Fāris, son of al-Manṣūr, was proclaimed at Marrakesh, another son, Zidān, was chosen sultān at Fās. A third brother, al-Shaikh, came and took Fās, then sent against Marrakesh an army led by his son 'Abd Allāh, who seized the town in Dec. 22, 1606. But Zidān, who sought refuge first in Tlemcen, then made his way to Sūs, via Tafilālt and coming suddenly to Marrakesh, had himself proclaimed there while 'Abd Allāh b. al-Shaikh while escaping with his troops was attacked in the midst of the gardens (*ḍynān Bekkār*) and completely defeated (Feb. 25, 1607). In October of the same year, 'Abd Allāh returned after defeating Zidān's troops on the Wādī Tifālfalt (Oct. 2, 1607), fought a second battle with them at Rās al-'Ain (a spring in Tānsift), regained possession of the town and revenged himself in a series of massacres and punishments so terrible that a portion of the population having sought refuge in the Gilliz, proclaimed as sultān, Muḥammad, great-grandson of Aḥmad al-A'raḍj 'Abd Allāh was forced to fly (Jan. 25, 1608). Zidān, recalled by a section of the populace, regained possession of his capital in a few days. The struggle between Zidān and his brother al-Shaikh, in the year following, centred round the possession of Fās. Zidān failed in his plans to retake it and henceforth Fās, given over completely to anarchy, remained separate from the kingdom of Marrakesh. On these happenings, a marabout from Tafilālt, named Abū Maḥallī, attempted to intervene (1611) to put an end to the fighting among the pretenders, which was inflicting great suffering on the people. His intervention only made matters worse. He took Marrakesh on May 20, 1612. Zidān took refuge in Safi and succeeded in again gaining possession of his capital with the help of an influential marabout in Sūs, called Yahya b. 'Abd Allāh. After a battle near Gilliz, Zidān withdrew into Marrakesh on Nov. 30, 1613. But Yahyā, succumbing to ambition, rebelled himself at the end of 1618, against the ruler whose cause he had once so well sustained. Zidān had again to take refuge in Safi. He was soon able to return to Marrakesh, taking advantage of the discord that had broken out in the enemy ranks. 'Abd al-Malik (1627—1631), son and successor of Zidān, has left only the memory of his cruelty and debauchery. He was murdered in May 1631. The renegades, who killed him, also disposed of his brother and successor al-Walīd in 1636. A third brother, Muḥammad al-Shaikh al-Aghar, succeeded him but had only a semblance of power. He managed however to reign till 1655, but his son Aḥmad al-'Abbās was completely in the hands of the Shab-bāna, an Arab tribe who assassinated him and gave the throne to 'Abd al-Karīm, called Ḳarrūm al-Ḥādīdī, in 1659. "The latter", says al-Ifrānī, "united under his sway all the kingdom of Marrakesh and conducted himself in an admirable fashion with regard to his subjects". His son Abū Bakr succeeded him in 1668 but only reigned two months until the coming of the Filālī Sultān al-Rashīd, already lord of Fās, who took Marrakesh on July 31, 1668. Called to Marrakesh by the rebellion of his nephew Aḥmad b. Muḥrīz, al-Rashīd met his death there in the garden of al-Agdāl, his head having been injured by a branch of an orange tree against which his horse threw him when it stumbled.

Mawlāy Ismā'īl had some difficulty in getting himself proclaimed at Marrakesh, which preferred

his nephew, Aḥmad b. Muḥriz. Ismāʿīl forced his way in on the 9th Šafar 1083 (June 4, 1672). In the following year, Marrakesh again welcomed Aḥmad b. Muḥriz. After a siege of two years (March 1675—June 1677), Ismāʿīl reoccupied Marrakesh and plundered it. He passed through it again in 1094 (1683) on his way to Sūs to fight Aḥmad b. Muḥriz who was still in rebellion. Marrakesh was no longer the capital. Mawlay Ismāʿīl took an interest in it and destroyed the palaces of the ḡašba to use the materials for his works in Meknes. In 1114 (Feb. 1703), a son of Mawlay Ismāʿīl, Muḥammad al-ʿAlīm, rebelled against his father, seized Marrakesh and plundered it. Zidān, brother of the rebel, was given the task of suppressing the rising, which he did, plundering the town once more.

Anarchy again broke out after the death of Ismāʿīl. Its centre was Meknes. Mawlay al-Mustaḍī, proclaimed by the ʿAbid in 1738, was disowned by them in 1740 and replaced by his brother ʿAbd Allāh. He sought refuge in Marrakesh. His brother al-Našīr remained his *ḡhalifa* in Marrakesh till 1745, while al-Mustaḍī tried in vain to reconquer his kingdom. Marrakesh finally submitted in 1746 to Mawlay ʿAbd Allāh who sent his son Sidi Muḥammad there as *ḡhalifa*. The governorship and then the reign of the latter (1757—1790) formed one of the happiest periods in the history of Marrakesh. Sidi Muḥammad completely restored the town, made it his usual residence, received many European embassies there, including a French one led by the Comte de Breugnot in 1767, and developed its trade. Peace was not disturbed during his long reign except for a riot raised by a marabout pretender named ʿUmar, who at the head of a few malcontents tried to attack the palace in order to plunder the public treasury. He was at once seized and put to death (between 1766 and 1772, according to the sources). On the death of Sidi Muḥammad b. ʿAbd Allāh, the situation remained very unsettled for several years. After taking the oath of allegiance to Mawlay Yazīd (May 3, 1790) the people of Marrakesh took in his brother Mawlay Hishām and proclaimed him. On hearing this, Yazīd abandoned the siege of Ceuta, returned to Marrakesh, plundered it and committed all kinds of atrocities (1792). Hishām, supported by the ʿAbda and the Dukkālā, marched on Marrakesh. Yazīd, wounded in the battle, died a few days later in the palace (Feb. 1792). Marrakesh remained faithful to the party of Mawlay Hishām, but very soon the Rḡamna abandoned him to proclaim Mawlay Ḥusain, brother of Hishām. He established himself in the ḡašba (1209 = 1794—1795). While the partisans of the two princes were exhausting themselves in fighting, Mawlay Slimān, sultān of Fās, avoided taking sides in the struggle. The plague rid him at one blow of both his rivals (July 1799) who had in any case to submit some time before. The last years of the reign of Mawlay Slimān were overcast by troubles in all parts of the empire. Defeated at the very gates of Marrakesh, he was taken prisoner by the rebel Šhrārda. He died at Marrakesh on Nov. 28, 1822. Mawlay ʿAbd al-Raḥmān (1824—1859) did much for the afforestation of Agdāl and restored the religious buildings. His son Muḥammad completed his work by repairing tanks and aqueducts. These two reigns were a period of tranquillity of Marrakesh. In 1862 however, while Sidi Muḥammad b. ʿAbd al-Raḥmān was fighting the

Spaniards at Tetwan the Rḡamna rebelled, plundered the Sūḡ al-Ḳhamis and closely blockaded the town, cutting off communications and supplies, until the Sultān, having made peace with Spain, came to relieve the town (June 1862). Mawlay al-Ḥasan hardly ever lived in Marrakesh but he stopped there on several occasions, notably in October 1875, to punish the Rḡamna and the Bū ʿl-sbaʿ, who had rebelled, and in 1880 and 1885, to prepare his expeditions into Sūs.

During the last years of the reign of Mawlay ʿAbd al-ʿAzīz (1894—1908), it was at Marrakesh that the opposition to the European tastes and experiments of the Sultān made itself most strongly felt. The xenophobia culminated in the murder of a French doctor named Mauchamp (March 19, 1907), and the spirit of separatism in the proclamation as sultān of Mawlay ʿAbd al-Ḥafīz, brother of ʿAbd al-ʿAzīz and governor of the provinces of the south (Aug. 24, 1907). But ʿAbd al-Ḥafīz becoming ruler of the whole empire (Aug. 24, 1907) and having signed the treaty of March 24, 1912 establishing the protectorate of France and of Spain over Morocco, the anti-foreign movement broke out again in the south. The Mauritanian marabout al-Ḥiba had himself proclaimed and established himself in Marrakesh. He only held out there for a brief period. His troops having been defeated at Sidi Bū ʿUḥmān on Sept. 6, 1912, the French troops occupied Marrakesh the next day.

Relations with Europe. Five minor friars sent by St. Francis were put to death at Marrakesh on Jan. 16, 1220, for having attempted to convert Muslims and having insulted the Prophet Muḥammad in their discourses. Their martyrdom attracted the attention of the Holy See to Marrakesh. A mission and a bishopric were established by Honorius III in 1225 to give the consolations of religion to the Christians domiciled in Morocco: merchants, slaves and mercenaries in the sultān's army. In the Almoravid period, the sultāns had Christian mercenaries recruited from prisoners reduced to slavery or from the Mozarab population of Spain whom they had from time to time deported to Morocco by entire villages. In 1227, Abu ʿl-ʿUlā Idrīs al-Maʿmūn having won his kingdom with the help of Christian troops lent by the king of Castile found himself bound to take up quite a new attitude to the Christians. He granted them various privileges, including permission to build a church in Marrakesh and worship openly there. This was called Notre Dame and stood in the ḡašba, probably opposite the mosque of al-Manšūr: it was destroyed during a rising in 1232. But the Christian soldiery continued to enjoy the right to worship, at least privately, and the bishopric of Marrakesh filled by an episcopal board at Seville, existed so long as there was an organised Christian soldiery in Morocco, i.e. to the end of the xvth century. The title of Bishop of Marrakesh was borne till the end of the xvth century by the suffragans of Seville (cf. Father A. Lopez, *Los obispos de Marruecos desde el siglo XIII*, in *Archivo Ibero-Americano*, N.º xlii., 1920). A Spanish Franciscan, the prior Juan de Prado, who came to re-establish the mission, was put to death in 1631 at Marrakesh. A few years later (1637), a monastery was re-established beside the prison for slaves in the ḡašba. It was destroyed in 1659 or 1660 after the death of the last Saʿdian. Henceforth the Franciscans were obliged to live in the *mellāḡ*

where they had down to the end of the xviiith century a little chapel and a monastery. As to the Christian merchants, they had not much reason to go to Marrakesh in the middle ages. Trade with Europe was conducted at Ceuta from which the Muslim merchants carried European goods into the interior of the country. In the xviiith century, 'Abd Allāh al-Ghālīb had a *fondūq* or "bonded warehouse" built in the *sūq* where the Christian merchants were allowed to live; but the majority of those who came to Marrakesh preferred to settle in the Jewish quarter. It was here also that foreign ambassadors usually lodged, at least when they were not made to encamp in one of the gardens of the palace.

Monuments. The present enceinte of Marrakesh is a wall of clay about 20 feet high, flanked with rectangular bastions at intervals of 250 to 300 feet. Bab Aghmāt, Bāb Ailān, Bāb Dabbāgh which still exist more or less rebuilt, are mentioned in the account of the attack on Marrakesh by the Almohads in 524 (1130). Bāb Yintān, Bāb al-Makhzen, mentioned at the same time, have disappeared. Bāb al-Sāliha (no longer in existence: it stood on the site of the *millāh*) and Bāb Dukkālā (still in existence) figure in the story of the capture of the town by the Almohads (1147). The plan of the wall has therefore never changed. It has been rebuilt in places from time to time, as the clay crumbled away, but it may be assumed that a number of pieces of the wall, especially on the west and south-west, are original, as well as at least three gates all now built up, to which they owe their survival, but have lost their name. According to Abu 'l-Fida' (xivth century), there were in Marrakesh seventeen gates; twenty-four at the beginning of the xviiith century according to Leo Africanus. It would be very difficult to draw up an accurate list, for some have been removed, others opened, since these dates or the names have been altered. Ibn Faḍl Allāh al-'Umari (beginning of the xviiith century) adds to the names already mentioned those of Bāb Nfis, Bāb Muḥriḳ, Bāb Mes-sūfa, Bāb al-Raḥa all four of which have disappeared. Bāb Taghzūt, Bāb Fas (now Bāb al-Khūmis), Bāb al-Rabb which still exist. The only important changes, which have been made in the walls of Marrakesh since they were built, have been the building of the *kaṣba* in the south and in the north the creation of the quarter of Sidi bel 'Abbās. The *zāwiya*, which as late as the xviiith century stood outside the walls beyond the Bāb Taghzūt, was taken into the town with all its dependencies.

The Kaṣba The little *kaṣba* and the palace of Dār al-'Imma built by Yūsuf b. Tāshfin, lay north of the present "Mosque of the Booksellers" or Kutubiya. 'Alī b. Yūsuf added in the same quarter other palaces called Sūr al-Hadjar, or Kaṣr al-Hadjar because they were built with stones from the Giliḥ, while all the other buildings in the town were of brick or clay. It was here that the first Almohads took up their quarters. According to a somewhat obscure passage of the *Istihḳāq*, Abū Yaḳūb Yūsuf seems to have begun the building of a "fort" in the south of the town but it was Yaḳūb al-Manṣūr who built the new *kaṣba* (1189—97): that is to say he joined to the south wall of the town a new walled area within which he built palaces, a mosque, and a regular town. Nothing remains of the Almohad palaces, but one can from pieces of wall and other vestiges follow

the old wall, at least on the north and the east side. There also the line of the wall has hardly changed. The magnificent gateway of carved stone by which the *kaṣba* is now entered, must be one of al-Manṣūr's building. Its modern name of Bāb Agnāu (the Negro's Gate) is not found in any old text. It probably corresponds to Bāb al-Kuḥl (Gate of the Negroes), often mentioned by the historians.

Ibn Faḍl Allāh al-'Umari, in the xivth century, Leo Africanus and Marmol in the xviith, have left us fairly detailed descriptions of the *kaṣba*, in spite of a few obscure passages. In the Almohad period, the *kaṣba* was divided into three quite distinct parts. One wall in the northwest, around the mosque of al-Manṣūr which still exists, contained the police offices, the headquarters of the Almohad tribes and the barracks of the Christian soldiery. From this one entered through the Bāb al-Tubūl, a second enclosure in which around a huge open space, the "Cereque" of Marmol (*asārāg*), were grouped the guardhouses, the offices of the minister of the army, a guest-house, a madrasa with its library and a large building called *al-saḳā'if* (the porticoes), the "Acequife" of Marmol, occupied by the principal members of the Almohad organisation, the "Ten", the "Fifty" and the *ṭolbā*, the pages (*ahl al-dār*). The royal palace, sometimes called the Alhambra of Marrakesh, in imitation of that of Granada, was entered from the Asārāg and occupied the whole area east of the *kaṣba*. The palaces of al-Manṣūr were still in existence at the beginning of the xviiith century when the Sa'dians took possession. 'Abd Allāh al-Ghālīb incorporated them in the new palaces which he was building. Aḥmad al-Manṣūr added, in the gardens to the north, the famous al-Badī' palace celebrated for its size and splendour. Only a few almost shapeless ruins remain of it, but its plan is perfectly clear. Mawlāy Ismā'il had it destroyed in order to use its materials. The *kaṣba* remained so completely in ruins that Sidi Muḥammad b. 'Abd Allāh when he became governor of Marrakesh in 1746, was obliged to live in a tent until his new buildings were finished. It is to him that we owe an important part of the present palace with its inner garden, Arṣat al-Nil. Other works were later undertaken by Mawlāy Slimān and his successors. Some large unfinished buildings date only from Mawlāy 'Abd al-Hafiz. A number of gates, in addition to the Bāb Agnāu give admittance to the *kaṣba*: these are Bāb Berrima and Bāb al-Aḥmar in the east, Bāb Ighli and Bāb Kṣiba in the west. The palace has vast gardens belonging to it: Dīnān al-Āfiya, Agdāl, Dīnān Riḍwān, Ma'mūniya, Manāra. The latter, two miles west of the town, contained in the xviiith century a pleasure house of the sultāns. The palace of Dār al-Baiḍā', situated in the Agdāl, took the place of a Sa'dian palace. It was rebuilt by Sidi Muḥammad b. 'Abd Allāh and has since been restored. As to the gardens of the Agdāl, they seem to have been created in the xiiith century by 'Abd al-Mu'min.

Mosques. Nothing remains of the early Almoravid mosques, in the building of one of which Yūsuf b. Tāshfin himself worked along with the masons as a sign of humility. But the cathedral mosque of 'Alī b. Yūsuf, where Ibn Tūmart had an interview with the sultān, although several times rebuilt, still retains its name. The Almohads, on taking possession of Marrakesh, destroyed all the mosques on the pretext that they were wrongly

oriented. The mosque of 'Alī b. Yūsuf was only partly destroyed and was rebuilt. 'Abd Allāh al-Ghālīb restored it in the middle of the xvth century. The present buildings and the minaret date from Mawlay Slimān (1792—1822).

Kutubiya. When the Almohads entered Marrakesh, Abd al-Mu'min built the first Kutubiya of which some traces still remain and it has been possible to reconstruct its plan. As it was wrongly oriented he built a new mosque, the present Kutubiya, in prolongation of the first but with a slightly different orientation. It takes its name from the 100 booksellers' shops which used to be around its entrance. It is a very large building with seventeen naves, which with its decoration in carved plaster, its stalactite cupolas, the moulding of its timberwork, its capitals and magnificent pulpit (*minbar*) of inlaid work, is the most important and the most perfectly preserved work of Almohad art. The minaret, begun by 'Abd al-Mu'min, was only finished in the reign of his grandson al-Manṣūr (1195). It is 230 feet high and its powerful silhouette dominates the whole town and the palm-groves. It is the prototype of the Giralda of Seville and of the tower of Hassān at Rabat. It is decorated with arcatures the effects of which were formerly heightened by paintings still visible in places, with a band of ceramic work around the top.

The mosque of the ḡasba or mosque of al-Manṣūr is the work of Ya'qūb al-Manṣūr. It was begun in 1189—95 and built in great splendour. It has been profoundly altered, first by 'Abd Allāh al-Ghālīb the Sa'dian, then in the middle of the xviiith century by Muḥammad b. 'Abd Allāh, then more recently by Mawlay 'Abd al-Raḥmān (1822—1859). The minaret of brick is intact and magnificently ornamented with green ceramics. The lamp-holder supports a *qīāmūr* of three bowls of gilt copper, which occupy a considerable place in the legends of Marrakesh. They are said to be of pure gold and to be enchanted so that no one could take them away without bringing on himself the most terrible misfortunes. This legend is often wrongly connected with the *qīāmūr* of the Kutubiya.

Among the religious monuments of Marrakesh of archaeological interest, may also be mentioned the minarets of the mosque of Ibn Ṣālah (dated 731 = 1331) and of the sanctuary of Mawla 'l-Kṣūr, built in the Marinid period in the Almohad tradition, and two Sa'dian mosques: the mosque of al-Mwāsīn or mosque of the Ṣharifs, which owes its origin to 'Abd Allāh al-Ghālīb, and that of Bāb Dukkāla, built in 965 (1557—1558) by Lālla Mas'ūda, the mother of the Sultān Aḥmad al-Manṣūr.

Madrasas. An Almohad madrasa, built "to teach the children of the king and others of his family in it", formed part of the buildings of Ya'qūb al-Manṣūr. This royal school was presumably different from what later were the Marinid madrasas. It stood on the great square in front of the palace and was still in existence in the time of Leo Africanus. The Marinid Abu 'l-Hasan in 1347 built another madrasa, also described by Leo. It lay north of the mosque of the ḡasba, where traces of it can still be seen. The madrasa of Ibn Yūsuf is not, as is usually said, a restoration of the Marinid madrasa. It was a new building by 'Abd Allāh al-Ghālīb, dated by an inscription of 972 (1564—1565), the only surviving example of a Sa'dian madrasa.

Sa'dian tombs. The two first founders of

the dynasty rest beside the tomb of Sidi Muḥammad b. Slimān al-Djāzūlī in the Riyād al-'Arūs quarter. Their successors from 1557 were buried to the south of the mosque of the ḡasba. There was a cemetery there, probably as early as the Almohad period, which still has tombs of the xvth century. The magnificent ḡubbas which cover the tombs of the Sa'dian dynasty must have been built at two different periods. The one on the east under which is the tomb of Muḥammad al-Shaikḥ seems to have been built by 'Abd Allāh al-Ghālīb. The other, with three chambers, seems to have been erected by Aḥmad al-Manṣūr (d. 1603) to hold his tomb.

AL-MARRĀKUSHĪ. [See 'ABD AL-WĀKĪD.]

MARŠAD (A.), from *raṣada*, "to wait on the road, to watch, to lie in wait", originally any place where a watch was kept, for example, a custom-house, then (with or without *al-kawākib*) an observatory. *Al-raṣad* is also used in the latter sense "To consult the stars for any one" is *raṣa'a al-fulān*, to take astronomical measurements with instruments is *ḥāsa* (cf. *ḥiṣās* = ascertaining latitude and longitude and *mīḥyās* = gnomon)

The Arab observatories had their models and predecessors in the Persian, Indian, Greek and Babylonian observatories. Very little is known about the construction of the oldest observatories. It is obvious however that when the advance was made from the observation and recording of isolated phenomena in the heavens, which were regarded as omens of good or ill fortune, to the exact following of the movements of heavenly bodies, simple instruments to calculate time and measure areas and angles in the heavens would become necessary. Such must have existed in the towers of Babylonian temples which were used as observatories, in the form of sundials, sand- and water-clocks measuring rods, and graduated circles. In the time of Ptolemy sundials and water-clocks were certainly in use, a circle divided parallel to the equator of the heavens which was used to calculate the equinox and length of the year, a meridian circle, the armillary sphere and the astrolabe or planisphere. The Arab astronomers, however, received their knowledge from the Hindus and Persians, among whom astrology and practical astronomy had reached a high level. When the first astronomical observations were made under the 'Abbāsids at Ḥundi-Sābūr and the first astronomical works were translated out of the Sanskrit and Pahlawi, there is no doubt that the observatories erected in Baghdad were also modelled on Indian and Persian prototypes. In his astronomical work, al-Battānī describes the construction of the sundial (*al-ruḥḥama*), a globe of the heavens (*al-baṣṭa*), a wall-quadrant (*al-ruḥ* or *al-ḥana*) and a triquetrum (*al-ṣiqāda al-tawila* or *ḍiāt al-ḥuḥḥatāin*). The instrument most used in the Arab period however was the astrolabe which was portable (cf. above i., p. 501). The number of makers of astrolabes, observers and compilers of astronomical tables from the beginning of the 'Abbāsīd period is immense and the rivalry of princes to obtain more and more accuracy in the astronomical foundations of astrology also led to the improvement of instruments and the arrangements in observatories generally. It is sufficient to mention out of the many observatories that of Cairo where Ibn Yūnus (d. 400—401 = 1009) completed the Ḥakīmī tables, the observatory of Nīshāpūr where al-Khāzini (d. beginning of the 11th = 11th century) took observations, that of Marāgha where Naṣīr al-Dīn al-Ṭūsī erected

with many new instruments for the Mongol Khān Hūlāgū (1259) and the observatory of Samarkand, where Ulūgh Beg employed the astronomers of his time. Following him in many points but also stimulated by European astronomy Djaī Singh in India built the great observatories, the remains of which still arouse admiration in Delhi, Djaipūr, Ujjain, Benares and Mathura.

MARTHIYA (A., plur. *marāṭhi*), translated variously by elegy or dirge, is a poem in Arabic (and other languages following Arabic tradition) in memory of a deceased person. The word elegy is hardly applicable in most cases as such poems differ somewhat from the style of Greek and Latin poems bearing this name; some notable exceptions exist and the finest example of a real elegy is perhaps the poem of a woman named Barra al-Kināniya preserved in the *Kiṭāb al-Iḥṭiyārāin*, and still unpublished. It was the custom of the ancient Arabs after the usual *naḥḥ* or lamentation of women [q. v.] that a member of the family, gifted as a poet, should commemorate the noble qualities and deeds of the departed in a poem by enumerating them. These poems as a rule do not contain the *taḥīb* or amatory introduction like ordinary *ḥaṣīdas* and in many cases have a peculiarity in their diction, the introduction of a kind of internal rhyme resembling *saḍf*, called *tarṣīf*. This has been fully discussed by Rhodokanakis in his analysis of the poetry of al-Khansā, but is found in many other *marṭhiyas*. Many poets, remembering the widespread, nay universal, belief of the ancient Arabs in fatalism, embellish their poems with descriptions to show that nothing can escape inevitable fate. A typical example is the long poem by Abū Dhū'ayb (*Dirwān*, N^o. 1; *Mufaḍḍaliyāt*, N^o. 126) in which three vivid pictures are drawn of the impossibility of escaping death, both for man and beast. This tradition has been followed by Arabic poets from the times of paganism to the present date and the quantity of poems produced for example upon the death of the Egyptian statesman Zaḥlūl Pāshā proves that the taste for them has not abated. The collected poems of al-Zahāwī, the most prominent living poet of

the 'Irāk, contain several pages mourning Zaghāl. As regards the earlier period, poems have been preserved in considerable numbers and from the *Ḥamāsa* of Abū Tammām downwards nearly every anthology has a special chapter devoted to marāṭhī. Several early scholars in addition made special collections of this class of literature and one such collection has come down to us, made by the Kūfī grammarian Ibn al-A'rābi, and published from an incomplete manuscript by W. Wright. The poet *par excellence* in this class of poetry however was a woman, al-Khansa' [q. v.].

MARTOLOSEN. Lexicons explain *martolos* and *martolos* as "Christian soldiers, volunteers in the Ottoman army". The word apparently is not to be found in Turkish authors, but is often met with in Western books and documents.

Leunclavius (*Annales*, p. 142) says that *martelos* means "robber"; Ricaut (Italian translation by C. Belli, *Istoria dello stato presente dell' Impero ottomano*) relates that Buda was garrisoned by 300 *martoloi* "who are like infantry"; M. Sanudo (*Diarii*, xxxvi. 271) mentions one Sbolovach "a very brave man and great *martelloso*", who served the Turks and was killed in action near Zara in Dalmatia. According to Lazaro Soranzo (*L'Ottomanno*, 4th ed., Naples 1600, p. 110—111), *martelos* means spy and thief.

Sathas (*Monim. Historiae Hellenicae*, iv., lvi., N^o. 4) derives the word (*martolosi*, *martalosi*, *martelosi*, *martelossi*, *armatoli*) from ἀρματολόγος and says that they were soldiers of fortune serving the Turks, often opposed the "Stradioti", who fought for the Venetians.

Von Hammer (*G. O. R.*, iv. 211—212) observes that the *martolosi* were bands of brigands, armed by the Turks on the frontiers towards the Venetians and Dalmatians; while, quoting Pouqueville, who favours the etymology ἀρματολόγος, he inclines to an etymology from the Hungarian.

Pouqueville's and Sathas' explanations seem to us the most probable. The appellation was not limited to brigands on the western frontiers of the Ottoman empire, but was also given to armed bands of volunteers (xvth—xviii centuries) in the Danube region (Jorga, *Geschichte des osm. Reiches*, iii. 419; Hurmuzaki, *Documente* etc., xii., p. 130).

(ETTORE ROSSI)

MARŪF AL-KARKHĪ, ABŪ MAḤFŪZ B. FIRŪZ or FIRŪZĀN, who died in 200 (815—816), was a celebrated ascetic and mystic of the Baghdad school. The *nisba* al-Karkhī probably refers to Karkh Bādjaddā, a township in eastern 'Irāk (Sam'āni, *Ansāb*, p. 478b, l. 10; cf. Yāqūt, *Muḥṭarrik*, ed. Wüstenfeld, p. 369, l. 8 sqq.), though some authorities connect him with the Karkh quarter of Baghdad. His parents are generally said to have been Christians; according to Ibn Taghribirdi (ed. Juynboll and Matthes, i. 575), they were Šābi'ans belonging to the district of Wāsiṭ. Bakr b. Khunais al-Kūfī and Farḡad al-Sabakhī, also of Kūfa, are named as his teachers in Sūfism (Abū Tālib al-Makkī, *Kūṭ al-Kulūb*, i. 9; *Fihrist*, p. 183). Of those whom he taught or influenced the most

famous was Sari al-Sakaṭī [q. v.], who in his turn became the master of Djunaid. The story that Ma'rūf was a client of the Shī'ī Imām, 'Alī b. Mūsā al-Ridā, before whom he made profession of Islām and induced his parents to do the same, deserves no credence. Among the sayings attributed to him are the following: "Love is not to be learned from men; it is a gift of God and comes of His grace". "The saints are known by three signs: their cares are for God, their business is in God, and their flight is unto God". "Sūfism consists in grasping the realities (*ḥaqā'iq*) and renouncing that which is in the hands of created beings". Ma'rūf was venerated as a saint, and his tomb at Baghdād on the west bank of the Tigris is still a great resort for pilgrims. Kūshairī relates that the people used to go there in order to pray for rain, saying: "The tomb of Ma'rūf is an approved remedy (*tiryāḡ mudjarrab*)".

Nicholson, i. 269 sqq.; Ibn Khallikān, *Wafayāt al-A'yān*, N^o. 371; transl. de Slane, *Biographical Dictionary*, ii. 88; Djamī, *Nafahāt al-Uns*, ed. Lees, p. 42; Massignon, *Essai sur les origines du lexique technique de la mystique musulmane*, p. 207; Nicholson, *The origin and development of Sūfism*, J. R. A. S., 1906, p. 306. (R. A. NICHOLSON)

MARŪF RUSĀFĪ, one of the best of contemporary Arab poets, born in Baghdād of a Kurd father and a Beduin mother in 1292 (1875). His *ḡazidas* have been collected into a *Divān* and edited by Muḥyī al-Dīn al-Khaiyāt, Bairūt 1910, following quite an original classification 1. *Kawniyāt*, 2. *Iḡtimā'iyāt*, 3. *Tārīkhīyāt*, 4. *Wasfiyāt*. Ruṣāfī's Buṭṭi has devoted an excellent study to him (in *al-Adab al-Arabi fī 'Irāk al-'Arabī*, Cairo, Salafiya 1922, p. 67—96).

(L. MASSIGNON)

MĀRŪT. [See HĀRŪT and MĀRŪT.]

MARW. [See MERW.]

AL-MARWA. [See AL-ŠAFĀ']

MARWĀN B. AL-ḤAKAM, the father of the Marwānid Caliphs, was born at Mecca or at Tā'if, probably several years before the Hidsra. Tradition, by placing his birth 2, 4, or 5 years later than the beginning of this era, aims at depriving him of a right to the title of "Companion" by showing that he could not have effectively accompanied the Prophet, as he must have followed his father who was exiled to Tā'if. Further, it endeavours in its hostility to give him the epithet of *farīd ibn al-farīd*, "the banished son of the banished man". After becoming Caliph, his grand-uncle 'Uṭmān adopted him as his secretary and under this title he is said to have governed in his name. Seriously wounded on the "day of al-Dār", at the siege of the palace of 'Uṭmān, he took part later in the battle of the Camel in which he received fresh wounds. All his life his health suffered from these terrible shocks. Mu'āwīya I used him alternately with Sa'īd b. al-Aš [q. v.], his cousin, to govern Medina and the Hidsjāz. He showed in this function a capacity and vigour, far above the ordinary.

Finally dismissed from office, he passed into obscurity during the latter years of Mu'āwīya who dreaded his ambition. When Ḥusain b. 'Alī refused

to recognize the Caliph Yazid, Marwân advised Walid b. 'Utba, his successor at Medina, to employ force against the rebel. The revolt of the people of Medina caused him to be expelled with all his followers from this town. He returned to it in the train of Muslim b. 'Ukba [q. v.] whose military operations he was supporting. Put to flight once more after the death of Yazid I, he took up his residence in Syria and attended the court of the Caliph Mu'āwīya II. After the disappearance of this prince, Marwân, despairing of the fortunes of the Omayyads, was disposed to recognize Ibn al-Zubair, when 'Uбайдاللہ b. Ziyād persuaded him to set up himself as candidate. Acclaimed at the assembly of Ḥābiya, he defeated the Kaisis under Ḍahhak b. Kais [q. v.] at Majdī Rāhiṭ [q. v.] The submission of the whole of Syria was the first result of this victory.

The reign of Marwan may be epitomized as an uninterrupted series of battles. Immediately after his official installation at Damascus he was forced to take up the gauntlet. He laid it down only to die in his capital. His chief task was the conquest of Egypt. A rapid campaign gave him possession of it, while his lieutenant repelled a raid into Palestine by Ibn al-Zubair. At Ḥābiya he was compelled to recognize as his eventual successors, Khālīd the son of Yazid I and the Omayyad Amr al-Ashdaq [q. v.]. After laborious negotiations, he was able to end them to the advantage of his own sons 'Abd al-Malik and 'Abd al-'Azīz, the latter being nominated by him governor of Egypt. This was the last success of his adventurous career. Worn out, the septuagenarian caliph died at Damascus on the 27th Ramaḥṣān 65 (7th May 685). He is said to have been murdered by the wife of Yazid I, the mother of the Sufyānid Khālīd, whom he had married after Majdī Rāhiṭ.

The estimates of the length of his reign vary between 8 and 11 months, according as they count the first recognition of him at Ḥābiya or the second — the exact date is not known — more ceremonious one at Damascus. We do not know his exact age any more definitely. The two extremes 61 and 81 years reveal the inconsistency of tradition. The 63 years sometimes given to Marwan are merely a lucky number which has been much abused to give the ages of the older caliphs. It has the advantage that it takes us back to the year 2, often said to be the year of his birth. Our texts describe him as an old man, *harīb kabīr*, when he ascended the throne and contrast him with the *lahl*, middle-aged man, i. e. Ibn al-Zubair who, however, was nearly sixty. There must therefore have been an appreciable difference of age between the two competitors. Marwan, therefore, seems to us to have been over seventy. The last five years of his life, filled with rebellions, his two exiles, his share in the campaign against Medina, and in those of Syria and Egypt to reconquer these provinces of his empire finally wore out the constitution of this vigorous old man, who had never been completely cured of the effects of his terrible wounds he received in his youth. This long lean wizened old man — these physical characteristics earned him the nickname *ḥaṣīf ḥāṣīf* — was destined to fall a victim to the great epidemic that swept over the East. In 65 H. the plague reached Syria from the 'Irāk; it had begun by carrying off Mu'āwīya II. the

decrepit predecessor of Marwân, as well as Walid b. 'Utba, a relative of both; it ended by laying low the first of the Marwānid caliphs.

Marwân showed himself a statesman worthy of the highest rank. A contemporary of the great Mu'āwīya, he had under the Sufyānids to accept — without ever resigning himself to it — the part of a brilliant second. He attained the caliphate, ever the object of his wishes, at the moment he had ceased to care about it. He allowed himself to be raised to the throne, rather than mounted it himself. But once at the top he regained that power of lucid decision and spirit of initiative which had earned Mu'āwīya's appreciation, though he feared his ambition. The new ruler remained on the throne just long enough to save the Omayyad fortunes from an imminent collapse and to save the future of the younger branch of this dynasty which bears his name. The work was continued by his favourite son 'Abd al-Malik. He early recognised the merits of this, the elder, man, and with a brutality and absence of scruple which was thoroughly Arab, he put him in the place of the young Khālīd b. Yazid I, who was less well fitted for the difficulties of the restoration. This is sufficient to characterize his place among the Syrian caliphs. It will explain the hatred of 'Abbasid and 'Alid historians, a hatred adopted by Muslim tradition. In energy and knowledge of the art of government, Marwân, recalled his illustrious relative Mu'āwīya. He would have equalled him, if to these eminent qualities he had been able to add that variety of political knowledge, a mixture of cunning and bonhomie, so appreciated by the Arabs, which they call *ḥilm*. He became Caliph in most critical circumstances and had to display firmness above all things, to put down rebellions, and to defend himself against the ambition and resentment of his relatives, frustrated in their attempts on the throne, or spoiled by him of their rights to it. If it had been given to him to live longer, we may well believe that he would have rivalled the first of the Omayyad Caliphs in nobility of soul.

MARWÂN II B. MUḤAMMAD, the last of the Omayyad caliphs in Damascus. He was the grandson of the caliph Marwân b. al-Hakam. As governor of Mesopotamia and Armenia his

father Muḥammad for several years directed the campaigns against the Byzantines. His mother was a Kurdish slave-girl, Maslama b. 'Abd al-Malik [q. v.] was one of those who followed Muḥammad b. Marwān to war; it is not till 115 (733—734) that we find Marwān coming to the front as governor of Armenia and Ādharbāidjān. In this position, which he held for 12 years, he fought with success against the peoples of the Caucasus and thus acquired military experience which enabled him to reorganise the Muslim army. In place of divisions consisting of the different tribes he created regular, paid troops under professional commanders; the men levied for military service were divided up into smaller divisions (*karūdīs*) which possessed much greater mobility and strength than the long Arab battle-lines. After the death in 126 (744) of Yazid III the succession passed to his brother Ibrāhīm b. al-Walid; the latter however was only recognised in the southern part of Syria. Under the pretext of protecting the interests of the sons of the murdered Walid II, Marwān crossed the Euphrates into Syria where the Kaïsīs at once joined him. At 'Ain al-Djarr between Lebanon and Anti-Lebanon he encountered the Kalbīs under Sulaimān, a son of the caliph Hishām. In spite of his years of experience in war with the Byzantines the latter was no match for Marwān. He was defeated and fled to Damascus, where he put to death the two sons of Walid II. He then went with his father, the nominal caliph Ibrāhīm to Palmyra, the capital of the Kalbīs, whereupon Marwān entered Damascus and received the homage of the people (Šafar 26, 127 = Dec. 7, 744). After arranging matters in the capital he made his headquarters in Hama, where he could rely upon the support of the Kaïsīs who were devoted to him. The result was a rising of the Kalbīs in Syria. Marwān soon succeeded in restoring order but when in the following year he was preparing a campaign against the 'Irāk not yet subject to him, he made the mistake of levying Syrian troops also who were to join the rest of the army on the march. On reaching al-Ruṣāfa where Sulaimān b. Hishām lived, the Syrians deserted from Marwān and proclaimed Sulaimān commander of the faithful. When Sulaimān occupied Ḳinnasrīn, Marwān had to come back. A battle took place near the town, Sulaimān was defeated and fled first to Hims, and then to al-Kūfa. After a siege of several months Hims was forced to surrender; Marwān razed its walls to the ground and also those of Ba'albek, Damascus, Jerusalem and other large towns of Syria. In the summer of 128 (746) peace was finally restored in Syria.

In the eastern provinces however complete anarchy reigned. The governorship of the 'Irāk had been given by Yazid III to a son of the caliph 'Omar b. 'Abd al-'Azīz, named 'Abd Allāh [q. v.]. The latter of course did not recognise the claims of Marwān to the caliphate and the 'Ahl 'Abd Allāh b. Mu'āwīya [q. v.] also rebelled in al-Kūfa. Marwān appointed a new governor Naḍr b. Sa'īd al-Ḥarashī to restore peace and security; the latter however soon fell in battle with 'Abd Allāh b. 'Omar and only the approach of a danger that threatened both sides, the Khārīdī movement brought the two opponents to terms. The Khārīdīs a little later seized the town of al-Mawṣil: 'Abd Allāh, the son of the caliph, was defeated and had to retreat. In the late summer of 28 (746)

however the Khārīdī leader al-Daḥḥāk b. Kaïs al-Shaibānī [q. v.] fell in battle with Marwān himself and in the following year the power of these dangerous rebels was finally broken after one of Marwān's generals Yazid b. 'Omar b. Habbaira had taken the 'Irāk from them.

Soon afterwards however a cloud that boded evil appeared in another direction. Naṣr b. Saiyār al-Laithī, governor of Khorāsān, had long before warned the caliph of the seditious activities of the 'Abbāsids and urgently appealed for assistance to render their cunning agitators harmless. Marwān however had his hands full and could devote no attention to the distant east. In Ramaḍān 129 (June 747) the long prepared rebellion broke out in Khorāsān. Apart from a few isolated successes, the government troops were defeated by the rebels and after the fall of al-Kūfa, Abu 'l-'Abbās who with his brother Abū Dja'far had taken command of the 'Abbāsī party had himself proclaimed caliph on the 12th Rabi' II, 132 (Nov. 28, 749). In Djumādā II of the same year (Jan. 750) Marwān was defeated on the upper Zab. He then fled from one place to another till he was overtaken at Būṣīr in the district of Uḥmūnān in Upper Egypt. Here the last Damascus caliph of the Omayyad dynasty fell fighting bravely (end of 132 = Aug. 750).

MARWĀNIDS, a Muḥammadan dynasty in Diyār Bakr, founded by the Kurd chief Bādh, who had begun his career as a shepherd and then took to brigandage. With the help of a body of men similarly inclined, he seized the town of Ardjish in Armenia with other strongholds on the Armenian frontier. After the death of the Būyid 'Aḍud al-Dawla (372 = 983), he invaded the province of Diyār Bakr and captured Āmid, Maiyāfāriḳīn and Naṣbīn. The armies, which Šams al-Dawla sent against him, were defeated and al-Mawṣil also passed into his hands. But when he tried to seize the capital, Baghdād (Šafar 373 = July—Aug. 983), he suffered a complete defeat and had to abandon al-Mawṣil. After vain attempts to retake this town, he took the field again in 380 (990—991) but was defeated by the Ḥamdānids, the lords of al-Mawṣil, and fell in the battle. Abū 'Alī al-Ḥasan b. Marwān, his sister's son, then married his widow and thus came into possession of the lands conquered by Bādh and continued the war against the Ḥamdānids whom he twice defeated. After the murder of Abū 'Alī in 387 (997—998) in Āmid, his brother Mumahhid al-Dawla Abū 'l-Manṣūr succeeded him. The third brother Naṣr al-Dawla Abū Naṣr Aḥmad at first attempted to dispute his authority but without

success. In 402 (1011—1012) Abū 'l-Manṣūr was poisoned by one of his generals, whereupon Abū Naṣr was recognised as lord of Diyār Bakr. During his rule of fifty years, peace and quiet as a rule prevailed, and poets and learned men found a hospitable welcome at his court. In 433 (1041—1042) the Ghuzz [q. v.] who had invaded Mesopotamia in the previous year, raided Djazirat Ibn Omar; but Sulamān, son of Abū Naṣr, succeeded in outwitting and capturing their leader whereupon the others dispersed; they soon returned however and continued their plundering, although Abū Naṣr released their chief and gave them a considerable sum to induce them to withdraw. They then occupied al-Mawṣil, which was completely sacked while the emir there, Karwāsh b. al-Muḥallad [q. v.], saved himself by flight. In 435 (1044) he finally succeeded in driving out the Ghuzz whereupon they withdrew to Diyār Bakr and thence to Adharbāydjān. When the Saldjūq Sultān Toghrul Beg in 448 (1056—7) advanced against Djazirat Ibn Omar, Abū Naṣr gained him over by gifts and a friendly relationship was established between them. Abū Naṣr died in 453 (1061—1062) aged over 80. He was succeeded by his son Niẓām al-Dawla Naṣr, who had however to go through a hard struggle with his brother Sa'īd. The former was victorious in Mayāfāriqin, while the latter had to be satisfied with Amid. In 463 (1070—1071) Naṣr submitted to the Saldjūq Sultān Alp Arslān. After Naṣr's death (472 = 1080) his son Manṣūr was recognised as his successor. Soon afterwards the Saldjūqs overthrew the Marwāmid dynasty. In 478 (1085—1086) Ibn Djahir, Malik-ṣhāh's vizier, and his son Za'im al-Ru'asā' Abū 'l-Kā'im conquered the towns of Amid, Maiyāfariqin and Djazirat Ibn 'Omar and then brought the whole province of Diyār Bakr under the rule of the Saldjūqs. Manṣūr, the last Marwānid, died in Muḥarram 489 (Dec. 1095—Jan. 1096) in Djazirat Ibn Omar.

MĀRYĀ, a tribe in the Western zone of Eritrea. They are — for the most part — shepherds and inhabit the middle valley of the 'Ansabā river in the district of Karan. Their tribe is formed by two sections of nobles: Māryā Kayih "the Red Māryā" and Māryā Ṣallim "the Black Māryā"; and the families of the vassals. The "Red" Māryā have been traditionally in a lower position than the "Black" and they were obliged to pay on certain occasions special gifts to the "Black" as, for instance, when the chief of the "Black" died. The vassals were practically divided between the Red and the Black as every family of them lived under the patronage of the chief of a noble family. Both the paramount chiefs of the noble sections had some particular rights over all the vassals of the noble families of their sections as they had, for instance, the power to order that every vassal may give to them the same gift as to his individual patron or to oblige the patrons to pay, as a duty to the highest representative of the tribe, the tenth part of every gift or duty of their vassals.

The Māryā claim to be descendants of a warrior, Māryā, born from Saho stock, who emigrated with seventeen soldiers to the borders of the 'Ansabā and was received there as a guest by the natives. But, afterwards, the sons of Māryā had so greatly increased that they were able to occupy the whole land and to subdue the native tribes who became their vassals. These natives, who are called *tigrāy* on account of their origin, were really Abyssinians and Bedja. However, the Māryā and their vassals to-day speak only the Tigrē language; and the Saho, as the Bedja, has been wholly forgotten.

The Māryā were Christians but, about half a century ago, they were converted to Islām. Even their clans (as the 'Ad Te-mikā'el, a section of the "Red") and their ancestors till recent generations bore Christian names. In any case, Islāmic law has gradually gained great influence, among the Māryā; and this has been from many points of view a real profit to the population, as the laws of Islām may moderate in a good way the ancient rough customs which strongly assured the privileges of the nobles and their mastery on the vassals. As a matter of fact, in the hereditary law, the prevalent right of the first born son and the exclusion of the daughters from the succession of their father's estates became gradually disused on account of the Islāmic influences. In the same way, the custom of declaring slaves those vassals who could not pay their debts to the nobles and the great differences, in the penal law, as to the punishment of crimes perpetrated by the nobles or by the vassals, had already been diminished after the conversion of the Māryā to the Islām, when the occupation of Eritrea by Italy caused the complete abrogation of those rules.

MARYAM, Mary. The Arabic form of the name is identical with مَرْيَمَ and μαριάμ which are used in the Syriac and in the Greek Bible; in the New as well as in the Old Testament. In the latter it corresponds to the Hebrew מַרְיָם. This

name, like other ones with the same suffix, such as 'Amram, Bil'am, points to the region between Palestine and Northwestern Arabia as its home. According to Muslim interpretation the name means "the pious" (*al-'ābida*; cf. the commentaries on sūra iii. 31). It occurs frequently in the Qur'an in the combination ['Isā] Ibn Maryam ["Jesus] the son of Mary" (sūra ii. 81, 254; iii. 31 sq.; iv. 156, 169; v. 19, 50, 76, 82, 109, 112, 114, 116; ix. 31; xix. 35; xxiii. 52; xxxiii. 7; xliii. 57; lvii. 27; lxi. 6, 14), no father being mentioned, because, according to Muslim tradition also, 'Isā had no earthly father. In the majority of these passages 'Isā is clearly regarded as the higher of the two. Yet Maryam's place is important from a dogmatical as well as from a historical point of view.

Maryam is mentioned in the Qur'an, from the oldest parts down to the later Madinese sūras. To the first Makkān period belongs sūra xxiii. 52: "And we made the son of Maryam and his

mother a sign; and we made them abide in an elevated place, full of quiet and watered with springs". Here is possibly the first allusion in the *Qur'an* to the virgin birth. This idea is accentuated in *sūra* xix. 20, where Maryam gives the spirit (i. e. the angel) who announces to her the birth of a male child, this reply: "How should I have a male child, no human man having touched me?" In *sūra* lxvi. 12 the conception is ascribed to this divine spirit (cf. Luke i. 34 *sq.*: Then said Mary unto the angel, How shall this be, seeing I know not a man? And the angel answered and said unto her, The Holy Ghost shall come upon thee, and the power of the Highest shall overshadow thee).

The virgin birth is also mentioned in *sūra* lxvi. 12 (Madinian): "And Maryam bint 'Imrān who kept her body pure. Then we breathed into it from our spirit. She acknowledged the truth of the words of her Lord and of his book and she belonged to the obedient".

A third mention of the annunciation and the virgin birth is in *sūra* iii. 37: "When the angels said, O Maryam, verily Allāh has elected and purified thee and elected thee above the women of all created beings. O Maryam, be obedient unto thy Lord and prostrate thyself and bow down with those who bow down" (cf. Luke i. 28). Maryam is indeed reckoned as one of the four best women that ever existed, together with Āsiya [q. v.], Khadīdja [q. v.] and Fātima [q. v.] (Aḥmad b. Ḥanbal, *Musnad*, iii. 135), and the chief of the women of Paradise (Ibn Ḥanbal, iii. 64, 80).

According to tradition the annunciation took place in the following way: Djibril appeared to Mary in the shape of a beardless youth with a shining face and curling hair, announcing to her the birth of a male child. She expressed her amazement, but, on the angel's reassuring answer, she complied with the will of God.

Thereupon the angel blew his breath into the fold of her shirt, which she had put off. When the angel had withdrawn, she put on the shirt and became pregnant. The annunciation took place in the cavern of the well of Silwān, whither Maryam had gone, as usual, to fill her pitcher; she was then 10 or 13 years of age; and it was the longest day of the year. In Christian tradition also the voice of the angel was heard by Maryam for the first time when she had gone to fill her pitcher. According to a different tradition 'Isā's spirit entered Maryam through her mouth (Ṭabarī, *Tafsir*, vi. 22).

A second important dogmatical feature is that Maryam belongs to the Trinity according to the *Qur'an*. A glimpse of this conception is given in *sūra* v. 79: "al-Masīḥ, the son of Maryam, is an Apostle only, who was preceded by other Apostles, and his mother an upright woman; and both were wont to take food". This verse is apparently meant as a refutation of the Christians who venerated 'Isā and his mother as divine persons, elevated above human needs. With this verse may be compared *sūra* iv. 169: "O people of the book, beware of exaggeration in your religion and say of Allāh nothing but the truth. 'Isā b. Maryam is only the Apostle of Allāh and His word, which He conveyed unto Maryam, and a spirit that came forth from Him. Believe, therefore, on Allāh and his Apostles and say not 'three'. Beware of this, this will be better for you. Allāh is but one God" etc.

Clearer is *sūra* v. 116: "And when Allāh said, O 'Isā b. Maryam, hast thou said to the people, Take me and my mother as two Gods besides Allāh? He answered: Far be it, that I should say to what I am not entitled. If I should have said it, Thou wouldst know it" etc.

The commentaries also describe the Trinity as consisting of Allāh, 'Isā and Maryam. Al-Baidāwī, however, admits that in *sūra* iv. 169 there could be an allusion to the Christian doctrine of one God in three hypostasies: Father, Son and Holy Ghost.

The question how Muḥammad had come to conceive of Maryam as one of the persons of the Trinity, has often been asked. Maracci has made a reference to Epiphanius, *Adv. Haereses*, Haeres. lxxviii., § 23, where this author speaks of women in Arabia who venerated Mary as God, and offered to her cakes, from which the heresy is often called that of the Collyridians. Sale, in his *Preliminary Discourse*, p. 45, mentions the Mariamites, who worshipped a Trinity consisting of God, Christ and Mary, referring to a passage in the work of al-Makin. It may, however, be that Muḥammad's conception was not influenced by any sect, but by the veneration of which Mary was the object in the Church itself. Or it may be an inference due to the identification of 'Isā with the Holy Ghost (cf. *sūra* iv. 169 as translated above), which made a vacant place in the Trinity, which Mary seemed entitled to occupy. A different explanation is attempted by Sayous, *l. c.*, p. 61 (see *Bibliography*).

A comparatively large place is occupied in the *Qur'an* by the story of Maryam and 'Isā. Many of the features narrated agree, partly or wholly, with narratives in the apocryphal Gospels. *Sūra* xxiii. 52 (see above) mentions the elevated place that was prepared for 'Isā and his mother. It is not clear which tradition is here alluded to. According to St. Luke i. 39, Mary went to the mountains to visit Elisabeth. In the *Protevangelium Jacobi* (chap. xxii; Syriac text, p. 20) it is Elisabeth who flees together with John to a mountain, which opens to protect them against their persecutors. The Muslim commentators mention Jerusalem, Damascus, Ramla, Egypt as being possibly meant by the "elevated place". Maracci thinks of Paradise.

In two passages of the *Qur'an* there is a fuller narrative of 'Isā's birth and what is connected with it, viz. in *sūra* xix. (which bears the title of Maryam), vs. 1—35, and in *sūra* iii. 31—42.

Sūra xix. opens with the story of Zakariyā' and Yahyā (vs. 1—15); on this follows the story of Maryam and 'Isā (vs. 16—34). *Sūra* iii. 31—42 contains *a.* the birth of Maryam; *b.* the annunciation of Yahyā (vs. 33—36); *c.* the annunciation of 'Isā (vs. 37—41). The comparison of *sūra* xix. with *sūra* iii. makes it probable that Muḥammad became acquainted with the story of the birth of Maryam later than with those of Yahyā and 'Isā.

a. The birth of Maryam. This story goes back to a Christian tradition corresponding closely with that which is contained in the *Protevangelium Jacobi* and *De natiuitate Mariae*. Mary's father is called 'Imrān in the *Qur'an*, Ioachim in Christian tradition; Ibn Khaldūn (*Ioar*, ii. 144) is also acquainted with the name Ioachim. It has been supposed that the name of 'Imrān, which apparently corresponds with the Biblical 'Amram, the father of Moses, as well as the fact that Maryam is called

a sister of Hārūn (sūra xix. 29), is due to a confusion between the two Biblical Maryam's. Sale, Gerock and others think such a confusion improbable. At any rate Muslim tradition assures us that there is a distance of 1,800 years between the Biblical 'Amram and the father of Mary.

Imrān's wife, 'Isā's grandmother, is not mentioned by name in the Qur'ān. In Christian as well as in Muslim tradition she is called Hanna. It is only in Muslim tradition that her genealogy is worked out. She is a daughter of Fākūdh and a sister of Ishbā', the Biblical Elisabeth.

According to a different genealogy Ishbā' and Maryam were sisters, daughters of Imrān and Hanna (Mas'ūdi, *Muwāḍi*, i. 120 sq.; Ṭabarī, *Tafsīr*, iii. 144).

Imrān and Hanna were old and childless. One day the sight of a bird in a tree, which was feeding her young, aroused Hanna's desire for a child. She prays God to fulfil her desire and vows, if her prayer should be heard, the child to the temple. She had however forgotten that, according to the Jewish law, it would be impossible, to accomplish her vow, if she should give birth to a female child (cf. *Prot. Jacobi*, chapters iii., iv.; Syriac text, p. 4). Compare with this Sūra, in. 31: "How the wife of Imrān said, O my Lord, I have vowed to Thee what is in my womb. Now accept [this vow] from me. Thou art the hearing, the knowing. And when she had given birth to the child, she said, O my Lord, I have given birth to a female child... and I have called her Maryam".

Then the Qur'an relates how she invoked on behalf of Maryam and her posterity Allah's protection from Satan. On this verse is based the well-known *ḥadīth*: "Every child that is born, is touched (or stung) by Satan and this touch makes it cry, except Maryam and her son" (Bukhārī, *Muḥṣan*, lib. 44; *Tafsīr*, Sūra 3, b. 2; Muslim, *Ḥadīth*, trad. 146, 147; Ahmad b. Hanbal, *Musnad*, ii. 233, 274, 288, 292, 319, 368, 523). This tradition is used in support of the impeccability (*ʿiṣma*) of 'Isā, Maryam and the Prophets in general (cf. al-Nawawī *ad* Muslim, *l. c.* and al-Baiḥaqī *ad* Sūra in. 31).

The Qur'an further relates (vs. 32) that the child grows up in a chamber in the temple (*miḥrāb*; cf. the *κεῖρα* in *Prot. Jac.*, vi.; Syr. text, p. 5 *et*) under the divine grace and under Zakariyā's care. According to Muslim tradition, Imrān had died before the birth of Maryam, and Zakariyā claimed authority over her on account of his being her uncle; the rabbis did not recognise his claim; his right was proved by an ordeal,

consisting in the parties throwing their pens or arrows in a river; the only one that floated was that of Zakariyā'. Sūra iii. 39 refers to this. Christian tradition knows of an ordeal only in the case of Joseph, who, because a dove comes forth from his staff, is recognised as Maryam's guardian.

As often as Zakariyā' enters Maryam's *miḥrāb*, he finds her being provided with food in a miraculous way (vs. 32). This feature also belongs to Christian tradition (*Prot. Jacobi*, chap. viii.; Syr. text, p. 7). The person of Joseph is not mentioned in the Qur'an. In Muslim tradition he takes care of Maryam, his cousin, because Zakariyā' is no longer able to do so, on account of old age. Maryam stays however in the temple, which she leaves during her monthly period only. According to Christian tradition, Joseph takes her into his house when she attains to womanhood, lest she should defile the temple.

b. The annunciation of Yahyā. See this art. and ZAKARIYĀ'.

c. The annunciation and birth of 'Isā. The more detailed narrative is that of sūra xix. 16 *sqq.* Maryam retires to "a place situated eastward", where she hides herself behind a curtain. The commentaries do not know whether a place to the east of Jerusalem is meant, or the eastern part of her house, to which she retires every month. It is said that this is the origin of the *kibla* of the Christians.

In vs. 17—21 the story of the annunciation is given (cf. above), followed by that of 'Isā's birth, which, according to some Muslim traditions, followed the conception either immediately or very soon. The pains of childbirth came upon Maryam when she was near the trunk of a palm. "She said, would to God I had died before this, and had become a thing forgotten, and lost in oblivion. And he who was beneath her [i.e. the child, or Djibril, or the palm] called to her, saying, Be not grieved; God has provided a rivulet under thee; and shake the trunk of the palm and it shall let fall ripe dates upon thee, ready gathered. And eat and drink and calm thy mind". This story may, perhaps, be considered as a parallel to the Christian tradition in which it is related that, during the flight to Egypt, the babe Jesus ordered a palm in the desert to bow down in order to refresh Mary by its dates; whereupon the palm obeyed and stayed with its head at Mary's feet, till the child ordered it to stand upright again and to open a vein between its roots in order to quench the thirst of the holy family (Apocryphal Gospel of Matthew, chap. xx.). The Qur'an goes on (vs. 26): "And when thou seest any man, say, I have vowed a fast unto the Merciful; so I may not speak to any man to-day". The commentaries say, this was meant to avoid importunate questions. This feature is not in Christian tradition; yet in the *Prot. Evangelium Jacobi* it is said (chap. xii.; Syr. text, p. 11) that Mary, who was then 16 years of age, hid herself from the Israelites. According to Muslim tradition, she stayed in a cavern during forty days. "Then she brought him", continues the Qur'an (xix. 28), "to her people, carrying him. They said, O Maryam, now thou hast done a strange thing. O sister of Hārūn, thy father was not a bad man, neither was thy mother a harlot. Then she pointed to the child". Then the child begins to speak, one of the wellknown

miracles ascribed to 'Isā. The "very shameful calumny" which the Israelites brought forth against Maryam, is also mentioned in sūra iv. 155.

As to the words "O sister of Hārūn" (cf. above), it may be added that, according to the commentaries, this Hārūn was not Moses' brother, but one of Maryam's contemporaries, who was either a wicked man, with whom she is compared in this respect, or her pious brother.

A legend about loaves of bread which Maryam gave to the Magi, is mentioned by al-Mas'ūdī, iv. 79 sq.

The flight to Egypt is not mentioned in the *Kur'ān*, unless the "elevated place" (sūra xxiii. 52; cf. above) should be an allusion to it. According to Muslim tradition which is acquainted with it, the abode lasts 12 years. After the death of Herod the holy family returns to Nāṣira.

After his alleged death 'Isā consoles his mother from heaven. According to others it was Mary Magdalene. The stories of the *Transitus Mariae* have not obtained a place in Muslim tradition. Instead of these, there is a narrative of how Maryam went to Rome in order to preach before Mārūt (Nero), accompanied by John (the disciple) and Shim'un, the coppersmith. When Shim'un and Tada'wus (Thaddaeus) were crucified with their heads downward, Maryam fled with John. When they were persecuted the earth opened and withdrew them from their persecutors. This miracle was the cause of Mārūt's conversion.

MARZUBĀN, Arabic form of the title of provincial governors in the Sāsānian empire, especially of the "wardens of the marches", the "markgraves". The word is derived from *marz* which still means in Persian a frontier district (Horn, *Grundriss der neupersischen Etymologie*, p. 218) and is found in Pehlevi in the form *marz-pān* (in the *Kār-nāmak*; cf. H. S. Nyberg, *Hilfsbuch des Pehlevi*, i., Upsala 1928, p. 54) which suggests a north Irānian origin (cf. Lentz, *Z. I. I.*, iv. 255, 295), as we find alongside of *marz* also *marǧ* in Persian (Horn, *loc. cit.*). The

title is not found, however, before the Sāsānian period and in the great inscription of Paikuli, the wardens are called *bitaksh* (Arm. *bdeashkh*), also a north Irānian title (Herzfeld, *Paikuli*, Berlin 1924, p. 155; cf. also Marquart, *Ērānshahr*, p. 165 sq.). In Syriac we find the forms *marzbānā* and *marzabānā* (Payne-Smith) and the Armenian has *marzpan* and *marz(a)pan* (Hubschmann, *Armenische Grammatik*, p. 193). Persian finally has kept the word as *marzbān*, *marzabān* or *marzawān* (cf. e.g. the *Burhān-i Kāfi*).

It is from Arab sources that we are more particularly informed of the duties of the *marzubān*. Al-Ya'qūbī (*Tārīkh*, ed. Houtsma, i. 201) says that it was the title of the *waṭis al-balad*, while the four great divisions of the empire were governed by *pādshāhs*. The historians al-Ṭabari and al-Balādhuri tell us of the different *marzubān* encountered by the Arabs in their conquests (cf. the list of provinces ruled by a *marzubān*, drawn up by Balādhuri, and given by Noldeke in *Gesch. d. Perser und Araber*, Leyden 1879, p. 446). In this period we find these governors acting independently of any higher authority and concluding truces and treaties. They sometimes retained their offices after the Arab conquest. Under the Sāsānians the *marzubān* were far from having such an independent position. We sometimes find them acting as generals under the command of the *spāhbad* (e.g. Joshua Stylites, ed. Wright, p. 61).

Although the title gradually fell into disuse, Muslim Persia still retained the word, used in its original sense of "warden of the marches". It is frequently found in literature (cf. Sa'dī, *Rustān*, ed. Graf, p. 73). On the other hand after the Sāsānian period, *marzubān* and its variants became a proper name (in Arabic sometimes *al-Marzubān*) among Muslims and also among Parsis (cf. the names of the copyists of Pahlavi manuscripts; cf. especially Justi, *Iranisches Namenbuch*, s. v. *Marz-pān*).

(J. H. KRAMERS)

MARZUBĀN B. RUSIAM, a prince of the Bāwand dynasty of Ṭabaristān [q. v.] regarded as the original author of the *Marzubān-nāma*, a work in Persian prose containing a series of short stories and fables of a moral and didactic character. This book is known in two versions in elegant Persian of the xiiith century, the author of one of which was Sa'd al-Dīn al-Warāwmi; he dedicated it to Abu 'l-Kāsim Rabīb al-Dīn, vizier of Uzbek b. Muḥammad b. Ildegiz, Atābeg of Ādharbāidjān from 1210 to 1225. These dates give us probable limits for the composition of the book. The other version is the work of Muḥammad b. Ghāzī al-Malaṭyawī, secretary and later vizier of Rukn al-Dīn Sulaimān-shāh, Saldjūq of Rūm, who reigned from 1192 to 1204. It is called *Rawḍat al-'Ukul* and differs a good deal in form and contents from the other, which is called the *Marzubān-nāma*.

In the preface by Sa'd al-Dīn al-Warāwmi we are told that the original work had been written in the language of Ṭabaristān and the ancient *Pārsi*, the popular language, but that thanks to him this valuable work had been given a new life after 400 years (p. 6 and 33 of Mirzā Muḥammad Kazwini's edition). In the first chapter Marzubān b. Sharwīn, descendant of Kayūs, brother of the Sāsānian king Anushirwān, is mentioned as *wādī-i*

kitāb. The *Rawḍat al-ʿUḳūl* on the contrary attributed the original book to a descendant of the Ziyārid Ḳabūs b. Waṣḥmīr and says simply that it is written in a coarse style. Apart from these, there are very few references to the book in Persian literature. The author of the *Ḳābūs-nāma* (composed in 1082) says that the grandmother of his mother was the daughter of the prince Marzubān b. Rustam b. Ṣharwīn, author of the *Marzubān-nāma*. Ibn Isfandiyyār in his *Taʾrīkh-i Tabaristān* (written in 1216) speaks of the *Iṣḫāḥād* Marzubān b. Rustam b. Ṣharwīn Parim as the author of the *Marzubān-nāma*, a work which is in every way better than the book of *Kalīla wa-Dimna*. He adds that this same Marzubān composed a *diwān* in Ṭabarīverse called the *Niki-nāma* (cf. *An abridged Translation of the History of Tabaristān*, by E. G. Browne, Leyden 1905, p. 86); finally the Persian bibliographer Riḏā Ḳulī Khān in the *Farhang-i Nāṣiri* speaks of the *Marzubān-nāma* as having been written by Marzubān b. Rustam and dedicated to (*mansūb ba*) the emir Ḳabūs Ṣhams al-Maʿālī; in the *Madjmaʿ al-Fuṣḥā* the same author incidentally mentions the *Marzubān-nāma*.

These very incomplete and sometimes contradictory statements have caused Mirzā Muḥammad Ḳazwīnī to suggest that the individual who gave the book its name was Marzubān, son of the "king" of Ṭabaristān, Rustam b. Ṣhahriyār b. Ṣharwīn b. Rustam b. Surkhāt, a descendant of Bāw, son of Kayūs, brother of Anushirwān. This genealogy is based on Ibn Isfandiyyār's work and seems more probable than that given by Schefer (*Chrest. pers.*, ii., p. 194), who thinks that Marzubān was the son of Rustam b. Surkhāt (d. 895). The date of Rustam b. Ṣhahriyār b. Ṣharwīn, who was in all probability the father of Marzubān, is only known from a coin of the year 355 (966) (H. L. Rabino, *Mazandarān and Astārābād*, London 1928, *G.M.S.*, N.S. vii., p. 135). Marzubān must have therefore flourished about 1000 A.D., i.e. during the period of the Persian renaissance.

In the first chapter of the *Marzubān-nāma* Marzubān is described as the brother of the reigning "king" (perhaps Dārā b. Rustam, who reigned for 8 years; cf. Rabino, *loc. cit.*) who begged to be allowed to live a life of seclusion and to compose a book containing "wise counsels and useful directions for the conduct of life in this world". In this connection he has a disputation with the king and his vizier in the course of which he relates several anecdotes. The other chapters continue in the same style. Several of the fables and anecdotes are found in other books just as we find similar stories in the book of *Kalīla wa-Dimna* and in the *Arabian Nights*. The collection therefore belongs to an essentially Persian literary type, which has had considerable influence on Arabic literature. Since its contents have not been examined for comparison, it would be too hazardous to express an opinion on its relation to similar collections and popular Persian stories. It is very possible that a number of the stories are of Indian origin. On the other hand, we ought perhaps not to credit the statement that originally it was written in the Ṭabari dialect; for then we should have to believe that the two authors of the new recension knew this dialect, about which however, we only have the notes in the *Taʾrīkh-i Ṭabaristān* of Ibn Isfandiyyār. Perhaps the reference is to a text in archaic Persian like the probable lang-

uage of the *Khudāi-nāmak* which Firdawsī used (cf. Noldeke, *Geschichte des Artachsir i Pāpakān*, Göttingen 1879, p. 27) and the source of a poem like *Wis u-Rāmīn*, a text which no longer pleased the taste of the literary connoisseurs of the xiith century.

The *Marzubān-nāma* was published by Mirzā Muḥammad Ḳazwīnī in 1908 (*G.M.S.*, vii.) from a manuscript in the British Museum (Or. 6476) with the help of two other MSS. in the same collection, one in the Bibliothèque Nationale and another sent from Persia. The Paris manuscript had already been used for the publication of extracts from the *Marzubān-nāma* in Ch. Schefer's *Chrestomathie persane*, Paris 1885, p. 172—199. The *Rawḍat al-ʿUḳūl* is represented by a manuscript in Leyden (cf. M. Th. Houtsma, *Eine unbekannte Bearbeitung des Marzbān-nāme*, *Z. D. M. G.*, lii, 359—392) and another in Paris. Mirzā Muḥammad has given extracts from it in the preface to his edition. There is also an Arabic version of the same work from the pen of Ibn ʿArabshāh, based on a Turkish version of Saʿd al-Warāwīn's recension; this Arabic text was lithographed at Cairo in 1278.

Bibliography: The philological data have been collected by Mirzā Muḥammad Khān in the preface of his edition; Schefer's observations (p. 194—211) are to be utilised with caution. Cf. also: H. Ethé, *Neuperische Literatur*, in *Grundriss d. iran. Phil.*, ii, 328 sqq. and E. G. Browne, *A Literary History of Persia*, ii, 115, 489. (J. H. KRAMERS)

MASʿĀ. [See SAʿY.]

MASAGAN. [See MAZAGHĀL.]

MASCARA, a town in Algeria (department of Oran), 50 miles S.W. of Mostaganem and 60 S.E. of Oran. Its position is 35° 26' N. Lat. and 8° E. of Greenwich. It lies on the southern slope of the Beni Ṣhūgran range, called by the Arabs Ṣhārib al-Riḥ and is built on the edge of a ravine at the bottom of which runs the Wād Sīdī Ṭūdjiman on the other side of which to the N.W. lies the native faubourg of Bāb ʿAlī. Mascara commands the plain of Eghris, which measures 25 to 30 miles from W. to E. and 10 to 12 miles from N. to S. and is one of the most fertile regions of Algeria. The natives have grown cereals here from the earliest times and the Europeans have introduced tobacco and created vineyards, the produce of which is celebrated. It is the market for a region, becoming more and more prosperous, and by the census of 1926 had 30,669 inhabitants of whom 16,630 were natives.

Mascara is of considerable antiquity. According to Bakrī (*Masālik*, transl. de Slane, rev. by Fagnan, p. 160), it included among its inhabitants people who came from Tihert (Tlaret) some of whom went and settled at Ifgan, a day's journey S.E., when this town was founded by Yaʿlā b. Muḥammad, son of Ṣāliḥ the Ifrānīd, in 338 (949—950 A.D.). Ibn Hawḳal (*Description de l'Afrique*, transl. de Slane, *Journ. As.*, 1842) and Idrisi (transl. de Goeje, p. 96) mention Mascara as a large well watered village rich in fruits. The Almohads seem to have built a fortress there. The Ziyānids of Tlemcen kept a governor and a garrison there. Leo Africanus (Bk. iv., ed. Schefer, vol. iii., p. 34) notes the importance of the market which was held at Mascara "one of the towns of the Beni Rasi" (Banū Rāshid) where one could buy, along with cereals in large quantities, cloth and articles of

harness manufactured in the country. The rulers of Tlemcen drew considerable revenues from it: 40,000 pistoles, according to Marmol (*Africa*, vol. ii, p. 356).

The Turks established themselves at Mascara in the xvth century and placed a garrison there. In 1701 they made it the capital of the beylik of the west, which had hitherto been Mazūna in Dahra. The beys lived there till Oran was reoccupied by the Algerians in 1792. During this period, Mascara, which had hitherto only been an insignificant place, began to look like a regular town. The beys built two mosques and a madrasa, a wall and a kašba and brought in a water-supply. The manufacture of burnuses and *ha'iks*, celebrated throughout the Regency, enriched the inhabitants. This prosperity began to decline after the beys left Mascara and especially after the risings, which broke out in the province of the west in the beginning of the sixteenth century. The Darkāwi Ben Sherif seized the town in 1805 and held it for a time. In 1827 it was attacked by the marabout Muḥammad al-Tidjāni. Supported by the Ḥašhim he gained possession of the faubourg of Bāb 'Alī but was killed by the Turks when preparing to storm the town itself. At the end of Turkish rule, 'Abd al-Kādir [q. v.] who had been proclaimed Sultān by the tribes of the plain of Eghris, established his seat of government at Mascara, but rarely lived there. An expedition, in the month of December 1836 led by Marshal Clauzel, occupied Mascara which the French abandoned next day, after burning down part of it. The emīr returned to the town and held it till May 30, 1841, when a column under Bugeaud occupied it finally for the French. Mascara, then half in ruins, had only a population of 2,840 inhabitants.

Architecture.

A. Origin of the Mosque.

The word מִסְבֵּדָה is found in Aramaic, the earliest occurrence being in the Jewish *Elephantine Papyri* (ed. Sachau, pl. 32, ed. Ungnad, N^o. 33; Cowley, *Aramaic Papyri of the fifth Cent. B. C.*, N^o. 44), also frequently in Nabataean (*Corp. Inscr. Semit.*, ii. 161, 1, 176, 185, 188, 190, 218; cf. Schwally, *Z.D.M.G.*, lii, 1898, p. 134; Lidzbarski, *Handbuch d. nordsem. Epigr.*, p. 152, 328; Cooke, *North Semitic Inscriptions*, p. 238). The word.

formed from סָבַד "to prostrate oneself" seems to mean in Nabataean a stele, a sacred pillar, although the meaning "place of worship" has also been suggested. In the *Elephantine Papyri* where it is sworn by בְּמִסְבֵּדָה וּבְעִנְיֵיהוּ both meanings are possible. The Syriac ܡܫܒܕܐ and ܡܫܒܕܐ (cf. the Lexica) is like the Amharic *masgəd* derived from the Arabic, while the Ethiopic *mäsḡād* "temple, church" is perhaps a genuine formation from the verb (which is certainly borrowed from the Aramaic: cf. Noldeke, *Neuz Beiträge z. sem. Sprachw.*, p. 36). The Arabic *masdjid* may have been formed independently from the corresponding verb, which also undoubtedly comes from the Aramaic; probably the above mentioned Aramaic substantive was simply taken over, although no links can be shown between the Nabataean inscriptions and the Qur'an.

The word in any case can hardly have been formed by Muḥammad himself from its specific connection with divine service ("place where one *sadjada* or prostrates oneself").

1. The Meccan period.

The word is used in the Qur'an especially of the Meccan sanctuary (*al-Masdjid al-ḥarām*, Sūra ii. 139, 144, 145, 187, 192, 214; v. 3; viii. 34; ix. 7, 19, 28; xvii. 1; xxii. 25; xlviii. 25, 27); according to later sources, this was already the usage in the Meccan period (cf. Yaḳūbī, ed. Houtsma, i. 285, 12). According to tradition the term *al-Masdjid al-aḳṣā* (Sūra xvii. 1) means the Jerusalem sanctuary (according to Schrieke, *Isl.*, vi. 1 sqq.; cf. Horovitz, *ibid.*, ix. 159 sqq., the reference is rather to a place of prayer in heaven); and in the legend of the Seven Sleepers *masdjid* means a tomb-sanctuary probably Christian, certainly pre-Muḥammadan (Sūra xviii. 20). The word is also applied to pre-Islamic sanctuaries, which belong to God and where God is invoked, although Muḥammad was not always able to recognise the particular cult associated with them. It is undoubtedly with this general meaning that the word is used in this verse of the Qur'an: "If God had not taken men under his protection, then monasteries, churches and places of prayer (*ṣalawāt*) and *masājid* would have been destroyed" (Sūra xxii. 41). The word is also used in a *ḥadīth* of an Abyssinian church (Bukhārī, *Ṣalāt*, bāb 48, 54; Muslim, *Masājid*, Tr. 3) and in another of Jewish and Christian tomb-sanctuaries (Bukhārī, *Ṣalāt*, bāb 55; Muslim, *Masājid*, Tr. 3). Even Ibn Kḥaldūn can still use the word in the general meaning of a temple or place of worship of any religion (*Muḳaldima*, *faṣl* 4, 6 at the end). There is therefore no question of a word of specifically Muslim creation. This is in entire agreement with Muḥammad's original attitude to earlier religions. Just as Abraham was a Muslim, so David had a *masdjid* (Ṭabari, i. 2408, 7 sqq.).

To the Prophet the Meccan sanctuary always remained the principal mosque, known as *Bait Allāh* even before the time of the Prophet. It was a grave charge brought against the Qurāish in the Meccan period that they drove the believers out of *al-Masdjid al-ḥarām* (Sūra ii. 214; v. 3; viii. 34; xxii. 25; xlviii. 25), which was considered all the more unjust as they worshipped the true lord of the sanctuary. To the true God belonged *al-masājid* (Sūra lxxii. 18, Meccan); it is therefore an absurdity for the godless to prevent the wor-

ship of God in "God's own mosques" (Sūra ii. 108). The result was that it was revealed in the year 9: "It is not right for polytheists to frequent the mosques of God" (Sūra ix. 17 sq.) and the opponents of the new religion were therefore excluded from the sanctuary. The *Sīra* agrees with the *Ḳim ān*, that the sanctity of *al-Masḍīd al-ḥarām* to which Muḥammad had been used from childhood was always regarded by him as indisputable. Like other Meccans, he and his followers regularly made the *ṭawāf* around the Ka'ba and kissed the Black Stone (e. g. Ibn Hishām, p. 183, 12 sqq., 239, 8, 251, 11); it is frequently stated that he used to sit in the masḍīd like his fellow-citizens, alone or with a follower or disputing with an opponent (Ibn Hishām, p. 233, 16; 251, 15; 252, 14; 259, 260, 294, 18 sq.). It is related that he used to perform the ṣalat between the Yaman corner and the Black Stone, apparently from the narrator's context very frequently (Ibn Hishām, p. 190, 9 sqq.). After his conversion, 'Umar is said to have arranged that believers performed the ṣalāt unmolested beside the Ka'ba (Ibn Hishām, p. 224, 13 sq., 17 sq.). How strongly Muḥammad felt himself attached to the Arab sanctuary is evident from the fact that he took part in the traditional rites there before the Hidra (Sūra cviii, 21; in the year 1, one of his followers, Sa'd b. Mu'adh, took part in the pilgrimage ceremonies and in the year 2 he himself sacrificed on the 10th Dhu 'l-Hiḍḍja on the muṣallā of the Banū Salima. He therefore, here as elsewhere, retained ancient customs where his new teaching did not directly exclude them. But when an independent religion developed out of his preaching, a new type of divine service had to be evolved.

In Mecca, the original Muslim community had no special place of worship. The Prophet used to perform the ṣalāt in secret in the narrow alleys of Mecca with his first male follower 'Alī and with the other earliest Companions also (Ibn Hishām, p. 159, 106, 13 sqq.). The references are usually to the solitary ṣalāt of the Prophet, sometimes beside the Ka'ba (Ibn Hishām, p. 190, 9 sqq.), sometimes in his own house (Ibn Hishām, p. 203, 8 sq.). That the believers often prayed together may be taken for granted; they would do so in a house (cf. Ibn Hishām, p. 202). Occasionally also 'Umar is said to have conducted the ritual prayer with others beside the Ka'ba (Ibn Hishām, p. 224) because 'Umar was able to defy the *Ḳuraish*. When the Prophet recited in the mosque the revelation, later abrogated, recognising al-Lāt, al-'Uzzā and Manāt, according to the legend, not only the believers but also the polytheists present took part in the *ṣubḥūd* (Ṭabarī, i. 1192 sq.). Abū Bakr is said to have had a private place of prayer (*masḍīd*) in Mecca in his courtyard beside the gate: the *Ḳuraish*, we are told, objected to this because women and children could see it and might be led astray by the emotion aroused (Ibn Hishām, p. 246; Bukhārī, *Ṣalāt*, B. 86; *Kaṣā'ib*, B. 14 etc.; *Maṣā'ir*, B. 22).

In the dogma taught by Muḥammad a sanctuary was not a fundamental necessity. Every place was the same to God and humility in the presence of God, of which the ritual prayer was the expression, could be shown anywhere; hence the saying of the Prophet that he had been given the whole world as a masḍīd, while earlier prophets could only pray in churches and synagogues

(Wāḳidī, transl. Wellhausen, p. 403; *Corpus juris di Zaid b. 'Alī*, ed. Griffini, p. 50 and clxxix; Bukhārī, *Ṣalāt*, B. 56; *Tayammum*, B. 1; Muslim, *Masāḍīd*, Tr. 1) and also the saying: "Wherever the hour of prayer overtakes thee, thou shalt perform the ṣalāt and that is a masḍīd" (Muslim, *Masāḍīd*, Tr. 1). That he nevertheless remained firmly attached to the traditional sanctuary of the Ka'ba, produced a confusion of thought which is very marked in Sūra ii. 136 sqq. When in Medina he was able to do as he pleased, it must have been natural for him to create a place where he could be undisturbed with his followers and where they could perform the ritual ṣalāt together.

2. The Foundation of the Mosque in Medina.

According to one tradition the Prophet came riding into Medina on his camel with Abū Bakr as *ṣūf* surrounded by the Banū Nadjdjār. The camel stopped on Abū Aiyūb's *finā*. Here (according to Anas) the Prophet performed the ṣalāt, and immediately afterwards ordered the mosque to be built and purchased the piece of land from two orphans, Sahl and Suhail, who were under the guardianship of Mu'adh b. 'Afra', for 10 dinārs, after declining to accept it as a gift; he lived with Abū Aiyūb until the mosque and his houses were completed. During this period he performed the ṣalāt in courtyards or other open spaces (Bukhārī, *Ṣalāt*, B. 48; Muslim, *Masāḍīd*, Tr. 1; Aḥmad b. Hanbal, *Musnad*, iii. 212 above; Ibn Hishām, p. 336; Ṭabarī, i. 1258 sq.; Mas'ūdī, *Murūdj*, iv. 140 sq.). According to this tradition, the building of the mosque was intended by the Prophet from the first and the choice of the site was left to the whim of his mount. According to another tradition the Prophet took up his abode with Abū Aiyūb, but during the first period of his stay in Medina he conducted the ṣalāt in the house of Abū Umāma As'ad, who had a private masḍīd, in which he used to conduct ṣalāts with his neighbours. The Prophet later expressed the desire to purchase the adjoining piece of ground and he bought it from the two orphans, who, according to this tradition, were wards of As'ad (Balādhuri, *Futūḥ al-Buldān*, ed. de Goeje, p. 6; cf. Wustenfeld, *Gesch. d. Stadt Medina*, p. 60). The site was covered with graves, ruins (*ḫhīrab*; also *ḥarath*, Ṭabarī, i. 1259, 17; 1260, 1; cf. Aḥmad b. Hanbal, *Musnad*, iii. 212, 7, perhaps due to an old misreading) and palm-trees and was used as a place for keeping camels (and smaller domestic animals, Bukhārī, *Wuḍū'*, B. 66). The site was cleared, the palms cut down and the walls built. The building material was bricks baked in the sun (*labīn*) (Ibn Hishām, p. 337; Bukhārī, *Ṣalāt*, B. 62, 65; according to one tradition they were baked at the well of Fāṭima, Wustenfeld, *Stadt Medina*, p. 31); in places it was a courtyard surrounded by a brick wall on a stone foundation with three entrances: the gateposts were of stone. On the *ḫibla* side (i. e. the north wall) at first left open, the stems of the palm-trees which had been cut down were soon set up as columns and a roof was put over them of palm-leaves and clay. On the east side two huts of similar materials were built for the Prophet's wives Sawdā' and 'Ā'isha; their entrances opened on to the court and were covered with carpets: they were later increased so that there were nine

little houses for the Prophet's wives. When the *ḵibla* was moved to the south, the arbour at the north wall remained; under this arbour called *ṣuffa* or *ḡulla* the homeless Companions found shelter (Bukhārī, *Ṣalāt*, B. 48, 62; Wüstenfeld, *Medina*, p. 60 sq., 66; Diyārbakrī, *Ta'rikh al-Ḵhamīs*, Cairo 1302, i. 387 sq.; on the *ṣuffa*, p. 387 in the middle; 391 after the middle; cf. L. Caetani, *Annali dell' Islām*, i. 377 sq.). In seven months the work was completed (Wüstenfeld, *Medina*, p. 59), according to others in the month of Ṣafar of the year 2 (Ibn Hishām, p. 339, 18 sq.). The mosque was very simple. It was really only a courtyard with a wall round it; the *ṣuffa* already mentioned supplied a shelter on the north side, while on the south side, later the *ḵibla* side, an arbour was probably built also, for the Prophet used to preach leaning against a palm-trunk and this must have been on the *ḵibla* side. How large the arbours were cannot be ascertained. The mosque was the courtyard of the Prophet's houses and at the same time the meeting-place for the believers and the place for common prayer.

According to the sources, it was the Prophet's intention from the very first to build a mosque at once in Medina; according to a later tradition Gabriel commanded him in the name of God to build a house for God (*Ḵhamīs*, i. 387 infra); but this story is coloured by later conditions. It has been made quite clear, notably by L. Caetani (*Annali dell' Islām*, i. 432, 437 sq.) and later by H. Lammens (*Mo'āwīa*, p. 8, note 5, 62 etc.; do., *Ziād*, p. 30 sq., 93 sq.) that the earliest masjid had nothing of the character of a sacred edifice. Much can be quoted for this view from *Ḥadīth* and *Sira* (cf. *Annali dell' Islām*, i. 440). The unconverted Thakīfis were received by the Prophet in the mosque to conduct negotiations and he even put up three tents for them in the courtyard (Ibn Hishām, p. 916; Wākidi-Wellhausen, p. 382); envoys from Tamīm also went freely about in the mosque and called for the Prophet, who dealt with them after he had finished prayers (Ibn Hishām, p. 933 sq.; Wākidi-Wellhausen, p. 386). Ibn Unais brought to the masjid the head of the Hudhaili Sufyān, threw it down before the Prophet and gave his report (Ibn Hishām, p. 981 sq.; Wākidi-Wellhausen, p. 225). After the battle of Uḥud the Medina chiefs spent the night in the mosque (Wākidi-Wellhausen, p. 149). The Awsīs tended their wounded here (*ibid.*, p. 215 sq.; Tabarī, i. 1491 sq.); a prisoner of war was tied to one of the pillars of the mosque (Bukhārī, *Ṣalāt*, B. 76, 82; cf. 75). Many poor people used to live in the *ṣuffa* (Bukhārī, *Ṣalāt*, B. 58); tents and huts were put up in the mosque, one for example by converted and liberated prisoners, another by the Banū Ḥifār, in whose tent Sa'd b. Mu'ādh died of his wounds (*ibid.*, B. 77; *Uṣd al-Ḡhāba*, ii. 297). People sat as they pleased in the mosque or took their ease lying on their backs (Bukhārī, *Ilm*, bāb 6; *Ṣalāt*, bāb 85; Ibn Sa'd, i. 124, 14); even so late as the reign of 'Umar it is recorded that he found strangers sleeping in a corner of the mosque (*Kāmil*, p. 118, 15 sq.); the Prophet received gifts and distributed them among the Companions (Bukhārī, *Ṣalāt*, bāb 42); disputes took place over business (*ibid.*, bāb 71, 83) and in general people conducted themselves as they pleased. Indeed, on one occasion some Sudanese or Abyssinians with the approval of the Prophet gave a display with

shield and lance on the occasion of a festival (do., *Ṣalāt*, bāb 69; *Idain*, bāb 2, 25; *Djihād*, bāb 81) and on another a stranger seeking the Prophet, rode into the mosque on his camel (do., *Ilm*, bāb 6). So little "consecrated" was this, the oldest mosque, that one of the *Manāḥikūn*, ejected for scoffing at the believers, could call to Abū Aiyūb "Are you throwing me out of the *Mirbad Banī Tha'laba*?" (Ibn Hishām, p. 362, 10 sq.).

All this gives one the impression of the headquarters of an army, rather than of a sacred edifice. On the other hand the mosque was used from the very first for the general divine service and thus became something more than the Prophet's private courtyard. Whatever the Prophet's intentions had been from the first, the masjid with the increasing importance of Islām was bound to become very soon the political and religious centre of the new community. The two points of view cannot be distinguished in Islām, especially in the earlier period. The mosque was the place where believers assembled for prayer around the Prophet, where he delivered his addresses, which contained not only appeals for obedience to God but regulations affecting the social life of the community (cf. Bukhārī, *Ṣalāt*, bāb 70, 71); from here he controlled the religious and political community of Islām. Even at the real old sanctuaries of Arabia, there were no restrictions on what one could do; what distinguished the mosque from the Christian church or the Meccan temple was that in it there was no specially dedicated ritual object. At the Ka'ba also people used to gather to discuss everyday affairs and also for important assemblies, if we may believe the *Sira* (Ibn Hishām, p. 183 sq., 185, 1, 229, 3, 248, 257, 19). Here also the Prophet used to sit; strangers came to visit him; he talked and they disputed with him; people even came to blows and fought there (Ibn Hishām, 183 sq., 185 sq., 187 sq., 202, 19, 257, 259; *Chron. d. Stadt Mekka*, ed. Wüstenfeld, i. 223, 11). Beside the Ka'ba was the *Dār al-Nadwa*, where important matters were discussed and justice administered (*ibid.*, see index). From the Medina mosque was developed the general type of the Muslim mosque. It depended on circumstances whether the aspect of the mosque as a social centre or as a place of prayer was more or less emphasised.

3. Other Mosques in the time of the Prophet.

The mosque of the Prophet in Medina was not the only one founded by Muslims in his lifetime and according to tradition not even the first, which is said to have been the mosque of Ḵubā'. In this village, which belonged to the territory of Medina (see Wüstenfeld, *Geschichte der Stadt Medina*, p. 126), the Prophet on his Hijra stopped with the family of 'Amr b. 'Awf; the length of his stay is variously given: 3, 5, 8, 14 or 22 days. According to one tradition, he found a mosque there on his arrival, which had been built by the first emigrants and the Anṣār and he performed the ṣalāt there with them (see Wüstenfeld, *op. cit.*, p. 56; Balādhuri, *Futūḥ al-Buldān*, p. 1; Diyārbakrī, *Ta'rikh al-Ḵhamīs*, Cairo 1302, i. 380 sq.). According to another tradition, the Prophet himself founded the mosque on a site, which belonged to his host Kulthūm and was used as a *mirbad* for drying dates or according to others,

to a woman named Labba, who tethered her ass there (Wustenfeld, *Medina*, p. 131; Ibn Hishām, p. 335; Tabari, i, 1260, 6; Ibn Sa'd, i, 1, 6; Mas'ūdī, *Murūdj*, iv, 139; Diyārbakrī, *Khāmis*, i, 381. *al-Sira al-Halabiya*, Cairo 1320, ii, 58 sq.). Out of this tradition arose a legend based on the story of the foundation of the principal mosque in Medina: The Prophet makes (first Abū Bakr and 'Umar without success, then) 'Alī mount a camel and at the place to which it goes builds the mosque with stone brought from the Harra; he himself laid the first stone, and Abū Bakr, 'Umar and 'Uthmān the next ones (*Khāmis*, i, 381). The Prophet is said to have henceforth visited the mosque of Kubā' every Saturday, either riding or walking and the pillar is still shown beside which he conducted the service (Bukhārī, *Faḍl al-Ṣalāt fī Masjīd Makka wa 'l-Madina*, bāb 2, 4; Muslim, *Ḥaḍḍj*, tr. 94; *Khāmis*, i, 382. Balādhuri, p. 5). We are occasionally told that he performed his ṣalāt on the Sabbath in the mosque at Kubā' when he went to the Banū Naḍir in Rabi' I of the year 4 (Wāḳidi-Wellhausen, p. 161).

It is obvious that the customs and ideas of the later community have shaped the legend of this mosque. The only question is whether the old tradition that the mosque was founded either by the Prophet himself or even before his arrival by his followers is also a later invention. We thus come to the question whether the Prophet founded or recognised any other mosques at all than that of Medina. L. Caetani, in keeping with his view of the origin of the mosque, is inclined to deny it, pointing to the fact that there was later an obvious tendency to connect mosques everywhere with the Prophet and that Sūra ix, 108 strongly condemns the erection of an "opposition mosque" (*M. al-Dīrār*). The Qur'ān passage is as follows: "Those who have built themselves a masjid for opposition (*dīrār*) and unbelief and division among the believers and for a refuge for him who in the past fought against God and his Prophet, and they swear: we intended only good. God is witness that they are liars! Thou shalt not stand up in it, for verily a masjid which is founded on piety from the first day of its existence has more right that thou shouldst stand in it; in it are men who desire to purify themselves and God loveth those who purify themselves" (Sūra ix, 108-109). According to tradition this was revealed in the year 9: when the Prophet was on the march to Tabūk, the Banū Sālim said to him that they had built a mosque to make it easier for their feeble and elderly people, and they begged the Prophet to perform his ṣalāt in it and thus give it his approval. The Prophet postponed it till his return, but then this revelation was announced, because the mosque had been founded by *Munāẓikūn* at the instigation of Abū 'Amir al-Kāhib, who fought against the Prophet. According to one tradition (so Ibn 'Umar, Zaid) the "mosque founded on piety" was that of Medina from which the people wished to emancipate themselves; according to another (Ibn 'Abbās) the reference was to that of Kubā'; Abū 'Amir and his followers were not comfortable among the Banū 'Amr b. 'Awf and therefore built a new mosque. According to some traditions it was in Dhū Awān. The Prophet however had it burned down (Tabari, i, 1704 sq.; Ibn Hishām, p. 357

sq., 906 sq.; Ibn Sa'd, i, 1, 6; Wāḳidi-Wellhausen, p. 410 sq.; Tabari, *Tafsīr*, xi, 17 sqq.; Wustenfeld, *Medina*, p. 131; *al-Sira al-Halabiya*, ii, 60; Balādhuri, p. 1 sq.; Muslim, *Ḥaḍḍj*, tr. 93). If the connection with the Tabūk campaign is correct, the *Masjīd al-Dīrār* is to be sought north of Medina; the "mosque founded on piety" would then be the mosque of Medina rather than that of Kubā' which lies to the south of it. There is in itself nothing impossible about the rejection in principle of any mosque other than that of Medina. We should then have to discard the whole tradition, for, according to it, the Prophet is at first not unfavourably disposed to the new mosque and his wrath, according to the tradition, arises from the fact that it had been founded by a refractory party. But as a matter of fact there are indications that a number of mosques already existed in the time of the Prophet; for example, the verse in the Qur'ān: "in houses, which God hath permitted to be built that His name might be praised in them, in them men praise Him morning and evening, whom neither business nor trade refrain from praising God and performing the ṣalāt and the giving of alms" etc. (Sūra xxiv, 36 sq.). If this revelation, like the rest of the Sūra, is of the Medina period, it is difficult to refer it to Jews and Christians, and this utterance is quite clear: "Observe a complete fast until the night and touch thou them (i.e. women) not while ye are in the mosques" (Sūra ii, 183). This shows that there were already in the time of the Prophet, several Muslim mosques which had a markedly religious character and were recognised by the Prophet.

That there were really public places of prayer of the separate tribes at a very early date is evident from the tradition that the Prophet in the year 2 offered his sacrifice on the 10th Dhū 'l-Hijja on the Muṣallā of the Banū Salima. In addition there are constant references to private *masājid* where a few believers, like Abū Bakr in Mecca, made a place for prayer in their houses and where others sometimes assembled (Bukhārī, *Ṣalāt*, bāb 46, 87; *Tahāẓẓud*, bāb 30; cf. also *Adhān*, bāb 50).

B. Origin of Mosques after the time of the Prophet.

1. Chief Mosques.

What importance the Medina mosque had attained as the centre of administration and worship of the Muslims is best seen from the fact that the first thought of the Muslim generals after their conquests was to found a mosque as a centre around which to gather.

Conditions differed somewhat according as it was a new foundation or an already existing town. Important examples of the first kind are Baṣra, Kūfa and al-Fuṣṭāṭ. Baṣra was founded by 'Uṭba b. Nāfi' as winter-quarters for the army in the year 14 (or 16 or 17). The mosque was placed in the centre with the *Dār al-Imāra*, the dwelling of the commander-in-chief with a prison and *Diwān* in front of it. Prayer was at first offered on the open space which was fenced round; later the whole was built of reeds and when the men went off to war the reeds were pulled up and laid away. Abū Mūsā al-Ash'arī, who later became 'Umar's Wālī, built the edifice of clay and bricks baked in the sun (*labīn*) and used grass

for the roof (Balādhuri, p. 346 sq., 350; *B. G. A.*, v. 187 sqq.; Yāqūt, *Muḍjam al-Buldān*, i. 642, 6-9; cf. Ṭabari, i. 2377, 14 sqq.). It was similar in Kūfa which was founded in 17 by Sa'd b. Abi Waḳḳāš. In the centre was the mosque and beside it the *Dār al-Imāra* was laid out. The mosque at first was simply an open quadrangle, *ṣahn*, marked off by a trench round it. The space was large enough for 40,000 persons. It seems that reeds were also used for building the walls here and later Sa'd used *labin*. On the south side (and only here) there was an arbour, *ḡulla*, built (cf. Balādhuri, p. 348, 1: *ṣuffa*). The *Dār al-Imāra* beside the mosque was later by 'Umar's orders combined with the mosque (Ṭabari, i. 2481, 12 sqq., 2485, 16, 2487 sqq., 2494, 14; Yāqūt, *Muḍjam*, iv. 323, 10 sqq.; Balādhuri, p. 275 sqq.; cf. *Annali dell' Islām*, iii. 846 sqq.). The plan was therefore an exact reproduction of that of the mosque in Medina (as is expressly emphasised in Ṭabari, i. 2489, 4 sqq.); the importance of the mosque was also expressed in its position and the commander lived close beside it. There was no difference in al-Fuṣṭāṭ, which, although there was already an older town here, was laid out as an entirely new camp. In the year 21, after the conquest of Alexandria, the mosque was laid out in a garden where 'Amr had planted his standard. It was 50 *dhira'* long and 30 broad. Eighty men fixed its *ḡibla*, which however was turned too far to the east, and was therefore altered later by Ḳurra b. Ṣharik. The court was quite simple, surrounded by a wall and had trees growing on it; a simple roof is mentioned; it must be identical with the above mentioned *ḡulla* or *ṣuffa*. 'Amr b. al-'Aṣī lived just beside the mosque and around it the *Ahl al-Ra'ya*. Like the house of the Prophet, the general's house lay on the east side with only a road between them. There were two doos in each wall except the southern one (Yāqūt, *Muḍjam*, iii. 898 sq.; Maḳrīzī, *Khitaṭ*, iv., Cairo 1326, p. 4 sqq.; Ibn Duḳmāḳ, *K. al-Intiṣār*, Cairo 1893, p. 59 sqq.; Suyūṭī, *Ḥusn al-Muḥāḍara*, i. 63 sq.; ii. 135 sq.; cf. *Annali dell' Islām*, iv. 554, 557, 563 sqq.). We find similar arrangements made in al-Mawṣil twenty years earlier (Balādhuri, p. 331 sq.).

In other cases the Muslims established themselves in old towns either conquered or surrendered by treaty; by the treaty they received a site for their mosque (e.g. Balādhuri, p. 116, 14, 147. 2). But the distinction between towns which were conquered and those which were surrendered soon disappeared and the position is as a rule not clear. Examples of old towns in which the Muslims established themselves are al-Madā'in, Damascus and Jerusalem. — In al-Madā'in Sa'd b. Abi Waḳḳāš after the conquest in 16 distributed the houses among the Muslims and Kisrā's *Iwān* was made into a mosque, after Sa'd had conducted the *Ṣalāt al-Faṭḥ* in it (Ṭabari, i. 2443, 15 sq., 2451, 7 sqq.). In Damascus which was occupied in 14 or 15 by capitulation, according to tradition, the Church of St. John was divided so that the eastern half became Muslim from which Muslim tradition created the legend that the city was taken partly by conquest and partly by agreement (Balādhuri, p. 125; Yāqūt, *Muḍjam*, ii. 591; Ibn Dībair, *Rihla*, p. 262; *J. A.*, ser. 9, vii. 376, 381, 404). As a matter of fact however, the Muslims seem to have laid out their own mosque here just beside the church

[cf. DAMASCUS]; and close beside it again was the *Al-Ḥaḍra'*, the commander-in-chief's palace, from which a direct entrance to the *maḳṣūra* was later made (*B. G. A.*, iii. 159, 4). Conditions here were therefore once more the same as in Medina. But the possibility of an arrangement such as is recorded by tradition cannot be rejected, for there is good evidence of it elsewhere; in Ḥimṣ for example, the Muslims and Christians shared a building in common as a mosque and church, and it is evident from al-Iṣṭakhri and Ibn Hawḳal that this was still the case in the time of their common authority, al-Balkhī (309 = 921) (*B. G. A.*, i. 61, 7 sq.; ii. 117, 5; iii. 156, 15), and a similar arrangement is recorded for Dabil in Armenia (*B. G. A.*, i. 188, 3 sq.; ii. 244, 21; cf. iii. 377, 3 sq.).

There were special conditions in Jerusalem. The Muslims recognised the sanctuary there, as is evident from the earlier *Ḳibla* and from Sūia xvii. 1 (in the traditional interpretation). It must therefore have been natural for the conquerors, when the town capitulated, to seek out the recognised holy place. Indeed we are told that 'Umar in the year 17 built a mosque in Jerusalem on the site of the temple of Solomon (F. Baethgen, *Fragmente syr. u. arab. Hist.*, p. 17, 110, following Iṣḥāḍnah, metropolitan of Baṣra after 700 A.D.; cf. for the viiith century Theophanes quoted by Le Strange, *Palestine under the Moslems*, 1890, p. 91 note). That the *Ḳubbat al-Ṣakhra* [q. v.] which the Mosque of 'Umar replaced, stands on the old site of the Temple is undoubted. How he found the site is variously recorded [cf. AL-ḲUDS]. The building was, like other mosques of the time of 'Umar, very simple. Arculf who visited Jerusalem about 670 says "The Saracens attend a quadrangular house of prayer (*domus orationis*, i.e. *masjid*) which they have built with little art with boards and large beams on the remains of some ruins, on the famous site where the Temple was once built in all its splendour" (*Itinera Hierosolymitana*, ed. P. Geyer, 1898, p. 226 sq.; transl. by P. Mickle, in *Das Land der Bibel*, ii/2, 1917, p. 19 sq.). It is of interest to note that this simple mosque, like the others, was in the form of a rectangle; in spite of its simple character it could hold 3,000 people, according to Arculf.

As late as the reign of Mu'āwiya we find a new town, *Ḳairawān*, being laid out on the old plan as a military camp with a mosque and *Dār al-Imāra* in the centre (Yāqūt, *Muḍjam*, iv. 213, 10 sqq.). As Balādhuri, for example, shows, the Muslim conquerors even at a later date always built a mosque in the centre of a newly conquered town, at first a simple one in each town, and it was a direct reproduction of the simple mosque of the Prophet in Medina. It was the exception to adapt already existing buildings in towns. But soon many additional mosques were added.

2. Tribal mosques and Sectarian mosques.

There were mosques not only in the towns. When the tribes pledged themselves to the Prophet to adopt Islām, they had also to perform the ṣalā. It is not clear how far they took part in Muslim worship, but if they concerned themselves with Islām at all, they must have had a Muslim place of meeting. Probably even before Islām they had, like the Meccans, their *maḡlis* or *nādī* or *dār ṣhūrā*, where they discussed matters of general importance (cf. Lammens, *Mo'āwīa*, p. 205; Zīād

b. *Abīhī*, p. 30 sqq., 90 sq.; *Le Berceau de l'Islam*, p. 222 sqq.). As the mosque was only distinguished from such places by the fact that it was also used for the common *ṣalāt*, it was natural for tribal mosques to come into existence. Thus we are told that as early as the year 5 the tribe of Sa'd b. Bakr founded mosques and used *adhān* (Ibn Sa'd, *īn*, 44, 7; not mentioned in Ibn Hishām, p. 943 sq.; Tabari, i. 1722): it is also recorded of the Banū Dīdhima who lived near Mecca that they built mosques in the year 8 and introduced the *adhān* (Waḳidi-Wellhausen, p. 351). How far one can rely on such stories in a particular case is however uncertain. A late writer like al-Diyārbakrī says of the Banū 'l-Muṣṭalik that they *aslamū wa-banū masāḍjida* (*Ta'rikh Khumīs*, ii. 132, 20; cf. *Annali dell'Islam*, ii. 221): in the early sources this is not found. Nor is the story, told by Ibn Sa'd at all probable, that envoys from the Banū Ḥanifa received orders to destroy their churches, sprinkle the ground with water and build a mosque (Ibn Sa'd, *īn*, 56, 11 sqq. while Ibn Hishām, p. 945 sq.; Tabari, i. 1737 sqq. and Balādhuri, p. 86 sq. say nothing about it). But that there were tribal mosques at a very early date is nevertheless quite certain. The mosque at Kubā' was the mosque of the tribe of 'Amr b. 'Awf (Ibn Sa'd, *īn*, 6, 2 and cf. above) and according to one tradition, the Banū Ḡhanm b. 'Awf were jealous of it and built an opposition mosque (Balādhuri, p. 3. Tabari, *Tafsīr*, i. 21 infra). A Companion, who had taken part in the battle of Badr, 'Ibān b. Malik, complained to the Prophet that he could not reach the masjīd of his tribe in the rainy season and wanted to build a mosque for himself (Bukhārī, *Ṣalāt*, bāb 46; Muslim, *Masāḍjid*, bāb 47). The Prophet himself is said to have visited the masjīd of the Banū Zurāik (Bukhārī, *Djihad*, bāb 56—58) and in the masjīd of the Banū Salima during the prayer, there was revealed to him Sūra ii. 139, which ordered the new *kibla*, wherefore it was called *Masjīd al-Kiblatayn* (Wustenfeld, *Medina*, p. 62).

The tribal mosque was a sign that the independence of the tribe was still retained under Islām. Indeed we hear everywhere of tribal mosques, for example around Medina that of the Banū Kuraiza, of the Banū Ḥaritha, of the Banū Zafar, of the Banū Wā'il, of the Banū Ḥarām, of the Banū Zurāik, said to have been the first in which the Qur'ān was publicly read, that of the Banū Salima etc. (see Wustenfeld, *Gesch. d. Stadt Medina*, p. 29, 37 sqq., 44, 50, 57, 136 sqq.); the "mosque of the two Kiblas" belonged to the Banū Sawāl b. Ḡhanm b. Ka' b. Salima (Wustenfeld, *Medina*, p. 41). This then was the position in Medina the tribes had usually their own mosques and one mosque was the chief mosque. This was probably the position within the Prophet's lifetime: for in the earliest campaigns of conquest, mosques were built on this principle. 'Umar is said to have written to Abū Mūsā in Baṣra telling him to build a mosque *fi l-djama'a* and mosques for the tribes, and on Fridays the people were to come to the chief mosque. Similarly he wrote to Sa'd b. Abī Waḳḳās in Kūfa and to 'Amī b. al-'Āṣi in Miṣr. On the other hand in Syria where they had settled in old towns, they were not to build tribal mosques (Maḳrīzī, *Khitaṭ*, iv., Cairo 1326, p. 4 infra). It is actually recorded that the tribes in each *khayfa* had their own mosques around the mosque of 'Amr in al-Fuṣṭāṭ (cf. Ibn Duḳmāk,

p. 62 infra sq.) and even much later a tribal mosque like that of the Rāshida was still in existence (Maḳrīzī, *Khitaṭ*, iv. 64, 4 sqq.). Even in the chief mosque, the tribes had their own places (*ibid.*, p. 9, 12 sq.). We have similar evidence from the 'Irāk. In Baṣra for example there was a Masjīd Banī 'Ubād (Balādhuri, p. 356, 2), one of the Banū Rifa'a (*B. G. A.*, vii. 201, 16), one of the Banū 'Adī (*ibid.*, v. 191, 4) and one of the Anṣār (cf. Goldziher, *Muhammedanische Studien*, i. 77, note 5); in Kūfa we find quite a number such as that of the Anṣār (Tabari, ii. 284, 13 sq.), of the 'Abd al-Kais (*ibid.*, ii. 657, 2, 9), of the Banū Duḥmān (*ibid.*, p. 670, 4), of the Banū Makhzūm (*ibid.*, p. 734, 19), of the Banū Hīlāl (*ibid.*, p. 1687, 8), of the Banū 'Adī (*ibid.*, p. 1703, 4), of the Banū Dhuhhl and Banū Hudjir (*ibid.*, p. 532, 8 sq.), of the Djuhaina (*ibid.*, p. 533, 8), of the Banū Ḥarām (*ibid.*, iii. 2509, 10) and the 'Absis even had several masāḍjīd (Balādhuri, p. 278, 12 sq., s. also p. 285 and Goldziher, *loc. cit.*).

During the wars these tribal mosques were the natural rallying points for the various tribes; the mosque was a majlis, where councils were held (Tabari, ii. 532, 6 sqq.) and the people were taught from its minbar (*ibid.*, p. 284); battles often centred for this reason round these mosques (e.g. Tabari, ii. 130, 148, 6, 960). "The people of your mosque", *ahl masāḍjīdikum* (*ibid.*, p. 532, 19) became identical with "your party". Gradually as, new sects arose, they naturally had mosques of their own, just as Musālima before them is said to have had his own mosque (Balādhuri, p. 90, 4 from below; Ibn Ḥanbal, *Musnad*, i. 404 infra). Thus we read later of the mosques of the Ḥanbalis in Baghdad, in which there was continual riot and confusion (Hīlāl al-Ṣābi, *Kitāb al-Wuzarā'*, ed. Amedroz, p. 335). It sometimes happened that different parties in a town shared the chief mosque (*B. G. A.*, iii. 102, 5 sqq.) but as a rule it was otherwise. In particular the Sunnīs and Shī'īs as a rule had separate mosques (cf. Mez, *Die Renaissance des Islams*, p. 63). It sometimes even happened that Hanafīs and Shāfi'īs had separate mosques (Yāqūt, *Mu'djam*, iv. 509, 9; cf. *B. G. A.*, iii. 323, 11). These special mosques were a great source of disruption in Islām and we can understand that a time came when the learned discussed whether such mosques should be permitted at all. But the question whether one might talk of the *Masjīd Banī Fulān* was answered by saying that in the time of the Prophet, the *Masjīd Banī Zurāik* was recognised (Bukhārī, *Ṣalāt*, bāb 41; cf. *Djihad*, bāb 56—58 and Tabari, *Tafsīr*, xi. 20 after the middle of the page).

3. Adaptation to Islām of Older Sanctuaries; Memorial Mosques.

According to the early historians, the towns, which made treaties with the Muslims, received permission to retain their churches (Balādhuri, p. 121, in the middle; Tabari, i. 2405, 2407) while in the conquered towns the churches fell to the Muslims without any preamble (cf. Balādhuri, p. 120 infra). Sometimes also it is recorded that a certain number of churches were received from the Christians, e.g. fifteen in Damascus according to one tradition (*ibid.*, p. 124, 8; otherwise p. 121; cf. *J. A.*, 9 Ser., vii. 403). It is rather doubtful whether the process was such a regular one; in any case the Muslims in course of time appropriated

many churches to themselves. With the mass-conversions to Islām, this was a natural result. The churches taken over by the Muslims were occasionally used as dwellings (cf. Ṭabarī, i. 2405, 2407); at a later date it also happened that they were used as government offices, as in Egypt in 146 (Maḳrīzī, iv. 35; cf. for Kūfa, Balādhuri, p. 286). The obvious thing, however, was to transform the churches taken into mosques. It is related of 'Amr b. al-'Āsī that he performed the ṣalāt in a church (Maḳrīzī, iv. 6) and Zaid b. 'Alī says regarding churches and synagogues, "Perform thy ṣalāt in them; it will not harm thee" (*Corpus iuris di Zaid b. 'Alī*, ed. Griffini, N^o. 364). It is not clear whether the reference in these cases is to conquered sanctuaries; it is evident, in any case, that the saying is intended to remove any misgivings about the use of captured churches and synagogues as mosques. The most important example of this kind was in Damascus where al-Walid b. 'Abd al-Malik in 86 (705) took the church of St. John from the Christians and had it rebuilt; he is said to have offered the Christians another church in its stead (see the references above, B. 1; and also *J. A.*, 9 Ser., vii. 369 sqq.; Quatremère, *Hist. Sult. Maml.*, ii/i. 262 sqq. and the article DAMASCUS). He is said to have transformed into mosques ten churches in all in Damascus. It must have been particularly in the villages, with the gradual conversion of the people to Islām, that the churches were turned into mosques. In the Egyptian village there were no mosques in the earlier generations of Islām (Maḳrīzī, iv. 28 sq., 30). But when al-Ma'mūn was fighting the Copts, many churches were turned into mosques (*ibid.*, p. 30). It is also recorded of mosques in Cairo that they were converted churches. According to one tradition, the Rāshida mosque was an unfinished Jacobite church, which was surrounded by Jewish and Christian graves (Maḳrīzī, iv. 63, 64) and in the immediate vicinity al-Ḥākim turned a Jacobite and a Nestorian Church into mosques (*ibid.*, p. 65). When Djawhar built a palace in al-Ḳāhira, a *dār* was taken in and transformed into a mosque (*ibid.*, p. 269); similar changes took place at later dates (*ibid.*, p. 240) and synagogues also were transformed in this way (Masḳid Ibn al-Bannā', *ibid.*, p. 265). The chief mosque in Palermo was previously a church (Yāqūt, *Mu'djam*, i. 719). After the Crusades several churches were turned into mosques in Palestine (Sauvaire, *Hist. de Jérus. et d'Hebron*, 1876, p. 77; Quatremère, *Hist. Sult. Maml.*, ii/i. 40).

Other sanctuaries than those of the "people of the scripture" were turned into mosques. For example a Masḳid al-Shams between Ḥilla and Kerbelā' was the successor of an old temple of Shamash (see Goldziher, *Muh. Stud.*, ii. 331 sq.) Not far from Iṣṭakhr was a Masḳid Sulamān which was an old "fire-temple", the pictures on the walls of which could still be seen in the time of Ma'sūdi and al-Maḳdisi (ivth century) (Ma'sūdi, *Murūdj*, iv. 77; *B. G. A.*, iii. 444). In Iṣṭakhr itself there was a *djāmi'*, which was a converted fire-temple (*ibid.*, p. 436). In Maṣīṣa, the ancient Mopsuestia, al-Manṣūr in 140 built a mosque on the site of an ancient temple (Balādhuri, p. 165 sq.) and the chief mosque in Dihli was originally a temple (Ibn Baṭṭūṭa, iii. 151); as to Ṭā'if cf. Abū Dāwūd, *Ṣalāt*, bāb 10. Thus in Islām also the old rule holds that sacred places survive changes of religion. It was especially

easy in cases where Christian sanctuaries were associated with Biblical personalities who were also recognised by Islām: e.g., the Church of St. John in Damascus and many holy places in Palestine. One example is the mosque of Job in Shēkh Sa'id, associated with Sūra xxi. 83, xxxviii. 40; here in Silvia's time (fourth century) there was a church of Job (Ma'sūdi, i. 91; Baedeker, *Palast. u. Syrien*⁷, 1910, p. 147).

But Islām itself had created historical associations which were bound soon to lead to the building of new mosques. Even in the lifetime of the Prophet, the Banū Sālim are said to have asked him to perform the ṣalāt in their masḳid to give it his authority (see above A 3). At the request of 'Itbān b. Malik the Prophet performed the ṣalāt along with Abū Bakr in his house and thereby consecrated it as a muṣallā, because he could not get to the tribal mosque in the rainy season (Bukhārī, *Ṣalāt*, bāb 47; *Tahaḳḳud*, bāb 36; Muslim, *Masā'id*, tr. 46; a similar story in Bukhārī, *Adhān*, bāb 47, *Tahaḳḳud*, bāb 33 is perhaps identical in origin). After the death of the Prophet, his memory became so precious that the places where he had prayed obtained a special importance and his followers, who liked to imitate him in everything, preferred to perform their ṣalāt in such places. But this tendency was only an intensification of what had existed in his lifetime: and so it is not easy to decide how far the above stories reflect later conditions. Mosques very quickly arose on the road between Mecca and Medina at places where, according to the testimony of his Companions, the Prophet had prayed (Bukhārī, *Ṣalāt*, bāb 89; Wāḳidi-Wellhausen, p. 421 sqq.); the same was the case with the road which the Prophet had taken to Tabūk in the year 9 (Ibn Hishām, p. 907; Wāḳidi-Wellhausen, p. 394; there were 19 in all, which are listed in *Annali dell' Islām*, ii. 246 sq.). Indeed wherever he had taken the field, mosques were built; for example on the road to Badr, where according to tradition Abū Bakr had built a mosque (Wāḳidi-Wellhausen, p. 39, also Wustenfeld, *Medina*, p. 135). The mosque of al-Faḳīh was built on the spot where the Prophet had prayed in a leather tent during the war with the Banū Naḍir in the year 4 (Wāḳidi-Wellhausen, p. 163; Wustenfeld, *Medina*, p. 132). He is said to have himself built a little mosque in Khaibar during the campaign of the year 7 (Diyārbakrī, *Ta'rikh al-Ḳhāmis*, ii. 49 sq.; cf. *Annali dell' Islām*, ii. 19). Outside Ṭā'if a mosque was built on a hillock, because the Prophet had performed the ṣalāt there during the siege in the year 8, between the tents of his two wives, Umm Sulāma and Zainab (Ibn Hishām, p. 872; sq.; Wāḳidi-Wellhausen, p. 369); in Luyya the Prophet is said to have himself built a mosque while on the campaign against Ṭā'if (Ibn Hishām, p. 872; Wāḳidi-Wellhausen, p. 368 sq.). Mosques arose in and around Medina, "because Muḥammad prayed here" (Wustenfeld, *Gesch. d. Stadt Medina*, p. 31, 38, 132 sqq.). It is obvious that in most of these cases later conditions are put back to the time of the Prophet; in connection with the "war of the Dutch" we are told that: "he prayed everywhere where mosques now stand" (Wāḳidi-Wellhausen, p. 208). Since, for example, the Masḳid al-Faḳīh is also called Masḳid al-Shams (Wustenfeld, *Medina*, p. 132) we have perhaps here actually an ancient sanctuary.

Mosques became associated with the Prophet in many ways. In Medina, for example, there was the Masjid al-Baghla where footprints of the Prophet's mule were shown in a stone, the Masjid al-Iḥḍāba where the Prophet's appeal was answered, the Masjid al-Faṭḥ which recalls the victory over the Meccans, etc. (see Wustenfeld, *Medina*, p. 136 sq.). In Mecca there was naturally a large number of places sacred through associations with the Prophet and therefore used as places of prayer. The most honoured site, next to the chief mosque, is said to have been the house of Khadija, also called Mawlid al-baiyuda Fāṭima, because the daughter of the Prophet was born there. This house, in which the Prophet lived till the Hidjra, was taken over by ʿUkail, ʿAlī's brother, and bought by him through Mu'āwiya and turned into a mosque (*Chroniken d. Stadt Mekka*, ed. Wustenfeld, i. 423; iii. 438, 440). Next comes the house in which the Prophet held his first secret meetings. This was bought by al-Khaizurān, mother of Hārūn al-Rašīd, on her pilgrimage in 171 and turned into a mosque (*Chron. Mekka*, iii. 112, 440). She also purchased the Prophet's birthplace, *Mawlid al-Nabi*, and made it into a mosque (*ibid.*, i. 422; iii. 439). If Mu'āwiya really bought the Prophet's house from his cousin, it was probably the right one, but the demand for places associated with the Prophet became stronger and stronger and we therefore find more and more places referred not only to the Prophet, but also to his Companions. Such are the birthplaces of Ḥamza, ʿUmar and ʿAlī (*Chron. Mekka*, iii. 445), the house of Māriya, the mother of the Prophet's son, Ibrāhīm (*ibid.*, i. 447, 406) who also had a mosque at Medina (Wustenfeld, *Medina*, p. 133). There were also a Masjid Khadija (*ibid.*, i. 324) and a Masjid ʿĀṣha (*ibid.*, iii. 454), a Masjid of the "granted appeal" in a narrow valley near Mecca, where the Prophet performed the *ḡalāt* (*ibid.*, iii. 453), a Masjid al-Djinn, where the Djinn overheard his preaching (*ibid.*, i. 424; iii. 453), a Masjid al-Raḡya, where he planted his standard at the conquest (*ibid.*, ii. 68 infra and 71 supra; iii. 13, 453), a Masjid al-Baṭā where the first homage of the Medinese was received (*ibid.*, i. 428; iii. 441). In the Masjid al-Khaif in Minā is shown the mark of the Prophet's head in a stone into which visitors also put their heads (*ibid.*, iii. 438). Persons in the Bible are also connected with mosques. Adam, Abraham and Ismāʿīl with the Ka'ba, beside which the *Maḳām Ibrāhīm* is shown and in ʿArafa there is still a Masjid Ibrāhīm (*ibid.*, i. 415, 425) and another in al-Zāhir near Mecca (Ibn Džubair, *Riḥla*, 1907, p. 112). To these memorial mosques others were later added, e.g. the Masjid Abi Bakr, Masjid Bilāl, the Mosque of the Splitting of the Moon (by the Prophet) etc. (Ibn Džubair, *Riḥla*, p. 114 sq.; *B.G.A.*, iii. 102 sq.; Snouck Hurgronje, *Mekka*, ii. 27; al-Batānūnī, *al-Riḥla al-Hidjāziya*², Cairo 1329, p. 52 sq.).

In al-Iḥḍāz the Muslims thus acquired a series of mosques which became important from their association with the Prophet, his family and his Companions, and made Muslim history live. On the other hand, in lands formerly Christian, they took over sanctuaries which were associated with the Biblical history which they had assimilated (see Le Strange, *Palestine*, passim). Other mosques soon became associated with Biblical and

Muslim story. The mosque founded by ʿUmar on the site of the Temple in Jerusalem was, as already pointed out, identified as *al-Masdjid al-Aḳṣū* mentioned in Sūra xvii. 1 and therefore connected with the Prophet's night journey and the journey to Paradise. The rock is said to have greeted the Prophet on this occasion and marks in a stone covering a hole are explained as Muḥammad's footprints (sometimes also as those of Idris; cf. Le Strange, *Palestine*, p. 136; al-Batānūnī, *Riḥla*, p. 165; Baedeker, *Palestine*, 1910, p. 52 sq.; cf. Ya'qūbī, ed. Houtsma, ii. 311). The name *al-Masdjid al-Aḳṣū* was used throughout the early period for the whole Ḥarām area in Jerusalem, later partly for it, and partly for the building in its southern part (*B.G.A.*, v. 100; Sauvaire, *Hist. Jérus. Hébron*, p. 95, 121; cf. Le Strange, *Palestine under the Moslems*, p. 96 sq.). Then there were the mosques which had specifically Muslim associations, like the Masjid of ʿUmar on the Mount of Olives where he encamped at the conquest (*B.G.A.*, iii. 172).

In Egypt not only was an old Christian sanctuary called Ma'bad Mūsā (Maḳrizī, iv. 269), but we are also told, for example, that the Mosque of Ibn Ṭūlūn was built where Mūsā talked with his Lord (Maḳrizī, iv. 36); according to al-Ḳudāʿī there were in Egypt four Masāḍīd of Mūsā (Ibn Duḳmāḳ, ed. Vollers, p. 92); there was a Masjid Ya'qūb wa-Yūsuf (*B.G.A.*, iii. 200) and a Joseph's prison, certainly dating from the Christian period (Maḳrizī, iv. 315). There was also a Mosque of Abraham in Munyat Ibn al-Khaṣṣ (Ibn Džubair, p. 58). The chief mosque of Šan'a' was built by Šemī, son of Noah (*B.G.A.*, vii. 110). The old temple near Iṣṭāḳr mentioned above was connected with Sulaimān (Maṣ'ūdī, *Murūdj*, iv. 77; Yāqūt, i. 299). In the mosque of Kūfa not only Ibrāhīm but one thousand other prophets and one thousand saints, described as *waṣī*, are said to have offered their prayers; here was the tree Yaḳṭīn (Sūra xxxvii. 146); here died Yaḡhūth and Ya'ūq, etc. (Yāqūt, iv. 325; also Ibn Džubair, p. 211 sq.) and in this mosque there was a chapel of Abraham, Noah and Idris (Ibn Džubair, p. 212); a large number of mosques were associated with Companions of the Prophet. What emphasis was laid on such an association is seen, for example, from the story according to which ʿUmar declined to perform the *ḡalāt* in the Church of the Resurrection in Jerusalem, lest the church should afterwards be claimed as a mosque.

4. Tomb Mosques.

A special class of memorial mosques consisted of those which were associated with a tomb. The graves of ancestors and of saints had been sanctuaries from ancient times and they were gradually adopted into Islām. In addition there were the saints of Islām itself. The general tendency to distinguish places associated with the founders of Islām naturally concentrated itself round the graves in which they rested. In the Qur'ān, a tomb-masjid is mentioned in connection with the Seven Sleepers (Sūra xviii. 20) but it is not clear if it was recognised. As early as the year 6, the companions of Abū Baṣīr are said to have built a mosque at the place where he died and was buried (Wākidi-Welhausen, p. 262). The Prophet is also said to have visited regularly at al-Baḳī' in Medina the tombs of the martyrs who fell at Uhud and paid reverence to them (*ibid.*, p. 143).

Whatever the exact amount of truth in the story, there is no doubt that the story of the tomb-mosque of Abū Baṣīr is ante-dated. The accounts of the death of the Prophet and of the period immediately following reveal no special interest in his tomb. But very soon the general trend of development stimulated an interest in graves which led to the erection of sanctuaries at them. The progress of this tendency is more marked in al-Wāḳidī, who died in 207 (823), than in Ibn Ishāq who died in 151 (768).

The collections of Ḥādīth made in the third century contain discussions on this fact which show that the problem was whether the tombs could be used as places of worship and in this connection whether mosques could be built over the tombs. The ḥādīths answer both questions in the negative, which certainly was in the spirit of the Prophet. It is said that "Ṣalāt at the graves (*ḥi 'l-makābir*) is *makrūh*" (Bukhārī, *Ṣalāt*, bāb 52); "sit not upon graves and perform not ṣalāt towards them" (Muslim, *Ḍjanā'iz*, tr. 33); "hold the ṣalāt in your houses, but do not use them as tombs" (Muslim, *Ṣalāt al-Musāfirin*, tr. 28). On the other hand it is acknowledged that Anas performed the ṣalāt at the cemetery (Bukhārī, *Ṣalāt*, bāb 48). We are also told that tombs cannot be used as *masājid* (Bukhārī, *Ṣalāt*, bāb 48; *Ḍjanā'iz*, bāb 62). On his deathbed the Prophet is said to have cursed the Jews and the Christians because they used the tombs of their prophets as *masājid*. Ḥādīth explains this by saying that the tomb of the Prophet was not at first accessible (Bukhārī, *Ṣalāt*, bāb 48, 55; *Ḍjanā'iz*, bāb 62; *Anbiyā'*, bāb 50; Muslim, *Masājid*, tr. 3); as a matter of fact its precise location was not exactly known (*Ḍjanā'iz*, bāb 96). The attacks in Ḥādīth insist that tomb-mosques are a reprehensible Jewish practice: "When a pious man dies, they build a masjid on his tomb" etc. (Bukhārī, *Ṣalāt*, bāb 48, 54; Muslim, *Ḍjanā'iz*, bāb 71). Although this view of tomb-mosques is still held in certain limited circles (cf. Ibn Taimiyya, the Wahhābis), the old pre-Islāmic custom soon also became a Muslim one. The expositors of Ḥādīth like al-Nawawī (on Muslim, *Masājid*, tr. 3, lith. Dihli 1319, i. 201) and al-ʿAskalānī, (Cairo 1329, i. 354) explain the above passages to mean that only an exaggerated *taʿzim* of the dead is forbidden so that tombs should not be used as a *qibla*; otherwise it is quite commendable to spend time in a mosque in proximity to a devout man.

The name given to a tomb-mosque is often *qubba*, a word which is used of a tent (Bukhārī, *Ḍjanā'iz*, bāb 62; *Ḥādīth*, bāb 64; *Furq al-Akhams*, bāb 19; *al-Djizya*, bāb 15; Tarafa, *Dīwān*, vii. 1), but later came to mean the dome which usually covers tombs and thus became the general name for the sanctuary of a saint (cf. Ibn Djubair, *Rihla*, p. 114, 115; cf. Dozy, *Supplément*, s. v.). *Maḳām* also means a little chapel and a saint's tomb (v. Berchem, *Corpus Inscr. Arab*, i., N^o. 72, etc.; cf. index). The custom of making a *qubba* at the tomb of a saint was firmly rooted in Byzantine territory, where sepulchral churches always had a dome (Herzog-Hauch, *Realencyclopädie* 3, x. 784). The usual name however for a tomb-sanctuary was *masḥhad*; this is applied to places where saints are worshipped, among Muslim tombs particularly to those of the friends and relations of the Prophet (v. Berchem, *Corpus Inscr. Arab*,

i., N^o. 32, 63, 417, 544; Maḳrīzī, iv., p. 265, 309 sqq.) but also to tombs of other recognised saints, e.g. Maḥḥad Ḍjurdīs in Mawṣil (Ibn Djubair, *Rihla*, p. 236) etc.

The transformation of the tombs of the Prophet and his near relatives into sanctuaries seems to have been a gradual process. Muḥammad, Abū Bakr and ʿUmar are said to have been buried in the house of ʿĀʾisha; Fāṭima and ʿAlī lived beside it. ʿĀʾisha had a wall built between her room and the tombs to prevent visitors carrying off earth from the tomb of the Prophet. The houses of the Prophet's wives remained as they were until al-Walīd rebuilt them. He thought it scandalous that Ḥasan b. Ḥasan b. ʿAlī should live in Fāṭima's house and ʿUmar's family close beside ʿĀʾisha's home in the house of Ḥafṣa. He acquired the houses, had all the houses of the Prophet's wives torn down and erected new buildings. The tombs were enclosed by a pentagonal wall; the whole area was called *al-Rawḍa* "the garden"; it was not till later that a dome was built over it (Wustenfeld, *Medina*, p. 66 sqq., 72 sq., 78 sqq., 89). In the cemetery of Medina, *al-Fakīf*, a whole series of *Maḥḥad* came to be built where tombs of the family and of the Companions of the Prophet were located (*ibid.*, p. 140 sqq.; Ibn Djubair, *Rihla*, p. 195 sqq.). It is often disputed whether a tomb belonged to one or the other (e.g. Tabarī, iii. 2436, 2 sqq.). Such tomb-mosques were sacred (*mukaddas*; Ibn Djubair, *Rihla*, p. 114, 13, 17). they were visited *li 'l-baraka*. The name *al-Rawḍa* of the Prophet's tomb became later applied to other sanctuaries (Ibn Djubair, *Rihla*, p. 46, 16; 52, 11). Separate limbs were covered in some mosques, like the head of al-Ḥusain in Cairo, which was brought there in 491 from ʿAskalān (ʿAlī Pāshā Mubārak, *al-Khiṭaṭ al-Djadida*, iv. 91 sqq.; cf. Sauvaire, *Hist. Jérus. Hébr.*, p. 16); his head was also reverred for some time in the *Maḥḥad al-Ra's* in Damascus (according to Ibn Shākir, *J. A.*, 9th ser., vii. 385).

Gradually a vast number of Muslim tombs of saints came into existence; and to these were added all the pre-Islāmic sanctuaries which were adopted by Islām. No distinction can therefore be drawn between tomb-mosques and other memorial mosques. It was often impossible to prove that the tomb in question ever really existed. In the Maḥḥad ʿAlī for example, ʿAlī's tomb is honoured but Ibn Djubair leaves it in doubt whether he is really buried there (*Rihla*, p. 212) and many located his grave in the mosque at Kūfa and elsewhere (Masʿūdī, *Murūj*, iv. 289; v. 68; *B. G. A.*, ii. 163). In ʿAin al-Bakār near ʿAkkā there was also a Maḥḥad ʿAlī (Yāqūt, iii. 759) and also in the Mosque of the Umayyads (Ibn Djubair, p. 267); on this question cf. *B. G. A.*, iii. 46. Names frequently become confused and transferred. In Mecca between Ṣafā and Marwa there was a *Qubba*, which was associated with ʿUmar b. al-Khaṭṭāb but Ibn Djubair says that it should be connected with ʿUmar b. ʿAbd al-ʿAzīz (*Rihla*, p. 115, 11 sqq.). In *Djiza* there was a *Maḥḥad Abī Huraira*, where the memory of this Companion of the Prophet was honoured; it is said to have been originally the grave of another Abū Huraira (Maḳrīzī, i. 335, 12). Wherever *Shiʿis* ruled, there arose numerous tomb-mosques of the *Ahl al-Bait*. In Egypt Ibn Djubair gives a list of 14 men and five women of the Prophet's

family, who were honoured there (*Rihla*, p. 46 sq.). Islām was always creating new tombs of saints who had been distinguished for learning or asceticism or miracle-working, e.g. the tomb of al-Shāfi'ī in Cairo and Aḥmad al-Badawī in Tanṭā. There were mosques, chiefly old established sanctuaries, of Biblical and semi-Biblical personages like Rūbil (Reuben) and Āsiya the wife of Pharaoh (*ibid.*, p. 46). In and around Damascus were a number of mosques, which were built on the tombs of prophets and unnamed saints (Ibn Djubair, *Rihla*, p. 273 sqq.). In Palestine could be seen a vast number of tombs of Biblical personages (cf. Le Strange, *Palestine under the Moslems*, Index and Conder in *Palestine Explor. Fund. Quarterly Statement*, 1871, p. 89 sqq.), usually mosques with a *ḡubba*.

After the sanctuaries of persons mentioned in the Bible came those of people mentioned in the Qur'ān. For example, outside the Džāmī' in 'Akkā was shown the tomb-mosque of the prophet Šāliḥ (Nāṣiri Khuraw, *Sefer-Nameh*, ed. Sehefer, p. 15, 1 = 49), and in Syria that of his son (Ibn Djubair, p. 46); that of Ilūd was also shown near 'Akkā (*Sefer-Nameh*, p. 16, 5 = 52), farther east that of Shu'ub and of his daughter (*ibid.*, p. 16, 12 = 53), the tomb of Ilūd was also pointed out in Damascus and in Maḡramawt (Yāqūt, ii. 596, 16); then we have peculiarly Muslim saints like Dhu l-Kifl, the son of Job (*ibid.*, p. 16, 4 = 52). Then there are the sanctuaries of saints who are only superficially Muslim but really have their origins in old popular superstitions, like al-Khaḍir who had a *maḡhad* in Damascus (Yāqūt, ii. 596, 9), or a saint like 'Akk, founder of the town of 'Akkā, whose tomb Nāṣiri Khuraw visited outside the town (*Sefer-Nameh*, p. 15, 6 from below = 51). Such tombs were much visited by pious travellers and are therefore frequently mentioned in literature (on Maḡhāhid of the kinds mentioned here in the Irāk, see B.G.A., iii. 130; for Mawṣil etc., *ibid.*, p. 146). In this way ancient sanctuaries were turned into mosques and it is often quite a matter of chance under what names they are adopted by Islām (cf. Goldziher, *Muh. Studien*, ii. 325 sqq.). It therefore sometimes happens that the same saint is honoured in several mosques. Abū Huraira, who is buried in Medina, is honoured not only in the above-mentioned tomb-mosque in Džiza but also at various places in Palestine, in al-Ramla and in Yubnā south of 'Abayya (Khalil ed-Dāhiri, *Zenbilat Kachf al-Mamlūk*, ed. P. Ravaisse, p. 42, 1 from below; *Sefer-Nameh* of Nāṣiri Khuraw, ed. by Ch. Sehefer, p. 17, 1 from below = 59; Yāqūt, iii. 512, 20; iv. 1007, 12. cf. *Symbolae Osloenses Fasc. Supplet.*, ii. [1928], 31). The tomb of the Prophet Jonah is revered not only in the ancient Nineveh but also in Palestine.

Just as the *ḡubba* under which the saint lay and the mosque adjoining it were sanctified by him so vice-versa a *ḡubba* and a mosque could cause a deceased person to become considered a saint. It was therefore the custom for the mighty not only to give this distinction to their fathers but also to prepare such buildings for themselves even in their own lifetime. This was particularly the custom of the Mamlūk sultāns, perhaps stimulated by the fact that they did not found dynasties in which power passed from father to son. Such buildings are called *ḡubba* (van Berchem, *C. I. A.*, i. N^o. 82 sqq., 95, 96, 126, 138 etc.), exceptionally

ṣāwiya (*ibid.*, N^o. 98), frequently *turba* (*ibid.*, N^o. 58, 66, 88, 106, 107, 116 etc.); the formula is also found: "this *ḡubba* is a *turba*" (N^o. 67); the latter word acquired the same meaning as masdjid, partly saint's grave and partly sacred site (cf. Ibn Djubair, *Rihla*, p. 114, 196); but this word does not seem to be used of ordinary tomb-mosques, although the distinction between these and mosques in honour of saints often disappeared. In these *ḡubbas* the regular recitation of the Qur'ān was often arranged and the tomb was provided with a *kiswa*. The mausoleum might be built in connection with a great mosque and be separated from it by a grille (Yāqūt, iv. 509, 6 sqq.).

5. Mosques deliberately founded.

In the early period the building of mosques was a social obligation of the ruler as representative of the community and the tribes. Very soon a number of mosques came into existence, provided by individuals. In addition to tribal mosques, as already mentioned, there were also sectarian mosques and prominent leaders built mosques which were the centres of their activity, for example the Masdjid 'Adi b. Hātim (Tabarī, ii. 130), the Masdjid Simāk in Kūfa (*ibid.*, i. 2653), the Masdjid al-Ash'ath etc. As old sanctuaries entered Islām, the mosque received more of the character of a sanctuary and the building of a mosque became a pious work; there arose a ḡadīth, according to which the Prophet said: "for him who builds a mosque, God will build a home in Paradise"; some add "if he desires to see the face of God" (*Corpus juris di Zaid b. 'Alī*, ed. Griffini, N^o. 276; Bukhārī, *Ṣaḡāt*, bāb 65; Muslim, *Masāḡid*, tr. 4; Zuhd, tr. 3; Maḡrizī, iv. 36). Like other sanctuaries, mosques were sometimes built as a result of a revelation in a dream. A story of this kind of the year 557 is given by al-Samḡūdī for Medina (Wustenfeld, *Medina*, p. 91 sq.); and a similar one of a mosque in Damascus (*J. A.*, Ser. 9, vii. 384); a mosque was also built out of gratitude for seeing the Prophet (*al-Madrasa al-Sharifiya*, Maḡrizī, iv. 209). It was of course particularly an obligation on the mighty to build mosques. Even in the earliest period, the governors took care that new mosques were built to keep pace with the spread of Islām (cf. Balāḡdhuri, p. 178 sq.). About the year 1000 the governor of Media, Badr b. Ḥasanawaihi, is said to have built 3,000 mosques and hostels (Mez, *Die Renaissance des Islāms*, 1922, p. 24). The collections of inscriptions, as well as the geographical and topographical works, reveal how the number of mosques increased in this way.

In Egypt, al-Ḥakim in the year 403 had a census taken of the mosques of Cairo and there were eight hundred (Maḡrizī, iv. 264); al-Kuḡā'ī (d. 454 = 1062) also counted the mosques and his figure is put at 30,000 or 36,000 (Yāqūt, iii. 901; Ibn Duḡmāk, ed. Völlers, p. 92; Maḡrizī, iv. 264) which seems quite a fantastic figure (there is probably a *wa* lacking before *alif* i.e. 1,036). Ibn al-Mutawwāḡ (d. 730) according to al-Maḡrizī counted 480, and Ibn Duḡmāk (about 800) gives in addition to the incomplete list of džāmī's a list of 472 mosques, not including madāris, khānākāhs etc.; the figure given by Maḡrizī is smaller. The fantastic figure of 30,000 for Baghdād is found as early as Yaḡḡūbī (*B.G.A.*, vii. 250). It is also an exaggeration when Ibn Djubair was told in

Alexandria that there were 12,000 or 8,000 mosques there (p. 43). In Baṣra where Ziyād built 7 mosques (*B.G.A.*, v. 191), the number also increased rapidly, but here again an exaggerated figure (7,000) is given (*B.G.A.*, vii. 361). In Damascus, Ibn 'Asākir (d. 571 = 1176) counted 241 within and 148 outside the city (*J.A.*, Ser. 9, vii. 383). In Palermo Ibn Hawḳal counted over 300 and in a village above it 200 mosques. In some streets there were as many as 20 mosques within a bowshot of one another; this multiplicity is condemned: everyone wanted to build a mosque for himself (Yāḳūt, i. 719; iii. 409, 410). As a matter of fact, one can almost say that things tended this way; Yāḳūbi mentions in Baghdad a mosque for the Anbari officials of the tax-office (*B.G.A.*, vii. 245) and several distinguished scholars practically had their own mosques. It occasionally happened that devout private individuals founded mosques. In 672 Tādj al-Dīn built a mosque and a separate chamber in which he performed the ṣalāt alone and meditated (Maḳrīzī, iv. 90). The mosques thus founded were very often called after their founders, and memorial and tomb-mosques after the person to be commemorated. Sometimes a mosque is called after some devout man who lived in it (Maḳrīzī, iv. 97, 265 sqq.) and a madrasa might be called after its head or a teacher (*ibid.*, iv. 235; Yāḳūt, *Udabā'*, vii. 82). Lastly a mosque might take its name from its situation or from some feature of the building.

6. Al-Muṣallā.

In addition to the mosques proper, al-Maḳrīzī mentions for Cairo 8 places for prayer (*muṣallā*) mainly at the cemetery (iv. 334 sq.). The word *muṣallā* may mean any place of prayer, therefore also mosque (cf. Sūra, ii. 119; cf. Maḳrīzī, *Alhiṭat*, iv. 25, 16; do., *Itti'āz*, ed. Bunz, p. 91, 17; Yāḳūt, *Mu'djam*, iv. 326, 3—5) or a particular place of prayer within a mosque (Ṭabarī, i. 2408, 16; Bukhārī, *Chusl*, bāb 17; *Ṣalāt*, bāb 91). In Palestine, there were many open places of prayer, provided only with a mihrāb and marked off, but quite in the open (cf. for Tiberias, *Sefer-Nāmeh*, transl. Schefer, p. 36). It is recorded of the Prophet that he used to go out at the two festivals (*al-Fiṭr* and *al-Aḍḥā*) to the place of prayer (*al-muṣallā*) of the Banū Salima. A lance which the Negus had presented to al-Zubair was carried in front of him and planted before the Prophet as *sutra*. Standing in front of it, he conducted the ṣalāt, and then preached a khutba without a minbar to the rows in front of him (Ṭabarī, i. 1281, 14 sqq.; Bukhārī, *Haid*, bāb 6; *Ṣalāt*, bāb 90; *Idain*, bāb 6). He also went out to the *muṣallā* for the ṣalāt *al-istiskā'* (Muslim, *Istiskā'*, tr. 1). This *Muṣallā* was an open space and Muḥammad is even said to have forbidden a building on it (Wustenfeld, *Medina*, p. 127 sqq.). This custom of performing the ṣalāt on a *muṣallā* outside the town on the two festivals became *sunna*. There is evidence of the custom for several towns. In Medina however, a mosque was later built on the *muṣallā* (*ibid.*, p. 128 sq.) which also happened in other places. An early innovation was the introduction of a minbar by Marwān (*ibid.*, p. 128; Bukhārī, *Idain*, bāb 6). When Sa'd b. Abi Waḳḳās built a mosque in Kisrā's Iwān in al-Madā'in, at the festival in the year 16 it was expressly stated that

it was *sunna* to go out to it: Sa'd, however, thought it was a matter of indifference (Ṭabarī, i. 2451). Shortly after 300 a *muṣallā* outside of Hamadhān is mentioned (Maṣ'ūdī, *Murūdj*, ix. 23). There was al-Muṣallā al-'Atīk in Baghdad; here a dakka was erected for the execution of the Ḳarmāṭian prisoners (Ṭabarī, iii. 2244 sq.; cf. 1659, 18); in Kūfa, several are mentioned (*ibid.*, ii. 628, 16; 1704, 8; iii. 367, 8 sq.); two in Merw (*ibid.*, ii. 1931, 2; 1964, 19; cf. *Sefer-Nāmeh*, transl. Schefer, p. 274), one in Farḡāna (*B.G.A.*, ii. 393, 11). In Tirmidh, the *muṣallā* was within the walls (*B.G.A.*, ii. 349, 18) which also happened elsewhere (*ibid.*, 378, 6 sq.). In Cairo the two festivals were celebrated on the *Muṣallā Khawlān* (a Yemen tribe) with the Khatīb of the Mosque of 'Amr as leader: according to al-Ḳudā'i the festivals were to be celebrated on a *muṣallā* opposite the hill Yaḥmūm, then on al-Muṣallā al-Ḳadīm where Aḥmad b. Ṭūlūn erected a building in 256. The site was several times changed (Maḳrīzī, iv. 334 sq.; cf. *B.G.A.*, iii. 200, 14 sq.). In 302, 306 and 308 the ṣalāt *al-'id* was performed for the first time in the Mosque of 'Amr (Maḳrīzī, iv. 20, 8 sqq.; *Husn al-Muḥādḍara*, ii. 137 infra; Ibn Taghribirdī, ii. 194, 9 sqq.). Ibn Baṭṭūṭa notes the custom in Spain (i. 20) and Tunis (i. 22) and also in India (iii. 154). Ibn al-Ḥadīdī (d. 737) says that in his time the ceremonies still took place on the *muṣallā* but condemns the *biṭ'a's* associated with them (*K. al-Madḥul*, ii., Cairo 1320, p. 82 sqq.). It is also laid down in Muslim law, although not always definitely (see Juynboll, *Handbuch d. islām. Ges.*, 1910, p. 127; I. Guidi, *Il Muḥṭayar*, i., 1919, p. 136). The custom seems in time to have become generally abandoned. In the ninth century the Masjdīd Aḳsonḳor was expressly built for the khutba at the Friday services and at festivals (Maḳrīzī, iv. 107, 17).

C. The Mosque as the Centre for Divine Service.

1. Sanctity of the Mosque.

The history of the mosque in the early centuries of Islām shows an increase in its sanctity which was intensified by the adoption of the traditions of the church and especially by the permeation of the cult of saints. The sanctity already associated with tombs taken over by Islām was naturally very soon transferred to the larger and more imposing mosques. The expression *Bait Allāh* 'house of God', which at first was only used of the Ka'ba came now be applied to any mosque (s. *Corpus iuris di Zaid b. 'Alī*, N^o. 48, cf. 156, 983; *Chron. Mekka*, ed. Wustenfeld, iv. 164; v. Berchem, *Corpus Inscr. Arab.*, i., N^o. 10, l. 18; Ibn al-Ḥadīdī, *K. al-Madḥul*, i. 20, 23; ii. 64, 68; cf. *Bait Rabbihi*, *ibid.*, i. 23, 73; ii. 56). The alteration in the original conception is illustrated by the fact that the Mamlūk al-Malik al-Zāhir Baibars declined to build a mosque on a place for tethering camels because it was unseemly, while the mosque of the Prophet had actually been built on such a place (Maḳrīzī, iv. 91; Abū Dāwūd, *Ṣalāt*, bāb 22).

In the house of God the Mihrāb and the Minbar (see below) enjoyed particular sanctity, as did the tomb, especially in Medina (Bukhārī, *Faḍl al-Ṣalāt fī Masjdīd Makka wa 'l-Madina*, bāb 5). The visitors sought *baraka*, partly by touching the tomb or the railing round it, partly by praying

in its vicinity: at such places "prayer is heard" (*Chron. Mekka*, iii. 441, 442). In the Masjid al-Khaif in Minā the visitor laid his head on the print of the Prophet's head and thus obtained *ḥaḍra* (*ibid.*, iii. 438). A mosque could be built on a site, the sanctity of which had been shown by the finding of hidden treasure (Maḳrīzī, iv. 75). There were often places of particular sanctity in mosques. In the mosques at Kūba' and Medina, the spots where the Prophet used to stand at prayer were held to be particularly blessed (Balādhuri, p. 5; Bukhārī, *Ṣalāt*, bāb 91; Wustenfeld, *Medina*, p. 65, cf. 82, 109). In other mosques, places where a saint had sat or where a divine phenomenon had taken place e.g. in the Mosque of 'Amr and in the Aḥar Mosque (Maḳrīzī, iii. 19, 52) or the Mosque in Jerusalem (Maḳḍīsī, *B. G. A.*, iii. 170) were specially visited. Pious visitors made *ṭawāf* [q.v.] between such places in the mosque (Maḳrīzī, iv. 20). Just as in other religions we find parents dedicating their children to the service of a sanctuary, so we find a Muslim woman vowing her child or child yet unborn to the mosque (Bukhārī, *Ṣalāt*, bāb 74; Maḳrīzī, iv. 20). The fact that mosques, like other sanctuaries, were sometimes founded after a revelation received in a dream has already been mentioned (B. 5).

This increase in sanctity had as a natural result that one could no longer enter a mosque at random as had been the case in the time of the Prophet. In the early Umayyad period, Christians were still allowed to enter the mosque without molestation (cf. Lammens, *Mosquée*, p. 13 sq.; Goldziher, in *H. Z. A. M.*, vi. 100 sq.). Mu'āwīya used to sit with his Christian physician, Ibn Ṭhāl, in the mosque of Damascus (Ibn Abī Ṭayb'a, ii. 117). According to Aḥmad b. Ḥanbal, the *Ahl al-Kutāb* (or *Ahl al-Aḥd*) and their servants, but not polytheists, were allowed to enter the mosque of Medina (*Musnad*, iii. 339, 392). At a later date entrance was forbidden to Christians and this regulation is credited to 'Umar (Lammens, *op. cit.*, p. 13, note 6). A strict teacher of morality like Ibn al-Hādīdj thought it unseemly that the monks who wove the mats for the mosques should be allowed to lay them in the mosque (*Madkhal*, ii. 57). Conditions were not always the same. In Hebron, Jews and Christians were admitted on payment to the sanctuary of Abraham until in 604 (1205) Balbars forbade it (Quatremère, *Hist. Sal. M. M.*, i. 27).

According to some traditions, a person in a state of ritual impurity could not enter the mosque (Abū Dāwūd, *Ṣalāt*, bāb 92; Ibn Mādjā, *Ṭahāra*, bāb 123) and in any case only the pure could acquire merit by visiting the mosque (Muslim, *Ṣalāt*, tr. 49; *Corpus Iuris ad Zait b. 'Alī*, No. 48), and in a later period it is specially mentioned that the *ṭawāf* cannot be undertaken in the mosque itself (*Madkhal*, ii. 47 *infra*) nor could shaving *ṭahā*. p. 58 sq.)

It is always necessary to be careful not to spit in a mosque, although some traditions which are obviously closer to the old state of affairs say, "not in the direction of the ḳibla, only to the left" (Bukhārī, *Ṣalāt*, bāb 33 sq.). The custom of taking off one's sandals in the mosque is found as early as the time of Abū 'Ubayda (second century) (Yāqūt, *Uḍabā'*, v. 272, 13 sq.) and according to *al-Madkhal* (see below) is also mentioned by Abū Dāwūd. Al-Ṭabari puts the custom back to

the time of 'Umar (i. 2408). That it is based on an old custom observed in sanctuaries is obvious (cf. on the history of the custom, F. Cumont, *Fouilles de Doura-Europos*, 1926, p. 60 sq.). The custom however seems not to have been always observed. In the viiith century in the Mosque of the Umayyads the shoes were taken off only in the *maḳṣūra*, because the floor was covered with mats; but in 827 an Egyptian superintendent ordered that the mosque should only be entered with bare feet (*J. A.*, ser. 9, vii. 211, 217). The visitor on entering should place his right foot first and utter certain prayers with blessings on the Prophet and his family (which Muḥammad is said to have done!) and when he is inside perform two rak'a's (Bukhārī, *Ṣalāt*, bāb 47; *Tahdīdjūd*, bāb 25; Muslim, *Ṣalāt al-Muṣāfirin*, tr. 12 sq.; Ṭabari, iii. 2464, 2532). Certain regulations for decent conduct came into being, the object of which was to preserve the dignity of the house of divine service. Public announcements about strayed animals were not to be made, as the Beduins did in their houses of assembly, and one should not call out aloud and thereby disturb the meditations of the worshippers (Bukhārī, *Ṣalāt*, bāb 83; Muslim, *Masūdījīd*, tr. 18; more fully in *Madkhal*, i. 19 sq.). One should put on fine clothes for the Friday service, rub oneself with oil and perfume oneself (Bukhārī, *Ḍiḥm'a*, bāb 3, 6, 7, 19) as was also done with *ḥib* for the Ḥadīdj (Bukhārī, *Ḥadīdj*, bāb 143).

A question which interested the teachers of morality was that of the admission of women to the mosques. That many did not desire their presence is evident from the ḥadīth that one cannot prevent them as there is no *fiṭna* connected with it, but they must not be perfumed (Muslim, *Ṣalāt*, bāb 29; Bukhārī, *Ḍiḥm'a*, bāb 13; cf. *Chron. Mekka*, iv. 168). Other ḥadīths say they should leave the mosques before the men (al-Nasā'ī, *Sahw*, bāb 77; cf. Abū Dāwūd, *Ṣalāt*, bāb 14, 48). Sometimes a special part of the mosque was railed off for them; for example, the governor of Mecca in 256 had ropes tied between the columns to make a separate place for women (*Chron. Mekka*, ii. 197 *infra*). According to some, women must not enter the mosque during their menstruation (Abū Dāwūd, *Ṭahāra*, bāb 92, 103; Ibn Mādjā, *Ṭahāra*, bāb 117, 123). In Medina at the present day, a wooden grille shuts off a place for women (al-Batānūnī, *al-Riḥla al-Ḥidāziya*, p. 240). At one time the women stood at the back of the mosque here (Yāqūt, *Uḍabā'*, vi. 400). In Jerusalem there were special *maḳṣūras* for them (*B. G. A.*, v. 100). Ibn al-Hādīdj would prefer to exclude them altogether and gives 'A'isha as his authority for this.

Although the mosque became sacred it could not quite cast off its old character as a place of public assembly and in consequence the mosque was visited for many other purposes than that of divine service. Not only in the time of the Umayyads was considerable business done in the mosques (Ṭabari, ii. 1118; cf. Lammens, *Ziād*, p. 98) which is quite in keeping with the ḥadīth (Bukhārī, *Ṣalāt*, bāb 70 sq.) which, actually found it necessary to forbid the sale of wine in the mosque (*ibid.*, bāb 73), but a writer in the viiith century, Ibn al-Hādīdj, records with disapproval that business was done in the mosques: women sit in the mosques and sell thread, in Mecca hawkers even call their wares in the mosque. The list given by

this author gives one the impression of a regular market-place (*Madkhal*, ii. 54). Strangers could always sit down in a mosque and talk with one another (see *B. G. A.*, iii. 205); they had the right to spend the night in the mosque; according to some, however, only if there was no other shelter available (*Madkhal*, ii. 43 infra, 49 supra; see below D. 1b). It naturally came about that people also ate in the mosque; this was quite common, and regular banquets were even given in them (e.g. Maḳrīzī, iv. 67, 121 sq.; cf. in Ḥadīth: Ibn Mādja, *Aḥima*, bāb 24, 29; Aḥmad b. Ḥanbal, ii. 106, 10 from below). Ibn al-Ḥādīdj laments that in al-Aḳṣā people even threw the remains of their repast down in the mosque; animals were brought in, and beggars and water-carriers called aloud in them etc. (*Madkhal*, ii. 53 sq.). It is even mentioned as a sign of the special piety of al-Šīrāzī (d. 476 = 1083) that he often brought food into the mosque and consumed it there with his pupils (Wustenfēld, *Der Imām Šāhān*, iii. 298). Gradually the mosques acquired greater numbers of residents (see D. 2b). In the Azhar Mosque it was the custom with many to spend the summer nights there because it was cool and pleasant (Maḳrīzī, iv. 54). This was the state of affairs about 800 A.H. Similar conditions still prevail in the mosques.

2. The Mosque as a Place of Prayer. Friday Mosques.

As places for divine service, the mosques are primarily "houses of which God has permitted that they be erected and that His name be mentioned in them" (Sūra, xxiv. 36), i.e. for His service demanded by the law, for ceremonies of worship (*manāsik*), for assemblies for prayer (*djāmāʿat*) and other religious duties (cf. *Chron. Mekka*, iv. 164). The mosques were *maʿābid* (Maḳrīzī, iv. 117, 140). In Medina after a journey, the Prophet went at once to the mosque and performed two rakʿas, a custom which was imitated by others and became the rule (Bukhārī, *Ṣalāt*, bāb 59 sq.; Muslim, *Ṣalāt al-Musafirin*, tr. 11; Wāḳidi-Wellhausen, p. 412, 436). In this respect, the mosque played a part in public worship similar to that of the Kaʿba in Mecca at an earlier date and the Rabba sanctuary in Taʿif. The daily ṣalāts, which in themselves could be performed anywhere, became especially meritorious when they were performed in mosques, because they expressed adherence to the community. A *ṣalāt al-djāmāʿa*, we are told, is twenty or twenty-five times as meritorious as the ṣalāt of an individual at home or in his shop (Muslim, *Masādjīd*, tr. 42; Bukhārī, *Ṣalāt*, bāb 87; *Buyūʿ*, bāb 49). There are even ḥadīths which condemn private ṣalāts: "Those who perform the ṣalāt in their houses abandon the *sunna* of their Prophet" (Muslim, *Masādjīd*, tr. 44; but cf. 48 and Bukhārī, *Ṣalāt*, bāb 52). If much rain falls, the believers may, however, worship in their houses (Bukhārī, *Djumʿa*, bāb 14). In this connection a blind man was given a special *rukḥṣa*; it is particularly bad to leave the mosque after the *adhān* (Muslim, *Masādjīd*, tr. 45). It is therefore very meritorious to go to the mosque; for every step one advances into the mosque, he receives forgiveness of sins, God protects him at the last judgment and the angels also assist him (Muslim, *Masādjīd*, bāb 49-51; Bukhārī, *Ṣalāt*, bāb 87; *Adhān*, bāb 36, 37; *Djumʿa*, bāb 4, 18, 31; *Corpus iuris* d. Zaid b. ʿAlī, N^o. 48, 156, 983).

This holds especially of the Friday ṣalāt (*ṣalāt al-djumʿa*), which can only be performed in the mosque and is obligatory upon every free male Muslim who has reached years of discretion (cf. Juynboll, *Handbuch*, p. 86; Guidi, *Sommario del Diritto Malechita*, i. 125 sq.). According to Ibn Hishām (p. 290) this ṣalāt, which is distinguished by the *khutba*, was observed in Medina even before the Hīdja. This is hardly probable and besides is not in agreement with other ḥadīths (see Bukhārī, *Djumʿa*, bāb 11) but the origin of this divine service, referred to in Sūra lxii. 9, is obscure. The assemblies of the Jews and Christians on a particular day must have formed the model (cf. Bukhārī, *Djumʿa*, bāb 1). Its importance in the earlier period lay in the fact that all elements of the Muslim camp, who usually went to the tribal and particular mosques, assembled for it in the chief mosque under the leadership of the general. The chief mosque, which for this reason was particularly large, was given a significant name. They talk of *al-Masdjīd al-aʿzam* (Tabarī, i. 2494; ii. 734, 1701, 1702, Kūfa; Balādhurī, p. 5; Tabarī, *Tafsir*, xi. 21, centre; *ibid.* also *al-Masdjīd al-akbar*, Medina; cf. *al-Masdjīd al-kabīr*, *B. G. A.*, vii. 245) or *Masdjīd al-Djamāʿa* (Yāḳūt, iii. 896, al-Fustāt; also Tabarī, ii. 1119; Ibn Kūtaiba, *Maʿārif*, ed. Wustenfēld, p. 106); *Masdjīd li ʿl-Djamāʿa* (Maḳrīzī, iv. 4); *Masdjīd Djamīʿ* (Balādhurī, p. 289, Madāʾin; Yāḳūt, i. 643, 647, Baṣra); then *Masdjīd al-Djamīʿ* (Yāḳūt, iii. 899; iv. 885; *B. G. A.*, ii. 298, 315, 387; vii. 110 etc.). As an abbreviation we find also *al-Djamāʿa* (Yāḳūt, i. 400; Ibn Baṭṭūta, iv. 343; cf. *Masdjīd al-Djamāʿa*, Balādhurī, p. 348) and especially *Djamīʿ*. As the *khutba* was the distinguishing feature, we also find *Masdjīd al-Khutba* (Maḳrīzī, iv. 44, 64, 87), *Djamīʿ al-Khutba* (*ibid.*, iv. 55) or *Musḥul al-Minbar* (*B. G. A.*, iii. 316 for *Djamīʿ*, l. 8).

Linguistic usage varied somewhat in course of time with conditions. In the time of ʿUmar there was properly in every town only one Masdjīd Djamīʿ for the Friday service. But when the community became no longer a military camp and Islām replaced the previous religion of the people, a need for a number of mosques for the Friday service was bound to arise. This demanded mosques for the Friday service in the country, in the villages on the one hand and several Friday mosques in the towns on the other. This meant in both cases an innovation, compared with old conditions, and thus there arose some degree of uncertainty. The Friday service had to be conducted by the ruler of the community, but there was only one governor in each province; on the other hand, the demands of the time could hardly be resisted and, besides, the Christian converts to Islām had been used to a solemn weekly service.

As to the villages (*al-kurā*), ʿAmr b. al-ʿĀṣī in Egypt forbade their inhabitants to celebrate the Friday service for the reason just mentioned (Maḳrīzī, iv. 7). At a later period then the *khutba* was delivered exceptionally, without minbar and only with staff, until Marwān in 132 introduced the minbar into the Egyptian *kurā* also (*ibid.*, p. 8). Of a mosque in which a minbar had been placed, we are told *ḥuṣṣu masdjīdan li ʿl-ʿayyā* (Tabarī, i. 2451) and a village with a minbar is called *ḥayya djamīʿa* (Bukhārī, *Djumʿa*, bāb 15; cf. *Madāʾin Djamīʿa*, *B. G. A.*, ii. 321), an idea which was regarded by Bukhārī (d. 256 = 870)

as quite obvious. In introducing minbars into the Egyptian villages, Marwān was apparently following the example of other regions. In the fourth century, Ibn Hawkal mentions a number of *manāṣir* in the district of Iṣṭakh̄r (*B. G. A.*, ii. 182 sq.) and a few in the vicinity of Marw (*ibid.*, p. 316) and in Transoxania (*ibid.*, p. 378; cf. p. 384), and al-Makdisi does the same for other districts of Persia (*B. G. A.*, iii. 309, 317) and he definitely says that the *kuṭās* of Palestine are *dhāt manāṣir* (*ibid.*, p. 176; cf. i. 58); Balādhuri (p. 331) also uses the name *manbar* for a village mosque built in 239; in general, when speaking of the *ḥurās*, one talks of *manāṣir* and not of *ḍawāmiṣ* (cf. *B. G. A.*, i. 63). Later however the term Masjdīd *ḍamī* is used for a Friday mosque (Ibn Djubair, p. 217). The conditions of primitive Islām are reflected in the teaching of the Hanafis, who only permit the Friday service in large towns (cf. al-Mawardi, *al-Aḥkām al-sultāniya*, ed. Enger, p. 177).

As to the towns, the Shāfi'is on the other hand have retained the original conditions, since they permit the Friday service in only one mosque in each town (cf. *Ḥumay* and *op. cit.*, p. 178 sq.), but with the reservation that the mosque is able to hold the community. The distinction between the two rites was of importance in Egypt. When in 569 Ṣalāḥ al-Dīn became supreme in Egypt, he appointed a Shāfi' chief *kāḍī* and the Friday service was therefore held only in the Ḥākīmī mosque, as the largest; but in 665 (1266) al-Malik al-Zahir Baibars gave the Hanafis preference and many mosques were therefore used as Friday mosques (Maḥrizi, iv. 52 sq.; al-Suyūṭi, *Ḥusn al-Mubāshara*, ii. 140; Quatremère, *Hist. Sult. Maml.*, i. ii. 39 sq.). During the Umayyad period and to some extent in the 'Abbasid period, the number of *ḍawāmiṣ* in the towns were still very small. The geographers of the third and fourth centuries in their descriptions of towns as a rule mention only "the *ḍāmi*". Ibn al-Fakh̄r, c. 290 (903), sometimes says *masjdīd ḍāmi wa-manbar*, *B. G. A.* v. 304-306, also *manbar* simply, p. 305. In keeping with the oldest scheme of town planning, it was very often in the middle of the town surrounded by the business quarters (*B. G. A.*, ii. 298, 325; iii. 274 sq., 278, 314, 316, 375, 376, 413, 426, 427 etc.; Nāṣir-i Khusrāw, ed. Schefer, p. 35, 41, 56) and the *ḍān al-māna* was still frequently in the immediate vicinity of the chief mosque (*B. G. A.*, ii. 208, 314; iii. 426).

Iṣṭakh̄rī mentions as an innovation in Islām that al-Haḍḍād built a *ḍāmi* in al-Wāsiṭ on the west bank, although there was already one on the east bank (*B. G. A.*, i. 82 sq.; cf. iii. 118; vii. 322). Ibn Djubair (*Rihla*, p. 211 sq.) mentions only one *ḍāmi* in Kūfa, called *Masjdīd al-Kāfa* by Ibn al-Fakh̄r, although he also mentions other mosques (*B. G. A.*, v. 173; cf. 174, 183 and iii. 116). In Baṣra where Yaḥyā (278 = 891) already mentions 7,000 mosques (*B. G. A.*, vii. 361), al-Makdisi (375 = 985) gives 3 *ḍawāmiṣ* (*B. G. A.*, iii. 117). In Sāmarrā, among many mosques, there was one *ḍāmi* (*B. G. A.*, vii. 258, 259), which was later replaced by another (*ibid.*, p. 260 sq.); al-Mutawakkil also built one outside the original town (*ibid.*, p. 265; see also P. Schwarz, *Die Ah-Ṭarīḥ-Reisende Sāmarrā*, 1909, p. 32). In Baghdad, Yaḥyā (278 = 891) mentions only one *ḍāmi* for the eastern town and one for the western (*B. G. A.*, vii. 240, 245, 251, 253, the

almost contemporary Ibn Rosta just mentions the old western town and its *ḍāmi*, *ibid.*, p. 109) although he gives the fantastic figures of 15,000 mosques in the east town (*ibid.*, p. 254) and 30,000 in the west (or in the whole town, *ibid.*, p. 250). After 280 there was added the *ḍāmi* of the eastern palace of the caliph (Mez, *Renaissance*, p. 388 quoting al-Khaṭīb al-Baghdādī, *Ta'rikh Baghdad*: a private *ḍāmi* of Hārūn al-Rashid in the *Bustān 'Umm Mūsā* is mentioned by Ibn al-Kifī, *Ta'rikh al-Ḥukamā'*, ed. Lippert, p. 433 infra). These 3 *ḍawāmiṣ* are mentioned about 340 (951) by Iṣṭakh̄rī (*B. G. A.*, i. 84), who also mentions one in the suburb of Kalwādhā. Ibn Hawkal in 367 (977) mentions the latter and also the *ḍāmi* al-Barāthā (*B. G. A.*, i. 164 sq., of 329; Mez, *loc. cit.*), a fifth was added in 379, a sixth in 383 (Mez, p. 389); thus al-Khaṭīb al-Baghdādī in 460 (1058) gives 4 for West Baghdad, 2 for the east town (cf. Le Strange, *Baghdad*, p. 324). Ibn Djubair in 581 (1185) gives in the east town 3, and 11 *ḍawāmiṣ* (*Rihla*, p. 228 sq.) for the whole of Baghdad. For Cairo, Iṣṭakh̄rī gives two *ḍāmi*: the 'Amr and Ṭūlūn Mosques (*B. G. A.*, i. 49) besides that in al-Karāfa, which was regarded as a separate town (cf. Ibn Rosta [c. 290 = 903], *B. G. A.*, vii. 116 sq.). Al-Makdisi, who writes (375 = 985) shortly after the Fātimid conquest, mentions the 'Amr and Ṭūlūn mosques, the new mosque in al-Kāhira (al-Azhar), also one in al-Djazira, in Dīza and in al-Karāfa (*B. G. A.*, iii. 198-200, 209; the *ḍāmi* in al-Djazira, also *ḍāmi* Miḥyās [cf. Maḥrizi, iv. 75], is mentioned in an inscription of the year 485; see van Berchem, *Corpus*, i. N^o 39). As these places were all originally separate towns, the principle was not abandoned that each town had only one *ḍāmi*. The Fātimids however extended the use of Friday mosques and, in addition to those already mentioned, used the *ḍāmi* al-Ḥākīm, al-Maḥs and Rāshida (Maḥrizi, iv. 2 sq.). Nāṣir-i Khusrāw in 439 (1047) mentions in one passage the *ḍawāmiṣ* of Cairo, in another seven for Miṣr and fifteen in all (ed. Schefer, p. 134 sq., 147). This was altered in 569 by Ṣalāḥ al-Dīn (see above) but the quarters, being still regarded as separate towns, retained their own Friday mosques (cf. for the year 607 in al-Karāfa: Maḥrizi, iv. 86).

After the Friday service in Egypt and Syria was freed from restriction, the number of *ḍawāmiṣ* increased very much. Ibn Duḥnāk (about 800) gives a list of only eight *ḍawāmiṣ* in Cairo (ed. Vollers, p. 59-78), but this list is apparently only a fragment (in all he mentions something over twenty in the part of his book that has survived); al-Maḥrizi (d. 845 = 1442) gives 130 *ḍawāmiṣ* (iv. 2 sq.). In Damascus, where Ibn Djubair still spoke of "the *ḍāmi*", al-Nu'aimi (d. 927 = 1521) gives twenty *ḍawāmiṣ* (*J. A.*, ser. 9, vii. 231 sq.), and according to Ibn Battūta, there were in all the villages in the region of Damascus *masājīd ḍāmi'a* (i. 236). The word *ḍāmi* in Maḥrizi always means a mosque in which the Friday service was held (vi. 76, 115 sq.) but by his time this meant any mosque of some size. He himself criticises the fact that since 799 the *ṣalāt al-ḍum'a* was performed in al-Aḥmar, although another *ḍāmi* stood close beside it (iv. 76; cf. also 86).

The great spread of Friday mosques was reflected in the language. While inscriptions of the viiith century still call quite large mosques *masjdīd*, in

the ninth most of them are called *djāmi*^c (cf. on the whole question, van Berchem, *Corpus*, i. 173 sq.); and while now the madrasa begins to predominate and is occasionally also called *djāmi*^c (see below, F. 4), the use of the word *masdjid* becomes limited. While, generally speaking, it can mean any mosque (e.g. Maḳrīzī, iv. 137, of the Mu'ayyad mosque), it is more especially used of the smaller unimportant mosques. While Ibn Duḳmāḳ gives 472 *masādjid* in addition to the *djawāmi*^c, madāris, etc., al-Maḳrīzī only gives nineteen, not counting al-Ḳarāfa, which probably only means that they were of little interest to him. *Djāmi*^c is now on the way to become the regular name for a mosque of any size as is now the usage, in Egypt at least. In Ibn al-Hādīdj (d. 737) *al-djawāmi*^c is occasionally used in this general meaning in place of *al-masādjid* (*Madkhal*, ii. 50). Among the many Friday mosques one was usually distinguished as the chief mosque; we therefore find the expression *al-djāmi*^c *al-a'zam* (Ibn Baṭṭūṭa, ii. 54, 94; cf. the older *al-masdjid al-a'zam*, *ibid.*, p. 53). The principal *djāmi*^c decided in such questions as the beginning and ending of the Fast of Ramaḍān (*Madkhal*, ii. 68).

3. Other religious activities in the Mosque.

"The mentioning of the name of God" in the mosques, was not confined only to the official ritual ceremonies. Even in the time of the Prophet, we are told that he lodged Thakfi delegates in the mosque so that they could see the rows of worshippers and hear the nightly recitation (Wāḳidī-Wellhausen, p. 382). Although this story (which is not given in Ibn Hiṣhām, p. 916) may simply be a reflection of later conditions, the recitation of the Ḳur'ān must have come to be considered an edifying and pious work at quite an early date. In the time of al-Maḳdisī the *ḳurra'* of Nisābūr used to assemble on Fridays in the *djāmi*^c in the early morning and recite till the *ḡha*^a (*B. G. A.*, iii. 328), and the same author tells us that in the Mosque of 'Amr in Egypt the *a'immat al-ḳurra'* sat in circles every evening and recited (*ibid.*, p. 205). In the time of Ibn Djubair, there were recitations of the Ḳur'ān in the Umayyad mosque after the *Ṣalāt al-Ṣubḥ* and every afternoon after the *Ṣalāt al-ʿAṣr* (*Rihla*, p. 271 sq.). Besides the recitation of the Ḳur'ān there were praises of God etc., all that is classed as *dhiḳr*, and which was particularly cultivated by Sūfism. This form of worship also took place in the mosque. The *Ahl al-Taḥlīl wa 'l-Ma'rifa* formed *madjālis al-dhiḳr*, who assembled in the mosques (al-Maḳkī, *Ḳūt al-Ḳulūb*, i. 152). In the Mosque of the Umayyads and other mosques of Damascus, *dhiḳr* was held during the morning on Friday (Maḳrīzī, iv. 49). In the *Masdjid al-Aḳṣā* the Ḥanafis held *dhiḳr*, and recited at the same time from a book (*B. G. A.*, iii. 182). In Egypt, Aḥmad b. Ṭulūn and Ḳhumārawaih allowed twelve men quarters in a chamber near the minaret to praise God, and during the night four of them took turns to praise God with recitations of the Ḳur'ān and with pious *ḳaṣīdas*. From the time of Ṣalāḥ al-Dīn an orthodox *'aḳīda* was recited by the mu'adhdhins in the night (*ibid.*, iv. 48). Ibn al-Hādīdj demands that the recitation of the Ḳur'ān aloud should take place in a mosque for the special purpose (*masdjid madjḥūr*) as otherwise pious visitors

are disturbed (*Madkhal*, ii. 53, 67). Mosques and particularly mausoleums had as a rule regularly appointed reciters of the Ḳur'ān. In addition there was, e.g. in Hebron and in a mosque in Damascus, a *shaikh* who had to read Buḫḫārī (or also Muslim) for three months (Sauvage, *Hist. Féru. Hébr.*, p. 17; *J. A.*, ser. 9, iii. 261). In Tunis, al-Buḫḫārī was read daily in a hospital (Zarkashī, transl. Fagnan, *Rec. Soc. Arch. Constantine*, 1894, p. 188).

Sermons were not only delivered at the *ṣalāt al-djum'a*. In the 'Irāk, even in al-Maḳdisī's time, one was preached every morning, according to the *sunna* of Ibn 'Abbās (*B. G. A.*, iii. 130), it was said. Ibn Djubair, in the Nizāmīya in Baghdad, heard the Shāfi'ī *ra'is* preach on Friday after the *ʿaṣr* on the minbar. His sermon was accompanied by the skilled recitation of the *ḳurra'* who sat on chairs; they were over twenty in number (Ibn Djubair, p. 219—222). In the same way, the calls of the mu'adhdhins to prayer to the Friday *ḳhuṭba* were delivered to a musical accompaniment (see below, H. 4). The unofficial sermons, which moreover were not delivered in mosques alone, were usually delivered by a special class, the *ḳuṣṣās* (plur. of *ḳaṣṣ*) (on these cf. Goldziher, *Muh. Stud.*, ii. 161 sqq.; Mez, *Die Renaissance des Islāms*, p. 314 sqq.; and the article *ḳuṣṣā*). The *ḳuṣṣās*, who delivered edifying addresses and told popular stories, were early admitted to the mosques.

Tamīm al-Dāri is said to have been the first of these; in Medina in the caliphate of 'Umar before the latter's decease, he used to deliver his orations at the Friday *ṣalāt* and under 'Umar he was allowed to talk twice a week in the mosque; in the reign of 'Alī and of Mu'āwiya the *ḳuṣṣās* were employed to curse the other side (Maḳrīzī, iv. 16 sq.). In the Mosque of 'Amr in Cairo by the year 38 or 39, a *ḳāṣṣ* was appointed, named Sulaim b. 'Itr al-Tudjībī, who was also *ḳāḍī* (*ibid.*, iv. 17 wrongly: Sulaimān; Kindī, *Governors and Judges*, ed. Guest, p. 303 sq.). There are other occurrences of the combination of the two offices (Ibn Hudjaira [d. 83], Kindī, p. 317; Ḳhair b. Nu'aim in the year 120, *ibid.*, p. 348; cf. *Husn al-Muḥādḍara*, i. 131, *Djbr*, according to Thawba b. Nimr, *Husn*, i. 130 infra; Ibrāhīm b. Ishāk al-Ḳārī [d. 204], Kindī, p. 427; see also Maḳrīzī, iv. 18) which shows that the office of *ḳāṣṣ* was quite an official one. There is also evidence of the employment of *ḳuṣṣās* in the mosque of the 'Irāk in the 'Abbāsid period (Yāḳūt, *Uḍabā'*, iv. 268; v. 446). The *ḳāṣṣ* read from the Ḳur'ān standing and then delivered an explanatory and edifying discourse, the object of which was to instil the fear of God into the people (Maḳrīzī, iv. 18). Under the Fātimids also, *ḳuṣṣās* were appointed to the mosques; for example, in 403 the imām undertook the office in the Mosque of 'Amr (Maḳrīzī, iv. 18 infra) and the rulers had also a *ḳāṣṣ* in the palace. The *ḳuṣṣās* were called *aḳḥāb al-ḳarāṣī*, because they delivered their discourses on the *kursī* (al-Maḳkī, *Ḳūt al-Ḳulūb*, i. 152; Ibn al-Hādīdj, *Madkhal*, i. 159; cf. Maḳrīzī, iv. 121). Their discourse was called *dhiḳr* or *wa'z* or *ma'wiza*, whence the *ḳāṣṣ* was also called *mu-dhakkir* (*B. G. A.*, iii. 205) or *wa'iz*. Specimens of their discourses are given by Ibn 'Abd Rabbihi (*al-ʿIḳd al-farīd*, Cairo 1321, i., p. 294 sqq.). It was not only the appointed officials who delivered such discourses in the mosque. Ascetics made

public appearances in various mosques and collected interested hearers around them (cf. e.g. Maḳrīzī, iv. 135). In the Djamī' al-Karāfa, a whole society, the Banū Dīhawhārī, delivered waḳ discourses on a kursī for three months on end; their servant collected money in a begging-bowl during the discourse and the ṣhaikh distributed some of it among the poor (*ibid.*, iv. 121).

The *ḳaṣaṣ* was completely taken over by popular ṣūfism and later writers would hardly reckon, as al-Makki does, the "story-tellers" among the *mutakallimūn* (*Ḳūt al-Ḳulūb*, i. 152). The whole system degenerated to trickery and charlatanry of all kinds, as may be seen in the Makāma literature (cf. thereon Yāḳūt, *Udabī*, vi. 167 sq. and see also Mez and Goldner, *op. cit.*). Al-Maḳrīzī therefore distinguishes between *al-ḳaṣaṣ al-ḳhūṣṣa*, the regular and seemly edifying discourse in the mosque, and *al-ḳaṣaṣ al-ʿamma*, which consisted in the people gathering round all kinds of speakers, which is *maḳlūh* (Maḳrīzī, iv. 17). Others also have recorded their objections to the *ḳuṣṣaṣ*. Ibn al-Ḥādīdj utters a warning against them and wants to forbid their activities in the mosque completely, because they deliver "weak" narratives (*Madḳhal*, i. 158 sq.; ii. 13 sq., 50). He says Ibn ʿUmar, Maḳrīzī and Abū Dāwūd rejected them and ʿAlī ejected them from the maṣḳid of Baṣya. It is of little significance that al-Muʿtaḍid in 284 forbade them to sit in the mosques and forbade people to gather round them, for he issued a similar interdiction against the *fuḳahāʾ* and the reasons were evidently political (Ṭabarī, iii. 2165); it was for political reasons also, but with a very different motive, that Aḳḳad al-Dawla forbade their appearing publicly in Baghdad shortly before 400, because they increased the tension between Sunnis and Shīʿis (Mez, *op. cit.*, p. 319). As late as 580 the *ḳuṣṣaṣ* still flourished in the mosques of Baghdad, as is evident from the *Rihla* of Ibn Dījūbair (p. 219 sqq., 224), and in the ninth century there was in the Aḥar mosque a *maḳḳālīs al-waḳ* as well as a *ḳaḳḳ al-dījīlī* (Maḳrīzī, iv. 54).

When Ibn al-Ḥādīdj denounces speaking aloud in the mosque, it is in the interest of the pious visitors who are engaged in religious works and meditation. *ʿItikāf* [q. v.], retirement to a mosque for a period, was adopted into Islām from the older religions.

The word *ʿakf* means in the Qurʾān the ceremonial worship of the object of the cult (Sūra vii. 134; ix. 93, 97; xvi. 53; xxvi. 71; cf. *Ḥiṭṭat*, ed. Horowitz, p. 86, 15) and also the ritual stay in the sanctuary, which was done for example in the Meccan temple (Sūra ii. 119; xii. 25). In this connection it is laid down in the Qurʾān that in the month of Ramaḍān believers must not touch their wives "while ye pass the time in the mosques" (*ʿakīfūn fī l-masāḳid*, Sūra ii. 183), an expression which shows, firstly that there were already a number of mosques in the lifetime of the Prophet and secondly that these had already to some extent taken over the character of the temple. The connection with the early period is evident from a ḥadīth, according to which the Prophet decides that ʿUmar must carry out a vow of *ʿitikāf* for one night in the *Masḳid al-Ḥaram* made in the Dīhiliya (Bukhārī, *ʿItikāf*, bāb 5. 15 sq.; *Farḳ al-Ḳhums*, bāb 19; *Maḳḳāzī*, bāb 54; *Amān wa l-Nuḍḥar*, bāb 29). It is completely in keeping with this that the Prophet

according to the ḥadīth, used to spend ten days of the month of Ramaḍān in *ʿitikāf* in the mosque of Medina (Bukhārī, *ʿItikāf*, bāb 1; *Farḳ Lailat al-Ḳadar*, bāb 3), and in the year in which he died as many as twenty days (*ibid.*, *ʿItikāf*, bāb 17). During this period the mosque was full of booths of palm branches and leaves in which the *ʿakīfūn* lived (*ibid.*, bāb 13; cf. 6, 7). The Prophet only went to his house for some very special reason (*ibid.*, bāb 3). This custom was associated with the asceticism of the monks. The faithful were vexed, when on one occasion he received Ṣafiya in his booth and chatted for an hour with her (Bukhārī, *Farḳ al-Ḳhums*, bāb 4; *ʿItikāf*, bāb 8, 11, 12). According to another tradition, his *ʿitikāf* was broken on another occasion by his wives putting up their tents beside him and he postponed his *ʿitikāf* till Shawwāl (Bukhārī, *ʿItikāf*, bāb 6, 7, 14, 18). According to Zaid b. ʿAlī, the *ʿitikāf* can only be observed in a chief mosque (*djāmiʿ*) (*Corpus iuris di Zaid b. ʿAlī*, N^o. 447). During the early period, it was one of the initiatory rites for new converts. In the year 14, ʿUmar ordered the retreat (*al-ḳiyām*) in the mosques during the month of Ramaḍān for the people of Medina and the provinces (Ṭabarī, i. 2377). The custom persisted and has always been an important one among ascetics. "The man who retires for a time to the mosque devotes himself in turn to ṣalāt, recitation of the Qurʾān, meditation, *dhikr* etc." says Ibn al-Ḥādīdj (*Madḳhal*, ii. 50). There were pious people, who spent their whole time in a mosque (*aḳmū fihī*; Maḳrīzī, iv. 87, 97); of one we were told that he spent his time in the *manāra* of the Mosque of ʿAmr (*ʿItakafa*, *ibid.*, p. 44). Al-Samḥūdī says that during the month of Ramaḍān, he spent day and night in the mosque (Wustenfeld, *Medina*, p. 95). Saʿd al-Dīn (d. 644) spent the month of Ramaḍān in the Mosque of the Umayyads without speaking (Ibn Abī Ṣaibīʿa, ii. 192). Nocturnal vigils in the mosque very early became an established practice in Islām. According to Ḥadīth, the Prophet frequently held nocturnal ṣalāts in the mosque with the believers (Bukhārī, *Djumʿa*, bāb 29) and by his orders ʿAbd Allāh b. Unais al-Anṣārī came from the desert for twenty-three successive nights to pass the night in his mosque in rites of worship (Ibn Ḳutaiba, *Maʿārif*, ed. Wustenfeld, p. 142 sq.). Out of this developed the *tahadjud* [q. v.] ṣalāt, particularly recommended in the law and notably the *tarāwīḥ* ṣalāts [q. v.]. In Dihli on these occasions women singers actually took part (Ibn Battūṭa, iii. 155).

During the nights of the month of Ramaḍān there were festivals in the mosques and on other occasions also, such as the New Year, sometimes at the new moon, and in the middle of the month. The mosque on these occasions was illuminated; there was eating and drinking; incense was burned and *dhikr* and *ḳirāʾa* performed.

The Friday Ṣalāt was particularly solemn in Ramaḍān, and in the Fāṭimid period, the caliph himself delivered the *ḳhuṭba* (see Maḳrīzī, ii. 345 sqq.; Ibn Taghribirdī, ii/i., ed. Juynboll, p. 482—486 and ii/i., ed. Popper, p. 331—333). The mosques associated with a saint had and still have their special festivals on his *maḳlūd* [q. v.]; they also are celebrated with *dhikr*, *ḳirāʾa* etc. (cf. Lane, *Manners and Customs*, ch. xxiv. sqq.). The saint's festivals are usually local and there

are generally differences in the local customs. In the Maghrib for example in certain places the month of Ramaḍān is opened with a blast of trumpets from the manābir (*Madkhal*, ii. 69).

The mosque thus on the whole took over the role of the temple. The rulers from 'Umar onwards dedicated gifts to the Ka'ba (*B. G. A.*, v. 20 sq. and *GL*, s.v. *Shamsa*), and as in other sanctuaries we find women vowing children to the service of the mosque (Bukhārī, *Ṣalāt*, bāb 74; Maḳrīzī, iv. 20). *Tawāf* was performed, as at the Ka'ba, in mosques with saints' tombs as is still done, e.g. in Hebron; Muḍjir al-Din sees a pre-Islāmic custom in this (Sauvage, *Hist. Jérus. et Hébron*, p. 5). Especially important business was done here. In times of trouble the people go to the mosque to pray for help, for example during drought, for which there is a special ṣalāt (which however usually takes place on the *muṣallā*), in misfortunes of all kinds (e.g. Wustenfeld, *Medina*, p. 19—20; Maḳrīzī, iv. 57); in time of plague and pestilence, processions, weeping and praying with Ḳur'āns uplifted, were held in the mosques or on the *muṣallā*, in which even Jews and Christians sometimes took part (Ibn Taghribirdī, ii/i. 11, ed. Popper, p. 67; Ibn Baṭṭūṭa, i. 243 sq.; cf. Quatremère, *Hist. Sult. Maml.*, ii/i. 35, 40; ii/ii. 199) or for a period a sacred book like Bukhārī's *Ṣaḥīḥ* was recited (Quatremère, *op. cit.*, ii/ii. 35; al-Djābartī, *Merveilles Biographiques*, French transl., vi. 13). In the courtyards of the mosques in Jerusalem and Damascus in the time of Ibn Baṭṭūṭa solemn penance was done on the day of 'Arafa (i. 243 sq.), an ancient custom which had already been introduced into Egypt in the year 27 by 'Abd al-'Azīz b. Marwān (*Ḳu'ūd* after the *Aṣr*; cf. Kindī, *Wulāt*, p. 50). Certain mosques were visited by barren women (Wustenfeld, *Medina*, p. 133). An oath is particularly binding if it is taken in a mosque (cf. Joh. Pedersen, *Der Eid bei den Semiten*, p. 144); this is particularly true of the Ka'ba, where written covenants were also drawn up to make them more binding (*ibid.*, p. 143 sq.; *Chron. Mekka*, i. 160 sq.). It is in keeping with this idea of an oath that Jews who had adopted Islām in Cairo had to take oaths in a synagogue which had become a mosque (Maḳrīzī, iv. 265). The contract of matrimony (*ʿaḳd al-nikāḥ*) also is often concluded in a mosque (Santillana, *Il Muḥtaṣar*, ii. 548; *Madkhal*, ii. 72 infra; Snouck Hurgronje, *Mekka*, ii. 163 sq.), and the particular form of divorce which is completed by the *liʿān* [q.v.] takes place in the mosque (Bukhārī, *Ṣalāt*, bāb 44; cf. Joh. Pedersen, *Der Eid* etc., p. 114).

It is disputed whether a corpse may be brought into the mosque and the ṣalāt *al-djinnā* performed there. According to one ḥadīth, the bier of Sa'd b. Abi Waḳkāṣ was taken into the mosque at the request of the Prophet's widow and the ṣalāt held there. Many disapproved of this, but 'A'isha pointed out that the Prophet had done this with the body of Suhail b. Baiḏā' (Muslim, *Ḍyānā'iz*, tr. 34; cf. also Ibn Sa'd, i/i. 14 sq.). The discussion on this point is not unconnected with the discussions regarding the worship of tombs. In theory this is permitted by al-Shāfi'ī, while the others forbid it (see Juynboll, *Handbuch*, p. 170; I. Guidi, *Il Muḥtaṣar*, i. 151). The matter does not seem to be quite clear, for Ḳuṭb al-Din says that only Abū Iḥanifa forbids it, but he himself thought that

it might be allowable on the authority of a statement by Abū Yūsuf (*Chron. Mekka*, iii. 208—210). In any case, it was a very general practice to allow it, as Ḳuṭb al-Din also points out. 'Umar conducted the funeral ṣalāt for Abū Bakr in the Mosque of the Prophet and 'Umar's own dead body was brought there; later it became a general custom to perform the ceremony in Medina close to the Prophet's tomb and in Mecca at the door of the Ka'ba; some even made a sevenfold *tawāf* with the corpse around the Ka'ba. This was for a time forbidden by Marwān b. 'Abd al-Hakam and later by 'Umar b. 'Abd al-'Azīz (Ḳuṭb al-Din, *loc. cit.*; Wustenfeld, *Medina*, p. 77). The custom was very early introduced into the Mosque of 'Amr (Maḳrīzī, iv. 7, 1 sqq.). That later scholars often went wrong about the prohibition is not at all remarkable; for it is not at all in keeping with the ever increasing tendency to found mosques at tombs. Even Ibn al-Ḥādīdj, who was anxious to maintain the prohibition, is not quite sure and really only forbids the loud calling of the *ḳur'ā*, *dhākirin*, *mukabbirin* and *muridin* on such occasions (*Madkhal*, ii. 50 sq., 64, 81). When a son of Sulṭān al-Mu'ayyad died and was buried in the eastern ḳubba of the Mu'ayyad mosque, the *ḳhaṭīb* delivered a *ḳuṭba* and conducted the ṣalāt thereafter and the *ḳur'ā* recited for a week at the grave, while the amirs paid their visits to the grave (Maḳrīzī, iv. 240, 2 sqq.). In Persia, it was the custom for the family of the deceased to sit in the mosque for three days after the death and receive visits of condolence (*B. G. A.*, iii. 440 infra).

4. Mosques as Objects of Pilgrimage.

As soon as the mosque became a regular sanctuary it became the object of pious visits. This holds especially of the memorial mosques associated with the Prophet and other saints. Among them three soon became special objects of pilgrimage. In a ḥadīth the Prophet says "One should only mount into the saddle to visit three mosques: al-Masjd al-Harām, the Mosque of the Prophet and al-Masjd al-Aḳṣā" (Bukhārī, *Faḍl al-Ṣalāt fi Masajid Makka wa 'l-Madina*, bāb 16; *Ḍyānā' al-Sa'id*, bāb 26; *Ṣawm*, bāb 67; Muslim, *Ḥaḍyḍ*, tr. 93; *Chron. Mekka*, i. 303). This ḥadīth reflects a practice which only became established at the end of the 'Umayyad period. The pilgrimage to Mecca had been made a duty by the prescription of the Ḥādīdj in the Ḳur'ān. The pilgrimage to Jerusalem was a Christian custom which could very easily be continued, on account of the significance of *al-Masjd al-Aḳṣā* in the Ḳur'ān. This custom became particularly important when 'Abd al-Malik made it a substitute for the pilgrimage to Mecca (Ya'ḳūbī, ed. Houtsma, ii. 311). Although this competition did not last long, the significance of Jerusalem was thereby greatly increased. Pilgrimage to Medina developed out of the increasing veneration for the Prophet. In the year 140 Abū Ḍja'far Maṣ'ūr on his ḥādīdj visited the three sanctuaries (Ṭabari, iii. 129) and this became a very usual custom. Mecca and Medina however still held the preference. Although those of Mecca and Jerusalem were recognised as the two oldest (the one is said to be 40 years older than the other; Muslim, *Masāḍīdj*, tr. 1; *Chron. Mekka*, i. 301), the Prophet however is reputed to have said "A ṣalāt in this

mosque is more meritorious than 1,000 ṣalāts in others, even the *al-Masjid al-Ḥarām* (Bukhārī, *Faṣl al-Ṣalāt fī Masajid Makka wa 'l-Madīna*, bāb 1; Muslim, *Ḥaḍḍaj*, tr. 89; *Chron. Mekka*, i. 303). The ḥadīth is aimed directly against Jerusalem and therefore probably dates from the Omayyad period. According to some, it was pronounced because someone had commended performing the ṣalāt in Jerusalem, which the Prophet was against (Muslim, *loc. cit.*; Wakidi-Wellhausen, p. 349). The three mosques however retained their pride of place (Ibn Khaldūn, *Muḥaddima*, faṣl 4, 6; Ibn al-Ḥaḍḍaj, *Muḥḥal*, ii. 55), and as late as 662 (1264) we find Baibars founding *awḡāf* for pilgrims who wished to go on foot to Jerusalem (Quatremère, *Hist. Sult. Maml.*, i. 1, 248).

Although these three mosques officially hold a special position, others also are highly recommended, e.g. the mosque in Kūba [see *AL-MADĪNA*]. A ṣalāt in this mosque is said to be as valuable as an *umra* or two visits to the mosque in Jerusalem (Dihyārbakrī, *Ḥamīs*, i. 381 sq.). Attempts were also made to raise the mosque of Kūfa to the level of the three. 'Alī is said to have told some one who wanted to make a pilgrimage from Kūfa to Jerusalem that he should stick by the mosque of his native town, it was "one of the four mosques" and two rak'as in it were equal to ten in others (*B. G. A.*, v. 173 sq.; Yāqūt, *Mu'jam*, iv. 325); in another tradition, ṣalāts in the provincial mosques are said to be generally worth as much as the pilgrimage (Maḥrizī, iv. 4), and traditions arose about the special blessings associated at definite times with different holy places of Islām (*B. G. A.*, iii. 183) and especially about their superior merits (*B. G. A.*, v. 174). The Meccan sanctuary, however, always retained first place, which was marked by the Ḥaḍḍaj. It was imitated by al-Mutawakkil in Sāmarrā': he built a Ka'ba as well as a Minā and an 'Arafa there and made his amurs perform their ḥaḍḍaj there (*B. G. A.*, iii. 122).

D. Equipment of the Mosque.

1. The Development of the Edifice.

Except in the case of Mecca the earliest mosques as described above (*B. 1*) were at first simply open spaces marked off by a *ḡulla*. The space was sometimes, as in al-Fustāt, planted with trees and usually covered with pebbles; e.g. in Medina (Muslim, *Ḥaḍḍaj*, tr. 95; Balādhuri, p. 6; and al-Fustāt (Maḥrizī, iv. 8; Ibn Duḡmāq, iv. 62; Ibn Taghribirdī, i. 77) which was later introduced in Baṣra and Kūfa the courtyards of which were otherwise dusty (Balādhuri, p. 277, 348). These conditions could only last so long as the Arabs retained their ancient customs as a closed corporation in their simple camps. The utilisation of churches was the first sign of a change and was rapidly followed by a mingling with the rest of the population and the resulting assimilation with older cultures.

'Umar made alterations in the mosques in Medina and in Mecca also. He extended the Mosque of the Prophet by taking in the house of 'Abbās: but like the Prophet, he still built of *labin*, palm-trunks and leaves, and extended the booths (Bukhārī, *Ṣalāt*, bāb 62; Balādhuri, p. 6). In Mecca also his work was confined to extending the area occupied by the mosque. He bought the surrounding

houses and took them down and then surrounded the area with a wall to the height of a man; the Ka'ba was thus given its *finā'* like the mosque in Medina (Balādhuri, p. 46; *Chron. Mekka*, i. 306 sq.; Wustenfeld, *Medina*, p. 68 sq.). 'Othmān also extended these two mosques but introduced an important innovation in using hewn stone and plaster (*ḡyaṣ*) for the walls and pillars. For the roof he used teak (*sādī*). The booths, which had been extended by 'Omar, were replaced by him by pillared halls (*arwiḡa*, sing. *riwāḡ*) and the walls were covered with plaster (Bukhārī, *Ṣalāt*, bāb 62; Balādhuri, p. 46; Wustenfeld, *Medina*, p. 70 sq.). Sa'd b. Abī Waḡḡās is said to have already taken similar steps to relieve the old simplicity of the barely equipped mosque in Kūfa. The *ḡulla* consisted of pillars of marble adorned in the style of Byzantine churches (Ṭabari, i. 2489; Yāqūt, iv. 324).

This was little in keeping with the simple architecture of the original town, for Baṣra and Kūfa had originally been built of reeds and only after several great fires were they built of *labin* (see above bāb 1; cf. Ibn Kutaiba, *Ma'arīf*, ed. Wustenfeld, p. 279). As to Kūfa, Sa'd by 'Omar's orders extended the mosque so that it became joined up with the *Dār al-Imāra*. A Persian named Ruzbeh b. Buzurdjmihr was the architect for this. He used bricks (*adḡurr*) for the building, which he brought from Persian buildings and in the mosque he used pillars which had been taken from churches in the region of Hīra belonging to the Persian kings; these columns were not erected at the sides but only against the Kibla wall. The original plan of the mosque was therefore still retained although the pillared hall, which is identical with the *ḡulla* already mentioned (200 *dhirā'* broad), replaced the simple booth and the materials were better in every way (Ṭabari, i. 2491 sq., 2494). Already under the early Caliphs we can therefore note the beginnings of the adoption of a more advanced architecture.

These tendencies were very much developed under the Omayyads. Even as early as the reign of Mu'awiya, the mosque of Kūfa was rebuilt by his governor Ziyād. He commissioned a pagan architect, who had worked for Kisrā, to do the work. The latter had pillars brought from al-Ahwāz, bound them together with lead and iron clamps to a height of 30 *dhirā'* and put a roof on them. Similar halls, built of columns (here like the old booth in Medina called *ḡuffa*; Ṭabari, i. 2492, 14; but also *ḡulla*, plur. *ḡilāl*; Ṭabari, ii. 259 sq.) were added by him on the north, east and western wall. Each pillar cost him 18,000 dirhams. The mosque could now hold 60,000 instead of 40,000 (Ṭabari, i. 2492, 6 sqq., cf. 2494, 7; Yāqūt, *Mu'jam*, iv. 324, 1 sqq.; Balādhuri, p. 276). Al-Ḥaḍḍaj also added to the mosque (Yāqūt, iv. 325 sq.). Ziyād did similar work in Baṣra. Here also he extended the mosque and built it of stone (or brick) and plaster and with pillars from al-Ahwāz, which were roofed with teak. We are told that he made *al-ḡuffa al-muḥaddima*, i. e. the *kibla* hall, with 5 columns. This seems to show that the other sides also — as in Kūfa — had pillared halls. He erected the *Dār al-Imāra* close to the *kibla* side. This was taken down by al-Ḥaḍḍaj, rebuilt by others, and finally taken into the mosque by Hārūn al-Rashīd (Balādhuri, p. 347, 348 supra, 349; Yāqūt, i. 642, 643). In Mecca also in the same period

similar buildings were erected. Ibn al-Zubair and al-Ḥadīdjādī both extended the mosque, and Ibn al-Zubair was the first to put a roof on the walls; the columns were gilt by 'Abd al-Malik and he made a roof of teak (*Chron. Mekka*, i. 307, 309). The Mosque of 'Amr was extended in 53 with Mu'āwīya's permission by his governor Maslama b. Mukhallad to the east and north; the walls were covered with plaster (*nūra*) and the roofs decorated; it is evident from this that here also the original booth of the south side was altered to a covered hall during the early Omayyad period. A further extension was made in 79 in the reign of 'Abd al-Malik (Maḳrīzī, iv. 7, 8; Ibn Duḳmāḳ, iv. 62). Thus we find that during the early Omayyad period and in part even earlier the original simple and primitive mosques were some extended, some altered. The alteration consisted in the old simple booth of the Mosque of the Prophet being gradually enlarged and transformed into a pillared hall with the assistance of the arts of countries possessing a higher degree of civilisation. In this way what had originally been an open place of assembly developed imperceptibly into a court, surrounded by pillared halls. Very soon a fountain was put in the centre of the court and we now have the usual type of mosque. The same plan is found in the peristyle of the houses and in the aithrion of a basilica like that of Tyre (Herzog-Hauch, *Real-encyclopädie* 3, x. 780).

The great builders of the Omayyads, 'Abd al-Malik and his son al-Walid I, made even more radical progress. The former entirely removed the original mosque in Jerusalem and his Byzantine architects erected the Dome of the Rock as a Byzantine building (cf. Sauvaire, *Jérus. et Hébron*, p. 48 sqq.). Al-Walid likewise paid equally little attention to the oldest form of mosque, when, in Damascus, he had the church of St. John transformed by Byzantine architects into the Mosque of the Omayyads. As al-Maḳḍīsī distinctly states, they wanted to rival the splendours of the Christian churches (*B. G. A.*, iii. 159). The new mosques, which were founded in this period, were therefore not only no longer simple, but they were built with the help of Christians and other trained craftsmen with the use of material already existing in older buildings. Al-Ḥadīdjādī, for example, used materials from the surrounding towns when building his foundation of Wāsiṭ (Tabarī, iii. 321; Balādhuri, p. 290). Columns from churches were now used quite regularly (e. g. in Damascus: Mas'ūdi, *Murūdj*, iii. 408; Ramla: *B. G. A.*, iii. 165; cf. Balādhuri, p. 143 sqq.; for Egypt see Maḳrīzī, iv. 36, 124 sq.). Sometimes remains of the older style remained alongside of the new. In Irānshahr, al-Maḳḍīsī found in the chief mosque wooden columns of the time of Abū Muslim along with round columns of brick of the time of 'Amr b. al-Laith (*B. G. A.*, iii. 316). The building activities of al-Walid extended to al-Fuṣṭāṭ, Mecca and Medina (cf. *B. G. A.*, v. 106 sq.) where no fundamental alterations were made, but complete renovations were carried out. With these rulers, the building of mosques reaches the level of the older architecture and gains a place in the history of art. There is also literary evidence for the transfer of a style from one region to another. In Iṣṭakhr, for example, there was a ḡāmī' in the style of the Syrian mosques with round columns, on which was a *baḳara* (*B. G. A.*, iii. 436 sq.; cf. for Shirāz,

p. 430). Al-Walid also rebuilt the Mosque of the Prophet, in part in the Damascus style (*B. G. A.*, iii. 80; Kaẓwīnī, ed. Wustenfeld, ii. 71).

This revolution naturally did not take place without opposition any more than the other innovations, which Islām adopted in the countries with a higher culture which it conquered. After the Mosque of the Prophet had been beautified by Christian architects with marble, mosaics, shells, gold etc. and al-Walid in 93 was inspecting the work, an old man said: "We used to build in the style of Mosques; you build in the style of Churches" (Wustenfeld, *Medina*, p. 74). The discussions on this point are reflected in ḥadīths. When 'Omar enlarged the Mosque of the Prophet, he is reported to have said: "Give the people shelter from the rain, but take care to make them red or yellow lest you lead the people astray", while Ibn 'Abbās said: "You shall adorn them with gold as the Jews and Christians do" (Bukhārī, *Ṣalāt*, bāb 62). Ibn 'Abbās here takes up the Omayyad attitude and 'Omar that of old-fashioned people, according to whom any extension or improvement of the *ḡulla* was only permissible for strictly practical reasons. The conservative point of view is predominant in Ḥadīth. It is said that extravagant adornment of the mosques is a sign of the end of the world; the works of al-Walid were only tolerated from fear of the *fitna* (Ibn Ḥanbal, *Musnad*, iii. 134, 145, 152, 230, 283; al-Nasā'ī, *Masāḍid*, bāb 2; Ibn Māḍja, *Masāḍid*, bāb 2). The lack of confidence of pious conservatives in the great mosques finds expression in a ḥadīth, according to which the Prophet (according to Anas) said: "A time will come over my *umma* when they will vie with one another in the beauty of their mosques; then they will visit them but little" (al-'Asḳalānī, *Fuṭḥ al-Bārī*, i. 362). In the Fīḳh, we even find divergence from the oldest quadrangular form of the mosque condemned (Guidi, *Il Muḥ-taṣar*, i. 71). Among the types which arose later was the "suspended" (*mu'allaḳ*) i. e. a mosque situated in an upper storey (e. g. in Damascus, *J. A.*, ser. ix., vol. v. 409, 415, 422, 424, 427, 430).

2. Details of the Equipment of the Mosque.

a. The Minaret (see also MANĀRA).

The earliest primitive mosques had no minaret. When the *adhān* call was introduced. Bilāl is said to have summoned the faithful in Medina to the early ṣalāt from the roof of the highest house in the vicinity of the mosque (Ibn Hishām, p. 348; Wustenfeld, p. 75); on the day of the conquest of Mecca, the Prophet instructed Bilāl to utter the call to prayer from the Ka'ba, according to al-Azraqī, from the roof (*Chron. Mekka*, i. 192; cf. Ibn Hishām, p. 822). During the early days of Islām, the *mu'adhdhin* did not however utter his summons from an elevated position (cf. below G 2 d). It is doubtful in the first place when the minaret was introduced, and in the second whether it was adopted into Islām, expressly for the call to prayer.

The Omayyad caliph al-Walid (86—96) undoubtedly had considerable importance for the history of the minaret, although even earlier in 84 (703) Sidi 'Uḳba in Kairawān had been built by Ḥassān b. Nu'mān with a minaret (so according to Bakrī: H. Saladin, *La Mosquée de Sidi Okba*, 1899, p. 7, 19). There was also a minaret in the

Omayyad mosque in Damascus. At the present day, the mosque has 3 minarets as was the case in the time of Ibn ʿUjair, who mentions two on the west and one in the north (*Rihla*, p. 266), while Ibn Baṭṭūta also says there were three and adds that one was in the west, another in the east and another in the north (i. 203), which agrees with present day conditions. One of the earliest authorities, Ibn al-Faḥlī (d. 289 = 902), however mentions only one minaret (*miḏhana*) and says that in the days of the Greeks it had been a watch-tower (*nāṭir*), which belonged to the church of St. John and was left standing by al-Walid (B. G. A., v. 108. 5). Al-Maḥḍī (d. 375 = 985) mentions only one minaret, which was above the Bāb al-Farādis: when he calls it a *manāra muḥlatiḥa* (B. G. A., iii. 159) he may perhaps mean a renovated minaret (cf. Le Strange, *Palestine under the Moslems*, p. 229) and besides, his description does not exclude the existence of other minarets. The tradition that the minaret of the Omayyad mosque was taken over from the predecessors of the Muslims long survived: for Yāqūt, who mentions the east and west minarets, says that the western belonged to a fire-temple and a flame used to be visible on it (*Muḥam*, ii. 596) and according to Ibn Baṭṭūta, the east and west minarets had been built by the Byzantines while only the north one was built by the Muslims (i. 203 sq.; a story also given by al-Bosrāwī [d. 1005 = 1594] quoting Ibn ʿAsākir [d. 571 = 1176], see *J. A.* ser. 9, vii. 423; Quatremère, *Hist. Sult. Manl.*, ii. 273). In Mecca also, al-Walid built turrets (*shurāfat*; *Chron. Mekka*, i. 310), sometimes minarets (as is evident from *ibid.*, p. 310, 311). They were later increased so that Kūṭb al-Dīn mentions 7 minarets (*ibid.*, iii. 424–426). According to al-Samhūdī, he also built in Medina 4 towers but Sulaimān b. ʿAbd al-Malik, in the year 97 had the southwestern tower taken down, because the shadow of the muḥadḍihīn from it fell upon him, when he was in the house of Marwān b. al-Ḥakam. While al-Samhūdī says that there were no minarets in Medina before al-Walid, he asserts on the other hand that ʿUmar had already built towers in the four corners of the mosque (Wustenfeld, *Medina*, p. 75; cf. Ibn Baṭṭūta, i. 272). In the time of Ibn ʿUjair (in 580) there were still only 3 minarets there (*Rihla*, p. 195). It was not until 706 that Muḥammad b. Kaḥāl rebuilt the fourth minaret (Wustenfeld, *op. cit.*, p. 76).

After the time of al-Walid, minarets became more and more numerous. In Ramla his brother Iḥṣām built a beautiful minaret (B. G. A., ii. 165, 61). For the mosque in Jerusalem Ibn ʿAbd Rabbihū about 400 mentions 4 minarets (*ʿItḥ. Cairo* 1331, iv. 274 sq.) which Muḥḍir al-Dīn claims to go back to the time of al-Malik (Sauvāgne, *Hist. Jesus. et Hohen*, p. 125). Ibn Hawkal (367 = 977) expressly notes of the ʿUjair in Farayab in Khurasān that it did not have a minaret (B. G. A., ii. 321) and he seems to consider it *bidʿa* to build two minarets (*ibid.*, p. 13 sq.). Apart from the isolated reference by al-Samhūdī to ʿUmar's building activities, to which very little importance can be attached, it is probable from this evidence that al-Walid was the first to introduce the minaret into Syria and the Hīdžāz. That he introduced it into Islām itself, is however not certain. According to Balādhuri (d. 279 = 892), Ziyād in Baṣra, where he was governor in 45, built the minaret of stone, when he built the mosque of brick (p. 348). This

seems to suggest that there was already a minaret there. According to the Egyptian historians, Maslama b. Mukhallad in al-Fuṣṭāt by Muʿāwiya's orders in 53 built a tower at each corner of the mosque of ʿAmr (*ṣawmaʿa*), which had not been done before (Makrizi, iv. 7 sq., 44; Ibn Taghribirdi, i. 77). The staircase leading up to the minaret was originally outside the mosque, but was later put inside it. Maslama is said to have introduced the minaret into other mosques in al-Fuṣṭāt (i. e. in all except those of Tūdjib and Khawlān; cf. Makrizi, iv. 44; Ibn Taghribirdi, *loc. cit.*). How old this story is, cannot be ascertained, but the view often put forward that al-Walid was the first to introduce the minaret (cf. Schwally, in *Z. D. M. G.*, lii., 1898, p. 143–146), is in any case not certain.

There are three names in common use for the minaret. *Maḏhana* or *miḏhana*, "place of the *aṭḥān* call", which is in general use in Egypt and Syria at the present day, is frequently found in literature and inscriptions (B. G. A., iii. 225, 15; v. 108, 5; Makrizi, iv. 13, 10; 20, 4, 6, and *pass.*; Ibn A. ʿUsaybiʿa, ii. 204, 2 from below; v. Berchem, *Corpus*, i., No. 25, 63, 88, 89, 90 and others from the viii century onwards). *Ṣawmaʿa*, specially used in North Africa (Margais, *Les Monuments arabes de Tlemcen*, 1903, p. 45), is frequently found (Ibn ʿUjair, *Rihla*, p. 91, 100, 145, 195, 266; Ibn Baṭṭūta, i. 203, 272; ii. 2, 12, 13; Makrizi, iv. 7 sq.; Ibn Taghribirdi, i. 77). This word means also cloister or cell and in the older literature is used as the equivalent of *daīr* (Sūra xxii. 41; Ibn Hishām, p. 115; Bukhārī, *al-ʿAmal fi ʿl-Salāt*, bāb 7; *Maṣālim*, bāb 35; *Anbiyāʾ*, bāb 48; B. G. A., ii. 154; Makrizi, iv. 389; Ibn al-Fārid, *Taʿīya* v. 561). *Manāra* is the most usual word in literature (Makrizi, iv. 7: *manār*; cf. v. Berchem, *Corpus*, i., No. 63; K. *al-Madkhal*, ii. 63, 67). This word has the same meaning as Syr. *menārā* but is probably an analogous, independent formation. The word means light, position in which a light is put (Imruʿulqais, *Diwān*, 148, 37; Abū Dhūʿaib, *Diwān*, ed. Bell, i. 60; B. G. A., vii. 132); also lighthouse (B. G. A., iii. 177; Kindī, *Wulāt*, p. 64; Ibn ʿUjair, *Rihla*, p. 41). *Manār(a)* also means a boundary stone or a signpost (*alam*; *Lisān*, vii. 99, 1 from below; ʿAis al-Ruḳayyāt, p. 37, 7, 70, 2; Ibn Saʿd, *ii*, i. 135; *Fragm. Hist. Arab.*, ii. 12 and *GL*) or a watch tower (Tabari, i. 864, 878); the boundary stones of the *ḥaram* area, for example, are called *Manār al-Ḥaram* (B. G. A., ii. 25) and Abrahā was called *Dhu ʿl-Manār*, because he put up signposts (*Lisān*, vii. 105, 11; *Djawharī*, *Ṣaḥāḥ*, i. 410); obelisks are also called *manāra* (B. G. A., vii. 117, 20, 118, 1). The derivation of the last named *manār* from *miliariion* (Fraenkel, *Fremdwörter*, p. 283) is little likely and still less probable is a derivation from a Persian building for fire-worship (v. Berchem in E. Diez, *Chirasanische Baudenkmäler*, i. [1908], 113 sqq. who distinguishes rather ingeniously between *manāra* "light" from *nūr* and *manār* "fire-tower" from *nār*). Probably there is only a single word in question and the signposts received their name from the watch-tower (note that *alam* also is used of the minaret: Ibn ʿArabshāh, *Vita Timuri*, ed. Manger, 1767, iii. 704). There are a number of references to the existence on the coasts of a series of *manāʾir* and each *manāra* gave warning by light-signals of the movements of the enemy (B. G. A., iii. 177). According to al-Balādhuri

(p. 128: *manāzir*), this was already the custom in 'Omar's time and was in all probability an inheritance from the Byzantines. Similar watch-towers (*sōmantērion*) were used inland in the Byzantine period e.g. in the eastern Hawrān, and the Persians had similar towers on their frontiers (*manāra*: Ṭabari, i. 864, 878); a similar *manāra* in the 'Irāk is described by Ibn Džubair (p. 210; cf. *B. G. A.*, v. 176); in the Maghrib also, fort-like towers are called *manāra*, e.g. in Tunis and Gabes (al-Tidjāni in 706—708; *J. A.*, ser. 4, xx. [1852], 99, 144). That these towers used fire-signals is very probable and Musil gives evidence of this custom for the Edom territory (*Arabia Petraea*, ii. 2, 232). In the viiith (xvth) century again al-'Umari (*Ta'rif bi'l-Muṣṭalah al-šharif*, Cairo 1312, p. 199 sq.) refers to the use of a series of heights and towers for light-signals, including the *Ma'dhanat al-'Arṣ*, one of the minarets of the Omayyad mosque of Damascus (on the whole question see R. Hartmann, in *Z. D. M. G.*, lxx., 1916, p. 486, 505; *Mennon*, iii. 221; *Isl.*, i. 388 sq.). It is obvious that the tower of the mosque was given the name *manāra* from its resemblance to similar watch-towers and it is possible that its use for fire-signals was more general in earlier times. In Fās the hours of prayer were indicated by lamps from the minarets (*J. A.*, ser. II, xii., 1913, p. 341).

This does not however answer the question why the minaret was introduced into Islām. From what has been said above it is probable that the minaret was introduced specially for the *adhān* call. According to Ibn al-Faḳīh and others, it was incorporated in the Mosque of the Omayyads, simply because it was already there as a part of the church (cf. above); this agrees with de Vogüé's observation that the use of towers in churches and the larger public buildings in Syria in the ivth and vth century was common (*La Syrie centrale*, i. 57). The tower in the mosque of Baṣra is thought to be an original church-tower (cf. Diez, *Die Kunst der islamischen Völker*, p. 19 sq.). This indicates that the minaret in Syria became part of the mosque in a purely architectural way. But after its introduction, it was soon used as a place in which the *mu'adhdhīn* could stand, which must have been an obvious thing to do. This did not happen at once however. From Ṭabari and others we can see that the call to prayer at a much later date could still be uttered in the street, and al-Farazdaq (d. about 110 = 728) who refers to the existence of *manār al-masājid* (*Kāmil*, p. 481; *Aghāni*, 2nd ed. Cairo, xix. 18) also speaks of *mu'adhdhīns* on the city wall (Ṭabari, ii. 1302; *Naḳā'id*, p. 365; see J. Horowitz, in *Isl.*, xvi., 1927, p. 253, 255) with which we may compare the tradition that the Prophet considered whether he ought to permit the call to prayer to be uttered on the fortifications of Madina (*al-aḥādīth al-Madīna*; cf. Ibn Sa'd, i. 7).

It is however by no means impossible that the minaret may have arisen elsewhere in a different way. If we can trust the account by al-Maḳrīzī and others (see above), the minaret was introduced into Egypt by Mu'āwīya's orders as a corner tower. Here it was at once used in a way which recalls the dwelling-towers of ascetics. It was used for the *adhān*, but not only for the five calls to prayer but also for vigils, in which the *mu'adhdhīns* repeated litanies (Maḳrīzī, iv. 44 middle) and its

architect, Maslama b. Mukhallad, used it for the *ṣṭikāf* (*ibid.*, p. 44). An ascetic who died in 469 lived in the *manāra* of the Mosque of 'Amr (Yāḳūt, *Udabā'*, iv. 274). This suggests the meaning of minaret expressed by the word *ṣawmā'a* (cf. also Maḳrīzī, iv. 7, 8) as a saint's cell. According to one source, rather late however, al-Walid is said to have found a monk in the tower of the church of St. John who lived in the *ṣawmā'a* there (cf. *J. A.*, ser. 9, vii., p. 189; Quatremère, *Hist. Sult. Maml.*, II/i. 264). This use of the minaret was kept up during the golden age of Islām. Thus Ibn Džubair records that he saw in the west minaret of the mosque of the Omayyads cells for devout Maghribis and in the topmost chamber, where al-Ghazālī had lived in *ṣṭikāf*, there was now a *zāhid* (*Rihla*, p. 266, 18 sq.); Ibn Tumait also lived there (Yāḳūt, *Mu'ḍam*, ii. 596, 17 sq.) and 'Abd al-Laṭīf also found another devotee living there (Ibn Abi 'Uṣaib'a, ii. 204, 2 from below). According to al-Maḳrīzī, the Egyptian minaret was not introduced in a purely architectural way, but even from his account it appears most likely to be Syrian in origin.

If the minaret did not have a single origin, it is improbable that a single type of tower served as the model for it. Ziyād is said to have built the minaret in Baṣra of stone. The quadrangular Syrian Omayyad type (*B. G. A.*, iii. 182), which was taken over from the church-tower, was also of stone. In Egypt, on the other hand, according to al-Maḳrīzī, minarets for many centuries were only built of brick and the earliest stone minarets in this country were not built till shortly before 700 in al-Manṣūriya and al-Āḳbughāwiya (Maḳrīzī, iv. 224). In North Africa where the Omayyad, Syrian type was introduced, a round minaret of brick in 7 stories with pillars was built in 'Abbasīya south of Kairawān in 184 (800) (Yāḳūt, *Mu'ḍam*, iv. 119). Ibn al-Hādīdī condemns minarets of his time as being built too high. It is interesting to note as throwing a light on what was considered *bid'a* that he regards the round form as the old and genuine one (*Madkhal*, ii. 61 below). — For literature see Fraenkel, Schwally, v. Berchem, R. Hartmann, Horowitz quoted above; Doutté, in *R. Afr.*, iv., 1900, p. 339 sqq.; J. H. Gottheil, in *J. Am. O. S.*, xxx., 1909—1910, p. 132—154; K. A. C. Creswell, in *Burlington Magazine*, xlviii., 1926, p. 134—140, 252—258, 290—296.

b. The Chambers.

The old mosque consisted of the courtyard and the open halls running along the walls: these were called *al-mughattā* (*B. G. A.*, iii. 82, 158, 165, 182) because they were roofed over. When we are told that in Palestine, except in Jericho, towers were placed between the *mughattā* and the courtyard (*ibid.*, p. 182), this seems to suggest that the halls were closed, which would be quite in keeping with the winter climate of this region. The halls were particularly extensive on the *qibla* side, because assemblies were held here. The space between two rows of pillars was called *riwāḳ*, pl. *arwiḳa* or *riwāḳāt* (*B. G. A.*, iii. 158, 159; Maḳrīzī, iv. 10, 11, 12, 49). Extension often took the form of increasing the number of the *arwiḳa*. In some districts a sail-cloth was spread over the open space as a protection from the sun at the time of the service (*B. G. A.*, iii. 205, 430).

The courtyard was called *ṣaḥn*. The open space around the Ka'ba is called *Fīnā' al-Ka'ba*

(*Chron. Mekka*, i. 307; Ibn Hishām, p. 822; cf. *Finā' Zamzam*: Yāqūt, *Ubbādī* vi. 376). *Finā'* is also the name given to the open space around the mosque (Maḳrīzī, iv. 6). Trees were often planted in the courtyard: e.g. in the mosque of 'Amr (see B 1; when we read in Maḳrīzī, iv. 6 that it had no *ṣaḥn*, this probably means that this space, planted with trees, between the covered halls was very narrow). In Medina, at the present day, there are still trees in the *Rawḍa* (Batanūnī, *Rihla*, p. 240); in Ibn Dhubair's time there were 15 palms there (*Rihla*, p. 194). Other mosques in Cairo had trees growing in them (Maḳrīzī, iv. 54, 94, 65, 120; in al-Masdjid al-Kāfirī, there were as many as 516 trees: *ibid.*, p. 266) as is still the case to-day. In other cases the court was covered with pebbles (see above D 1); but this was altered with a more refined style of architecture. Al-Maḳḍī mentions that this was only found in Tiberias, out of all the mosques in Palestine (*B. G. A.*, in 182). Frequently, as in Ramla, the halls were covered with marble and the courtyard with flat stone (*ibid.*, p. 165). In the halls also the ground was originally bare or covered with little stones; for example in the mosques of 'Amr until Maslama b. Mukhallad covered it with mats (see below). The floor of the Mosque of Amr was entirely covered with marble in the Mamlūk period (Maḳrīzī, iv. 13 sq.; cf. in Shirāz: Ibn Baṭṭūṭa, ii. 53). But in the mosque of Mecca, the *ṣaḥn* is still covered with little stones (Batanūnī, *Rihla*, p. 99 below), 400 dinars used to be spent annually on this (*Chron. Mekka*, ii. 10 sq.). In Medina also little pebbles were used (Ibn Dhubair, *Rihla*, p. 190; Ibn Baṭṭūṭa, i. 263).

There were not at first enclosed chambers in the hall. A change in this respect came with the introduction of the *maḳṣūra* [q. v.] (on this word cf. Quatremère, *Hist. Sult. Maml.*, i. i., p. 164, note 46). This was a box or compartment for the ruler built near the mihrāb. Al-Samhūdī gives the history of the *maḳṣūra* in Medina (Wustenfeld, *Medina*, p. 71 sq., 89 sq.). The traditions all agree that the *maḳṣūra* was introduced to protect the ruler from hostile attacks. According to some men, 'Othmān built a *maḳṣūra* of *ḥaṭīm* with windows, so that the people could see the imam of the community (*ibid.* and Maḳrīzī, iv. 7). According to another tradition, Marwān b. 'Abd al-'Iḥakam, governor of Medina, after an attempt had been made on him by a Yamani in the year 44, was the first to build a *maḳṣūra* of dressed stone with a window (Balādhuri, p. 6 below; Tabari, ii. 70). Mu'āwiya is then said to have followed his example. Others again say that Mu'āwiya was the first to introduce this innovation. He is said to have introduced the *maḳṣūrat* with the accompanying guard as early as the year 40 or not till 44 after the Khāridjī attempt (Tabari, i. 3465, 3; *B. G. A.*, v. 109, 3; Maḳrīzī, iv. 12, 11 sq.); according to one story because he had seen a dog on the minbar (Baihaḳī, ed. Schwally, p. 393 below; cf. on the whole question: H. Lammens, *Mu'āwiya*, p. 202 sq.). This much seems to be certain, that the *maḳṣūra* was at any rate introduced at the beginning of the Omayyad period and it was an arrangement so much in keeping with the increasing dignity of the ruler that, as Ibn Khaldūn says, it spread throughout all the lands of Islām (*Mu'āwiya*, Cairo 1322, p. 212 sq., *faṣl* 37). The governors built themselves compartments in the principal mosques

of the provinces, e.g. Ziyād in Kūfa and Baṣra (Balādhuri, p. 277, 348) and probably Kurra b. Sharik in al-Fuṣṭāṭ (Maḳrīzī, iv. 12). In Medina, we are told that 'Omar b. 'Abd al-'Azīz as governor (86—93) raised the *maḳṣūra* and built it of teak, but al-Mahdī had it taken down in 160 and a new one built on the level of the ground (*ibid.*, p. 7; Wustenfeld, *op. cit.*; Balādhuri, p. 7 centie). We are further told that in 161, al-Mahdī prohibited the *maḳṣūr* of the provinces and al-Ma'mūn even wanted to clear all the boxes out of the *masāḳid* *djāmi'a*, because their use was a *sunna* introduced by Mu'āwiya (Maḳrīzī, iv. 12; Ya'qūbī, ed. Houtsma, ii. 571). But this attempt did not succeed. On the contrary, their numbers rapidly increased. In Cairo, for example, the *djāmi'* al-'Askar built in 169 had a *maḳṣūra* (Maḳrīzī, iv. 33 sq.) and the mosque of Ibn Ṭulūn had a *maḳṣūra* beside the mihrāb which was accessible from the Dār al-Imāra (*ibid.*, p. 36, 37, 42; Ibn 'Aghrībī, ii. 8, 14). The *maḳṣūra* was found in the larger mosques. In the *djāmi'* al-Kāfa, Muḥammad b. Kaḥālūn in 718 built a *maḳṣūra* of iron for the Sulṭān's ṣalāt (Maḳrīzī, iv. 132). According to Ibn Khaldūn, the *maḳṣūra* was an innovation of Islām's own. The question must however be left open, whether in its introduction and development there may not be some connection with the boxes of the Byzantine court, at least, for example, when the Turks in the Yeshil *djāmi'* in Brussa put the Sulṭān's box over the door (R. Hartmann, *Im neuen Anatolien*, p. 27).

Although the *maḳṣūra* was introduced with the object of segregating the ruler and was therefore condemned by the strict as contrary to the spirit of Islām (e.g. *Madkhal*, ii. 43 sq.), *maḳṣūr* were probably introduced for other purposes. Ibn Dhubair mentions three in the Mosque of the Omayyads: the old one built by Mu'āwiya in the eastern part of the mosque, one in the centre, which contained the minbar, and one in the west where the Ḥanafīs taught and performed the ṣalāt. There were also other small rooms shut off by wooden lattices, which could be sometimes called *maḳṣūra* and sometimes *zāwiya*. As a rule, there were quite a number of *zāwiya* connected with the mosque which were used by students (*Rihla*, p. 265 sq.). We find the same state of affairs in other mosques.

While the groups of the *kurra'*, the students, the lawyers etc. had originally to sit together in a common room, gradually the attempt was made to introduce separate rooms for some of them. Small compartments were either cut off in the main chamber or new rooms were built in subsidiary buildings. In the former case we get the already mentioned *maḳṣūr* or *zāwiya*. Ibn al-Ḥāḍijī says that a madrasa was often made by the simple process of cutting off a part of a mosque by a balustrade (*darbuzin*) (*Madkhal*, ii. 44). Thus in the hall, of the Mosque of 'Amr there were several compartments for teaching, which are called *maḳṣūra* and *zāwiya*, in which studies were prosecuted (Maḳrīzī, iv. 20, 16, 23). In the Azhar Mosque a *Maḳṣurat Fāṭima* was made in the time of the Fāṭimids, where she had appeared, and the emirs in the following period made a large number of such *maḳṣūr* (*ibid.*, p. 52, 53). In the Aḳṣā Mosque about 300 A.H., there were three *maḳṣūras* for women (*B. G. A.*, v. 100). These divisions might be a nuisance at the great Friday assemblies and this is why al-Mahdī wanted to remove them in 161 from the *masāḳid* al-*djāmi'at* (Tabari, iii. 486),

and Ibn al-Hādīdj condemned them as works of the *mulk* and numbers them like other embellishments with the *ashrāt al-sā'a* (*Madkhal*, ii. 43 sq.).

The mu'adhḥins not only lived in the minarets, where, at any rate in the Tūlūnid period, they held vigils (Maḳrīzī, iv. 48). They had rooms (*ḡhuraf*, sg. *ḡhurfa*) on the roof and these rooms in time came to be numerous (*ibid.*, p. 13, 14). All kinds of rooms were put in subsidiary buildings, for the khaṭīb (*ibid.*, p. 13), for judges, for studies, etc. In addition there were dwelling-houses, not only for the staff but also for others. As already mentioned, devout men used to take up their residence in the mosque for a considerable period for *ṣikāf* and any one at any time could take up his quarters in the mosque; he could sleep there and make himself at home. It therefore came quite natural to the devout to reside permanently in the mosque. Ascetics often lived in the minaret (see above), a *ṣāhid* lived on the roof of the Azhar mosque, others made themselves cells in the mosque, as a *shāikh* in Naṣībīn did (Ibn Djubair, *Riḥla*, p. 240; cf. in Ḥarrān, p. 245) and as happened in Salāḥ al-Dīn's time in the mosque of the Omayyads (Ibn Abī Uṣaibī'a, ii. 182). It was however very usual for them to live in the side rooms of the mosque, as was the case for example, in the Mosque of the Omayyads (Ibn Djubair, p. 269; Ibn Baṭṭūta, i. 206). In particularly holy mosques like that in Hebron, houses for *al-mu'takifūn* were built around the sacred place (Sauvaire, *Hist. Jérus. et Hébron*, p. 11 sq.) and also beside the *Masjid Yānis* at the ancient Niniveh (*B. G. A.*, iii. 146). Kitchens were therefore erected with the necessary mills and ovens and cooked food (*ḡashisha*) and 14-15,000 loaves (*raḡhīf*) were daily distributed to those who stayed there and to visitors (Sauvaire, p. 20 sq.; cf. Quatremère, *Hist. Sult. Maml.*, i/i., 231). Bread was also baked in the mosque of Ibn Tūlūn (Quatremère, *op. cit.*, i/i., 233) and kitchens were often found in the mosques (for al-Azhar, see Djabarti, *Merveilles*, iii. 238 sq.; Sulaimān Raṣād, *Kanz al-Djawhar fī Ta'rikh al-Azhar*, p. 71 sqq., 107 sqq.). Those who lived in and beside the mosque were called *muṭjāwriūn* (cf. *B. G. A.*, iii. 146: for Jerusalem, Nāṣir-i Khosraw, p. 82, 91; for Mecca, Ibn Djubair, p. 149; for Medina, Ibn Baṭṭūta, i. 279, where we learn that they were organised under a *kaddim*, like the North Africans under an *amin* in Damascus; Ibn Djubair, p. 277 sq.). They were pious ascetics, students, and sometimes travellers. The students generally found accommodation in the madāris but large mosques like that of the Omayyads or al-Azhar had always many students who lived in them. The name of the halls *riwāḳ*, plur. *arawīḳa*, was later used for these students' lodgings (cf. v. Berchem, *Corpus*, i. 43, note 1; perhaps Maḳrīzī, iv. 54, 23). Strangers always found accommodation in the mosques (cf. C 1). In smaller towns it was the natural thing for the traveller to spend the night in the mosque and to get food there (Yāḳūt, iii. 385; al-Kifī, *Ta'rikh al-Ḥukamā'*, ed. Lippert, p. 252). Travellers like Nāṣir-i Khosraw, Ibn Djubair, Ibn Baṭṭūta, al-'Abdārī (*J. A.*, ser. 5, iv., 1854, p. 174) were able to travel throughout the whole Muslim world from one mosque to the other (or *madrasa* or *ribāṭ*). The traveller could even leave his money for safe keeping in a mosque (*Safar-nāma*, p. 51). Large endowments were bequeathed for those who

lived in the mosques (Ibn Djubair, *op. cit.*; Ibn Taghribirdī, ii/ii., 105 sq.).

In later times the rulers often built a lodge or pavilion (*manzara*) in or near the mosque (Maḳrīzī, ii. 345; iv. 13; cf. on the word: Quatremère, *Hist. Sult. Maml.*, ii/ii., 15).

There was often a special room with a clock in the mosques; this also is probably an inheritance from the church, for Ibn Rosta (290 = 903) talks of similar arrangements in Constantinople (*B. G. A.*, vii. 126 supra). Ibn Djubair (p. 270) describes very fully the clock in the Mosque of the Omayyads (cf. *J. A.*, ser. 9, vii. 205 sq.). It was made in the reign of Nūr al-Dīn by Fakhr al-Dīn b. al-Sā'atī (Ibn Abī Uṣaibī'a, ii. 183 sq.; an expert was kept to look after it: *ibid.*, p. 191). There was a clock in the Mustanṣiriya in Baghdad (Sarre and Herzfeld, *Arch. Reise*, ii. 170) and the Mosque of 'Amr also had a *ḡhurfat al-sā'at* (Maḳrīzī, iv. 13, 15). In the Mosque of Ibn Tūlūn is still kept a sundial of the year 696 (1296-1297; cf. v. Berchem, *Corpus*, i., No. 514) but the clocks were usually mechanical (see also Dozy, *Supplément*, s.v. *minḡāna* and on the clock generally E. Wiedemann, in *Nova Acta der K. Leop. Carol. Akad.*, vol. C, Halle 1915). In the Maghrib also we find mosque-clocks, e.g. in the Bū'anāniya (*J. A.*, ser. 11, xii. 357 sqq.).

The very varied uses to which the mosques were put resulted in their becoming storehouses for all sorts of things. In 668, the Mosque of the Omayyads was cleared of all such things; in the courtyard there were for example stores for machines of war and the *zāwiya* of Zain al-'Abidin was a regular *kḥān* (*J. A.*, ser. 9, vol. vii. 225 sq.).

c. Miḥrāb [q.v.].

Whether the Prophet considered it necessary to erect an indicator of the direction of prayer in Medina may be considered doubtful. According to Tradition, when the revelation of the alteration of the *qibla* came to him, he turned round in the middle of the prayer without further investigation (Wustenfeld, *Medina*, p. 41, 62; Tabari, *Tafsīr*, xi. 25 centre; Muslim, *Musūḥid*, tr. 2). On the mu'allā however and on journeys he used a spear, which was stuck in the ground right in front of him, but this *sutra* [q.v.] was not intended so much to give the direction as to be a substitute for the wall, to mark off the area of the worshipper: it could therefore also be an animal or some living thing (Bukhārī, *Ṣalāt*, B. 18, So. 90-92: Muslim, *Ṣalāt*, tr. 46; Zuḳānī on *Muwatṭā'*, i. 283; Abū Dāwūd, i. 69; Aḥmad b. Ḥanbal, *Musnad*, ii. 106). At the present day the miḥrāb is often called *qibla* (and as early as Ibn Taghribirdī, i. 351; Yāḳūt, i. 642).

In al-Fustāt 'Amr is said to have ascertained the *qibla* very carefully with the help of many others (Maḳrīzī, iv. 6 supra; *B. G. A.* viii. 359; Ibn Taghribirdī, i. 75 sq.). But we are not told how it was indicated, probably by a pole or something of the kind. The *qibla* was however too far to the east, so that during the prayer the worshippers turned more to the south. At first they were probably content with the direction, roughly correct, in keeping with a ḥadīth of Abū Huraira, according to which the *qibla* in general lies between east and west (Tirmidhī, *Mawāḳit al-Ṣalāt*, p. 139; Maḳrīzī, iv. 24). The first mosque in I-fāhān was built where Abū Mūsā had performed the *ṣalāt*, and a brick placed in position

by him was taken as the *qibla* (*B. G. A.*, vii. 200). But later the problem was tackled seriously. Maḡrīzī mentions the different solutions of it in Egypt (iv. 21—33). Al-Azhar had the *qibla* accurate; the *maḡārib al-ṣaḡāba*, i. e. that of the Mosque of 'Amr and those of the mosques in *Djiza*, *Bilbis*, *Alexandria*, *Qūs* and *Assuan* were too far to the east, that of the Mosque of Ibn Ṭūlūn was found by a committee to be 14 *daraj* too far west, those of the villages too far west. The direction was ascertained from the stars. Many however followed the *qibla* of Syria. In the transformation of churches into mosques, frequent under al-Ma'mūn, their orientation from east to west was decisive. The door on the east side as a rule was made the *miḡrāb* (Maḡrīzī, iv. 30).

The word *miḡrāb* before and after the beginning of Islām meant in the first place a palace or a part of one (Imu'ulḡais, p. 52, 33, South Ar.; *Mufaḡḡaliyāt*, p. 21, 13, Persian; Buḡturi, *Ḥamāsa*, p. 404, 4; *Kais al-Ruḡayāt*, p. 2, 5, 49, 2), also women's apartment ('Omar b. Rabī'a, p. 136, 9, 247, 2; Maḡrīzī, iv. 378, 14), secondly a niche where a bust stood; e. g. before Islām (Ibn Kuṭayba, *ʿUyūn al-Aḡḡār*, p. 356) and for the Muslim period (*Ḥudḡatit-tidwān*, p. 90, 14; Buḡturi, *Ḥamāsa*, p. 692), especially of a niche with an image of a Christian saint ('Omar b. Rabī'a, p. 262, 9). Perhaps the part of the palace, called *miḡrāb* in the above examples, is simply a niche with a throne in it (cf. esp. *Mufaḡḡaliyāt*, p. 21, 13). The same use of the word is found in the *Qur'ān*. In *Sūra xxxviii*, 20, it means the part of the palace where the king is, xxxiv, 12, most probably a place where images are put, and iii, 32 sq.; xix, 12, a temple or rather a cell in a temple where one prays. At a still later date we find expressions like *miḡrāb al-maḡḡbaḡ*, apparently a name for the apse in the church behind the altar (*J. A.*, ser. 9, vii, 189). *Miḡrāb* has been derived from *ḡarba* "spear" and from South Arabic *mīḡrāb*, Ethiop *mekwāb* "temple" but the etymology is not certain (see on the whole question: Fraenkel, *Fremdwörter*, p. 274; Rhodokanakis, in *W. Z. K. M.*, xiv., 1905, p. 296—298; Pratorius, in *Z. D. M. G.*, lxi., 1907, p. 621 sq.; Noldeke, *Neue Beiträge z. sem. Sprachw.*, p. 52, note 2; Lammens, in *J. A.*, ser. xi., vi, 247; Becker, *Islāmstudien*, i, 492 sqq.; J. Horowitz, in *Idl.*, xvi., 1927, p. 260 sqq.).

If the word *miḡrāb* means the niche placed in the mosque in the direction of prayer, this connects quite well with the usual usage of the word. All are agreed that the *miḡrāb* did not originally belong to the mosque and that it was taken over from the church finds confirmation in Muslim literature (see Lammens, *Ziād*, p. 33, note 7: 94, note 1) and it is evident that the innovation found its way into the mosque by a purely architectural way. The *miḡrāb* became the place where the imām stood during the *ṣalāt*. It may therefore be assumed that it was one of the principal niches in the church, which was taken over into the mosque: it may have contained the bishop's throne or the image or picture of an important saint.

There is no unanimity as to the date when the *miḡrāb* was introduced into the mosque. Mu'āwīya is occasionally mentioned (*B. G. A.*, v. 109, 2) as a rule, however, and probably with greater right, al-Walid. His governor 'Omar b.

'Abd al-'Azīz is said to have introduced it into Medina (Wüstenfeld, *Medina*, p. 74; *B. G. A.*, iii. 80, 17 however takes it for granted that 'Omar b. 'Abd al-'Azīz only revived it); similarly his governor Kurra b. *Sharik* (90—96) is recorded to have introduced the prayer niche (*miḡrāb muḡḡawwaf*) into Egypt (Maḡrīzī, iv. 6, 14, 9, 9; Ibn Duḡmāk, iv. 62, 12 sq.; Ibn Taghribirdi, i. 76; Suyūṭi, *Ḥusn al-Muḡḡāra*, ii. 135 sq.). Only occasionally is Mu'āwīya's governor Maslama b. Mukhallad (47—62) or 'Abd al-'Azīz b. Marwān (65—84) mentioned as having introduced this innovation (Maḡrīzī, iv. 6). It therefore seems not to be wrong when one of the *maḡārib* in the Mosque of the Omayyads is described as the oldest in Islām. But it is an anachronism to call it *miḡrāb al-ṣaḡāba* and attribute it to Mu'āwīya (Ibn Djuḡair, p. 265; Ibn Baṡṡā, i. 203). The *miḡrāb* is however said not yet to have come into general use in the second century (see Lammens, *Ziād*, p. 94, note 1); on the other hand, Tabari presupposes a *miḡrāb* in the Muslim sense as early as David (Tabari, i. 2408, 7, 12; *B. G. A.*, ii. 112, 10 sq.; other prophets also had their *miḡrābs* in Jerusalem, *ibid.*).

In the larger mosques there were usually several *miḡrābs*, used by the different *maḡāhib*; in the mosque of 'Amr, for example (according to Ibn Taghribirdi, i. 79), in Hebron (Sauvaire, *Hist. Jérus. et Hébron*, p. 17), in the mosque of the Omayyads (*J. A.*, ser. 9, vii, 213 sqq.; Ibn Djuḡair and Ibn Baṡṡā as above). They might be of wood, but as a rule they were built of masonry or put on pillars. They were often highly ornamented. In the *miḡrāb* of al-Walid, a looking-glass that had belonged to 'Ā'isha is said to have been placed (Ḳazwini, ii. 71). A Fāṭimid adorned a *miḡrāb* in the mosque of 'Amr and one in the Azhar mosque with a silver girdle which weighed 5,000 dirhams (Maḡrīzī, iv. 52).

The general objections to adorning mosques were also applied to the *miḡrāb*. A ḡadīth is said to have forbidden this as an inheritance from the churches; it is compared with the altars (see Lammens, *Ziād*, p. 33, note 7), but even a puritan like Ibn al-Ḥafḡḡūj does not reject the *miḡrāb* in principle; he only condemns its adornment (*Madḡḡhal*, ii. 48). In fact the *miḡrāb* was held in special respect as the most important part of the mosque which found expression in the erection of a *qubba* over it (e. g. Maḡrīzī, iv. 91; cf. v. Berchem, *Corpus*, i., N^o. 79). The special importance of the *miḡrāb* is shown from the fact that its position was occasionally revealed in dreams, e. g. in *Ḳairawān* (Yāḡūt, iv. 213) and in the Mosque of Ibn Ṭūlūn; here the Prophet appeared to Aḡmad b. Ṭūlūn and showed him the *miḡrāb* and the spot was surrounded by ants (Maḡrīzī, iv. 39). In the principal mosque of Ṣan'a' there was a prophet's tomb under the *miḡrāb* (*B. G. A.*, vii. 110), which recalls Christian altars. As the most sacred part of the mosque, the *miḡrāb* is compared not only with Christian altars, but the word is used of the sacred place of prayer in any sanctuary, e. g. in the pre-Christian temple, which stood on the site of the later mosque of the Omayyads (*J. A.*, ser. 9, vii. 371). In Palestine, in keeping with this idea, very many *miḡrābs* are said to have been the *miḡrābs* of Biblical personalities (see Sauvaire, *Hist. Jér. et Hébr.*, p. 42, 76, 96 sq., 102; Le Strange, *Palestine*, Index).

d. Minbar [q. v.].

In contrast to the mihṛāb, the *minbar* was introduced in the time of the Prophet himself. The word, often pronounced *minbar* (cf. Brockelmann, *Grundriss*, i. 161), comes from the root *n-b-r* "high"; it could be derived from the Arabic quite easily with the meaning "elevation, stand", but is more probably a loanword from the Ethiopic (Schwally, *Z. D. M. G.*, lii, 1898, p. 146—148; Noldeke, *Neue Beiträge z. sem. Sprachw.*, 1910, p. 49). Its case is therefore somewhat similar to that of *masdjid*. It means "seat, chair" (e. g. *Chron. Mekka*, ii. 8; *Aghānī*², Cairo, xiv. 75) and is used, for example, for saddle (Ṭabari, *Gloss.*) and of a litter (*Aghānī*, xiii. 158; cf. Schwally). It is therefore identical with *maḍḡlis* (Bukhārī, *Ḍjum'a*, B. 23), with *sarīr* (*Kāmil*, p. 20; *Aghānī*, iii. 3), *tukht* or *kursī* (*Uṣd*, i. 214; cf. also Becker, *Kanzel*, p. 8). The use of the word for the pulpit is in keeping with its history.

When the *khaṭīb* [q. v.] spoke among the Arabs, he usually did so standing (cf. *Mufaḍḍalīyāt*, ed. Lyall, xci. 23; *Djāhīz*, *Bayān*, Cairo 1332, i. 129; ii. 143) frequently beating the ground with bow and lance (*ibid.*, i. 198; Labīd, 7, 15, 9, 45); or he sat on his mount as did e. g. Ḳuss b. Sa'īda (*Bayān*, i. 25, 31; ii. 141). The Prophet did both of these things. In 'Arafa he sat on his camel during his *khaṭba* and on other occasions, when addressing the community during the early period, even as late as the day of the capture of Mecca, he stood (cf. *Sūra* lxii. 11). The people sat on the ground around him (Bukhārī, *Ḍjum'a*, B. 28; *Ṭāin*, B. 6). In the mosque in Medina he had a particular place, as is mentioned in the stories of the introduction of the minbar. Sometimes, we are told, he stood beside a tree or a palm-tree (Bukhārī, *Manāḡib*, B. 25; ed. Krehl, ii. 400); as a rule however, beside a palm-trunk (*ḡidh*, so Ibn Sa'd, i. 9, 10, 11, 12) and on a few occasions beside one of the pillars (Bukhārī, *Manāḡib*, B. 25, ed. Krehl, ii. 401; *Ḍiyārbakrī*, *Ḳhamīs*, ii. 75). This is undoubtedly the original tradition: the Prophet stood beside one of the palm-tree trunks used as pillars in the mosque. For "beside" (usually *ḵāma ilā*; Bukhārī, *Buyū'*, B. 32; *Ṭāin*) "up" (*ḵāma 'alā*; already in Bukhārī, *Ḍjum'a*, B. 26) is sometimes found later and for the column or trunk, we find a stump on which he sat.

Various passages record how the minbar was introduced, notably the following: Ibn Sa'd, i. 9—13; Bukhārī, *Ṣalāt*, B. 18, 64, 91; *Ḍjum'a*, B. 26; *Buyū'*, B. 32; *Hiba*, B. 3; *Manāḡib*, B. 25; Muslim, *Masāḡid*, tr. 10; s. also Wensinck, *Hand-book*, s. v. *Pulpit*; *Uṣd al-Ghāba*, i. 43 infra, 214; Wustenfeld, *Medina*, p. 62 sq.; Ibn Baṭṭūṭa, i. 275 sq.; the whole material is in *Ḍiyārbakrī*, *Ḳhamīs*, i. 129; ii. 75 sq. and *Sirat al-Ḥalabī*, ii. 146 sqq. The details are variously given. The minbar, we are told, was built of ṭarfā wood or tamarisk from the woods near Medina; the builder was a Byzantine or a Copt and was called Bākūm or Bākūl, but the names Ibrāhīm (*Uṣd*, i. 43), Maimūn, Ṣabāḡ, Kulāb, Minā [see *Ḳhamīs*] are also given. He was a carpenter, but a slave of the wife of one of the Anṣār or (Bukhārī, *Hiba*, B. 3) of the Muḥāḡirūn. Others say he belonged to al-'Abbās. The suggestion is sometimes credited to the Prophet and sometimes to others. The palm-trunk is said to have whined like a camel

or a child when the Prophet mounted his new seat but was calmed by stroking and kind words from the Prophet. Most stories take it for granted that the minbar was primarily intended for the *khaṭba*; in some it is added that the object was to enable the large assembly to hear him (Ibn Sa'd, i. 10, 11). We are told also that the Prophet performed the ṣalāt on it and, during the *sudḡūd*, he came down from it. He also took care that the people could see his ṣalāt and follow him (Bukhārī, *Ṣalāt*, B. 18; *Ḍjum'a*, B. 26). This last tradition however presupposes the later custom of standing upon the minbar (note that the same idea of the palm-stump occurs in *Ḍjum'a*, B. 26).

In this connection it is interesting to note a tradition in Ibn al-Aṭhīr, according to which the Companions asked the Prophet to take up a raised position as many *wuṣūḡ* were coming (*Uṣd al-Ghāba*, i. 43). Another tradition is in keeping with this, according to which the Prophet, when he was visited by a man named Tawīm, stood on a *kursī* and addressed him from it (*ibid.*, p. 214; cf. Lammens, *Mo'awwa*, p. 204, note 5). Here we have a seat of honour on which the ruler sits. This is undoubtedly in keeping with the character of the minbar; while the raised seat was in general use among the northern Semites the Arabs usually sat on the ground, often leaning against a saddle. The raised seat was the special mark of the ruler or, what is the same thing, of the judge. We are told that Rabi'a b. Muḡhashin was the first to sit on a *minbar* or *sarīr* when acting as judge (*Aghānī*, 2nd Cairo ed., iii. 3; *Maḡīzī*, iv. 6 sq.). Al-Ḥaḡḡīdī, for example, when he addressed the people (hardly in the mosque) sat on a chair which belonged to him (*kursī lahu*; Ṭabari, ii. 959) and when he tried and condemned his enemies, a *sarīr* was erected for him (*ibid.*, p. 1119); in the same way a *kursī* was placed for Yazīd when he issued his orders for a battle (*ibid.*, p. 1107; see also Becker, *Kanzel*, p. 8).

If tradition usually suggests that the minbar was introduced exclusively for the *khaṭba*, this seems to be a somewhat one-sided view. The minbar was primarily, as Becker was the first to point out, the throne of the mighty Prophet in his capacity as a ruler. In keeping with this is the tradition that it was introduced in the year 7, 8 or 9 (Ṭabari, i. 1591; *Ḳhamīs*, ii. 75; *Uṣd al-Ghāba*, i. 23). The Prophet used it for the publication of important announcements, for example, the prohibition of wine. That he should also make his public speeches to the community from the new seat was only natural. His *khaṭbas* however were not confined to the Friday service and he could still deliver a *khaṭba* without a minbar, e. g. at the festival on the muṣallā, where Marwān was the first to put up a minbar (Bukhārī, *Ṭāin*, B. 6) and beside the Ka'ba after the capture of Mecca (Ibn Hishām, p. 823).

The Prophet's minbar is often called *a'wāḡ* from its material (Bukhārī, *Ṣalāt*, B. 64; *Ḍjum'a*, B. 26). It consisted of two steps and a seat (*maḡḡlis*; *Ḳhamīs*, ii. 75; Bukhārī, *Ḍjum'a*, B. 23; *maḡ'a'*; Ṭabari, i. 1591). After the time of the Prophet, it was used in the same way by Abū Bakr, 'Omar and 'Othmān (see below). Its significance as a throne is seen from the fact that in the year 50 Mu'āwiya wanted to take it to Syria with him: he was not allowed to do so but he raised it by 6 steps. At a later date, 'Abd al-

Malik and al-Walid are said to have wanted to take the Prophet's minbar to Damascus (Tabarī, ii. 92 sq.; *Ḥasanīs*, ii. 75; Ya'qūbī, ed. Houtsma, ii. 283; *B. G. A.*, v. 23 sq.; Wustenfeld, *Medina*, p. 63). In the time of the Prophet, it stood against the wall so that a sheep could just get past (Bukhārī, *Ṣalāt*, p. 91). In the time of al-Maḥdī, in the centre of the Mughattā there was pointed out the position of the old minbar, above which Mu'āwiya was said to have built his new one (*B. G. A.*, iii. 82; cf. ii. 26 and Kaẓwīnī, ed. Wustenfeld, ii. 71). According to some ḥadīths, it was over the *ḥawḍ* of the Prophet (Bukhārī, *Ṣalāt fī Makka*, B. 5; *Faḍā'il al-Madīna*, B. 5, 12 and *pass.*). At a later date, new minbars were erected in the mosque (see Wustenfeld, *Medina*, p. 64, 96).

That the Omayyads should have a minbar of their own was natural; they sat on it, just as their predecessors had done (cf. Goldziher, *Muh. Stud.*, ii. 42). Mu'āwiya took it with him on his journey to Mecca (*Chron. Mekka*, i. 333); he also had it taken to the festivals on the muṣallā (Ya'qūbī, ed. Houtsma, ii. 265), just as Marwān used to do in Medina (see above); it was therefore still portable and indispensable for the sovereign, when he wished to make a public appearance as such. In Ibn Dhubair's time, the minbar *al-khuṭba* in Damascus was in the central maṣṣūra (*Riḥla*, p. 265). According to Ibn Khaldūn, Mu'āwiya was the first in Islām to use the throne (*sa'ir*, minbar, *taḥt*, *kursī*) but he is clearly not referring to the minbar of the mosque (*Muḥaddima*, Cairo 1322, p. 205 sq., *faṣṣ*, 3. N^o. 37).

The minbar taken to Mecca by Mu'āwiya remained there till the time of al-Rashīd; when the latter visited Mecca on his ḥajj al-jadī in the year 170 or 174 a minbar *manḥūḥ* with 9 steps was presented to him by the emir of Egypt and the old one was put up in 'Arafa. At a later date, al-Wāthiq made minbars for Mecca, 'Arafa and Minā (*Chron. Mekka*, i. 333; iii. 114). The Meccan minbar was a portable one. It usually stood beside the *maḥām* but was put beside the Ka'ba during the *khuṭba* (Ibn Dhubair, p. 95. 97; cf. *Chron. Mekka*, iii. 429). According to al-Batānūnī, this custom was kept up until Sulṭān Sulaimān Ḳanūnī (926—974) built a marble minbar, north of the *maḥām* (*al-Riḥla al-Ḥijāziyya*, p. 100).

It seems at first to have been doubtful whether *manābir* should be put up in the provinces or not. According to al-Ḳudā'ī, 'Amr had a minbar made in al-Fuṣṭāṭ but 'Omar ordered him to take it away; he was not to raise himself above the Muslims so that they would have to sit below his heels (Maḳrīzī, iv. 6 sq.; Ibn Taghribirdī, i. 76; Suyūṭī, *Husn al-Muḥādḍara*, i. 63; ii. 135). The idea obviously was that the throne belonged to the caliph alone. After 'Omar's death however, 'Amr is said to have used a minbar (Maḳrīzī, iv. 8. 27). It stood there till Ḳurra b. Sharik rebuilt the mosque. During the rebuilding it was put in the Kaṣāriya, which was used as a mosque; only when the mosque was completed in the year 92, did Ḳurra put up a new minbar. Tradition however is uncertain. The minbar removed by Ḳurra perhaps dated from 'Abd al-'Azīz b. Marwān, who had taken it from a church or had been presented with it by the Nubian King (Maḳrīzī, iv. 8; Ibn Taghribirdī, i. 78). Ḳurra's minbar remained till 379 when the Fātimid vizier Ya'qūb b. Killis replaced it by a gilded one. A large new minbar

was placed in the mosque of 'Amr in 405 by al-Ḥākim (Maḳrīzī, iv. 8; Ibn Taghribirdī, i. 78 sq.).

We hear of no objections in other places to the *manābir* in the amṣār. In al-Madā'in as early as the year 16 Sa'd erected a minbar in the mosque improvised in the Iwān of Kisrā (Tabarī, i. 2451, 9). In Baṣra, Abū Mūsā put up a minbar in the middle of the mosque. This was however found inconvenient because the Imām had to cross from the minbar to the *ḳibla* "over the necks" of the (seated) believers. Ziyād then placed the minbar against the south wall (Yaḳūt, i. 642). On the other hand, we are told that 'Abd Allāh b. 'Abbās (governor of Baṣra 36—40) was the first to mount the minbar in Baṣra (Djāhīz, *Bayān*, i. 179). When Ziyād had to fly from Baṣra he saved the minbar which he put up in his Masjdīd al-Huddān (Tabarī, i. 3414 sq.). The minbar was the symbol of the ruler and the governor sat upon it, as representative of the ruler. It therefore formed a feature of the Masjdīd al-Djamā'a, where the community was officially addressed. In the year 64 therefore, there were minbars in all the provinces. In this year homage was paid to Marwān b. al-Ḥakam not only in the capital but in the other *manābir* in the Ḥijāz, Miṣr, Sha'm, Djazīra, 'Irāq, Ḳhurāsān, and other amṣār (*B. G. A.*, viii. 307). Special mention is made of the fact that Ṭabariya had no minbar.

In the first century and beginning of the second, we find the wali in the smaller towns, delivering the *khuṭba* standing, with the staff only. But in 132 the governor 'Abd al-Malik b. Marwān had *manābir* put up in the *ḳurā* of Egypt (Maḳrīzī, iv. 8, 17 sqq.; Ibn Taghribirdī, i. 350 sq.). When the *khuṭba* became purely a divine service and the ruler was no longer the *ḳhaṭīb* [q. v.], the minbar became the pulpit of the spiritual preacher and every mosque in which the Friday service was celebrated was given a minbar. At the same time, i. e. after al-Rashīd, the change was gradually completed and the preacher spoke, standing on the pulpit. Ḥadīths therefore came into existence, according to which the Prophet used to deliver two *khuṭbas* on Friday, standing "just as is done to-day" (Bukhārī, *Djum'a*, p. 27, 30 and 'Omar, *ibid.*, p. 2).

The minbar was thus now quite analogous to the Christian pulpit. It is very probable that this latter also influenced its form. We have already noted above, of a minbar in the mosque of 'Amr, that it was said to be of Christian origin. The same thing came to be said of the Prophet's minbar (Wustenfeld, *Medina*, p. 63). Mu'āwiya made the Medina minbar larger, while the one brought by him to Mecca had only 3 steps and was of course portable. We again hear of portable minbars later, which did not exclude their being large (cf. above on the minbar of Mecca). Thus the *manābir* in al-Maghrib are said to have been portable. Ibn al-Ḥadīd regards this (the oldest) custom as *bid'a* and therefore ascribes it to al-Ḥadīd al-Jādī (*Madḥal*, ii. 47, 13 sqq.). The oldest minbars were all of wood. There is however one ḥadīth which says that the Prophet had a *kursī* of wood with iron legs made for the reception of Tamīm (*U'sd*, i. 214, 8 from below; cf. Lammens, *Mo'āwīya*, p. 273, note 3); it is however uncertain what relation this had to the minbar. A minbar of iron was made as early as the Omayyad period (Ibn Taghribirdī, i. 78, 8: *al-minbar al-ḥadīd* probably correct in

spite of Becker, *Kanzel*, p. 10, note; cf. 79, 4, see below); and also of stone (Goldziher, *Muh. Stud.*, ii. 42, note 5 with a reference to Ibn Ḥajar); later they were also built of bricks (Wustenfeld, *Medina*, p. 64, 96). As a rule the minbar stood against the kībla wall beside the mihrāb. Al-Mahdī had tried to reduce the *manābir* to their original small size (Ṭabarī, iii. 486, 12; Maḳrīzī, iv. 12, 13 sqq.), but he could not arrest the development. In the larger mosques several *manābir* were even built. Ibn al-Faḳīh about 300 A.H. already mentions 5 minbars in the mosque in Jerusalem (*B. G. A.*, v. 100, 8 sq.). In the Sulṭān Ḥasan mosque in Cairo 4 were planned and 3 erected when a minaret fell down in 762 and diverted attention to other work (Maḳrīzī, iv. 117, 18 sq.).

The importance, which the minbar already had in the time of the Prophet, caused special reverence to be paid to it and the sanctity of the mosque was concentrated round this and around the mihrāb. The governor of Kūfa Khālīd b. 'Abd Allāh al-Kasrī (105—120) received a letter of censure from the caliph because he had prayed for water on the minbar (*Kāmil*, p. 20, 15 sqq.). A false oath taken on or beside the minbar of the Prophet led to hell absolutely (Ibn Sa'd, i/i. 10, 3 sq., 12, 19 sq.; Ibn Ḥanbal, *Musnad*, ii. 329; cf. Johs. Pedersen, *Der Eid*, p. 144, 147). Legends grew up which represented the Prophet seeing into the future from the minbar (Bukhārī, *Ḍun'a*, bāb 29) and being able to follow the battle of Mu'ta from it (cf. Wāḳidī—Wellhausen, p. 311; Ibn Hishām, p. 796) and also telling how his prayers on the minbar were specially efficacious.

Just as the Ka'ba was covered (*kasā*) so was the same thing done to the minbar. 'Othmān is said to have been the first to cover the minbar of the Prophet with a *ḳaṭīfa* (*Ḳhamīs*, ii. 75, 1 from below). Mu'āwīya did the same thing when he had to give up his attempt to abolish it (*ibid.*, p. 76, 4; Ṭabarī, ii. 92, 4). It was not quite the same thing when al-Hākim rediscovered the already mentioned iron minbar and covered it with gilt leather because it was covered with dirt (read: *ḳadhar*) i. e. rust (Ibn Taghribirdī, i. 79, 5 sq.). Under the 'Abbāsids a new *kiswa* was sent every year for the minbar of the Prophet from Baghdād; the Sulṭāns later did not renew it so frequently (Wustenfeld, *Medina*, p. 64). We find other references to the covering of the minbar on special occasions (Ibn Djubair, p. 149, 16). Ibn al-Hādīdj (*Madkhal*, ii. 74) demands that the imām should put a stop to the custom of putting carpets on the minbar. — (On the question of the minbar see: C. H. Becker, *Die Kanzel im Kultus des alten Islām*, *Noldeke-Festschrift*, i. 331—351 = *Islāmstudien*, i. 450—471; Caetani, *Annali dell' Islām*, i. 533, 739; ii. 68 sq., 87, 213 sq.; H. Lammens, *Mémoires*, p. 63, 204—208, 273; J. Horowitz, in *Isl.*, xvi., 1927, p. 257—260).

c. Dakka.

In the larger mosques there is usually found near the minbar a platform to which a staircase leads up. This platform (*dakka*, popularly often *dikka*) is used as a seat for the mu'adhdhins when pronouncing the call to prayer in the mosque at the Friday service. This part of the equipment of a mosque is connected with the development of the service (cf. below under H 4 and C. II. Becker, *Zur Geschichte des islamischen Kultus*, iii., 1912, p. 374—399 = *Islāmstudien*, i. 472—500; E.

Mittwoch, *Zur Entstehungsgeschichte des islamischen Gebets und Kultus*, *Abh. Pr. Ak. W.*, 1913, Phil.-Hist. Cl., N^o. 2). The first adhān-call is pronounced from the minaret, the second (when the khaṭīb mounts the minbar) and the third (before the ṣalāt, *iḳāma*) in the mosque itself. These calls were at first pronounced by the mu'adhdhin standing in the mosque. At a later date raised seats were made for him.

Al-Halabi records that Maslama, Mu'āwīya's governor in Egypt, was the first to build platforms (here called *manābir*) for the calls to prayer in the mosques (*Sira Halabiya*, ii. 111 below). This story however, given without any reference to older authorities, is not at all reliable. It seems that a uniform practice did not come into existence at once. In Mecca the mu'adhdhins for a time uttered the second call (when the preacher mounted the minbar) from the roof. As the sun in summer was too strong for them, the emir of Mecca, in the reign of Hāṭim al-Rashīd, made a little hut (*ḡulla*) for them on the roof. This was enlarged and more strongly built by al-Mutawakkil in 240, as his contemporary al-Azrakī relates (*Chron. Mekka*, i. 332 sq.). The position in the mosque of 'Amr in Cairo was similar. Here also the adhān was uttered in a chamber (*ḡhurfa*) on the roof and in 336 there is a reference to its enlargement (Maḳrīzī, iv. 11). As late as the time of Baibars, when the many chambers were removed from the roof of the Mosque of 'Amr, the old *ḡhurfa* of the mu'adhdhin was left intact (*ibid.*, p. 14; cf. al-Kindī, *Wulāt*, ed. Guest, p. 469, note 2). In the Mosque of Ibn Tūlūn the adhān was pronounced from the cupola in the centre of the *ṣahn* (Maḳrīzī, iv. 40). Al-Maḳdisī records in the fourth century as a notable thing about Khurāsān that the mu'adhdhins there pronounced the adhān on a *ṣarīr* placed in front of the minbar (*B. G. A.*, iii. 327). The *dukkān* "platform" in front of the minbar in the mosques of Shāhastān must have had the same purpose (*ibid.*, p. 357).

In the viiith century, Ibn al-Hādīdj mentions the dakka as a *bid'a* in general use, which should be condemned as it unnecessarily prevents freedom of movement within the mosque (*Madkhal*, ii. 45 above). In the year 827 a *dukkā* in the mosque of al-Hākim is mentioned (Maḳrīzī, iv. 61); the dakkas mentioned in inscriptions from Cairo all date from the period before and after 900 A.H. Ibn al-Hādīdj mentions that in addition to the large dakka used for the Friday service there was sometimes a lower one for ordinary ṣalāts (*Madkhal*, ii. 46 sq.) and says that in the larger mosques there were several dakkas on which mu'adhdhins pronounced the adhān in succession so that the whole community could hear it (*tabligh*; *ibid.*, p. 45 sq.). Lane also mentions several *muballighs* in the Azhar Mosque (*Manners and Customs, Everyman's Library*, p. 87, note 2).

f. Kursī, Qur'āns and Relics.

In the mosques there is usually a kursī, that is a wooden stand with a seat and a desk. The desk is for the Qur'ān, the seat for the *ḳāṣṣ*, or reader, *ḳarr'*. Ibn Djubair attended a divine service in Baghdād at which a celebrated preacher spoke from the minbar, but only after the *ḳur'ā*, sitting on *karāsī* had recited portions of the Qur'ān (*Rihla*, p. 219, 222). The *wāḳiṣ*, often identical with the *ḳāṣṣ* sat on a *kursī* made of teak (Ibn Djubair, p. 200; Yāḳūt, *Udaba'*, ii. 319; Maḳrīzī, iv. 121);

sometimes he spoke from the minbar to which the wā'iz often had access (cf. Ibn Džubair: see Mez, *Renaissance des Islams*, p. 320). The kuṣṣās are called by al-Makkī *aṣḥāb al-karāsi* which is in keeping with this (*Kuṭ al-Kuṭūb*, i. 152, quoting *K. al-Madkhal*, i. 159). Several karāsi are often mentioned in one mosque (cf. for the Mosque of 'Amr, Maḳrīzī, iv. 19). Whether the karāsi mentioned for the earlier period always had a desk cannot be definitely ascertained. The karāsi with dated inscriptions given by van Berchem in his *Corpus* all belong to the ixth (xvth) century (N^o. 264, 302, 338, 359 bis, 491). According to Lane, at the Friday service while the people are assembling, a *kānī* on the kursī recites the 18th Sūra up to the *adḥān* (*Manners and Customs*, p. 86). The same custom is recorded by Ibn al-Ḥādīdj and condemned because it has a disturbing effect (*K. al-Madkhal*, ii. 44, middle).

The Qur'an very soon received its definite place in the mosque like the Bible in the church (cf. Bukhārī, *Ṣalāt*, bāb 91: they prayed at a pillar beside *al-muṣḥaf*). According to one tradition, 'Uthmān had several copies of his Qur'an sent to the provinces (e.g. Noldeke-Schwally, *Gesch. d. Kor.*, ii. 112 sq.): al-Ḥādīdjūḥ, a little later, is said to have done the same thing (Maḳrīzī, iv. 17). The mosques had many other copies beside the one kept on the kursī. Al-Ḥakīm put 814 *muṣḥaf* in the Mosque of Ibn Tūlūn, where the founder had already put boxes of Qur'āns (Maḳrīzī, iv. 36, 40. cf. *Ḥusn al-Muḥādara*, ii. 138) and in 403 he presented 1,289 copies to the Mosque of 'Amr, some of which were written in letters of gold (Maḳrīzī, iv. 12; *Ḥusn al-Muḥādara*, ii. 136). Even earlier than this there were so many that the *kaḍī* al-Ḥārith b. Miskīn (237—245) appointed a special *amīn* to look after them (al-Kindī, *Wulāt*, p. 469); there are still a very large number in the Mosque of the Prophet (see Batanūnī, *Rihla*, p. 241 above). Of particular value was the *Muṣḥaf Asmā*, belonging to the Mosque of 'Amr, prepared by 'Abd al-'Azīz b. Ma'wān, later bought by his son and afterwards by his daughter Asmā'; her brother left it in 128 to the mosque and it was used for public readings (see its whole history in Maḳrīzī, iv. 17 sq.). Besides it, another copy was for some time also used for reading, which was said to have lain beside 'Uthmān, when he was killed and to have been stained with his blood, but this one was removed by the Fātimids (*ibid.*, p. 19). In the time of Ibn Baṭṭūta, a Qur'an for which the same claims were made was kept in Ba'ra (ii. 10). On New Year's Day when the Fātimid caliphs used to go in procession through the town, the Caliph at the entrance to the Mosque of 'Amr took up in his hands a *muṣḥaf* said to have been written by 'Alī and kissed it (Ibn Taghribirdī, ii. i., p. 472 middle): it was perhaps the *Muṣḥaf Asmā*'. In Syria, Egypt, and the Ḥidjāz, in the fourth century, there were Qur'āns which were traced back to 'Uthmān (*B. G. A.*, iii. 143; cf. ii. 117). One of the Qur'āns made for 'Uthmān was shown in the Mosque of the Omayyads in Damascus in the time of Ibn Džubair. It was produced after the daily ṣalāts and the people touched and kissed it (*Rihla*, p. 268). It was brought there in the year 507 from Tiberias (Ibn Ḥabīb, *Tarīkh*, Ḥaidarābād, 1337, ii. 25). Other Qur'āns of 'Uthmān were shown in Baghdād and Cordova (see Mez, *Renaissance des Islams*, p. 327)

and Ibn Džubair saw another in the Mosque of the Prophet; it lay in a desk on a large stand, here called *miḥmal* (*Rihla*, p. 193; cf. thereon Dozy, *Supplément*, s. v.). The Fāḍiliya Madrasa also had a *Muṣḥaf 'Uthmān*, bought by the Qāḍī al-Fāḍil for 30,000 dinārs (Maḳrīzī, iv. 197) and there is one in Fās (*Archives Marocaines*, xviii., 1922, p. 361). Valuable Qur'āns like these had the character of relics and belonged to the *khizāna* of the mosque. They were often kept in a chest (*ṣandūq*) (Ibn Džubair, *op. cit.*; for *al-muṣḥaf*, Bukhārī, *Ṣalāt*, bāb 95, Muslim has *al-ṣandūq*; see al-'Aṣkalānī, *Fath al-Bārī*, i. 385), also called *tābūt* (Ibn Džubair, p. 104). In the Ka'ba, Ibn Džubair saw two chests with Qur'āns (p. 84, 3). Ibn al-Fakīh mentions 16 chests with Qur'āns in the Jerusalem mosque (*B. G. A.*, v. 100). In the mosques there were also *ṣanādīk* for other things, such as lamps (Maḳrīzī, iv. 53; Wüstenfeld, *Medina*, p. 82 = Ibn Džubair, p. 194), a *tābūt* for alms (*K. al-Madkhal*, ii. 44, *infra*), for the *bait al-māl* or the property of the mosque (see below). There were also chests for rose-wreaths (*Madkhal*, ii. 50) which were in charge of a special officer. In the Mosque of 'Amr there was a whole series of *tawābīt* (Maḳrīzī, iv. 9).

The Qur'āns were not the only relics to be kept in the mosques. Bodies or parts of the bodies of saints (cf. B 4, C 1) and other *uṭṭār* were kept and revered in mosques: the rod of Moses, (in Kūfa, Yāqūt, iv. 325, previously in Mecca, see Goldziher, *Muh. Stud.*, ii. 361), the Prophet's sandals (in Hebron, *B. G. A.*, v. 101, also in Damascus, where the Ashrafiya Madrasa had his left and the Dammaghīya his right sandal; *J. A. ser.* 9, iii. 271 sq., 402), his cloak (in Adhruh, *B. G. A.*, iii. 178), hair from his beard (in Jerusalem among other places, Batanūnī, *Rihla*, p. 165) and many other things (see Goldziher, *Muh. Stud.*, ii. 358 sq.; Mez, *Renaissance d. Islams*, p. 325 sq.). These relics were often kept in valuable reliquaries. The head of Ḥusain was buried in a *tābūt* in his mosque in Cairo (Ibn Džubair, p. 45). There was a black stone like that in the Ka'ba in a mosque in Shahrastān (*B. G. A.*, iii. 433).

On the other hand, pictures and images were excluded from the mosques, in deliberate contrast to the crucifixes and images of saints in churches, as is evident from Hadīth (Bukhārī, *Ṣalāt*, bāb 48, 54; *Ḍjanā'iz*, bāb 71; Muslim, *Masāḍid*, tr. 3; cf. on the question Becker, *Christliche Polemik und islamische Dogmenbildung*, Z. A., xxvi. = *Islamstudien*, i. 445 sq.). It is of interest to note that in the earliest period, Sa'īd b. Abī Waḳḳāṣ had no scruples about leaving the wall-paintings in the Iwān of Kisra at Madā'in standing, when it was turned into a mosque (Tabarī, i. 2443, 2451). The case was somewhat different, when, before the chief mosque in Dehlī which had been a Hindu temple, two old copper idols formed a kind of threshold (Ibn Baṭṭūta, iii. 151) although even this is remarkable (cf. Snouck Hurgronje, *Verspreide Geschriften*, ii. 451 sq. = *Z. D. M. G.*, lxi., 1907, p. 186 sq.). In some circles the opposition to pictures extended to other relics also. Ibn Taimīya condemned the reverence paid to the Prophet's footprint, which was shown, as in Jerusalem, in a Damascus mosque also (Quatremère, *Hist. Sult. Maml.*, ii/ii. 246).

g. Carpets.
Carpets were used to improve the appearance of the mosques. The custom of performing the

ṣalāt upon a carpet is ascribed by Ḥadīth to the Prophet himself. Anas b. Mālik performed the ṣalāt with him in his grandmother's house and the Prophet used a cloth or mat (*ḥaṣīr*), which had become black through wear; as a rule, he used a mat woven of palm leaves, *ḥumra* (Bukhārī, *Ṣalāt*, bāb 19, 20, 21; *Haid*, bāb 30; Muslim, *Masāʿid*, tr. 47; Aḥmad b. Ḥanbal, *Musnad*, iii. 145). In any case, it is clear from Balādhuri that the ṣalāt was at first performed in the mosque simply in the dust and then on pebbles (Balādhuri, p. 277, 348; cf. al-Zurkāni, *Sharḥ 'ala 'l-Muwatṭʿ*, i. 283 sq.). Later, when the halls were extended, the ground, or the paving, was covered with matting.

The first to cover the ground in the Mosque of 'Amr with *ḥuṣur* instead of *ḥaṣīr* was Mu'āwiya's governor Maslama b. Mukhallad (Makrizi, iv. 8; *Husn al-Muhādḍara*, ii. 136; Ibn Taghribirdi, i. 77). The different groups which frequented the mosque (cf. above) had their places on particular mats: when a kāḍī (middle of the third century) ejected the Shāfi'is and Ḥanafis from the mosque, he had their ḥuṣur torn up (al-Kindi, *Uṣūlāt*, p. 469). Ibn Ṭūlūn covered his mosque floor with 'Abbadānīan and Sāmānīan mats (Makrizi, iv. 36, 38). For the mosque of al-Ḥākim in the year 403, al-Ḥākim bought 1,036 *ḥīrā'* of carpeting for 5,000 dinārs (Makrizi, iv. 56; cf. for al-Azhar, *ibid.*, p. 50). In the year 439 in the Mosque of 'Amr, there were ten layers of coloured carpets one above the other (Nāṣir-i Khosraw, ed. Schefer, p. 31 [text], p. 149 [transl.]). In the Mosque at Jerusalem 800,000 *ḥīrā'* of carpets were used every year (*B. G. A.*, v. 100). In the Mosque in Mecca they were renewed every Ramaḍān (*B. G. A.*, v. 100). On ceremonial occasions the minbar was also draped with a carpet (*sadqūdā*, q.v.); in Medina, the minbar and the sacred tomb was always covered like the Ka'ba in Mecca (Wustenfeld, *Medina*, p. 83; cf. Quatremère, *Hist. Sult. Maml.*, ii/i. 91) and some, especially the teachers, had their skins (*farwa*), in some cases also a cushion to lean upon. The doors were also covered with some material (Makrizi, iv. 56). On feast-days, the mosques were adorned with carpets in a particularly luxurious fashion (see Ibn Taghribirdi, ii/i. 483). The Puritans rejected all this as *bid'ā* and preferred the bare ground (*Maḍkhal*, ii. 46, 49, 72, 74, 76) as the Wahhābīs still do.

h. Lighting.

Where evening meetings and vigils were of regular occurrence, artificial lighting became necessary. Al-Azraqī gives the history of the lighting of the Meccan Mosque. The first to illuminate the Ka'ba was 'Ukba b. al-Azraq, whose house was next to the Mosque, just on the *Maḳām*; here he placed a large lamp (*miṣbāḥ*). 'Omar, however, is said previously to have placed lamps upon the wall, which was the height of a man, with which he surrounded the mosque (Balādhuri, p. 46). The first to use oil and lamps (*kanādīl*) in the mosque itself was Mu'āwiya (cf. *B. G. A.*, v. 20). In the time of 'Abd al-Malik, Khālid b. 'Abd Allāh al-Ḳasri placed a lamp on a pillar of the Zemzem beside the Black Stone, and the lamp of the Azraq family disappeared. In the reign of al-Ma'mūn in 216 a new lamp-post was put up on the other side of the Ka'ba and a little later two new lanterns were put up around the Ka'ba Hārūn al-Raṣhid (268—271) placed ten large lamps around

the Ka'ba and hung two lanterns on each of the walls of the mosque (*thuraiyāt*; cf. Ibn Djabair, *Rihla*, p. 149, 150, 155, 271; v. Berchem, *Corp. Inscr. Arab.*, i., No. 506). Khālid al-Ḳasri had the *mas'ā* also illuminated during the pilgrimage and in 219 the torches called *nafāṭāt* were placed here and 'Omar b. 'Abd al-'Azīz ordered the people, who lived in the streets of Mecca, to put up lamps on the 1st Muḥarram for the convenience of those visiting the Ka'ba (*Chron. Mekka*, i. 200—202, cf. 458 sq.). In 253 Muḥammad b. Aḥmad al-Manṣūrī erected a wooden pole in the centre of the *ṣaḥn* and *kanādīl* on ropes were hung from it. This was however very soon removed (*ibid.*, ii. 196 sq.). About 100 years later, al-Makdīsī saw around the Tawāf wooden poles on which hung lanterns (*kanādīl*) in which were placed candles for the kings of Egypt, Yemen, etc. (*B. G. A.*, iii. 74). Ibn Djabair describes the glass *kanādīl*, which hung from hooks in the Meccan Ḥaram (*Rihla*, p. 103) and lamps (*maḥā'il*) which were lit in iron vessels (*ibid.*, p. 103, cf. p. 143). Similar silver and gold *kanādīl* were seen by him in Medina (*ibid.*, p. 192 at the top; see also Wustenfeld, *Medina*, p. 83 sq.). According to al-Fakīh (before 300), 1,600 lamps were lit every evening in Jerusalem (*B. G. A.*, v. 100) and in the next century al-Makdīsī says that the people of Palestine always burn *kanādīl* in their mosques, which were hung from chains as in Mecca (*B. G. A.*, iii. 182). The illumination was thus very greatly increased. In the year 60, when Ibn Ziyād was searching for his enemies in the mosque of Kūfa, the lamps were not sufficient, and large torches had to be used in searching the pillared halls (Ṭabari, ii. 259 sq.). This, like what has already been said about Mecca, shows out of what modest beginnings this part of the mosque's equipment developed.

In the time of the 'Abbāsids, lamps and lanterns were part of the regular furniture of the mosque. Al-Ma'mūn is said to have taken a special interest in this. He ordered lamps to be put in all the mosques, partly to assist those who wanted to read and partly to prevent crime (Bathakī, ed. Schwally, p. 473). For this purpose, the *kanādīl*, already mentioned, hung on chains were used, as at the building of the mosque of Ibn Ṭūlūn (Makrizi, iv. 36, 38), in the Azhar Mosque and elsewhere; they were often of silver (*ibid.*, p. 56, 63). Golden *kanādīl* were also used and were of course condemned by Ibn al-Ḥādīdī (*Maḍkhal*, ii. 54) as ostentatious. At the same time, candles (*sham'* or *shama'*) were used in large numbers, the candlesticks (*atwār*, sing. *atwar*) often being of silver (Ibn Djabair, *Rihla*, p. 45, 151, 194; cf. Wustenfeld, *Medina*, p. 95, 100). About 400, large candleabra were made in Egypt, which from their shapes were called *tannūr*, stoves. Al-Ḥākim presented the Mosque of 'Amr with a *tannūr* made out of 100,000 dirhams of silver; the mosque doors had to be widened to admit it. He also gave it two other lamps (Suyūṭī, *Husn al-Muhādḍara*, ii. 136 infra; cf. Nāṣir-i Khosraw, ed. Schefer, p. 51 [text]; p. 148 [transl.]; Ibn Taghribirdi, ed. Popper, ii/i. 105). In the Mosque of al-Ḥākim, in addition to lamps and candle-lanterns, he also put 4 silver *tannūr* and he made similar gifts to the Azhar and other mosques: the lamps were of gold or silver (Makrizi, iv. 51, 56, 63; cf. Ibn Taghribirdi, ii/i. 105). The *tannūr* and other lanterns could also be made of copper (see v. Berchem,

Corpus, i., N^o. 502, 503, 506, 507, 511), as, for example, the celebrated candelabrum of the Mosque of Mu'ayyad (Maḳrīzī, iv. 137) which was made for the mosque of Ḥasan but sold by it (*ibid.*, p. 118).

This great interest in the lighting of the mosque was not entirely based on practical considerations. Light had a significance in the divine service and I-lām here, as elsewhere, was taking over something from the Church. When, in 227, the caliph was on his deathbed, he asked that the ṣalāt should be performed over him with candles and incense (*bi 'l-sham' wa 'l-bukhūr*) exactly after the fashion of the Christians (Ibn Abī Uṣaybi'a, i. 165; cf. ii. 89). The dependence of Islām on Christianity is also seen in the story that 'Othmān, when he was going to the evening ṣalāt in Medina, had a candle carried in front of him, which his enemies condemned as *ḥuḍ'a* (Yaḳūbī, ed. Houtsma, ii. 187). The Shī'a bias does not affect the significance of this story. A light was used particularly in the miḥrāb, because it represented the holy cell, to which light belongs (cf. Sūra xxiv. 35). Then, in Mecca, lamps were placed before the imāms in the miḥrābs and there were considerable endowments for such miḥrāb lamps (Ibn Djubair, *Riḥla*, p. 103, 144). Light, as was everywhere the custom in ancient times, was necessary in mausoleums and the documents of endowment show that a large number of oil-lamps were used in this way (cf. e.g. the document for al-Malik al-Ashraf's mausoleum, v. Berchem, *Corpus*, i., N^o. 252). But in the mosque generally the use of lights had a devotional significance and lamps might be endowed for particular individuals (cf. *B.G.A.*, iii. 74, quoted above). The lamps so given by al-Ḥakīm were therefore placed in the mosques with great ceremony, with blasts of trumpets and beating of drums (Ibn Taghribirdī, ii/i. 105).

On ceremonial occasions a great illumination was therefore absolutely necessary. In the month of Ramaḍān, says Ibn Djubair, the carpets were renewed and the candles and lamps increased in number, so that the whole mosque was a blaze of light (*Riḥla*, p. 143); on certain evenings trees of light were made with vast numbers of lamps and candles and the minarets were illuminated (*ibid.*, p. 149—151, 154, 155). In the Mosque of the Prophet in the time of Saḥbūdī, forty wax candles burned around the sacred tomb, and three to four hundred lights in the whole mosque (Wustenfeld, *Medina*, p. 100). On the *ma'atid al-nabi*, says Ḳaṭib al-Dīn, a procession went from the Ka'ba in Mecca to the birthplace of the Prophet with candles, lanterns (*ṣawānīs*) and lamps (*maḥā'il*, see *Chron. Mekka*, iii. 439). In the ḥaram of Jerusalem, according to Muḍjir al-Dīn, 750 lamps were lit by night and over 20,000 at festivals (Sauvage, *Hist. Jérus. et Hébron*, p. 138). In the dome of the Ṣakḥra in 452 a chandelier and 500 lamps fell down (*ibid.*, p. 69); at the taking of the town in 492 (1099) the Franks carried off 42 silver lamps, each of 3,600 dirhams, 23 lamps of gold and a *ṭanūr* of 40 *riḥl* of silver (*ibid.*, p. 71). It was similar and still is in Cairo and elsewhere in the Muslim world. For the *ṭailat al-ṣuḥūd* in the Mosque of 'Amr, 18,000 candles were made for the Mosque of 'Amr and every night eleven and a half *ḳinār* of good oil were used (Maḳrīzī, iv. 21 and more fully ii. 345 sq.). The four "nights of illumination" fell in the months of Raḍjab and Shaḥān, especially Nuṣf

Shaḥān (Quatremère, *Hist. Sult. Maml.*, ii/i. 131; cf. also Snouck-Hurgronje, *Mekka*, ii. 77). Quite recently (1908) electric light has been introduced into the Mosque of the Prophet (al-Batanūni, *Riḥla*, p. 245 sq.).

[On the question in general see Clermont-Ganneau, *La lampe et l'olivier dans le Coran*, in *Recueil d'Archéologie Orientale*, viii., 1924, p. 183—228; on the copper candelabra see A. Wingham, *Report on the Analysis of various examples of Oriental Metal-Work etc. in the South Kensington Museum etc.*, London 1892; F. R. Martin, *Altäre Kupferarbeiten aus dem Orient*, Stockholm 1902; on glass lamps see G. Schmoranz, *Altorientalische Glass-Gefässe*, Vienna 1898; v. Berchem, *C. I. A.*, i. 678 sq.; Max Herz Bey, *La Mosquée du Sultan Hasan (Comité de Conservation des Monuments de l'Art Arabe)*, 1899, p. 8 sq.; see also the Bibliography in *Isl.*, xvii., 1928, p. 217 sq.].

i. Incense.

According to some traditions, even the Prophet had incense burned in the mosque (Tirmidhī, i. 116; see Lammens, *Mo'āwīa*, p. 367, note 8) and in the time of 'Omar, his client 'Abd Allāh is said to have perfumed the mosque by burning incense while he sat on the minbar. The same client is said to have carried the censer (*midjmar*: cf. Lammens, *loc. cit.*) brought by 'Omar from Syria before 'Omar when he went to the ṣalāt in the month of Ramaḍān (A. Fischer, *Biographie von Gewährsmännern etc.*, p. 55, note). According to this tradition, the use of incense was adopted into Islām very early as a palpable imitation of the custom of the Church. In keeping with this is the tradition that in al-Fuṣṭāt as early as the governorship of 'Amr, the mu'adhdhīn used to burn incense in the mosque ('Abd al-Ḥakam, p. 132; cf. *Annali dell' Islam*, iv. 565). The Ṣakḥra Mosque had incense burned in it during the consecration ceremony (Sauvage, *Hist. Jérus. et Hébron*, p. 53).

Under the Omayyads, incense was one of the regular requirements of the mosque (*ṭib al-masjīd*: Tabarī, ii. 1234, 10). Mu'āwīya is named as the first to perfume the Ka'ba with perfume (*ḳhalūk*) and censer (*ṭuyaba*: *B.G.A.*, v. 20, 12). It became the custom to anoint the sacred tombs with musk and *ṭib* (*Chron. Mekka*, i. 150, 10; Ibn Djubair, *Riḥla*, p. 191, 9). Balbars washed the Ka'ba with rose-water (Maḳrīzī, iv. 96, 14). Incense, as well as candles, was used at burials (cf. de Goeje, *Z.D.M.G.*, 1905, p. 403 sq.; Lammens, *Mo'āwīa*, p. 436, note 9). Al-Mu'taṣim's desire to be buried with candles and incense (*bukhūr*) exactly like the Christians (Ibn Uṣaybi'a, i. 165, 12 sq., cf. above) shows that they were aware that the custom bore much the same relation to the Christian usage, as the mosque building did to the church. The consumption of incense in the mosques gradually became very large, especially at festivals (see for the Fātimids: Ibn Taghribirdī, ii/i., 484, 12; ii/ii., ed. Popper, p. 106, 3; Maḳrīzī, iv. 51; on vessels for holding incense see the Bibliography in *Isl.*, xvii., 1928, p. 217 sq.).

j. Water-Supply.

Nothing is said of a water-supply in connection with the oldest mosques. The Mosque of Mecca occupied a special position on account of the Zemzem well. In the early days of Islām, two basins (*ḥawḍ*) are said to have been supplied by it, one behind the well, i. e. just at the side of the mosque for *ṣuḍū'* and one between the well

and the *rukn* for drinking purposes; the latter was moved nearer the well by Ibn al-Zubair. In the time of Sulaimān b. 'Abd al-Malik, a grandson of 'Abd Allāh b. 'Abbās for the first time built a *ḡubba* in connection with the Zemzem (*Chron. Mekka*, i. 299). At the same time, the governor Khālīd al-Ḳasrī laid down lead-piping to bring water from the well of al-Thābir to the mosque, to a marble basin (*ḡiskīya*) with a running fountain (*ḡawwāra*) between the Zemzem and the *rukn*, probably on the site of the earlier *ḡawd*. It was intended to supply drinking-water in place of the saltish water of Zemzem, but a bianch was led on to a *birka* at the Bāb al-Ṣafā, which was used for ritual ablutions. The people, however, would not give up the Zemzem water and immediately after the coming to power of the 'Abbāsids, the provision for drinking-water was cut off, only the pipe leading to the *birka* being retained (*ibid.*, i. 339 sq.). In Ibn Džubair's time, there was, in addition to the Zemzem, a supply of water in vessels and a bench for performing the *wuḡḡ* (*Rihla*, p. 89). Khālīd's plan, arrangements for ablutions at the entrance and a running fountain in the ṣaḡn, seems to have been a typically Omayyad one and to have been introduced from the north. Such fountains were usual in the north, not only in private houses, but also for example in the *aithrion* (*atrium*) surrounded by pillars, which, from Eusebius's description, formed part of the church of Tyre (see Hauch in Herzog-Hauch, *Realencycl. f. prot. Theol. u. Kirche* 3, x. 782).

The usual name for the basin, *ḡiskīya* (in Egypt now *ḡaskīya*) is *piscina*, which in the *Mishna* and in Syriac takes the form *piskin* (see Levy, *Neuhebr. u. chald. Wörterbuch*, iv. 81b; Fraenkel, *Fremdwörter*, p. 124; *ḡiskīna*, found in al-Azraqī, *Chron. Mekka*, i. 340 is probably due to a slip). At the same time, however, *birka* or *ḡikāya* or *ḡihūḡ* which probably comes from the Persian (cf. Fraenkel, *op. cit.*, p. 287) or the old Arabic *ḡawd* are also used. The arrangements for ablutions were called *maḡāhir* or *mayāḡḡū*, sing. *mīḡḡa* (now usually *mīḡḡa*), "place for *wuḡḡ*". The accommodation in Mecca just mentioned was later extended. Ibn Džubair mentions a building at al-Zāhir, 1 *mil* north of Mecca which contained *maḡāhir* and *ḡikāya* for those performing the minor *umra* (*Rihla*, p. 111).

In Medina, Ibn Džubair mentions rooms for *wuḡḡ* at the western entrance to the mosque (*Rihla*, p. 197, 13 sq.; cf. the plan in al-Batanūnī, *Rihla*, facing p. 244). At the same time Ibn Zabāla mentions seventeen receptacles for water in the ṣaḡn in the year 199, probably for drinking-water; later (viiith century) a large basin surrounded by a railing is mentioned in the centre of the court. It was intended for drinking purposes, but became used for bathing and was therefore removed. Baths and latrines were built anew by al-Nāṣir's mother (Wustenfeld, *Medina*, p. 99 sq.).

In Damascus, where every house, as is still the case, was amply supplied with water, Yāḡūt (d. 626 = 1229) found no mosque, madrasa or *khānaḡāh* which did not have water flowing into a *birka* in the ṣaḡn (Yāḡūt, ii. 590). Ibn Džubair describes the arrangements in the Mosque of the Omayyads. In the ṣaḡn, as is still the case, there were three *ḡubbas*. The centre one rested on four marble columns, and below it was a basin with a spring of drinking-water surrounded by an iron grille. This was called *ḡaḡḡ al-mā* "water-cage".

North of the ṣaḡn was a Masjid al-Kallāsa in the ṣaḡn of which there was again a *ḡihūḡ* of marble with a spring (Ibn Džubair, *Rihla*, p. 267). There was also running water in an adjoining *maḡḡad* (p. 269), in the *khānaḡāh* and madrasa (p. 271), and in a hall beside the living apartments there was again a *ḡubba* with a basin (*ḡawd*) and spring water (p. 269). There were also *ḡikāyāt* against the four outer walls of the mosque, whole houses fitted up with lavatories and closets (p. 273); a century earlier, we are told that at each entrance to the mosque there was a *mīḡḡa* (*B. G. A.*, iii. 159). The whole arrangements correspond exactly to those made by Khālīd al-Ḳasrī in Mecca in the Omayyad period and must therefore date from the Omayyads.

It was the same in other Syrian and Mesopotamian towns. In Sāmairā, al-Mutawakkil built in his new ḡjami' a *ḡawwāra* with constant running water (*B. G. A.*, vii. 265). In Naṣībīn, the river was led through the ṣaḡn of the mosque into a *ḡihūḡ*; there was also a *ḡihūḡ* at the eastern entrance with two *ḡikāyāt* in front of the mosque (Ibn Džubair, *Rihla*, p. 239). In Mawṣil in the mosque, which dated from the Omayyad period, there was a spring with a marble cupola over it (*ibid.*, p. 235). In Ḥarīrān, there were in the ṣaḡn three marble *ḡubbas* with *birka* and drinking-water (*ibid.*, p. 246). In Ḥaleb two (*ibid.*, p. 253). In Kūfa there were three *ḡawd* with Euphrates water in front of the ḡjami' (*ibid.*, p. 212) but in the mosque in a *zāwiya* a domed building with running water (Yāḡūt, iv. 325, 326, here called *tannūr*; cf. *B. G. A.*, v. 173; Ibn Džubair, p. 89, 267). It was the same in Amīd (Nāṣir-i Ḳhosraw, ed. Schefer, p. 28) and in Sijīstān (*B. G. A.*, ii. 298 sq.). The principal mosques of the 'Irāḡ had *mayāḡḡū* at the entrances, for which, according to a remarkable note by Maḡḡisī, rents were paid (*B. G. A.*, iii. 129, read *karāṣī*; cf. *maḡḡaba*: Ibn Džubair, p. 89). In Palestine also, in al-Maḡḡisī's time, there were conveniences for ablutions at the entrances to the ḡjami' (*maḡāhir*: *B. G. A.*, iii. 182; *Mayāḡḡū*: *ibid.*, i. 58) and in Ṣan'ā' in the fourth century, beside each mosque, there was water for drinking and for *wuḡḡ* (*B. G. A.*, vii. 111). In Persia also, it was the custom to have a *ḡawd* in front of the mosque (*B. G. A.*, iii. 318) and there was drinking-water in the mosque itself on a bench (*kursī*) in iron jars into which ice was put on Fridays (*ibid.*, p. 327). Not only at the Zemzem well but also in the mosques of the 'Irāḡ, men were appointed whose duty it was to distribute drinking-water (Ṭabarī, iii. 2165).—The regular custom, therefore, was to have at the entrance to, or in front of the mosque, conveniences for *wuḡḡ*, in the court of the mosque itself a fountain as the traditional ornament and for drinking water. It was the exception for the *wuḡḡ* to take place in the mosque itself.

In Egypt at first the Mosque of Ibn Ṭulūn was arranged similarly to the Syrian mosques. In the centre of the ṣaḡn there was a gilt dome, supported by sixteen marble columns and surrounded by a railing. This upper storey was supported by nineteen marble columns and below was a marble basin (*ḡaḡḡa*) with a running fountain (*ḡawwāra*): the *ṣaḡn* was called from the dome (Maḡḡisī, iv. 37, the description is not quite clear). People complained that there were no arrangements for washing (*mīḡḡa*) there. Ibn Ṭulūn replied that

he had not made them because he had concluded the mosque would be polluted thereby. He therefore made a *miḍḍa'a* with an apothecary's shop behind the mosque (*ibid.*, p. 38, 39; *Husn al-Muhādḍara*, ii. 139; Ibn Taghribūdī, ii/i. 10). This suggests that previously in Egypt the washing arrangements had been directly connected with the mosque. After the fire of the year 376, the *ṣaḥn* was renovated by al-ʿAzīz (Maḳrīzī, iv. 40), in 696 again by al-l-ādīn, whose inscription still exists (*C. I. I.*, i., N^o. 16). A new *miḍḍa'a* was built in 792 beside the old one on the north, outside the mosque (Maḳrīzī, iv. 42).

The Mosque of ʿAmr first got a *ṣaḥn* at the time of al-ʿAzīz. In 378—379 his vizier Vaḳḥūb b. Killis installed one in the cupola, already in existence for the *ḥait al-māl*. Marble jars were put there for the water (probably drinking-water) (Maḳrīzī, iv. 9. 11; cf. *Husn al-Muhādḍara*, ii. 139; Yaḳūt, iii. 899). A new water basin was installed by Ṣalāḥ al-Dīn beside his *manḥara* in the mosque. The water was led to the *ṣaḥn* from the Nile. This was prohibited in the reign of Baibars al-Bunduqdārī (658—676) by the chief *ḳāḍī*, because the building was being affected by it (Maḳrīzī, iv. 14; *Husn al-Muhādḍara*, ii. 137). The emir, who restored it, brought the water for the *ṣaḥn* from a well in the street (Maḳrīzī, iv. 15).

Like Ibn Ṭūlūn, the Fāṭimids do not seem to have considered the *miḍḍa'a* indispensable. For the Azhar Mosque had originally no *miḍḍa'a*: as late as al-Hākim's waḳf document for the provision of *miḍḍa'a*, money is given only with the provision that something of the kind should be made (Maḳrīzī, iv. 51, 54). At a later date we hear of two *miḍḍa'a*s, one at the adjoining Aḳbughāwīya (*ibid.*, p. 54). On the other hand, there was already a *ḥaḥīya* in the centre of the court, but whether it had existed from the first is not known. It had disappeared, when traces of it were found in 827 in laying-out a new *ḡhrīḍ* (*ibid.*, p. 54). The *ḡḥīra* of the Mosque of al-Hākim was not erected by the founder. Like that of the Mosque of ʿAmr, it was removed in 660 by the *ḳāḍī* Tādī al-Dīn but after the earthquake of 702, it was again rebuilt and provided with drinking-water from the Nile (*ibid.*, p. 56, 57) and again renovated after 780 (*ibid.*, p. 61). A small *miḍḍa'a*, later replaced by another, was in the vicinity of the entrance (*ibid.*, p. 61). Other Fāṭimid mosques had basins in the *ṣaḥn*, which were supplied from the Nile and from the *Ḳhalīḍī* (*ibid.*, p. 76, 81, 120).

The traditional plan was retained in the period following also. For example, we know that the emir Ṭūḡḡān in 815 placed a *birka* in the centre of the Djamīʿ Aḳṣunḳur which was covered by a roof supported by marble pillars and supplied by the same pipe as the already existing *miḍḍa'a*s (Maḳrīzī, iv. 107, cf. 124, 138, 139 etc.). At the ceremonial dedication of mosques, it was the custom for the patron to fill the *birka* in the *ṣaḥn* with sugar, lemonade or other sweet things (e. g. al-Muʿayyadī, in 822; Maḳrīzī, iv. 139; Madrasat Djamāl al-Dīn in 811; *ibid.*, p. 253; another in 757; *ibid.*, p. 256).

The importance of the *birka* of the mosque, as a drinking-place, diminished as pious founders erected drinking fountains everywhere (cf. for Mecca, *Chron. M. kka.*, ii. 116—118; also *E. G. I.*, iv. 211, s. v. *ḡḡḡḡ*; p. 258, s. v. *ṣaḥn*) and especially

when it became the custom to build a *sabil* with a boy's school in part of the mosque (see below, E 4 end). A *ḡḡḡḡ* for watering animals was also sometimes built in the vicinity of the mosque (Maḳrīzī, iv. 76). Sometimes also the *birka* of the *ṣaḥn* was used for washing. In the year 799 the emir Velbughā made arrangements for this in the Aḳmar mosque so that one could get water for *ṣaḥn* from taps from a *birka* put up in the *ṣaḥn* (Maḳrīzī, iv. 76). Maḳrīzī condemns this addition, but only because there was already a *miḍḍa'a* at the entrance and the *ṣaḥn* was too small for the new one (*ibid.*) and not on grounds of principle; and it was only because the wall was damaged that the emir's gift was removed in 815 (*ibid.*, p. 77). The custom of using the water supply of the *ṣaḥn* for *ṣaḥn* survived in many places in Egypt. The arrangements were therefore usually called *miḍḍa'a* or rather *mīdā* (which is not found in the inscriptions). If they had taps, they were called *ḡḡḡḡ*; according to Lane's suggestion because the Ḥanafīs only permitted ablutions with running water or from a cistern 10 ells broad and deep (*Lexicon*, s. v.; cf. *Manners and Customs*, Everyman's Library, p. 69; cf. on the question: Max Herz, *Observations critiques sur les bassins dans les Ṣaḥns des Mosquées*, *B. I. E.*, iii 17, 1896, p. 47—51; do., *La Mosquée du Sultan Husan*, p. 2; Herz wrongly dates the modern usage from the Turkish conquest in 1517). In quite recent times the *miḍḍa'a*s have often been moved outside to special buildings. Ibn al-Hādīḍī condemns bringing water into the mosque, because the only object is for ablutions and ablutions in the mosque are forbidden by "our learned men" (*Madkhal*, ii. 47 sq.; 49); like shaving, ablutions should be performed outside the mosque in keeping with the Prophet's saying: *idḡḡalū ma-ḡḡḡḡakum ʿalā abwābī maṣāḡḡḡḡikum* (*ibid.*, ii. 58). It was in keeping with this principle that in earlier times the *miḍḍa'a* was usually put at the entrance and the barbers took up their places before the entrance (cf. the name *Bāb al-Muṣayyīnūn* "The Barbers' Gate" for the main entrance to the Azhar mosque). *Miḍḍa'a*s were also to be found in hospitals; thus the "lower hospital" was given two in 346, one of which was for washing corpses (Ibn Duḡmāḡ, p. 99 infra).

E. The Mosque as a State Institution.

1. The Mosque as a political centre.

Its relation to the Ruler.

It was inherent in the character of Islām that religion and politics could not be separated. The same individual was ruler and chief administrator in the two fields, and the same building, the mosque, was the centre of gravity for both politics and religion. This relationship found expression in the fact that the mosque was placed in the centre of the camp, while the ruler's abode was built immediately adjacent to it, as in Medina (and in al-Fustāt, Damascus, Baya, Kūfa). We can trace how this *dār al-umāra* or *ḡḡḡḡ* (so for Kūfa: Tabarī, ii. 230 sq.; *ḡḡḡḡ al-umāra*: *ibid.*, p. 234) with the growth of the mosque gradually became incorporated in it in al-Fustāt and Damascus and was replaced by a new building. The tradition remained so strong that in Cairo, when the new chief mosque Djamīʿ al-ʿAskar was being planned in 169, a *Dār Umara' Miḡr* was built beside it with direct access to the mosque (Maḳrīzī, iv. 33

sq.) and when Ibn Tūlūn built his mosque, a building called the *Dār al-Imāra* was erected on its south side, where the ruler, who now lived in another new palace, had rooms for changing his dress, etc., from which he could go straight into the maḥṣūra (*ibid.*, p. 42).

The 'Abbāsids at the foundation of Baghdad introduced a characteristic innovation, when they made the palace the centre of the city; the case was similar with Fātimid Cairo; but Sulaimān b. 'Abd al-Malik in Ramla had already built the palace in front of the mosque (Balādhuri, p. 143). Later rulers who no longer lived just beside the mosque, had special balconies or something similar built for themselves in or beside the mosque. Ṣalāḥ al-Dīn built for himself a *manṣara* under the great minaret of the mosque of 'Amr (Maḥrizi, iv. 13; *Ḥuṣn al-Muḥādḍara*, ii. 137) and just to the south of the Azhar mosque the Fātimids had a *manṣara* from which they could overlook the mosque (Maḥrizi, ii. 345).

The caliph was the appointed leader of the ṣalāt and the khaṭīb of the Muslim community. The significance of the mosque for the state is therefore embodied in the minbar. The installation of the caliph consisted in his seating himself upon this, the seat of the Prophet in his sovereign capacity. When homage was first paid to Abū Bakr by those who had decided the choice of the Prophet's successor, he sat on the minbar. 'Omar delivered an address, the people paid homage to him and he delivered a khaṭba, by which he assumed the leadership (Ibn Hishām, p. 1017; Tabari, i. 1828 sq.; *K. al-Ḥamīs*, ii. 75; Ya'qūbī, ii. 142); it was the same with 'Omar and 'Othmān (*ibid.*, p. 157, 187).

The khaṭba, after the glorification of God and the Prophet, contained a reference to the caliph's predecessor and a kind of formal introduction of himself by the new caliph. It was the same in the period of the Omayyads and 'Abbāsids (see for al-Walīd: Tabari, ii. 1177 sq.; al-Amin: *ibid.*, iii. 764; al-Mahdi: *ibid.*, iii. 389, 451, 457; cf. on this question also Bukhārī, *Aḥkām*, bāb 43). The minbar and the khaṭba associated with it was still more important than the imāma at the ṣalāt, it was *minbar al-mulk* (*Ḥamāsa*, ed. Freytag, p. 656, v. 4). According to a ḥadīth, the Prophet carried the little Ḥasan up to the minbar and said, "This my son is a chieftain" etc. (Bukhārī, *Manāqib*, bāb 25). This reflects the later custom by which the ruler saw that homage was paid to his successor-designate; this also was done from the minbar (cf. *khaṭba yawm al-djuma'ati li 'l-Mu'taḍid bi-wilāyat al-Ṣād*, Tabari, iii. 2131). The Fātimid caliph showed honour to a distinguished officer by allowing him to sit beside him on the minbar (*Ḥuṣn al-Muḥādḍara*, ii. 91); in the same way Mu'āwiya allowed Ibn 'Abbās to sit beside him *'aṣa saririki* (Ibn Abi 'Usābi'a, i. 119) but whether the reference is to the minbar is perhaps doubtful. The *ba'a* could also be received by another on behalf of the caliph but it must be accepted on the minbar. Thus the governor of Mecca in 196 accepted on the minbar homage to 'Abd Allāh b. Ma'mūn and the deposition of Muḥammad b. Hārūn (Tabari, iii. 861 sq.; cf. for al-Mahdi: *ibid.*, p. 389). There are other cases in which the solemn deposition of a ruler took place on or beside the minbar (*Aḡḥānī*, 2nd ed. Cairo, i. 12; Wüstenfeld, *Medina*, p. 15). Even at a much later

date, when spontaneous acclamation by the populace was no longer of any importance, the ceremonial installation on the minbar was still of importance (Maḥrizi, iv. 94). It had become only a formality but still an important one. Homage was paid to the 'Abbāsid caliphs in Egypt in the great *iṭwān* of the palace or in a tent in which a minbar had been put up, and similarly to the sultāns whose investiture was read out from the minbar (cf. Quatremère, *Hist. Sult. Maml.*, i/i. 117, 149 sqq., 183 sqq.). If one dreamt that he was sitting on the minbar, it meant that he would become sultān (*ibid.*, ii/ii. 103). — The 'Abbāsid caliph had however long had his own throne after the old Persian fashion in his palace (*al-Taḍj fi Akhlāk al-Mulūk*, ed. Aḥmad Zakī, Cairo 1914, p. 7 sqq.) and so had the Fātimids (Ibn Taghribirdī, ii/i. 457) and the Mamlūks (Quatremère, *op. cit.*, i/i. 87; cf. 147). When later we find mention of the *kursi 'l-khilaṭa* (v. Berchem, *Corpus*, i., N^o 33), *sarir al-mulk* (*Chron. Mekka*, iii. 113), *sarir al-sultāna* (Maḥrizi, ii. 157; cf. *al-sarir*, royal throne: *B. G. A.*, ii. 282, 285; *cf.* similarly *cf.*: Ibn 'Arabshāh, *Vita Timuri*, ed. Manger, ii. 486) or *martabat al-mulk* (Quatremère, *op. cit.*, ii/ii. 61), the reference is no longer to the minbar. This does not mean that the ruler could no longer make public appearances in the mosques: thus in 648 Mu'izz Aibak regularly gave audiences in *al-madāris al-ṣālihiya* (Quatremère, *Hist. Sult. Maml.*, i/i. 17) and memorial services for Barbars were held a year after his death in several mosques, madāris and khawānīḡ in Cairo (677 = 1278: *ibid.*, ii/ii. 164 sq.).

The caliph spoke chiefly from the minbar of the capital, but when he made the pilgrimage he also spoke from the *manābir* in Mecca and Medina (cf. e.g. Tabari, ii. 1234; Ya'qūbī, ii. 341, 501; *Chron. Mekka*, i. 160). Otherwise in the provinces, the governor stood in the same relation to the mosques as the caliph in the capital. He was appointed "over ṣalāt and sword" or he administered "justice among the people" and the ṣalāt (Tabari, iii. 860), he had "province and minbar" under him (*ibid.*, ii. 611). *al-wilāyat wa 'l-khaṭba* (*B. G. A.*, iii. 337). Speaking from the minbar was a right which the caliph had delegated to him and it was done in the name of the caliph. 'Amr b. al-'Āṣī therefore refused to allow people in the country to hold *djuma'* except under the direction of the commander (Maḥrizi, iv. 7). This point of view was never quite abandoned. The khaṭba was delivered "in the name of" the caliph (*ibid.*, p. 94) or "for" him (*li: ibid.*, p. 66, 74, 198; Ibn Taghribirdī, ii/i. 85 *infra*; *B. G. A.*, iii. 485 *supra*) and in the same way an emīr delivered a khaṭba "for" a sultān (Maḥrizi, iv. 213, 214). The sultān did not have the "secular" and the caliph the "spiritual" power, but the sultān exercised as a Muslim ruler the actual power which the caliph possessed as the legitimate sovereign and had formally entrusted to him. During the struggles between the different pretenders, there was thus a confession of one's politics if one performed the ṣalāt with the one or the other governor (Tabari, ii. 228, 234, 258; *Chron. Mekka*, ii. 168). The pretenders disputed as to whether the one or the other could put up his standard beside the minbar (Tabari, iii. 2009).

Like the caliph, the governor also made his formal entry into office by ascending the minbar

and delivering a *khutba*; this was the symbol of his authority (e.g. Tabari, ii. 91, 238, 242; *Chron. Maml.* ii. 173; cf. *Hamāsa*, p. 660, v. 2-3; *Uṣṭaḥ, Bayān*, iii. 135). After glorifying God and the Prophet, he announced his appointment or read the letter from the caliph and the remainder of his address, if there was a war going on, was exclusively political and often consisted of crude threats. The *khutba* was not inseparably connected with the Friday service. The commander-in-chief could at any time issue a summons to the *ṣalāt* and deliver his *khutba* with admonitions and orders (see Tabari, ii. as above and p. 260, 297 sq., 298, 300, 863, 1179) and it was the same when he left a province (*ibid.*, p. 241); a governor, who could not preserve his authority with the *khutba*, was dismissed (*ibid.*, p. 592).

Since war was inseparably associated with early Islām and the mosque was the public meeting-place of ruler and people, it often became the scene of warlike incidents. While the governor in his *khutba* was issuing orders and admonitions relating to the fighting, cheers and counter-cheers could be uttered (*ibid.*, p. 238) and councils of war were held in the mosque (Tabari, i. 3415; ii. 284; Balādhuri, p. 267). Soon after his election 'Abd al-Malik asked from the minbar who would take the field against Ibn al-Zubair and al-Haḍḍjādī shouted that he was ready to go (*Chron. Mekka*, ii. 20). After the battle of the Camel, 'Alī sent the booty to the mosque of Baṣra and 'A'isha looked for another mosque (Tabari, i. 3178, 3223). Rowdy scenes occasionally took place in mosques (Kindi, *Wuḍāt*, p. 18); Zayād was stoned on the minbar (Tabari, ii. 88); one could ride right into the mosque and shout to the governor sitting on the minbar (*ibid.*, p. 682); fighting often took place in and beside the mosque (*ibid.*, p. 960, 1701 sq.; Wustenfeld, *Mekka*, p. 13 sq.). Sometimes for this reason, the governor was surrounded by his bodyguard during the *ṣalāt* or on the minbar or even clothed in full armour (al-Walid; Tabari, ii. 1234; Yāqūt, ii. 341; al-Haḍḍjādī; Tabari, ii. 254). *Ṣalāt* and sword were thus closely associated in reality.

It thus came to be the custom for the enemies of the ruler and his party to be cursed in the mosques. This custom continued the old Arab custom of regular campaigns of oburgation between two tribes but can also be paralleled by the Byzantine ecclesiastical anathematization of heretics (cf. Becker, *Is. amir*, ii. 1. 485; *Gesch. d. Islām. Kultur*).

The first to introduce the official cursing of the Aḥids from the minbar of the Ka'ba is said to have been Khālīd al-Qasri (*Chron. Mekka*, ii. 36). The reciprocal cursing of Omayyads and Aḥids became general; cf. Tabari, ii. 12, 4 sq.; *Aḥkām*, 2nd edition Cairo, v. 102. Ibn Taghribirdī, i. 248; see also Hammens, *Mishna*, p. 180 sq.). Like the blessing upon the ruler, it was uttered by the *ḥuṣṣā*; (Maḥrizi, iv. 16); it was even recorded in inscriptions in the mosque (Ibn Taghribirdī, ii. n. ed Popper, p. 63, 64; cf. also Mez, *Renaissance*, p. 61). As late as 284, al-Mu'taḥid wanted to restore the anathematization of Mu'awiya from the minbar but abandoned the idea (Tabari, iii. 2164). Anathemas were also pronounced on other occasions, for example, Sulamān had al-Haḍḍjādī (*Chron. Mekka*, ii. 37) and al-Mu'tamid Ibn Tālūn solemnly cursed from the minbar (Tabari, iii. 2048, s. 2,

and other rulers had Mu'tazilī heretics cursed from the pulpits (see Mez, *op. cit.*, p. 198; cf. against Ibn Taimiya: Quatremère, *Hist. Sult. Maml.*, ii. n. 256). Ibn Baṭṭūṭa describes the tumultuous scene with thousands of armed men uttering threats in a mosque in Baghdād when a Shī'ī *khāṭib* was on the minbar (ii. 58).

It was very natural to mention with a blessing upon him the ruler in whose name the Friday *khutba* was delivered. Ibn 'Abbās, when governor of Baṣra, is said to have been the first to pronounce such a *du'ā* over 'Alī (Ibn Khaldūn, *Muḥaddima*, *faṣl* 37, end); it is not improbable that the custom arose out of the reciprocal oburgations of Aḥids and Omayyads; the *ḥuṣṣā*, who had to curse the Aḥids in the mosques, used to pray for the Omayyads (Maḥrizi, iv. 17). Under the 'Abbāsids, the custom became the usual form of expressing loyalty to the ruler (Ibn Taghribirdī, ii/i. 151). After the caliph, the name of the local ruler or governor was mentioned (*ibid.*, p. 156, 161); even in Baghdād in 369 by order of the caliph al-Tā'ī, the actual ruler 'Aḍud al-Dawla was mentioned in the *du'ā* (Ibn Miskawaih, vi. 499; Cairo 1915, p. 396) and the Būyids, according to al-Maḥḍī, were generally mentioned in the *khutba* even in the remotest parts of the kingdom (this is evident from the above-mentioned expression *khutba lahu*, for which we also find *'alaiki*; see B. G. A., ii. 20; iii. 337, 338, 400, 472, 485; cf. Glossary, s. v.). There is also evidence that prayers used to be uttered for the heir-apparent (Maḥrizi, iv. 37; *Kitāb al-Wuzarā'*, ed. Amedroz, p. 420). Under the Mamlūks also, the sultan's heir was mentioned (Quatremère, *Hist. Sult. Maml.*, ii/i. 101; ii/i. 3). Under the Fātimids, it was even the custom to call *salām* upon the ruler from the minaret after the *adhān al-faḍr* (Maḥrizi, iv. 45); this also took place under the Mamlūks (e.g. in 696 = 1297, when I ḥajj was elected; Quatremère, *Hist. Sult. Maml.*, ii/i. 45). The prayer for the sovereign in the *khutba* did not find unanimous approval among the learned (see Snouck Hurgronje, *Verspreide Geschriften*, ii. 214 sq.).

In general, the mosque, and particularly the minbar, was the place where official proclamations were made, of course as early as the time of the Prophet (Bukhārī, *Ṣalāt*, bāb 70, 71), 'Othmān's blood-stained shirt was hung upon the minbar (Tabari, i. 3255); messages from the caliph were read from it (*ibid.*, iii. 2084). Al-Walid announced from the minbar the deaths of two distinguished governors (Ibn Taghribirdī, i. 242); the results of battles were announced in *khutbas* (Yāqūt, i. 647; *al-ḥik al-farid*, ii, Cairo 1321, p. 149 sq.). In the Fātimid and 'Abbāsīd periods also proclamations, orders, edicts about taxation etc. by the ruler were announced in the principal mosque (Tabari, ii. 40; iii. 2165; Ibn Taghribirdī, ii. n. 68; Maḥrizi, *litā'iz*, ed. Bunz, p. 87 *supra*; Quatremère, *Hist. Sult. Maml.*, ii/i. 89; ii/i. 44, 151); documents appointing the more important officers were also read upon the minbar (Kindi, *Wuḍāt*, p. 589, 599, 603, 604, etc. *pass.*; Maḥrizi, ii. 246; iv. 43, 88; frequently the people trooped into the mosque to hear an official announcement (Kindi, *Wuḍāt*, p. 14; cf. Dozy, *Gesch. d. Mauren in Spanien*, ii. 170).

After the position of the caliph had changed, tradition was so far retained that he still delivered the *khutba* in the principal mosque on special occasions,

particularly at festivals. Thus the Fātimid al-ʿAzīz preached in the mosque of al-Hākīm on its completion (Maḳrīzī, iv. 55) and in the month of Ramaḍān he preached in the three chief mosques of Cairo, one after the other (*ibid.*, p. 53; cf. 61 sq.; Ibn Taghribirdī, ii. i. 482 sqq.; exceptionally also in al-Rāshida: Maḳrīzī, iv. 63). The Abbāsid caliph also used to preach at festivals (e.g. al-Rāḍī. Yaḳūt, *ʿUdabāʾ*, ii. 349 sq.); it was the exception when a zealot like al-Muhtadī (255) followed the old custom and preached every Friday (Masʿūdī, *Murūū*, viii. 2). Even the caliph *faḳīr* in Egypt preached occasionally (Maḳrīzī, iv. 94; Quatremère, *Hist. Sult. Maml.*, ii. i. 138 sq.). Although the mosque lost its old political importance in its later history, it has never quite lost its character as the place of assembly on occasions of public importance. This is evident from al-Hijabī's history and even quite recently large meetings have been held in the mosques of Egypt on questions of nationalist politics.

2. The Mosque and public administration.

The actual work of government was very early transferred from the mosque into a special *diwān* or *maḳṣṣ* (see Tabarī, *Gl.*, s. v.) and negotiations were carried on and business frequently done in the *ḳay* *al-imāra* (cf. Tabarī, ii. 230 sq.). But when financial business had to be transacted at public meetings, the mosque was used; of this there is particular evidence from Egypt. Here the director of finance used to sit in the Mosque of ʿAmr and auction the farming out of the domains, with a crier and several financial officers to assist him. Later the Diwān was transferred to the Dīwān ʿAḥmad b. ʿIṣṣūn but even after 300 A.H. we find Abū Bakr al-Maḍḥarāʾī sitting on such occasions in the Mosque of ʿAmr. Under the Fātimids the vizier Yaḳūh b. Killis used first the *ḍār al-imāra* of the Mosque of Ibn Ṭūlūn (see above), later his own palace and afterwards the caliph's *ḳay* was used (Maḳrīzī, i. 131 sq.). In the same way, in the reign of Muʿāwiyā, the Coptic churches were used and the taxation commission took up their offices in them (*Papyrus Erzherzog Rainer, Führer durch die Ausstellung*, No. 577); and Ibn Rosta (c. 290 = 903) says that the officials in charge of the measurement of the Nile, when they noticed the rising of the river, went at once to the chief mosque and announced it at one *ḥalḥa* after another, at the same time scattering flowers on those seated there (*F. G. A.*, vii. 116).

The connection with administration was also seen in the fact that the treasure-chest, the *ḥait al-māl* (identical with the *tābūt*; Kindī, *Wuʿāt*, p. 70. 117) was kept in the mosque. In al-Fuṣṣṭāṭ Usāma b. Zaid, the director of finance, in 97 and 99 built in the Mosque of ʿAmr a *ḳubba* on pillars in front of the minbar for the *ḥait al-māl* of Egypt. A drawbridge was placed between it and the roof. In the time of Ibn Rosta (c. 300) it was still possible to move about freely below the *ḳubba* but in 378—379 al-ʿAzīz put up a running fountain below it (*F. G. A.*, vii. 116; Maḳrīzī, iv. 9, 11, 13; *Huṣn al-Muḥādḍara*, ii. 136; Yaḳūt, ii. 899). Al-Kindī records an attempt to steal the chest in 145 (*Wuʿāt*, p. 112 sq.). In the disturbed years about 300, the wali al-Nūshārī closed the mosque between the times of ṣalāt for the safety of the chest, which was also done in Ibn Rosta's time

(Kindī, *Wuʿāt*, p. 266; *F. G. A.*, vii. 116). New approaches to the Bait al-Māl were made in 422 from the *ḫizāna* of the mosque and from the Diwān (Maḳrīzī, iv. 13).

In Kūfa, the *ḫayūt al-amwāl*, at least during the early period, were in the Dar al-Imāra (Tabarī, i. 2489, 2491 sq.); in the year 38 during the fighting, it was saved from Bayra and taken with the minbar to the Mosque of al-Huḍḍān (*ibid.*, p. 3414 sq.). In Palestine, in the chief mosque of each town, there was a similar arrangement to that in the Mosque of ʿAmr (*F. G. A.*, vii. 182). In Damascus the *ḥait al-māl* was in the most western of the three *ḳubba*'s in the court of the Mosque of the Omayyads; it was of lead and rested on 8 columns (*F. G. A.*, iii. 157; Ibn Dūbair, p. 264, 267; Ibn Baṭṭūṭa, i. 200 sq.); it is still called *ḳubbat al-ḥazne* ("treasure-cupola", earlier *ḳubbat ʿAsha*) (cf. Baedeker, *Palästina und Syrien*). In the time of the two travellers mentioned, the *ḳubba* only contained property of the mosque. Ibn Dūbair saw a similar *ḳubba* in the chief mosque of Harrān and says that it came from the Byzantines (p. 246). In Adharbaidjan also by the time of Isāḳhri, the Syrian custom had been everywhere introduced (*F. G. A.*, i. 184); in Transhahr in the centre of the court, there was a building with marble columns and doors (*F. G. A.*, iii. 316) which perhaps points to a similar statement of affairs and in Armenia it is recorded that the *ḥait al-māl* was kept in the Dīwān in the time of the Omayyads as in Mīsr and elsewhere (*F. G. A.*, ii. 241). The *ḳubba* was usually of lead and had an iron door. Ibn al-Hadḍj considers it highly illegal to shut off a diwān in a mosque, which is the same as forbidding entrance to it. This shows that the custom still survived in his time.

Ibn Dūbair's remark about Harrān suggests that here again we have an inheritance from Byzantium. It was probably the building belonging to the *prætorium* (cf. above) that the Muslims put to a practical use in this way. For the Byzantines had the treasury (*thesauri*) in the palace and it is doubtful if the treasure-chambers of the church (*skrinophylakion*) were built in this way (cf. Franz Dölger, in *Byzantinisches Archiv*, Heft 9. 1927, p. 26, 34).

3. The Mosque as a court of justice.

That the Prophet used to settle legal questions in his mosque was natural (see Bukhārī, *Al-sun.*, bāb 19, 29 etc.; cf. *Ṣalāt*, bāb 71. *Kānūnāt*, bāb 4); but he could also deliver judgments in other places (*ibid.*, pass.). In Hīrah it is recorded that some *ḳādis* of the earlier period (Shurrahī, al-Shaʿbī, Yahyā b. Yūman, Marwān) sat in judgment beside the minbar, others (al-Ḥasan, Zurāʿa b. Awfā) on the open square beside the mosque (Bukhārī, *Aḥḳām*, bāb 18). The custom had all the better chance of survival, as churches were used in the same way (Joshua Stylites, ed. Wright, ch. 29; cf. Mer, *Renaissance*, p. 223). Sitting in judgment was primarily the business of the ruler but he had to have assistants and Abū Bakr's *ḳādi* is mentioned as assisting ʿOmar (Tabarī, i. 2135) and a number of judges appointed by ʿOmar are mentioned (*F. G. A.*, vii. 227). In the reign of ʿUthmān, ʿAbd Allāh b. Masʿūd is said to have been judge and financial administrator of Kūfa (Ibn Kṭāiba, *Māʾārif*, ed. Wustenfeld, p. 128). On the other hand, we are told that ʿAbd Allāh

b. Nawfal, appointed by Marwan in 42, was the first *qāḍī* in Islām (Ṭabarī, iii. 2477): it is recalled that in the year 132 the *qāḍī* of Medīna administered justice in the mosque (*ibid.*, p. 2505). In Baṣra, we are told that al-Aswad b. Sarī al-Tamīm immediately after the building of the mosque (i. e. in the year 14) worked in it as *qāḍī* (Balādhurī, p. 346). In the early period Umar wanted to choose a *qāḍī*, who had been already acting as a judge before Islām (Kindī, *Wulāt*, p. 301 sq.; *Ḥusn al-Muḥādḍara*, ii. 86). Even the Christian poet al-Akḥṭal was allowed to act as arbiter in the mosque of Kūfa (see Lammens, *Muḥādḍara*, p. 435 sq.).

In al-Fustāt, as early as 23 or 24 A.H. by command of Umar, 'Amr b. al-'As, appointed a *qāḍī* named Kaṭs (*Ḥusn al-Muḥādḍara*, ii. 86; Kindī, *Wulāt*, p. 300 sq.). The *qāḍī* held his sessions in the Mosque of 'Amr but not exclusively there. The *qāḍī* Khair b. Nu'aim (120—127) held his sessions sometimes before his house, sometimes in the mosque and for Christians on the steps leading up to the mosque (Kindī, *Wulāt*, p. 351 sq.). A successor of his (177—184) invited Christians who had lawsuits into the mosque to be heard (*ibid.*, p. 391); of another judge (205—211) it is recorded that he was not allowed to sit in the mosque (*ibid.*, p. 428). It seems that the *qāḍī* could himself choose where he would sit. A judge, officiating in the year 217, sat in winter in the great pillared hall turning his back towards the *qibla*-wall and in summer in the *ṣaḥn* near the western wall (*ibid.*, p. 443 sq.). During the Fāṭimid period, the subsidiary building on the north east of the Mosque of 'Amr was reserved for the judge. This judge, called from the year 376 onwards *qāḍī 'l-qudāt* (cf. *Ḥusn al-Muḥādḍara*, ii. 91; Kindī, *Wulāt*, p. 590), sat on Tuesday and Saturday in the mosque and laid down the law (Makrīzī, ii. 246; iv. 16, 22; cf. Kindī, *Wulāt*, p. 587, 589; cf. *Saḥīf al-Nāme*, transl. Schefer, p. 149).

In Yaḥyā's time in Baghdad, the judge of the east city used to sit in its chief mosque (*B.G.A.*, vii. 245), in Damascus the vice-*qāḍī* in the fourth century had a special *ṣaḥn* in the Mosque of the Omayyads (*B.G.A.*, iii. 158), and the notaries (*al-shu'ūbiyyūn*) also sat in the Mosque of the Omayyads at the Bab al-Nāṭ (*ibid.*, p. 17). In Nisābūr, every Monday and Thursday, the *maḍlis al-ḥukm* was held in a special mosque (*ibid.*, p. 328). In course of time the judge was given a *maḍlis al-ḥukm* of his own (cf. *Ḥusn*, ii. 96) and in 279 al-Muṭaḍḍid wanted to forbid the *qāḍīs* to hold sessions in the mosques (Ibn Taghribirdī, ii. 1. 87 *supra*; perhaps however we should read *qāḍī*; see Goldziher, *Muh. Stud.*, ii. 164, note 4). Justice was also administered in the *dār al-ad.* (Quatremère, *Hist. Sult. Maml.*, ii. ii. 79). But the administration of justice did not at once lose all connection with the mosque. Under the Fāṭimids, the custom had been introduced that the *qāḍī* should hold sittings in his house, but Ibn al-'Awwām, appointed just after 400 A.H., held them either in the *ḍjāmī* at the Bait al-Māl or in a side-room (Kindī, *Wulāt*, p. 612; cf. Ibn Taghribirdī, ed. Popper, ii. i. p. 69; Kalkashandī, *Ṣuḥ al-Ṭibā*, iii. 487; for 439 = 1046, see Najrī Khosraw, ed. Schefer, p. 51, text, p. 149, transl.). In Mecca, the *dār al-ṭāfi* was in direct connection with the mosque (Ibn Ḍjubair, p. 104). In the viiith century Ibn Baṭṭūta attended a court presided over by an eminent jurist in a mosque (madrasa) in Shirāz (ii. 55, 63; cf. also *al-Mad-*

ḥal, ii. 54 *infra*), and in Damascus the *Shāhī* chief *qāḍī* held his sessions in the 'Adiliya Madrasa (so Ibn Khallikān, Quatremère, *Hist. Sult. Maml.*, ii. i. 22; cf. also for Egypt: *ibid.*, p. 87, ii. ii. 253), the vice-*qāḍīs* sat in the Zāhiriya Madrasa (Ibn Baṭṭūta, i. 218). The judgment might even be put into execution in the madrasa (*ibid.*, p. 220). During the Mamlūk period in Egypt, we occasionally find a small mosque being used as a *maḍlis* for judges (Makrīzī, iv. 270; Ibn Duḡmāk, p. 98 *supra*); Ibn Khaldūn held legal sittings in the Madrasa al-Ṣālihiya (*Ibar*, vii. 453).

A mufti, especially in the large mosques, was also frequently appointed; he sat at definite times in a *ḥalqa li 'l-fatwā*, e. g. in Cairo (al-Ḳazwīnī, *Ḥusn al-Muḥādḍara*, i. 182; Ḍjālāl al-Dīn, *ibid.*, p. 187), in Tunis (Zarkashī, *Chronicle*, transl. Fagnan, *Rec. Mém. Soc. Arch. Constantine*, vol. xxi., 1895, p. 197, 202, 218, 248). In Baghdad Abū Bakr al-Dīnawarī (d. 405) was the last to give *fatwās* in the Mosque of al-Manṣūr according to the *madhhab* of Sufyān al-Thawrī (Ibn Taghribirdī, ed. Popper, ii. ii., p. 120).

F. The Mosque as an Educational Centre.

1. Islāmic studies in the Mosque to the end of the Fāṭimid period.

The new studies stimulated by Islām were from their nature associated with the mosque. The learning by heart and the understanding of the *Qurān* formed the starting-point and next came the study of *Ḥadīth*, by which the proper conduct for a Muslim had to be ascertained. The Prophet was often questioned on matters of belief and conduct, in or outside the mosque (Bukhārī, *Ṣlm*, bāb 6, 52; 23, 24, 26, 46). After the death of the Prophet, his Companions were consulted in the same way and scientific study began with the collection and arrangements of *ḥadīths*, as has been shown, notably by Goldziher. This process is reflected in the *ḥadīths* themselves. According to them, even the Prophet in his lifetime was asked about *ḥadīths* (*ibid.*, bāb 4, 14, 33; tr. 9, 51, 53); the Prophet sits in a mosque surrounded by a *ḥalqa* and instructs his hearers; the latter repeat the *ḥadīths* three times until they have learned them (*ibid.*, bāb 8, 30, 35, 42). The necessity of *ṣlm* is strongly emphasised and the *ṭalab al-ṣlm* is recommended; a man is held up as a model because he undertook a month's journey for the sake of a single *ḥadīth* (*ibid.*, bāb 19—22; cf. Goldziher, *Muh. Stud.*, ii. 32 sq., 175 sq.). Jewish influence is perhaps to be recognised when learning is compared with the drinking of water (Bukhārī, *Ṣlm*, bāb 20; cf. *Proverbs*, xviii. 4; *Puḥ Abūth*, i. 4, 11) and the teachers are called *raḥbānīyūn* (Bukhārī, *Ṣlm*, bāb 10). A special class of students, *Ahl al-Ṣlm*, was formed who spread the knowledge of traditions throughout Muslim land, (*ibid.*, bāb 7). They collected people around them to instruct them in the most necessary principles of the demands of Islām; 'Abd Allāh held one of these *maḥfiza* every Thursday, only once a week, in order not to tire the people (*ibid.*, bāb 12). In this simple form of instruction which was indistinguishable from edifying admonitions lay the germ of Islāmic studies. The teacher *shākh* his hearers; elsewhere it is called *faḳḳāh* or *allama* and the knowledge imparted is

ilm or *hikma* (*ibid.*, bāb 15). Such knowledge was imparted to the tribes by the Prophet (*ibid.*, bāb 25) or by teachers sent to them. In the year 17, 'Omar sent teachers of the Qur'an in all directions and ordered the people to appear every Friday in the mosque. The complicated nature of the subjects of study resulted at the principal centres of Islām in the formation not only of a guild of teachers but of a regular system of instruction. The typical scholar, in addition to the *ḥarīṣ*, was the *muḥaddith* (*ibid.*, bāb 29) although new branches of study were soon added as a result of contact with lands with older cultures, notably linguistic studies and in this connection the study of the old poetry, philosophical and speculative studies, logic, etc. The learned man of the old period was also called *faqīh* (*Husn al-Muḥaddara*, i. 131; Tabari, ii. 1183, 1266; *Aghāni*, viii. 89; Ibn Sa'd, v. 167 etc.). Even after the new branches of learning were added to the older studies, the mosque remained the chief centre of instruction. This may have been facilitated by the fact that in the old Christian countries it had been the custom for studies to be prosecuted in connection with monasteries and churches (on the university connected with the Church of the Apostles in Constantinople cf. A. Heisenberg, *Grabeskirche und Apostelkirche*, ii., 1908, p. 17 sqq.).

We hear of a *madjlis* for educational purposes in the Medina mosque in the first century A. H. (*Aghāni*, i. 48; iv. 162 sq.). Yazīd b. Abi Ḥabīb sent by 'Omar b. 'Abd al-'Azīz as muftī to Egypt (d. 128), is said to have been the first to teach in Egypt (*Husn al-Muḥaddara*, i. 131); he is mentioned along with another as teacher of al-Laith (Kindi, *Wulāt*, p. 89) and the latter, upon whose pronouncements fatwā's were issued had his ḥalka in the mosque (*Husn*, i. 134). 'Omar II had before this sent al-Nāfi', the Maḥlā of Ibn 'Omar, to Egypt to bring them the *sunan* (*ibid.*, p. 130). He also sent an able reciter of the Qur'an to the Maghrib as *kādi* to teach the people *ḥirā'a* (*ibid.*, p. 131). Education was arranged for by the government by allowing suitable people to give instruction in addition to their regular office. From the very first, education in Egypt was closely connected with admonition to right living. The first teachers in the mosques were the *ḥuṣṣā's*, as a rule *kādis*, whose discourses dealt with the interpretation of the Qur'an and the proper conduct of divine service (cf. C 3). Their *marw'iza* was the direct continuation of the moral instruction given by the old Companions (cf. Bukhārī, *Ilm*, bāb 12). The instruction started in the mosque of 'Amr was continued for centuries. In the third century A. H., al-Shāfi' taught various subjects here every morning till his death (240) (*Husn al-Muḥaddara*, i. 134; Yāqūt, *U'dabā'*, vi. 383). It was after his time that the study of *fiqh* came markedly to the front and the great teachers used at the same time to give fatwās (cf. *Husn*, i. 182: 'Abd Allāh al-Kazwini, d. 315: i. 183: 'Abd al-Rahman al-Rāzi, d. 339). In the year 326 (938), the Shāfi's and Mālikis had each 15, the Ḥanafis 3 groups in the mosque of 'Amr (Ibn Sa'id, ed. Tallquist, p. 24). The Māliki Muḥammad al-Na'ālī (d. 380) had so many hearers that the class occupied the area which 17 pillars included (*Husn*, i. 207). In the fourth century, al-Makdisī mentions the groups (*ḥalaḳ*) of *fukahā'*, *ḥirā'a* and *ahl al-udab wa 'l-hikma*, who sat in the mosque (*B. G. A.*, iii. 205; cf. for the fifth

century, Nāṣir-i Khosraw, ed. Schfer, p. 50 [text], p. 148 [transl.]). He also mentions that the followers of Abū Ḥanifa held meetings in the Masjid al-Akṣā with *dhikr*, which here must mean something like lectures, where they read out of a volume and the *fukahā'* used to sit in the mosques of Palestine generally, to teach between the ṣalāts (*B. G. A.*, iii. 182). In the third century, Ibn al-Faḳīh tells how the *fukahā'* sit in the mosques of Sijidjān, Balkh and Herāt, while the people crowd around them (*ibid.*, ii. 317). The *madhāhib* which later lost their importance had also their study-circles in the mosques. For example al-Makdisī says that the Dāwūdiyya had study-groups in Fārs (iii. 439) and the Awzā'iyya had even a *madjlis* in the mosque of the Omayyads (*ibid.*, p. 179).

Arabic philological studies were ardently prosecuted in the mosques. The interest of the early Arabs in rhetoric survived under Islām; the *faqīh* Sa'id b. al-Musaiyab (d. 95) (cf. Tabari, ii. 1266) discussed Arabic poetry in his *madjlis* in the mosque in Medina; but it was still thought remarkable that poems should be dealt with in a mosque (*Aghāni*, i. 48; iv. 162 sq.). In the year 256, al-Tabari by request dictated the poems of al-Tirīmāh beside the Bait al-Māl in the Mosque of 'Amr (Yāqūt, *U'dabā'*, vi. 432 *infra*). In the chief mosque of Basra, the *Aṣḥāb al-'Arabiya* sat together and were visited by Ḥamad b. Salama (d. 167 or 169) while he made Ḥasan al-Baṣrī give lessons (*ibid.*, iv. 135). In Granada we hear of a *naḥwi* who gathered many pupils around him in the *ḍjāmi'* (Maḳḳārī, ii. 254). In Tunis in the viiith century, the Maḳāmas of al-Ḥarirī were actually read in the *ḍjāmi'* Zaitūna (Zarkashi, transl. Fagnan, *Rec. Soc. Arch. Constantine*, 1894, p. 111). In Baghdad al-Kisā'i gave his lectures in the mosque, which bears his name and the pupils used to take their places in front of him after the morning ṣalāt (Yāqūt, *U'dabā'*, iv. 243 sq.). About 200 A. H. we hear of lectures on *tafsir* in the principal mosque of the same town (*ibid.*, vii. 105). At the same time, the study of *Ḥadīth* still retained its importance (Wustensfeld, *Schāḥīr*, iii. 362). The Mosque of al-Manṣūr remained the most distinguished school, the goal of all the learned (Yāqūt, *U'dabā'*, i. 246 sq.). When a traveller came to a new town, he could go to the *ḍjāmi'* in the confidence that he could attend lectures on *Ḥadīth* there (*B. G. A.*, iii. 415, in Sūs). In Mecca, for example, al-Shāfi' lectured (Yāqūt, *U'dabā'*, vi. 391), in Medina Ibn I-shāḳ, who died in 234 (*ibid.*, p. 400, 401). In Damascus we hear of some one who lectured on *ḥirā'a* (*Husn*, i. 182) and of another, Abū Ṭāhir al-Iskandarānī (d. 359) who lectured on *Ḥadīth* in the same place (*ibid.*, i. 183). Teachers went from one town to another. Makī b. Abi Ṭālib came from Kairawān to Mīṣr. Mecca and Qurṭuba; in the last named place he put up in two *riwāḳ's* of the chief mosque, where he lectured on *ḥirā'a*, afterwards in another mosque, and he was much sought after on account of his *ilm* (Yāqūt, *U'dabā'*, vii. 174). At quite an early date we read of special apartments (which were certainly also lecture-rooms) for authorities on the Qur'an, for, according to al-Wāḳidi, 'Abd Allāh b. Umm Maktūm lived in Medina in the *Dār al-Ḥurra* (*Husn al-Muḥaddara*, ii. 142).

As is evident from the examples quoted, studies were not only prosecuted in the chief mosques but also in other mosques. In Egypt, not only

the Mosque of 'Amr but also the chief mosques of later date were important centres of study. As soon as the Mosque of Ibn Tulūn was founded, a pupil of al-Shāfi'i began to lecture in it on *Ḥadīth* (*Ḥusn al-Muḥādara*, ii. 139). During the Fātimid period this was continued. In the year 361 (972), the Azhar Mosque was finished. Soon afterwards, the new Shī'i Kādī, 'Alī b. al-Nū'mān, lectured in it on Fiqh according to his school; in 378 al-'Aziz and his vizier Ya'qūb b. Killis founded 35 lectureships and in addition to their salaries, the lecturers were given quarters in a large house built beside the mosque (Maḳrīzī, iv. 49; Sulaiman Raṣād al-Iṣnāfi, *Kanz al-Djazarah fi Ta'rikh al-Azhar*, p. 32 sq.). Immediately after the foundation of the Mosque of al-Hākim, the *fukahā'* gave lectures (*ḥikāla*: Maḳrīzī, iv. 55) in it. In the Fātimid Mosque of al-Aḳmar, also founded in 519, teaching was carried on from the very first (*ibid.*, p. 77).

We can therefore say definitely that mosques were from the beginning through the centuries educational institutions, that learned men occasionally used to live in mosques and that under the Fātimids and probably much earlier, there were special houses for the learned teachers. The mosque therefore corresponded to church, town hall and school and sometimes hostel. It was, then, a public place of assembly for the town. Nāṣir-i Khosraw in 439 (1047) gives a vivid picture of the activity in the Mosque of 'Amr which was visited by 5,000 people daily, teachers, Qur'ān-lecturers, students, strangers, scribes, who drew up bill of exchanges and contracts etc. (ed. Schefcr, text, p. 50 and transl. p. 148). It was therefore an exception when the Ṣakhra Mosque was open only on Mondays and Fridays (Sauvage, *Hist. Jérus. et Hébr.*, p. 54) which happened with very few other sanctuaries, and also unusual for the mosque only to be opened for prayer, as sometimes happened out of consideration for the safety of the *bait al-māl*. The people demanded unrestricted access to the mosque at all times (cf. Maḳrīzī, iv. 54).

2 Special Educational Institutions.

In the descriptions of the larger mosques the libraries are often mentioned. These collections were gradually brought together from gifts and bequests, and it was a common thing for a scholar to give his books for the use of the *Muslimin* or *Ahl al-'ilm* (e.g. al-Khaṭīb al-Baghādādī: Yāqūt, *Udbā'*, i. 252; cf. iv. 287). Many other libraries were semi-public. These often supplemented the libraries of the mosques, because they contained books in which the mosques were not much interested, notably on logic, falsafa, geometry, astronomy, music, medicine and alchemy; the latter were called *al-'ulūm al-ḥadīma* (Ibn Abi 'Uṣaybi'a, i. 113, uses this already for the pre-Islamic period) or *'ulūm al-awā'il* (on them see Goldziher, in *Abh. Pr. Ak. W.*, 1915, Phil.-Hist. Kl., N^o 8, Berlin 1916). The academy, *Bait al-Hikma*, founded by al-Ma'mūn (198—202) in Baghdad, deserves first mention. It recalls the older academy founded in Gundēšāpār, to which Maṣnūr had invited Gorgios b. Gabri'el as head of the hospital; he also translated works from the Greek (Ibn Abi 'Uṣaybi'a, i. 123 sq.). In the new academy there was a large library, and it was extended by the translations which were made by men qualified in the above-mentioned fields: there was also an

astronomical observatory attached to the institution in which there were also apartments for the scholars attached to it (*Fihrist*, ed. Flügel, p. 243; cf. Ibn al-Kifī, *Ta'rikh al-Ḥukamā'*, p. 98). When the caliph al-Mu'taḍid (279—289) built himself a new palace, he had apartments and lecture-rooms in an adjoining building for men learned in every science, who received salaries to teach others (Maḳrīzī, iv. 192, 2 sq.; *Ḥusn al-Muḥādara*, ii. 142).

Private individuals of wealth continued benefactions on these lines. 'Alī b. Yahyā, who died in 275 and was known as al-Munadjdjim, had a palace with a library, which was visited by those in search of knowledge from all lands; they were able to study all branches of learning in this institution, called *Khizānat al-Hikma*, without fee; astronomy was especially cultivated (Yāqūt, *Udbā'*, v. 467). Al-Munadjdjim also presented a whole library to Fath b. Khākān (*ibid.*, p. 459, *infra*; on al-Sulī's library, see *ibid.*, vii. 136, 11 sq.). In Mawṣil, Dja'far b. Muḥammad al-Mawṣilī (d. 323) founded a *dār al-'ilm* with a library in which students worked daily at all branches of knowledge and were even supplied with free paper. The founder lectured on poetry in it (*ibid.*, ii. 420). In the fourth century al-Maḳdisi visited in Shirāz a large library founded by 'Aḳd al-Dawla (367—372) to which people of standing had access. The books were arranged in cases and listed in catalogues, and the library (*khizānat al-kutub*) was administered by a director (*wakil*), an assistant (*khāzin*) and an inspector (*mushrif*) (*B. G. A.*, iii. 449; cf. a little later: Yāqūt, *Udbā'*, v. 446, 12 sq.). In the fourth century, a certain Ibn Sawwār founded both in Baṣra and in Rām-Hurmuz a large *dār al-kutub* with stipends for the scholars who worked in it; in Baṣra a *shāikh* used to hold classes (*muḍarris*) on Mu'tazili *kalām* (*B. G. A.*, iii. 413, 18). In al-Raiy, there was at the same time, a *bait al-kutub* with over four hundred camel-loads of books, which were catalogued in a ten volume *fihrist* and included many Shī'i works (Yāqūt, *Udbā'*, ii. 315, 9 sq.). In the year 383, the vizier Ṣābūr b. Ardashīr founded a *dār al-'ilm* in Karkh with a large library for scholars (Ibn Taghribirdī, ed. Popper, p. 51, 16 sq.; Ibn al-Athīr, ix., Cairo edition, p. 35, 7).

Many of the libraries had a strongly, but by no means exclusively, Shī'a character. As to the *'ulūm al-awā'il*, the 'Abbāsids, as already mentioned, were interested in them and the Omayyad Khālid b. Yazid b. Mu'āwiya studied alchemy and medicine along with *Ḥadīth* (Ibn Taghribirdī, i. 246, 5; Yāqūt, *Udbā'*, iv. 165). But the connection between the Shī'a systems and Hellenistic science of which we have evidence, for example in the Ikhwān al-Ṣafā, perhaps caused a greater interest to be taken in this branch of knowledge among the Shī'is than among the Sunnis. In Cairo, the Fātimids founded similar institutions in the interests of the Shī'a. In their palace, they had a library which was said to be the largest in Islām. It had about 40 rooms full of books, and all branches of knowledge were represented; they had for example 1,200 copies of al-Ṭabari's History and 18,000 books on the "old learning" (Maḳrīzī, ii. 253—255). The vizier Ya'qūb b. Killis founded an academy with stipends for scholars and spent 1,000 dinārs a month on it (Yahyā b. Sa'id, ed. Tallquist, fol. 108a; Ibn Khallikān, *Wafayāt*, Cairo 1310, n. 334; cf. Maḳrīzī, iv. 192, 21). It was

and one built by Abū Saʿīd Ismāʿīl al-Astarābādī and another built for the teacher Abū Ishāq al-Isfārāʾīnī. A Nizāmiya was also built here by Nizām al-Mulk for the Imām al-Haramain al-Djuwainī (Maḥrizī, iv. 192; *Ḥusn al-Muḥāḍara*, ii. 141 sq.). It was an event of great importance when Nizām al-Mulk (456—485, vizier of the Saljuq sultāns Alp Arslān and Malik Shāh) founded the celebrated Nizāmiya Madrasa in Baghdad; the building was begun in 457 and on the 10th Dhu l-Kaʿda 459 (Sept. 1067) it was consecrated. It was founded for the Shāfiʿi teacher Abū Ishāq al-Shīrāzī; but he at first refused to accept the call, because the ground on which it was built was said to have been acquired illegally, and Abū Naṣr Ibn al-Ṣabbāgh therefore held the office for the first twenty days (*ibid.*; and Wustenfeld, *Schāfiʿi*, iii. 297; Ibn Khallikān, *Wafayāt*, Cairo, i. 143 sq.).

The Muslim historians are in some doubt about the history of the madrasa. Nizām al-Mulk is given the credit of having founded it, but al-Maḥrizī and al-Suyūṭī point out that *madāris* were already in existence before him and mention the four above-named, but, as we have seen, even they were not innovations. Al-Subkī thinks (says al-Suyūṭī) the new feature was that Nizām al-Mulk endowed scholarships for the students. But this again was nothing new as we have already seen. But the enthusiasm and energy of Nizām al-Mulk meant the beginning of a new period of brilliance for the Madrasa. The sultān and men of high rank were now interested in it and the type evolved by Nizām al-Mulk, a school in which the students were boarded, became the prevailing one after his time. We may presume that the older schools also had a place for prayer in them, i.e. they resembled mosques. The type of school known to us is built as a complete mosque. Since even the older mosques containing living-rooms which were frequently used by students, there is no difference in principle between the school and the ordinary mosque; only the schools were especially arranged for study and the maintenance of students. This character is expressed by the name *madrasa*, plural *madāris*; it is a genuine Arabic formation from the word *dārasa*, "to read", "to study", taken from Hebrew or Aramaic (Sūra lxviii. 37 and elsewhere; *Itzhumiyāt*, ed. Horowitz, p. 53, 13; *Aghānī*, xiv., 2nd Cairo ed., p. 78; cf. *dārasa* "to teach": Bukhārī, *Badʿu l-Waḥy*, bab 5 and elsewhere; "to study": *Kāmil*, ed. Wright, p. 171), where *beit Madras* is used of a Jewish school (Bukhārī, *Ḍuʿiʿa*, bab 6; Ibn Hishām, p. 383, 388); it is therefore an analogous formation to Masjid (cf. also Fleischer, *Klein. Schriften*, ii. 122 sq.; Noldeke, *Neue Beiträge z. sem. Sprachw.*, p. 38).

In the time of Nizām al-Mulk and immediately afterwards, the madrasa spread in the ʿIrāq, Khurāsān, al-Djazīra etc. He was not content with the two he founded in Nisābūr and Baghdad. There was also a *Madrasa Nizāmiya* in Balkh (Wustenfeld, *Schāfiʿi*, iii. 240). in Mawṣil (*ibid.*, p. 319). in Herāt to which al-Shāshī (d. 485 = 1092) was called from Ghazna and in Merw (Yāqūt, iv. 509). Ibn al-Ṣabbāgh, who had to give up his position in favour of al-Shīrāzī, received a promise from Nizām al-Mulk that he would build a madrasa for him in Baghdad, but the death of this scholar prevented this being done (in 477: *ibid.*, p. 304). The great vizier's rival Tādī al-Mulk (d. 486 =

1093) in Baghdad founded a *Madrasa Tādīya* (*ibid.*, p. 311). In Nisābūr, other madrasas were founded at the same time, for example one by al-Manīʿi who died in 463 (*ibid.*, p. 277) and a Shāfiʿiyya (*ibid.*, p. 327). In Marw, al-Samʿānī who died in 484 taught in a Shāfiʿi madrasa (*ibid.*, p. 321; cf. above). In Marw al-Rudh, Aḥmad al-Manīʿī (d. 512) built a madrasa (*ibid.*, p. 326).

The prosperity of the madāris stimulated by Nizām al-Mulk in the fifth century survived for a long time in the east. In the sixth century Ibn Djbair (580 = 1184) mentions some thirty madāris, all in the eastern part of the town, the most notable being the Nizāmiya, renovated in 504 (*Rihla*, p. 229). In 631 (1234), the caliph al-Mustaṣfir founded the magnificent Mustanṣiriya as a school for the four rites, each with a teacher and seventy-five students and a teacher for Qurʾān and one for Ḥadīth, as well as a physician. Attached to it were a library, baths, hospital and kitchens; there was a clock at the entrance; beside it was a garden where the caliph had a pavilion (*manṣara*) from which he could survey the whole building (cf. Le Strange, *Baghdad*, p. 266 sq.; Wustenfeld, *Akademien der Araber*, p. iv. and 29).

The Nizāmiya and the Mustanṣiriya survived the destruction of Baghdad by Hülāgū and both are mentioned at the beginning of the viiith century by Ibn Baṭṭūṭa (ii. 108 sq.) and the building of the latter still exists. Ten others are known of the viiith—ixth century including the Madrasat ʿAbd al-Kādir al-Djilānī (688 = 1286), Madrasat Abī Ḥanifa (of about the same date) and al-Mirdjāniya (758 = 1357), all still in existence, which were founded for Shāfiʿis, Hanafis and for the study of Qurʾān and Ḥadīth. Besides these three there still exist seven madrasas founded in Baghdad in the xviith and xviiith centuries (L. Massignon, *Les Medreses de Bagdad*, B.I.F.A.O., vii., 1909, p. 77—86; the inscriptions, do., in M.I.F.A.O., xxxi., 1912). Although the Tatars in 699 (1300) destroyed many madāris (Quatremère, *Hist. des Sult. Maml.*, ii/ii. 163 sq.), Ibn Baṭṭūṭa shows that in the eighth century there were still flourishing schools in the east. In Wāsiṭ there was a madrasa which specialised in *taḍwīd al-ḥurʾān*; it had three hundred rooms for foreign students (ii. 3). In Tustar, the sultān expended one-third of the revenues on madrasas and monasteries (ii. 31) and in Shīrāz and other Persian towns he also found madrasas (ii. 62 and *pass.*). For Nisābūr, he mentions four madāris beside the chief mosque (iii. 80); according to Ḥafīz Abrū (c. 820 = 1417), this town still had eight madāris under the ʿAbbāsids and he mentions seventeen in which Shāfiʿi fiqh was taught (*Sefer Nameh*, ed. Schefer, p. 281). For Marw, Yāqūt about 600 mentions, in addition to the Nizāmiya, the school founded by Abū Saʿīd Muḥ. b. Maṣṣūr al-Mustawfī (d. 494), also the ʿAmidiya and the Khātūniya (iv. 509). Large madāris were still being built in Persia in the xviiith century and they are still to be found there in modern times (E. G. Browne, *A Year amongst the Persians*, 1916, p. 104, 217 sq.). Although the institution had for long a Sunnī tendency, it could of course be taken over by the Shiʿis without any difficulty. In 728 (1328) in Mashhad ʿAlī, Ibn Baṭṭūṭa found a large Shiʿi madrasa (i. 415). The Mongols also built madāris, e.g. Karaka Khān, the descendant of Čingiz Khān (Quatremère, *Hist. Sult. Maml.*, i/i. 56). Hülāgū's mother built two madrasas in Bukhārā

where 1,000 students studied daily in each (*J.A.*, ser. 4, xx. 389). The period of greatest prosperity of the madāris in Central Asia was under the Timūrids, notably in Samarqand, where Timūr built a dījami' "in the Indian style", and his wife a madrasa (Ibn 'Arabshāh, *Vita Timuri*, ed. Manger, 1767, p. 444 sqq.; see also Diez, *Kunst der islam. Völker*, p. 99 sq.).

In the towns of Mesopotamia and Syria the movement spread from the fifth century onwards. Nūr al-Dīn b. Zangī founded madāris for Shāfi'is in Damascus, Ḥalab, Ḥamā, Ḥimṣ, Ba'albek (*J.A.*, ser. 9, iii., p. 428; cf. 488; Makrizi, iv. 192). Kamāl al-Dīn (d. 572) founded a madrasa in Mawṣil, two in Naṣibin and one in Damascus (Wüstenfeld, *Schāfi'i*, p. 317). Taḳī al-Dīn, the nephew of Ṣalāḥ al-Dīn, built a madrasa in al-Ruhā (Makrizi, iv. 195, 14). Ibn Dhubair who travelled from 578 (1183) to 587 (1191) mentions two in Naṣibin (p. 240), one in Ḥarrān (p. 247) and a large Ḥanafī madrasa in Ḥalab and four or five others (p. 253), three in Ḥamā (p. 257), one in Ḥimṣ (p. 258), about twenty in Damascus notably the great al-Nūriya (p. 283, 8 sq., 284, 4) and six or more in Mawṣil (p. 236, 1 sq.); a madrasa in the last-named town was built in two stories with a Dār al-Ḥadīth on the ground floor (Ibn Abī Uṣaib'a, ii. 204, in the year 585).

The development in Damascus was of particular importance. Information about this is contained in the *Tanbih al-Qālīb wa Irshād al-Dāris* of Muḥyi'l-Dīn al-Nu'aimi (d. 927 = 1521), the synopsis of which by 'Abd al-Bāsiṭ al-'Ilmawī (d. 1059 = 1549) has been published by Sauvaire (*J.A.*, ser. 9, iii.—vii.), the substance had already been given by Fleischer from Mikhā'il Meshāka (*Kl. Schriften*, iii. 306 sqq. = *Z.D.M.G.*, viii., 1854, p. 346 sqq.; cf. iii., 1849, p. 123; there are a few differences in points of detail between Fleischer's and Sauvaire's publications). A *Dār al-Kur'an*, the Rishā'iya, was founded here about 400 (*J.A.*, ser. 9, iii. 262) and the first madrasa for fiqh studies was the Ḥanafī Ṣādiriya, which was founded beside the Mosque of the Omayyads by Shudjā' al-Dawla Ṣādir in 491 (1097) (*ibid.*, iv. 266); next came, sometime before 520, the likewise Ḥanafī Ṭarḫāniya (*ibid.*) and in 514 the Shāfi'ī Amīniya founded by the Atābeg Amīn al-Dawla (*ibid.*, iii. 395), then the Ḥanbalī Sharifiya founded by a scholar who died in 536 (iv. 467), the Ḥanafī Khātūniya built *extra muros* by a princess in 526 (*ibid.*, p. 254), the Ḥanbalī 'Omariya founded by a shāikh who died in 528 (*ibid.*, p. 473; cf. Fleischer, *Kl. Schr.*, iii. 328). The two rulers Nūr al-Dīn b. Zangī (541–569 = 1146–1163) and Ṣalāḥ al-Dīn (570–589 = 1174–1193) displayed a munificent activity in this direction as did their emirs and relatives. Nūr al-Dīn founded a *dār al-ḥadīth*, the Nūriya (*ibid.*, iii. 280), and the following Shāfi'ī madāris: al-Ṣalāhiya (*ibid.*, p. 414), al-'Uṣrūniya (*ibid.*, p. 428), al-'Imādiyya (*ibid.*, p. 430), al-Kallāsa (*ibid.*, p. 439), and he began the building of the 'Adiliya (completed by al-Ṣāliḥ; *ibid.*, p. 423), and as a Ḥanafī madrasa, the large and small Nūriya (*ibid.*, iv. 388, 291). In his reign an emir also built the Asādiya for Shāfi'is and Hanafis (*ibid.*, iii. 387), another emir a Shāfi'ī Mudjahidiya inside and another outside the town (*ibid.*, p. 440); of Ḥanafī madāris, an emir al-Duḳāḳī built two, al-Balkhiya and al-Nāshīya (*ibid.*, iv. 245 sq.), a slave of Nūr al-Dīn's, the Raiḥāniya in 565 (*ibid.*, p. 259), an

emir the Mu'niya in 555 (*ibid.*, p. 281); a lady built a Ḥanbalī madrasa with a *dār al-ḥadīth*, the 'Alima (*ibid.*, p. 477), a Ḥanbalī Shāikh, who died in 596, the Musāmīriya (Fleischer, *op. cit.*, p. 329). Ṣalāḥ al-Dīn rebuilt the Shāfi'ī Kallāsa, which had been burned down (*J.A.*, ser. 9, iii. 439) and himself founded the Māliki Ṣalāhiya and a Māliki zāwiya in the Mosque of the Omayyads (*ibid.*, iv. 460 sq.). There were also built in his reign a *dār al-ḥadīth* by the Kāḍī al-Fāḍil (*ibid.*, iii. 277), a madrasa for Shāfi'is and Hanafis, the 'Aḍhrawiya, by his daughter or brother's daughter in 580 (*ibid.*, p. 425), six Shāfi'ī madāris (*ibid.*, p. 391, 399 sq., 403, 435, 442), some five Ḥanafī including one founded by his (previously Nūr al-Dīn's) wife (*ibid.*, iv. 256, 266, 277, 284 sq.). This building activity was continued into the seventh to ninth centuries so that al-Nu'aimi can give the following totals: seven *dār al-Kur'an*, sixteen *dār al-ḥadīth* (one, the Kūsiya, is not given in Fleischer), three for both Kur'an and Ḥadīth, sixty Shāfi'ī (two of them also for Hanafis; in Fleischer, Nrs. 16 and 30 are not given), fifty-two Ḥanafī (two of them also for Shāfi'is; in Fleischer, one of them, the Dammāghiya, is not given: it appears among the Shāfi'ī as Dabbāghiya), four Māliki and ten Ḥanbalī madāris (in Fleischer, one of the two Iḥiā'iya is not given; on the other hand he has the Musāmīriya), also three *madāris al-tibb*, all of which belong to the seventh century. The founders were mainly rulers and emirs, but also included merchants and quite a number of men of learning, and a few women also. As in the east, especially in earlier times, a madrasa was often founded for a particular scholar (*ibid.*, iii. 400, 488) and one sometimes finds a learned man handing over his house to be a madrasa (al-Dawla'iya, *ibid.*, p. 403, cf. 439; iv. 470). According to Mikhā'il Meshāka, in his time (1848) these madāris had practically all disappeared or were used as dwelling-houses, because their endowments had disappeared and there were only five left in his time (Fleischer, *op. cit.*, p. 307–311).

Ṣalāḥ al-Dīn introduced the madrasa into Jerusalem. In 585 (1189) he endowed the Khanaḳāh Ṣalāhiya, in 587 the Zāwiya Khātāniya south of al-Aḳṣā for a particular scholar and in 588 he turned the Church of St. Anna into the Ṣalāhiya Madrasa; in 589, 583 and 598 emirs built similar institutions and in the seventh–ninth centuries a whole series of them came into existence. According to Mudjir al-Dīn (d. 927 = 1521), there were thirty-one madāris and monasteries (which were in part used in the same way as madāris) in direct connection with the Ḥaram 'area or near it, and sixteen at some distance. Of these some forty are especially called *madrasa*, one a *dār al-Kur'an* and one a *dār al-Ḥadīth* (Sauvaire, *Hist. Jérus. et Hébr.*, 1876, p. 139 sqq.; v. Berchem, *Corpus*, ii. 1; cf. for Ṣalāḥ al-Dīn: Ibn Khallikān, *Wafayāt*, ii., Cairo 1310, p. 402 sq.). In Hebron there was also a madrasa, that of al-Malik al-Nāṣir (Sauvaire, *op. cit.*, p. 23).

Next to Nizām al-Mulk, Ṣalāḥ al-Dīn has the greatest reputation as a builder of madrasas. He owes this mainly to the fact that his great activity as a builder lay in countries, which became of great importance in the Muslim world, Syria with Palestine, and Egypt. Even before the fall of the Fātimids he had founded in the year 566 in the vicinity of the Mosque of 'Amr, the Nāṣiriya

overshadowed by the "House of Knowledge" (*dār al-ʿilm* or *dār al-ḥikma*) founded by al-Ḥākim in 395 (1005). It was at the northern end of the west palace and contained a library and reading-room as well as rooms for meetings and for classes. Librarians, assistants, with their servants administered it and scholars were given allowances to study there; all branches of learning were represented — astronomy, medicine etc. in addition to the specifically Islāmic subjects. Al-Ḥākim built similar institutions in al-Fustāt (Maḳrīzī, ii. 334 *sqq.*; according to Ibn Duḳmāḳ, ed. Vollers, p. 80, *infra*, there still existed in his time [about 800] a building called the *Dār al-ʿilm* in al-Fustāt). In the year 435, al-Sanbadī saw in Cairo a library with 6,500 books on astronomy, handasa and falsafa (Ibn al-Kifī, p. 440, 13 *sq.*). We do not learn very much of the subjects taught there but occasionally hear of someone who lectured on Arabic philology in it (Kindī, *Wulāt*, p. 610, 15). But the whole institution was closely associated with Shīʿa propaganda, which is obvious from the fact that it was administered by the *Dāʾi ʿl-Duʿāt* who held conferences with the learned men there every Monday and Thursday (Maḳrīzī, iv. 226; Ḳālqashandī, *Ṣubḥ al-Ashūʿ*, iii. 487); occasionally he was a *qāḍī* (Kindī, *Wulāt*, p. 600, 11). A similar missionary institute (*dār ʿl-dāʿwa*) was built in Ḥalab in 507 by the emīr Fakhr al-Mulk (Ibn Taghribirdī, ed. Popper, p. 360, 17). We may assume that these buildings were also arranged for the performance of the ṣalāt.

With the *dār al-ḥikma*, Islām was undoubtedly continuing Hellenistic traditions. Al-Maḳrīzī mentions a *dār al-ḥikma* of the pre-Islāmic period, where the learned men of Egypt used to work (iv. 377, 4); Ibn Abī ʿUṣāibīʿa, also mentions pre-Islāmic seminaries in Egypt where Hellenistic learning was cultivated (*dār al-ʿilm*, i. 104, 16, 24; Athens is also called *dār ḥikmat al-Yūnāniyyin*: *B. G. A.*, ii. 135, 14) and the similarity with the Alexandrine *Museum*, which was imitated in Pergamon and Antioch, for example, is apparent (John W. H. Walden, *The Universities of Ancient Greece*, New York 1919, p. 48—50). Al-Ḥākim's institution was closed by the vizier al-Aḫḍal on account of political and religious disputes, but shortly afterwards (517 = 1123) reopened by the vizier al-Maʿmūn in another building, south of the east palace (Maḳrīzī, ii. 313, 337, 17 *sqq.*). But it was now considerably smaller. During the famine in the reign of al-Mustanṣir, the library was plundered. In 461 (1068) an eye-witness saw twenty-five camels carrying books from the palace library (Maḳrīzī, ii. 254; cf. Wüstenfeld, *Fāṭimidenchalifen*, p. 261). The institute was finally closed with the end of the Fāṭimid dynasty (567 = 1171). Ṣalāḥ al-Dīn had all the treasures of the palace, including the books, sold over a period of ten years. Many were burned, thrown into the Nile, or thrown into a great heap, which was covered with sand so that a regular "hill of books" was formed and the soldiers used to sole their shoes with the fine bindings. The number of books said to have disposed of varies from 120,000 to 2,000,000 but many were saved for new libraries. The *Qāḍī al-Fāḍil* is said to have procured 120,000 volumes (Maḳrīzī, ii. 253—255; Abū Shāma, *Kitāb al-Rawḍatayn*, Cairo 1287, i. 200, 268). Ṣalāḥ al-Dīn also allowed anyone interested to take what he liked from the *khizānat al-kutub* in Ḥalab for

example (Yāḳūt, *Uḍabāʿ*, vii. 20). These attacks on libraries did not mean they were tired of books as Yāḳūt (*Uḍabāʿ*, v. 389) suggests, but was only one expression of the reaction against the Shīʿis.

3. Origin and spread of the Madrasa.

While the institutions called the *Dār al-ʿilm* developed in Fāṭimid countries into centres of Shīʿa propaganda, the madrasa grew up in the east out of similar Sunni institutions. It is interesting to note that in 400, al-Ḥākim built a Sunni *dār al-ʿilm* in Cairo. In it lived two Mālikī scholars, who gave instruction and gathered round them men learned in ḥadīth and fīkh (Ibn Taghribirdī, ed. Popper, ii/ii., p. 64, 105, 106; al-Dihabī, *Duwal al-Islām*, Ḥaidarābād, 1337, i. 186). As the instruction (see the first reference) was given in the *Djāmiʿ*, the institute must have been connected with a mosque, probably that of ʿAmr. It owed its existence however only to a passing fancy and after three years, the institution was abolished and the two learned teachers executed. With the growing strength of the Sunna, especially in the Shāfiʿi and Ḥanafī form, many educational institutions arose in the east which had a pronounced Sunni character; the Sunna in the fourth century wanted to have influence with the other schools (*B. G. A.*, iii. 323, 365, 415). Many teachers built houses of their own, where they dictated ḥadīths and held lectures on fīkh, e. g. a teacher who died in Merw in 420 (Wüstenfeld, *Imām Schāḥīʿi*, ii. 232). Abū Ḥātim al-Bustī born in 277 (890) founded in his native town a school with a library with apartments and allowances for the maintenance of foreign students (*ibid.*, p. 163). In Āmul, al-Rūyānī (d. 502) built a school; he himself taught in the mosque, also in al-Raiy (iii. 245). In Ṭabarān a school was built for al-Ḥātimī (d. 393 = 1003) (*ibid.*, ii. 202). In Baghdad, al-Ismaʿīlī (d. 396 = 1006) founded two lecture-ships in fīkh studies, one of which was filled by al-Isfaraʿīnī, who otherwise lectured in the Mosque of Ibn al-Mubārak, and the other by al-Bāfi (*ibid.*, p. 204, cf. p. 217). The philologist and ḥidjāʾ-poet al-Zawzanī who died in 463 lived with other learned men in a madrasat al-Suyūṭī (Yāḳūt, *Uḍabāʿ*, vi. 409).

In Nisābūr especially, where studies were vigorously prosecuted in the mosque (e. g. Wüstenfeld, *Schāfiʿi*, iii. 236) many such institutions arose. Thus a special school was built for the Shāfiʿi fīkh-scholar al-Sāʿigh al-Nisābūrī (349 = 960; *ibid.*, ii. 156; cf. 160). Abū ʿAlī al-Ḥusainī (d. 393) himself founded a school in which to teach Ḥadīth and it was attended by 1,000 scholars (*ibid.*, p. 203). Ibn Fūrak (d. 406; *ibid.*, p. 216) did the same and in the year 437 Abu ʿl-Kāsum al-Ḳushairī (*ibid.*, iii. 284) and for Rukn al-Dīn al-Isfaraʿīnī (d. 418 = 1027) a school was built which surpassed all others (*ibid.*, ii. 229). As early as the fourth century, we thus find al-Maḳḍisī praising the very fine *madāris* of Ḥānshahr (*B. G. A.*, iii. 315). In the first half of the fifth century, there were four especially famous madāris in Nisābūr: al-Madrasa al-Baiḥaḳīya, founded by al-Baiḥaḳī (d. 384), when he became a teacher in Nisābūr in 441 (Wüstenfeld, *Schāfiʿi*, iii. 270; al-Suyūṭī is therefore wrong in ascribing its foundation to before the birth of Niẓām al-Mulk [in 408]; see *Husn*, ii. 141), al-Saʿīdiyya founded by the emīr Naṣr b. Subuktakīn (governor of Nisābūr in 389)

for Shāfi'is and the Kānhiya for Mālikis; for Shāfi'is also the Sharifiya (called after its head also Madrasa Zain al-Tudjijār) and notably the great Ṣālahiya or Nāshiriya (for the identity of the two cf. Maḳrīzī, iv. 251, with *Ḥusn al-Muḥādara*, ii. 142 sq.) beside al-Shāfi'i's mausoleum; he also built a madrasa beside the Maṣḥḥad al-Ḥusain and in 572 a Ḥanafī madrasa, the Suyūfiya, and he turned the house of an emir named Sa'd al-Su'adā into a khānakāh (*Ḥusn al-Muḥādara*, ii. 141 sq.; Maḳrīzī, iv. 192 sqq.; Ibn Khallikān, ii. 402 sq.). Those around him emulated this activity. His vizier the Kādī 'l-Fādīl in 580 built the Fādīliya for Shāfi'is, Mālikis and for ikrā' (Maḳrīzī, iv. 197), a brother the Saifiya (*ibid.*, p. 199), another, al-Malik al-'Adīl, the Madrasat al-'Adīl (*ibid.*, p. 195), his nephew Taḳī al-Dīn built in Cairo the Manāzil al-'Izz or Taḳāwiya for Shāfi'is (*ibid.*, p. 194; Ibn Duḳmāḳ, p. 93) and two others in the Faiyūm (Maḳrīzī, iv. 195). Other emirs and their relatives followed his example (*ibid.*, p. 196, 199 sq.) and even a merchant, al-Arsufī, founded a madrasa in 570 (*ibid.*, p. 194). Ibn Djabair, who travelled through Egypt in the time of Ṣālah al-Dīn, speaks of several madrasas in Alexandria (*Rihla*, p. 42) and particularly of one beside al-Shāfi'i's tomb, which looked like a whole town (*ibid.*, p. 48).

During the period of the Aiyūbids and Mamlūks the number of madāris increased to an extraordinary degree. In the street called Bain al-Ḳaṣrain there were two long rows of madāris on the site of the old Faṭimid palace in Cairo (cf. P. Ravaisse, in *M. M. A. F.*, i, 1889, p. 409 sqq., pl. 3). As a rule, the madrasa was in the street in line with the houses. Ibn Duḳmāḳ mentions that in Cairo only two stood isolated (p. 98). Al-Nu'aīmī and Ibn Duḳmāḳ describe several madāris (and masājid) as *mu'allaka* i. e. above the ground-floor. Ibn Baṭṭūṭa, who travelled at the beginning of the eighth century, found madāris even in quite small towns, e.g. in Dimyāt, Muniyat b. Ḳhaṣīb, Ḳinā, Ḳūṣ, Aṣna (i. 65, 96, 106, 108). Ibn Duḳmāḳ (p. 92-99) about 800 gives a list of twenty-four madāris; this is obviously very incomplete; on the other hand, it contains nine names, not given by al-Maḳrīzī. This author (d. 845 = 1442) mentions 73 madāris, fourteen for Shāfi'is, four for Mālikis, ten for Ḥanafis, three for Shāfi'is and Mālikis, six for Shāfi'is and Ḥanafis, one for Mālikis and Ḥanafis, four for all four rites, two exclusively used as *adāb al-ḥadīth*, while the rite of twenty-five is not mentioned and four remained unfinished. Of these madāris, according to him, about thirteen were founded before 600, twenty in the seventh century, twenty-nine in the eighth century and two after 800. To the two schools of Ḥadīth (al-Kāmilīya of the year 622 and al-Ḳharībīya of about 780, see iv. 201, 211 sq.) is to be added the Maṣāghīya mentioned by Ibn Duḳmāḳ (p. 99). A notable feature is the decline of the Ḥanbalīs and in contrast to Damascus the large number of schools which included all four rites. The first Egyptian madrasa to include all four rites was the Ṣāhihiya, founded in 640-641 by al-Malik al-Ṣāliḥ (Maḳrīzī, iv. 209 sq.) probably on the model of the Mustashirīya.

In Ṣālah al-Dīn's time, the madrasa was also introduced into the Hīdīyāz. In the year 579, the governor of 'Aden built in Mecca a madrasa for the Ḥanafis and in the following year a Shāfi'i madrasa was also founded there (*Chron. Mekka*,

ii. 104). Up to the beginning of the ninth century, eleven madāris are mentioned (*ibid.*, p. 104-107) but others were added (*ibid.*, iii. 177 sq., 211 sq., 225 sq., 351 sqq., 417). In the xviii century they ceased entirely to be used for their original purpose (see Snouck Hurgronje, *Mekka*, ii. 229 sqq.). Madāris were also built in Medina (Wüstenfeld, *Medina*, p. 58, 98, 112).

In Asia Minor, madrasas spread under the Saldjūks; the oldest known date from the seventh century. In Ḳonya for example there were the Sir'ali Madrasa of the year 640 (1242-1243), Ḳaratai Madrasa 649 (1251-1252) and Indjemi-nāreli Madrasa 674 (1274-1276) (Cl. Huart, *Konia*, 1897, p. 156, 160, 178; Fr. Sarre, *Reise in Kleinasien*, 1896, p. 48 sq., 51 sq.; R. Hartmann, *Im neuen Anatolien*, 1928, p. 106 sqq.). In Siwās three madāris date from the year 670 (1271-1272) namely the Ṣāhihiya or Gok-Madrasa, founded by Fakhr al-Dīn, that of Muzaḥfar Barūdīrdī and that of Shams al-Dīn Muḥammad. The first mentioned is probably identical with the *Dār al-Tadris* described by Ewliyā, which contained eighty rooms in two stories (see v. Berchem, *Corpus*, III/i, p. 18 sqq., 26 sqq., 31 sqq.). In Diwrigi, a madrasa has been built in the Dīmi' Ahmad Shāh erected in 626 (1228-1229) (*ibid.*, p. 71 sq., 80). About 733 (1333) Ibn Baṭṭūṭa found madāris all over Asia Minor, even in quite small towns (ii. 260, 267, 269, 283, 296 sq., 340, 343, etc.). Building activity was continued under the Ottomans (cf. Huart, *Konia*, p. 59, 92, 109; Sarre, *Reise in Kleinasien*, index; R. Hartmann, *op. cit.*, p. 24 sq.).

According to the *Ḳirfās*, the madrasa was brought to North Africa as early as the time of Ṣālah al-Dīn, for we are there told that the Almohad Ya'qūb b. Yūsuf (580-595 = 1184-1199) built mosques, hospitals and madrasas in Ifriḳiya, the Maghrib and al-Andalus (Tornberg, *Annales Regum Mauritaniae*, Upsala 1843, i. 143); but no exact details are given to corroborate this statement. The Maghribī madrasas were exclusively Mālikī. In Tunis, many madāris were erected under the Ḥafṣids (625-941 = 1228-1534), the oldest being the Madrasat al-Ma'rad about 650. In the Chronicle of Tunis (Zarkashī, in *Chronique des Almohades et des Hafides*, transl. E. Fagnan, in *Rec. Not. et Mém. Soc. Arch. Const.*, xli, 1895, see index) eleven are mentioned including the Madrasat 'Unḳ al-Djama' of 742 (1344), the Madrasat Ibn Tāfi-radjīn, founded by a learned man in 766 (1364), the Madrasa Shammā'iya (before 734 = 1333; see *op. cit.*, p. 105, 106, 221), Madrasat Belḥalfawin in 796 (1393) (*ibid.*, p. 183), and six of the ninth century (see *op. cit.*, index; cf. also Marçais, *Manuel d'Art Musulman*, ii. 500, N^o. 2). Ibn Baṭṭūṭa mentions at the beginning of the eighth century the Madrasat al-Kutubiyyin (i. 20). There is no trace of madrasas of the Almohads and the statement in the *Ḳirfās* regarding them does not agree with the other sources. The first madrasa in the Maghrib was, according to Ibn Marzūḳ, *Musnad*, the Madrasa al-Ṣaffārīn built by the Marinid Abū Yūsuf Ya'qūb b. 'Abd al-Ḥaḳḳ (656-685 = 1258-1286) in Fās in 684 [also called al-Ḥalfā'iyyin, see the edition by Lévi-Provençal, in *Hespéris*, v., 1925, p. 34 (Arabie) = p. 44 (French)]. In Fās, we are told by the same source, Abū Sa'īd (720-731) and his son Abū 'l-Ḥasan (731-749) built several madrasas: the M. al-Madina al-Baiḍā' (= M. Dār al-Makhzin in Fās Djadīd) in 721 (1321), the M.

al-Šihriđj in 723 (1321), the M. al-ʿAttārīn in 725 (1325) later called M. al-Wādī and in 747 (1346–1347) M. Mišbāh after the teacher; the next Marinid Abū ʿInān (749–759) built in 756 (1385) the Buʿanāniya (Tornberg, *Annales Reg. Maur.*, i. 280 *infra*; Ibn Marzūk, in *Hespiris*, v. 34 and 68; Ed. Pauty, *ibid.*, iii., 1923, p. 515 *sqq.*; Bel, *Inscriptions de Fès*, in *J. A.*, ser. II, x., 1917; xii., 1918; Marçais, *Manuel d'Art Musulman*, ii, 1927, p. 465 *sqq.*). These Marinid madāris are all still in existence. No longer in existence is the M. al-Lebbādīn (Bel, *J. A.*, ser. II, x. 148); the M. al-Šihriđj consisted of a larger and a smaller madrasa; the latter is now the M. al-Šāfiyīn (*ibid.*, p. 215 *sq.*). Others were built under the Sharifs, notably the M. al-Sharrāṭīn in the xith (xvii) century, now the largest in Fās (*ibid.*, p. 114; Bel writes *Shaghghaṭīn*). In other towns also Abu ʿl-Ḥasan built madāris: in Tāzā Miknāsa, Salā (742 = 1340), Tāndja, Sabta, Ānfā, Āzammūr, Āsfā, Āghmāt, Marrākash, al-Ḳaṣr al-Kabīr, al-ʿUbbād near Tilimsān (747 = 1346–1347), Tilimsān and al-Djazzāʾir (Ibn Marzūk, *Hespiris*, v. 35 and p. 69). That of Miknāsa was completed by the son of Abu ʿl-Ḥasan, Abū ʿInān, who was a great builder of schools (Ibn Baṭṭūta, i. 84). In Tilimsān, the Ziyānīd Abū Ḥammū Mūsā I had already built a mosque in 710 (1310) and before 737 Abū Tāshifīn founded the similar institute, which bore his name (Marçais, *Monuments arabes de Tlemcen*; do., *Manuel d'Art Musulman*, 1927, ii. 483, 515).

In Spain according to Ibn Saʿīd (vii)th = xiii)th century), there were no madrasas; instruction was given in the mosques (al-Makḳārī, ed. Dozy, i. 136); but in the following year, however, a large madrasa was founded in Granada by the Naṣrid Yūsuf Abū ʿl-Ḥađđjādđj in 750 (1349) (Almagro Cardenas, in *Boletín de la Real Acad. de la Hist.*, xxvii. 490; Marçais, *op. cit.*, p. 517).

According to Ibn Saʿīd, men of learning were held in high esteem in al-Andalus; the Marinids in the Maghrib also built madrasas in their enthusiasm to further learning. The traveller al-ʿAbdarī (688 = 1289), however, found no interest in learning in Tilimsān, al-Djazzāʾir or Constantine (with one exception); it was only in Tunis that he found any enthusiasm (*J. A.*, ser. 5, iv., 1854, p. 154, 157, 158, 161, 169). This is certainly connected with the fact that the madrasa had just then been introduced into Tunis. But not even the madrasas brought about any deepening of interest in study in the west. Ibn Khaldūn (808 = 1406) testifies to the spread of madrasas in Tunis and the Maghrib but laments the decline in education. In al-Andalus, Muslim culture was dying out and after the decline of Ḳurṭuba and Ḳairawān, education in the Maghrib was on a low level; while the old schools in the ʿIrāk were no longer of importance, Cairo was a centre of learning to which all made their way and studies also flourished in Persia (*Mukaddima*, Cairo 1322, p. 342–344, *faṣl* 6, No. 2). This decline in interest in learning soon became general. The learning of the time lacked vitality and international scholarship was affected by political conditions. In 1517 A. D., Leo Africanus says that the lecture-rooms in Cairo were large and pleasant but the numbers who attended them were small. Some still studied fiqh, but very few the arts (*Descr. de l'Afr.*, iii. 372, in *Rec. de Voy. et de Doc.*, ed. Schefer, Paris 1896–1898). In Egypt,

interest in the specialised madrasa decreased considerably and the great builder of the xiii)th (xvii)th century, the emir Katkhudā, still built madrasas, but his real interest was in the mosque (see below). Lane only mentions the Azhar Mosque as an important centre of study in Cairo. The development in Mecca was similar, where in modern times studies are only prosecuted in the mosque (Snouck Hingronje, *Mekka*, i. 17, and cf. above). On education and the madrasa in general cf. also F. Wustenfeld, *Die Akademien der Araber und ihre Lehrer*, Göttingen 1837; Kremer, *Kulturgeschichte*, 1877, ii. 479 *sqq.*; Haneberg, *Abhandlung über das Schul- und Lehrwesen der Muhammedaner im Mittelalter*, 1850; v. Berchem, *Corpus Inscr. Arab.*, i. 252–269; G. Gabrieli, *Manuale di Bibliografia Musulmana*, i., 1916, p. 109 *sqq.*

4. Development of the Madrasa and similar Institutions.

a. Madrasa, Masjid and Djāmiʿ.

There was, as already mentioned, no difference in principle between the madrasa and other mosques. Even after the introduction of madāris, the regular mosques remained schools as before. Ibn Baṭṭūta, who travelled in the eighth century, in the period when madāris flourished most, attended lectures on Ḥadīth not only in the Djāmiʿ of Shurāz but also in the Djāmiʿ Maṣrūr in Baghdad (ii. 83, 110). In Damascus in 580, Ibn Dūbair refers to rooms in the Mosque of the Omayyads, which were used for Shāfiʿi and Māliki students, who received considerable stipends (*idṛāʿ, maʿlūm*) and among them were many *Maghārība*; the mosque had large endowments (*manāfiq*) for strangers and *ahl al-ṭalab* (*Rihla*, p. 266 *supra*, 272 *supra*); Ibn Baṭṭūta also speaks of the *ḥalāqāt al-tadris* of this mosque in the different sciences (i. 212). In Egypt in the time of al-Makḳarī (ninth century), there were 8 rooms for fiqh studies in the Mosque of ʿAmr and before 749 there were over 40 *ḥalāqāt* in it (Makḳarī, iv. 20, 21). In the Mosque of Ibn Tūlūn after its renovation in the reign of Lāḍjīn (696–708) courses of fiqh, according to the four madhāhib, and other studies were arranged (*ibid.*, p. 41; cf. Quatremère, *Hist. Sult. Maml.*, ii/i. 47 *sqq.*) and in 767 an emir appointed 7 teachers in Hanafi fiqh there (Makḳarī, iv. 42). In al-Azhar in the seventh century and later after the earthquake of 702 many lecture-rooms with paid teachers were built (*ibid.*, p. 52), likewise in the Mosque of Ḥakīm, where, after the earthquake, lecture-ships in fiqh for each madhhab and for Ḥadīth were founded with salaries for the teachers and scholarships for the students (*ibid.*, p. 57). In Fātimid mosques, like the Djāmiʿ al-Zāfir and the Djāmiʿ Maks built by al-Ḥakīm, Mamlūk emirs founded new lectureships (*ibid.*, p. 66, 81) and not only in the Mashhad al-Huʿaini but also in the Mashhad al-Nafisī were studies carried on in the eighth century (*Iḥṣn al-Muḥādḍara*, i. 195; Muḥyi ʿl-Dīn).

When a particular room was set apart for teaching purposes in a mosque, this was often called a madrasa; for example 6 of the Damascus madāris were in the Mosque of the Omayyads: the Shāhimiya, Ghazāliya, Ḳūsiya, ʿIzziya, Safimiya. Munadḍajāʾiya, of which the first and third were also known simply as *ḥalqa* (*J. A.*, ser. 9, iii. 410, 432, 437; iv. 262, 270, 481; others: vii. 230); al-Ḥakīm's Māliki madrasa was

in the Mosque of 'Amr (see above) and Ibn Duḡmāk (p. 100 sq.) mentions 8 zawāyā in this mosque, which were endowed for *tadris*. The madrasas were often also built close beside the large mosques so that they practically belonged to them. This was the case in Mecca (*Chron. Mekka*, ii. 104 sqq.; cf. Ibn Baṭṭūṭa, i. 324), in Damascus where there was a Shāfi'ī madrasa beside the western gate, Bab al-Barid (Ibn Djabair, p. 271), in Nisābūr (Ibn Baṭṭūṭa, iii. 80) and in Cairo where al-Madrasa al-Ṭalbarsiya in 709 and al-Ākbughāwiya about 730 were built so close to the Azhar Mosque that they had common walls and windows in them, which was specially permitted by a fetwā; they were afterwards completely incorporated in the Mosque (Maḳrīzī, iv. 223 sq.). In Fās, the chief madrasas are arranged round the great mosque al-Ḳarawīyn and the same arrangement is found in Mariakash (Pauty, in *Hespérus*, 1923, p. 515 sqq., 523).

If the madrasa, as a building, had little independence, its character as a home for students and place of instruction was very marked. But even where it was quite an independent institution, the distinction between madrasa and ordinary mosque was very slight, all the less as sermons were also preached in the madrasa. In the fifth century the minbar had already been introduced into a large number of mosques. In the Nizāmiya in Nisābūr, services were held as soon as it was finished (by 'Abd al-Rahīm: Wustefeld, *Schāfi'ī*, iii. 285) and the Nizāmiya in Baghdād had a minbar (Ibn Djabair, p. 219). A problem was however raised by the fact that these madāris were Shāfi'ī and this school held that only one mosque in a town could celebrate the Friday service, unless the town was of very considerable size and we are definitely told that al-Djuwaini conducted the Friday service in the madrasa in Nisābūr although he was also *khāṭib* at the Manī' mosque (Wustefeld, *Schāfi'ī*, iii. 251). In Egypt from 569 to 665 there was only one Friday *khutba*, but after this time there was usually a minbar in the larger madrasas. The caliph actually preached in the madrasa built by Kalā'ūn (678-689; Maḳrīzī, iv. 221). The minbar for the *djum'a* in many mosques is expressly mentioned, e.g. the Hūdjayiya 761 (*ibid.*, p. 222 sq.), the Baḳriya 776 (*ibid.*, p. 236), the Zamāniya 797 (*ibid.*, p. 241), the Dī'ī (*ibid.*, p. 249). The Ṣāhibiya, which had not a minbar at first, was given one in 758 and was henceforth used for the Friday service (*ibid.*, p. 205). In Fās the mixed type of *djāmi'* and madrasa was found in the Bū'ānāniya (Bel, *J. A.*, ser. 11, xii. 339).

It was only natural that the madrasa should also be called *masdjid* (cf. Ibn Djabair, p. 48, 11 with line 19. 20). Ibn al-Hādīdj in the viii century still wants to distinguish between *masdjid* and *madrasa* and to give more importance to the former (*Madḡhal*, ii. 3. 48). The distinction remained however quite an artificial one and this is also true of the distinction between *madrasa* and *djāmi'*. The name madrasa was decided by the main object of the institution and the special style of the building. The name *djāmi'* was only given if the Friday service was held in it. Thus, as late as 772, we find the emir Būbakr building a madrasa and opposite it a *djāmi'*; but in the year 815, the madrasa was given a minbar and used as a *djāmi'* (Maḳrīzī, iv. 235 sq.). If these two uses of the building are equal either name may be used

(cf. the double name in an inscription of the emir Muḳbil: van Berchem, *Corpus*, i, N^o. 201). In some cases a Friday mosque can be said to be in the madrasa (Ibn Baṭṭūṭa, ii. 39). The great *Djāmi'* Ḥasan begun in 757 was also one of the largest madāris in Cairo (Maḳrīzī, iv. 117 sq.) and on the other hand, the *Djāmi'* Ḳhaṭṭrī in Bulāḳ built in 737 and the *Djāmi'* Aṣlam founded in 746 were educational institutions (*ibid.*, p. 106, 111; *Ḥusn al-Muḥādḍara*, i. 192). In the ninth century the *Djāmi'* al-Mu'ayyadī was the most important new madrasa in Cairo (Maḳrīzī, iv. 139). The same variation in nomenclature is often found in this century (cf. v. Berchem, *Corpus*, i, N^o. 235, 248, 253, 262). On the other hand Maḳrīzī, in the ninth century, only uses *masdjid* as a name for quite insignificant mosques (iv. 263 sqq., where 19 *masājīd* are mentioned). In the xiii century the emir Katḡudā built 18 large mosques and many smaller ones and his interest in the furtherance of learning was specially displayed in his buildings at the Azhar mosque, which had developed at the expense of the specialist madāris (al-Djabarī, *Merveilles Biographiques*, iii. 230 sqq.; Sulaimān Raṣad, *Kanz al-Djawhar fī Tārīkh al-Azhar*, p. 74 sq.); for the similar situation in Mecca cf. above.

The connection between mausoleum and mosque was also found with the madrasa. The tomb of the founder was placed in Nūr al-Dīn's madrasa in Damascus (Ibn Djabair, p. 284, 4 sq.) and during the Mamlūk period it was the regular custom for the founder of a madrasa to be buried under a *ḡubba* in it.

b. Monasteries.

A close connection arose between the monastery and the madrasa. As already mentioned, it was quite a common thing for devout men to live permanently in the mosque e.g. in the minaret or somewhere else on the roof or in subsidiary buildings or in a cell in the mosque. Such a cell which can be used for teaching or for meditation is called *zāwiya*, lit. corner (Ibn Djabair, p. 240, 245, 266; Maḳrīzī iv. 20; cf. Greek *γυνία*; see Dozy, *Supplément*, s. v.). Pious ascetics however had retained from the older religion the custom of living in special monasteries e.g. in Djawlān in the fourth century (*B. G. A.*, i. 188); Muslim historians trace these back to the time of the Companions (Maḳrīzī, iv. 272 sq.). In the fourth century ascetics and Ṣūfis, especially the Karrāmiya [q. v.] or Kīrrāmiya (cf. Mez, *Renaissance*, p. 273), had quite a number of monasteries (*khawānīk*, also *khuvānīk*, sing. *khānākāh*) in Farghāna, Marw al-Rūdḡ, Samarkand, Djurdjān, Tabaristān etc. (*B. G. A.*, iii. 323, 365); in Jerusalem and in Egypt also the Kīrrāmiya had their monasteries in which they held *dhikr* (*ibid.*, p. 179, 182, 202).

The distinction between *khānākāh* and *ribāt* (plur. *rubuṭ*) is one of origin rather than fact. Ribāt was simply a dwelling for men who waged the *djihād* on the frontier but the word was also used by the Ṣūfis who waged a spiritual *djihād* (cf. Maḳrīzī, iv. 292 sq.). There was a *ribāt* in the Maghrib in the fourth century in the Wādī Salā (*B. G. A.*, ii. 56). When Ibn Marzūḡ says that they had only two *rubuṭ* of the eastern kind (in Safī and Salā, *Hespérus*, v. 36, 71), it is doubtful whether he means an establishment of Ṣūfis or of ḡhāzīs. In the vth (xith) century there were several military *rubuṭ* on the river Niger, from

which the Almoravids originated. From the xvth century onwards many were built in Morocco against the Spaniards and Portuguese. *Maḥris* is the usual word for *ribāṭ* (see Bel, *J. A.*, ser. 11, ix., 1917, p. 325, N^o 1). In the east in the fourth century, *rubūṭ* are frequently mentioned, which probably had a military character (*B. G. A.*, iii. 303, 354, 415). The original distinction between *khānaqāh* and *ribāṭ* is never quite forgotten; as late as the beginning of the eighth century we find *ribāṭ* used of a barracks (Maḳrīzī, iv. 276). Ibn Baṭṭūṭa says that the word *khānaqāh* had not reached the west; here the old Arabic term *zāwīya* was used (Ibn Baṭṭūṭa, i. 71; *khānaqāh* however in Ibn Marzūq, *Hesṣeris*, v. 35 sq.). Usually we find the three terms used without any definite distinction being made between them (*ṣawma'a* also seems to be used in the *Ḳīrṭās* of a Muslim monastery, see Tornberg, *Annales*, p. 143; cf. p. 18); for all three names are applied to Ṣūfī monasteries, which also take in strangers, i.e. are used as hospices.

Ibn Baṭṭūṭa mentions many monasteries in the 'Irāq and Persia. Beside the tomb of al-Rifā'ī, not far from Wāsiṭ there is a *ribāṭ*, which he calls *riwāḳ*, where "thousand of poor men", i.e. Ṣūfis, lived (ii. 4). In al-Lūr especially, he found a vast number of monasteries; the sultān there built 460 *zawāyā* and spent 1/3 of his revenues on them and the madāris (ii. 31).

For Syria, Ibn Djubair testifies to the flourishing monasteries which were often regular palaces and he says that the names *khānaqāh* and *ribāṭ* are used indiscriminately (p. 243, 271, 284); the word *khānaqāh* sounded strange to him as a westerner, as to Ibn Baṭṭūṭa (p. 284). Nevertheless al-Nu'aimī distinguishes the three terms and mentions 29 *khawānīk*, 23 *rubūṭ* and 26 *zawāyā*. The oldest *khānaqāh* mentioned by him (Duwairā) was founded for a learned man who died in 401 (Sauvaire, in *J. A.*, ser. 9, v. 269, 377, 387 sqq.).

It was similar with Egypt. The first *khānaqāh* was built by Ṣalāḥ al-Dīn in 569 in Cairo (al-Ṣāliḥiyya, originally called Dār Sa'īd al-Su'adā; Maḳrīzī, iv. 273), the next in the seventh century by Baibars al-Bunduqdārī, who also founded new monasteries in Syria (*ibid.*, p. 282, 298). Of *khawānīk*, al-Maḳrīzī mentions 22 (Ibn Duḳmāk only one), of the sixth century: one, seventh: one, eighth: 18, ninth: one. Of *rubūṭ* 12 (Ibn Duḳmāk 8), of the seventh century: 9, of the eighth: one, besides 5 on al-Ḳarāfa. Of *zawāyā* 26 (Ibn Duḳmāk. 9); these were mainly outside the town and were obviously quite small, often being simply the house, later the tomb of some devout man. The oldest dated from the sixth century. In Jerusalem also Ṣalāḥ al-Dīn built a *khānaqāh* (v. Berchem, *Corpus*, ii., p. 87 sqq.). Among the *khawānīk*, *zawāyā* and *rubūṭ* in this city the last named seem to have been specially intended as hostels for pilgrims (*ibid.*, p. 197 sqq.; see also Sauvaire, *Jérus. et Hébron*, index). In Mecca 50 *rubūṭ* are mentioned; the oldest dated from 400 (*Chron. Mekka*, ii. 108—115). At places of pilgrimage, the monasteries played an important part as hostels but even in other places they also gave accommodation to strangers. Ibn Baṭṭūṭa on his travels usually stayed in them (he calls them *zawāyā*) but he also lodged in madāris, which were generally used as hospices (cf. Quatremères, *Hist. Sult. Maml.*, ii/ii. 35, note). Some of these

institutions were convents for single women (Maḳrīzī, iv. 293 sq.).

The main object of monasteries, however, was to afford Ṣūfis a home and place for their devotional exercises. In the *khānaqāh* of Baibars founded in 706, 400 Ṣūfis were maintained (Maḳrīzī, iv. 276 *infra*) and in the *khānaqāh* Siryākūs 100 (*ibid.*, p. 285). They were given lodging, food, clothing and money; there were often baths attached to them. The building was arranged for *dhikr* exercises, and also for ṣalāts so that it was a kind of mosque. Ibn Djubair mentions a *ribāṭ* on the summit of Abū Ḳubais in which there was a mosque (p. 108). A *ribāṭ* may be actually called a masjid (Maḳrīzī, iv. 294; cf. *khānaqāh* and *masjid*, p. 282 and the term *masjid al-ribāṭ*: Ibn 'Arabshāh, *Vita Timurī*, ed. Manger, iii. 880). The monastery founded by Ṣalāḥ al-Dīn was actually given a minaret in 780 (*mi'dhana*) and it is recorded that people used to wear sandals to walk in the *ṣaḥu* (Maḳrīzī, iv. 275 *infra*). Sometimes only the occupants of the monastery are admitted to the ṣalāt (*ibid.*, p. 277: *Khānaqāh* Baibars). There was therefore an imām on the staff of the *khānaqāh* (*ibid.*, p. 287). Like other sanctuaries the monasteries sometimes preserved relics; the *Ribāṭ al-Āḥār*, for example, preserved a piece of iron and wood which had belonged to the Prophet (*ibid.*, p. 295). We sometimes find a *khānaqāh* built close to a large mosque like the *khānaqāh* of Āḳbughā beside the Azhar Mosque (*ibid.*, p. 292; cf. p. 289: *Ḳūsūn*) or the founder built a masjid for the Friday ṣalāt beside the monastery (Siyyākūs, *ibid.*, p. 285). The occupants of the Ṣāliḥiyya *Khānaqāh* took a prominent part in the Friday service in the mosque of Iḷāḳim (*ibid.*, p. 274). At a later date, we find the monasteries themselves arranged for the Friday ṣalāt. This was the case with the *Ribāṭ al-Afram*, which in 663 was given a minhar for the Friday and festival *khutbas* (*ibid.*, p. 297) and al-Mu'ayyad made a house, that had been begun before he came to the throne, into a *ḡāmi'an wa-khānaqāh* (*ibid.*, p. 134 *infra*) just as *vice versa* a *ḡāmi'* could be built with living-rooms for Ṣūfis, e.g. the *Djāmi'* al-Bāsiṭi (beginning of the 1xth century, like the preceding, *ibid.*, p. 140 *infra*) and in the viith century, the *Djāmi'* *Shaiḳhū* (before the building of his *khānaqāh*, *ibid.*, p. 113) Baibars al-Bunduqdārī was buried in his *khānaqāh* and the monasteries had as a rule tombs, either of the founder, or of devout men who had lived in them.

The development of the monastery is therefore quite analogous to that of the madrasa: the one institution merges into the other, because learning and manifestation of piety are inseparable in Islam. Learning was also cultivated in the monasteries; at the present day, we find students living in a monastery and attending lectures in a madrasa. Some scholars lectured on *Ḥadīth* in their rooms in a monastery (*ibid.*, p. 294, 295, 303) but instruction was also arranged for in some monasteries just as in the madāris. 'Abd al-Latif (d. 629 = 1231) lectured in a *ribāṭ* in Baghdād on *uṣūl*, *ḥadīth*, etc. (Ibn Abi 'Uaybi'a, ii. 203) and a *Ribāṭ al-Khātūnī* is mentioned here, which had a library (Ibn al-Ḳifṭī, ed. Lippert, p. 269). There are other references to libraries in monasteries (see for Marw: Yāḳūt, iv. 509). In *Khānaqāh Shaiḳhū* founded in 756, an extensive course of lectures, *Fikḥ* according to all four *Madhāhib*, *Ḥadīth* and

Ikra² (Maḳrīzī, iv. 283), was given. In the Ribāṭ al-ʿAḥḍar in the eighth century, instruction was given in Shāfiʿī Fiqh (*ibid.*, p. 296) and in the Djamīʿ al-Fakhri built in 821, arrangements were made for students as well as for Sūfīs (*ibid.*, p. 136); the Ifānāfi madrasa al-Djamāliya (730) was also a khānāḳāh (*ibid.*, p. 238 *supra*); they had a common director.

In the eighth and ninth century this combination of the two institutions became quite frequent, for example in the Nizāmiya in Cairo of the year 757 (v. Berchem, *Corpus*, i. 242 *sqq.*), in the mausoleums of Baṣbāi 835 (*ibid.*, p. 365 *sq.*; cf. Ibn Iyās, ii. 21, 22, 41), of al-Malik al-Ashraf Ināl, 855–860 (*ibid.*, No. 271 *sqq.*) and of Kaʿit Bāi 879 (*ibid.*, p. 431 *sqq.*). The same institution thus came to be given different names (cf. *ibid.*, p. 172 *sqq.*) and al-Suyūṭī deals with the khawānīk under the madāris. In the east, Ibn Battūṭa found the same relationship, for example in Shirāz and in Kerbelā² (ii. 78 *sq.*, 88, 99) and this is what he means when he says the Persians call the zāwiya madrasa (ii. 30, 32). In the west, he lauds his own sovereign, who had built a splendid zāwiya in Fās (i. 84); here also learning and Sūfīsm were associated (see the quotation in Dozy, *Supplément*, s.v. *zāwiya*) and the zāwiya still plays an important part in North Africa (see Depont and Coppolani, *Les Confréries Religieuses Musulmanes*, Algiers 1897; El-Hachaichi, *Voyages au Pays des Senoussia*, transl. Serres and Lasram, Paris 1912). Cf. on the monasteries: v. Berchem, *C. I. A.*, i. 163 *sqq.*, 174 *sq.*

c. Hospitals.

We commonly find, e.g. in Ibn Djubair and al-Maḳrīzī, the hospital, *bimāristān*, *māristān*, *mūristān*, mentioned in close connection with the madrasa, probably because it was administered by learned men and as a rule also contained a medical school. Al-Walid is said to have been the first in Islām to build a hospital, in the year 88 (Maḳrīzī, iv. 258 *sq.*; *B. G. A.*, v. 106). In Cairo in 259 or 261 (i.e. before the mosque) Ibn Ṭulūn built a hospital for the poor. At the same time he installed a dispensary behind the mosque and a physician used to sit here to be consulted every Friday. According to al-Maḳrīzī, his māristān (called in Ibn Duḳmāḳ, p. 99 the "upper") was the first in Egypt; this probably means the first free public hospital; it is improbable that this Hellenistic institution did not already exist in Egypt (Maḳrīzī, iv. 38, 39, 258; *Husn*, ii. 139). Al-Maḳrīzī (iv. 259 *sqq.*) mentions in addition to this hospital in Cairo the *Māristān Kāfur* (in 346, perhaps identical with that called the "lower" by Ibn Duḳmāḳ, p. 99), al-Maghāfir (232–247), al-Manṣūri (682), al-Muʿaiyadi (821). To these must be added the two which Ṣalāḥ al-Dīn maintained in Miṣr and Kāhira (Ibn Djubair, p. 51, 52; cf. Ibn Khallikān, Cairo 1302, u. 402 *sq.*). In Damascus Ibn Djubair found two hospitals, one of them the *Bimāristān al-Nūri* (p. 283, 284; cf. Ibn Khallikān, ii. 403). He also mentioned one in Naṣibin (p. 240), in Ḥarrān 2 (p. 247), in Ḥalab 1 (p. 253), in Ḥamā 1 (p. 257); in Baghdad he refers to a number without particularising them but we know of hospitals here from the third century and in 304 Sinān b. Thābit was director of the hospitals of Baghdad; he was responsible for the foundation of three more (Ibn al-Kifī, ed. Lippert, p. 193; cf. *Kitāb al-Wuzarāʾ*, ed. Amedroz, p. 21 and on the whole question: Mez, *Renaissance*, p. 326 *sq.*). There was

a hospital attached to the great Mustanṣiriya madrasa (Le Strange, *Baghdad*, p. 268).

As regards the teaching of medicine, Ibn Abi Usaibiʿa shows (i. 103 *sqq.*) that it was continued without interruption in Islām: for example, he mentions ʿAbd al-Malik b. Abdjār, who was in charge of the medical school in Alexandria, and after the conquest adopted Islām. At a later date, the chief medical schools were in Antākiya and Ḥarrān, among other places (i. 116 *infra*). For a long period most of the physicians were Christians (cf. also *B. G. A.*, iii. 183). Teaching was usually given in connection with the hospitals. The head physician collected the students around him whom he trained (*kharradja*) and they assisted him (e.g. the Georgios, summoned from Gundēshāpūr to Baghdad by Manṣūr: Ibn Abi Usaibiʿa, i. 124). Kālāʾūn had a lecture-room installed in his hospital, the Manṣūri, where the *raʾis al-aṭibbāʾ* lectured on medical science (Maḳrīzī, iv. 260); instruction was also given in the great al-Bimāristān al-Nūri in Damascus (Ibn Abi Usaibiʿa, ii. 192). Lectures on medicine (*ṭibb*) were sometimes also given in the mosques but in this case it was for the most part a theoretical science closely connected with philosophy. Ibn al-Haitham (d. c. 430) lectured on *ṭibb* in the reign of al-Ḥākim (*ibid.*, ii. 90) and when Lādīn restored the mosque of Ibn Ṭulūn he also endowed lectureships on this subject (Maḳrīzī, iv. 41; which shows that *ṭibb* should be read in Quatremère, *Hist. Sult. Maml.*, ii/ji. 47). *Ṭibb* could also be studied in a madrasa; for example, al-Djili, who died in 641 lectured on it in the ʿAdhrawiya in Damascus (Ibn Abi Usaibiʿa, ii. 171). At the same time there were special *madāris al-ṭibb*; thus in the seventh century three were built in Damascus (*J. A.*, ser. 9, iv. 497–499; Fleischer, *Kl. Schr.*, iii. 329). The teachers in them could also be physicians at the hospitals (Ibn Abi Usaibiʿa, ii. 266).

d. Children's Schools.

These were older than Islāmic science, since at the very beginning of Islām, reading and writing were taught in Arabia. In Medina the teachers were often Jews (see Balādhuri, p. 473 *infra*; cf. the name *rabbānī* for the teacher: Sūra, iii. 73; v. 48, 68; Bukhārī, *ʿIlm*, bāb 10; Yaʿqūbī, ed. Houtsma, ii. 243); but ability to write was not so common here as in Mecca (cf. on the question Noldeke-Schwally, *Gesch. d. Qurʾān*, i. 15 *sq.*; Goldziher, *Muh. Stud.*, i. 110 *sq.*). After the battle of Badr, several captured Meccans were released to teach writing in Medina (*Kāmil*, ed. Wright, p. 171; cf. Goldziher, *op. cit.*, p. 111; Sprenger, *Leben Muh.*, iii. 131). After the capture of Kaisariya, the prisoners were settled in al-Djurf and some were employed in the school (*kuttāb*) (Balādhuri, p. 142). Another contemporary of ʿOmar's, Djubair b. Haiya, who was later an official and governor, was a teacher (*muʿallim kuttāb*) in a school in Tāif (Ibn Ḥaḍjar, *Iṣāba*, Cairo 1323, i. 235). Muʿāwiya, who had acted as the Prophet's amanuensis took a great interest in the education of the young. They learned reading, writing, counting, swimming and a little of the Qurʾān and the necessary observances of religion. Famous men like al-Ḥaḍḍadī and the poets Kumait and Ṭirimmāh are said to have been schoolmasters (Lammens, *Muʿāwīya*, p. 329 *sqq.*, 360 *sqq.*). The main subject taught was *adab*, so that the schools of the children were called *madāris al-adab* (*Aghāni*, xviii, 2nd Cairo ed., p. 101), and the teacher was called

mu'addib (e.g. Maḳrīzī, iv. 223; cf. Yāqūt, *Uḍabā'*, iv. 272; vii. 105), also *mu'allim* (Bukhārī, *Ḍiyāt*, bāb 27; Yāqūt, iii. 410; Ibn Baṭṭūṭa, i. 213), in modern times *fiḳīh* (s. Lane, *Manners and Customs, Everyman's Library*, p. 61). The teacher was as a rule held in little esteem, perhaps a relic of the times when he was a slave, but we also find distinguished scholars teaching in schools; thus Ḍahḥāk b. Muzāḥim who died in 105 or 106, the exeget, traditionist and grammarian, had a school in Kūfa, said to have been attended by 3,000 children, where he used to ride up and down among his pupils on an ass (Yāqūt, *Uḍabā'*, iv. 272 sq.). As language was of the utmost importance, we find a Beduin being appointed and paid as a teacher of the youth in Baṣra (*ibid.*, ii. 239). Schools spread during the Omayyad period. They were found in Ḳhurāsān and instruction was also given at home in the houses (see Haneberg, *Schul- und Lehrwesen*, p. 4 sq.). Under the Fāṭimids, there was a boys' school in the palace where the youth of the upper classes was prepared for the Caliph's service (Maḳrīzī, ii. 209—211). It is natural to find a children's school also attached to the mosque; but education became probably more and more centred round the Ḳur'ān. In the Mosque of the Omayyads children were taught (Ibn Baṭṭūṭa, i. 213; Ibn Ḍjubair, p. 272) and the teachers had special rooms at the north door of the mosque (Ibn Ḍjubair, p. 271). In Palermo most of the numerous mosques were also used for teaching the Ḳur'ān (*ibid.*, p. 332); according to Yāqūt (iii. 410), there were no less than 300 teachers here, but, he adds, because they were exempt from military service; but in the fourth century Ibn Ḥawḳal counted 300 *kaṭātib* in Palermo, the teachers of which were held in high esteem (*B.G.A.*, ii. 87).

To this day children are taught in the ṣaḥn of the Azhar Mosque. In the sixth century there were also many independent schools. In Cairo, Ibn Ḍjubair found a large number of schools mainly for orphans and poor children and the teachers and pupils were maintained by the Sulṭān (p. 52) and in Damascus he saw a similar large institution (p. 272). In Jerusalem Ṣalāḥ al-Dīn built a school (v. Berchem, *Corpus*, II/i., 108 sq.). Ibn Ḍjubair says that in these eastern countries, the Ḳur'ān was only taught orally (by *talḳīn*) while writing was practised with poems etc., out of respect for the Ḳur'ān (*Riḥla*, p. 272). This did not hold generally however. At a later date (xiith century) we are told that a pipe was led from a school in the Azhar Mosque to the tomb of the founder so that his grave could be watered by the water in which the slates, on which sentences from the Ḳur'ān had been written, were washed (Sulamān Raṣād, *Kanz al-Djawhar fī Ṭarīḳih al-Azhar*, Cairo 1320, p. 73). As a rule the school was placed close to the mosque and beside a drinking fountain. During the Mamlūk period, nearly every founder of a madrasa built in connection with it a similar institution for orphans and poor children, who received free instruction and sometimes also maintenance in it (see Maḳrīzī, s. v. *madāris*, *passim*). The object of one such school beside the mosque of Ibn Ṭūlūn is thus defined by Lādīn as "to teach the orphans of the Muslims to recite the Book of God, the Exalted and also for other works pleasing to God and the various kinds of piety" (Maḳrīzī, iv. 41). Elsewhere it is

often said to be "to teach them the Ḳur'ān". In the Maghrib also, the children only learned the Ḳur'ān, i. e. to recite it, while in Andalus they also learned reading and writing (*kitāb*), poems and a little grammar. In Ifrīḳiya they learned, beside the Ḳur'ān, some Ḥadīth and a little of other sciences (Ibn Ḳhaldūn, *Muḳaddima*, p. 447 sq.; *faṣṭ*, vi. 32).

The children's school is called *maktab* (e. g. Yāqūt, *Uḍabā'*, iv. 272; Maḳrīzī, iv. 41, 201) or *kuttāb* (Bukhārī, *Ḍiyāt*, bāb 27; Balāḏihī, p. 142; Maḳrīzī, iv. 197, 240); those founded for poor children *kuttāb ṣabīl* or *maktab ṣabīl* (cf. e. g. Maḳrīzī, iv. 53, 117, 199, 201). The word *ṣabīl* characterises the school as a public benevolent institution; cf. the expression: "she made a *maktab li 'l-ṣabīl*" (*ibid.*, p. 223; of Ḳalā'ūn's hospital, *ibid.*, p. 260; s. also Dozy, *Supplément*, s. v.; Quatremère, *Hist. Sult. Maml.*, I/i., 229 note and *B. G. A.*, iv. 211, 258). — Cf. on elementary education: Goldziher, *Art. Education*, in Hastings, *Encycl. of Rel. and Ethics*; Mez, *Renaissance*, p. 177 sq.; Lane, *Manners and Customs*; Snouck Hurgronje, *Mekka*, ii. 144 sqq.

5. Libraries.

In Mecca, as well as in Medīna, there were large collections of books in the mosques (Ibn Ḍjubair, p. 89, 193; on modern conditions in Medina, see Batanūnī, *Riḥla*, p. 254 sq.). The Ḍjāmi' Zaitūna in Tunis had a large library (*Rec. Soc. Arch. Constantine*, 1894, p. 287). The Niẓāmiya in Baghdād had a library of which al-Isfārā'īnī (d. 488) was librarian (Wustenfeld, *Shihāb*, iii. 314). The Mustanṣiriya was better supplied in this respect than any other madrasa (*Chron. Mekka*, iii. 174). In Marw there were in the sixth century 10 public endowed libraries in the mosques and madāris, two of them in the chief mosque, one of the latter containing about 12,000 volumes (Yāqūt, iv. 509). Among the madāris in Cairo, the Fādiliya was particularly well endowed in this respect; it contained 100,000 volumes (Maḳrīzī, iv. 197); these were acquired by al-Ḳāḍī al-Fāḍil from the Fāṭimid Academy (Shihāb al-Dīn Abū Shāma, *K. al-Rawḍatayn*, Cairo 1287, i. 200, 268; Maḳrīzī, ii. 253 sqq.) and in Ḳalā'ūn's hospital there were according to Ibn Taghribirdī (II/i. 482), 100,000 volumes from the same library. These libraries were often broken up and portions put in other madāris. During the famine of 694, the students of the Fādiliya sold the valuable books for a loaf a volume (Maḳrīzī, iv. 197; cf. also p. 252). In Syria, Asia Minor (v. Berchem, *Corpus*, III/i. 26 sqq.) and in the Maghrib also (*J. A.*, ser. II, x. 109 sqq.; *Hespérie*, v. 35) and elsewhere, libraries formed part of the endowments of the madāris. With the decline in interest in learning many of these libraries became neglected. What survived has often been collected and placed in new libraries, as for example in Cairo in the Royal Library since 1891: for Damascus see Ḥabīb al-Zayāt, *Khazā'in al-Kutub fī Dimashq wa-Ḍawāḥihā* (Cairo 1902).

6. The subjects taught and the methods of instruction.

As already explained, in the earliest period the principal subjects studied in the mosque were Ḳur'ān and Ḥadīth to which was added the study of the Arabic language. In Bukhārī (*K. al-'Ilm*)

‘ilm still means Ḥadīth but, with the development of the systems of law and theology, these were also taught in the mosques. In the mosque of al-Manṣūr in Basra, al-Ash‘arī heard al-Djubbā‘ī expound the Mu‘tazila kalām (Wustenfeld, *Schāfi‘ī*, p. 131); closely connected with this was methodology (*al-Mudhākara wa ‘l-Naḥw*, cf. Yāqūt, *‘Udabā’*, vi. 383). But many different subjects could also be taught. Al-Khaṭīb al-Baghdādī, who taught in Manṣūr’s Djāmi‘ in Baghdad, lectured on his history of Baghdad (Yāqūt, *‘Udabā’*, i. 246 sq.). Philosophy proper however disappeared from the mosques. In Spain we are told, *falsafa* and *tandjīm* were only cultivated in secret, as those who studied them were branded as zindīk, even stoned or burned (Maḥḥarī, ed. Dozy, i. 136). The madāris were mainly established to teach the established systems of fiqh and originally each school was intended to represent only one madhhab. Where the four madhāhib are represented in one school, one can talk of four madāris, e.g. *al-Madāris al-Ṣālihiya* (Maḥrizī, iv. 209, 282; also *al-Madā asatūni*, because it was divided by the street, p. 209; cf. v. Berchem, *C.I.A.*, i. 104, note 1). The custom, often occurring before Niẓām al-Mulk’s time of founding a *Dār al-Ḥadīth* was also continued after him. Al-Maḥrizī mentions two of them in Cairo: al-Kāmilīya, founded in 622 by al-Malik al-Kāmil (iv. 211 sq.) and al-Khaṭūbiya, founded in 785 (*ibid.*, p. 201). The former was restored in 1166 again as a ḥadīth school (v. Berchem, *C.I.A.*, i. 61). Before al-Malik al-Kāmil, Nūr al-Dīn (d. 599) had founded the Nūriya in Damascus as a *Dār al-Ḥadīth* (Maḥrizī, iv. 211; cf. *J.A.*, ser. 9, iii. 280); when al-Maḥrizī says this was the first built on the earth he must be corrected. In Damascus many similar schools were built. 16 are mentioned, and 3 Qur’ān and Ḥadīth schools besides (*J.A.*, ser. 9, iii. 271 sq.; Fleischer, *Kl. Schriften*, iii. 318 sq., 329 differs slightly).

The ordinary madāris however included other subjects beside the study of fiqh alone. Special mention is made of *naḥw* (al-Ṣāhibīya, Maḥrizī, iv. 205). In the Niẓāmiya in Baghdad and in other madāris in the east, philological studies were prosecuted (cf. Yāqūt, *‘Udabā’*, vi. 409; v. 423 sq. and iv. 253, but it must be an anachronism when Sulaimān b. ‘Abd Allāh is said to have taught philology in 403 in the Niẓāmiya in Baghdad). In 604 (1207) al-Malik al-Mu‘azzam built beside the Ṣakhra mosque a *Madrasa naḥwiya*, exclusively for Arabic linguistic studies (Sauvaire, *Hist. Jér. et H. br.*, p. 86, 140) and schools for special subjects were not rare (cf. Subki, *Mu‘id*, ed. Myhrmann, p. 153). In addition to those in Maḥrizī, there are frequent references to *ḥirā’a* (often *al-ḥirā’at al-sa‘ī*), *ḥadīth*, *tafsīr* and *mi‘ād* (devotional exercises: cf. thereon Quatremère, *Hist. Sult. Maml.*, ii. 47). Al-Subki mentions, in addition to the special Ḥadīth schools, also *Madāris al-Tafsīr* and *Madāris al-Naḥw* (*Mu‘id al-Ni‘am*, ed. Myhrmann, p. 153).

In his *Muḥaddima* (faṣl 6, No. 4 sqq.), Ibn Khaldūn gives a survey of the divisions of Islāmic studies. They are divided into ‘ulūm *ṭabī‘iya* and *naḥliya*. The former are based on observation by the senses and deduction and are therefore also called *falsafiya* or *‘akliya*, the latter are dependent on revelation by the “legitimate determiner” (*al-Wāḥi‘ al-Shar‘ī*), are therefore based on special communication. The ‘ulūm *naḥliya* therefore com-

prise all branches of knowledge which owe their existence to Islām, namely *Qur’ān*, i. e. *tafsīr* and the seven *ḥirā’at* (No. 5), *ḥadīth* with the sciences auxiliary to it, including *al-nāsiḥ wa ‘l-mansūkh*, *muṣṭalah al-ḥadīth* (No. 6), *al-fiḥh* with special emphasis on *al-faḥḥ*, the law of inheritance (No. 7—8), *uṣūl al-fiḥh* with the principles of law including methods of deduction on the differences between the madhāhib (No. 9), *al-kalām*, theology, which is *naḥliya* in as much as it is really a further development of *imān* which comes under the head of religious duties, but is *‘akliya* in its nature since it is entirely based on abstract proofs (No. 10), *al-taṣawwuf*, something like practical theology (No. 11), *taḥīr al-rū‘yā*, interpretations of visions (No. 12).

Linguistic sciences come next to the study of Qur’ān and Ḥadīth (cf. No. 4, 37 beginning), which are divided into 4 parts: *al-naḥw*, *al-lughā*, *al-bayān*, *al-‘adab* (No. 37), and in the last named category comes the whole study of Arabic literature.

The ‘ulūm *‘akliya* are variously classified, usually into 7 main sections (No. 13) and are *al-manṭik*, logic, which is the foundation of all others (No. 17), *al-arithmāṭikī*, arithmetic, including *ḥisāb* etc. (No. 14), *al-handasa*, geometry (No. 15), *al-ḥaḥa*, astronomy (No. 16), *al-mūsikī*, the theory of tones and their definition by number etc. (see No. 13); then there is *al-ṭabī‘iyāt*, the theory of bodies at rest and in motion, — heavenly, human, animal, plant and mineral; among its subdivisions, special mention is made of *al-ṭibb*, medicine, and *al-falāḥa*, agriculture (No. 18—20; cf. No. 29). The seventh main head is *‘ilm al-ilāhiyyāt*, metaphysics (No. 21). Magic, talismans, mysterious properties of numbers etc. also form branches of Muslim learning (No. 22 sqq.).

As above remarked, medicine was not only taught in special schools but also in the mosques; about 600 A. H., ‘Abd al-Latīf lectured in the Azhar Mosque but it is not quite clear whether his instruction in *ṭibb* was also given there (Ibn Abi Uṣaibi‘a, ii. 207) and in any case the “philosophical sciences” in particular were cultivated in the mosques. Another division which still prevails, developed, that into principal sciences, those having a definite aim (*maḥāsid*) and instrumental sciences (*ālāt* or *wasā’il*). To the former belong *kalām*, *al-akhlāq al-dīniya* (ethics, practically the same as *taṣawwuf*), *fiḥh*, *uṣūl al-fiḥh*, *Qur’ān* (*tadwīd* and *tafsīr*), *ḥadīth*. The latter comprise linguistics, (*ṣarf*, *ma‘ānī*, *bayān*, *badī‘*) and in addition metrics and prosody (*‘arūd*, *ḥāfiya*), logic (*manṭik*) including the theory of proof (*‘ūdāb al-baḥṭh*), probably the same as the older *mudhākara* and *naḥar*, mathematics (*ḥisāb* and *djabr*), *muṣṭalah al-ḥadīth* (cf. Muṣṭafā Barīm, *Risāla*, Cairo 1902, p. 20; Snouck Hurgronje, *Mekka*, ii. 200 sqq.). There are no hard and fast lines drawn. When in 1162 Aḥmad Pasha came to Cairo as governor, no *shāikh* in the Azhar could give answers to simple questions on mathematics and astronomy, because they only knew as much arithmetic as sufficed to deal with questions raised by the law of inheritance; a very few studied these subjects privately. The Pasha pointed out that astronomy was necessary for the study of religious duties, to settle the times and seasons (al-Djabbārī, *Merveilles Biographiques*, ii. 110 sqq.; cf. also A. Sprenger, *Die Schulfächer und die Scholastik der Muslime*, Z.D.M.G. xxxii., 1878, p. 1—20).

The method of teaching was by lectures which had to be learned by heart afterwards (*talqin*). The first task was to learn the Qur'an by heart and then acquire as many traditions as possible. The ḥadīth was repeated three times so that the student could remember it (Bukhari, *ʿIlm*, p. 30). Lecturing soon became dictation (*imlāʾ*), when the student wrote down what was said, except in the case of the Qur'an (approved: Bukhārī, *ʿIlm*, bāb 34, 36). The method was the same for linguistic or literary subjects as for Ḥadīth, Tafsīr, etc. The philologists not only used to dictate their grammatical works, as for example Ibn Duraid (Wustenfeld, *Schāḥīʿi*, p. 127) or ʿAmr b. ʿAbd al-Wāḥid (d. 344) who dictated from memory 30,000 folios on *luḡha* (Yāqūt, *ʿUdabāʾ*, vii. 26) but also the text of the poets, like al-Ṭabari, who lectured on *al-Tirīm-mūh* in the Mosque of ʿAmr in 256 (*ibid.*, vi. 432). Abū Bakr b. al-Anbārī (d. 327 or 328), who dictated in one part of the mosque and his father in another, knew by heart 300,000 *ṣḥaḥ* for the Qur'an and 120 commentaries on verses of the Qur'an with their isnāds (*ibid.*, vii. 73). Dictation was specially important in the case of Ḥadīth, as the exact establishment of the text was the first necessity. It is therefore always said "he dictated Ḥadīth" (*Husn al-Muḥādḍara*, ii. 139; Wustenfeld, *Schāḥīʿi*, p. 210, 224, 248, 257, 287 etc.; Ibn Kuṭlūbughā, *Ṭabaḳāt al-Ḥanafīya*, ed. Flügel, p. 51; Yāqūt, *ʿUdabāʾ*, i. 246). The position of a teacher is therefore *maḍjlīs al-imlāʾ* (*ibid.*, ii. 243; vii. 74), and his *famulus* among the students is *al-mustamlī* (cf. *ibid.*, vi. 282; vii. 74). Problems of fīkh were also dictated (so Abū Yūsuf, Ibn Kuṭlūbughā, ed. Flügel, N^o. 249).

Instruction frequently began immediately after the ṣalāt and the students performed the ṣalāt along with the teacher. The class (*ḍars*) began with the recitation of the Qur'an by a *ḥarīṣ*, with blessings on the Prophet, and other religious formulae (*Madkhal*, i. 56; cf. Mez, *Renaissance des Islams*, p. 172 sq.). At the present day, the teacher as a rule simply pronounces the *basmala* himself. Dictation alone was not everywhere the custom. In time, there came to be so many copies of the chief texts that the students were able to get copies for themselves. The text was in this case read aloud and the teacher gave his comments and emendations on the text (Yāqūt, *ʿUdabāʾ*, i. 255). It was only natural that the dictation of texts was first abandoned in philology; it is said to have been dropped as early as the fourth (tenth) century (Mez, *Renaissance*, p. 171 with a reference to Subki, *Ṭabaḳāt al-Shāfiʿiyya*, iii. 259; Suyūṭī, *Mushir*, i. 30). This does not mean that dictation was completely abandoned for the teacher still made his pupils write down his comments; for example Muḥammad b. ʿAbd al-Rahmān (d. 584) dictated a commentary on Ḥarīrī (Yāqūt, *ʿUdabāʾ*, vii. 20), and the method of having a text read aloud, while the lecturer explained any remarkable phrases was used as early as by the teacher of Ḥadīth, Ibn Kaisān (d. 299; *ibid.*, vi. 282). At the present day, either the teacher or his *famulus* reads the text to be expounded from printed copy.

Cooperation between teachers and taught by questioning one another has always been an important feature of method. Ibn Khaldūn laments that so few teachers in his time understand the correct methods of teaching (*turuḳ al-taʿlim*).

They put difficult questions at once to the pupil instead of which the *talqin* must be arranged systematically, so that it is always combined with exposition and it is a fundamental principle that the pupil should not mix the different subjects. In Spain and North Africa in particular in his time, the instruction was not particularly good, and they laid too much stress on learning by heart (*ḥifẓ*) (*Muḥaddima*, p. 342, 443 sq., 445 = *faṣl* 6, N^o. 2, 29, 30; cf. Subki, *Muʿīd al-Nʿam*, ed. Myhimann, p. 151 sq.). Mechanical learning by heart is recognised for the Qur'an. It is therefore regularly said "he dictated and expounded" (e.g. Wustenfeld, *Schāḥīʿi*, p. 220, 326). When the above mentioned Ibn Kaisān expounded ḥadīths, he also asked his hearers about their meaning (Yāqūt, *ʿUdabāʾ*, vi. 282). Vice versa, the class was at liberty to catechise the teacher. Al-Shāfiʿī used to sit in his great ḥalka in Mecca and say: "Ask me what you want and I will then give you information on the Qur'an and *sunna*" (*ibid.*, vi. 391; cf. *B. G. A.*, iii. 379). The teacher was sometimes overwhelmed with questions (Yāqūt, *ʿUdabāʾ*, v. 272). Ibn Djubair saw written questions being handed to a teacher in the Nizāmiya in Baghdad (p. 219 sq.). Both practices are still in vogue and even in large classes the student may interrupt with questions. Ibn al-Ḥāǧǧī condemns irregular interruptions of the lecture (*Madkhal*, i. 57).

7. The Teachers.

The name for a teacher is *mudarris* (also used in the pre-Muḥammadan period: Ibn Abi ʿUaybīʿa, i. 104); *ustādh* is a kind of honorary title (see Yāqūt, *ʿUdabāʾ*, i. 113, 209; ii. 271; v. 353, 354, 358, 448) and is still in use and applied also to students. There were a very large number of teachers in the great mosques. In the madrasa at first only one was appointed, for example in the Nizāmiya in Baghdad (see above). In the first of those founded by Ṣalāḥ al-Dīn in Cairo (al-Nāṣiriya: Maḳrīzī, iv. 193) and in many others. A madrasa frequently took its name from a distinguished teacher (e.g. the Ghazawīya in Cairo: Maḳrīzī, iv. 235; the Sharīfiya, originally the Nāṣiriya: *ibid.*, p. 193; M. Ibn Rashīq: *ibid.*, p. 195; cf. Masǧid al-Kisāʾī in Baghdad). In the larger madāris, however, several teachers were appointed; Ṣalāḥ al-Dīn appointed 4 lectures to the Ḳāmiya in Cairo (*ibid.*, p. 193 sq.); in this case a definite number (20) of students was allotted to each teacher (cf. *Chron. Mekka*, ii. 105 sq.).

It is easily understood that the conditions in the older mosques, where every one could come and go, were freer than in the madāris, which were built for particular teachers and students. There was certainly no official recognition of the teachers in the earliest period. After text-books had come into use, the certificate of qualification was the *idjāza*, and so it has remained to modern times. Any one who had studied with a teacher could get permission from him to teach from the book, which he had copied out and studied from his dictation; the teacher wrote this permission (*idjāza*) in the book (e.g. Yāqūt, *ʿUdabāʾ*, i. 253; ii. 272). A teacher could also give an *idjāza ʿamma*, which permitted the individual concerned to teach from all his works (Ibn Baṭṭūṭa, i. 251). In Damascus, Ibn Baṭṭūṭa was given quite a number of these "diplomas" (i. 251—253). It was the usual thing for a travelling scholar to collect numerous *idjāzāt*;

thus 'Abd al-Laṭīf had certificates of this kind from teachers in Baghdad, Khurāsān, Egypt and Syria (Ibn Abī Uṣaybī'a, ii. 202). As late as about 1700 we find al-Nābulusī acquiring *idjāzāt* on his travels (*Z. D. M. G.*, xvi. 690). There were special formulae for the *idjāza* for *tadris* and *futwā* (al-Kāḫashandī, *Ṣubḥ al-A'ḫḫā*, xiv. 322 sq.). Some scholars only gave occasional lectures. 'Abd al-Wahid (d. 494) lectured on Ḥadīth every Friday in the Nizāmiya (Wustenfeld, *Schāḫī*, p. 287) and originally this was the case in the Azhar Mosque (see above).

The caliph al-Kādir, in his earlier days, used to lecture every Friday in a mosque in Baghdad (*ibid.*, p. 233). Some scholars only dealt with a very limited subject; thus one was appointed to the Nizāmiya to lecture on Bukhārī's *Ṣaḥīḥ* because he had attended lectures on this from a celebrated teacher (*ibid.*, p. 288). There were however many learned men who devoted themselves mainly to teaching and taught several subjects. Thus al-Shāfi'ī began his *ḥalka* immediately after the *ṣalāt al-ṣubḥ* and taught students of the Qur'ān, at sunrise the students of Ḥadīth came to him and heard his comments; later in the day he lectured on method (*mudhākara wa 'l-naṣar*); at the *ḡuḥā* the *ahl al-'Arabiya* came to him and he lectured on *'arūd*, *naḥw* and *shī'r*. He went off at midday (Yāqūt, *Uḍabā*, vi. 383). About 300 A.H. we find Ibn Kaisān lecturing for the best part of the day on a number of subjects in somewhat the same order (*ibid.*, vi. 282); others lectured from early morning till late in the evening (*ibid.*, vii. 176: Ibn Abī Uṣaybī'a, ii. 207 *supra*) and pious teachers even spent the night in the mosque in prayer (Wustenfeld, *Schāḫī*, p. 258). Sometimes a young teacher began by dictating ḥadīth and later received a post with a wider scope in a mosque (*ibid.*, p. 239).

The distinction between teacher and taught was not absolute; any one could have an *idjāza* in one subject, while he was still a student in others and even men of ripe scholarship attended the lectures of notable teachers. This led students to travel from one seat of learning to another, just as they used to travel in early days to collect ḥadīths (Bukhārī, *Ulm*, p. 7, 19, 26). All the biographies of learned men give examples of this; the old Hellenistic custom was thus continued (cf. J. W. H. Walden, *The Universities of Ancient Greece*, New York 1910) and royal courts still played the same part; at them learned guests received donations, which enabled them to appear as teachers in the mosques (e.g. Ibn Baṭṭūṭa, i. 75 sq.; Ibn Khaldūn, *Kitaḥ al-'Ibar*, Būlaḡ 1284, vii. 452; Ibn Abī Uṣaybī'a, ii. 205; cf. Mommsen, *Römische Geschichte*, v. 589). Distinguished scholars were of course much visited by lovers of learning; of one of the latter, it is said *ruḥila ilaihi or ilaihi kumal al-'arḥa* "they used to travel to him" (Yāqūt, *Uḍabā*, vii. 174; *Iḥṣān al-Muḥāḍara*, i. 207; cf. p. 141). 4—600 *ṣuḳḫāḥ* had gathered round a teacher in the Maghrib in the time of Ibn al-Ḥadīd (*Madḫal*, i. 5). Sometimes a scholar attended another's class to try him with questions (see e.g. for al-Bukhārī: Brunnow-Fischer, *Chrestomathie*, p. 103) and disputations often took place in which the pupils used to support their teacher very vigorously. If the stranger was recognised, the teacher might receive him with marks of honour (al-Akhfash at al-Kisā'i's: Yāqūt, *Uḍabā*,

iv. 243 sq.). As in the Christian universities of Europe, public disputations were held in the mosques, in which considerable feeling might be displayed, e.g. in the disputations in the Ruṣāfa mosque in Baghdad between Ibn Suraidj (d. 306 = 918) and the son of Dāwūd al-Zāhiri in which the former was victorious (Wustenfeld, *Schāḫī*, p. 110 sq.). The teachers of the Nizāmiya also used to hold disputations (*ibid.*, p. 309). Celebrated teachers were not only visited by other scholars. When (about 300) Ibn Kaisān was lecturing, about 100 horses etc. used to stand outside the mosque because prominent men were listening to him (Yāqūt, *Uḍabā*, vi. 282). The teachers made up the class of "the turban-wearers" (*mu'ammam, muta'ammim, arbāb al-'imāma, aṣḥāb al-'imāma*; see Makrizī, ii. 246; Quatremère, *Hist. Sult. Maml.*, i/i, 244 sq.; ii/i. 266; Dozy, *Supplément*, ii. 169^a); in eastern Andalus, they did not wear the *'imāma*, but this was exceptional (Makrizī, i. 137). The Kādi Abū Yūsuf (d. 82) is said to have settled the dress worn by learned men (Ibn Ḳuṭlūbughā, ed. Flugel, N^o. 249).

In spite of all this flexibility a certain stability developed in the teaching staff of the mosques. This was connected with the question of pay. It was for long in dispute whether it was permitted to accept payment for giving instruction. In the collections of Ḥadīth, the practice is both supported and condemned and it is said that the teacher may accept money, but not demand it, and avaricious teachers are strongly condemned. There are continual references to people who gave lectures without payment (Bukhārī, *Idjāza*, bāb 16; Abū Dāwūd, *Buyū'*, bāb 36; Ibn Mādja, *Tidjārāt*, bāb 8; cf. Goldziher, *Muh. Stud.*, ii. 181 sq.; Art. *Education*, N^o. 3-4 in Hastings, *Encycl. of Rel. and Ethics*; Lammens, *Mo'āwīa*, p. 360 sq.; *J. A.*, 1901, p. 143; Wustenfeld, *Schāḫī*, p. 295; Mez, *Renaissance*, p. 176). The custom of the older Jewish scholars of exercising a handicraft was not common among the Muslims but was found occasionally. Among men of learning we find shoemakers, locksmiths, sandal-makers (Wustenfeld, *Schāḫī*, p. 227, 231, 267; cf. also Mez, *Renaissance des Islam*, p. 179). It was the rule however for the teacher to be paid for his work. This might be quite a personal donation from a prince or other rich man, for example al-Ṭabarī was given a sum of money when he taught in the Mosque of 'Amr (Yāqūt, *Uḍabā*, vi. 428; cf. the remarks above on wandering scholars); it was as a rule however a regular salary which was paid out of endowment, so that the position was a regular professorial chair (see under G); this was especially the case in the madāris. The salaries of the teachers (*ma'lūm*, also *ḡawānīk*, sg. *ḡamāliya*; see Dozy, *Supplément*, s. v.) varied considerably, according to the endowment. The lecturer in the Suyūfiya received 11 dinārs a month (Makrizī, iv. 196) but in another of Ṣalāḥ al-Dīn's schools, the Ṣalāhiya or Nāṣiriya, the pay was much higher; the principal teacher received 40 dinārs (of 13¹/₃ dirhams) a month and 10 dinārs as principal, along with 60 *riṭl* of bread and two beasts of burden, to bring water from the Nile (*ibid.*, p. 251). In the Djamāl al-Dīn madrasa, each teachers got 300 dirhams a month (*ibid.*, p. 253). The teachers also received donations in kind on special occasions; in the other Nāṣiriya school they received sugar and meat every month at the festivals (*ibid.*, p. 222),

in the *Hidjāziya* on 'Id al-Fitr different kinds of bread and biscuit (*ka'k* and *khushkunānik*), at the feast of sacrifice meat and in Ramaḍān food was prepared for them (p. 223). According to al-Makrizī, learned men might have 50 dinārs a month in all in addition to allowances in kind (iii. 364). On ceremonial occasions, they often were given special marks of distinction, such as gifts in money and robes of honour.

The men of learning were organised in a gild. How the organisation worked in detail is not known. At the end of the third century we find the institution of the *ri'āsa* established in Egypt. While Yazīd b. Ḥabīb (d. 128) is called *ḥakīm Miṣr wa-shaikḥukhā* and *sayyidunā wa-'alimunā* and 'Cḥaidallāh b. Abī Dī'far (d. c. 135) *ḥakīm zamānihi* (*Husn*, i. 131), it is said of a series of scholars beginning with 'Abd al-Kaḥmān b. al-Kāsim (d. 191), Ashḥab b. 'Abd al-'Azīz (d. 204), 'Abd Allāh b. 'Abd al-Ḥakam (d. 214 or 215) that they had *al-ri'āsa* in Egypt (*Husn*, i. 133 sq.) which seems to mean that they belonged to an organisation. The position is also called *ri'āsat al-'ilm*, as, for example, with reference to Yūnus (d. 264) (*ibid.*, i. 136). When the *madhābiḥ* arose, each school had its own *ra'īs* in the district. The formulae for this was *tahat ilaḥi 'l-riyāsa fī madhhab mūlik*; e.g. of Ibn al-Mawāz (d. 281), and others (*Husn*, i. 136; Ibn Taghribirdī, ii/ji. 116); for the *Shāfi'is* e.g. Isfara'īni, died 406 (Ibn Taghribirdī, ii/ji. 121 sq.; cf. *Husn*, i. 196; Ibn Dījūbair, p. 219, 220); for the Ḥanafis e.g. al-Karkhī, died 340 (Ibn Kuṭlūbughā, N^o. 115; cf. N^o. 11, 13; Ibn Taghribirdī, ii/ji. 116); for the Ḥanbalis al-Barbahārī (d. 329) (Ibn Maskawaih, i., Cairo 1905, p. 260). Besides *ra'īs* we find other names like *Imām al-Ḥanafiya bi-Baghḍād* or *bi-Khulūdān* or *Shaiḥ al-Shābi'ā bi-mā warā' al-Nahr* (Ibn Kuṭlūbughā, N^o. 67, 96, 196; cf. *Shaiḥ al-Ḥanafiya*: Ibn Taghribirdī, ii/ji. 116; *Shaiḥ al-Malikīya fī Waḥtihi*: *Husn*, i. 209). With such names it is not always clear whether they are simply epithets like *Imām Waḥtihi*, *Imām 'Aṣrihi* (Ibn Kuṭlūbughā, N^o. 206, 217), *Uṣādh Zamānihi* (*Husn*, i. 141), *Ra'īs fī 'Ilm al-Kalām* (*ibid.*, N^o. 192), *Saiyidunā* (*ibid.*, N^o. 50), "the teacher of the Hanbalis and their *Ḥakīm*" (Ibn Taghribirdī, ii/ji. 114). There is also evidence of the *Riyāsa* within the special subjects, e.g. *Shaiḥ al-Kurrā bi-Miṣr* (*Husn*, i. 230), *Riyāsat al-Ḥadīth bi-Miṣr* (*ibid.*, i. 163; al-Rashīd), *Riyāsat al-Fatwā* (Quatremère, *Hist. Sult. Maml.*, ii/ji. 27), *Riyāsat al-Ikrā' wa 'l-Ifṭā' in Alexandria* (*Husn* i. 210). The physicians of a district had their *Ra'īs al-Atibbā'* (Makrizī, iv. 237; Ibn Abī 'Uṣaibī'a, ii. 86, 247); a *Ḳāḍī* was appointed in 684 (1285) chief of the physicians (Quatremère, *op. cit.*, ii/ji. 81). There was also a *Ra'īs al-Muḥandisīn* (Makrizī, iv. 224). *Shaiḥ al-Islām* is found as a title of honour for a scholar, e.g. in the viith, viiiith, ixth century (*Husn*, i. 143, 205; Quatremère, *op. cit.*, ii/ji. 68, note; ii/ji. 270, 280: Ibn Taimiyya), probably also used earlier (Mez, *Renaissance*, p. 179), while *Shaiḥ al-Shuyūkh* means the most distinguished leader of the *Ṣūfis* (Makrizī, iv. 285).

It is not clear what real importance the organisation of teachers had in the earlier period. In different districts there was a principal director of the organisations, a *ra'īs al-ulamā'*, in Medina (Ibn Dījūbair, p. 200, 5), in Baghḍād (*ibid.*, p. 220, 12), in Cairo and Upper Egypt (*Husn*, i. 141, 143,

191), also called *ra'īs al-ru'asā* (Ibn Abī 'Uṣaibī'a, ii. 204; Yāḳūt, *Uḍabā'*, i. 248). Every *madhhab* had its *ra'īs* for the district (*Husn*, i. 148, 21; Yāḳūt, iv. 512). The chief *ra'īs* could interfere in the activities, for example, of the teachers of *Ḥadīth* (Yāḳūt, *Uḍabā'*, *loc. cit.*). He is probably identical with the *naḥīb al-nuḥabā'*, without whose permission the caliph would not admit a teacher to the Mosque of al-Manṣūr in 451 (*ibid.*, i. 246 sq.). This shows that the head of the gild of learned men even then could exact influence on the appointment of new teachers. Whether appointments were made after an examination we do not know. The right of lecturing was in any case limited in this way in practice, but a systematic set of regulations hardly existed. 'Abd al-Latif lectured in the Masjid al-Ḥādij Lu'Lu', being paid by the *Ḳāḍī al-Faḍl* and afterwards in the Azhar, paid out of the Bait al-Mal (Ibn Abī 'Uṣaibī'a, ii. 205, 207); but what his relation to the gild of teachers was is not known. In later times the chief of the learned men in Cairo and Mecca had great influence, because he decided who should be admitted into the gild of teachers and also controlled salaries (see G 2^a).

The teacher had his particular place in the mosque, often beside a pillar: this was his *madṭis*, which was inherited by his successors; al-Buwaṭṭi was *ḫalīfatun 'l-Shāfi' fī ḥalḳatihi* (*Husn al-Muḥādara*, i. 135; cf. 181 infra, 182; Makrizī, iv. 5; Yāḳūt, *Uḍabā'*, iv. 135; Wustenfeld, *Schāhī*, p. 239). The outward appearance of the class did not alter through the centuries. His hearers sit in a circle (*ḥalḳa*: the listeners *taḥallafū*: Makrizī, iv. 49, 17 sq.; cf. on the word Quatremère, *Hist. Sult. Maml.*, ii/ji. 197 sqq.) on the ground before the lecturer. The teacher sits on a carpet (*sadyḍāda*, cf. Yāḳūt, *Uḍabā'*, i. 254) or skin (*farwa*). This was described as a symbol of his dignity in his *waṣīya* (al-'Umari, *Ta'rif*, p. 134). It is quite irregular for any one to teach standing (Yāḳūt, *Uḍabā'*, v. 424, 8; for the other view see Bukhārī, *Ḥlm*, bāb 45). On the other hand, we often find in large audiences that the teacher has a raised seat (for the older period see Ibn Baṭṭūta, i. 212). Ibn al-Ḥādij condemns this because the teacher must not raise himself out of the circle of his hearers; he even wants to reject the use of the skin and carpet as effeminate (*Madḫal*, i. 96 sq.).

It was not the custom for teachers, to live in the mosque. Of course a teacher, like any other pious individual, could stay in the mosque and even have a room there; al-Ḡhazālī for example lived in the mosque of the Umayyads, where Ibn Dījūbair saw his room and Ibn Baṭṭūta mentions a teacher, al-Kermānī, who lived on the roof of the Azhar Mosque (i. 92; cf. also Ibn Abī 'Uṣaibī'a, ii. 204). But these were exceptions; al-'Azīz built a dwellinghouse for the teacher in the Azhar near the mosque (Makrizī, iv. 49). The earlier madāris founded by Nizām al-Mulk had often lodgings for the teacher, especially as the teacher sometimes made his lodging his classroom and this is also found later. Thus al-Ḳhādīrdī, who died in 543 (1149) lived in the Baiḥaḳīya (Wustenfeld, *Schāhī*, p. 307) and in the Ṣalāhiya the head of the college had his home within the buildings (Ibn Dījūbair, p. 48). Shams al-Dīn (d. 637) lived in Damascus in the 'Adiliya where he taught *fiḳh* (Ibn Abī 'Uṣaibī'a, ii. 171; cf. also p. 260). This must also have been the case in other madāris. But in any

somewhat modernised, was still given. The education in the madrasas is linked up with the new universities in Calcutta and elsewhere (*Calcutta University Commission, 1917—1919, Report*, Calcutta 1919, i, 143—187; v, ii. 60—70). In 1922 there were already 14 universities of which five were founded after 1919 (*Oriente Moderno*, ii., 1922, p. 60; on earlier discussions on the foundation of a university see *R. M. M.*, xxi. 1912, p. 268 sqq.). The older universities, founded on the model of that of London, are those of Calcutta 1857, Madras and Bombay 1857, Lahore 1882, Allāhābād 1887 (*R. M. M.*, vi. 4; on Chiefs' Colleges, *ibid.*, p. 1—51; ix. 44—81). The essential feature of the reforms is the new method of instruction, the systematic organisation of the courses, which are concluded by examinations, and the creation of a qualified body of competent teachers.

Inspired by the same spirit, if not so thorough, were the reforms which were carried through at the capital of Islāmic studies, the Azhar in Cairo without the assistance of a European power. In 1872 an examination for those beginning teaching was instituted and the ordinance expanded by new regulations in 1885, 1888 and 1895. The principal could however appoint teachers without examination. The students had to be registered so that unworthy persons should not share the stipends. On June 4, 1895, a council of five members was appointed to prepare reforms. They dealt with the finance and organisation. In 1896 the mosque-schools in Tanṭā, Damietta, and Dassūḵ and in 1903 those of Alexandria were put under the Azhar. On July 1, 1896 (supplemented in 1897 and 1898) examinations for students were arranged; history, geography and mathematics were introduced as voluntary subjects and it was forbidden to read glosses and super-commentaries in the first four years. The driving power in the council was one of its members, Muḥammad 'Abduh, but he retired in 1905. The Khedive 'Abbās II Hilmi in 1908 and in 1911, after several commissions had been working at the subject, promulgated a new law which is still (1928) practically in force. The administration of the Azhar Mosque and the institutions connected with it (particularly other mosques and the Kāḍī School) were reorganised. The organisation is based on the old organisation of the staff with the principal as head of the 'ulamā' and the heads of the madhāhib as members of the committee of management. New subjects were instituted, such as *akhlāq* in combination with the *sira*, history, especially Muslim, geography, natural history, chemistry, mathematics, drawing, hygiene, education. Instruction is given in three divisions, each of which is estimated to cover 5 to 7 years. To obtain admission a student must be 10—17 years of age, be able to read and write and know the Qur'ān by heart (by the law of 1911 he was allowed to learn half of it in his first six months in the Mosque, but this was abolished in 1921). Each year ends with the examination in the month of April; the final examination of the first section enables the successful candidate to teach in elementary schools, that of the second to obtain an appointment in certain offices or as *imām* or *khaṭīb* in the mosques; by the examination, the candidate obtains the highest degree of *ʿālim*, and can become a teacher in the Azhar, or judge or council in the Shari'a courts. By new laws of 1921, 1923 and 1924, the examinations were reformed and the relationship to the Kāḍī School,

Dār al-ʿUlūm and other educational institutions reorganised so that in the Azhar, a *kism al-takhaṣṣus* for *Fikh*, *Tafsīr*, *Ḥadīth*, *Tawhīd*, *Mantiq*, *Wadʿ*, *Bayān*, *Akhlāq*, Islāmic history and practical courses in teaching and court practice were instituted. When by the law of Aug. 26, 1927, a university was founded with faculties of arts, law, science, and medicine (cf. *Oriente Moderne*, v., 1925, p. 110 sq., 434—436; vii., 1927, p. 627 sqq.), the question of education in the mosque again came up and a new commission on Nov. 27, 1927 was charged to consider new proposals (for the reforms of Egyptian institutions see P. Arminjon, *L'enseignement, la doctrine et la vie dans les universités musulmane d'Égypte*, 1907; Muṣṭafā Bairam, *Risāla*, 1902; Sulaimān Raṣād al-Zaiyātī, *Ḍjawhar fi Ta'riḫ al-Azhar*, 1320, p. 147 sqq.; *ʿAmāl Madjlis Idārat al-Azhar*, Cairo 1323, anonymous, but by 'Abd al-Karīm Salmān, cf. *al-Manār*, xxv., 1324, p. 703; *Commission de la Réforme de l'Université d'El Azhar, Projet de Réforme présenté par Muḥ. Pacha Saīd*, Cairo 1911, and the official regulations; Johs. Pedersen, *al-Azhar*, Copenhagen 1922, p. 65 sqq.; A. Sékaly, in *Revue des Études Islamiques*, i., 1927, p. 95 sqq., 465 sq.; ii., 1928, p. 47 sqq. etc.; *Oriente Moderno*, v., 1925, p. 113 sq.; vii., 1927, p. 634). In Morocco the ruler in 1844 introduced European subjects into the Madrasa in Fās Ḍjadīd (whence its name *Madrasat al-Muḥandisīn*); these innovations did not become permanent but in 1916 the madāris in Fās and Rabāṭ were reformed (Bell, in *J.A.*, ser. 11, x. 152; Péretié, in *Arch. Maroc.*, xviii., 1912, p. 257 sqq.; see for Tunis: *R. M. M.*, iii. 385).

Since the World War, throughout the world of Islām, particularly in Turkey, very far reaching reforms in education have been introduced the results of which cannot yet be surveyed.

G. The Administration of the Mosque.

1. Finances.

The earliest mosques were built by the rulers of the various communities and the members of the community did all the work necessary in connection with the primitive mosques. The later mosques as a rule were erected by rulers, emirs, high officials or other rich men in their private capacity and maintained by them. The erection of the mosque of Ibn Ṭūlūn cost its builder 120,000 dinārs, the Mosque of Mu'ayyad 110,000 (Maḳrīzī, iv. 32, 137, 138). The upkeep of the mosque was provided for by estates made over as endowments (*wakf*, *habs*) (cf. thereon besides the Fikh-books: I. Krcsmárik, *Das Wakfrecht*, *Z.D.M.G.*, xlv., 1891, p. 511—576; E. Mercier, *Le code du hobous ou ouakf selon la législation musulmane*, 1899). In the third century we thus hear of houses which belonged to the mosques and were let by them (*Papyrus Erzherzog Rainer, Führer*, No. 773, 837) and Ibn Ṭūlūn handed over a large number of houses as an endowment for his mosque and hospital (Maḳrīzī, iv. 83). This custom was taken over from the Christians by the Muslims (see Becker, in *Isl.*, ii. 404). According to Maḳrīzī, estates were not given as wakf endowments until Muḥammad Abū Bakr al-Māḍharāʾī (read thus) bequeathed *Birkat al-Habash* and *Suyūṭ* as endowments (about 300 A.H.); this was however cancelled by the Fātimids again (*ibid.*). Al-Hākim made large endowments not only for his own,

but also for mosques previously in existence, such as the Azhar, al-Ḥakīmī, Dār al-ʿIlm and Dījāmī al-Maḥs and Dījāmī Rāshīda; the endowments consisted of dwelling-houses, shops, mills, *ḥaṣārīya* and *ḥawānīt*, and the document (*ibid.*, p. 50 sq.) specifies how and for what purposes the revenues are to be distributed. Baths were also given as endowments for mosques (*ibid.*, p. 76 for 529; cf. 81 of the year 543). Šalāḥ al-Dīn granted lands to his madāris: in 566, for example, a *ḥaṣārīya* to the Ḳamḥiya and a *ḥaṣārīya* in al-Faiyūm and the teachers received wheat from al-Faiyūm and in the same year he endowed the Naṣīriya with goldsmiths' shops and a village (*ibid.*, p. 193 sq.; cf. another document: p. 196 sq.). During the Mamlūk period also, estates were given as endowments (for documents of this period see van Berchem, *C. I. A.*, i, N^o. 247, 252, 528; Moberg, in *M. O.*, xii, 1918, p. 1 sqq.; *J. A.*, ser. 9, iii, 264—266; ser. 11, x, 158 sqq., 222 sqq.; xii, 195 sqq., 256 sqq., 363 sqq.). They were often a considerable distance apart: the mosques in Egypt often had estates in Syria (v. Berchem, *C. I. A.*, i, N^o. 247; Maḳrīzī, vi, 107, 137). Not only were mosques built and endowed but already existing ones were given new rooms for teachers, minbars, stipends for Ḳurʿān reciters, teachers etc. There were often special endowments for the salaries of the imām and the muʿadhdhins, for the support of visitors, for blankets, food etc. (see Ibn Dījūbair, p. 277 with reference to the Mosque of the ʿUmayyads). The endowments and the purpose for which they might be used was precisely laid down in the grant and the document attested in the court of justice by the qāḍī and the witnesses (cf. Maḳrīzī, iv, 50, 196 *infra*). The text was also often inscribed on the wall of the mosque (cf. *ibid.*, p. 76; the above mentioned inscriptions amongst others. Documents from Taškent see *R. M. M.*, xiii, 1911, p. 278 sqq.). Certain conditions might be laid down, e.g. in a madrasa that no Persian should be appointed there (Maḳrīzī, iv, 202 *infra*) or that the teacher could not be dismissed or some such condition (v. Berchem, *C. I. A.*, i, N^o. 201), that no women could enter (*J. A.*, ser. 9, iii, 389), that no Christian, Jew or Ḥanbalī could enter the building (*ibid.*, p. 405), etc. Endowments were often made with stipulations for the family of the founder or other purposes. That mosques could also be burdened with expenses is evident from an inscription in Edfū of the year 797 (1395) (v. Berchem, *C. I. A.*, N^o. 539). If a mosque was founded without sufficient endowment, it decayed (e.g. Maḳrīzī, iv, 115, 201, 203) or the stipends were reduced (*ibid.*, p. 251), but in the larger mosques as a rule the rulers provided new endowments. According to al-Māwardī, there were also special "Sulṭān-mosques" which were directly under the patronage of the caliph and their officials paid from the Bait al-Māl (*al-Aḥkām al-Sulṭāniya*, ed. Enger, p. 172 *supra*, 176 *supra*).

Just as the Bait al-Māl of the state was kept in the mosque, so was the mosque's own property kept in it; e.g. the *kanz* or *ḫiṣānat al-Kāba*, which is mentioned in ʿOmar's time and may be presumed to have existed under his predecessors (Balādhuri, p. 43 *supra*; *C. M.*, i, 307; ii, 14). The *Bait Māl al-Dījāmī* in Damascus was in a ḳubba in the ṣaḥn (*B. G. A.*, iii, 157; Ibn Dījūbair, p. 267; Ibn Baṭṭūta, i, 201; cf. for Medina: Wustenfeld, *Medina*, p. 86). Rich men also had their

private treasure-chambers in the mosque (see E 2) as used to be the case with the Temple (see E. Schurer, *Gesch. d. jud. Volkes* 4, ii., 1907, p. 322—328; F. Cumont, *Fouilles de Doura-Europos*, 1926, p. 405 sq.).

2. Administration.

As Imām of the Muslim community, the caliph had the mosques under his charge. This was also the case with the sulṭān, governor or other ruler who represented the caliph in every respect. The administration of the mosques could however not be directly controlled by the usual government offices. By its endowment the mosque became an object *sui generis* and was withdrawn from the usual state or private purposes. Their particular association with religion gave the qāḍīs special influence and on the other hand the will of the testator continued to prevail. These three factors decided the administration of the mosque but the relation between them was not always clear.

a. Administration of the separate mosques.

The mosque was usually in charge of a *nāzir* or *walī* who looked after its affairs. The founder was often himself the *nāzir* or he chose another and after his death, his descendants took charge or whoever was appointed by him in the foundation charter. In the older period the former was the rule and is said to have applied especially in the case of chief mosques, if we may believe Naṣīr-i Khosraw, according to whom al-Ḥakīm paid the descendants of Ibn Ṭūlūn 30,000 dinārs for the mosque and 5,000 for the minaret and similarly to the descendants of ʿAmr b. al-ʿĀṣī 100,000 dinārs for the Mosque of ʿAmr (*Safer-Nāma*, ed. Schefer, p. 39 and 146, 40 and 148). In 378 we read of an administrator (*mutawallī*) of the mosque in Jerusalem (Maḳrīzī, iv, 11). In the case of mosques and madāris founded during the Mamlūk period, it is often expressly mentioned that the administration is to remain in the hands of the descendants of the founder: e.g. in the case of a mosque founded by Baibars (Maḳrīzī, iv, 89), in the Dījāmī Maḥs when the vizier al-Maḥsī renovated it (*ibid.*, p. 66), the Šaḥībiya (*ibid.*, p. 205), and the Ḳarāsunkuriya (*ibid.*, p. 232) etc.; so also in the Badriya in Jerusalem ("to the best of the descendants", cf. v. Berchem, *C. I. A.*, ii, 129). Other cases are also found. Sometimes an emir or official was administrator e.g. in the Muʿaiyad (Maḳrīzī, iv, 140), the Ṭaibarsiya (*ibid.*, p. 224), the Azhar, (*ibid.*, p. 54 sq.) or the Mosque of Ibn Ṭūlūn (Ḳalkashandī, *Šuḥḥ al-Aḫṣā*, xi, 159—162). In Dījāmī al-Dīn's madrasa, it was always the *kātib al-sirr* (Maḳrīzī, iv, 256), in the Ḳhanaḳāh of Baibars the *ḫāzīndār* and his successors (v. Berchem, *C. I. A.*, i, N^o. 252); but it was more frequently a qāḍī; for example in the mosque of Baibars just mentioned, the Ḥanafī qāḍī was to take charge after the descendants (Maḳrīzī, iv, 89); in the Āḳbughawīya, the Šaḥīfī qāḍī was appointed but his descendants were expressly excluded (*ibid.*, p. 225). In the Mosque of the ʿUmayyads during the Mamlūk period, the Šaḥīfī chief qāḍī was as a rule the *nāzir* (Ḳalkashandī, iv, 191) and in the Naṣīr mosque in Cairo (*ibid.*, xi, 262—264). In this city we find during the Mamlūk period that emīrs and qāḍīs alternately acted as *nāzirs* in the large mosques (e.g. the Mosque of Ibn Ṭūlūn:

Maḳrīzī, iv. 42). Cases are also found however in which descendants of the founder unsuccessfully claimed the office of nāzir (Maḳrīzī, iv. 218, 255). This was the result of the increasing power of the *kaḏīs* (see below). In the madāris the nāzir was often also the headmaster; the two offices were hereditary (*ibid.*, p. 204: the Ṣāhibiya al-Bahā'iya, p. 238 *supra*: the Djamāliya). In Tustar a descendant of Saḥl as nāzir and teacher conducted a madrasa with the help of four slaves (Ibn Baṭṭūṭa, ii. 25 *sq.*).

The Nāzir managed the finances and other business of the mosque. Sometimes he had a fixed salary (in Baḥrās' Khānākhāh 500 dirhams a month: v. Berchem, *C.I.A.*, i. No. 252: in the Dulāmiya in Damascus in 847 only 60 dirhams a month: *J.A.*, ser. 9, iii. 201), but the revenues of the mosque were often applied to his personal use. His control of the funds of the mosque was however often limited by the central commission for endowments (see below). The nāzir might also see to any necessary increase of the endowments. He appointed the staff and he fixed their pay (cf. e.g. Maḳrīzī, iv. 41). He could also interfere in questions not arising out of the business side of administration: for example the emir Sawdūb, the nāzir of the Azhar in 818 ejected about 750 poor people from the mosque. He was however thrown into prison for this by the Sultan (*ibid.*, p. 54). Generally speaking the nāzir's powers were considerable. In 784 a nāzir in the Azhar decided that the property of a mudhāwī, who had died without heirs, should be distributed among the other students (*ibid.*, p. 54). In Mecca, according to Kutb al-Dīn, the *Amīr al-Ḥaram* was in charge of the great festival of the mawlid of the Prophet (12th Rabi' I) and distributed robes of honour in the mosque on this occasion (*C.M.*, iii. 439). In the Azhar, no nāzir was appointed after about 1100 but a learned man was appointed Shaikh al-Azhar, principal and administrator of the mosque (Sulamān Raṣād al-Zayātī, *Kanz al-ʿUmmār fī Tārīkh al-Azhar*, p. 123 *sq.*). Conditions are similar in Mecca (Snouck Hurgronje, *Mecca*, ii. 235 *sq.*, 252 *sq.*).

As we have seen, *kaḏīs* were often nāzirs of mosques. This was especially the case in the madāris, where the *kaḏīs* were often teachers (cf. Maḳrīzī, iv. 200, 219, 222, 238, etc.); the *kaḏīs* were particularly anxious to get the principal offices in the large schools (cf. Kāḱashandī, xi. 235). Their influence was however further increased by the fact that, if a nāzir qualified by the terms of the founder's will no longer existed, the *kaḏī* of the madhhab in question stepped into his place (cf. *J.D.M.G.*, xlv., 1807, p. 552). By this rule, which often gave rise to quarrels between the different *kaḏīs* (e.g. Maḳrīzī, iv. 218 the Zāhiriya), a *kaḏī* could accumulate a large number of offices and "rule the endowments" (*ibid.*, iii. 364). Sometimes their management was so ruthless, that the schools soon declined (e.g. the Ṣāhibiya and the Djamāliya, Maḳrīzī, iv. 204 *sq.*, 238). They also exercised influence through the committee of management of the mosque.

Centralisation in the Management of the Mosques

The large mosques occupied a special position in the Muslim empire, because the caliph had to interest himself particularly in them: especially those of Mecca and Medina where the rulers and

their governors built extensions and executed renovations (cf. *C.M.*, i. 145; iii. 83 *sqq.*). During the ʿAbbāsid period, the *kaḏī* occasionally plays a certain part in this connection; for example al-Mahdī (158—169) presented the *kaḏī* with the necessary money to extend and repair the Meccan mosque (*C.M.*, i. 312; ii. 43). In 263, al-Muwaffaḱ ordered the governor of Mecca to undertake repairs at the Ka'ba (*ibid.*, ii. 200 *sq.*). In 271 the governor and the *kaḏī* of Mecca co-operated to get money from al-Muwaffaḱ for repairs and they saw the work through (*ibid.*, iii. 136 *sq.*). In 281, the *kaḏī* of Mecca wrote to the vizier of al-Mu'taḏid about the Dār al-Nadwa and backed up his request by sending a deputation of the staff there (*sadana*). The caliph then ordered the vizier to arrange the matter through the *kaḏī* of Baghdad and a man was sent to Mecca to take charge of the work (*C.M.*, iii. 144 *sqq.*).

The importance of the *kaḏī* was based primarily on his special knowledge in the field of religion. A zealous *kaḏī* like al-Ḥārith b. Miskīn in Cairo (237—245) forbade the *ḱurra'* of a mosque to recite the *Ḵur'ān* melodiously; he also had the *maṣāḥif* in the mosque of 'Amr inspected and appointed an *amīn* to take charge of them (Kindī, *Wulāt*, p. 469). After the building of the Tulūnid mosque, a commission was appointed under the *Kaḏī 'l-Ḵudāt* to settle the *qibla* of the mosque (Maḳrīzī, iv. 21 *sq.*). But at a quite early date they also obtained a say in the management of the funds. The first *kaḏī* to lay his hands on the *ahbās* was Tawba b. Namir al-Ḥaḏāmi; while hitherto every endowment had been administered by itself by the children of the testator or some one appointed by him, in 118 Tawba brought about the centralisation of all endowments and a large *diwān* was created for the purpose (Kindī, *Wulāt*, p. 346). How this system of centralisation worked is not clear at first, but it was carried through under the Fātimids.

Al-Mu'izz created a special *dīwān al-ahbās* and made the chief *kaḏī* head of it as well as of the *ḡawāmi'* wa *'l-maṣāḥid* (Maḳrīzī, iv. 83 and 75; cf. Kindī, *Wulāt*, p. 585, 587, 589, according to whom al-'Azīz specially appointed the chief *kaḏī* over the two *djāmi's*), and a special *bait al-māl* was instituted for it in 363; a yearly revenue of 150,000 dirhams was guaranteed; anything left over went to form a capital fund. All payments were made through this office after being certified by the administration of the mosques (Maḳrīzī, iv. 83 *sq.*). The mosques were thus administered by the *kaḏīs*, directly under the caliph. The *dīwān al-ḥur wa 'l-sadaka* in Baghdad (Mez, *Renais. anc.*, p. 72) perhaps served similar purposes.

Al-Ḥākim reformed the administration of the mosques. In 403 he had an investigation made and when it proved that 800 (or 850) had no income (*ḡha'la*), he made provision for them by a payment of 9,220 dirhams monthly from the *Bait al-Māl*; he also made 405 new endowments (of estates) for the officials of the mosque (Maḳrīzī, iv. 84, 264). Under the Fātimids, the *kaḏīs* used to inspect all the mosques and *maṣāḥid* in and around Cairo at the end of Ramaḏān and compare them with their inventories (*ibid.*, p. 84). The viziers of the Fātimids, who also had the title *kaḏī* did much for the mosques (Djawhar, *Ya'kūb b. Killis*, Badr al-Djamālī: cf. v. Berchem, *C.I.A.*, i. No. 11, 576, p. 631).

Under the Aiyūbids, conditions were the same as under the Fāṭimids. The *diwān al-aḥbās* was under the *qāḍī* (Maḳrīzī, iv. 84). Ṣalāḥ al-Dīn gave a great deal to the mosques, especially the madāris (cf. above): 20,000 dirhams a day is a figure given (*ibid.*, p. 117). When Ibn Djuhair says that the sultān paid the salaries of the officials of the mosques and schools of Alexandria, Cairo and Damascus (p. 43, 52, 275), he must really mean the *Diwān* already mentioned.

The same conditions continued for a time under the Mamlūks. In the time of Baibars, for example, the chief *qāḍī* Tādī al-Dīn was *nāẓir al-aḥbās*. He caused the Mosque of 'Amr to be renovated and when the funds from the endowments were exhausted, the Sultān helped him from the Bait al-Māl (Maḳrīzī, iv. 14); after conferring with experts, the chief *qāḍī* forbade a water-supply brought by Ṣalāḥ al-Dīn into the mosque (*ibid.*, p. 14; Suyūṭī, *Ḥuṣn al-Muḥādara*, ii. 137). In 687 the chief *qāḍī* Taḳī al-Dīn complained to Qalā'ūn that the 'Amr and Azhar mosques were falling into ruins, while the *aḥbās* were much reduced. The Sultān would not however permit their restoration but entrusted the repairs of the mosques to certain emirs, one to each (Maḳrīzī, iv. 14, 15). This principle was several times applied in later times and the emirs frequently gained influence at the expense of the *qāḍīs*. Thus after the earthquake of 707 (1303) (cf. thereon Quatremère, *Hist. Sult. Maml.*, i. n. 214 sqq.), the mosques were allotted to emirs, who had to see that they were rebuilt (Maḳrīzī, iv. 15, 53). From the middle of the seventh century, we often find emirs as administrators of the chief mosques. The *qāḍī* had however obtained so much authority that he was conceded "a general supervision of all matters affecting the endowments of his madhhab" (al-Umarī, *Tārīf bi'l-Muṣṭalah al-Sharīf*, p. 117; cf. Z. D. M. G., xlv., p. 559); according to this theory the *qāḍī* could intervene to stop abuses. In Syria in 660 (1262) Ibn Khalikān became *qāḍī* over the whole area between al-'Arish and the Euphrates and superintendent of waḳfs, mosques, madrasas etc. (Quatremère, *Hist. Sult. Maml.*, i/i. 170).

Sultān Baibars reformed these endowments and restored the office of *nāẓir al-awḳāf* or *nāẓir al-aḥbās al-mabrūra* or *n. dīkhāt al-biri* 'Kalka-bandī, iv. 34, 38; v. 465; ix. 256; xi. 252, 257 sqq.; cf. Khalil al-Zāhiri, *Zublat Kashf al-Mamālik*, ed. Ravaisse, p. 109). According to al-Maḳrīzī, the endowments were distributed among the Mamlūks in three departments (*dīkhāt*): 1. *dīkhāt al-aḥbās*, managed by an emir, the Dawādār; this looked after the lands of the mosques, in 740 in all 130,000 faddān; 2. *dīkhāt al-awḳāf al-hukmīya bi-Misr wa'l-Ḳāhira*, which administered dwelling-houses; it was managed by the Shāfi'ī *Qāḍī 'l-Ḳudāt*, with the title *Nāẓir al-Awḳāf*. This department came to an end in the time of al-Malik al-Nāṣir Faraj because an emir supported by the opinion of the Hanafī chief *qāḍī*, spent a great deal and misused the funds; 3. *dīkhāt al-awḳāf al-aḥliya*, comprised all the endowments which still had particular *nāẓirs*, either descendants of the testator or officials of the Sultān and the *qāḍī*. The emirs seized their lands and Barkūk, before he became Sultān, sought in vain to remedy the evil by appointing a commission. The endowments in general disappeared somewhat later because the ruling emirs seized them (Maḳrīzī, iv. 83—86). In modern times, as a rule, endow-

ments in Muslim lands have been combined under a special ministry.

To be distinguished from the administrators of the mosque is the *nāẓir* who is only concerned with the supervision of the erection of mosques. Any one could be entrusted with the building of a mosque (e.g. Maḳrīzī, iv. 92). Under the Mamlūks there was also a clerk of works, *mutawallī shadd al-amār* or *nāẓir al-imāra*; he was the overseer of the builders (*ibid.*, p. 102; see *Zublat Kashf al-Mamālik*, ed. Ravaisse, p. 115, cf. p. 109; v. Beichem, *C. I. A.*, i. 742 sq., 751).

The caliph or the ruler of the country was in this, as in other matters, supreme. As we have seen, he intervened in the administration and directed it as he wished. He was also able to interfere in the internal affairs of the mosque, if necessary through his usual officers. In 253 (867) after the rising in the Faiyum, the chief of police issued strict orders by which it was forbidden to say the *karmalah* aloud in the mosque, the number of prayers in the month of Ramaḍān was cut down, the *adhān* from the minaret forbidden etc. (*Papirus-Erzeroug Kairo, Fihrist*, No. 788). In the year 294, the governor 'Isā al-Nashiri had the mosque of 'Amr closed except at the salats because the Bait al-Māl was kept in it, which however produced protests from the people (Maḳrīzī, iv. 11; Kimb, *Wulat*, p. 266; *B. G. I.*, vi. 116). Many similar examples could be mentioned, especially during periods of unrest. In 821 the naib in conjunction with the *qāḍīs* revised the budget of the Mosque of the Umayyads and made financial reforms (*J. A.*, ser. 9, vii. 2204). The *adhān* formulae were laid down in edicts by the ruler (Maḳrīzī, iv. 43, 45). In the year 323, the vizier in Baghdad had a man whipped who had recited a variant text of the Ḳuran in the mihrab, after he had been heard in his defence in the presence of the *qāḍīs* and learned men (Yāḳūt, *Uḍabā'*, vi. 300). The importance of the sovereign in connection with the mosque depended on his personality. As a rule he recognised the authority of the regular officials. When for example al-Khatib al-Baghdādī asked the Caliph al-Ḳāim for authority to read *Ḥadīth* in the mosque of al-Mansūr, the latter referred the question to the *nāẓir al-amār* (Yāḳūt, *Uḍabā'*, i. 246 sq.; cf. Wustenfeld, *Schicksal*, iii. 280).

The consecration of the mosque was attended by certain ceremonies. When for example the midday service was conducted for the first time in the *Djāmi'* al-Ṣalāḥ in Cairo, a representative from Baghdad was present (Maḳrīzī, iv. 81). At the consecration of the Mosque of Ibn Fūlm, the builder gave al-Rabī' b. Sulaimān, a pupil of al-Shāfi'ī, who lectured on *Ḥadīth* there, a purse of 1,000 dinars (Suyūṭī, *Ḥuṣn al-Muḥādara*, ii. 139). Al-Maḳrīzī describes the consecration ceremony at several mosques. In the M. al-Mu'ayyad the Sultān was present seated on a throne surrounded by his officers; the basin of the ṣāḥn was filled with sugar and ḥalwa, the people ate and drank, lectures were given, then the ṣalāt was read and *ghutba* delivered and the Sultān distributed robes of honour among the officials of the Mosques and *Sūfis* (Maḳrīzī, iv. 139); similarly at the *Zāhiriya* (p. 662, were poems were also recited of Quatremère, *Hist. Sult. Maml.*, i/i. p. 228 sq.), Madrasat Ḥamāl al-Dīn, p. 811; al-Sayhīmshīya, p. 757 (Maḳrīzī, iv., p. 217 sq., 253, 256).

H. The Personnel of the Mosque.

1. The Imām.

From the earliest days of Islām, the ruler was the leader of the ṣalāt; he was *imām* as leader in war, head of the government and leader of the common ṣalāt. The governors of provinces thus became leaders of the ṣalāt and heads of the *ḫarāṭij* and when a special financial official took over the fiscal side, the governor was appointed *ʿala ʿl-ṣalāt wa ʿl-ḫarb*. He had to conduct ritual prayer, especially the Friday ṣalāt on which occasion he also delivered the *ḫuṭba*. If he was prevented, the chief of police, *ṣāhib al-ṣurṭa*, was his *khalifa* (cf. Maḳrīzī, iv. 83). ʿAmr b. al-ʿAṣī permitted the people of the villages to celebrate the two festivals, while the Friday divine service could only take place under those qualified to conduct it (who could punish and impose duties; *ibid.*, p. 7). This was altered under the ʿAbbāsids. The caliph no longer regularly conducted the ṣalāts (after the conquest of the Persians: Maḳrīzī, iv. 45), and ʿAnbasā b. Iṣḫāk, the last Arab governor of Egypt (238—242), was also the last emir to conduct the ṣalāt in the *ḡāmīʿ*. An imām, paid out of the *baṭi al-māl*, was now appointed (*ibid.*, p. 83), but the governor still continued to be formally appointed *ʿala ʿl-ṣalāt*. Henceforth the ruler only exceptionally conducted the service, for example the Fātimids on ceremonial occasions, especially in the month of Ramaḍān (Ibn Taghribirdī, ed. Juynboll, ii. 482 sqq.; Kaḷāshandī, *Ṣubḥ al-Aṣḥar*, iii. 509 sqq.); in many individual mosques probably the most prominent man conducted the service; according to the Ḥadīth, the one with the best knowledge of the Qurʾān and, failing him, the eldest should officiate (Bukhārī, *Adhān*, bab 46, 49).

The imām appointed was chosen from among those learned in religious matters; he was often a Hāshimīd (Mez, *Renaissance*, p. 147); he might at the same time be a *qāḍī* or his *nāʾib* (see Kindī, *Wulāt*, p. 575, 589; Ibn Baṭṭūṭa, i. 276 sq.). During the ṣalāt he stood beside the mihrab; al-Maḳrīzī mentions the anomaly, that in Syria one performed one's ṣalāt "in front of the imām" (*B.G.A.*, ii. 202); he could also stand on an elevated position; on one occasion Abū Huraira conducted the ṣalāt in the Meccan mosque from the roof (Bukhārī, *Ṣalāt*, bāh 17). In Mecca, in Ibn Djubair's time, each of the four recognised madhāhib (with the Zaidis in addition) had an imām; they conducted the ṣalāt, one after the other each in his place, in the following order: Shāfiʿis, Mālikis, Ḥanafis and Ḥanbalis; they only performed the ṣalāt al-maghrib together; in Ramaḍān they held the *taʾarūḫ* in different places in the mosque, which was also often conducted by the *kurāʾ* (*Rihla*, p. 101, 102, 143 sq.). This is still the case: very frequently one performs the ṣalāt, not after the imām of his own madhāb (Snouck Hurgronje *Mekka*, ii. 79 sq.). In Jerusalem according to Mudjir al-Dīn the order was: Mālikis, Shāfiʿis, Ḥanafis, Ḥanbalis, who prayed each in their own part of the Ḥaram; in Hebron the order was the same (Sauvaire, *Hist. Jér. et Hebron*, p. 136 sq.). In Ramaḍān extraordinary imāms were appointed (*ibid.*, p. 138).

When the imām no longer represented a political office, each mosque regularly had one. He had to maintain order and was in general in charge

of the divine services in the mosque. In al-Maḳdisi's time the imām of the Mosque of ʿAmr read a *ḡuzʾ* of the Qurʾān every morning after the ṣalāt (*B.G.A.*, iii. 205). It was his duty to conduct every ṣalāt, which is only valid *fi ḡamāʿa*. He must conform to the standards laid down in the law; but it is disputed whether the ṣalāt is invalid in the opposite case. According to some, the leader of the Friday ṣalāt should be a different man from the leader of the five daily ṣalāts (Māwardī, *al-Aḥkām al-Sultāniya*, ed. Enger, p. 171 sqq.; Ibn al-Hādīd, *K. al-Madḫhal*, ii. 41, 43 sqq., 50, 73 sqq.; al-Subkī, *Muʿid al-Niʿam*, ed. Myhrman, p. 163 sq.; for ḥadīths s. Wensinck, *Handbook*, p. 109 sq.). Many cherished misgivings against payment being made for religious services and quoted in support of their view a saying of Abū Ḥanifa (*B.G.A.*, iii. 127).

2. The *Ḫaṭīb*.

The development of this office is analogous to that of imām. When the ʿAbbāsīd caliph no longer delivered *ḫuṭbas* regularly, a man learned in religious matters was appointed to the office of *ḫaṭīb* [see D 1 and the article *ḪAṬĪB*]. It could be pointed out that the Prophet himself had a *ḫaṭīb* namely ʿUṯāid b. Ḥādīb (Djāhīz, *Bayān*, i. 178) and sermons outside the Friday service had in any case become quite usual. Thus Ḥasan al-Baṣrī was already a noted preacher (*ibid.*, p. 190). Later it sometimes happened that a general like Ḍawhar himself acted as imām at the ṣalāt, while the *ḫuṭba* was left to a learned man (Maḳrīzī, iv. 44). As the *ḫaṭīb* in theory represented the ruler, he uttered a blessing upon him; to this extent the office had a political significance. The caliph was blessed and the heir-apparent and the king of the country (cf. above D 1). When the caliph himself preached, he also pronounced a prayer for himself (Yāqūt, *ʿUḍabāʾ*, ii. 349 sq.) and the Fātimids mentioned their fathers. The sermons gradually became quite stereotyped; Ibn Baṭṭūṭa (i. 348) praises the *ḫaṭīb* in Mecca, because he gave a new sermon every Friday. A *qāḍī* was frequently chosen as *ḫaṭīb* and a chief *qāḍī* could sometimes preach in a large mosque (Kindī, *Wulāt*, p. 589; Maḳrīzī, iv. 132; Ibn Djubair, p. 156; according to Quatremère, *Hist. Sult. Maml.*, ii/i. 25, a *qāḍī* was for the first time appointed *ḫaṭīb* in 694 [1925] in Damascus). The *ḫaṭīb* could also be a "witness" (Iḥlāl al-Ṣābi, *K. al-Wuzarāʾ*, ed. Amedroz, p. 421 *infra*) or hold another office like that of *kātib al-sirr* (Maḳrīzī, iv. 137, 138, 139, 140); in the last mentioned case the office was hereditary, which we also find elsewhere (*ibid.*, p. 9, 98; Suyūṭī, *Ḥusn al-Muḥādḍara*, i. 185: al-ʿIrāqī). The *ḫaṭīb* had frequently a *khalifa*. In the Rāshīda mosque, where in 414 two *ḫaṭībs* were deliberately appointed, they both preached at the same time on the minbar (Maḳrīzī, p. 63 sq.). Later we find in the larger mosques a number of *ḫuṭabāʾ* being appointed who relieve one another.

In Mecca the *ḫaṭīb* was a particularly imposing figure. In his black robe, trimmed with gold, and turban with tail-*ān*, he went up to the minbar between two black banners carried by *muʾadhdhdhins*, while a servant walked in front of him cracking a whip; after he had kissed the Black Stone, the chief *muʾadhdhdhin* went quickly in front of him with the word with which he girded him on the minbar (Ibn Djubair, p. 95 sq.; Ibn Baṭṭūṭa, i. 376 sqq.).

The whip (*farka'a*: Ibn Djubair, p. 96, 97, 144, 156; Ibn Baṭṭūṭa, i. 376, 379, 390, 394; see B. G. A., iv., s. v.) is also used as he goes out and on other occasions. The black was the colour of the 'Abbāsids; it was also used in Egypt (Ibn Djubair, p. 50). The Fāṭimid khaṭīb wore a cap (*kalansuwa*: Maḳrīzī, iv. 44. 22 sq.). The dress of the khaṭīb varied with time and country (cf. *ibid.*, p. 90; B. G. A., iii. 129, 416; Ibn al-Hādīdj, *Madkhal*, ii. 73). In Mecca there were celebrations when a young man became a khaṭīb (Ibn Djubair, p. 149).

Very frequently the khaṭīb and the imām were one individual, especially in the smaller mosques, but sometimes also in larger ones (Yāqūt, *Udabā'*, vii. 174, 179; Maḳrīzī, iv. 124). Ibn al-Hādīdj even regards this as the normal thing (A. al-Madkhal, ii. 59, 60, 73, 74); s. also al-Subkī, *Mu'id*, p. 160 sq. and the article KHAṬĪB.

3. Kāṣṣ and Kārī'.

On these see C 3. Sometimes, in the later usage *wāṣṣ* is used of the official speaker, very like khaṭīb (cf. Ibn Baṭṭūṭa, iii. 9), while al-kāṣṣ is only applied to the street story-teller (al-Subkī, *Mu'id al-N'ram*, p. 161 sq.). The *ḥurrā'* are also frequently appointed to madrasas and particularly to mausoleums (Maḳrīzī, iv. 223; Yāqūt, iv. 509; Subkī, *Mu'id*, p. 162; v. Berchem, *C. I. A.*, i., N^o. 252).

4. The Mu'adhḥin.

According to most traditions, the office of mu'adhḥin was instituted in the year 1, according to others only after the *isrā'*, in the year 2, according to some weak traditions while Muḥammad was still in Mecca. At first the people came to the ṣalāt without being summoned. Trumpets (*būḳ*) were blown and rattles (*nāḳūs*) used or fires lit after the custom of Jews, Christians and Mādjūs. 'Abd Allāh b. Zaid learned the adhān formula in a dream; it was approved by the Prophet and when Bilāl proclaimed it, it was found that 'Omar had also learned the same procedure in a dream (Ibn Hishām, p. 357 sq.; *Khamīs*, i. 404 sq.; Bukhārī, *Adhān*, bāb 1; Zurkāni, i. 121 sqq.). There are also variants of the story, e.g. that the Prophet and 'Omar had the vision, or Abū Bakr or seven or fourteen Anṣār; according to some, the Prophet learned it at the *mi'rāj* from Gabriel, wherefore the introduction of the adhān is dated after the *isrā'*; among the suggestions made, the hoisting of a flag is mentioned (*Sira Ḥalabiya*, ii. 100 sqq.). Noteworthy is a tradition which goes back to Ibn Sa'd, according to which at 'Omar's suggestion at first a *munādī*, Bilāl, was sent out who called in the streets: *al-ṣalāta ḡāmī'atan*. Only later were other possibilities discussed, but the method already in use was confirmed by the dream, only with another formula, the one later used (*Khamīs*, i. 404; *Sira Ḥalabiya*, ii. 100 sq.). According to this account, the consideration of other methods would be a secondary episode and probably the tradition in general represents a later attitude to the practices of other religions. But in Islām other methods were certainly used. In Fās, a flag was hung out in the minarets and a lamp at night (*J. A.*, ser. II, xii. 341). The flag is also found in the legend of the origin of the practice.

The public crier was a well-known institution

among the Arabs. Among the tribes and in the towns important proclamations and invitations to general assemblies were made by criers. This crier was called *Munādī* or *Mu'adhḥin* (*Sira Ḥalabiya*, ii. 170; Lammens, *La Mecque*, p. 62 sqq., 146; do., *Berceau*, i. 229 note; do., *Mo'awia*, p. 150). *Adhān* therefore means proclamation, *Sūra* ix. 3, and *adhḥana*, *mu'adhḥin*, *Sūra* vii. 70 "to proclaim" and "crier". *Munādī* (Bukhārī, *Fard al-Khums*, bāb 15) and *Mu'adhḥin* (*ibid.*, *Ṣawm*, bāb 69; *Ṣalāt*, bāb 10 = *Diriya*, bāb 16; *Sira Ḥalabiya*, ii. 270) are names given to a crier used by the Prophet or Abū Bakr for such purposes. Official proclamations were regularly made by criers (cf. Ṭabarī, iii. 2131, 3). Saḍḍālī and Musailima used a mu'adhḥin to summon the people to their prayers (Ṭabarī, i. 1919, 1932; cf. *Annali dell' Islām*, i. 410 sq.; 638 sq.). It therefore was a very natural thing for Muḥammad to assemble the believers to common prayer through a crier (*nādā l'il* or *ila 'l-ṣalāt*, *Sūra* v. 63; lxii. 9); the summons is called *Nidā'* and *Adhān*, the crier *Munādī* (Bukhārī, *Wuḍū'*, bāb 5; *Adhān*, bāb 7) and *Mu'adhḥin*; the two names are used quite indiscriminately (e.g. *ibid.*, *Wuḍū'*, bāb 5; Ṭabarī, ii. 297 sq.). *Munādī 'l-Ṣalāt*, B. G. A., iii. 182, 12, also *Ṣā'iḥ* "crier" is used (Ṭabarī, iii. 861; *Chron. Mekka*, i. 340).

In these conditions, it was very natural for the crier in the earliest period to be regarded as the assistant and servant of the ruler; he is his mu'adhḥin (Ibn Sa'd, i. 7; Muslim, *Ṣalāt*, tr. 4; Maḳrīzī, iv. 43, etc.; cf. Ṭabarī, ii. 1120). 'Umar sent to Kūfa 'Ammār b. Yāsir as emir and 'Abd Allāh b. Mas'ūd "as mu'adhḥin and wazīr" (B. G. A., v. 165); he is thus the right hand of the ruler. Al-Ḥusain had his *munādī* with him and the latter summoned to the ṣalāt on al-Ḥusain's instructions (Ṭabarī, ii. 297, 298; cf. Ibn Ziyād, *ibid.*, p. 260 and in the year 196 the *āmil* in Mecca, *ibid.*, iii. 861, 13; also *Chron. Mekka*, i. 340). During the earliest period, the mu'adhḥin probably issued his summons in the streets and the call was very short: *al-ṣalāta ḡāmī'atan* (Ibn Sa'd, i. 7, 7; *Chron. Mekka*, i. 340; Ṭabarī, iii. 861; cf. also in the year 196, *Sira Ḥalabiya*, ii. 101; *Khamīs*, i. 404 sq.). This brief summons was, according to Ibn Sa'd, also used later on irregular occasions (i. 7 sqq.; cf. the passage in Ṭabarī). Perhaps also the summons was issued from a particular place even at a quite early date (see D 2a). After the public summons the mu'adhḥin went to the Prophet, greeted him and called him to prayer; the same procedure was later used with his successor: when he had come, the mu'adhḥin announced the beginning of the ṣalāt (*aḳāma 'l-ṣalāt*: cf. Bukhārī, *Wuḍū'*, bāb 5; *Adhān*, bāb 48; *Sira Ḥalabiya*, ii. 104 sq.; Maḳrīzī, iv. 45). The activity of the mu'adhḥin thus fell into three sections: the assembling of the community, the summoning of the imām and the announcement of the beginning of the ṣalāt. With time changes were made in all three stages.

The assembling of the community by crying aloud was not yet at all regular in the older period. During the fighting, Ibn Ziyād in the year 60 called his *munādī* with threats to the evening ṣalāt in the mosque and when after an hour the mosque was full he had the *iḳāma* announced (Ṭabarī, ii. 260). When a large number of mosques had come into existence, the public call to prayer had to be organised lest confusion arose, and the custom

of calling from a raised position became general after the introduction of the minaret. While previously the call to prayer had only been preparatory and the *iḳāma* was the final summons, the public call (*adhān*) and the *iḳāma* now formed two distinct phases of the call to prayer. Tradition has retained a memory of the summoning in the streets, now completely fallen into disuse, when it tells us that 'Othmān introduced a third *adhān*, a call in al-Zawra', which was made before the call from the minaret: this call however was transferred by Hishām b. 'Abd al-Malik to the minaret (Bukhārī, *Ḍjum'a*, bāb 22, 25; *Sira Ḥalabiya*, ii. 110; Ibn al-Hādīdj, *Madkhal*, ii. 45). This may be evidence of the gradual cessation of the custom of summoning the community by going through the streets. Ibn Baṭṭūṭa, but this is exceptional, tells us that the mu'adhdhins in Khwārizm still fetched the people from their houses and those who did not come were whipped (iii. 4 sq.), which recalls Wahhābī measures. When exactly the Sunnī and in distinction to it the Shī'ī formulae, finally developed can hardly be ascertained [see *ADHĀN*]. The call *ḥaiya 'ala 'l-falāḥ* is known from the time of 'Abd al-Malik (65-85) (Akḥṭal, ed. Ṣāliḥānī, p. 254; see Horowitz, in *Isl.*, xvi., 1927, p. 154; on *takbīr* see *ibid.*: on *adhān* formulae see further *Sira Ḥalabiya*, ii. 105 sq.). At first the call was only made at the chief mosque, as was the case in Medina and Mīṣr (Maḳrīzī, iv. 43 *infra*) but very quickly other mosques were also given mu'adhdhins: their calls were sufficiently audible in the whole town. The chief mosque retained this privilege, that its mu'adhdhin called first and the others followed together (Maḳrīzī, iv. 43 *infra*, 44).

The summoning by the imām in Medina was therefore quite a natural thing. The custom, at first associated with the ruler's mosque, was not observed in Medina only (see for 'Othmān and 'Alī: Ṭabari, i. 3059 sq.) but was also usual under the Omayyads. The formula was: *al-Salām 'alarka aiyuka 'l-Amīr wa-Raḥmatu 'llāh wa-Barakātuhu. ḥaiya 'ala 'l-Ṣalāt, ḥaiya 'ala 'l-Falāḥ al-Ṣalāt, yarḥimuka 'llāh* (Maḳrīzī, iv. 45; *Sira Ḥalabiya*, ii. 105). After the alteration in the *adhān* and the greater distance of the ruler from the mosque, to summon him was no longer the natural conclusion to the assembling of the community. In the 'Abbāsīd period and under the Fāṭimids there was a survival of the old custom, in as much as the mu'adhdhins ended the *adhān* call before the *ṣalāt al-fajr* on the minarets with a *salām* upon the caliph. This part of the mu'adhdhin's work was thus associated with the first *adhān* call. When Ṣalāḥ al-Dīn came to power, he did not wish to be mentioned in the call to prayer, but instead he ordered a blessing upon the Prophet to be uttered before the *adhān* to the *ṣalāt al-fajr*, which after 761 only took place before the Friday service. A muḥtāsib ordered that after 791 in Egypt and Syria at each *adhān* a *salām* was to be uttered over the Prophet (Maḳrīzī, iv. 46; *Sira Ḥalabiya*, ii. 110). Ibn Djubair relates that in Mecca after each *ṣalāt al-maghrib*, the foremost mu'adhdhin pronounced a *du'a* upon the 'Abbāsīd Imām and on Ṣalāḥ al-Dīn from the Zemzem roof, in which those present joined with enthusiasm (p. 103) and according to Maḳrīzī, after each *ṣalāt* prayers for the Sultān were uttered by the mu'adhdhins (iv. 53 sq.). Another relic of the old custom was that

the trumpet was sounded at the door of the ruler at times of prayer; this honour was also shown to 'Aḍud al-Dawla in 368 by order of the caliph (Ibn Maskawaih, vi. 499; Cairo 1315, p. 396).

The *iḳāma* always remained the real prelude to the service and is therefore regarded as the original *adhān* (Bukhārī, *Ḍjum'a*, bāb 24 sq.). In the earliest period it was fixed by the arrival of the ruler and it might happen that a considerable interval elapsed between the summoning of the people and the *iḳāma* (cf. Ṭabari, ii. 260, 297 sq.). The times were later more accurately defined; one should be able to perform 1-3 *ṣalāts* between the two calls (Bukhārī, *Adhān*, bāb 14, 16). Some are said to have introduced the practice of the mu'adhdhin calling *ḥaiya 'ala 'l-ṣalāt* at the door of the mosque between the two calls (*Sira Ḥalabiya*, ii. 105). From the nature of the case the *iḳāma* was always called in the mosque; at the Friday service, it was done when the imām mounted the minbar (Bukhārī, *Ḍjum'a*, bāb 22, 25; *Sira Ḥalabiya*, ii. 110; Maḳrīzī, iv. 43) while the mu'adhdhin stood in front of him. This mu'adhdhin, according to some, ought to be the one who called the *adhān* upon the minaret (*Sira Ḥalabiya*, ii. 109), while Ibn al-Hādīdj ignoring the historical facts only permits the call from the minaret (*Madkhal*, ii. 45). In Tunis, the *iḳāma* was announced by ringing a bell as in the churches (Zarkashī, transl. Fagnan, in *Rec. Soc. Arch. Constantine*, 1894, p. 111 sq.). A similarity to the responses in the Christian service is found in the fact that the call of the mu'adhdhin, which contains a confession of faith, is to be repeated or at least answered by every one who hears it (Bukhārī, *Ḍjum'a*, bāb 23); this is an action which confers religious merit (Ibn Kuṭlūbughā, *Ṭabaḳāt al-Ḥanafiya*, ed. Flügel, p. 30). It is possible that we should recognise in this as well as in the development of the formulae the influence of Christians converted to Islām (cf. Becker, *Zur Gesch. d. islam. Kultus*, in *Isl.*, iii., 1912, p. 374 sqq. and *Islamstudien*, i. 472 sqq. who sees an imitation of the Christian custom in the *iḳāma* in general; on the possibility of Jewish influence see Mittwoch, in *Abh. Pr. A. W.*, 1913, Phil.-Hist. Cl. 2).

The mu'adhdhin thus obtained a new importance. His work was not only to summon the people to divine service, but was in itself a kind of religious service. His sphere of activity was further developed. In Egypt we are told that Maslama b. Mukhallad (47-62) introduced the *tasbīḥ*. This consisted in praises of God which were uttered by the mu'adhdhins all through the night until *fajr*. This is explained as a polemical imitation of the Christians, for the governor was troubled by the use of the *naṣāḳiz* at night and forbade it during the *adhān* (Maḳrīzī, iv. 48). In the time of Aḥmad b. Ṭūlūn and Khumārāwaih, the mu'adhdhins recited religious texts throughout the night in a special room. Ṣalāḥ al-Dīn ordered them to recite an *'aḳīda* in the night *adhān* and after 700 *dhikr* was performed on Friday morning on the minarets (*ibid.*, p. 48 sq.; *Sira Ḥalabiya*, ii. 111). In Mecca also the mu'adhdhins performed *dhikr* throughout the night of the first Shawwāl on the roof of the ḳubba of the Zemzem well (Ibn Djubair, p. 155, 156; cf. for Damascus: Maḳrīzī, iv. 49). Similar litanies are kept up in modern times as well as a special call about an hour before dawn (*Ebed, Tarḥīm*; see Lane, *Manners and Customs* [Everyman's Library],

p. 75 sq.; cf. p. 86; Snouck Hurgronje, *Mekka*, ii. 84 sqq.).

The original call of the mu'adhdhin thus developed into a melodious chant like the recitation of the Qur'an. Al-Makdisi tells us that in the fourth century in Egypt during the last third of the night, the aḥḥān was recited like a dirge (*B. G. A.*, iii. 205). The solemn effect was increased by the large number of voices. In large mosques, like that of Mecca, the chief mu'adhdhin called first from a minaret, then the others came in turn (*Chron. Mekka*, iii. 424 sq.; Ibn Djubair, p. 145 sqq.; cf. *B. G. A.*, vii. 111, 1 sqq., et supra). But in the mosque itself the *ikāma* was pronounced by the mu'adhdhins in chorus on the dakka (see D 2e) erected for this purpose, which is also traced to Maslama. In the third and fourth centuries we hear of these melodious recitations (*taḥrīb*) of the mu'adhdhins on a raised podium in widely separated parts of the Muslim world (Šan'a', Egypt, *Khnrāsān*: *B. G. A.*, iii. 327; vii. 111; the expression *al-mutala'ibin*, "the musicians", if correct, probably refers to the mu'adhdhins: *B. G. A.*, iii. 205; cf. also Kindī, *Wuḥāt*, p. 469; for Fāis we are expressly told that the mu'adhdhins call without *taḥrīb*: *B. G. A.*, iii. 439, 17). Sometimes in large mosques they were stationed in different parts of the mosque to make the imām's words clear to the community (*tabliḡ*). The singing, especially in chorus, like the *tabliḡ*, was regarded by many as *bid'a* (Kindī, *op. cit.*; *K. al-Madkhal*, ii. 45 sq., 61 sq.; *Sira Ḥalabiya*, ii. 111). In other ways also the mu'adhdhins could be compared to deacons at the service. The khaṭīb on his progress to the minbar in Mecca was accompanied by mu'adhdhins and the chief mu'adhdhin girded him with a sword on the minbar (Ibn Djubair, p. 96 sq.).

The new demands made on the mu'adhdhins necessitated an increase in their number, especially in the large mosques. The Prophet in Medina had two mu'adhdhins, Bilāl b. Ribaḥ, Abū Bakr's *maḥlūl* and Ibn Umm Maktūm, who worked in rotation. 'Othmān also is said occasionally to have called the aḥḥān in front of the minbar (i.e. the *ikāma*) (Maḡrizī, iv. 43). It is therefore regarded as commendable to have two mu'adhdhins at a mosque (Muslim, *Ṣalāt*, tr. 4; cf. Subkī, *Mu'ad*, p. 165). Abū Maḡdhūra was also the Prophet's mu'adhdhin in Mecca. Under 'Omar, Bilāl's successor as mu'adhdhin was Sa'd al-Karaz, who is said to have called to prayer for the Prophet in Ḳubā' (Maḡrizī, *op. cit.*; cf. *Sira Ḥalabiya*, ii. 107 sqq.). In Egypt under 'Amr, the first mu'adhdhin in al-Fuṣṭāt was Abū Muslim: he was soon joined by nine others. The mu'adhdhins of the different mosques formed an organisation, the head (*arīf*) of which, after Abū Muslim, was his brother Shuraḥbil b. 'Amir (d. 65); during his time Maslama b. Mukhallad built minarets (Maḡrizī, iv. 44).

The office of mu'adhdhin was sometime hereditary. The descendants of Bilāl were for example mu'adhdhins of the Medina Mosque in al-Rawḍa (Ibn Djubair, p. 194); we also find in Medina the sons of Sa'd al-Karaz officiating (Ibn Ḳutaiba, *Handb. d. Gesch.*, ed. Wustenfeld, p. 132, 279), in Mecca the sons of Abū Maḡdhūra (*ibid.*, p. 278; *Sira Ḥalabiya*, ii. 106), in Baṣra the sons of al-Mundhir b. Ḥassān al-'Abdī, mu'adhdhins of 'Ubad-allāh b. Ziyād (Ibn Ḳutaiba, p. 279); it is however possible that this was really the result of a system of guilds of mu'adhdhins. In the ḡawāmi'

of the Maghrib in the eighth century each had regularly four mu'adhdhins who were stationed in different parts of the mosque during the ṣalāt (*K. al-Madkhal*, ii. 47 supra); but there were often quite a large number. In the Azhar mosque in the time of al-Ḥākim there were fifteen, each of whom was paid two dinārs a month (Maḡrizī, iv. 51). Ibn Baṭṭūṭa found seventy mu'adhdhins in the Mosque of the Omayyads (i. 204). About 1900, in Medina there were in the Mosque of the Prophet fifty mu'adhdhins and twenty-six assistants (Batānūnī, *Rihla*, p. 242). Blind men were often chosen for this office; Ibn Umm Maktūm for example was blind (Bukhārī, *Aḥḥān*, bāb 11; *Sira Ḥalabiya*, ii. 104; cf. Lane, *op. cit.*, p. 75). The Prophet is said to have forbidden the ḥakīf to pay a mu'adhdhin (Wākīdī-Welhausen, p. 383). 'Othmān is said to have been the first to give payment to the mu'adhdhins (Maḡrizī, iv. 44) and Aḥmad b. Ṭūlūn gave them large sums (*ibid.*, p. 48). They regularly received their share in the endowments, often by special provisions in the documents establishing the foundations.

The mu'adhdhins were organised under chiefs (*ru'asā'*: Maḡrizī, iv. 14). In Mecca the *ra'is al-mu'adhdhinūn* was identical with the *mu'adhdhin al-Zamzamī* who had charge of the singing in the upper story of the Zamzam building (*Chron. Mekka*, iii. 424 sq.; Ibn Djubair, p. 145; cf. Snouck Hurgronje, *Mekka*, ii. 322). The *ra'is* was next to the imām but subordinate to him; in certain districts, it was the custom for him to mount the pulpit during the sermon with the imām (when the latter acted as khaṭīb) (*K. al-Madkhal*, ii. 74; correct above p. 928, l. 31 sq. in keeping with this). The position which they originally occupied can still be seen from the part which they play in public processions of officials, e.g. of the *K'ādī 'l-Kuḡāt*, when they walk in front and laud the ruler and his vizier (Maḡrizī, ii. 246).

Closely associated with the mu'adhdhin is the *muwaḥḥit*, the astronomer, whose task it was to ascertain the qibla and the times of prayer (Subkī, *Mu'ad*, p. 165 sq.); sometimes the chief mu'adhdhin did this (Snouck Hurgronje, *Mekka*, ii. 322).

5. Servants.

According to Abū Huaira, the Mosque of the Prophet was swept by a negro (Bukhārī, *Ṣalāt*, bāb 72, cf. 74). The larger mosques gradually acquired a large staff of servants (*khudām*), notably *batwāb*, *farrāsh*, and water-carriers (cf. e.g. v. Berchem, *C. I. A.*, i. N^o. 252). In Mecca there have always been special appointments, such as supervisor of the Zamzam and guardian of the Ka'ba (*sā'im*, pl. *sadana*, also used of the officials of the mosque: Maḡrizī, iv. 76; cf. Ibn Djubair, p. 278). In Ibn Baṭṭūṭa's time the servants (*khudām*) of the Mosque of the Prophet were eunuchs, particularly Abyssinian; their chief (*shaykh al-khudām*) was like a great emir and paid by the Egyptian-Syrian government (i. 278, 348). cf. the title of an emir of the year 798: *shaykh mashā'ikh al-sāda al-Lūṣiyyūn bi 'l-haram al-sharif al-naṣrānī* (v. Berchem, *C. I. A.*, i. N^o. 201). In the Mosque of Jerusalem about 300 A.H., there were no less than 140 servants (*khudām*: *B. G. A.*, v. 100); others give the figure 230 (I.e. Strange, *Palestine*, p. 163) and according to Mudjir al-Dīn, 'Abd al-Malik appointed a guard of three hundred black slaves here, while the actual menial work was done by

certain Jewish and Christian families (Sauvaire, *Hist. Jér. et Hébr.*, p. 56 sq.).

In other mosques superintendents (*kaiyim*, pl. *kaṣama*) are mentioned, a vague title which covered a multitude of duties: thus the Madiasa al-Madji-diya had a *kaiyim* who looked after the cleaning, the staff, the lighting and water-supply (Maḳrizi, iv. 251), the Azhar Mosque had one for the miḳda'a, who was paid twelve dinārs (*ibid.*, p. 51) and also 4 *kaṣama*, who were paid like mu'adhdhins (two dinārs a month) and are mentioned between them and the imāms, probably supervisors of the staff (*ibid.*, p. 51). In other cases a *kaiyim al-djāmi'*, sometimes a *kāḍi*, is mentioned, who is apparently the same as the imām, the *khaṭīb* or some similar individual of standing (*ibid.*, p. 75, 121, cf. 122; cf. Ibn Djabair, p. 51). A *mushrif*, inspector, is also mentioned, e. g. in the Azhar (Maḳrizi, iv. 51).

II.

The Mosque in the Dutch East Indies.

In the Dutch East Indies, two kinds of mosque have to be distinguished, the mosque for the Friday service — these alone are called mosques (*masjid*, also *masjid*) — and simple houses of prayer. This second category is found all over the country, especially in smaller villages and owes its origin, partly to private initiative and partly to public efforts; they have native names (*laḡgar* [Javan.], *tayug* [Sum.], *surau* [Malay]). The *laḡgar*, or whatever it may be called, of the village is a centre at which the *ṣalāt* can be performed, but it also serves other purposes of general interest. The upkeep of the building is the affair of the community and in particular one of the tasks of the religious official of the village. The upkeep of the other *laḡgars*, erected by private individuals, is left to them. The building stands on its own site and is maintained by the founder or his descendants. The owner cannot however refuse admission to strangers who desire to use it for the *ṣalāt* or as shelter the night. Such private chapels are always found beside the Muḥammadan seminaries (Jav. *pasantren*). We sometimes find that these *laḡgar* are endowed as *wakf* (Jav. Mal. *wakap*). The village *laḡgar* on the other hand has a more public character.

The mosques, i. e. the *masjid al-djāmi'*, are found in larger places usually in those which are also centres of administration. Their erection and maintenance is regarded as a duty of the Muslim community; every one contributes his share in materials, work or money, according as he is requested and is able to do. When a new mosque is to be built, not only is the site necessary for the building railed off, but also that for the dwellings of the staff and other people, whose piety induces them to seek a dwelling-place near the mosque; here they find the spot, where in their opinion they can be best benefitted by the atmosphere of their faith, spiritually and socially. This mosque area, at least the mosque itself and its immediate neighbourhood, is popularly regarded as *wakap* although the conditions necessary to make it an endowment in the sense of the *shari'a* are not fulfilled. In *wakap* affairs, the *shari'a* is regarded as authoritative and not affected by common law.

Each mosque has its own staff, of the size it

requires; in the large mosques there may be 40 or more. In Java and Madura, they form a regular hierarchy; this holds also for the relation of the larger and smaller mosques to each other. A mosque serves the requirements of a definite area; the staff of the mosque at the chief place in a smaller district is subordinate to that of a larger one and so on up to the capital of a regency (which is the highest native administrative unit). At each mosque a superintendent is appointed and the head of the mosque at the capital of the regency is regarded as head of all the mosque officials in the whole district. On the other islands the native, political organisation is less developed, the hierarchy of the secular power therefore less influenced by it. Generally speaking the personnel of the mosque is the same everywhere; the more the secular hierarchy is graded, the more noticeable is the classification of the personnel of the different mosques into various ranks; but we always find one recognised as the head of the staff.

The superintendent of a mosque in Java and Madura bears the general name *pañ[h]ulu*. His main duty is to see that the Friday service is held; he can act as imām at it himself but usually he leaves this to someone else. Besides him there are a large number of other officials, whose names usually are taken from the Arabic and whose duties are very varied; among them however we find the *kētib* (Jav. Ar. *khaṭīb*). He delivers the sermon; but this also can be done by some one else. The maintenance of the building is also the duty of the superintendent. The expenses have to be met from the money collected by the staff, of which he has control (see below).

In Java and Madura generally, and very often elsewhere, the superintendent of a mosque is also an official, i. e. he is the legal authority who is present at the marriage ceremony; sometimes he acts as *wakil* of the *wali*. He is also authorised to give in marriage women who have no blood-relative to act as *wali*; in this capacity he is called *wali ḡakim*. Marriages are concluded in the mosque; it is exceptional for the *pañ[h]ulu* to perform the marriage ceremony in person; he usually leaves this to one of his subordinates. People of high rank marry in the house; on these occasions the *pañ[h]ulu* himself acts. The same holds *mutatis mutandis* of *ṭalāk* and *ruḡū'*; these also are reported to the *pañ[h]ulu* and recorded by him along with marriages in a register.

In smaller centres, where there are only *laḡgar* (chapels) there is an official, who assists the villagers in matters of Muḥammadan law; he belongs to the village administration and may be regarded as the lowest rank of the mosque hierarchy; people desirous of matrimony apply to him; he accompanies them to the mosque of the district to which his village belongs; he also acts for the *pañ[h]ulu* as *amil* of the *ḡakat* (*zakāt*) and *pitra* (*zakāt al-fiṭr*) (see below). From this capacity comes the name he bears in some parts of the country: *amil*.

The appointment of the mosque officials (as distinct from the village officials in whose cases the local customary law is followed) is not done everywhere in the same way. In Java and Madura, it is in the hands of the native chiefs who are also the highest state officials; on the other islands of the East Indian Archipelago, in so far as Islām prevails on them, the wishes of

the Muslim community are more or less respected; the secular authorities however exert a great influence.

The revenues of mosque officials come from various sources: donations, freewill offerings, in cases where their services are required: — at religious festivals, burials, etc. — need only be mentioned. The chief source of revenue is the so-called marriage fees, less from *djakat* and *pitra*; these are administered and distributed by the superintendent of the mosque. As already mentioned the mosque and its accessories have to be maintained out of the income. Neglect of this duty has induced the chiefs in Java and Madura to intervene and form a special fund, the so-called mosque fund for this purpose. This was arranged as follows: a certain percentage of marriage fees and of the *djakat* and *pitra* was set aside; the chiefs took charge of these funds. The revenues of the mosque officials earmarked in this way were however only a small fraction of the total; the greater part, perhaps $\frac{4}{5}$ or more, remained at the disposal of the officials. This same procedure is found here and there on other islands but is not general.

The Dutch government maintains a neutral attitude to Islām, in all business matters of the mosque also. It takes no part in the building or restoration of mosques; only very exceptionally does it give a contribution in money for such purposes. This was done for example in Kuta Raja (Atjeh), where the chief mosque, which had been destroyed during fighting, was rebuilt from government funds in 1881. But this act of the authorities was not appreciated by the Muslim population; in general, the government officials only see that no compulsion is used to procure materials or funds for the building or maintenance of mosques.

With the end of the sixteenth century the Colonial administration began to pay some attention to the regular organisation of the staffs of the mosques, primarily in Java and Madura. Their measures aimed at maintaining things as they were and at getting rid only of abuses and such customs as had proved to be a burden on the people.

Djakat and *pitra* are regarded as "freewill offerings" by the colonial authorities; the native chiefs and village authorities were therefore forbidden to interfere with them. It is left to the individual to give them or not; he is also free to give his gifts to whom he pleases. The giving of *djakat* varies very much with places and persons and is smallest in Central Java. It is concerned almost entirely with agricultural produce, especially with the staple product and even then it rarely happens that the legal quantity is given. In practice the *djakat*, where it is levied, is collected by the village mosque officials and handed over to the *pañ[h]ulu*; he then distributes it in a certain proportion among his subordinates. The proceeds go almost entirely to the staff of the mosque and the village officials, firstly because they are *āmil* and secondly because they consider themselves *ṣakīr* and *maskin*: they have, as they say, no means of livelihood like other people.

Pitra is paid regularly: it happens very frequently with this "donation" that it is paid direct to those entitled to it and not through the officials. Nevertheless a considerable portion goes the same way as the *djakat*.

The government confined itself to seeing that

the *djakat* and *pitra* collected by the *Pañ[h]ulu*, was distributed as it ought to be according to custom but this was not always done.

Marriage, *ṭalāk* and *ruḍjū* have been regulated by a colonial law. The *pañ[h]ulu* or his deputy was confirmed in his already mentioned functions as an official with legal standing. At the same time, others than the appointed *pañ[h]ulu* were forbidden by the secular authority to perform marriages. The registration of marriages, *ṭalāk* and *ruḍjū* was improved. The fees and their distribution among the staff were fixed according to local custom. Every effort is made to keep these as low as possible. Similar regulations were later promulgated for the other islands.

As to the funds of the mosques, it was ascertained that there was more money in them than was required for the maintenance of the building and that they were being used for other purposes than the traditional ones. This caused the government to place the funds of the mosques under the joint control of European and native authorities. This holds particularly of Java and Madura; but wherever else the mosque had funds, these were retained.

The regulations promulgated for Java and Madura have recently been attacked by Muslims; they wanted as far as possible to withdraw everything relating to marriage from government interference. The intervention of the government is now (since 1929) limited to the fact that parties who wish to enter into matrimony have to report themselves to a registrar. *Ṭalāk* and *ruḍjū* have also to be reported to him. The marriage ceremony may be performed by others, but they are under the control of the registrar; this last method is now the exception: the majority continue to go to the district officer.

In one other respect the mosque has come under the control of government regulations. In Muslim districts of the East Indian Archipelago hardly a mosque is built without the consent of the local secular authority. Although it does not have to give its approval expressly, no work will be begun until the plan is approved. In Java and Madura the chiefs have long held themselves entitled to decide on the question whether a new mosque should be erected, though they justified this claim by saying among other things that a new mosque, if not desired by the entire community, may easily lead to jealousy and disputes about the validity of the Friday service etc., which might result in general unrest.

The custom of making the site of a mosque *wakaf* — or at least regarding it as such, — results in it being impossible to use such pieces of ground for public purposes, even if it is long since the mosque buildings had been removed from them.

These and other difficulties induced the government to require the approval of the chiefs for the building of new mosques on Java and Madura and also that the sites should become *wakf*. It was however expressly laid down that there can be no possible question of interfering with the religious requirements of the Muslims; the chief can only refuse his consent in the public interest.

The law of the Dutch Indies demands the presence of the *pañ[h]ulu* or some one with similar functions, at the courts for Muslim natives and also when a native appears as accused or plaintiff

in a court, to assist the court as adviser. An endeavour is made to get the most suitable people as advisers: they are officially appointed. It was found to be desirable to combine this office and that of the administrator of the mosque in the one individual; and this is now the usual practice. The influence of the government on the appointment of the personnel of the mosque, which otherwise is reserved for the chief, has thus been increased, especially as in the appointment of the assistant[s] of the *pañ[h]ulu*, the ability of acting as adviser is also taken into account.

The bonds which connect the personnel of the mosque and the secular authority are thus fairly close; — in the opinion of some too close. In recent years the effort has been made in nationalist Muslim circles, to loosen or even break all secular connections in the fulfilment of religious duties. One way of doing this is to get private individuals to found mosques with the help of similar-minded people. This is quite possible in the conditions described and is still done.

III.

Architecture.

The mosque with an open quadrangle was the natural form for the hot southern lands of Islam, and is simply a continuation of the many types of pillared halls and chambers which were to be found all over the near east, beginning with the Egyptian temples and coming down to the apadanas of the Persians and the stoas of the Greeks, of which of course only the latter influenced the development of the early Muslim mosque. This consists of a courtyard or quadrangle (*ṣaḥn*) usually very large which is surrounded by cloisters (*ṣiwāk*) which are either connected by flat beams, or more usually by arches and covered by a flat roof. At the *ḳibla* side the *ṣiwāk*s were deeper so that the rows of worshippers could find shelter from the sun. The supports were at first very often columns taken from ancient buildings and where these were not obtainable, were of wood or brick. The pillared hall at the *ḳibla* side was called *al-ṭiwān al-ḳibli* or *ṭiwān*. A portion of the *ṭiwān* was shut off by a railing and reserved for princes and priests. On the quadrangle side of the *ṭiwān* is a podium (*dikka*) supported by pillars and reached by a staircase or ladder; this is for the officials of the mosque, who repeat the words of the *imām* during the service to make them audible on all sides. At the end of the *ṭiwān* the *miḥrāb* is set into the middle of the wall and beside it is the *minbar*. In the centre of the court is a well, originally intended for ritual ablutions but these were as a rule performed in rooms specially set apart for the purpose.

These mosques with open quadrangle were built in the first century A. H. on a large scale, as they were primarily intended to be mosques for the troops, whence they were called *askar* mosques.

The *Djāmiʿ Ibn Ṭūlūn* in al-Ḳatai, Cairo is a comparatively well preserved specimen of one of these *askar* mosques. It was built in 264—267 (876—879) and measures 466 × 383 feet and its court is 300 feet square. The principal *liwān* had originally five rows of pillars but has now only four since the first one fell down, the others had two rows each, which are connected by pointed arches, parallel to the walls, thus still following the type of the Hellenistic agora. The piers are built of brick and into the corners are let small columns. Between the pillars are pointed arches and ornamental windows with little pillars at the sides. Similar windows with stucco gratings pierce the outer walls. The roof, most of which is now modern, was made of palm trunks with sycamore planks nailed over them. In front of the *miḥrāb* was a *maḳṣūra* for the ruler. This *maḳṣūra* was as here usually distinguished by its cupola. In the later mosques of this kind an aisle of some width led through the pillars up to the *maḳṣūra*, usually through the naves of the *ṭiwān* so that an aisle was created for a ceremonial procession by the ruler into the mosque. In the *Djāmiʿ Ibn Ṭūlūn* as in the *askar* mosques of the third (ninth) century in general there are no transepts as yet so that the succession of pillars is quite uniform. The *miḥrāb* projects out as the wall juts out a little here and the niche has two steps cut into the wall and then projects in a semi-circle. Two marble pillars are built into the angles formed by the projection of the niche, which have been taken from older Christian buildings. The white stuccoed surfaces of the walls are ornamented along the upper margins and archivolts with decorative strips of carving, which were originally painted. The interiors of the arches were also originally decorated but are now for the most part whitewashed. Immediately below the roof on a wooden frieze runs a *Kūfic* inscription two miles long with *sūras* from the *Qurʾān*, the letters of which are cut out of wood and nailed on to the boards. The mosque has a battlemented wall, which again was surrounded on three sides by a second outer wall so that the whole area was square in shape and the outer courtyards put some distance between the quadrangle of the mosque and the surrounding streets. The outer walls of these early army mosques were turreted like a fortress with round projecting towers even though not intended for defence. This was not the case with the Mosque of Ibn Ṭūlūn. On the *nunatet*, which stood outside the mosque among the outer buildings on the north side and like the mosque itself was restored under the Mamlūk Sultān Ladjin, cf. the article *MANĀRA*. Similar mosques for the troops were built in all the garrison towns of the young empire, like Baṣra, Kūfa, Baghdad, Samarra, Raḳka, in Cairo, Ḳahawān and elsewhere.

The type of mosque with quadrangle and piers or columns was however by no means limited to the mosques for the troops but was general in the early centuries of Islām and survived much longer than this, just as the early Christian basilica had done. Many pillared mosques, the foundation of which dates back to the early centuries A. H. are still in use, like the mosque of the Umayyads in Damascus, the great mosque of Sidi Uḳba in Ḳarawān, many mosques in the Maghrib, where they have frequently remained faithful to this type down to the present day, the *Djāmiʿ al-Azhar* and others in Cairo. In towns that are cold in winter, the

ḥarām was shut off by doors and windows from the quadrangle as in the pillared mosques in Konya, Siwās and Turkish towns, but also in Damascus and Córdoba.

The Domed Mosque. The great mosques built on piers — in so far as they were not simply army mosques — were primarily used for the Friday service in the larger cities. In addition to these, there were in every town several smaller mosques either for the use of the separate quarters or for special purposes. For these also in Egypt and the lands of the Maghrib the type of pierced mosque with open quadrangle persisted while in Mesopotamia, the lands of the Caucasus and Persia, suiting the ruder climate and undoubtedly stimulated by the influence of the Christian churches the closed domed mosque became the type. Some of these mosques (e. g. in Werāmīn) reveal with their combination of a long building and a dome such a striking similarity to the older, mainly Nestorian, churches that M. Dieulafoy and van Berchem comprised them under a type to which they gave the name "mosquée-église". Typical mosques of this kind with a central domed chamber and internal piers are to be found in Tabriz, Erīwān, Diyār Bakr etc. It was only under the Ottomans in Asia Minor that the domed mosque attained the next stage in its development and it reached its zenith — not by chance — where the similar Christian style of church architecture had reached its final development, namely in Constantinople.

Madrasa. The foundation for the further development of the mosque with a great open quadrangle, as perfected under the Saldjūks in the east, was the type of madrasa which had in the meanwhile been evolved [cf. the articles MADRASA and ARCHITECTURE]. The ideal plan of a madrasa is an open court with vaulted cloisters opening on a central quadrangle in the centre of the four façades, i. e. at the intersection of the axes. This plan however only became regular in Persia and we only find a few specimens exceptionally in Cairo. On both sides of these four iwāns are the cells and dwelling apartments of the teachers and pupils usually in two stories. In contrast to the pillared mosque with an open court, which arose out of a Hellenistic Mediterranean type of building, the model for the development of the eastern madrasa, which combined both school and monastery, was on the one hand the Indian Buddhist monastery and on the other the Khurāsān iwān, while the madrasa of Syria, Egypt and the Maghrib was influenced by native types of mosque and house. The Turkish peoples, as representatives of the Sunna and its propaganda through the madrasa, before they invaded Persia and became Muslims, were mainly under the influence of Buddhism and Nestorian Christianity, which survived much longer in Turkestan and the Taïm basin than in Persia and still was very important as late as the ninth century A. D., as is evident from the narrative of Wilham of Rubruck. The Turks before they adopted Islām had, among the Buddhists and Nestorians, become acquainted with the missionary side of religion. This seems to explain the prominent part later played by them as propagandists of Islām in Persia and Asia Minor. It must have seemed to them that the most suitable centre of propaganda was the same type of building as that used by the Nestorians and Buddhists, namely the monastery. The Buddhist monasteries which were courtyards with cells built round them, numbered hundreds

in Central Asia. They are as a rule oblong quadrangles with cells built round them and a stūpa in the centre and several large rooms for meetings. In Persia, under the influence of these buildings, the type of quadrangle and cells with 4 iwāns in the form of a cross became established as the ideal scheme of a madrasa. That this plan which was architectonic in origin was also the practical ideal for the fourfold doctrine of the Sunnis, was a fortunate combination, which in some large state madrasas became of practical significance.

The Persian Mosque-Madrasa. The quadrangle surrounded by cells with four iwāns of the Persian Madrasa was now combined with the old pierced mosque and the result was a very happy combination: the mosque-madrasa (as we Europeans call it). The important result of this combination was from the architectonic point of view the monumental quadrangle with cells, which now replaced the old courtyard with pillars or piers which was no longer architectonically satisfactory and was also foreign to the spirit of Persian architecture. But with this transformation of the quadrangle a change was brought about in the spiritual aspect of the mosque. It symbolised the transformation which had meanwhile taken place internally and externally in Islām from a combative, conquering religion organised on military lines into a spiritual attitude to life, controlled by theologians and men of learning. The fighting, however, which was still conducted by military forces, and the conquests had now become more or less the private business of the secular rulers, above whom was the religious propaganda of the Muslim clergy. The most instructive example of this penetration of the older type of mosque by the Persian quadrangle surrounded with cells is the Masjid-i Djum'a in Isfahān. This mosque, like all the Friday mosques in Persia was originally built as a pillared mosque and had been frequently enlarged. At the present day, as the plan shows, it consists of colonnades which have in course of centuries been added to one another from time to time. A great deal of wood must have been built into its framework, since Yākūt tells us that during the siege of Isfahān by the Saldjūk Tughlīl Beg (442 = 1050/1051) the mosque was destroyed to obtain wood. From the contemporary accounts that have been handed down, we further learn that the Saldjūk Sulṭān Malik Shāh when the mosque was completely restored by his orders began with roofing the walls of the courtyard. He is credited with building the southern iwān. The other three iwāns are of their present form of later origin. By covering over this huge quadrangle, the courtyard, the only characteristic architectural feature of the mosque, received the necessary unity and importance. (Around it, this mosque, like most Friday mosques, was completely surrounded by bazaars which made any external development impossible, the quadrangle was therefore all the more important) The rows of cells had here no longer any practical significance as dwellings but became an architectural feature. Behind the southern iwān, directed towards Mecca, a large domed hall was built as a sanctuary, in the south wall of which were the mihrāb and pulpit. Here the solemn Friday service was held. Thus the Friday mosque was created of the type which became general in Irān and Turkestan. Mosques and madrasas were frequently combined with mausoleums [cf. the article ARCHITECTURE].

The Mosque building in the early period. Muhammad left no instructions as to how future mosques were to be built so that the earliest mosques varied considerably and we can hardly talk of a fully developed type before the third (ninth) century. The Prophet's house in Medina, where he performed the ṣalāt with his faithful followers and instructed them, was a *dār* of the usual local type quite unsuitable as a model for the future mosque. It consisted of a courtyard surrounded by a brick wall with living rooms and outhouses along the inner wall. As was usual and still is in every house of this kind in Arabia and other tropical lands, palm trunks were put up in the courtyard and a flat roof of palmleaves put over them and covered with a layer of clay. This is how the earliest accounts would lead us to picture the Prophet's house. In the courtyard was a reception tent furnished with fine carpets and materials, for Muhammad did not despise the nomadic luxuries and comforts of his people (cf. H. Lammens, *Fatima et les filles de Mahomet* and *do.*, in *J. A.*, 1915, p. 238 sqq.). Around this establishment of the Prophet, his wife and daughters, lay the court in which his friends and followers used to assemble for the daily prayer and which thus became the first quadrangle of the first mosque. The use of a typical Arabian courtyard arranged in this way as a masjid however gives us no idea of the future imposing building. For half a century, it is true, they were content with this primitive mosque, during the patriarchal period of the first four caliphs, out of respect for the Prophet's mosque; but the first Omayyad caliph Walid I who in transforming the church of St. John in Damascus into the Mosque of the Omayyads had acquired experience "in matters of building" and connections with builders, on the occasion of his pilgrimage to Medina in 90 (709) ordered the primitive mosque which had served the purpose so far, to be removed so that an entirely new building could be erected on its site, which was extended. For this purpose, as Samkhūdi tells us, he asked the Byzantine emperor for skilled workmen and shells for the ornamentation, which were sent to him. "The walls and columns of the new mosque were built of large hewn stones of equal size and bound with plaster, ornamentation in shell and marble was carried out and the roof built of palm wood and covered with gold paint". Instead of the early primitive mosque, Walid had thus given the Medinese a substantial pillared mosque, like the first mosques which he had built in Syria with the help of Byzantine artisans from pillars plundered from Hellenistic colonnades and Christian churches. It was only in this Hellenicised form that the mosque of Medina could have influenced the further development of the mosque in so far as we can speak of such influence at all. (It was given its present form by the Mamlūk Sultān Kā'it Bey in 888 = 1483). The ordinary Arab village mosque is different in appearance. It has retained the form of the Arab pre-Islamic *muṣalla*. This "place of ṣalāt" was and still is a long hall supported by pillars, open on one side without a courtyard and having no *miḥrāb* and *minbar*.

The lack of any generally binding or recognised rules or tradition is shown by the varying form of the mosque in the early centuries A. H. The earliest mosque of the general 'Amr in Fustāt

of 21 (642) was an enclosed rectangular hall without a courtyard, with a *qibla* which was not yet marked by a *miḥrāb*. The first mosque in Baṣra was, like the whole city of encampments, built of reeds so that it could be taken down with the camp. In the year 16 or 17 A. H. Abū Mūsā, the newly appointed governor of Baṣra, built a mosque of unbaked brick and clay with a roof of grass. It was only under the Omayyad governor Ziyād that a mosque was built of brick and plaster with a roof of teak and pillars, which came from the quarries of Ahwāz on the Kārūn river. The first mosque in Kūfa on the other hand of 17 A. H. was "a covered hall... which had no side wings nor buildings behind it" (Tabari); before it was an open square "and so, continues Tabari, were all the mosques except the *Masjd al-Ḥarām* (i. e. Mecca); out of respect for the sanctity of the latter, it was not copied in the other mosques". This mosque also was rebuilt by Ziyād, governor for the first Omayyad Mu'awiya I (41-62 = 661-680). For it he had plans drawn up by Mazdaean architects: "Uno degli architetti gli fece un disegno sul modello degli edifizii cretti dai rei sassanidi, ossia un vasto colonnato con tetto e chiuso ai lati" (cf. *Annali dell' Islām*, III, § 47, p. 857). When, on the other hand, the conquerors found buildings in towns which were suitable for masjids from the point of view of space, they utilised them. In al-Madā'in, for example, the old twin-city of Seleucia-Ctesiphon, the *ḥwān* of the white palace was used as a place of assembly for the Friday ṣalāt, and the pictures of men and animals in it were not destroyed. In Syria, however, the churches were turned into mosques by changing the orientation from east to south and placing a quadrangle in front of them. In this way the building of the mosque of any place in the early centuries A. H. was adapted to the traditions in existence and where there were no buildings, as in the newly founded camp-cities, it was on every occasion a problem for the governor requiring much consideration. In spite of this uncertainty, as one can deduce from the descriptions, they were more inclined, even as early as the first century A. H., to the type of piered mosque with a quadrangle, to which all the prototypes as well as the climate pointed.

Development of the Masjid and the Madrasa in the different countries.

Syria. As the place of residence of the first dynasty of the young Muslim empire and a land of ancient culture, Syria was naturally destined to build the first substantial mosques and to influence early developments. This influence it exercised on the one hand indirectly through the Syrian mosque built by Walid in Medina, next to Mecca the most sacred and most visited city of Islām; on the other hand, the Mosque of the Omayyads in Damascus, as we know from Arabic sources, was taken as a model as far away as Córdoba. The earliest centre of Muslim building was Jerusalem, which the Omayyads endeavoured to play off against Mecca. Beside the rotunda of the *Kubbat al-Ṣakhra* on the Ḥarām al-Sharif, the sacred rock of which was to supplant the Ka'ba, 'Abd al-Malik used the parts still standing of Justinian's Church of the Virgin to build the *Ḍiyānī al-Aḥṣā* (finished in 83 = 702). According to de Vogüé's plan, this building, later often restored or rebuilt, was a pil-

lared hall with three naves, of necessity oriented to the south with the mihrāb in the long axis. At a later date the transept with the dome and four side naves was added. The Mosque of the Omayyads in Damascus arose out of the rebuilding of the Church of St. John, which had been built on this site by Theodosius out of the pillars and other stones of the Antonine temple of Jupiter. We must assume that Walid had the pillars of the basilica moved so that three equal naves were built. These were crossed in the centre by a transept, which led up to the mihrāb and had a dome over its centre. The rich decoration with mosaics was a suggestion from Syria and was probably done by Syrian workmen (plan and history of these buildings in Diez, *Die Kunst d. islam. Völker*, p. 14 sqq. of the first and p. 32 sq. of the second edition; with references to the literature). The mosque of Damascus was the first to have a transept, the prototype of which Thiesch no doubt rightly finds in the chalke of Byzantium (*Pharos*, p. 214), which frequently appears again in Syria and Northern Mesopotamia. The great mosque of Aleppo was also built after the plan of the Omayyads with a transept, as the latter can hardly have been added until the rebuilding of 365 (976) (pictures in Saladin, *Manuel*, p. 85). The mosque of 'Isā in Ephesus, finished in 777 (1375), and the mosque of Diyār Bakr are northern outposts of this type, the influence of which can also be often traced in Cairo and the Maghrib.

Alongside of these principal mosques in Syria a series of smaller mosques arose, partly out of ancient temples (Aleppo, Ḥamā, Ḥomṣ, Ba'albekk, Tripolis, al-'Umṭāya), partly built out of material available from Christian buildings (Ramla, Qusaïr, al-Ḥallābāt, Boṣrā). Some of these mosques may have been pre-Omayyad foundations, certainly the Mosque of 'Omar in Baṣra. All these mosques, except Qusaïr al-Ḥallābāt, have the same type of quadrangle with halls around it, two or more being on the kībla side, without transept. The development of these halls varies however, as a result of local tradition or the material available (e. g. the naves of Christian churches). They are as a rule vaulted with pointed arches but sometimes have gable roofs and thus, along with their closed façades, in front of which we exceptionally have a bowered corridor, bear a western or northern stamp in keeping with the ruder climate. The later Syrian mosques under the Ayyūbids and Mamlūks differ very much in their plans. The Mosque of Firdaws in Aleppo, for example, has a small pillared court and a broad nave, with a row of five small domes, as the ḥarām besides various side-rooms; cf. M. v. Berchem and E. Fatio, *Voyage en Syrie* (M. I. F. A. O., Cairo 1914, 2 vols.).

Madrasas in Syria. A very complete study of the madrasa in Syria and Egypt by K. A. C. Creswell (*The Origin of the Cruciform Plan of the Cairene Madrasas*, B. I. F. A. O., 1920) has brought some clearness into the question of its typical form etc. After an examination of eight madrasas built before 1270 A. D., the plans of which can still be traced in Aleppo, Damascus and Ḥamā, Creswell shows that the symmetrical plan was unknown in Syria and that there was no regular scheme in the arrangement of the rooms, but it depended on the site available. A typical specimen is the always correctly oriented mosque: a nave of three vaulted rooms with three pointed arched

doors to the court; a *liwān* on the court, rows of cells in the rest of the court and usually two tomb-cupolas usually flanking the mosque; the rest of the area is occupied by rooms. Madrasas used by two rites had two liwāns. Of the 80 madrasas counted by al-'Ilmawī in Damascus in the xvth century (*J. A.*, ser. 9, vol. iii.—iv.), 33 were Ḥanafī, 31 Shāfi'ī, 9 Ḥanbalī, 1 Malīkī, 6 used by Shāfi'īs and Ḥanafīs. Creswell's investigation shows that in Syria there was not one madrasa of all four rites nor a cruciform one, a result, which suggests new deductions for the Egyptian madrasas.

Arabia. The indigenous form of the masjid in Arabia is a large hall formed of chambers with pillars and arches. The author found such oratories, more correctly to be described as muṣallās, in Manāma on Baḥraïn (picture in Diez, *K. d. isl. V.*, p. 46). These praying chambers, open to the street without a courtyard, have no furniture, not even a minbar or mihrāb. The latter was foreign to Arabia and in the larger masjids its place was taken simply by a slab of stone with some adornment. But these pillared halls were only a more substantial form of the local native masjid of palm-trunks, which could probably often be found in the simple villages of the interior and whose sanctified precursor was the Masjid al-Nabawī in Medina built in this fashion. Alongside of this type of mosque which was indigenous to Arabia we find imported forms, like the masjid in Medina (see above), of slight importance from the archaeological point of view. Mention may be made of the ruins of a mosque near Manāma of 740 (1339/1340) described in an inscription as *maṣḥad al-sharīf ḏhu 'l-minā'atayn*, with old pillars of teak of the fourth (tenth) century; the Shi'a form of the creed on this as well as the inscriptions on the kībla stones of the xvth century mark it as a Shi'a edifice (cf. Diez, *Eine schiitische Moscheereste auf der Insel Bahrayn*, in *Jahrb. d. asiat. Kunst*, II, 1925).

Irāk and Mesopotamia. The earliest settlements of the conquering Arabs in the Irāk were primitive camps built of reeds; equally primitive were the earliest mosques. Sāsānian buildings were used for the purpose in conquered cities, like Ctesiphon. A pillared mosque was early built in Kūfa (17 A.H.) which Ṭabarī describes and which was rebuilt as early as the beginning of the Omayyad period by "Persian builders" in the form of a completely enclosed pillared hall (see above). In the capital of the caliphs also, as a result of its complete destruction by Timūr nothing worthy of note has survived. We know however that the Friday Mosque of al-Manṣūr (149 = 766) was built of pillars of teak with capitals of wood and a flat roof. A wooden dome over the *maṣḥūra* is probable. It was rebuilt under Harūn in 192—193 (808). Al-Mu'taḍid began to enlarge it after the return of the troops from Samarra (280 = 893) (cf. Sarre-Herzfeld, *Arch. Reise*, II, 134 sqq. with plan). Outside of Baghdad the unlimited space available permitted great mosques for the soldiers to be systematically planned, as in Raḳḳa and Samarra; these were the great pierced mosques of the third (ninth) century, which were copied in the Mosque of Ibn Tūlūn in Cairo. Of the three large old mosques in Mōṣul, that of the Omayyads has completely disappeared; according to Yāqūt's description it was "completely vaulted, with alabaster slabs". This seems to be the origin of that type of pierced mosque

with vaulted arches which was later further developed by the Saldjūks and Ottomans (see below). The Mosque of Nūr al-Dīn (541—569 = 1146—1173) or Ḥāmī^c al-Kabīr was also vaulted from the first (with cross-vaulting) on piers (543 = 1148) and on its rebuilding in 566—568 (1170—1172) was not given cupolas. The third Mosque of al-Muḥāhid, Khidr Ilyās, has been completely modernised. Smaller mosques of the viith (xiith) century like the Ḥāmī^c Nabī, Dīrdīs have single domed chambers as praying-rooms.

In Baḡḡād the following madrasas were built under the 'Abbāsids: the Shāfi'ī Nizāmiya in 459 (1066), the Tāḍiyya in 482 (1089), the Ḥanafī Tutuḥiyya in 508 (1114), the Nāṣiriya, c. 600 A. H. and the Mustanṣiriya about 630 A. H. Only the latter is still in existence and is used as a customs warehouse (sketch-plan in Sarre and Herzfeld, *Arch. Reise*, ii, 161). Of remarkable oblong shape (86 x 210 feet) it has six liwāns, a large vaulted hall, rows of cells and side-rooms. Besides the four rites this, the first state madrasa, also accommodated a *dār al-ḥadīth* and a *dār al-Ḳur'ān*. If the Mustanṣiriya was not planned in a strictly symmetrical way with four liwāns at the intersection of the axes, it nevertheless incorporated the same idea and may therefore have stimulated the development of the next type. In Mōṣul there were several Ḥanafī madrasas.

Egypt. The type of pillared mosque imported from the 'Irāk under Ibn Ṭūlūn prevailed in Cairo along with the pillared mosque down to the Mamlūk period. It is the regular rule that the large military and Friday mosques always have piers, the smaller mosques intended for the people of the quarter have pillars. Some of the latter however were on occasion also used as Friday mosques. The rows of piers were always parallel to the Ḳibla wall and connected by aches, a natural result of the rectangular form of the piers, which had to run parallel to the rows of worshippers. In the pillared mosques the naves might also be perpendicular to the Ḳibla wall, without inconveniencing the worshippers. The Cairo mosques of this group are:

The Mosque of 'Amr Ibn al-ʿĀs in Fuṣṭāt, which received its present form as a result of repeated rebuilding and additions to the above mentioned hall of the year 21 (642) (cf. E. K. Corbett, *The History of the Mosque of Amr at Old Cairo*, *J. R. A. S.*, 1890).

The Mosque of Aḥmad Ibn Ṭūlūn of 263—265 (876—879; for a description see above; cf. E. K. Corbett, *The Life and Works of Ahmad Ibn Tulun*, *J. R. A. S.*, 1891, p. 527—562).

The Mosque of al-Azhar of 359—361 (970—972) on pillars: the first Mosque of Fāṭimid Cairo, remarkable for the central nave, broader than usual with two domes (*salḡuḡa*) probably borrowed from the Maghrib and unusual here; also for its stilted pointed arches which henceforth became frequent in Cairo; finally for the rich decoration of the plaster in the arches, which were recently cleaned. (They will be published by S. Flury in Creswell's great work on the architecture of Cairo). The Azhar has long been used as a *Dār al-Funūn* (state madrasa).

The Mosque of Ḥākīm, a piers mosque of the year 380—403 (990—1012), with valuable decorations on the plaster and inscriptions and two unvalled, historically important maḡāras [q. v.] (cf. M. v. Berchem, *Notes d'Archéologie Arabe*, *Monum.*

et Inscr. Fatimites, *J. A.*, 1891, reprint, p. 23).

The Mosque of al-Aḳmar, a small pillared mosque historically important for its façade built by Abū 'Alī al-Manṣūr al-ʿAmir (495—524), finished 519 (1125); restored by Barḳūḳ in 799 (1396—1397) and given a maḡāra which was removed in 815 (1412) (cf. M. v. Berchem, *l. c.*, *J. A.*, 1891, reprint, p. 81).

The Mosque of al-Faḳīḥānī, built by the Fāṭimid caliph al-Zāfir in 543 (1148—1149); completely restored in the Ottoman period.

The Mosque of al-Šāliḥ Talā'ī^c outside the Bāb el-Zuwēle, built about 550 (1160). A smaller pillared mosque of the usual type, which was sometimes used as a Friday Mosque (cf. M. v. Berchem, *l. c.*, reprint, p. 3 *sqq.*; pictures in R. L. Devonshire, *Some Cairo Mosques and their Founders*, London 1921, p. 1—10).

The Mosque of al-Zāhir Baibars of the year 665—667 (1266—1269), a mosque with piers of brick, built for the troops with a very strong stone wall and three portals jutting out like the Mosque of al-Ḥākīm. The six rows of columns in the ḡarām are crossed by a transept with a dome of three naves breadth in diameter before the miḡrāb. Porticoes with double naves surrounded the court.

The Mosque of Sulṭān Muḥammad al-Nāṣir on the citadel, of the year 718—735 (1318—1335) on pillars.

The Mosque of Amīr al-Mās (Shāfi'ī Ḥilmiya) of 730 (1329—1330).

The Mosque al-Mardānī of 739—740 (1338—1340) on pillars.

The Mosque of Amīr Akṣunḡur of 747—748 (1346—1348) on pillars.

The Mosque al-Mu'aiyad of 819—823 (1416—1420).

Of pillared mosques in Egypt outside Cairo we may mention the Mosque of "St. Athanasius" and the Mosque of the "Thousand Pillars" in Alexandria the plans of which were recorded by the French expedition (*Description de l'Égypte, Antiquités*, v., reproduced in Thiersch, *op. cit.*, p. 224). Shortly before the arrival of the French, Alexandria still had 88 mosques, 46 of which were large. Practically nothing of these is left at the present day. The two above mentioned were pillared mosques and particularly the second, also called the "Mosque of the Seventy", with its liwāns of equal depth on all sides (only the northeastern one has 4 instead of 5 rows of pillars) the arches of which always run parallel to the outer walls, i. e. palm-like, continue the type of the Hellenistic pillared agora or the gymnasium as Thiersch has pointed out. The same type predominated in the towns of the Delta. The second, later type of mosque in Egypt was decisively influenced by the madrasa, to which we may now turn our attention. As Creswell has shown, the Egyptian madrasa was by no means always cruciform, as was usually supposed previously. It is also distinguished from the Syrian type and cannot be at once said to have been introduced from Syria. It is true that the first madrasa for all four rites in Cairo was built by Šāliḥ Nadīm al-Dīn Aiyūb, but this Šāliḡiyya was a building divided into two halves and cannot be considered as the original of the later type (641 = 1243—1244). The first cruciform madrasa with 4 liwāns in Cairo was the Zāhiriyya which was built on the site of a part of the old Fāṭimid palace which was cleared for this purpose and consecrated in

660 (1263). The south liwān belonged to the *Shāfiʿis*, the north to the *Hanafis*; lectures on *Ḥadīth* were given in the east liwān and in the west liwān the seven ways of reading the *Qurʾān* were taught (Maḳrīzī, *Al-ḥuṭaṭ*, ii.). While the *Ṣālihiya* held all four rites but was not cruciform, the *Zāhiriya* was cruciform but did not accommodate all four rites. The *Nāṣiriya* of 695 (1295–1296) was the first madrasa of the rare type which, cruciform and accommodating all four rites, allotted a liwān to each. Maḳrīzī also mentions a large number of other madrasas of one or two rites which have completely disappeared but probably were of different forms, as the existing madrasas and ruins show. One great difference in principle between the Syrian and Cairene madrasas was the installation of the mosque. In Syria this was always a broad chamber with a central dome and two tunnel vaults but in Cairo one of the liwāns was always used as a mosque and with this object was furnished with a miḥrāb. The Egyptian madrasas also always had minarets, which was the exception in Syria. Creswell's assertion that the cruciform mosque is of Cairene origin, although it remained the exception, therefore will hardly find acceptance. Timūr and his successors certainly did not get the design for their numerous cruciform madrasas from Cairo but followed the old *Khurāsānīan* tradition. It remains to be seen whether future excavations in *Niṣhābūr*, *Tūs* and other towns of *Khurāsān* will supply further information on this point. Creswell gives a chronological list of the madrasas of Cairo mentioned by Maḳrīzī and others, which were built between 566–811 (1170–1408); these number 55, 26 of which are still in existence. Two of these are devoted to all four madhabs, the Madrasas of Sulṭān Ḥasan 757–764 (1356–1363) and of *Ḍjamāl al-Dīn* of 811 (1408) (Creswell, *loc. cit.*, p. 44). Further details of these madrasas will be found in Creswell, *op. cit.* and in Diez, *Kunst d. isl. V. 2*, p. 118–125. Here we shall just mention the most celebrated building of this kind in Cairo, the tomb-mosque-madrasa of Sulṭān Ḥasan. It belongs to the group of buildings which contain several places of worship and are devoted to all four rites, the school liwāns of which were however outside the central court at the four corners of the building, quite separate from one another. The four liwāns had therefore only an architectural significance. In keeping with the Cairo tradition, the *ḳibla liwān* was made much larger and arranged as a masdjid.

With this adaptation of the madrasa for use as a mosque, the foundations were laid for the further development of the mosque during the period of the Circassian Mamlūks when it may be described as a transformed and roofed madrasa. As a rule we can distinguish in it three compartments, the *ḳibla liwān*, a central chamber sunk a step lower occupying the place of the former open courtyard and a room at the back, as a rule a smaller one. Of little importance from the architectural point of view, these small mosques were elaborately decorated and formed fine specimens of the decorative art of Cairo. The tomb mosque of *Ḳāʾit Bey* of 880 (1475), the mosques of *Kishmā al-Ishāḳī* of 885–886 (1480–1481), of the *Amir Akhḳōr* of the year 908 (1503) and of *al-Ghūrī* of the year 908–910 (1503–1504) are building of this group. The Ottoman domed mosques from 935 (1528) follow the Turkish tradition.

The *Maghrib* (North Africa and Spain).

The typical mosque of the Muslim west is the mosque with courtyard, on pillars or columns. It was only under Turkish rule that the domed mosque became established in those parts of North Africa affected by it. The rows of pillars run, as a rule, perpendicular to the *ḳibla* wall from which however they are separated by a transept. The axis of the latter is a continuation of the axis of the central nave which is always broader. Of the rows of pillars in the axis the two or three outermost ones are continued over the court and form the arcades, of which the inner entrance side of the court has as a rule only one. The beginning and end of the central nave are as a rule marked by a dome. The western mosques are given their characteristic features by the horseshoe and bulbous arch (a mixture of the horseshoe and the pointed arch). The miḥrāb of the western mosques is as a rule a pentagonal niche considerably deeper than the eastern semi-circular one. The oldest surviving large mosques in the west are in *Ḳairawān*, *Tunis* and *Córdoba* (since the expulsion of the Church).

The foundation of the Great Mosque of *Ḳairawān* like that of *ʿAmr* in Cairo goes back to the first century A.H. but like that in Cairo also retains nothing from its founder *ʿUḳba b. Nāfiʿ* except the name. By 76 (695) the original masdjid was rebuilt, and later enlarged but in 221 (836) it was completely taken down by the *Aghlabid* *Ziyādat Allāh* and rebuilt and in the third (ninth) century again enlarged on two occasions. In spite of many later restorations, the mosque has retained the form it was given in the third (ninth) century. Seventeen naves on pillars run perpendicular to the *ḳibla* wall from which however they are separated by the transept. The central nave is broader and flanked by double columns and marked externally by two domes. It may be noted as a special feature that the first two travées of the *ḥarām* seem to be one with the court arcades while the part behind was shut off by doors. The arcades of the court rest on pillars with double columns in front of them, which with their bulbous arches give the court its special charm. The *Ḍjāmiʿ Zaitūna* in *Tunis* was built as early as 114 (732) by the *Omayyad* governor *Ibn al-Habbāb* but entirely rebuilt in 250 (864); in spite of many internal restorations, it has in the main retained to the present day its old form of the end of the ninth century. In Spain we have from the *Omayyad* period the (former) Mosque of *Córdoba*. It was built by *ʿAbd al-Raḥmān I* (138–172 = 756–788) and several times extended by his successors until the *ḥarām* contained 19 naves each with 35 pillars. The special feature of this mosque is the double storied arrangement of its rows of arches, a bold innovation, which does not seem to have been imitated elsewhere. Recent investigations have revealed the original floor of the mosque at a much lower level, which is decorated with mosaic. This would alter the proportions. The horseshoe arch taken over from the *Visigoths* was varied in the clover leaf and indented arch and these arches were imitated in the *Maghrib* (mosques of *Algiers*, *Tlemcen* etc.). The domes swelling into various shapes were frequently imitated in *Ḳairawān* and *Córdoba*. The mosques of *Sūs* (236 = 850) and *Sfax* (235 = 849) were founded in the *Aghlabid* period but the latter was completely restored in the tenth century. The rise of

the Fātimid empire in North Africa (297 = 909) brought about a new development of mosque building. The mosque of the new Shī'ī capital Mahdiyya in Tunis however corresponds completely to the preceding Aghlabid type. A novelty however is the use of cross vaulting which henceforth we find frequently, first of all in the two mosques of Monastir and in the new part of the Great Mosque of Sfax. Of the great pillared mosque of the Kal'a of the Banī Ḥammād, the minaret of which still stands and was mentioned in the article MANĀRA, it is only possible to reconstruct the ground plan, which had 13 naves with 8 travées (cf. Blanchet, *Nouvelles archives de Missions*, vol. xviii., p. 13 sqq. and De Beylie, *La Kalaa des Beni Hammād*, p. 77 sqq.). A second mosque of the Banī Ḥammād has been destroyed in Bougie but it is evident from an old description that it belonged to the type of Kairawān (De Beylie, *op. cit.*, p. 102—104).

Mosques of the Almoravids (448—541 = 1056—1147) and Almohads (524—667 = 1120—1267). The great mosques in Algiers and Tlemcen, the Kutubiya in Marrākeṣh and the mosque in Tinmāl are pillar mosques with bulbous arches. On the other hand the Mosque of Ḥasan in Rabāt, now completely destroyed, the largest mosque of the Maghrib, stood on round pillars (610 × 465 feet; begun 539 = 1196—1197). A noteworthy feature is the mausoleum behind the mihrāb in the mosque of Tlemcen, which now becomes frequent in the Maghrib (but seems not to have been unknown in eastern Islām, as the plan of the madrasa of Khargird shows; cf. Diez, *Churasan. Baudenkmaler*, p. 73).

Marinids in Morocco (1195—1470), successors of the Almohads (xiii—xiv century): a large mosque in Tāza, Morocco, piers, broad central nave and transversal nave, finished in 693 (1294). A large mosque in Auyda on the Algerian-Moroccan frontier (696 = 1296). Sidi bel-Ḥasan in Tlemcen (696 = 1296), a small mosque with onyx columns, and Awlād al-Imām in Tlemcen (710 = 1310), small, but richly decorated. The great Maṣūra mosque in Tlemcen (736 = 1336), a very regular building, thirteen naves on onyx columns, a broad central nave, a three naved transept, a maṣūra in the centre, a polygonal mihrāb with mausoleum behind. Sidi bī Medyen of al-Awbād (739 = 1339) and Sidi al-Halwī (754 = 1353), both in Tlemcen, small, the former on piers, the second on columns with slightly modified horseshoe arches with a wide span. Shella (harbour of Rabāt), Necropolis of the Marinids, a tomb-mosque (739 = 1339) (plan in Marçais, *Manuel*, ii., p. 498). Around Tlemcen are several small mosques of the xiv century.

Mosques of the Hafsids in Tunis, xiii—xiv century: Mosque of the Kaṣba in Tunis, built by the founder of the Hafsīd dynasty Abū Zakariyā Yahyā I (625—647 = 1228—1249), finished in 633 (1235). Pillars with chaptrels, supporting horseshoe arches in the quadrangle and cross vaulting, the usual form of roof in Ifrīqiya from the tenth century (cf. Sfax etc.) is similar. The Mosque of al-Hawā of the xiv century is similar.

Mosques in Morocco under the Sharifs 951—1311 (1544—1893).

In Morocco preference was given to the old Almohad type of mosque as exemplified in the

Kutubiya. The Bāb Dukkāla 965 (1537) and Muasiyn 976 (1562) mosques in Marrākeṣh have seven naves at right angles to the kībla, and a transept along the kībla wall. Innovations seem to be, in addition to the broader central nave, that the two outside naves left and right along the side walls were broader and a dome was placed at each of the four corners of the mosque. A second transept on the court side of the Ḥarām seems to be exceptional, as in the Bāb Dukkāla. The mosque of the Kaṣba of Marrākeṣh dates from a foundation of the Almohad al-Manṣūr. After the explosion of 1574 it was rebuilt and in the xviii and xix centuries repeatedly restored (cf. the monograph by H. Basset and Terrasse). The mosques of al-Karawīyīn and Mūlāy Idrīs in Fēs have likewise been restored.

Mosques in Algeria under Turkish rule (1518). In addition to the two mosques which date from the Almoravid period, the Great Mosque 490 (1096) and the M. Sidi Ramḍān in Algiers, only two other mosques of the old type are believed to exist; all the others, over 100 in number, are Turkish. The oldest Turkish mosque is 'Alī Bitṣh nūn (1622), now Nōtre Dame des Victoires. This building had a large central dome, which is surrounded by small domes. It is noteworthy that the square minaret was not ousted by the Turkish type. All the later mosques of Algeria show variations of this type, except the "Mosque on the Fish-Market" 1070 (1660) the plan of which recalls those of the Jesuit churches of the xvth century; it may however owe nothing to them but derive from Byzantine-Turkish models.

Mosques in Tunis under the last Hafsids and Turks (from 1534) Under the last Hafsids the venerable Djamī Zaitūna was again restored, enlarged and given its present portico and the outer gallery of arcades. The oldest Turkish mosque is Yūsuf Dā'ī (1610—1637). It is significant that it is built after the old Tunisian type on pillars with cross-vaulting, as are the later M. of Ḥammūda Bey finished in 1067 (1654) and several mosques of the xviii and xix centuries. The Turkish style (Ahmediya in Constantinople) represented by the Sidi Mahrez (second half of the xviii century) remains the exception in Tunis.

The medersa in the Maghrib. Medersas were first introduced into the western lands of Islām by the Almohads but nothing of these seems to have survived. The oldest medersas date from the xiii—xiv centuries. The Marinids in Maghrib al-Akṣā were particularly active in building and encouraging medersas, which, as in Syria and Egypt, were also state institutions. This evolution of the medersa was apparently a result of the Sunnī, particularly Mālikī, revival under the Marinids (1195—1470). Al-Saffarīn, the oldest medersa in Fēs, built by the great warrior and champion of the faith Yaḳ'ūb Yūsuf (685—706 = 1286—1306) of the Marinids who also built Shella (see above), was the prototype of all the later medersas in the extreme Maghrib. An angular gateway, such as is usually only found in private houses leads into a court with a central basin and the cells. A domed chamber with a pentagonal mihrāb adjoins it. On the analogy of the tombs, it is called ḳubba. Adjoining it reached by a corridor is a miḍa'a, with a basin in the centre for ablutions and latrines. These three main parts of the building, ṣaḥn, ḳubba and miḍa'a and usually

a separate minaret, are found continually in a number of variations, usually dependent on the space available, which Margais, *op. cit.*, ii. 504, divides into three groups. In Fēs in addition to those mentioned there are other seven medersas of the xvth century. With the medersas of Meknes, Sale, Taza and al-Awbād in Tlemcen we have in all eleven medersas of the Marinids extant (cf. the list in Margais, *op. cit.*, ii. 504 *sqq.*). The most imposing and finest medersa in Fēs is the Bū 'Aināniya, founded by Abū 'Ainān, 749-759 (1348-1358). With its masjdīd of two transepts at the end of the square court and two domed chambers in the central axis of the court it recalls the mosque of Ḥasan in Cairo with its iwāns. The façades on the court display the wealth of wall adornment usual in the Maghrib: tiles, stucco moulding and stalactites.

Medersas of the xvth-xixth centuries in Morocco: The Medersa of Ben Yūsuf in Marrākesh is regarded as the largest in the Maghrib and stands on the site of an originally Almoravid (?) and next Marinid Medersa Abū 'l-Ḥasan. The plan seems to be old and in its regularity recalls the *al-Ḥiri* type of Arab palace and the palaces of the Omayyads and 'Abbāsids built in this style in the desert (plan in Margais, *op. cit.*, ii, p 702). The Medersa al-Sharrāṭīn in Fas, begun in 1670, shows a similar plan but is smaller and simpler.

Medersas of the xvth-xixth centuries in Tunis. In the xvth century the Ḥafṣids built a number of medersas here. Of the Turkish, the most interesting is the Medersa Bashiya of 'Alī Pasha (1740-1755): a court with cells, masjdīd on pillars and *miḍā'a*, but, like the Egyptian madrasas, it has also the tomb of the founder and a public fountain. In Tunis, probably as the result of Egyptian or Oriental influence, it is common to find medersas and mosques associated with the tomb of the founder. The three varieties distinguished in Egypt by van Berchem, mosque-mausoleum, madrasa-mausoleum and monastery-mausoleum were also built in Tunis.

Saldjūk empire in Rūm, Armenia and Georgia. In Saldjūk Anatolia (470-700 = 1077-1300) the three types of piered mosque, the court-iwān madrasa and domed madrasa are to be distinguished. The piered hall was used as the large public mosque. On account of the colder climate the open courtyard with pillars was not found here. The pillars were sometimes of wood (Eshref Rūm Djāmī?), usually however of stone. The flat wooden roof rested directly on the piers or on the arches which connected them, which run sometimes parallel, sometimes perpendicular to the kibla wall. The Ulū Djāmī' in Wān has a vaulted roof resting on pillars, a system later often used in the Ottoman empire. Of more importance architecturally are the smaller (mosque-madrasas, which played a prominent part in the Saldjūk empire: but they fell far behind the Persian madrasas in impressiveness and harmonious development. The model for the evolution of the iwān-madrasa was the Mesopotamian-Anatolian *farma*-house. From the latter came the bowers along the sides of the court which were placed in front of the iwān and the rows of cells. The combination of school and mausoleum in which the builders, usually high officers of state, were interred, was the rule. The domed madrasa consists of a domed hall

with a water basin in place of the open court with living rooms, a lecture-room and a mausoleum adjoining it. The external ornamentation of these Saldjūk madrasas and mosques is confined to the gateways. The façades of the gates, irrespective of the material used elsewhere in building (brick or moulding), were always covered with slabs and the portals then ornamented with strips of decoration or inscriptions, fantastic looking candelabra of palmettes (Diwrigi), bundles of rods and convolutions in low and high relief and thus one of the highest points in Muslim decorative art was attained. The iwāns along the court, interiors of the comparatively low domes (which here usually bridge over the corners on triangular consoles), the friezes on the wall and the niḥrābs are frequently adorned with glazed brick and mosaic friezes in a style which in pattern and colour is readily distinguished as an independent pattern from the Persian decoration. Here we find geometrical network patterns, which were not usual in Persia and a colour scheme which receives its special character from the much used black, alternating with bright and dark blue, although other colours are also found. The following is a list of the most important buildings, so far as they are known: 1. Piered mosques: Mosque of 'Alā al-Dīn in Konya, completed 616 (1209-1210), Djāmī Kebīr in Siwās, xth-xvth cent., citadel mosque 576 (1180-1181) and great mosque 679 (1280-1281) in Diwrigi, Eshref Rūm (Eski) Djāmī', xvth century, in Beyshehir, Ulū Djāmī' in Egerdir, xvth century (?), Ulū Djāmī' in Caesarea (Cappadocia), mosque of Minuḍḥr 464-495 (1072-1100) in Ānī (with octagonal Manāra), Ulū Djāmī' in Wān, xth-xvth century. — 2. Court iwān madrasas: Sirdjely Madrasa 641 (1243-1244), Gök Madrasa, Barudjirdiya and Tjifte Mināre, all 670 (1271-1272) in Siwās, Khātūniya, 783 (1381-1382) in Karāmān, Ibrāhīm Bey Madrasa, xvth-xvth century in Akserai, Tjifte Minareli, xivth-xvth century in Erzerum. — 3. Domed madrasas: Kara Tai Madrasa 649 (1251) in Konya, Indje Minareli 650-684 (1252-1285) in Konya, Enirge Djāmī' 657 (1258) in Konya, Tāsh Madrasa 613 (1216) and 659 (1260) in Akshahir, Sulṭān Wālide xivth and xvth century in Saiyid-i Ghāzi.

The mosque of the Turcoman ruler 'Isā I (1348-1390) in Ayasoluk (Ephesus) is an exception in Asia Minor; it was finished in 777 (1375-1376) and its architect is said to have been 'Alī b. al-Dimishki. The interior is modelled on the mosque of the Omayyads in Damascus; the walls however are in the Turkish style of that period, as developed in the provinces of the Atābegs. The west façade is closely related to the façades of the mosque of Ḥasan in Cairo, which also drew inspiration from Northern Mesopotamia.

The Ottoman empire. The Ottoman Turks further developed the types of mosque built by their predecessors, the Saldjūks. A second very important factor in the development was their expansion into Europe and the new model, the Byzantine domed churches, especially the Hagia Sophia in Constantinople. Here three main types of mosque may again be distinguished: the piered hall, the cruciform domed mosque and the central or great domed mosque. The first and third were

commonly used for Friday mosques and mosques for the people, while the second type was reserved for the Sultān's Friday service and religious instruction, and was more used for private mosques. The Ottoman pierced hall mosque is distinguished from the Saldjūk, principally by its vaulting, rows of cupolas over the piers. The court is limited to a hypætral water-basin of the same size as the dome above it. The Ulū Djāmi' in Brussa for example is an unadorned pillared hall, rectangular in shape with five aisles each with four domes in a row. The second group of four pillars in the central aisle was originally uncovered (now it has a glass dome) and contains the basin for ablutions, the rudiments of a court. The domes of the five aisles rise one above the other to the central row. The most important buildings of this group are: Ulū Djāmi' 1370—1420 in Brussa, Uç Şerefeli Djāmi' 889—893 (1484—1487/8) in Adrianople, Ulū (Eski) Djāmi' ca. 1403—1420 in Adrianople, Ulū Djāmi' xvth century(?) in Manissa (Magnesia on Sipylus), Djumaya in Filibe (Philippople), old mosque (now museum) 882 (1477—1478) in Sofia, Sındırlı Koyu Djāmi' ca. 1500, Aḥmad Pasha Djāmi' by Sinan ca. 1555 and Pīāle Pasha Djāmi' 1573, all in Constantinople, Eski Walide in Scutari ca. 1570. The pierced hall as an unmixed form became extinct in the xvth century. The İekīm Oghlu Djāmi' in 1734 in Constantinople is a mixture of the latter with the great dome. The origin of the cruciform domed mosque is rightly sought by Wulzinger in the Saldjūk madrasas with courtyards which come in time to be covered over with a dome. The centre which lies somewhat below the level of the rest, is occupied by a square roofed with a dome, again the rudiments of the former courtyard, and still often containing a fountain. The Kibla chamber is vaulted with a barrel or dome, the praying chambers to right and left are either like iwāns open towards the centre or have barrel-vaulting. The similarity of these mosques to Byzantine churches (in plan, not in structure) is involuntary and lies in the system. On the other hand, the open pierced outer court (*kūṭya*) may go back to Byzantine stimulation. These outer courts however are very general in the east to give shade. The most important buildings of this type are according to Wulzinger's list (*op. cit.*, p. 186): Mosque of Murād I (1359—1389) in Brussa, fin. end of xvth century, two storied, Mosque of Bāyazid I Yıldırlm (1389—1403), fin. after 1402, Yashil-Djāmi' in Brussa, fin. 1423, Mosque in the Koimesis church in Isnik, beg. of xvth century, Nilufer Khātūn 'Imāret, end of xvth century, Piruz Bey Djāmi' in Milas, fin. 797 (1394), Mosque of Murād II (1421—1451), fin. 1447 in Brussa, Mosque of Murād II in Adrianople, 'Imāret Djāmi' in Philippopolis 1359, Mosque of Hamza Bey before 1451 in Brussa, Ghāzi Michal Djāmi' ca. 1400 in Adrianople. The great domed mosque developed out of the more primitive single domed mosque which was very common throughout Asia Minor and Turkey as the simple village mosque, private mosque etc. and continued to survive. (In Ayasoluk alone 14 small single domed mosques can be counted). This type of building was also used for the numerous turbes. The following are more important single domed mosques outside Constantinople: Yashil-Djāmi' 794 (1392) and Maḥmūd Çelebi Djāmi' about 1400 in Isnik,

Masdjid of Khodja Yadygyar beg. 1369 in In-Önū, Masdjid of Elias Bey fin. 806 (1404) in Balāt (Milet). The development of the great domed mosque from this type took place in part through combination with cruciform domed types, but its aim was however the elimination of all minor domes which at first it had for constructional reasons to put at the sides. A. Gabriel's table gives a good idea of the different variations. He gives the mosques of Constantinople, which number 42 (with Scutari), under six main types (*Les Mosquées de Constantinople, in Syria*, vii., 1926, p. 352—419):

A. Square or oblong halls with one or more domes, sometimes flanked by secondary domed chambers: Maḥmūd Pasha Djāmi' 868 (1464), Murād Pasha Djāmi' 870 (1466), Dāwūd Pasha Djāmi' 890 (1485), 'Atik 'Alī Pasha Djāmi' 902 (1497), Sultān Selim Djāmi' 926 (1520).

B. Quadrangular single domed halls (continuing the list just given of the not yet very large single domed mosques from the city area of Constantinople): Firūz Agha Djāmi' 896 (1491), Djezeri Kāsim Pasha Masdjid 921 (1515), Khāssēki Khurem Djāmi' 946 (1539), Mehmed Agha Djāmi' 993 (1585), Cınlı Djāmi' 1050 (1640), Nūrī 'Othmāniya Djāmi' 1169 (1755), Laleli Djāmi' 1177 (1763), Wālide Djāmi' 1287 (1870).

C. Square hall with a central dome, usually supported by two half domes: Sultān Bāyazid Djāmi' 906 (1500), Sultān Sulaimān Djāmi' 957—964 (1550—1557), Kılıdji 'Alī Pasha Djāmi' 988 (1580).

D. Square hall with a central dome supported by four axial half domes: Shāhāzāde Djāmi' 955 (1548), Sultān Aḥmad Djāmi' 1026 (1617), Yenī Walid Djāmi' 1120 (1708), Sultān Mehmed Djāmi' 867 (1463), reconstructed 1180 (1767); variants: oblong hall with a central dome supported by three half domes: Iskele Djāmi' in Scutari 954 (1547).

E. Oblong hall with six domes of equal size (old type of people's mosque, cf. above): Zindjrlı Kuyu Djāmi' ixth (xvth) century, Pīāle Pasha Djāmi' 981 (1573).

F. Oblong hall with central dome and aisles.

Group a. Central dome with square plan and pendentives: Balı Pasha Djāmi' middle of xth (xvth) century, Mihrimāh Djāmi' middle of xth (xvth) century, Zal Maḥmūd Pasha Djāmi' 958 (1551).

Group b. Central dome on octagonal basis: İbrāhīm Pasha Djāmi' 958 (1551), Rustam Pasha Djāmi' middle of xth (xvth) century, Eski 'Alī Pasha Djāmi' 994 (1586), Yenī Wālide Djāmi' 1120 (1708) in Scutari, A'zāb Kapu Djāmi' 985 (1577), Ayyūb Sultān Djāmi' founded ixth (xith) century, rebuilt xliith (xviiith) century, Nishāndjī Mehmed Pasha Djāmi' 992 (1584).

Group c. Central dome on hexagonal basis: Aḥmad Pasha Djāmi' 962 (1555), Şukūl or Mehmed Pasha Djāmi' 979 (1571), 'Atik Wālide Djāmi' 991 (1583) in Scutari, Djerāh Pasha Djāmi' 1002 (1594), Hākim Oghlu 'Alī Pasha Djāmi' 1147 (1734).

A survey of this list shows that the type given under A. is also the earliest. This was directly linked up with that in use in the older capital Brussa and already being built in Konya in the xliith century (Kara Tai Madrasa, Yıldırlm and Yashil Djāmi') which seems to be continued in the Maḥmūd and Murād Pasha Djāmi'. But already the original Sultān Mehmed Djāmi' (rebuilt in the xviiith century)

which forms a striking anachronism in Gabriel's list under *D.* with its date 1463 (only the second modern Mehmediya of 1767 belongs properly there), had made the first important step towards a single great chamber (cf. Agha Oghlu's reconstructed plan in Diez, *Kunst d. isl. Völker*, 2nd ed., p. 105) and this plan was repeated for the 'Atik 'Alī Pasha Djamī, while the Dāwūd Pasha Djamī of 1485 had already used another variation (cf. the plans in Gabriel, *op. cit.*). This in brief is the historical development of the Constantinople mosque from the Anatolian Saldjuk-Ottoman type. The next important step to the gigantic domed mosques of Constantinople given under *D.* was completed by the greatest of Ottoman architects Sinān (1489—1588) step by step in the Shahzade Djamī, the Sulaimāniye and the Selmiye (1567—1574) in Adrianople. His guiding idea was, by thrusting the pillars of the domes as far back into the walls as possible, to get a single domed chamber of the largest possible dimensions, no longer interrupted by pillars; Sinan achieved this end in the Selmiye in Adrianople.

Persia, Turkestan and Afghanistan, Old mosques or remains of them have not survived in Persia, as in Egypt, the Maghrib and Syria, except perhaps for a few old parts still standing in the great complex of buildings, that forms the Friday Mosque of Isfahan or in the old Friday Mosque of Shiraz. We know however from literary sources that at the beginning of the 'Abbāsid period large mosques were built everywhere in the towns and some must have existed even earlier. Abū Muslim, the celebrated general and 'Abbāsid propagandist, built mosques in Merw and Nishābūr. The latter was built on pillars of wood and similar structures are occasionally mentioned in Persia (e.g. at Rubāt in the province of Djurdjan, Shirāf on the Persian Gulf etc.). In the ninth century, however, greater use began to be made of columns of brick or stone or marble columns taken from older buildings where they could be obtained, as in Istakhr at Persepolis. 'Amr b. al-Laith (265—287 = 878—900), the second ruler of the Saffārid dynasty, renovated the Friday Mosque in Nishābūr and among other mosques built the Djamī 'Atik in Shiraz, both mosques with columns of brick, of which parts are still standing in Shiraz. The Friday Mosque of Balkh destroyed by the Mongols in 1220, is said to have had splendid pillars, as Ibn Battūta records. An old mosque on piers of the fourth (tenth) century has survived in the remote desert town of Naiyin, east of Isfahan, and enables us to make deductions about the architecture of mosques in the early period in Iran. The ḥarām consists of eleven barrel-vaulted aisles running perpendicular to the kibla wall, of which the central one is broader than the others. The court is flanked by four-aisled riwāks which run parallel to the kibla wall, only the wall of the entrance has an arcade. The plan is therefore similar to that of the mosques of the Maghrib. It is built on columns or piers of different forms. The part around the mihrāb is richly ornamented in stucco and has bands of inscriptions around it (cf. H. Viollet and S. Flury, *Un monument etc.*, Syria, ii, 1921). How securely the pierced hall, as the type of Friday Mosque, maintained itself in the Sunni east, is seen from the rebuilding of Timūr's great mosque in Samarkand after his return from his raid on India

in 1410, a mosque with columns, which was directly connected with the madrasa of Bibi Khanum, but has now completely disappeared. The mosque had 460 columns of hewn stone, each seven ells in height. The vaulting was covered with large beautifully carved and polished slabs of marble. There was a minaret at each of the four corners of the mosque. The door was of bronze and the walls were covered inside and outside with inscriptions in relief (according to Sharif al-Dīn 'Alī Yazdī). How far there was any Indian influence here cannot now be ascertained. In any case, the iwān and mihrāb court became established in Persia in the fifth (eleventh) century and as the above described Friday Mosque in Isfahan shows, became blended with the pillared court. The great Mosque of Herāt (cf. Niedermayer-Diez, *Afghanistan*, p. 55 and figg. 149—153) shows a similar mihrāb court adapted to the (probably older) pierced hall. In the completely new buildings of the Timūrid and Safawid period, the pierced hall completely disappeared and the ḥarām is extended by a central dome with vaulted halls at the side, when the kibla iwān itself does not fulfil the purpose. The mosque of the great sanctuaries in Kūm Mashhad, Kərbelā, the Masjid-i Shāh in Isfahan and many other urban mosques of Persia are built on this plan. Only in Eastern Khūzistān, as in the Turbat-i Shaikh Djam, does the old pierced mosque survive but with vaulted arches and a large dome in the centre of the ḥarām, all of which betrays Indian influence (cf. the plan in Diez, *Chirasanische Bautenkmaler*, p. 79).

Of the already characterised type of domed mosques may be mentioned: the "Blue Mosque" in Tabriz and the Masjid-i Shāh in Mashhad, both similar in plan with a large central dome and two flanking minarets. The former was built during the reign of the Turkoman ruler Djihān Shāh (1437—1467), the latter by Amir Malik Shāh, the architect being Ahmad b. Shams al-Dīn Muḥammad Tabrizi (cf. *J. R. A. S.*, 1910, p. 1131). The Tabriz mosque had a chapel leading from the domed area with a second smaller dome. Both domes were decorated with tiles, the larger with white tendrils on a green ground, the smaller with white stars on a black ground (Tavernier). Only fragments survive of the Blue Mosque, which show how splendidly it was once decorated; on the other hand, the Masjid-i Shāh in Mashhad is still standing, although the dome has lost its decoration. To this group belong also the mosque on the citadel mound of Eriwān, the mosque of Shaikh Lutf Allāh in Isfahan, the Kāliyān mosque used as a royal private mosque and the public Mosque of 1611 in Bukhārā, both with high entrance iwāns and without a court. At largely attended common prayer, the people assemble in front of such mosques. This is particularly the case in Turkestan; for the iwān and niches were simply very large mihrābs and nothing further was necessary. In Balkh also there is a similar, formerly domed mosque probably intended for the ruler with a towering iwān (xvth century) (cf. Niedermayer-Diez, *Afghanistan*, figg. 204—205). Besides these large main types, there were and are in these lands of eastern Islām hundreds of smaller mosques in the towns and villages, which sometimes show very interesting structures. Thus in Djārdarm in the Isfahān steppe (northern Persia) there is a mosque with a small

open court and domed chamber in front of the mihrāb, and two triple yoked aisles, probably a reminiscence of Nestorian churches (cf. Diez, *Churas. Bauk.*, p. 83). We also find everywhere small masjids, which are simply little oratories, where the people can promptly worship at the proper time: flat-roofed large halls on wooden pillars, which are frequently richly carved in Turkeṣtān, Afghānistān (Kābul) and Central Asia (Kashmir etc.).

The Madrasa in Persia, Turkeṣtān and Afghānistān. Shāfi'ī madrasas were built in the 'Abbāsid period in Nishābūr (where Hāfiz Abrū counted 17), Meiw, Bukhārā, Āmol, Tūs and other towns. Naṣr, brother of Maḥmūd of Ghazna, is said to have built the first state madrasa. Under the Saljuqs, Nizām al-Mulk, vizier of Alp Arslān and of Malik Shāh, built three state madrasas in Nishābūr, Tūs and Baghdād. None of these pre-Timūrid madrasas in Persia has survived; unless the ruined iwān in Khārgird is what is left of a madrasa, which is very probable (cf. Diez, *op. cit.*, p. 71 sq.). The ruins of the Timūrid period however give us a picture of the Persian madrasa of the golden period of Muslim Persian architecture. The madrasa in Khārgird near Khāf close to the Afghān frontier, completed in 848 (1444—1445), still shows a pure unmixed madrasa design: a quadrangular court with four barrel-vaulted large iwāns, equal in size, at the intersection of the axes, each flanked by two or, with the upper storey, four cells, four vaulted corner-chambers, a narthex-like outer building, consisting of three successive domed chambers; low confined mihrāb façades with low flanking towers at the corners. The walls, especially of the court, were adorned with rich tiled mosaic, the walls of the domed chambers with ornamental frescoes (cf. Diez, *Churas. Bauk.*, p. 72—76, pl. 31—34). In contrast to the low façade of Khārgird built by a West Persian (Shi'āz) architect are the Turkeṣtān madrasas with their high iwāns, characteristic of the east in general, and gateways especially. In Samarḳand we have the three Rīgistan madrasas: Shīr Dār (c. 1610), Tillya Kārī (c. 1610) and Ulūgh Beg (c. 1434); also the Madrasa Bibi Khanūm (about 1410) built by Timūr, all large courtyards with mihrāb courts and domed chambers, usually four minarets at the surrounding walls. In Bukhārā, the Madrasa Mir Arab of the end of the xvth century is related to the Madrasa Shīr Dār. Of the madrasas in Herāt, e.g. the celebrated Ekklausiya, nothing has survived, nor do we have anything left of the madrasa of Turbat-i Shaikh Djam in Eastern Khurāsān (cf. Diez, *op. cit.*, p. 78). A ruin architectonically interesting is the state madrasa founded in the xvth century by Malik Ḥamza, the Gumbaz-i Surkh at Kal'a-i Fath in Sijistan (cf. Tate, *Sistan*, fig. p. 78). The cells are vaulted with the typical Persian house and hazaar domes. The last fine Persian madrasa is the Mader-i Shāh Sultān Ḥusām in Isfahān built by the Ṣafawid Shāh of this name (1694—1722). The tiled decoration of the court is among the finest of its kind that has survived in Persia (cf. Sarre, *Pers. Bauk.*, and Diez, *Kunst d. isl. Völker*, p. 106—107). The dome still shows the original glazed tiles with foliage patterns: dark blue and white, changing to black stalks and yellow leaves on a turquoise blue ground.

India. In India the history of Muslim archi-

tecture so far known does not go beyond the xiiith century. The two earliest mosques of which the ruins still survive, the mosques of Adjmir and of Dehli, are large covered courts, built of pillars taken from Jaina temples. The domes on eight pillars found in all Jaina temples are here found ranged in rows. The richly sculptured pillars were simply cleared of any figures on them before being used. Vaulting on square piers continued in use after there were no more pillars to plunder (mosques in Kulbarga and Bidjāpūr). For the rest, Indo-Muslim mosque architecture developed in different ways according to varied traditions and local conditions. In towns completely islāmised like Mandu on the Narbada, the capital of the sultānate of Mālwa founded by Dilāwar Shāh at the beginning of the xvth century, or Djanpur near Beuares, which was founded by the sultān of Dehli in 1359, Muslim places of worship show a marked synthesis of Hinduistic tradition with the rigid forms of Muslim symbolism. Similarly in the Muslim towns of Guḍjārāt, in Aḥmadābād, Cambay, Dholkā, Maḥmūdābād, Muslim sacred architecture developed out of the local Hindu art so that the demands made by Islām on the shape of a mosque, such as an entrance-iwān and minaret, were carried through by purely Indian means and only the arch gave the building a Muslim stamp. In Bengal again, where the curved bamboo roof prevailed, mosques were built with curved roofs from the bricks in use there, as is shown, notably by the ruins in Gaur on the Ganges. Instead of glazed tiles, the walls were generally adorned with richly ornamented slabs of stone. South of the Vindhya range also, in the Deccan and in South India local schools of architecture grew up according to the same general principles. In Aḥmadnagar, Golkonda, Kulbarga, Bidār, Awrangābād and other capitals of Muḥammadan principalities, the building of mosques was much cultivated. Architectonically, the most important city was Bidjāpūr, the capital of the state of the same name, which became independent in 1490 under Yūsuf 'Adil Shāh and survived down to the xvth century, when its great period of building culminated in the gigantic dome of the mausoleum of 'Adil Shāh. The mosque of Bidjāpūr (second half of the xvth century) consists of a piers hall with small domes over each group of four piers and a large dome in the centre. In the Moghul period little change was made in this mixture of Hindu and Muslim methods, although the Persian elements are often more marked. The huge mosque with courtyard built by Akhar in Faṭhpur Sikrī has the usual plan with slight variations. The Great Mosque of Agra built by Akbar still shows little Indian pavilions on the tops of the cornices. It was only under his successors that a Puritan reaction set in, which finds its fullest expression in the mosques of Dehli and Lahore. The process of assimilation thus attained its end.

China and Indo-China. From the Maghrib to the Pamirs and southeast of them the general character of the country, plains and deserts, linked the peoples of Islām together by certain common features, which also secured the mosque its uniformity of structure in the early centuries. In China where Islām was only the religion of a few isolated groups of immigrants the mosque soon adapted itself to the well marked Chinese style of architecture and the mosques of the south and western

provinces, where Islām has established itself in places, are not distinguished externally from the Chinese temples or yamen and internally only by the absence of idols which are replaced by the mihrāb and minbar. Exceptions are the mosques in the seaports, where the colonies of Muslims kept up steady intercourse with the home of Islām and the mosques were at the same time built by native architects. This holds for example of the mosques of Ts'uan-tschou, province of Fukien, the Zaitūn of mediaeval writers, which was built in 400 (1009—1010) and restored in 710 (1310—1311) by an architect, a native of Jerusalem, who came from Shirāz, as the inscription testifies. This mosque which is built of hewn stone consists of a hypostyle hall, such as we find in Asia Minor (e. g. Siwās) and has bulb shaped niches (cf. G. Arnaiz and M. v. Berchem, *Mémoires sur les antiquités musulmanes de Ts'uan Tchou, T'oung Pao*, vol. xii., 1911). The mediaeval chief mosque of Canton also followed the western tradition and even has a minaret, which is never seen on the mosques of the interior. The same holds of mosques in Burma and the Indian Archipelago. They are usually built of wood and adapted to the native architecture.

Bibliography: The works quoted under MANĀRA will also serve for Mosque and Madrasa. Special works are quoted in the text. For the Maghrib the new, excellent *Manuel d'art musulman* of G. Marçais was mainly used, which deals only with the Maghrib (2 vols., Paris 1927). (ERNST DIEZ)

AL-MASDJID AL-AḲṢĀ, the mosque built on the site of the Temple in Jerusalem. The name means "the remotest sanctuary" and is first found in the Qur'ān, Sūra xvii. 1: "Praise Him who made his servant journey in the night from the holy place to the remotest sanctuary, which we have surrounded with blessings to show him of our signs".

As was explained in the article ISRĀ' [q. v.], the older exegesis refers this verse to the journey to heaven [cf. MĪRĀḌ] and sees in the name al-Masdjid al-AḲṣā a reference to some heavenly place (cf. *Sidrat al-Muntahā*, Sūra liii. 14).

This explanation had however in time to give way to another, according to which the expression is a name of Jerusalem. This explanation is connected with Muhammad's "journey in the night" (*isrā'*). The combination of the *isrā'* and *mīrāḍ* thus gives the story of the Prophet's journey by night to the Masdjid al-AḲṣā (Jerusalem) and his journey following it from Jerusalem to the heavens.

The question arises how Jerusalem came to have this name among the exegetists of the Qur'ān. According to Schrieke [cf. ISRĀ'] it is a result of the Omayyad tendency to glorify Jerusalem at the expense of the holy land of Islām. Horowitz has challenged this explanation (in *Is'lam*; cf. the *Bibl.*). In any case, Jerusalem was from very early times regarded in Islām as a sacred place, the original Kibla, which, although abandoned in favour of Mecca, still retained its sanctity as may be seen, for example, from the fact that 'Umar had a Masdjid built on the site of the Temple [see AL-KUḌS, ii., p. 1097].

The name al-Masdjid al-AḲṣā is now particularly attached to the mosque in the south of the Temple area, which according to some was originally a church built by Justinian [cf. AL-KUḌS, ii., p. 1096¹].

According to late Arab writers the mosque was built by the caliph 'Abd al-Malik (785—805), a statement which might simply mean that Justinian's church was rebuilt. On this compare AL-KUḌS, ii., p. 1098 *sqq.* where the further history of the mosque is given.

For a picture of the site and the mosque see Pl. v. to the article AL-KUḌS; plan and description of the interior in *Travels of Ali Bey*, London 1816, ii. 214 *sqq.*; Baedeker, *Palastina und Syrien*⁷, p. 54 *sqq.*

AL-MASDJID AL-ḤARĀM, the name of the Mosque of Mecca. The name is already found in the pre-Muhammadan period (Horowitz, *Koransche Studien*, p. 140 *sq.*) in Kaïs b. al-Khatim, ed. Kowalski, v. 14: "By Allāh, the Lord of the Holy Masdjid and of that which is covered with Yemen stuffs, which are embroidered with hempen thread" (?). It would be very improbable if a Medina poet by these two references meant anything other than the Meccan sanctuary. The expression is also fairly frequent in the Qur'ān after the second Meccan period (Horowitz, *op. cit.*) and in various connections. It is a grave sin on the part of the polytheists that they prohibit access to the Masdjid Ḥaram to the "people" (Sūra ii. 214; cf. v. 3; viii. 34; xii. 25; xlvii. 25); the Masdjid Ḥaram is the pole of the new kībla (Sūra ii. 139, 144); contracts are sealed at it (Sūra ix. 7).

In these passages *masdjid ḥarām* does not as in later times mean a building but simply Mecca as a holy place, just as in Sūra xvii. 1 Masdjid AḲṣā [q. v.] "the remotest sanctuary" does not mean a particular building.

According to tradition, a ṣalāt performed in the Masdjid al-Ḥarām is particularly meritorious (Buḫḫārī, *al-Ṣalāt fī Masdjid Makka*, bāb 1). This masdjid is the oldest, being forty years older than that of Jerusalem (Buḫḫārī, *Anbīyā*, bāb 10, 40).

This Meccan sanctuary included the Ka'ba [q. v.], the Zemzem [q. v.] and the Maḳām Ibrahim [see KĀ'BA], all three on a small open space. In the year 8, Muhammad made this place a mosque for worship. Soon however it became too small and under 'Umar and 'Uthmān adjoining houses were taken down and a wall built. Under Abd Allāh Ibn al-Zubair, the Umayyad and 'Abbāsid caliphs, successive enlargements and embellishments were made. Ibn al-Zubair put a simple roof above the wall. Al-Mahdī had colonnades built around, which were covered by a roof of teak. The number of minarets in time rose to seven. Little columns were put up around the Ka'ba for lighting purposes. The mosque was also given a feature which we only find paralleled in a few isolated instances: this was the putting up of small wooden buildings, or rather shelters for use during the ṣalāt by the imām, one for each of the four orthodox rites. The fact that one of these makāms might be more or less elaborate than another occasionally gave

rise to jealousies between the Hanafis and the Shāfi'is. Ultimately the ground under the colonnades, which was covered with gravel was paved with marble slabs, in the maṭaf around the Ka'ba as well as on the different paths approaching the maṭaf.

The mosque was given its final form in the years 1572—1577, in the reign of the Sulṭān Selim II, who, in addition to making a number of minor improvements in the building, had the flat roof replaced by a number of small white-washed cone-shaped domes.

A person entering the mosque from the Mas'ā or the eastern quarters of the town, has to descend a few steps. The site of the mosque, as far as possible, was always left unaltered, while the level of the ground around — as usual in oriental towns and especially in Mecca on account of the Sēl — gradually rose automatically in course of centuries (cf. Snouck Hurgronje, *Mekka*, i. 18—20).

The dimensions of the Ḥarām (interior) are given as follows (al-Batānūnī, *Kiḥla*, p. 96): N. W. side 545, S. E. side 553 feet, N. E. side 360, S. W. side 364 feet; the corners are not right angles, so that the whole roughly represents a parallelogram.

Entering the maṭaf from the eastern side, one enters first the Bāb Banī Shēba, which marks an old boundary of the masjid. Entering through the door, the Maḳām Ibrāhīm is on the right, which is also the Maḳām al-Shāfi', and to the right of it is the minbar. On the left is the Zemzem building. As late as the beginning of the sixteenth century, there stood in front of the latter, in the direction of the northeast of the mosque, two domed buildings (*al-Kubbatain*) which were used as store-houses (*Chron. d. Stadt Mekka*, ii. 337 sq.). These Kubbas were cleared away (cf. already Burckhardt, i. 265); they are not given in recent plans.

Around the Ka'ba are the maḳāms for the imāms of the madhhabs, between the Ka'ba and the south-east of the mosque, the maḳām (or muṣallā) al-Ḥanbalī, to the south-west the maḳām al-Mālikī, to the north-west the maḳām al-Hanafī. The latter has two stories; the upper one was used by the mu'adhdhin and the muballigh, the lower by the imām and his assistants. Since Wahhābī rule has been established, the Ḥanbalī imām has been given the place of honour. The maḳām al-Hanafī stands on the site of the old Meccan council-chamber (*dār al-nadwā*) which in the course of centuries was several times rebuilt and used for different purposes. The maṭaf is marked by a row of thin brass columns connected by a wire. The lamps for lighting are fixed to this wire and in the colonnades.

The mosque has for centuries been the centre of the intellectual life of the metropolis of Islām. This fact has resulted in the building of madrasas and riwāqs for students in or near the mosque, for example the madrasa of Kā'it Bey on the left as one enters through the Bāb al-Salām. Many of these waḳfs have however in course of time become devoted to other purposes (Burckhardt, i. 282; Snouck Hurgronje, *Mekka*, i. 17). For the staff of the mosque cf. *HEBA* (BANU); Burckhardt, i. 287—291.

MASHAF. [See MUṢHAF.]

MASHAFĪ, GHULĀM HAMADĀNĪ B. WALĪ MUḤAMMAD, a distinguished Urdū poet, was born in Lucknow but went to Dihlī in 1190 (1776), where he applied himself to the cultivation of Urdū poetry. His house was resorted to by the eminent poets of the capital. In 1201 (1786) he returned to Lucknow and spent the rest of his life there under the patronage of Prince Sulaimān Shikōh, son of Shāh 'Ālam. He died in 1240 (1824). He is the author of several *Diwāns* in Persian and Hindustānī, and of biographies of Urdū poets, called *Tadhkira-i Hindi*. He also wrote another *Tadhkira* of Persian poets who flourished in India from the time of Muḥammad Shāh (1131—1161 = 1719—1748) to the reign of Shāh 'Ālam (1173—1221 = 1759—1806) entitled *'Ikāṭ Thurayyā*, and a historical work in verse which he entitled *Shāh-Nāma*.

(M. HIDAYET HOSAIN)

MĀSHĀ'ALLĀH, the son of Ath(a)ri or Sāriya, a celebrated astrologer, who along with Nawbakht fixed the day and hour for the foundation of Baghdād by order of al-Manṣūr. According to the *Fihrist*, he was a Jew whose original name was Mishā (a corruption of Manashshī, i. e. Manasse); whether he later adopted Islām and for this reason took the name Māshā'allāh is not recorded. The date of his birth is unknown, but it can hardly be later than 112 (730). He is said to have died in 200 (815).

In numerous works Māshā'allāh covered the whole field of astrology, and also the making and uses of astronomical instruments. There has only survived in Arabic fragments of a treatise on the pices of various wares which was translated into Latin under the title *Mesahallae Libellus de Mercibus*. Many of his astrological works were translated into Latin by Johannes Hispalensis and others and later printed. Hebrew versions are also known. It may be safely assumed that Arabic originals will still be found in eastern libraries. The critical study of the Latin translations existing in manuscript and printed form is most desirable in view of the early date of the author.

Bibliography: Ibn al-Nadīm, *Fihrist*, ed. Flügel, i. 273; ii. 129; H. Suter, *Das Mathematikerverzeichnis*, 1892, p. 61—62; H. Suter, *Die Mathematiker und Astronomen der Araber*, 1900, p. 5—6; *Nachtrage*, 1902, p. 158; M. Steinschneider, *Die arab. Literatur der Juden*,

1902, p. 15—23; P. Duhem, *Système du monde*, ii, 1914, p. 204—206; G. Sarton, *Introduction*, i, 531.

AL-MASĪḤ, the Messiah; in Arabic (where the root *m-s-h* has the meanings of "to measure" and "stroke") it is a loanword from the Aramaic where מָשִׁיחַ was used as a name of the Redeemer.

Horowitz (*Koranische Untersuchungen*, p. 129) considers the possibility that it was taken over from the Ethiopic (*masih*). Muhammad of course got the word from the Christian Arabs. In Arab writers we find the view mentioned that the word is a loanword from Hebrew or Syriac. Ṭabari (*Tafsīr* on Sūra iii. 40: vol. iii, p. 169) gives only purely Arabic etymologies, either with the meaning "purified" (from sins) or "filled with blessing". Horowitz, *op. cit.*, calls attention to the occurrence of the word in inscriptions, proper names and in the old poetry.

In the Qur'ān the word is first found in the Meccan sūras, *a.* alone: Sūra iv. 170; ix. 30; *b.* with Ibn Maryam: Sūra v. 19, 76, 79; ix. 31; *c.* with 'Isā b. Maryam: Sūra iii. 40; iv. 156. None of these passages make it clear what Muhammad understood by the word. From Sūra iii. 40: "O Maryam, see, Allāh promises thee a word from Him, whose name is al-Masīḥ 'Isā b. Maryam" one might suppose that al-Masīḥ was here to be taken as a proper name. Against this view however is the fact that the article is not found with non-Arabic proper names in the Qur'ān.

In canonical Ḥadīth, al-Masīḥ is found in three main connections: *a.* in Muḥammad's dream, in which he relates how he saw at the Ka'ba a very handsome brown-complexioned man with beautiful locks, dripping with water, who walked supported by two men; to his question who this was the reply was given: al-Masīḥ b. Maryam (Bukhārī, *Li'ās*, bāb 68; *Ta'ḥīr*, bāb 11; Muslim, *Imān*, trad. 302); *b.* in the descriptions of the return of 'Isā [q. v.]; *c.* at the Last Judgment the Christians will be told: "What have you worshipped?" They will reply: "We have worshipped al-Masīḥ, the Son of God". For this they shall wallow in Hell (Bukhārī, *Tafsīr*, Sūra iv., bāb 8; *Tawḥīd*, bāb 24; Muslim, *Imān*, trad. 302).

In Ḥadīth also we frequently find references to al-Masīḥ al-Kaḏḥāb and al-Masīḥ al-Daḏḏjāl; see the article AL-DADḐJĀL.

Bibliography: given in the article.

(A. J. WENSINCK)

MASKAT, 1. a seaport on the Gulf of 'Omān, on the east coast of Arabia in 23° 37' 26" N. Lat. and 56° 15' 26" East Long. Maskat is the only harbour between 'Aden and the Persian Gulf, which ships of any size can enter and next to 'Aden and Djidda, the best harbour in the Peninsula. The port is of considerable importance from its position commanding the entrance to the Persian Gulf. It lies at the end of a horse-shoe-shaped bay 900 fathoms long and 400 broad which is enclosed and sheltered from the winds by multi-coloured rocks of volcanic origin, devoid of any vegetation. Behind the white town rises a series of extensive ranges of mountains on the highest of which, the Djabal Akḥḍar, 9,000 feet high, snow occasionally lies in winter-time. On the slopes we even find the Muscatel vine growing which is said to have been introduced by the Portuguese. The harbour is very busy; in the middle on the shore

stands the sultān's palace, at the south end the offices of the British political agent. On either side the town is flanked by an old Portuguese fort, Marāni and Djalālī. The chapel in one of them bears the date 1588. The bazaar consists of low buildings and is of little importance. The mosques are remarkable for the absence of the usual tall minarets.

The climatic conditions are by no means favourable. With al-Hodeida and Djidda, Maskat is one of the hottest towns in the world. In 1912 the maximum temperature was 45½° C., the minimum 17½° C.; the rainfall varies between 75 and 150 mm. The high temperatures are caused mainly by the hot winds which at certain periods in the summer months usually blow from the Arabian desert and from the rocky hills for several hours in the night. From November to the middle of March the weather is however quite pleasant, but one must beware of malaria and fever.

Maskat plays a considerable part as centre of trade with the nearer east. There are regular communications with India, Persia, East Africa and Mauritius. The ships of quite a number of steamship companies call regularly at Maskat, e.g. the British India Steam Navigation Company on the route from London to India, the Bucknall Steamship Company and the Strick Line to Bayra, the West Hartlepool Steam Navigation Company on the 'Aden-Bayra route, the Hamburg-America Line monthly to the harbours of the Persian Gulf, the Arab Steamers Ltd. on the Bombay-Bayra route, and the Compagnie Russe de Navigation à Vapeur et de Commerce. In 1912—1913 the total tonnage entering the port was 98 steamers with 127,885 tons and 63 sailing vessels with 5,021 tons and leaving it 86 steamers of 90,803 tons and 30 sailing ships of 2,379 tons. The ships in question were mainly British (86.73%). Maskat has a regular postal service with the rest of the world instituted by the British, as well as a cable connection which the Indian Government has laid to Džashk. The population, which changes a good deal, is about 10,000 souls, primarily Arabs but there are also Persians, Hindus, Indian Muslims, Beludjis and a few Europeans settled here, mainly traders.

Maskat was at one time a flourishing centre of the silk and cotton trade but in recent years this has almost been destroyed by Indian and American competition. The gold and silver work done by Indians here is famous, notably richly ornamented swords and daggers. The imports of Maskat in 1912—1913 were valued at £ 463,551 and the exports at £ 301,477. The former were mainly arms and munitions, cereals, dyes, precious metals, pearls, foodstuff, textiles, tobacco, building materials, enamel, glass and porcelain, ironmongery, perfumes and soaps, the latter camels, horses and asses, weapons, cereals, dried and salt fish, dates, lemons and pomegranates, *tears* and dragon's blood, pearls, melted butter (*gḥī*), mussels, mother-of-pearl and tortoise-shell, textiles, hides and leather. The chief importer was India, then Belgium, England and 'Aden, the exports went mainly to India, the Arabian coast, England, Persia, America and Zanzibar.

According to local tradition Maskat was founded at an early period by Himyar colonists. A. Sprenger has identified Maskat with the *κρυπτὸς λιμὴν* of Ptolemy, vi. 7, 12. As the harbour has only a narrow entrance on the north and is enclosed on

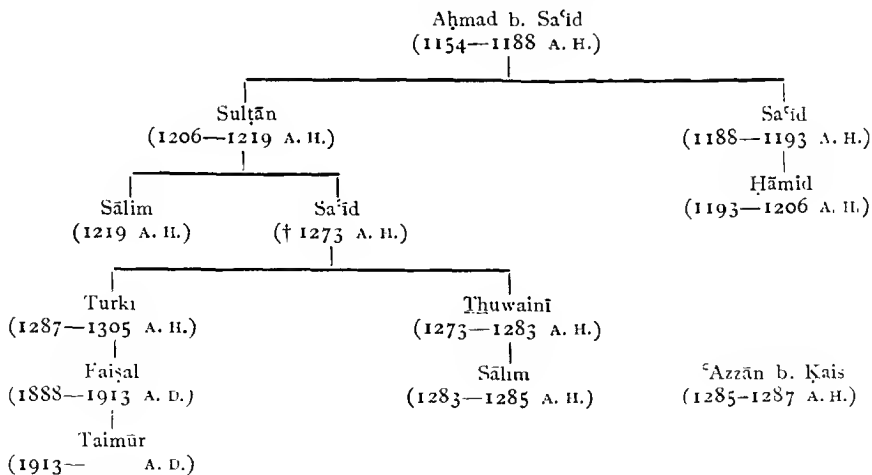

the east by rocky heights, it is, as a matter of fact, easy for sailors to overlook it, and the name "the hidden" would be quite appropriate. Al-Mukaddasī (*B.G.A.*, iii. 93 *sq.*) who mentions the port of al-Masqat, says that it is the first place which the ships from Yemen reach and is a fine town, rich in fruits. Ibn al-Faḥīh al-Hamadḥānī (*B.G.A.*, v. 11) says of Masqat that it is the very end of 'Omān, about 200 parasangs from Sirāf, the starting point for ships sailing to India and to Kūlūmah, a month's journey beyond it. Ships take in water here and Chinese ships pay 1,000 dirhams for it, the other 10—20 dinārs. Idrīsī briefly mentions Masqat as a densely populated town. Ibn al-Muḍjāwīr is fuller (in A. Sprenger's *Post- und Reise-reuten*, p. 145 *sq.*) and tells us that Masqat was originally called Maskat—so also Niebuhr, p. 296—and that it is a considerable centre of trade with Africa and the east coast of the Persian Gulf, whence the wares are forwarded to Sijjīstān, Khūāsān, Transoxania, Ghawr and Zābulistān. In the beginning of the xvth century A.D., Masqat, whose history had hitherto been that of 'Omān, attracted the attention of European powers. In 1506, Albuquerque appeared before the town and demanded that it should submit to the Portuguese. At the first the people seemed to be peacefully inclined and willing to accept his terms, but this attitude changed and the Portuguese admiral decided to attack and destroy the town. Forty large and small ships and many fishing-vessels and the Imām's arsenal were destroyed, the mosque pulled down and the town burned. The Portuguese fortified the place and in 1527 built two forts, Marānī and Djalālī, and factories; the present buildings of these names were however only built after the union of Portugal with Spain in 1580 by direct instructions from Madrid. The Portuguese had not an easy position here. They were frequently attacked by the surrounding tribes and in addition by the Turks; in 1526 a rising in Masqat was put down by Lopo Vaz, the governor of India. In 1550 a Turkish fleet under Pīr Bey appeared before Masqat, attacked the town and took it by storm after eighteen days' bombardment. The Portuguese commander and 60 men were carried off to be Turkish galley-slaves, but in 1553 the Portuguese succeeded in destroying the Turkish fleet and re-establishing their sway in the Persian Gulf. Masqat was now fortified as a naval base. But after 1631 Portuguese prestige began to decline rapidly. At the end of 1649, Masqat was attacked by the Imām's army and had to surrender on January 23, 1650, as relief came too late. The town now lost much of its former importance, although under Dutch influence its commerce was still considerable. Towards the end of the xvth century it attained an unenviable notoriety as a nest of pirates. In 1737 it was taken by the Persians, who were driven out by Ahmad b. Sa'īd, the founder of the dynasty still ruling in Masqat, who was elected imām in 1741. Since 1793 Masqat has been the capital of the sultanate of 'Omān. After 1797 the French began to be influential in Masqat, the town played a prominent part as a base for attacking India in Napoleon's grandly conceived plan for destroying England's power; we need therefore not be surprised that England also soon paid increased attention to the town. In January 1807, Capt. John Malcolm was sent to Masqat by the Indian government and concluded

a treaty with the Sultān by which an earlier agreement with the East India Company was ratified and an agent of the company established at Masqat. In 1807 and 1808 the French made treaties with the Sultān and also sent a consular agent to Masqat. The town flourished under this sultān, Sa'īd b. Sultān, and became a centre for commerce with the Persian Gulf. Masqat repelled an attack of the Wahhābīs with the assistance of the English in 1809, but in 1833 it became tributary to them. The change from sailing to steamships brought about a decline in the importance of the town. In 1863 Palgrave describes Masqat as an important harbour with 40,000 inhabitants, but in 1895, Bent puts the population at only 20,000 and at present it can hardly be more than 10,000. In 1833 however, the sultān was able to negotiate a commercial treaty with the United States, followed by a similar one with England in 1839; in 1844 France and Masqat drew up a commercial treaty by which France obtained the privilege of the most favoured nation and French subjects were given full freedom to trade in Masqat. The independence of Masqat, although expressly stated in the Anglo-French declaration of 1862, was however little more than nominal, for England, who had several times come forward to protect the sultānate, had through her political agent considerable control over the sultān. In connection with the slave-trade, which England was endeavouring to suppress, the sultān of Masqat had bound himself in various ways to England and in 1854 even ceded to England the Khūryān-Mūryān Islands of which France was endeavouring to obtain possession. When Sultān Saiyid Sa'īd died in 1856, his kingdom was divided between his two sons Thuwānī and Maḥmūd of whom the former received Masqat, while the latter was given Zanzibar which had belonged to Masqat since the end of the xvth century. This division was negotiated by England through Lord Canning, the Viceroy of India. In 1861 Zanzibar was declared independent, but it had still to pay an annual tribute to Masqat, which England in 1873 undertook to pay in compensation for various concessions of the sultān of Masqat in connection with the suppression of the slave-trade so long as the sultān fulfilled his pledges and showed friendship for England. This readiness to meet the English was also seen in a telegraph agreement of 1864. In 1891 Sultān Fāisal concluded a treaty of friendship, commerce and navigation with England in which the Sultān bound himself and his successors not to cede, sell or let land except to England. The French opposed this and in 1894 succeeded in obtaining a coaling station five miles S. E. of Masqat. England raised objections and quoted the treaty with the sultān although France in the treaty of November 17, 1844, had secured the right to acquire land. Diplomatic negotiations finally brought about a settlement, by which France gave up the coaling station in the Gulf of 'Omān, and in compensation was lent half the coal depots of Mukallā. As France in 1916 again lent this coaling station to the English, the dispute was finally settled in favour of the English. A second *contretemps* was similarly settled, although for a time it caused grave diplomatic negotiations. The French consul of Masqat and Zanzibar had given French papers and flags to a number of ships belonging to 'Omān. The captains of these who often traded in slaves and smuggled arms, resisted the jurisdiction of their sovereign, the

sultān of Maskat, and when the latter took steps to deal with them they were protected by France. The affair finally became so serious that in 1903 there appeared to be danger of a conflict between England and France, but in 1905 the question was submitted to the Hague Tribunal which decided that only those sailing-vessels which had received the French flag before January 2, 1892, had the privilege renewed and licences later issued were cancelled as invalid, in so far as they were not given to French protégés of 1863. As, in 1917, only 12 'Omān sailing-vessels still carried the French flag, this privilege of France must soon die out. It was only natural that the active smuggling of weapons from Maskat not only to Persia and Afghānistān but also into the interior of Arabia, should cause anxiety to England. The flourishing trade in arms was put down in 1912 by the establishment of a depot for the sale of arms under government control, which alone could sell arms. It is true that the smugglers have now migrated to Birk, Shab'ain and Ru'ais, but the great decline in the import of arms into Maskat is best shown by the statistics of the year 1912—1913 when in the first half year 147,391 lbs. of arms were still imported while in the last five months the total was only 36,667. In 1913, the new ruler Sulṭān Taimūr, who succeeded his father on October 4 and was recognised by England and France on November 15, 1913, met with serious opposition from the tribes in the south of 'Omān, who declared themselves independent under an imām whom they chose themselves. It is only England's power that keeps these rebels from Maskat and thus secures the existence of the dynasty, whose rule has long been quite nominal.

(A. GROHMANN)

MASLAMA IBN 'ABD AL-MALIK, son of the second Marwānid caliph. "His chivalrous figure seems to have made a vivid impression on the popular imagination; one might think he came out of a popular romance" (C. H. Becker). Few of the Marwānid princes were so active and gifted in so many diverse directions. He lived long enough to give proof that he was not unworthy of the high hopes placed upon him. His gifts earned him the confidence of all the Marwānid rulers, to whom he was a Nestor whose counsels were always heeded, from 'Abd al-Malik to Hishām, not even excepting 'Umar II, who was not at all favourably inclined to the sons of 'Abd al-Malik, nor the hysterical Yazid II nor the criminal and fanatic Walid II, who wept at his loss. He had been carefully educated by his father 'Abd al-Malik. His long career as a military leader revealed his personal courage and his knowledge of the art of war. A man of good counsel and excellent judgment, versed in literature, a patron of poets and an accurate critic of their merits, adored by his men, Maslama made use of his exceptional position to be a protector of all the oppressed, to maintain the unity and cohesion at the heart of his dynasty, which was threatened by the absurd law of seniority which regulated the succession to the throne.

The chance of birth — his mother was a slave-girl — prevented him from rising higher. Walid I gave his brother Maslama the task of conducting the military operations against the Greeks. Henceforth — with a few short intervals — he was to hold the office of commander-in-chief of the Arab armies, in which he frequently had under him his nephew, the able and valiant 'Abbās [q.v.], son of the caliph Walid. In the year 91 (709–710) he succeeded his uncle Muḥammad as governor of Armenia, a province not completely subdued, which required a military man to rule it. He also governed the *ḡum* of Kinnasrin [q.v.], another frontier province continually exposed to the attacks of the enemy. He never spent much time in civilian appointments, for which his soldierly spirit seemed less adapted and in which the independent character of the Marwānid prince usually came into conflict with the central power.

His first campaign was marked by the capture of the important fortress of Tyana (Tuwāna): the rigorous winter of the high Anatolian plateaus did not interrupt the operations of this long siege, in which the assailants suffered great hardships [for the chronology see AL-'ABBĀS IBN AL-WALID]. The dismantled town remained deserted, a serious loss for the Byzantines. Their enemies now held both slopes of the Cilician Taurus, the gateway to Anatolia. Under Maslama's directions, his nephew 'Abbās in the next two or three years completed the conquest of mountainous Isauria. In 93 (712) the fortress of Amasia was taken and Maslama entered Galatia through Armenia. This opened up the road to Constantinople. In 98 he laid siege to the capital. The attack dragged on and caused unspeakable sufferings in the Arab army. Contemporary writers blame for their failure the lack of fore-sight and insufficient diplomatic skill in the commander-in-chief. 'Umar II recalled the besiegers to Syria and sent Maslama to the 'Irāk against the Khāridjīs. Yazid II sent his brother to put down the rebellion of Yazid b. Muḥallab [q.v.] in the 'Irāk. After the death of this rebel (102 = 720) Maslama became governor of the two 'Irāqs.

Before this, he had very opportunely persuaded the caliph not to modify the order of succession to the disadvantage of Hishām. Yazid was not long in finding fault with his brother, especially as he neglected to send him the taxes of his immense eastern vice-royalty. He recalled him to Syria, where Maslama endeavoured to combat the influence of favourites on this weak sovereign. Returning to the army in 108 he conquered Caesarea in Cappadocia. The following years were marked by Maslama's great campaign in Armenia and the land of the Khazars. After partial successes in which the country was laid waste, the stubborn resistance of the natives and the Turkish tribes forced him to retire. The retreat was a disastrous one: with great difficulty Maslama succeeded in bringing back the remnants of his army to Arab territory by sacrificing all his baggage and equipment (115 A. H.). His intervention to support the claims of Walid b. Yazid [q.v.], heir presumptive to Hishām, compromised him at court. He died before this caliph and seems to have taken with him to his grave the fortune of the Marwānids, for they rapidly declined after his time.

(H. LAMMENS)

MAŞMŪDA (the broken plural *Maşmūda* is also found), one of the principal Berber ethnic groups forming a branch of the Barānis.

If we set aside the Maşmūda elements mentioned by al-Bakrī in the neighbourhood of Bone, the post-Islāmic Maşmūda seem to have lived exclusively in the western extremity of the Maghrib; and as far back as one goes in the history of the interior of Morocco, we find them forming with the Ṣanhādja [q.v.], another group of Barānis Berbers, the main stock of the Berber population of this country. Indeed from the first Arab conquest in the seventh century to the importation of the Hilālīs by the Almohad Sultān Ya'qūb al-Manṣūr in 1190, it was the Maşmūda who inhabited the great region of plains, plateaus and mountains, which stretches from the Mediterranean to the Anti-Atlas to the west of a line from N. E. to S. W. passing through Miknāsa (Meknās) and Dimnāt; the only parts of this territory which were not occupied by them were three small Ṣanhādja enclaves: the Ṣanhādja of Tangier, of the valley of the Wargha and of Azammūr. To the north and to the west, the land of the Maşmūda was bounded by the Mediterranean and the Atlantic. To the east and south it was bounded by the lands of the Ṣanhādja. To the north were the Ṣanhādja of the region of Tāzā and those of

Wargha; in the centre, the Zanāga or Šanhādja of the Central Atlas, to which should be added the Zanāta of Fāzāz; to the south, the Haskūra, the Lamta and the Gazūla.

It was from the presence of this Mašmūda bloc, extending continuously from Sūs to the Mediterranean, that eastern Morocco generally must have received the name of Sūs, a name found for example in Yāqūt (cf. *Mu'ğam*, s. v. *Sūs*) who distinguishes a Hither Sūs (capital Tangier) and a Farther Sūs (capital Taḡkala²) separated from the other by two months' journey. It is also to this racial unity that are due the legends according to which all the N.W. corner of Morocco was once inhabited by the people of Sūs (*ahl Sūs*). Before the coming of the Hilālī Arabs, the Mašmūda peoples were divided into three groups:

1. In the north, from the Mediterranean to the Sabū and Wargha, the Ġhumāra [q. v.].
2. In the centre from the Sabū to the Wādī Umm Rabīf, the Baraghwāta [s. BERGHAWATA].
3. In the south, from the Wādī Umm Rabīf to the Anti-Atlas, the Mašmūda in the strict sense of the word.

Like the majority of the Barānis, who in this respect are a contrast to the Butr, who are inclined to be nomads, the Mašmūda were all settled; for if, in one passage, Ibn Khaldūn mentions two nomad tribes, the Lakhs and the Zaggan as forming part of the Mašmūda confederation of the Ilāha, he also points out that they were tribes of the Lamta, i. e. of the nomadic Šanhādja, who finally became incorporated in the Dhawū Ḥassān, Ma'kili Arab nomads of Sūs. Ibn Khaldūn further makes special mention of the fortresses and fortified villages (*ma'ākil wa-ḥuṣūn*) of the Mašmūda who lived in the mountains of Daran or the Great Atlas. Other Arab historians and geographers mention the many little towns (*karya*) in the plains occupied by the Dukkāla or the Baraghwāta, a pastoral and agricultural people; but these were gradually ruined and destroyed in the course of the fighting which went on without interruption in their country from the establishment of the Zanāta principalities of Šhalla, Tādla and Aghmāt: the Almoravid and Almohad conquests, repeated campaigns against the heretical Baraghwāta, the Hilālī occupation, the struggle between the Almohads and the Marinids, the rivalry between the Marinid kingdom of Fās and that of Marrākush and lastly the wars with the Portuguese. Exterminated as heretics, dispossessed of their lands and driven from them by the Arab or Zanāta nomads brought into their territory, transported to a distance (region of Fās) by the Wāṭṭāsīd sultāns, for whose taste they showed too little hostility to the Portuguese, the central Mašmūda, the original inhabitants of the Azghār, of Tāmasnā and of the land of the Dukkāla finally disappeared: their place was taken by nomads, Hilālī Arahs (in the north, in Habṭ and Azghār, the Riyāh; in the south, the Djusham, Sufyān, Khulṭ, Banū Djābur) and the Berbers (Zanāta Hawwāra); in the xvth century the coming to power of the Sa'dian dynasty brought about the immigration of Ma'kili Arab tribes to the same region: 'Abda, Ahmar, Raḥāmina, Barābiṣh, Wadāya, Awlād Du-laim, Zu'air, etc.

From the xvth century onwards, as a result of the occupation of their central plains by the Arabs, Hilālī then Ma'kili, the Mašmūda only survived in the mountainous regions which formed the

northern and southern extremes of their old domains.

The Mašmūda of the north (or *Mašmūdat al-Sāhil*: "M. of the shore" of *al-Bayān*) were chiefly represented by the Ġhumāra group [q. v.]. But, alongside of them, we find two small groups having the same racial origin:

a. The Mašmūda of the Straits, settled between the district of Ceuta, which belonged to the Ġhumāra and that of Tangier, a Šanhādja country. It was they who gave their name to the fortified port of Kašr Mašmūda, also called Kašr al-Madjaž, the modern al-Kašr al-Šaghīr. Their presence here is attested in the tenth century, for it was while fighting here against them that Iḥā-Mim, the prophet of the Ġhumāra, was slain; al-Bakri (xth century) knows them in the same area corresponding to that of the modern Andja.

b. Al-Bakri mentions another group of Mašmūda (tribe of the Ayyāda) settled in the land lying between al-Kašr al-Kabīr and Wāzzān; there is still a small Mašmūda tribe between these two towns.

The Mašmūda of the south, who inhabited the lands between the Wādī Umm Rabīf and the Anti-Atlas, were divided into two groups: those of the plain and those of the mountain.

a. The Southern Mašmūda of the plain lived to the north of the Great Atlas. The chief tribes were the Dukkāla; the Banū Māgīr (around Safi); the Ilazmīa; the Ragrāga and the Ilāha (to the south of the lower course of the Tānsīft). The chief town in this region was Safi (Ar. *Asfi*), for the town of Azemmūr [q. v.] and the *ribāṭ* of Tiṭ [q. v.] were in the enclave of Šanhādja; beside the port of Safi, we must also mention that of Kūz (the *Agoz* of the Portuguese) at the mouth of the Tānsīft, which gave Aghmāt access to the sea and had a *ribāṭ*, and that of Amagdūl (the *Mogador* of the Portuguese) which seized the district of Sūs. Besides these three centres, there were, as in Tāmasnā, a large number of fortified little towns (*karya*) many of which survived down to the xvth century; the Portuguese chroniclers, Leo Africanus and Marmol have preserved for us many names of these places which have now disappeared, their very memory being lost; the local hagiographic collections and notably the *Kitāb al-Tashawwuf* of al-Tādili (xiiith century) have preserved a good deal of valuable information on this subject. At the present day all the country to the north of the Atlas is arabicised and if the old Berber element has not completely disappeared, it is at least overwhelmed by Arabs of whom the majority seem to be of Ma'kili origin. The Ilāha alone, between Mogador and Agadir, have remained almost intact and have retained the use of the Berber language.

b. The Southern Mašmūda of the mountains occupied the Great Atlas (*Ljabal Daran*), the massif of Sirwā (anc. Suwān) and the Anti-Atlas or mountains of the Nagisa (Berb. In Gist).

In the Great Atlas, the Mašmūda extended to the east as far as the upper course of the Tānsīft (a pass called Tizi-n-Telwet). From east to west, the following were the chief groups: the Galāwa; the Hailāna (or Ailana), the Warika and the Ilazradja, near Aghmāt; the Ayyādan, including the Mašfiwa, the Māghūs and the Dughāgha or Banū Daghūgh; the Hintāta, including the Ġhaighāya; the people of Tin-Mallal, on the upper course of the river of Naffis; the Šauda or Zauda, in the lower valley of the Asif al-Māl; the Gadmīwa and

lastly in the west, the Ganfisa, the chief tribe of which was the Saksāwa or Saksiwa.

The massif of Sirwā and the high valley of the Wādī Sūs were inhabited by the Banū Wāwazgīt and the Saktāna. The N. E. part of the Anti-Atlas was occupied by the Hargha.

Farther to the south, the Sūs, properly so-called, was inhabited by heterogeneous elements of Maṣmūda origin (al-Idrisī, *akhlāṭ min al-Barbar al-Maṣmūda*). Describing the road leading from Tārūdant to Aghmāt, al-Idrisī mentions between Tārūdant and the land of the Hargha, four tribes the names of which, corrupted by the copyists, are unfortunately hardly identifiable.

Besides these highlanders, who were strictly Maṣmūda, we must mention the Haskūra (or Hasākira). These were highlanders of Ṣanhādja origin, brethren of the Lamta and Gazūla, who led a nomadic existence to the south of the Great Atlas and the Anti-Atlas. The Haskūra were settled in the high valley of Tānsift and the Wādī al-ʿAbid, on the two slopes of the mountain range which links the Great Atlas, the home of the Maṣmūda, with the Central Atlas, the home of the Zanāga (= Ṣanhādja) of Tādā; their chief tribes were the Zamāwa, the Mughiana, the Garnāna, the Ghudjdama, the Faṭwāka, the Maṣṭāwa, the Hultāna, and the Hantifa, who, according as they lived on one slope or the other, belonged to the Haskūrat al-Ḳibla (H. of the south) or to the Haskūrat al-Dill (H. of the north). Ibn Ḳhaldūn, who calls attention to the Ṣanhādja origin of the Haskūra, adds that, as a result of their taking up the Almohad cause, it became customary to associate them with the Maṣmūda tribes, but that they never enjoyed the same privileges as these latter.

History. In 682, ʿUkba b. Nafi' marched against the Maṣmūda of the Atlas with whom he fought several battles. On one occasion he was surrounded in the mountains and owed his safety solely to the help given him by a body of Zanāta. In the same year he attacked and took the town of Naffis which was occupied by "Rūm" and Berbers professing Christianity. Thence he went to Ighl, a town of Sūs which he also took.

Legend adds that he even thrust his way to the Atlantic where he rode his horse into the water, calling God to witness that there were no more lands for him to conquer. This first submission of the Maṣmūda does not however seem to have lasted after the departure of ʿUkba. In 707, Mūsā b. Nuṣayr had to reconquer Morocco; he in person took Darā and Tāfilālt and sent his son to the conquest of Sūs and the land of the Maṣmūda.

In 732 ʿUbad Allah b. al-Habbāb was appointed governor of the Maghrib; he appointed his son Ismāil as assistant to the governor of Morocco and gave him particular charge of the district of Sūs.

In 735, the same ʿUbad Allah sent Ḥabīb, grandson of ʿUkba, to make an expedition into Sūs against the Maṣmūda and the Ṣanhādja (Mussafa). Later the latter's son ʿAbd al-Rahmān al-Fihri (d. 745) becoming semi-independent governor of the Maghrib occupied Ighl and built a camp there, the remains of which could still be seen in al-Bakrī's time. It is to the same governor that is attributed the making of the wells which supply the road from Tāmdalt to Awdāghast via Wādān, through the modern Mauritania.

The land of the Maṣmūda then disappears from history till the ninth century. The conquests of

Idris I did not extend in the south beyond the Tāmasnā and the Tādā. But in 812 Idris II made an expedition against the town of Naffis; on his death in 828, his son ʿAbd (or ʿUbad) Allāh obtained as his share of the kingdom, Aghmāt, Naffis, the lands of the Maṣmūda and of the Lamta as well as Sūs. Al-Bakrī records that some of his descendants ruled as lords of Naffis and among the Banū Lamās, not far from Ighl. Other Idrisids, descendants of Yahyā b. Idris, were at this time lords of Darā.

With the decline of Idrisid power in the tenth century, the Maṣmūda again became independent and were ruled by elected chiefs or *imghāren* (= Arabic *shuyūkh*); al-Bakrī tells us that those of Aghmāt were appointed by the people for a term of one year. When at the end of the tenth century, Zanāta principalities became established in Morocco (at Fās, Shālla and Tādā), Maghrāwa established themselves at Aghmāt; but all we know of them is that they were attacked by the Almoravids. In 1057, after receiving the submission of Sūs and of the Maṣmūda (Zauda, Shafshāwa, Gadmiwa, Ragrāga and Hāḡja), the Almoravid chief ʿAbd Allāh b. Yā-Sīn took Aghmāt, the last Maghrāwa ruler of which, Lagūt b. ʿAlī, fled to Tādā. His wife, the famous Zamal, who was one of the Nafzāwa, finally became the wife of Yūsuf b. Tāshfin whom she initiated into the fine art of diplomacy.

From 1057 Aghmāt was the capital of the Almoravids till 1062, when Yūsuf b. Tāshfin founded Marrākush [q. v.]. In 1074 the same ruler, having divided his empire among several governors, gave his son Tamīm the governorship of Marrākush, Aghmāt, of the Maṣmūda and of Sūs, then of Tādā and Tāmasnā.

The Maṣmūda seem to have remained subject to the Almoravids till the rebellion in 1121 provoked by the *mahdī* Ibn Tūmart [q. v.] of the tribe of Hargha, who, supported by ʿUmar Intī, *shaikh* of the Hintāta, and by ʿAbd al-Muʿmin [q. v.], brought about the foundation of the Almohad dynasty [q. v.]. The history of the Maṣmūda is henceforth involved with that of the dynasty which they brought to power and which was to last till 1269. The Maṣmūda, together with the Almohad dynasty, thus contributed to the rise of the Ḥafṣids [q. v.], who ruled over Ifrīkiya from 1228 to 1574, through the descendants of Abū Ḥafṣ ʿUmar Intī, *shaikh* of the Hintāta.

During the first half of the xiiith century, the power of the Almohads, routed by the Christians of Spain at the battle of Hīṣn al-ʿUkāb (las Navas de Tolosa) in 1212 and vigorously attacked in Morocco by the Banū Marīn, soon began to decline. The Maṣmūda of the Atlas, indifferent to the fate of the dynasty, took advantage of its plight to regain their independence. It was the tribes of the Hintāta and the Haskūra, which in 1224 at the proclamation of al-ʿAdil assumed the leadership in the movement; frequently allied with the Hilālī Arabs of the plains, Sufyān and Ḳhult, we find them fighting in all the civil wars and supporting various pretenders to the throne.

When in 1269, the Marinids had definitely crushed the Almohads, the Maṣmūda retained a certain amount of independence and lived more or less in submission to the central power, ruled by chiefs chosen from the great local families: Awlād Yūnus among the Hintāta; Awlād Saʿd Allāh among the Gadmiwa, among the Saksāwa, ʿUmar b. Ḥaddū

was an independent chief who went so far as to claim the Berber title *agellid* (= king). In Sūs the Banū Yaddar founded an independent principality which lasted from 1254 till about 1340. As to the Haskūra, the power among them was exercised by the Banū Khattāb.

Down to the xvth century, except during the first half of the reign of the Almohad dynasty of which they had been the principal supporters, the Mašmūda of the Atlas were hardly ever under the direct rule of the Moroccan government; only the tribes of the plains, Dukkāla and Ḥaḥa in a position of inferiority as a result of their geographical situation, were able to offer less resistance and had to submit. The later dynasties, Sa'dian and 'Alawi, were no better able to subdue the Mašmūda of the highlands; but instead of gathering round local chiefs with temporal power, the latter now placed themselves under the leadership of holy men with religious prestige.

In the beginning of the xvth century, the land of the Mašmūda was in a state of anarchy. Some *ashyākh* of the tribe of the Hintāta held the lands of Marrakush; the most famous was Abū Shantūf; to the south of Tānsift, the xvth century saw the rise of the warlike group of the Ragrāga; in the xvth century, the power of the mystic al-Djāzūli [q. v.] spread among the Ḥaḥa. In the adjoining country of Dair'a, the Sa'dian dynasty was rising, which after occupying Sūs imposed its domination on the whole of Morocco.

But it did not however succeed in subjecting completely the highlanders of the Atlas. The powerful Aḥmad al-Manšūr himself had to fight against a pretender who had proclaimed himself king of the Saksāwa.

After the death of al-Manšūr, the Atlas and Sūs were all under the authority of local religious leaders of whom the most important were to be found among the Ḥaḥa and in Tāzarwālt (family of Aḥmad U-Mūsā).

It was the 'Alawid Sultān Mawlāy Rashīd who restored Sūs and the Atlas to the Moroccan empire. The only episode to note is the constitution in Tāzarwālt, by a marabout Saiyidi Hishām of a kind of independent kingdom, the capital of which was Ilihet and which lasted from the end of the xvth century till 1886.

Henceforth the Mašmūda disappear from history. The Atlas remained more or less independent, according to the degree of power of the ruling sovereigns, but all the important events in the region took place among the Ḥaḥa or in Sūs [q. v.]. The French occupation found the old Mašmūda grouped, since the death of the 'Alawid Sultān Mawlāy al-Ḥasan, into three bodies each under the authority of a local family: the Glāwa in the east, the Gundāfa in the centre, and the Mtugga in the west. The only one now in existence is the Glāwa; as a result of the disappearance of their leaders, the two others were recently broken up.

The name Mašmūda, still preserved in the north Morocco in the name of a little tribe of al-Ḥaṣr al-Kabir, seems to have completely disappeared in the south, where the former Mašmūda peoples, continuing to talk Berber, bear the name of *Shulūh* (French *Chleuh*, q. v.). It may even be asked if the name Mašmūda, which is found so often in the Arab historians and geographers, was ever in regular use among the peoples to whom they apply it; it is, indeed, suggestive that it is not

found in the long lists of ethnics given in the *Kitāb al-Ansāb*, published in the *Documents inédits d'Histoire Almohade*.

Sociology. The Mašmūda of the Atlas lead a settled life, living by a little agriculture and breeding a poor type of cattle; they live in villages or hamlets of stonehouses with clay roofs. Ibn Khaldūn notes the existence among them of numerous little strongholds and fortified villages (*mu'akkil wa-ḥuṣūn*), the ancestors of the modern *figherents* and *agādirs*. There were no towns among the mountains; Tin Mallal, famous for the mosque where Ibn Tūmart was buried, was never a town. Before the Almoravid ruler Yūsuf b. Tāshfin founded Marrākush in 1062, built moreover in the plains out of reach of the highlanders, whom it was to control, the only urban centres in the district were situated at the foot of the Atlas on its lowest slopes. The principal towns were in the north, the double town of Aghmāt [q. v.] and that of Naffis on the river of the same name; in the south, in Sūs, Igli and Tāūdant; as places of less importance we may mention in the north, Shafshawa (mod.: Shīshāwa), Afīfan and Tamarūrt; in the east, among the Ḥaḥa and in the borders of Sūs: Tadnast. The great trade-routes which traversed the region started from Aghmāt for the port of Kūz (at the north of the Tānsift), Fā (via Tadlā), Sidjilmāssa (through the land of the Hazradja and the Haskūra), and Sūs (via Naffis, the land of the Banū Māghūs and Igli; no doubt using the pass now called Tizi-n-Test). Al-Bakri particularly mentions the industry and application and the thirst for gain, characteristic of the Mašmūda of the Atlas and of Sūs. The principal products of the country were fruits (nuts and almonds), honey and oil of argan (*hargān, argān*), a tree peculiar to the country, of which there were regular forests among the Ḥaḥa. The Mašmūda could cast and work iron and also copper, which they exported in the form of ingots or "loaves" (*tāngūlt*); they also worked and chased silver jewellery. In Sūs also the cultivation of the sugar-cane enabled sugar to be made.

From the intellectual point of view, the Mašmūda seem to occupy a place of first rank among the Berbers. Each of their three principal groups has produced a reforming prophet, the author of sacred works in the Berber language: Ḥā-Mim of the Ghumāra; Ṣāliḥ b. Ṭarīf of the Baraghwāta; Ibn Tūmart of the Mašmūda of the Atlas. It may also be noted that, Sūs is one of those few districts in which books were written in Berber down to a quite recent date (cf. H. Basset, *Essai sur la littérature des Berbères*, p. 73—81).

As regards religion, the Mašmūda were converted to Islām in the viith century by 'Uḳba b. Nāfi', who left his comrade Shikār among them to teach the new religion. The latter died among them and was buried on the banks of the Tānsift where his tomb is still venerated. The place is now called Ribāt Saiyidi Shikār near the confluence with the river of the Shīshāwa. The Mosque of the town of Aghmāt of the Hailāna was founded at the beginning of the eighth century in 704.

Ibn Khaldūn describes the Mašmūda of the Atlas as being attached to Islām from the first conquest, in which they differed from their brethren of the north, the Baraghwāta and the Ghumāra, who remained faithful to their heretical beliefs. At the beginning of the eighth century, several

of them accompanied Ṭāriq on his conquest of Spain: the best known of these was Kuthayir b. Waslās b. Šamlāl, of the tribe of the Aṣṣāda, who settled in Spain and was the grandfather of Yahya b. Yahyā, one of the *ruṣāt* of the *Muwaṭṭaʿ*; many others also settled in Spain and their descendants played important parts under the Omayyads.

In the eleventh century however, al-Bakrī notes Rafīdī heretics among the Mašmūda; these were the Banū Lamās settled to the north of the Hargha and the town of Igli. In this district he also mentions the existence of idolators who worshipped a ram: perhaps we have here a relic of the cult of the god Ammon among the ancient Berbers. The towns however formed important centres of Muslim culture, the influence of which was felt not only by the Mašmūda of the district but also by the Ṣanhādja of the adjoining deserts: Lamṭa and Gazūla. We know that it was in the town of Naffis, with Waggāg b. Zallū, a learned jurist of Lamṭa origin and a pupil of Abū ʿImrān al-Faṣī of al-Ḳairawān, that in 1039 Yahyā b. Ibrāhīm al-Ḡudālī recruited ʿAbd Allāh b. Yā-Sin al-Gazūlī who was the promoter of the Almoravid movement. For the Almohad period al-Ṭaḥīlī's hagiographic collection, entitled *Kitāb al-Taḥṣīn*, shows us the land of the Mašmūda of the south full of wonder-working saints. Later the tribe of the Rag-rāga, settled on the lands now occupied by the Ṣhayṣūma, was the cradle of a movement at once religious and warlike, the details of which are little known but the memory still alive. In the first half of the xviii century, religious activity seems to be concentrated in the south of Sūs, in Tazawalt where the descendants of the saint Sayyid Aḥmad U-Mūsā carved themselves out an independent marabout principality.

Terrasse, *Tinmel*, in *Hesperis*, 1924, p. 9—91.

AL-MAŠMUGHĀN, a Zoroastrian dynasty whom the Arabs found in the region of Dunbāwand (Dāmāwand) to the north of Raiy.

The origins of the Mašmughāns. The dynasty seems to have been an old though not particularly celebrated one as is shown by the legends recorded by Ibn al-Faḳīh, p. 275—277, and in al-Birūnī, p. 227. The title of mašmughān is said to have been conferred by Faridūn upon Armā'il, Bēwāwasp's former cook (Zohāk), who had been able to save half the young men destined to perish as food for the tyrant's serpents. Armā'il (according to Yāqūt, ii. 606, a Nabataean, a native of the Zāb) showed to Faridūn in the mountains of Dailam and Šhuriz, a whole nation of these refugees, which caused Faridūn to exclaim *was mānā kata āzād karīd* which is explained to mean: "What a large number of people of the house (*aḥl ta'im*) thou hast saved".

The first historical reference to a mašmughān is found in Ṭabarī's (i. 2656) account of the taking of Raiy by Nuʿaim b. Muḥarrir in the time of the caliph ʿOmar [according to Ibn al-Aṭṭir in the years 18, 21 or 22; Marquart however puts

these events as late as 98 (716—717)]. The King of Raiy, Siyāwakhsh b. Mihrān b. Bahrām-Čōbin, had received reinforcements from the people of Dunbāwand, but when he was defeated, the mašmughān of Dunbāwand made peace at once with the Arabs and received honorable terms (*ʿalā ḡhairi naṣrīn wa lā maʿūnaṭin*) promising an annual payment of 200,000 dinārs. The charter given by Nuʿaim was addressed "to the mašmughān of Dunbāwand, Maidān-shāh, to the people of Dunbāwand, of Khwār, of Lāriz (Lāridjān) and of Šhiriz". This gives us an idea of the extent of the sway of the mašmughān. His possessions included the country round Mount Dāmāwand [q. v.] and stretched down the plains as far as the east of Raiy. The district of Dunbāwand [²Dubā-wand, (the land occupied by) the *Dubā clan?] did not form part of Ṭabaristān. The Arabs mention it along with Raiy (Ṭabarī, i. 2653—2656; Muḥaddasī, p. 209; Ibn al-Faḳīh, p. 275—277); but as we have seen at the time of the conquest, Raiy and Dunbāwand were under different dynasties. The old capital of Dunbāwand may have been at Maidān where, according to Ibn al-Faḳīh, Armā'il had built a wonderful house of teak and ebony, which in the reign of Hārūn al-Rašhid was taken to pieces and transported to Baghdād. In the Arab period there were two towns in Dunbāwand: Wimā and Šhalanba (the latter is marked on Stahl's map to the south of the modern town of Dāmāwand, which lies on the slopes of Mount Dāmāwand). According to Yāqūt, the mašmughān's principal stronghold was called Ustūnāwand or Djarhud. This should be sought above the village of Reinā, which must correspond to the old Ḳaryat al-Ḥaddādīn. (Ibn al-Faḳīh's story of the shops [*ḡawānīl*] in which worked the smiths, the noise of whose hammers exorcised the enchained Bēwāwasp must refer to the chambers carved out of the rock near Reinā; cf. Crawshaw-Williams, *Rock-Dwellings at Reinah*, *J. R. A. S.*, 1904, p. 551; 1906, p. 217). An attempt made by Abū Muslim in 131 to conquer the mašmughān was a disastrous failure: his general Mūsā b. Ka'b was attacked by the mašmughān's men and on account of the difficult nature of the country (*li-ḡaḳi bilādihī*) was forced to return to Raiy (Ibn al-Aṭṭir, v. 304; cf. Hāfiẓ Abū in Dorn, *Auszuge*, p. 441).

The principality was not conquered until 141. In this period there were dissensions in the family of the mašmughān. Abarwiz b. al-Mašmughān, quarrelled with his brother and went over to the caliph al-Manṣūr who gave him a pension (Ṭabarī, iii. 130). The *Kitāb al-ʿUyūn wa l-Ḥadā'iq*, p. 228, testifies to his bravery in the rising of the Rāwandīya and calls him "al-Mašmughān Mālik b. Dinār, malik of Dunbāwand". This Abarwiz (or Mālik) had enjoyed considerable influence, for, according to Ibn al-Faḳīh, the appointment of ʿOmar b. ʿAlā as commander of the army sent against Ṭabaristān was made on the advice of Abarwiz who had known him since the trouble with Sunbādīh (on the partisans of this "Khurrami" in Ṭabaristān cf. Masʿūdī, *Murūdj*, vi. 188) and with the Rāwandīya.

In the year 141, the brother of Abarwiz who occupied the throne of Dunbāwand was at war with his father-in-law, the ispahbad Khurshid of Ṭabaristān; but when he heard that the forces sent by al-Manṣūr were on their way to Ṭabaristān, he hastened to effect a reconciliation with his adversary (Ṭabarī, iii. 136; Ibn al-Aṭṭir, v. 386).

The stories of the campaign against Ṭabaristān directed by al-Mahdī by order of his father al-Manšūr are very contradictory as is shown by their very detailed analysis in Vasmer, *op. cit.* After the defeat of the isphahbad, the Arabs conquered the mašmughān and captured him and his daughters Bakhtariya (?) and Šunyr (?) or Šhakla). Of these princesses one became the wife of Mahdī b. Maṣnūr and the other the *umm-walad* of 'Alī b. Raiṭa. According to a story in Ibn al-Faḳīh, p. 314, Khālīd b. Barmak (Vasmer, *op. cit.*, p. 100, thinks that his expedition was sent especially against the lord of Dunbāwand) sent the mašmughān and his wife and his two daughters to Baghdād, but in another passage, p. 275, the same writer says that the mašmughān obtained *amān* from Mahdī b. Maṣnūr and came down from the mountain of al-'Aīrain (?). He was taken to Raiy and there Mahdī ordered him to be beheaded.

After the death of the mašmughān, the people of these mountain regions lapsed into barbarism (*hawziya*) and became like wild beasts (Ṭabari, iii. 136). According to Ibn al-Faḳīh (p. 276) however, the descendants of the mašmughān (= Armā'il?) were still well known.

Spiegel's and Marquart's hypotheses. Yāqūt i. 244 interprets *mašmughān* as *kabir al-maḍjūs* "the great one of the magi" (*mas*, "great", N.W. Iranian form). Spiegel thought of connecting this dynasty with the prince-priests of Raiy, whose existence is known from a well-known passage in the Avesta (*Yasna*, ix. 18, transl. Darmesteter, i. 170; cf. Jackson, *Zoroaster*, p. 202—205). In spite of Marquart's criticisms, who says it is impossible to quote the authority of Avestan traditions which relate to much earlier state of affairs, Spiegel's suggestion is still of interest. We have certainly to deal with vague memories and not with actual facts. In the time of the Arab conquest the descendants of Bahrām-Čōbīn were ruling in Raiy, but the Arabs (Ṭabari, i. 2653—2656) installed there a certain al-Zainabī, son of Kūla and father of al-Farrukhān. It remains to be seen if this family of Zainabī, "whom the Arabs call al-Zainabī" (Balādhuri, p. 317) is connected with Dunbāwand. Their stronghold in Raiy was called 'Arīn (?) which resembles the name of the mountain al-'Aīrain from which the last mašmughān came down (cf. the note by de Goeje in Ibn al-Faḳīh, p. 275). Marquart wanted to connect the mašmughāns of the Bāwanid dynasty, the eponymous ancestor of which Bāw, a descendant of Kayūs, brother of Khusraw I, is said to have lived in the time of the later Sāsānians. This Bāw was a man of piety and after the fall of Yazdagird III had retired to his father's fire-temple. Marquart regards him as a "magus" and identifies him with the father of the Christian martyr Anastasius, who bore this name (Bāw) and was a "master of magian lore". Lastly he quotes the fact that the Bāwanids appeared in 167 only after the disappearance of the mašmughān (after 141) as if to continue their line. Unfortunately several details of the ingenious argument are not accurate: our sources (Ibn Isfandiyyār, *Zahīr al-Dīn* p. 204—205) give not the slightest suggestion that Bāw belonged to the priestly caste. According to Ibn Isfandiyyār (transl. Browne, p. 98), his grandfather's temple was at Kūsān, which Rābīno, p. 160, locates a little distance west of Ašraf i.e. quite remote from Dunbāwand. The passage in Ṭabari, iii. 1294, which Marquart quotes to prove the occurrence

of the name Mašmughān among the Bāwanids refers to the cousin of Māziyār of the Kārinid dynasty, which is quite different from the Bāwanids (cf. below).

The Kārinid mašmughāns. It is curious that neither Ibn Isfandiyyār nor *Zahīr al-Dīn* speak of the dynasty of the mašmughān of Dunbāwand, perhaps because they do not include this region in Ṭabaristān proper. On the other hand, they mention a mašmughān (*mašmughān* > *mazmughān*) Walāsh, who was the marzubān of Miyān-du-rūd (*Zahīr al-Dīn*, p. 42 says that this canton was near the Sārī between the rivers Kalārūd and Mihūbān and that on the east it adjoined Kaia-tughān; Miyān-du-rūd is thus quite close to where Rābīno puts Kūsān!). This mašmughān Walāsh (Ibn Isfandiyyār, p. 101; *Zahīr al-Dīn*, p. 42) lived in the time of Djamāspid Farrukhān the Great (709—722?) and belonged to the elder branch of the Kārinids descended from Zarmihr b. Sūkhriā. (We do not know why Justi, p. 430, takes this Walāsh to be the son of the last mašmughān of Dunbāwand?). The Kārinid Wandād Hurmuzd (of the younger line, descended from Kārin, brother of Zarmihr) in his rising against the caliph (cf. Mahdī, p. 158—169?) had combined with the isphahbad Sharwīn (772—797) and the mašmughān Walāsh of Miyān-du-rūd. This latter (Ibn Isfandiyyār, p. 126; *Zahīr al-Dīn*, p. 155) seems to have been one of the successors of the mašmughān Walāsh mentioned above.

Under 224 (838) Ṭabari (iii. 1294) mentions a cousin of the Kārinid Māziyār, who was called Šahriyār b. al-Mašmughān. According to this, al-Mašmughān would be identical with Wandād Ummid, uncle of Māziyār (cf. Justi, p. 430). On the other hand under the year 250 (864), Ṭabari, iii. 1529, mentions a Mašmughān (*sic*) among the allies of the 'Alid Hasan b. Zaid. Ibn Isfandiyyār, p. 165 calls him Mašmughān b. Wandād-Ummid. One must either suppose there is an error in Ṭabari's genealogy or admit that the title of mašmughān was borne both by Wandād-Ummid and his son, but the form of the designation of the latter (ماشمغان with the article) would rather show that the title had become a simple proper name (Browne is wrong in translating "the Mašmughān").

To sum up then: Alongside of the mašmughāns of Dunbāwand, we have the mašmughāns of Miyān-du-rūd. These *marzubān*, if we may rely on *Zahīr al-Dīn*, belonged to the Zarmihrid branch of the dynasty of Sūkhriā (Sāsānian governor of Ṭabaristān descended from Kārin, son of the famous smith Kāwa). Later we find the title (or proper name!) of mašmughān recurring in the younger branch of the line of Sūkhriā (the Kārinid branch), which occupied a position in Ṭabaristān subordinate to the Bāwandid isphahbads (*Zahīr al-Dīn*, p. 154, 14).

MĀSSA (Berber *Māset*), the name of a small Berber tribe of Morocco of Sūs, settled some 30 miles south of Agadir at the mouth of the Wādī Māssa; the latter is probably the *flumen masatat* mentioned by Pliny the Elder (v. 9) to the north of the *flumen Darat*, the modern *Wādī Dar'a*, and the *Masatas* of the geographer would correspond to the modern *ahl Māssa*.

The name Māssa is associated with the first Arab conquest of Morocco: according to legend, it was on the shore there that, after conquering Sūs, 'Uqba b. Nāfi' drove his steed into the waves of the Atlantic calling God to witness that there were no more lands to conquer on the west. In any case, Māssa appears very early as an important religious and commercial centre. Al-Ya'qūbi (end of the third = ninth century) notes that the harbour was a busy one and mentions a *ribāṭ* already renowned, that of Bahlūl. Al-Bakrī and al-Idrīsī mention the harbour of Māssat; al-Bakrī emphasises the fame of the *ribāṭ* and the importance of the fairs held there. Ibn Khaldūn devotes several passages in his *Kitāb al-'Ibār* to the *ribāṭ* of Māssa, where according to popular belief the expected Mahdī or Fāṭimid was to appear: this belief induced many devout people to go and settle in this *ribāṭ* and also sent many adventurers there to raise rebellions.

Towards the end of the xvth century, the religious movement begun by al-Djazzūli made Māssa one of the great *zāwiya*'s of Sūs. In the middle of the 16th (xvth) century Leo Africanus describes Māssa as a group of three little towns surrounded by a stone wall in the middle of a forest of palm-trees; the inhabitants were agriculturists and turned the rising of the waters of the Wādī to their advantage. Outside the town on the seashore was a very venerated "temple", from which the Mahdī was to come; a peculiar feature of it was that the little bays in it were formed of ribs of whale-bone: the sea actually throws up many cetaceans on this coast and ambergris was collected here; local legend moreover says that it was on the shore of Māssa that Jonah was cast up by the whale.

After the fall of the Sa'dians, the development of the Marabout principality of Tāzarwālt again made Māssa a commercial centre. The port was frequented by Europeans but it was soon supplanted by that of Agadir. The rapid decline of the principality of Tāzarwālt and the steadily increasing influence of the central Moroccan power finally destroyed almost completely any religious and economic importance of Māssa.

MAS'UD ABŪ SA'ĪD, the eldest son of Sultān Maḥmūd of Ghazna, was born in the year 388 (998). In 406 (1015—1016), Sultān Maḥmūd nominated him his heir-apparent, and two years later made him governor of Herāt. In

411 (1020), at the command of his father, he led an expedition to Ghūr and reduced the north-western part to submission. Shortly after this, he was disgraced and sent as a prisoner to Multān, but he was soon taken back into favour and was reinstated in his government at Herāt. When the province of Raiy was conquered in 420 (1029), Sultān Maḥmūd placed it under Mas'ud who, after subjugating the outlying parts, conquered Hamadhān and Isfahān from their Buwaihīd ruler, 'Alā' al-Dawla b. Kākawaih, in the beginning of 421 (1030), and was making preparations for further conquest when news arrived of the death of his father and the succession to the throne of his brother Abū Aḥmad Muḥammad. Mas'ud hurried to Ghazna to claim the throne. In the meantime, the army tired of Muḥammad, deposed him, and had the *khutba* said in the name of Mas'ud. Muḥammad was blinded and sent to the fort of Mandish, and Mas'ud ascended the throne in Shawwāl, 421 (October 1030), about 5 months after the death of his father. The Caliph al-Qādir bi'llāh conferred on him the titles of Naṣir Dīni 'llāh, Hāfiẓ 'Ibādī 'llāh and Zahir Khālifati 'llāh.

In 422 (1031), Sultān Mas'ud sent an army to punish 'Isā, the ruler of Mukrān, for his rebellion. 'Isā was defeated and put to death, and his brother named Abu 'l-Mu'askar was placed on the throne. In 424 (1032—1033), Mas'ud laid siege to a fort named Sarastī in the southern Kāshmir hills, took it by assault and returned to Ghazna in the spring. After this he attacked Tabaristān, as the ruler of that country, named Abū Kālingdār, had adopted a hostile attitude, and captured Astarābād. Abū Kālingdār was forced to offer submission and to promise to pay annual tribute. About the end of 426 (October 1035), Aḥmad b. Niyāltigin, the governor of Lahore, rebelled. Mas'ud sent against him one of his Hindū generals who was defeated and slain in battle. He then sent another Hindū general named Tilak, who defeated Aḥmad and forced him to fly to Sind where he was drowned while attempting to cross the river Indus. About the end of 427 (October 1036), Mas'ud led an expedition to India, took the forts of Hānsī and Sonipat and returned to Ghazna, leaving his son Maḥdūd as the governor of the Punjab. In 430 (1038—1039), Mas'ud crossed the Oxus to punish Pūrtigin, son of 'Altigin, ruler of Bukhāra, for his hostility, but before he could accomplish anything he received news that the Saldjūks were advancing to Balkh to cut off his retreat, and he immediately returned to Khurāsān.

Early in his reign, Sultān Mas'ud had been called upon to deal with the Saldjūks whose power had considerably increased during the period of disturbance following the death of Sultān Maḥmūd. They raided Herāt as early as 422 (1031) but were repulsed with heavy loss at Farāwah and forced to take refuge in the Balkhān Mountains. This however did not stop their activities, and by 425 (1033—1034) they had started to make systematic incursions into Khurāsān. In Sha'bān 426 (June, 1035) Mas'ud sent against them two of his generals, the Hādhib Baktrghdi and Husain 'Alī b. Mikā'il, who inflicted a crushing defeat on them, but while the Ghaznawid troops were engaged in plundering the camp of their vanquished foes, a body of the Saldjūks under Dāwūd issued from the hills, fell upon their disorderly ranks, and made fearful slaughter among them. Husain 'Alī was taken prisoner, and

Baktoghdi managed to escape. Instead of marching against the Saldjūks, Mas'ūd wasted his time in a fruitless expedition to India in 427, as stated above, and the result was that they became bolder and more powerful. In 428 (1036—1037), they captured Balkh, but retired to Marw at the approach of Sulṭān Mas'ūd, and sued for peace. Mas'ūd gladly consented to it, but it was only a shampeace and when Mas'ūd started on his return march to Ghazna, the Saldjūks fell upon his rear and put many of his soldiers to death. Mas'ūd turned round and took terrible revenge for this treachery. The Saldjūks redoubled their efforts against the Sulṭān, and won over the people of Sarakhs, Nasā and Bāward to their side. Mas'ūd now personally took the field against them. The Saldjūks advanced to meet him under their leader Tughlrl. The two armies met at Dandānakān on 8th Ramaḍān, 431 (May 23, 1040). Mas'ūd fought bravely but being deserted by his generals and finding himself surrounded on all sides by the enemy, he fought his way out of the field of battle and managed to reach Ghazna in safety.

The Saldjūks had evidently become too strong for him, and he resolved to withdraw to India, possibly with a view to gaining a respite and preparing a large army there to retrieve his affairs. He left Ghazna with all his treasure, and accompanied by his captive brother Abū Aḥmad Muḥammad. At Ribāṭ-i Mārīkalah, shortly after crossing the river Indus, his slaves rebelled against him, plundered his treasure, and, being joined by the rest of the army, they seized Mas'ūd and acclaimed the blind Muḥammad as their sovereign. Mas'ūd was sent as a prisoner to a fort where he was put to death on 11th Djumādā 1, 432 (January 17, 1041). His reign had lasted 10 years and three months.

Mas'ūd was a man of strong build and great physical strength. He was brave and generous, but he lacked the wisdom of his father, and early in his reign, he lost the co-operation of his officers by foolishly attempting to bring about the ruin of the old servants of the House on the advice of his young and ambitious courtiers, and demanding the return of the money which Muḥammad had distributed among them at the time of his succession to the throne. Mas'ūd was a great lover of learning, and numerous scholars had assembled at his court, one of whom was the famous Abū Raiḥān al-Bīrūnī who dedicated some of his greatest works to him. Several poets sang his praises and were given munificent rewards. He adorned his capital with beautiful buildings, and the New Palace with its magnificent throne was one of the wonders of the times.

MAS'UD B. MAWDUD B. ZANGI, 'IZZ AL-DIN ABU 'L-FATH (or Abu 'l-Muzaḥfar), lord of al-Mawṣil. Mawdud [q. v.] died in 565 (1170); he was followed by his son Saif al-Din Ghāzi [q. v.] as Atābeg of al-Mawṣil. When the latter came into conflict with Saladin [q. v.] in 570 (1175) he gave his brother Mas'ūd command of the troops sent to relieve Halab, which was being besieged by Saladin. After Saladin had left Halab and seized

the citadel of Hims, Mas'ūd, who had in the meanwhile attached the Ḥalabis to his side, attacked him but was defeated in Kamaḍān 570 (April 1175) at Ḳurūn Ḥamāt. Saif al-Din died on 3rd Ṣafar 572 (Aug. 11, 1176), or according to another less authenticated statement in 576 (began June 29, 1180), and Mas'ūd then became lord of al-Mawṣil. To this in 577 (1181—1182) was added Halab, which his cousin al-Malik al-Ṣālḥ [q. v.] bequeathed to him shortly before his death; but Mas'ūd did not hold it very long. On the advice of the influential emir Muḍjāhid al-Din Kaīmāz, he ceded his new possessions to his brother 'Imād al-Din Zangī who gave him Sindjār in exchange, and in Muḥarram 578 (May 1182) the latter occupied Halab. Soon afterwards, Saladin took Edessa, al-Raqqā, Sarūdj and Naṣībā, and in Raḍjab (November) of the same year he appeared before al-Mawṣil but could not take it by force; so he retired in the following month and turned his attention to Sindjār. After he had taken this town, he forced 'Imād al-Din to capitulate (Ṣafar 579 = June 1183). In 581 (1185) Saladin again attacked al-Mawṣil but had once more to retire with his object unachieved. After the capture of the town of Mayyāfānḳīn, he made a third attempt to take al-Mawṣil, and encamped at some distance from the town but fell ill and was taken to Ḥarran. In spite of this, 'Izz al-Din did not dare to oppose him any longer but began negotiations. Saladin declared himself ready to make terms, and in Dhu 'l-Hijja 581 (March 1186) peace was made on condition that 'Izz al-Din recognised the suzerainty of Saladin and gave him Shahrazūr with the lands behind the Zāb. 'Izz al-Din died in al-Mawṣil on Sha'bān 27 or 29, 589 (Aug. 28 or 30, 1193) after designating his son Nūr al-Din Arslān Shāh as his successor. The Arabic historians pay him as high a tribute as they do to his father Mawdūd.

(K. V. ZETTERSTÉEN)

MAS'UD B. MUHAMMAD ABU 'L-FATH GHIVATH AL-DIN, a Saldjūk ruler in the 'Irāk (529—547 = 1134—1152). Like Muḥammad's other sons, Mas'ūd, when quite a child, was entrusted to an atābeg to be educated, namely the celebrated emir Mawdūd and when the latter was murdered, Aḳ Sonḳor and Aiaba Djuyūsh Beg acted successively as Mas'ūd's tutors. The latter, an ambitious emir, in the beginning of Maḥmūd's reign tried to secure the sultānate for his protégé, then an eleven-year-old boy, but the attempt failed; in an encounter with Maḥmūd's troops he was put to flight and Mas'ūd as well as his wazir, the famous Arab poet al-Tughlā'i [q. v.], were taken prisoners (514 = 1120). On the fate of the poet see the article on him. Mas'ūd was pardoned and later given Gandja by his brother (1130). After Maḥmūd's death (525 = 1131), his son Dāwūd was at first recognised as sultān but Sandjār decided that Mas'ūd's brother Tughlrl should be sultān. Mas'ūd soon made peace with Dāwūd, after some fighting near Tabriz, and sought to obtain from the caliph al-Mustashid that the latter should mention him in the *khutba* in

Baghdād. The caliph, who had been approached with the same object by another brother of Mas'ūd named Saldjūk and his atābeg Qaradja, found himself forced to accede to both by having Mas'ūd's name mentioned first, followed by that of Saldjūk. He also collected his forces to go in alliance with them against Sandjar; but when he arrived in Khaniqin, he withdrew so that Mas'ūd and Saldjūk had to continue the struggle against their uncle alone and they were routed by him near a hill called Pandj Anghusht in the neighbourhood of Dinawar (1132). Sandjar however allowed Mas'ūd to return unhindered to Gandja and at the end of the same year Mas'ūd found an opportunity to go to Baghdād where Dawūd also now was. Both princes were received by the caliph in public audience and given robes of honour and other tokens of esteem. Homage was paid to Mas'ūd as sultān and to Dawūd as heir-apparent. Thereafter he fought with varying fortune against his brother Tughril and after the latter's premature death (528—529 = 1134) was generally recognised as sultān. Anusharwān b. Khālid, the caliph's vizier, now was given the office of vizier to the sultān. Soon afterwards however, a number of Turkish emirs became dissatisfied with Mas'ūd because they had felt themselves insulted by the advancement of Qara Sonkor, the powerful emir of Aḡharbāndjān, and were able to win the caliph over to their party. In the hope that Dawūd would join him, he went with some 7,000 horsemen towards Hamadhān, where Mas'ūd then was, but when the sultān's troops met him at Dārmarg, his own men left him in the lurch or even went over to Mas'ūd so that he and his vizier and other high officials were taken prisoners (529 = 1135). The sultān, it is true, treated him with deference, and began to discuss terms of peace, but he did not release him. He took him with him to Marāgha, where in the same year (cf. the various dates given: Weil, *Gesch. der Chalifen*, iii. 231, note 4) he was murdered by a number of fidā'is. The murderers were apparently hired by the sultān, on the advice of Sandjar, who had been stirred up against the Caliph by Dubais [q. v.]. The latter, who was also with Mas'ūd, was soon afterwards treacherously slain by him. These deeds of violence naturally made a very bad impression. Dawūd and Saldjūk began again to bestir themselves; the new caliph al-Rāshid brīllah, a son of al-Musta'id, adopted a hostile attitude and other Turkish emirs, notably Zangī, the lord of al-Mawṣil, began to be insubordinate; in a word, anarchy soon prevailed everywhere. But when Mas'ūd returned to Baghdād with his troops they all retired. Mas'ūd thereupon had the caliph, who had escaped with Zangī to al-Mawṣil, deposed by a fatwā of the qādīs and jurists and approved the appointment of al-Muḡtafi (530 = 1136). After peace had in this way been to some extent restored, Mas'ūd thought he might now devote himself to his pleasures and remained the whole year of 1137 in Baghdād in comparative inactivity, without allowing his leisure to be disturbed by a demonstration by the mob of the capital, which was intended to remind him that it was his duty to wage war upon the unbelievers. Once again several Turkish emirs rebelled and tried to bring Dawūd to the front again; among them the most dangerous were 'Abd al-Rahmān b. Tughanyerek, lord of Khalkhāl, and particularly the prince Mingubars, whom Sandjar after Qaradja's death had sent to Fārs and who

was vigorously supported by his deputy in Khuzistān, Buzāba. Mas'ūd, it is true, sent troops against them under Qara Sonkor but they had to retire, and a battle was only fought when Mas'ūd himself came up, at Kurshanbe near Hamadhān (532 = 1138). The sultān was at first victorious and put Mingubars, whom he had captured, to death; but when his troops were scattered plundering the enemy's camp, Buzāba fell suddenly upon them so that he and Qara Sonkor had narrow escapes and some twelve of the emirs with him were captured and all put to death by Buzāba. Fortunately for Mas'ūd, Buzāba did not pursue him, but was content with occupying Fārs; the sultān was also able to make peace with Dawūd, and the deposed caliph was murdered in Isfahān on Ramaḡān 25, 532 (June 6, 1138). The sultān's position however was not one whit better, for the different provinces of the empire were in the hands of powerful emirs, who not only paid no heed to the sultān, but occasionally appeared in open rebellion against him in the name of various Saldjūk princes whose atābegs they were. The most powerful of these was still Qara Sonkor who began a war on Buzāba to avenge his son, who had been murdered by the latter. When he approached, however, Buzāba withdrew into an inaccessible citadel and when Qara Sonkor retired, he took prisoner the prince Saldjūk whom he had appointed to rule over Fārs and then continued to rule in Fārs as atābeg of two sons of Maḡmūd, Malikshāh and Muḡammad. After the death of Qara Sonkor, who died in 535 of a broken heart after the great losses he suffered in the terrible earthquake in Gandja in 533 (1138), Čawli al-Djāndār took his place and like his predecessor was generally attached to Mas'ūd. Buzāba's attempt along with another emir named 'Abbās [q. v.], who had gained an influential position in al-Ray, to put the sultān's youngest brother Sulaimān on the throne therefore failed. Mas'ūd invited this prince to come to him and when he came he was imprisoned in spite of the sultān's promise. Čawli died in 541 (1146) in the same year as Zangī and in the following year 'Abd al-Rahmān and 'Abbās were disposed of by assassination so that Buzāba alone remained of the enemies of Mas'ūd. Buzāba now set out for Hamadhān to attack the sultān, but not far from this city was taken prisoner in a fierce battle and executed (542 = 1147). The princes Muḡammad and Malikshāh who were with him escaped. Mas'ūd afterwards sent for the latter, gave him his daughter in marriage and designated him his successor. In these negotiations the sultān followed the advice of his favourite beg Arslān b. Balangari, best known by the title Khāṣṣbeg, who in this way disposed of all his rivals, but at the same time aroused great discontent so that even the aged Sandjar came once more to al-Ray to remonstrate with his nephew (544 = 1149). But all this was in vain; and when in 547 (1152) Mas'ūd died, Khāṣṣbeg put Malikshāh upon the throne: when in a short time the latter showed himself quite incapable, he sent for Muḡammad, who had Khāṣṣbeg treacherously murdered.

Bibliography: in the article SELDJUKS. — Ibn Khallikān's article on Mas'ūd (Balāḡ edition 1299, ii. 531) is of no importance.

(M. TH. HOUTSMA)

MAS'UD B. SA'D B. SALMĀN, a poet in Arabic and Persian, was born in Lāhore. His father

remained for a considerable time in the service of the kings of Ghazna and had become the possessor of great wealth and lands in Lāhore and other parts of India. After his father's death these lands were confiscated by the Governor of Lāhore and Mas'ud was compelled to proceed to Ghazna to demand justice, but there also his enemies were able to put him to more troubles and bring against him a false accusation, which caused him to be imprisoned. He at last through the recommendation of Mas'ud b. Sultān Ibrāhīm was permitted to return to India and take possession of his estate. When Saif al-Dīn Maḥmūd b. Sultān Ibrāhīm came in India as viceroy, Mas'ud attached himself to this prince as courtier and panegyrist and became one of the special favourites of his court. But again, a false charge being brought against him, he once more fell upon evil days and loss of fortune. It was maliciously reported in 492 (1098) to Sultān Ibrāhīm b. Maḥmūd that his son Saif al-Dīn Maḥmūd intended to go to 'Irāk to Malikshāh. This report so much aroused the indignation of the Sultān that he ordered his son with all his courtiers to be arrested and put to prison. Our poet for the next ten years remained a prisoner. But on the intercession of Abu 'l-Kāsim Khāṣṣ, the Sultān pardoned him and released him from prison. He returned to India and was again placed in possession of his father's lands and dignity.

He died in 515 (1121). He is the author of two diwāns, one in Arabic and the other in Persian.

(M. HIDAYET HOSAIN)

AL-MAS'UDĪ, ABU 'L-ḤASAN 'ALĪ B. AL-ḤUSAIN, Arab historian and geographer and one of the most versatile authors of the fourth century A.H. Information about his life can only be gleaned from occasional references in his works; as his activity lay outside the lines of the regular schools of learning, he gets little mention from their representatives. The author of the *Fihrist* regards him as a Maghribi. According to his own statement, however, he was born in Baghād and descended from an Arab family which could trace its ancestry to a Companion of the Prophet. While still quite young he travelled through Persia where he spent part of 305 (915) in Iṣṭakhr. Next year he went to India and visited Multān and al-Manṣūra. He went by Kanbāya and Ṣaimūr as far as Ceylon, joined some merchants on a voyage to the China Sea and back to Zanzibar from which he returned to 'Omān. We again find him travelling along the southern shore of the Caspian Sea and in 314 (926) at Tiberias in Palestine. In 332 (943) he visited Antioch and the Syrian frontier towns and after a brief visit to his native province of Baṣra, he was staying in Damascus in 334 (945). Afterwards he seems to have lived sometimes in Syria and sometimes in Egypt. He was in al-Fusṭāṭ in 336 (947) and 344 (955) and he died there in Djumādā II 345 (956) or 346.

His restless life is reflected in his literary acti-

vity. His travels were certainly stimulated not by thirst for adventure but by a strong desire for knowledge. But this was superficial and not deep. He never went into original sources, as did al-Bīrūnī later, but contented himself with superficial enquiries and accepted tales and legends without criticism. Nevertheless we owe him a good deal of valuable information about the lands on the periphery of Islām. His method of presenting his material has the same faults as his scholarship. He is never able to finish a subject he has begun but continually diverges from his theme. His literary activity, in addition to philology and theology in the narrower sense, touched on almost all the fields of interest of his time, particularly natural philosophy, ethics and politics as well as heresiology. His works, a list of which is given by de Goeje in the preface to the *Kitāb al-Tanbih*, p. vi., are for the most part lost because they were not of general interest. Posterity was only interested in him as a historian. In the year 332 (943) he began his great history of the world *Kitāb Akhbār al-Zamān wa-man abādahu 'l-Hudūd min al-Umam al-mādīya wa 'l-Ādyal al-khāliya wa 'l-Mumālīk al-dāthira*, which is said to have filled 30 volumes. Burckhardt's statement (*Travels in Nubia*, p. 527) that twenty volumes of it are preserved in the Aya Sofia in Constantinople has unfortunately not been confirmed. Only a single volume, the first of the work, which A. v. Kremer obtained in Aleppo, is preserved in Vienna (see v. Kremer, *S. B. W. A.*, 1850, p. 207-211; Flugel, *Die ar. pers. u. turk. Hss. der K.K. Hofbibliothek*, ii., N^o. 1262; another MS. of the same part is in Berlin, see Althwardt, N^o. 9426). The work begins with the creation and after a brief geographical survey discusses the non-Muslim peoples and goes fully into the legendary history of Egypt. He reproduced extracts from this work in the *Kitāb al-awsaṭ* of which one volume perhaps survives in Oxford (see Uri, *Catalogus cod. MSS. or.*, i. 666). The substance of these two works he gave in briefer form in the *Murūdj al-Dihab wa-Ma'adin al-Djawāhir*, which he finished in Djumādā I, 336 (Nov.-Dec. 947) but revised in 345 (956). In addition to the manuscripts used for the Paris edition, a number of others are in existence, e.g. in the Ambrosiana (*R. S. O.*, iv. 97), in Fez (*Fihrist Masjud al-Karawīn*, N^o. 1298) and Mōsul (Dāwūd, *Makhtūṭāt al-Mawṣil*, p. 122, N^o. 22; p. 173, N^o. 32); printed as Maḥoudi, *Les prairies d'or* (the more correct translation would be "Gold-washings", see Gildemeister, *W.Z.K.M.*, v. 202), *Texte et Traduction* par C. Barbier de Meynard et Pavet de Courteille, 9 vols., Paris 1861-1877, Bülāḳ 1283, Cairo 1313, on the margin of Ibn al-Athīr, Bülāḳ 1303, of Maḳḳārī's, *Nafḥ al-Tib*, vol. 1-3, Cairo 1302. A synopsis of the *Murūdj al-Dihab* down to the fall of the Omayyads was made by Ibrāhīm al-Aḥṣihī in 1118 (1706) (MS. Vienna, Flugel, N^o. 807). Another synopsis of which it has still to be ascertained whether the two works on which it is based were not also used in addition to the *Murūdj*, with a continuation down to the year 638 (1248) was composed by Abū 'Abd Allāh Muḥammad b. 'Alī al-Shāṭibī of Tāza in Morocco under the title *al-Djumān fī Mukhtaṣar Akhbār al-Zamān* (wrongly ascribed by de Sacy, *N. E.*, ii., 1787 to Maḳḳārī; MS. Gyangos, 64, fol. 31-195; see Asin Palacios, *Escatologia*, p. 374; other MSS. in Cairo and

Damascus: see M. Kurd 'Alī, *R. A. A. D.*, iii. 239—242). An anonymous synopsis of his *magnum opus* with special reference to travellers' tales from the Indian Ocean with additions from the *Kitāb 'Adḡā'ib al-Hind* of Rāmihurmuzī, as well as from the legends of Egypt, entitled *Kitāb Akhbār al-Zamān wa-'Adḡā'ib al-Buldān*, or *Mukhtaṣar al-'Adḡā'ib wa'l-Gharā'ib* is preserved in several MSS. in Paris (see Carra de Vaux, *J. A.*, ser. 9, vol. vii, p. 133—144). Towards the end of his life, Mas'ūdī composed a survey of his whole literary activity and supplemented it where necessary from new sources in the *Kitāb al-Tanbih wa'l-Ishrāf* (ed. de Goeje, in *B. G. A.*, viii, Leyden 1894; additions to these in a Leipzig MS., *Z. D. M. G.*, lvi, 223—236; see Carra de Vaux, *Maḡādi, le Livre de l'avertissement et de la révision*, French transl., Paris 1897).

Bibliography: Ibn al-Nadīm, *Kitāb al-Fihrist*, ed. Flügel, p. 154; Yāqūt, *Ishād al-Arīb*, v. 147—149; al-Subkī, *Ṭabaqāt al-Shāfi'īya*, ii. 307; Quatremière, *J. A.*, ser. iii, vol. vii, p. 1—31; Wustenfēld, *Geschichtschreiber der Araber*, N^o. 119; Brockelmann, *G. A. L.*, i. 141—143; Nicholson, *A Literary History of the Arabs*, p. 352—354; J. (C. BROCKELMANN)

MAŠYĀD, a town in Northern Syria on the eastern side of the Djabal al-Nuʿairiye. The pronunciation and orthography of the name varies between the forms *Mašyād*, *Mašyāf* (in official documents and on the inscriptions mentioned below of the years 646 and 870 A. H.), *Mašyāt* and *Mašyāth* (on the interchange of *f* and *th* see Keschler, *Z. D. M. G.*, lxxiv. 465; Praetorius, *Z. D. M. G.*, lxxv. 292; Dussaud, *Topographie hist. de la Syrie*, p. 143, note 4; 209; 395, note 3). The variants *Mašyāb* (Yāqūt, *Mudḡam*, ed. Wustenfēld, iv. 556), *Mašyāh* (Khalil al-Zahrī, *Zubda*, ed. Ravasse, p. 49) and *Mašyāt* (al-Nābulusi, in v. Kremer, *S. B. Ak Wien*, 1850, ii. 331) are no doubt due to mistakes in copying (van Berchem, *J. A.*, Ser. 9, ix. [1897], 457, note 2). At a later period, the pronunciation *Miṣyāf*, *Miṣyād* became usual (al-Dimaṣḡī, ed. Mehren, p. 208; al-Ḳal-kāshandī, *Subḥ al-Aṣḡar*, Cairo, iv. 113; Ibn al-Shihna, *Barūt*, p. 265; cf. *Meṣyāf* on v. Oppenheim's map in *Petermanns Mitteilungen*, lv. [1911], n. Taf. 11). The name is perhaps a corruption of a Greek *Μαρούα* (= *Μαρούα*) or *Μάρου κάμυ*, which presumably lay on the *Marṣyas amn*, the boundary river of the Nazerim (ancestors of the Nuʿairis; Plinius, *Nat. Hist.*, v. 81) (cf. Pauly-Wissowa-Kroll, *Realencyklopädie*, xiv., Col. 1985 sq., s. *Marṣyas*, N^o. 3).

A number of ancient pillars and capitals built into the gates of the fortress (some reproduced in G. I. Bell, *Syria: The Desert and the Sea*, p. 217—220) are its only remains of antiquity. An old Roman road (*ṣaṣīf*) from Hamā to the west passed the town (according to Miss Bell, *loc. cit.*).

Mašyād is not mentioned in the early middle ages; the first mention of the fortress is probably in a Frankish account of the advance of the Crusaders in 1099: *peruenimus gaudentes hospitari ad quiddam Arabum castrum* (*Anonymi gesta Francorum et aliorum Hierosolymitanorum*, ed. Hagenmeyer, 1890, p. 418 with note 29; Dussaud, *Histoire et religion des Neḡairis*, Paris 1900, p. 21,

note 4). When in 503 (1109—1110), the Franks advanced on Kafaniya, Tuḡtakīn set out to relieve it; by the terms of the peace concluded between them, the Franks bound themselves to abandon all designs on Mašyāth and Ḥiṣn al-Akrād and in compensation these two places and Ḥiṣn Tuḡfān were to pay them tribute (Sibt b. al-Djawzī, *Murāt al-Zamān*, in *Rec. Hist. Or. Crois.*, iii. 537). Before 521 (1127) the fortress was in possession of a branch of the Mirdāsids, who sold it to the Banī Munḡidh. After the Nuṣairi citadels of Ḳadmūs and al-Ḳahf had fallen into the hands of the Ismāʿīlis in 527 (1132—1133), the latter also seized the fortress of Mašyād in 535 (1140—1141), by outwitting the commandant Sunkur, a mamlūk in the service of the Banī Munḡidh of Shaizar, who was surprised and slain (Abu 'l-Fidā', *Mukhtaṣar fī Akhbār al-Bashar*, in *Rec. Hist. Or. Crois.*, i. 25; Ibn al-Aṭhīr, *Kāmil*, *ibid.*, i. 438; al-Nuwairī, *Cod. Leyden* 2^m, f. 222^b, in van Berchem, *J. A.*, 1897, p. 464, note 1). Mašyād now became the residence of the Syrian 'Master' of the sect (as we may call him, with van Berchem, to distinguish him from the Grand Master in Alamūt), known as *Shaiḡh al-Djabal*. After the Master (*Muḳaddam*) Abū Muḥammad had gathered round him the members of the sect in the hills of Ḳadmūsīya, about 557 (1162) Kāshid al-Dīn Sinān [q. v.] appeared in Syria, as envoy from the Persian Grand Master, took over command of the Assassins [q. v.] there and displayed his unusual organising ability, by raising the sect to be a well equipped and dreaded force, the terror of the Crusaders. Saladin, who wanted to punish them for two attempts on his life, invaded the land of the Ismāʿīlis in Muḥarrim 572 (July—Aug. 1176), laid it waste and laid siege to Sinān in Kal'at Mašyād. Through the mediation of Saladin's uncle Shihāb al-Dīn al-Ḥārimī, lord of Hamā, Sinān however succeeded in obtaining Saladin's forgiveness; in the beginning of August, he went with his army to Hamā (Abū 'l-Fidā' and Ibn al-Aṭhīr, in *Rec. Hist. Or. Crois.*, i. 47, 626). Shortly before he raised the siege of Mašyād (about the 1st Ṣafar), he received from Usāma b. Munḡidh, who was in Damascus, a letter containing a panegyric of his great patron (Derenbourg, *Vie d'Ousāma*, Paris 1893, p. 400 sq.). Rāshid al-Dīn died in 588 (Sept. 1192). The Syrian Masters, as the official epithet *al-Dunyā wa'l-Dīn* henceforth regularly borne by them shows, were raised by him to a position with power and privileges equal to those of sovereign rulers (van Berchem, *op. cit.*, p. 470). While Sinān had completely emancipated himself from the suzerainty of the headquarters of the sect in Alamūt, in 608 we find the old conditions completely restored (Abū Shāma, *al-Dhail fī'l-Rawḡatān*, in van Berchem, *op. cit.*, p. 475 sqq., note 1). According to an inscription in the inner gate of the castle (van Berchem, *J. A.*, 1897, p. 482 = van Berchem—v. Oppenheim, *Beiträge z. Assyriol.*, vii/1, p. 17, N^o. 18), this building was restored by the Syrian Master Kamāl al-Dunyā wa'l-Dīn al-Ḥasan b. Mašūd under the suzerainty of the Grand Master of Alamūt 'Alā' al-līn Muḥammad III (618—653). The reference is probably to the al-Kamāl, who according to al-Nasawī (*Hist. du Sultan Djelal al-Dīn Mankobīrti*, ed. Houdas, p. 132) was for a period before 624, governor in Syria for the grand master of the Ismāʿīlis. It is uncertain whether the commandant (*mutawallī*)

Maḡd al-Dīn, who received in 624 the ambassadors of Frederick II (Ḥamawī in Amari, *Bibl. arabico-sicula*, App. ii., p. 30) was one of the Masters (van Berchem, *J.A.*, 1897, p. 501, note 1) About 625/6 and still in 635, Sirāḡ al-Dīn Muẓaffar b. al-Ḥusain was Syrian Master (Nasawī, *op. cit.*, p. 168; inscription of al-Kahf, ed. van Berchem, *op. cit.*, p. 488). A Persian from Alamūt, Tāḡ al-Dīn, was in 637 *muḡaddam* of the Syrian Ismāʿilis (Ibn Waṣīl, *Geschichte der Aiyūbiden*, Paris, MS. Ar. 1702, f. 333^b in van Berchem, p. 466, note 2). As Tāḡ al-Dīn Abū'l-Futūḥ he appears in an inscription in Maṣyād of Dhū'l-Ḳa'da 646 (Feb.-March 1249), according to which he had built the city wall of Maṣyād and its south gate. The commander of the fortress under him was 'Abd Allāh b. Abi 'l-Faḡl b. 'Abd Allāh (inscriptions A and B in van Berchem, *J.A.*, 1897, p. 456 = van Berchem-v. Oppenheim, *Beitr. z. Assyriol.*, *op. cit.*, N^o. 19). Probably it was Tāḡ al-Dīn to whom the Dominican monk Yvo the Breton, a member of an embassy sent by Louis IX to the "Old Man of the Mountains" in May 1250, sent a naive and fruitless appeal for his conversion (Jean de Joinville, *Hist. de St. Louis*, ed. Wailly, p. 246 *sqq.*; van Berchem, *J.A.*, 1897, p. 478-480). In the time of the Master Ridā' al-Dīn Abū'l-Ma'ālī in 658 (1260) the Tatars seized and held the fortress for a time, but after the victory of the Egyptian Sulṭān Ḳuṭuz at 'Ain Dījlūt, they abandoned it. About two years later Baibars began to interfere in the affairs of the Ismāʿilis and to demand tribute from them. He very soon deposed the Master Naḡm al-Dīn Ismāʿil and appointed his son-in-law Ṣarīm al-Dīn Muḡārak in his place and took Maṣyād from him. When the latter returned there, Baibars had him seized and brought to Cairo, where he was thrown into prison. Naḡm al-Dīn was again recognised as Master for a brief period and then his son Shams al-Dīn, before the Sulṭān definitely incorporated Maṣyād in his kingdom in Raḡjab 668 (1270) (Abū 'l-Fida', in *Rec. hist. or. crois.*, i. 153; Muḡaḡḡal b. Abi 'l-Faḡḡāl, *Gesch. d. Mam-lūkensultane*, ed. Blochet, in *Patrol. Orient.*, xiv. 445; van Berchem, *J.A.*, 1897, p. 465, note 2).

Maṣyād presumably at first belonged to the "royal province of fortunate conquests" the capital of which was Ḥiṣn al-Akrād, then to Tarābulus (after its capture in 688). It was later separated from this province and added to the niyāba of Dimashḡ to which it still belonged in the time of Ḳalḡashandī (*Ṣubḡ al-A'sḡā'*, Cairo, iv. 113, 202, 235) about 814 (1412). Ḳhalīl al-Zāḡhiri (*Zublat Kashf al-Mamālik*, ed. Ravaisse, p. 49) includes Maṣyād with Hamā (about 850) Under Egyptian rule the position of the lands of the Ismāʿilis with Maṣyād as capital was to some extent exceptional (Gaudefroy-Demombynes, *La Syrie à l'Époque des Mamelouks*, Paris 1923, p. 182, N^o. 3).

Abū 'l-Fida' (about 720 = 1320) described Maṣyād as an important town, with beautiful gardens through which streams flowed; it had a strong citadel and lay at the eastern base of the Djabal al-Lukkām (more accurately Djabal al-Sikkīn) about a farsakh north of Bārin and a day's journey west of Ḥamā (not Ḥims, as Le Strange, *Palestine*, p. 507 erroneously says: Abū 'l-Fida', *Geogr.*, ed. Reinaud, p. 229 *sq.*). As a result of its high situation, it has a more temperate climate than the low ground on the Nahr al-ʿĀṣī; the young Uṣāma

in 516 (1122-1123) brought to Maṣyād the wife and children of the emir of Ṣaizar, his uncle 'Izz al-Dīn Abū 'l-ʿAsāḡir Sulṭān, from the heat of Ṣaizar which was causing the emir anxiety about their health (Derenbourg, *Vie d'Ousāma*, p. 43).

Ibn Baṭṭūta passed through Maṣyād in 756 (1355) and al-Nābulusī in 1105 (1693-1694). The latter mentions that the governor of the town then was a certain Sulaimān of the tribe of Tanūḡh. An inscription of Maṣyād of Ramaḡān 870 (April-May 1466) contains a decree about taxes of the Sulṭān al-Malik al-Zāḡhir Ḳhushḡadam (van Berchem-v. Oppenheim, *Beitr. z. Assyriol.*, vii., p. 20, N^o. 23; N^o. 22 is perhaps of the same Malik al-Zāḡhir). Of a later date are two inscriptions of an emir Muṣṭafā b. Idris, one of the year 1203 (1788-1789) relating to the building of a well (*sabil*) (*op. cit.*, p. 21, N^o. 24), the other (N^o. 25) of 1208 (1793-1794) to the building of the house of the Ismāʿilī emirs.

The Ismāʿilis lived constantly in open or secret enmity with the Nuṣairis, although various tribes of the latter had offered their services to the Ismāʿilī Masters, for example as early as 724 (1324) to Rāḡhid al-Dīn (Guyard, *Un grand maître des Assassins au temps de Saladin*, *J.A.*, p. 1877, p. 165; Dussaud, *Histoire et Religion des Nuṣairis*, p. 80). A number of Nuṣairis of the tribe of Raṣlān, whom the emir of Maṣyād had allowed to settle in the town under their Shaikh Maḡmūd, in 1808 murdered the emir, his son and about 300 Ismāʿilis and seized the town. The other inhabitants, who had sought refuge in flight, applied for protection to Yūsuf Pāshā, the governor of Damascus. He sent a punitive expedition of 4-5,000 men against the Nuṣairis; Maṣyād had to be surrendered by the Banī Raṣlān after three months' stubborn resistance and the fugitive Ismāʿilis returned to Maṣyād in 1810 (Dussaud, *op. cit.*, p. 32; Burckhardt, *Reisen in Syrien*, p. 258) In 1812 Burckhardt estimated the population of Maṣyād at 250 Ismāʿilis and 30 Christian families. The population since then seems to have diminished still further. Burckhardt and Lammens found many houses in the town in ruins and large gardens within its walls. According to Burckhardt, the land east of the town is a desert moor, while in the north at the foot of the hills the citadel stands on a high steep rock: on the west side is a valley, in which the inhabitants grow wheat and oats. The town, which lies on the slope of a hill is about half an hour's walk, in circumference. Three older gates have been incorporated in the present more modern walls. The mosque is in ruins. The citadel has an outer wall from which the inner defences are reached by a vaulted passage (G. L. Bell, *Syria: The Desert and the Sown*, p. 218). The old citadel is for the most part destroyed; only a few buildings have been roughly restored and in parts are still inhabited.

MATĀLĪF. [See MATĀLA.]

MATAMMĀ, a town in the Eastern Sūdān (province of Kašala, district of Gallabat). Matammā has a remarkable importance as a market on the Sūdāno-Ethiopic frontier near the route of the caravans between the Abyssinian region of Lake Tāna and *Ḳhartūm*. Its economic value has greatly increased on account of the development of agriculture in the Anglo-Egyptian Sūdān and the new survey of Lake Tāna as a possible reservoir of water to extend irrigation in the Sūdān and Egypt and by this means to increase and intensify the culture of the cotton which is the principal source of prosperity in those countries.

Matammā is famous in the recent history of Ethiopia because the Emperor (*Negusa Nagast*) Yoḥannes IV was defeated and killed in the neighbourhood of this town by the so-called Darāwīsh of the Sūdānese Mahdī. March 10. 1889 A.D. (1st *meḡābir* 1881 of the Abyssinian era). The Emperor was preparing an expedition against *Shawā* to oblige Menilek, King of that country, to recognise definitely his vassallage to the Ethiopian Crown But, when he was informed that a corps of Darāwīsh had advanced as far as the frontier and that the zone of Lake Tāna with the ancient capital, Gondar, was menaced by the fanatic followers of the Mahdī, he came back to the Northern regions with his army, and met the Darawīsh at Matammā. After a strenuous fight the Emperor Yoḥannes IV himself was killed and the Abyssinians were defeated.

The Darāwīsh cut the head of Yoḥannes and sent it to the Mahdī as a sign of his victory.

The battle of Matammā however had no greater value for the Mahdī's followers than a successful razzia: they retreated to the Sūdān after pillaging some neighbouring countries and did not occupy any territory of Ethiopia. On the contrary, Matammā caused the end of the Northern Abyssinian dynasties; and the southern region — the *Shawā* kingdom — became the political centre of the Empire, when in the same year, 1889 A.D., King Menilek proclaimed himself Emperor (*Negusa Nagast*) as a descendant of the Salomonic dynasty.

The death of the Emperor Yoḥannes as a martyr during the battle against the Muslims, hereditary enemies of the Christian Abyssinians, has been celebrated in many songs and poems. The following is a very interesting example of the Abyssinian poetry in recent times:

"The Emperor Yoḥannes was a fool,
and we all despise him!

They said to him: "Reign in the middle of
the country!"

He answered: "I will be the keeper of the
frontier!"

The Emperor Yoḥannes was a liar!

He said: "I do not like drink".

And we have seen him drinking
a drink which causes the head to turn
around!"

(The last verses allude to the head of the Emperor sent to the Mahdī by the Darāwīsh).

MATḠHARA, the name of a Berber tribe belonging to the great family of the Butr; they were related to the Zanāta and brethren of the Maṭmāta, Kūmya, Lamāya, Ṣaddīna, Madyūna, Maghila etc., with whom they form the racial group of the Banū Fātin. Like the other tribes belonging to this group, the Maṭḡhara originally came from Tripolitania: the most eastern members of the Maṭḡhara, however, known to al-Bakrī and Ibn *Ḳhaldūn* were those who lived in the mountainous regions along the Mediterranean from Mil-yāna and Tenes to the north of Undja (port of Tābahrit); those of the western part of this zone were allied with the Kūmya; their mountain rose not far from Nadrūma and the fortress of Tāwunt was on their territory.

Three sections had reached the western Maghrib as early as the eighth century and there formed an important bloc. These were:

1. The Maṭḡhara of Fās and the couloir of Tāzā; al-Bakrī observes that the source of the Wādī Fās was on their territory, in the region where Leo Africanus still mentions the *Sūḳ al-ḳhamīs* of the Maṭḡhara "fifteen miles west of Fās".

2. The Maṭḡhara of the Middle Atlas in the Djabal Maṭḡhara which Ibn *Ḳhaldūn* locates S.E. (*ḳhūli*) of Fās and which Leo Africanus says is five miles from Tāzā (to the south). The reference then is to the mountain region now occupied by the Ait Wārāin: an important section of the latter, the Ait Djellidāsen, represents the Banū Gallidāsen

whom al-Bakrī gives as a section of the Maṭghara, settled near Tenes in Algeria. We still find among the Ait Wārāin several sections of the Imghilen who represent the Maghila, brethren of the old Maṭghara.

In al-Bakrī's time (vth = xith century) these two sections of the Maṭghara had as neighbours in the west, the Zawāgha of Fāzāz and of Tādla.

3. The Maṭghara of the oases of the Sahara settled in the region of Sidjilmāssa and in the town itself, in which they constitute the main element of the population, in the region of Figīg, in Tuwāt, Tāmanūt and as far away as Wāllan (Ouallan).

At the beginning of the Arab conquest, the Maṭghara are represented by Ibn Khaldūn as settled and living in huts built of branches of trees (*khaṣāṣ*); those of the Sahara lived in fortified villages (*ḡuṣūr*) and devoted themselves to growing dates. In the time of Leo Africanus, the Maṭghara of the Central Atlas occupied about fifty large villages.

Like other peoples belonging to the group of the Banū Fātin, the Maṭghara took an active part in the events at the beginning of the Arab conquest and weakened themselves considerably in the fighting. As soon as they had become converted to Islām, a number of bodies of Maṭghara went over to Spain and settled there. Later, like their brethren, the Maṭmāta, they adopted the principles of the Ṣūfīya; one of their chiefs, Maisarū, provoked the famous schismatic rising of 740, which was the beginning in Morocco of the Baraghwāta heresy. In a list of the tribes which adopted this heretical teaching we find the Maṭmāta and Maṭghara of the Central Atlas, as well as the Banū Abī Naṣr, the modern Ait Bū-Nṣar, the eastern section of the Ait Wārāin.

With the rise of Idrīs, the chief of the Maṭghara, Bahlūl, declared himself at first a supporter of the caliph of Baghdād, Hārūn al-Raṣhīd, then rallied to the new dynasty. Later and down to the xvith century, the Maṭghara of the Central Atlas do not seem to have played any part in politics; they retained their independence at least. From the xvith century, they seem to have been supplanted on their territory by invaders from the south. As to the Maṭghara of the shore, settled in the region of Nadrūma, their alliance with the Kūmya gained them considerable political importance, when the latter became supporters of the Almohads. It was at this period that they built the fortress of Tāwunt. They then rallied to the Marinids but this brought upon them the wrath of the ruler of Tlemcen, the celebrated Yaḡmurāsān, who finally crushed them.

Ibn Khaldūn uses the form *Madghara* instead of *Maṭghara*; in Moroccan texts of late date we also find *Madghara*.

Bibliography: al-Bakrī and al-Idrīsī, *indices*; Ibn Khaldūn, *Kitāb al-'Ibar*, transl. de Slane, i. 237—241; Leo Africanus, *Description de l'Afrique*, ed. Schefer, ii. 54 and 342; iii. 71 and 225. (G. S. COLIX)

MATHAL (A., pl. *amthāl*) is originally by etymology, like the Eth. *mesl*, *messālē*, Aram. *mathlā* and Hebrew *māḡhāl* (see O. Eissfeldt, *Der Maschal im Alten Testamente, Beihefte zur Z.A.T.W.*, xxiv., Giessen 1913), simile, comparison; as popular sayings commonly appear in this form, the term was applied to them in general and thus obtained the general sense of proverb and popular saying. The fondness for similes and allusions,

which is common to all primitive cultures, survived among the Semites and especially among the Arabs with great tenacity and therefore plays an important part, even in the higher forms of literature. The simplest form of metaphor usually draws parallels between man and beast. Of a sleepless man, one says *bāta bi-lailati anḡada* (or *anḡadha*) "he spent the night like a hedgehog" (Abū Hilāl al-ʿAskarī, *Madḡmaʿ al-Amthāl*, on the margin of Maidānī, Cairo 1310, i. 109, 15; *Lisān al-ʿArab*, iv. 437) and with the downrightness beloved by the Arabs the good example and educative influence of a leader or father is described as *bāla ḡimārūn fa 'stabāla aḡmiratan* or *bāla fādīrūn fa-bāla ḡafruhū* (al-Maidānī, *Madḡmaʿ al-Amthāl*, Cairo 1310, i. 64, 65). The comparison to animals is also used to indicate veiled mockery of unpleasant social conditions as *al-buḡḡāthū fi arḡnū yastansīru* "here among us the sparrow plays the falcon" (al-ʿAskarī, i. 193, 20). Such proverbs are sometimes developed into regular fables (see Brockelmann, *Fabel und Tiermarchen in der älteren arab. Litteratur*, *Islamica*, ii. 96—128). Among them we find much that is common to all nations, which it is hardly ever possible to trace back to a single source (cf. the discussion on the "goat and knife": *Z. D. M. G.*, xlv. 737 sqq.; xlvii. 86 sqq.), unless the origin is as well known as that of the two bulls from the *Kalīla wa-Dimna*, which is given by al-ʿAskarī, i. 47, 16 sqq. and therefore ʿAlī cannot have applied it to his relationship to ʿOḡmān.

But the circumstances of everyday life also provide material for similes which usually take the form *a/ʿalū min*, as in those which al-ʿAskarī and al-Maidānī quote at the end of each chapter of their collections of proverbs arranged in alphabetical order. Even quite banal happenings may pass into proverbs (*fa-ṣārat* or *ḡhakahat mathalan* or *ḡurība bihi 'l-mathalū*, as so many Arabic stories end), like the story of Kuʿais of whom we know no more than that his aunt once gave him as a surety and never redeemed him (al-Mufaḡḡal b. Salama, *al-Fāḡḡir*, ed. Storey, p. 24, N^o. 61); or the story of the poor woman selling butter of whom a rogue took advantage after inducing her to hold two skins of butter firmly together in her hands (*al-Fāḡḡir*, p. 70, N^o. 147). But the memory of important historical events is also perpetuated in proverbial sayings, like that of the fratricidal war between the Bakr and Taghlib provoked by Basūs (*al-Fāḡḡir*, p. 76, N^o. 157); al-Mufaḡḡal in his *al-Fāḡḡir*, p. 217—231, and al-Maidānī, ii. 38—47, therefore give the most notable battles of the Arabs in their lists of proverbs and proverbial allusions. Many incidents of the Muslim period have attained equal renown, like Muʿāwīya's exclamation of joy on hearing that al-Aṣhtar had been poisoned (see above, i. 504; al-Maidānī, i. 8, 15) or the memory of the fine voice of the two singers of the bon vivant Caliph Yazīd b. ʿAbd al-Malik (al-Maidānī, i. 137, 12). It is however not always epoch-making events that are handed down to posterity in this way, like the stormy night in the time of the Caliph al-Mahdī, which provoked him and his retinue to do such penance (al-Maidānī, i. 176, 12); or the story of the defeat and fall of the Khākān, apparently that chief of the Khuttal, whom Asad b. ʿAbd Allāh conquered in the year 119 (737), which, according to Ṭabarī, ii. 1616, made a great sensation at the court of Hishām, while Mufaḡḡal in *al-Fāḡḡir*, p. 80, 11 sqq., refers it to the fighting

against the Khazars, but the historians record no event of the kind among them; or the story of Mu'awiya's ambassador to the Emperor of Byzantium (Ibn K̄utaiba, *ʿUyūn*, p. 238, and the proverb: 'Askari, i. 76, 11 sqq.; Maidānī, ii. 72, 4). Such historical memories are frequently preserved in the form of allusions like the famous *ṣahīfat al-Mutammis* and the *djazzā Sinimmār*. Many problems of this kind are of local origin, like the allusion to the two equally poor asses of the man from Hira (Maidānī, i. 72, 16) or to the Meccan dandy (Maidānī, i. 127, 11); such proverbial allusions are particularly numerous from Medīna (*ibid.*, i. 168, 6 173, 20, 261, 18, 264, 2, 280, 25, 298, 1), but we also have them from Baṣra (*ibid.*, i. 145, 16 and 30; a parallel from Kūfa in *Djāhiz*, *K. al-Hayawān*, v. 153, 13). Kūfa (*ibid.*, i. 192, 15, as a nest of Shi'īs), Wāsiṭ (*ibid.*, i. 97, 9) and Himṣ (*ibid.*, i. 190, 21). Men celebrated for particular qualities, as in other lands, are frequently commemorated among the Arabs in proverbial sayings, but the popular imagination very often invents the representative of such virtues; when Hātim has to share the reputation for liberality with the Ṭāhī Ka'ab b. Māmā and Harim b. Sinān ('Askari, i. 223 sqq.; Maidānī, i. 123 sqq.), this is due to tribal rivalry. There are therefore various typical representatives of fidelity ('Askari, ii. 251 sqq.; Maidānī, ii. 231 sqq.), of perspicacity (Maidānī, i. 219 sqq.) and also of stupidity (Dughā: *al-Fākhīr*, p. 24, N^o. 58; Maidānī, i. 147; Shawla: *al-Fākhīr*, p. 71, N^o. 148; Gothamites of Arabia, the people of al-Hadjar: Maidānī, i. 178, 19; Abū Ḥabshān and others in Maidānī, i. 146 sqq., 150 sqq.), the best known is *Djūhā*, around whom have crystallised the stories of a wandering rogue in the Adab literature (cf. Schwally, *Z D.M.G.*, lvi. 237¹), but we also have the Omayyad governor of the 'Irāk, Yūsuf b. 'Umar al-Thikāfi (Maidānī, i. 99, 31). Memories of Penelope seem to have found their way to Arabia in completely perverted form ("stupidity than the woman who continually undid her weaving", which is found as early as *Ḳur'ān*, xvi. 94; cf. 'Askari, i. 283, 7; Maidānī, i. 172, 5) and of Sisypheus "greedier than he who turned the rock" (Maidānī, i. 297, 17), among the typical representatives of stupidity and greed respectively.

But among Arabic proverbs there are not a few the meaning and origin of which had already been quite forgotten at the time they were put on record, so that Arab writers invented all kinds of explanation for them from pseudo-history, with a particular fondness for the Amalekites; not infrequently a choice is given of several stories, as for the "naked warner" (Maidānī, i. 31, 20), "the gatherer of acacia shoots of the tribe of 'Anaza" (*ibid.*, i. 49, 21, 288, 17), "the repentance of al-Kusa'i" (*al-Fākhīr*, p. 74). We also find widely disseminated motives, as in the story of *Khuzāfa* which the Prophet is said to have told his wives (*al-Fākhīr*, p. 137, N^o. 280). In many cases the learned editors have gone so far as to invent stories because they passed over the simplest explanation as too easy. Thus the saying *ḥidā, ḥidā, warā'akī l'unluka* probably only means "Hawk, hawk, the ball (which was shot from the bow before the invention of fire-arms) is behind you",

which Abū 'Ubaida refers to a children's game; al-Kalbī and al-Sharkī however take *ḥidā* and *Bunduḳa* as names of South Arabian tribes who had fought with one another (*al-Fākhīr*, p. 38, N^o. 93). Similarly the same writers invent stories of the time of the Amalekites in which *Himār* is a proper name to explain *ṭarakuhu djawfa himārīn*, which al-Aṣma'ī rightly takes literally (*al-Fākhīr*, p. 12, N^o. 18).

The number of proverbs is naturally very large in which maxims of life, often very trivial, are laid down; they include some which owe their origin to social conditions in Arabia, like "assist thy brother whether he is right or wrong" (*al-Fākhīr*, p. 119, N^o. 259). They also include much that is the common property of all nations, the origin of which can rarely be demonstrated, as in the Arabic pendant to the definitely Roman *Res venit ad triarios* in al-'Askari, ii. 32, 16. The subject can only be touched on here. To the references given by the writer in *Ostas. Zeitschrift*, viii. 66 sqq. we may add a few Arabic parallels to our proverbs: "Walls have ears" (Maidānī, i. 57, 21); "Speak of an angel and you hear his wings" (*ibid.*, i. 57); "Hammer and anvil" (*ibid.*, p. 58, 13); "A liar must have a good memory" (*ibid.*, i. 49, 13); "Festina lente" (*ibid.*, i. 87, 21); "Out of the frying-pan into the fire" (*ibid.*, ii. 25, 9); "To fall between two stools" (*ibid.*, ii. 64, 7); "To be on tenter-hooks" (ii. 74, 13); "Hoist with his own petard" (ii. 168, 11); "A bird in the hand is worth two in the bush" (*ḥaifūn fi 'l-kaffi khairun min kurkiyin fi 'l-dhaww*; al-Hamadhānī, *Rasā'il*, Bairūt 1890, p. 44, 3).

Among sayings which are international in character those disseminated by religious communities occupy a special position. It is of course not an accident, but is quite in keeping with the importance, which is becoming more and more evident, of Christianity for the intellectual life of ancient Arabia, that New Testament sayings are common among Arabic proverbs, notably from the Sermon on the Mount, like Mt. 7,2 = Maidānī, ii. 67, 17; Mt. 7,15 = Maidānī, i. 192, 23; Mt. 7,16 = Maidānī, i. 34, 8, 336, 31; ii. 182, 4; 'Askari, i. 68; Mt. 9,24 = Maidānī, ii. 113, 23; Mt. 17,3 = Maidānī, ii. 67, 26; Mt. 23,24 = Maidānī, ii. 259, 16; Gal. 6,7 = Maidānī, ii. 73, 12. On the other hand, except for a few echoes of Proverbs and Eccles. in which the origin is uncertain, the only one from the Old Testament is Maidānī, i. 228, 20, which looks like a quotation from Deut. 32,15. From Christian legend we have also the proverbial martyrdom of *Djurdjus* (*al-Fākhīr*, p. 256, N^o. 517) and the story of the Seven Sleepers which appears in various forms (*al-Fākhīr*, p. 109, 239; Maidānī, ii. 196, 14; *Ḳālī Amālī*, i. 61; cf. *M.S.O.S.*, v. 228). On the other hand, of Old Testament figures we find only Noah once in a late proverb, probably native to Moṣul (Maidānī, ii. 250, 11). The Mandaean Creator-deity *Fiṭahl* must have gone into the proverb Maidānī, ii. 62 sqq. from the verse of Ru'ba quoted there, to whom it was welcome, like other foreign matter, to give an appearance of learning (see Ahlwardt, *Der Diwan des Ru'ba*, xv.). Later tradition also associated with Luḳmān [q. v.], the wise hero of Arab antiquity, sayings attributed to Aḥīkar and common to many nations.

Although the proverb is from its nature anonymous, learned tradition often tries to find authors. Many proverbial sayings are therefore attributed

¹) The *Varā'id al-Djūhā al-Kubrā*, ed Hikmet Bek Ṣharīf, Cairo 1346 (1928) are for the most part from the Turkish Naṣraddin.

to the Prophet and his Companions. The *Amthāl al-Nabi*, which circulated outside the canonical collections of Tradition were collected by Ibn Khallād al-Rāmhurmuzī (*Fihrist*, p. 155) and Abū Hilāl al-Askari; al-Maidānī accuses the latter of being uncritical and quotes in his preface as an example of genuine Ḥadīth the parable of the good and bad companion in Bukhārī, *Ṣaḥīḥ* (ed. Krehl, ii. 17). This does not prevent him however from putting in his collection a series of sayings of the Prophet, as his predecessors had done, and at the end of his book compiling a special chapter of them, which also includes sayings of the first Caliphs. Special popularity was always enjoyed — not only among Shīʿis — by sayings attributed to ʿAlī. Ibn Kūtaiba in his *ʿUyūn al-Akhbār*, in the fifth book, *K' al-ʿIlm wa 'l-Bayān* (cod. Köpr., fol. 155b), already uses a collection of this kind, such as was current in various recensions (anonymous in *al-Tuhfa al-bahīya*, Sтамbul 1302, p. 107—114), e.g. in alphabetical order by ʿAhd al-Wāhid b. Muḥammad al-ʿAmidī, about 510 (1116), entitled *Ghurar al-Hikam wa-Durar al-Kalim*, lith. Bombay 1280 and also edited in Persian and Turkish (s. i. 299, and also W. Yule, *Apophthegms of Alee the son of Aboo Talib* [*Maṭlūb kull Ṭalīb*] with an early Persian paraphrase and an Engl. translation, Edinburgh 1832; *Sad Kalimātī Mawlāʾi Muttakiyān Amir al-Muʾminin*, Teheran 1304; *Nathr al-Laʾlī*, the second coll. in Fleischer, with Türk. paraphrase by Muʿallim Nādjī entitled *Amthāl ʿAlī*, Sтамbul 1313, with Türk. comm. by Nasib entitled *Rishatī Djawāhir*, Sтамbul 1257).

Numerous also are the proverbs which have a metrical form, while it is impossible to say whether the poets, in whose *Diwāns* they are, originated the idea or only gave it its form. Al-Sukkari (*Fihrist*, p. 78) and ʿYaina b. al-Minhāl (*ibid.*, p. 48, 108) collected such *abyāt ʿāʾira*. A fine collection has been made by al-Isḥāqī in the *Kitāb al-Mustatṭaf*, Cairo 1320, i. 27 sqq. Among such metrical sayings are some by the greatest poets of the pagan period like Tarafa (*al-Fākhīr*, p. 254, 509; al-Maidānī, i. 161), Imraʾalkais (ʿAskari, i. 255 = Maidānī, i. 133), Lebid (ʿAskari, i. 37) and by later poets like al-Farazdaq (*al-Fākhīr*, p. 250, N^o. 496; al-ʿAskari, ii. 46) and Muṭʿ b. Iyās, whose two palms of Ḥulwān (ʿAskari, i. 297, 452; Maidānī, i. 297) are famous. From a misunderstanding of a verse of Farazdaq's in which the way to ʿUnṣulain is mentioned (Maidānī, i. 38; quoted by Yāqūt, iii. 736), this verse became typical of taking the wrong way. Al-Mutanabbī's verses that have passed into the language have been collected by Ismāʿīl al-Ṭalākānī, d. 385 = 995 (Yāqūt, *Irshād*, vi. 501—518; Suyūṭī, *Rughvat al-Wuʾāt*, p. 35), in *al-Amthāl al-ʿāʾira min Shīʿr al-Mutanabbī* (*Fihrist*, Cairo 2, iii. 23).

Proverbs excited the interest of the learned from the very beginning of Arabic literature; historians and philologists emulated one another in collecting and explaining them. Thus we find among the sources of the works that have survived to us the old historians and genealogists like al-Sharkī b. al-Kuṭāmi (Wustenfeld, *Geschichtsschreiber*, N^o. 23) and ʿAwāna b. al-Hakam (*ibid.*, N^o. 27) and Abū ʿl-Yāqzan (*ibid.*, p. 36; *al-Fākhīr*, p. 253), the two former very often as authorities for Hishām b. al-Kalbī, to whom with the great monographer Muḥammad b. Habib (Wustenfeld, N^o. 59), Zubair b. Bekkār (*ibid.*, p. 61) and al-Madāʾinī (*ibid.*, p. 47), we owe

most of the legendary and historical material. Almost all the philologists of note have devoted special works to the subject. To their interest in language is to be ascribed the fact that the limits of the scope of the subject are extended to include phrases and idioms which have really nothing to do with the proverb and, as for example *laʿanahu ʿllāhu* (*al-Fākhīr*, p. 7), do not seem to require explanation; but we owe, for example, to al-Mufaḍḍal the interesting note that it had become a habit with some Syrian Arabs to use the Greek φησιν, “says he”. The oldest work of the kind that has survived is the *Kitāb al-Amthāl* of al-Mufaḍḍal al-Dabbī († 170 = 786), pr. Sтамbul 1300. The next oldest, that of Abū ʿUbad al-Kāsim b. Sallām al-Harawī (d. about 223 = 837), is preserved in a number of Sтамbul MSS. (s. Rescher, *Z.D.M.G.*, lxiv. 517, N^o. 43; *M.S.O.S.As.*, xiv. 6; *M.O.*, vii. 123), and in the Escurial (Derenbourg, Lévi-Provençal, N^o 1757), also the commentary by ʿAbd Allāh al-Bakrī (d. 487 = 1094), *ibid.*, N^o. 526 and Lāleli, N^o. 1795; printed as N^o. 1 of the *al-Tuhfa al-bahīya*, Sтамbul 1302, p. 2—16; on the other hand, the work dealt with by E. Bertheau in his Diss., Göttingen 1836 (s. Freytag, *Arabum Proverbia*, iii., vii. — xi.) is much more recent. The *Kitāb al-Fākhīr* of al-Mufaḍḍal b. Salama, a pupil of Ibn al-Aʿrābi (d. 231), has been edited by C. A. Storey for the “De Goeje Foundation”, Leyden 1915. The specially numerous proverbs of the form *afaʿlu min* were collected by Ḥamza al-Isfahānī (d. between 450—460 = 960—970) in a work which only survives in a unique MS. in Munich (see Mittwoch, in *M.S.O.S.As.*, 1909, p. 33 sqq.), which was much used by later writers, and copied word for word by al-Maidānī for the corresponding section of his book. Abū Hilāl al-ʿAskari (d. after 395 = 1005) compiled the *Djamharat al-Amthāl*, extant in several MSS. in Sтамbul (see Rescher, *Z.D.M.G.*, lxiv. 513; *M.F.O.B.*, v. 501; *M.S.O.S.As.*, xiv. 36) and printed at Bombay in 1306—1307 as well as on the margin of Maidānī (Cairo 1310), in which an attempt was made for the first time to annotate each proverb from the philological and historical point of view, excluding all post-classical material, to which Ḥamza had allotted considerable space. Al-Maidānī [q.v.] collected the material compiled by his predecessors in his *Madjmaʿ al-Amthāl* and expanded each section by an appendix on modern proverbs. This has since then been regarded as the standard work on the subject and not even Zamakhsharī's *Kitāb al-Mustakṣā fi ʿl-Amthāl*, although also much read (to the MSS. mentioned in *G.A.L.*, i. 202. xiv. may now be added the following in Sтамbul, *M.S.O.S.As.*, xiv. 15; *R.S.O.*, iv. 708; *M.O.*, vii. 97, 102, 123; also Aghā, N^o. 991; Dāmāzāde, N^o. 1557; Scutari, *Z.D.M.G.*, lxviii. 58; Brussa, *ibid.*, p. 50; Mōsul, Dāwūd, *al-Makhtūṭāt al-Mawṣiliya*, p. 329, 37, Cairo: *Fihrist* 2, iii. 355), could according to Ḥādjdjī Khalifa, N^o. 11421, permanently affect its popularity. Al-Māwardī's [q.v.] book, like the different collections of sentiments made by al-Zamakhsharī, was from the first intended to deal rather with the literature than with the language of the people.

It was not till the ninth century that interest in the east was again aroused in proverbs under the influence of European scholarship. Almost all works on modern Arabic dialects contain collections of proverbs (cf. the lists which could of

course now be very much extended in A. Fischer, *M.S.O.S. As.* i. 198—199 and E. Littmann, *Arabic Proverbs collected by Mrs. A. P. Singer*, Cairo 1913, p. ix; in addition to the works by modern Orientals there quoted we may mention: Ibrāhīm Sāḥib Lubnānī, *al-Durra al-yatima fī 'l-Amṡāl al-ḥadīma*, Banūt 1871; Maḥmūd Ef. 'Omar al-Bādī, *Kitāb Amṡāl al-mutakallimīn min 'Aẓamm al-Mas'ūlīn (alladhī kaddamahu fī 'l-Mu'tamar al-'ilmī al-ḥāmin bi-Bilād al-Sūd wa 'l-Norwēdj min Mamālik 'Urūḡ Sunat 1889 mil.)*, Cairo 1311; Tāḥir b. Šāliḥ al-Djāzārī (cf. M. Kurd 'Alī, in *R.A.A.D.*, vii. 576—596, 666—679), *Aṣḥar al-Amṡāl*, Cairo 1338; cf. O. Rescher, *Ethnologisches im arabischen Sprichwort*, *Isl.* ii. 98—101; iii. 178.

(C. BROCKELMANN)

MATHĀNĪ, a term of uncertain meaning which occurs twice in the *Ḳur'ān*, namely in Sūra xv. 87: "and we have brought thee seven of the *mathānī* and the noble *Ḳur'ān*", and Sūra xxxix. 24: "Allāh sent down the most beautiful recital, a book which is in harmony with itself, *mathānī*, at which the skin of those who fear their Lord creeps".

The interpretation of the word is made more difficult by the fact that in the latter passage it seems to mean the *Ḳur'ān* itself, in the former, on the other hand, something similar to the *Ḳur'ān*.

In Ṭabarī (*Tafsīr*, xiv. 32 sqq.; cf. xxiii. 124 sq.) we find the following opinions:

a. Mūsā was given six out of the seven *mathānī*; two were lost when he broke the tablets. The seven *mathānī* are like seven long sūras, i. e. ii.—vii. and a seventh, on the identity of which there is a difference of opinion; it is either Sūra x. or viii. and ix. combined.

b. The seven *mathānī* mean the *Fātiḥa* which contains six verses. These with the *ḥasmala* in the beginning make seven. It is called the *mathānī*, i. e. repetitions, because it is repeated in the *ṣalāt*'s at each *ruk'at*. This explanation is supported by quoting the term *mutaḥabbish* ("in harmony with itself") which immediately precedes the word *mathānī* in Sūra xxxix. 24.

c. The *mathānī* means the *Ḳur'ān* in general. Hadīth hesitates among these interpretations a. (Tirmidhī, *Tafsīr*, Sūra ix. trad. 1; cf. Bukhārī, *Adḍun*, bāb 106) and b. (Bukhārī, *Tafsīr*, Sūra i. bāb 1; Sūra xv., bāb 3; *Faḍā'il al-Ḳur'ān*, bāb 9; Tirmidhī, *Tafsīr*, Sūra xv., trad. 3, 4; Nasā'i *Iḥṡāk*, bāb 26).

Nor is there any unanimity in explaining the form *mathānī*. Baidawī on Sūra xxxix. 24 gives as the singular *mathānān*, *mathnān* or *mathnīn*. Zamakhsharī gives *mathnā*. The latter form is found in the *Ḳur'ān* (Sūra iv. 3; xxxiv. 45; xxv. 1) and in Hadīth (Bukhārī, *Ṣalāt*, bāb 84; *Witr*, bāb 1; *Tahajjud*, bāb 10; Muslim, *Musāwirin*, trad. 145—148; Tirmidhī, *Ṣalāt*, bāb 206 etc.) as a distributive, meaning "occurring in pairs". This meaning however would not be at all suitable for *mathānī*.

Geiger (*Was hat Mohammed aus dem Judenthume aufgenommen?*, p. 57 sq.) has already compared the Hebrew *mişnā* (Aram: *mathnithā*). According to him then *mathānī* would mean the *Ḳur'ān* itself as a whole. His suggestion is approved by Noldeke-Schwally (*Geschichte des Qorāns*, p. 114

sq.). Attention might further be called to the fact that *mişnā* means a single law as well as the whole codex and from this could be derived the double meaning of *mathānī* (separate verses and the whole *Ḳur'ān*), a derivation which could be supported by the parallel double meaning of the word *Ḳur'ān* (single revelation and all revelation as a whole).

Sprenger (*Das Leben und die Lehre des Mohammed*, Berlin 1861, i. 463 sq.) explains the word from the Hebrew *shānā* "to repeat" and the conception from Sūra xxxix. 24, from which it would appear that the *mathānī* are part of the stories of punishment. This view has been adopted by D. H. Müller, *Die Propheten in ihrer ursprünglichen Form*, i. 43, 46, note 2; H. Grimme, *Mohammed*, ii. 77; N. Rhodokanakis, in *W. Z. K. M.*, xxv. 66 sq.; J. Horowitz, *Koranische Untersuchungen*, p. 26 sq. This would imply that, at least when Sūra xv. 87 was revealed, there were seven of these legends of punishment.

Early evidence of the use of the word outside of the *Ḳur'ān* is found in a poem of Abu 'l-Aswad al-Du'ālī (text and transl. by Noldeke, in *Z.D.M.G.*, xviii. 236 sq.; cf. thereon Bevan, in *J. R. A. S.*, 1921, p. 584 sq.; Horowitz, *op. cit.*). Here the *mathānī* are mentioned along with the *Mf'ūna*, "the seven versed" along with the "hundred versed" sūras of the *Ḳur'ān*. The exact content of these groups is unknown.

In conclusion it may be mentioned that Goldziher (*Z.D.M.G.*, lxi. 866 sqq.) has called attention to a term *mathnā*, which occurs in non-canonical tradition and is obviously a new formation modelled on the Hebrew *mişnā*.

(A. J. WENSINCK)

MATHNAWĪ, a form of poetry in which each *bait* (verse) is normally a self-contained whole, grammatically complete and with the two *miṣrā's* (hemustichs) rhyming with one another and not — except accidentally — with the verses that follow. In Persian, Turkish, Turkī and Urdu, poetic compositions of any length dealing with epic, romantic, ethical or didactic themes are of the *mathnawī* form, which probably originated in Persia. Dawlatshāh (ed. E. G. Browne, p. 29) relates a tradition that in the time of the Dailamite 'Aḍud al-Dawla (d. 372 = 982) there was still to be found inscribed on the palace at Kaṣr-i Shīrīn a *bait* in "Old Persian" having the two hemistichs rhyming. There would appear to be no pre-Islāmic Pahlāwī verse of the kind extant, and the *mathnawī* form may be merely a development or expansion of the *maṭṭā'* of the *ḡazal* or *ghazal*. However that may be, in the oldest fragments of Muslim Persian literature that have come down to us, there are examples of the *mathnawī* as of the other forms of verse. Of these fragments the oldest belong to the work of Abū Shukūr of Balkh, who is said, probably on that account, to have invented the *genre*. They appear to be parts of a series of narrative *mathnawīs* (cf. Asad's *Lughat-i Furs*, ed. P. Horn, p. 29 of the Persian, and also p. 22 sq.). Alongside of them are to be found sufficient portions of the work of Rūdāgī (a later contemporary of his), to indicate that he also used the same form

for a translation of the *Kalīla u-Dimna* (Asadi, *op. cit.*, p. 19 *sqq.* and Dawlatshāh, p. 31). There is also a couplet in the *hazajī* metre indicating an erotic mathnawī (Asadi, p. 48; cf. Ethé, *Rudagi*, in *N. G. W. Gott.*, 1873, p. 735 *sqq.*).

The first complete poem that has survived of the *genre* is the *Shāh-nāma*, begun by Dāqīqī and completed by Firdawsi. Actually, apart from the arrangement of the rhyme, it is not of the regular mathnawī type. More characteristic is Firdawsi's *Yūsuf u-Zalikhā*, composed in the same metre (the *mutaqārib*). It begins with a number of introductory sections of which the first is in praise of Allāh and the rest are headed respectively, "In praise of the Prophet", "In description of the king of Islām", "On the cause of the revelation of the Sūra of Joseph", "On the reason for setting down this narrative", etc. Then comes the story proper, commencing with the description of Jacob's working for Rachel and pursuing its way through the various episodes of Joseph's career until he becomes treasurer to the house of the vizier Potiphar, whose wife Zalikhā falls in love with the youth. When he refuses her advances she denounces him for wizardry to her husband. Here is introduced the often illustrated incident of the Egyptian ladies who, at a feast to which they had been invited by Zalikhā, catch sight of Joseph and are so astounded by his beauty that, without being conscious of what they are doing, they peel the skin from their hands instead of keeping their knives for their oranges. Then comes the account of the imprisonment of Joseph, the events that lead to his release and exaltation, the confusion of the wicked brethren, the repentance of Zalikhā, her rejuvenescence and marriage to Joseph, and the death of Jacob.

A contemporary of Firdawsi's, 'Unṣuri, is credited with a mathnawī romance which has not survived: *Wāmīk u-Adhrā*. What purports to be a version of the story is given in a Turkish mathnawī by Lāmī'ī (d. 940 = 1533), according to which, Wāmīk, a priest in a fire-temple, is described as having fallen in love with Adhrā, a maiden devoted to the cult. They are forced to part; Adhrā going to the frozen regions of the North and Wāmīk to the torrid lands of Ethiopia. They pine away in separation, and dying are turned into stars. The maiden becomes *Virgo* holding *Spica* in her hand, while Wāmīk becomes *Arcturus*. The story bears marks of being of Pahlavi origin, the Arabic names being only translations.

Of mathnawīs which have survived there follow chronologically two works of Nāsir-i Khusrāw, namely the *Rawḥanā'ī-nāma* and the *Sa'adat-nāma*, two ethico-didactic poems written in the *hazajī* metre. After them in time is usually put the romance of *Wis u-Rāmin*, ascribed by 'Awfi to Fakhr al-Din Gurgānī (d. 440 = 1048), who is said to have derived it from the Pahlavi. In the version which has come down to us (ed. W. N. Lees, Calcutta 1865), we have a tale of passion unrestrained, which Pizzi (*Persia Persiana*, ii. 88) characterizes as a vulgar product of India in Akbar's time. In the tale, Wis or Wisa, the wife of Mōbad, king of Merw, has for her paramour her husband's brother Rām or Rāmin, who proves unfaithful to her but in the end marries her after Mōbad has been killed. If the work is genuine, it marks a step in the differentiation of the romantic from the epic mathnawī, being composed in the *hazajī* and

not the *mutaqārib* metre which had hitherto been common to both.

The true creator of the romantic mathnawī is Nizāmī of Gandja, who, after beginning with the composition in that form entitled the *Makhzan al-Asrār* — a collection of ethical and religious maxims interspersed with anecdotes, — wrote in succession the four other works which form his *Khamṣa* or *Pandj Gandj*. This quintet provided the model for all subsequent mathnawī writers. Strictly speaking, only the second, third and fourth of them are romances; namely (a), the *Khusraw u-Shirin*, the story of the love of the Sāsānian prince Khusraw Parwiz for the Christian princess Shirin, who is also loved by the mighty builder and engineer Farhād, and of the latter's betrayal and tragic end; (b), the *Lailā u-Madḡnūn*, the scene of which is laid in the desert and which shows the two lovers prevented from union by the hatred of their families for one another; and (c), the *Haft Paikar*, which has Bahrām Gūr as its hero and consists of seven tales, each told to the king by one of his seven favourite wives. The *Sikandar-nāma*, which forms the fifth of the group, treats of the life of Alexander in epic style, but with a mystical touch in the later passages which makes him a prophet as well as a conqueror. Each of the five mathnawīs is prefaced by introductory sections similar to those in Firdawsi's *Yūsuf u-Zalikhā*, with the necessary changes for the names of patrons etc. and with a further section headed "On the *mir'ād* of the Prophet" added in the works which follow the *Khusraw u-Shirin*. Every imitator of Nizāmī's mathnawīs copies him in this respect as in others, so that even the xviii century Judaeo-Persian *Daniāl-nāma* (by Khwādja Bukhārī, British Museum, MS. Or. 4743) has this introductory matter, though Moses is substituted for Muḥammad in the section devoted to the Prophet.

The chief imitators of Nizāmī are, in Persian, Djāmi; in Turkish, Shaikht with his *Khusraw u-Shirin* and Fuḍūlī with his *Laili u-Madḡnūn*; in Turki, Mir 'Alī Shir Nawā'ī with his *Khamṣa*; and in Urdu, Amin with a *Yūsuf u-Zalikhā*, Tadjalli with a *Lailā u-Madḡnūn*, etc. (cf. G. de Tassy, *Auteurs Hindoustanis*, Paris 1885, p. 30 *sqq.*).

The Mathnawī *par excellence*, i.e. the *Mathnawī-i Ma'nawī* of Djalāl al-Din Rūmī, is in a class by itself, being a long medley of the doctrines of Sūfism combined with parables, allegories, and pseudo-historical narratives. It is without the preliminary sections characteristic of the romantic mathnawī.

Arabic contains no poems of the mathnawī *genre*, but poems having the two *misrā's* of each *bait* rhyming together independently of the rest are known. The arrangement of the rhyme is known as *muzdawijda*. Short specimens translated from Persian are quoted in Tha'alibī's *Yatimat al-Dahr* (iv. 23), and there are longer compositions, metrical grammars, by Ḥariri (*Mulhat al-I'rāb*) and by Muḥammad b. Mālik (*Kitāb al-ʿAlfiya*) (for both of which see de Sacy, *Anthologie Arabe*, p. 134 *sqq.* and 145 *sqq.* of the Arabic text and p. 325, 356 of the notes).

The metres normally associated with the *mathnawī* form are those used by the masters in their compositions: *i.e.*, in addition to those mentioned above, the *sariʿ* and *khafif* used by Nizāmī for *Makhzan al-Asrār* and the *Haft Paikar* respectively;

and the *ramal*, used by Djalāl al-Dīn Rūmī in his *Mathnawī* and by Farīd al-Dīn 'Aṭṭār in the *Manṭiq al-Ṭayr*.

Bibliography: in addition to the works quoted above, cf. Ethé, in the *Grundriss d. iran. Philologie*; F. Ruckert, *Grammatik, Poetik und Rhetorik der Perser*, ed. W. Pertsch, Gotha 1874; E. J. W. Gibb, *History of Ottoman Poetry*; and Agha Aḥmad 'Alī, *Haft Āsmān* (*Bibliotheca Indica*), Calcutta 1873.

(R. LEVY)

MATHURĀ, name of a city, situated in $27^{\circ} 31'$ N. latitude and $77^{\circ} 41'$ E. longitude, and of a district of the same name in Northern India. The site of the city was of importance in the Buddhist period, as is proved by the numerous inscriptions and pieces of sculpture that have been found there. In later Hindu times it attained sanctity as the reputed birthplace of the god Kṛṣṇa and the temples erected there acquired great wealth and reputation. In 1017 Maḥmūd of Ghazna [q. v.] captured the city and levelled all the temples to the ground; there is no further record of the city until the reign of Sikandar Lodi, Sulṭān of Dīhli (1488–1516), who destroyed all the temples that existed in Mathurā in his time. The city was practically refounded in the reign of Akbar, who visited the sacred site and gave permission for the erection of four temples, the ruins of which still exist. In 1669 Awrangzēb destroyed a vast temple that had been built in the reign of Jahāngir and changed the name of Mathurā to Islāmābād, but like many other Muḥammadian designations of towns in India it failed to displace the original name of the city. With the break-up of the Mughal empire after the death of Awrangzēb, Mathurā suffered from the political confusion in which all the country between Dīhli and Āgra was involved, and at one time or another passed into the hands of the Dījāys, the Marathas and finally the British.

In the centre of the modern city stands the mosque erected in 1661 by 'Abd al-Nabī Khān, who was appointed governor of Mathurā by Awrangzēb in 1659. The Muslims number 13,475 out of a total population of 56,666 (in 1921).

1. **MATIN**. [See ALLĀH.]

MATLA', **MAṬĀLI'**, ascension. Two kinds of ascension are distinguished:

1. Ascension in the sphaera recta *R*. — Modern astronomers use the expression right ascension for all points of the heavens; the older astronomers only for those of the ecliptic. The right ascension *R* is found by drawing a circle of declination

which is perpendicular to the equator through the corresponding points of the ecliptic. With us and as a rule with the Arabs the right ascension of the arc of the equator is between the beginning of Aries, the vernal equinox and the intersection of the circle of declination with the equator. Many Arab astronomers calculate the ascension *R'* from the beginning of Capricorn; then $R' + 90^{\circ}$ gives the degree of the equator which rises at the time at which the corresponding degree of the ecliptic culminates. The ascertainment of this is, according to Suter, of importance for certain astrological purposes. If in fig. 1, the point *A* or the star *S* of the ecliptic rises above the horizon, the point *B* of the equator, the poles of which are *P* and *P'*, rises at the same time; γB is therefore the ascension of the arc γA of the ecliptic in the sphaera recta.

Fig. 1

One also talks of the ascension of a sign of the zodiac; it is the arc of the equator which rises contemporaneously with the 30° of this sign. The longitude of the ascension generally varies with the different signs, but from time to time is the same for those which are similarly situated at the beginning of Aries or of Libra, and for those which are at the beginning of Capricorn or of Cancer.

The *maṭālī'* in the sphaera recta are therefore so important (for astronomical purposes also) because in stereographic projection they give the curves corresponding to the degrees of the ecliptic, according to which the ecliptic, which is projected as a circle, is to be divided on the astrolabe.

Tables for the right ascensions have been prepared by numerous Muslim scholars, e. g. by Muḥammad b. Mūsā al-Khwarizmi, al-Battānī, al-Bīrūnī etc.

If the point being observed does not lie on the ecliptic, the *maṭālī'* are those of the degrees of the equator, which run at the same time as the star through the centre of the heavens i. e. the upper meridian (*tatarwassaf*), quite in keeping with the modern definition.

The ascension in the sphaera recta is called *maṭālī'* (often with the addition of *al-burūdī* = the sign of the zodiac): *fi 'l-Falak al-mustakīm* (M. in the sphaera recta); *M. li 'l-Burūdī fi Khatṭ al-Istiwa'*; *M. al-Burūdī bi-Khatṭ al-Istiwa'*; *M. fi Mawqif Khatṭ al-Istiwa'*; *M. al-Kura al-mustakīma*; *M. al-Kura al-muntaṣifa* or *fi 'l-Kura* etc.; *M. al-istiwa'iya* and *al-falakiya*.

If one calculates from the degree of Capricorn, the right ascension is also called *maṭālī'* *al-kubba* (i. e. *Kublat al-Ard*, "M. of the dome", namely of the dome of the earth).

2. The ascensio obliqua (fig. 2) of a point *A* in the ecliptic at any point is the curve γB of the equator the poles of which are *P* and *P'*, between the beginning of Aries and the horizon

Fig. 2

at the moment in which this point rises (for any particular star *S* substitute "star" for "point of the ecliptic"; it is often also made to begin at Capricorn).

Tables for the ascensio obliqua can only be given for particular places as they differ from place to place. The ascensio obliqua however can easily be calculated from the ascensio recta.

The ascensio obliqua is called: *Maṭālī^c al-Balad*, *M. al-Buldān*, *M. al-Iqlīm* (of the clime), *M. fi 'l-Balad*, *M. fi 'l-Iqlīm*, *M. al-baladiya*, *M. al-ufkiya*, *M. fi 'l-Aḥlāk al-mawṭila*, *M. al-Burūd* *fi 'l-Kura al-mawṭila*, *M. al-Shuruk*. We may also note the terms *M. al-Naḡir* and *M. al-Waqt*.

Ascensio recta might perhaps be translated direct or spherical ascension and ascensio obliqua by local ascension.

Arab astronomers, following Ptolemy, have proposed the following formulae for the ascensio obliqua. If ϵ is the plane of the ecliptic, δ the declination of the point *A* on the ecliptic, a_1 its right ascension and r the number of parts (usually 60) into which the radius is divided (with the later Arabs and modern astronomers $r = 1$) then according to al-Khwarizmi and al-Battāni, we have:

$$\sin a_1 - \frac{\sin \delta}{\cos \delta} \cdot \frac{\cos \epsilon}{\sin \epsilon} \cdot r = \text{tg ctg.}$$

The ascensio obliqua a_2 is for the latitude ϕ $a_2 = \text{ascensio recta } (a_1) + \text{arc } \left(\frac{\sin \phi}{\cos \phi} \cdot \frac{\sin \delta}{\cos \delta} \right) = a_1 \pm \arcsin (\text{tg } \phi \text{ tg } \delta)$. At the same time it is to be observed that al-Khwarizmi (d. about 850) and al-Battāni, who published his book before 900, give the formula with sine and cosine, while Ḥabash al-Ḥasib, who made his observations between 825 and 835, uses tangents and cotangents.

To ascertain the ascension, the above formulae are used if tables are not available. But one can also use one of the many apparatus which are made for the mechanical solution of such problems. The simplest of these is the armillary sphere (see Nolte quoted in KURA) and the globe with the arm (see Schnell quoted in KURA) as in both cases the heavens can be used as the largest circles. There are also the monographic methods, in which projections of the sphere of heavens are used, as in the astrolabe (s. J. Frank, *Die Verwendung des Astrolabs nach al-Khwarizmi*, *Abhandl. zur Gesch. der Naturwissenschaft.* etc., Heft iii., 1922), the universal plane, the Zarkālī plane (see an article to be published later by Mittelberger), Werner's

meteoroscope (*Joannis Vernerii de Meteoroscopia*, publ. by J. Wüschmidt, *Abhandlungen zur Gesch. d. Mathematik*, Heft xxiv/ji., 1913) and the *muḥanṭara* quadrants. On the sine quadrants, the system of lines which enable the sine and cosine to be read off, the above formulae can be obtained with the help of the latter (on the quadrants see P. Schmalzl, *Zur Geschichte des Quadranten bei den Arabern*, Munich 1929).

Along with the *maṭālī*, the *maghārib* also were ascertained. If one is observing, not the rising but the setting points, the corresponding curves are called *maghārib* (a table for the latter is given by al-Birūnī in the *Mas'ūdī Canon*).

Addendum. Among the Greeks and Arabs and European astronomers of the xiiith-xvth century σφαῖρα means: 1. the globe or geometrical sphere; 2. the space between two surfaces of two concentric spheres, a shell of a sphere; 3. the circle which corresponds to the assumed path of a heavenly body, i. e. the ecliptic, the epicyclus, the eccentric circles. — The Arabic *kūwa* has only the first meaning, the word *ḥalak* the second and third, the second in the theory of Ibn al-Haiṭham (see al-Kharaḳī). The *sphaera recta*, *al-ḥalak al-mustaḳīm* is the sphere of the heavens, i. e. for the inhabitants of the equator; in the Latin translation of the tables of al-Khwarizmi (table 59) it is said of the ascension in the *sphaera recta* "horoscopus secundum terram Arin" (Arin is a corruption of Azin-Uḍjain = Ujjayini in Sanskrit, which was erroneously taken to be the *ḡubbat al-arḍ*, dome of the earth, the centre of the equator and of the inhabited world). At all places which do not lie on the equator, there is a *sphaera obliqua* so that these are innumerable.

Suter, *Die astronomischen Tafeln des Muhammed Ibn Mūsā al-Khwarizmi* etc. [cf. also AL-KHẒĀRIZMĪ] and numerous works on astronomy. — (I am much indebted to Prof. Nallino for a number of suggestions). (E. WIEDEMANN)

MAṬMĀṬA, the name of a Berber tribe, belonging to the large family of the Butr, and brethren of the Matghara, Kūmya, Lamāya, Ṣadīna, Madyūna, Maghila, etc. They formed with them the ethnic group of the Banū Fātin who, like all the other Butr, seem to have had their original home in Tripolitania.

Our chief source of information about the Maṭmāṭa are al-Bakrī and Ibn Khaldūn. As with the majority of the Butr Berbers, three principal divisions can be distinguished:

1. Elements settled in the eastern Maghrib not far from their original home: these are the modern Maṭmāṭa in Southern Tunisia, some 30 miles S.W. of Gabes.

2. Elements which have settled in the Central Maghrib: first in the plateaus of the Sersū, in the N. E. of Mindās; then having been driven out of this territory by the Zanāta Banū Tūḍjīn, they sought refuge in the mountainous massif of Wānsharīs (the modern Ouarsénis).

3. Elements which have migrated as far as Morocco. In the fourth (tenth) century we find them in the county of the modern Kabdāna (to the S. E. of Mehilla) and in the upper valley of the Moluya at Amaskūr. Ibn Khaldūn also mentions a little isolated group settled on the mountain

which bears their name between Fās and Ṣuṣiyy; there must also have been some of them in the coulour of Taza for a place between Fās and Faza still bears their name. Finally we owe to al-Idrisi the record of the most western body: the Maṭmāṭa of Tāmasnā.

The Maṭmāṭa played a fairly important part in the early centuries of Islām. Those of the central Maḡrib had adopted Abādī doctrines: being conquered by the Ṣānḥādja and Zanāta, many of them migrated to Spain. The most famous member of this people was Ṣābiḡ b. Sulaimān, the famous Berber genealogist, so frequently quoted by Ibn Khaldūn.

Bibliography: al-Bakri and al-Idrisi, *Indica*; Ibn Khaldūn, *Hist. des Berbères*, transl. de Slane, i. 246—248. (G. S. COLIN)

MATN (ماتن), a term with different meanings (cf. the lexica, s.v.), of which that of text, especially that of the text of a tradition, deserves to be mentioned here.

Matn occurs in the sense of text already in pre-Islamic poetry and is used in this sense in Arabic literature up to the present day. It denotes especially the text of a book as distinguished from its oral explanation or its written or printed commentary.

In connection with traditions matn denotes the contents as distinguished from the chain of traditionists who handed it down (*isnād*).

Bibliography: Goldziher, *Muhammedanische Studien*, ii. 6 sqq. (A. J. WENSINCK)

MAṬRAḤ, a town on the Gulf of 'Omān, two miles west of Maṣṣaṭ on the east coast of Arabia. The town, which has about 14,000 inhabitants, is the starting-point for caravan traffic into the interior of Arabia and, next to Maṣṣaṭ, the most important commercial centre in 'Omān. The town is beautifully situated in fertile surroundings, has a good harbour, easily entered but little sheltered, from which Maṣṣaṭ can be reached in an hour by boat. The sultāns of 'Omān used to have wharves for shipbuilding here and the textile industry was not unimportant (spinning and weaving). A fort built by the Portuguese still stands as a memorial of their rule in 'Omān. According to Wellsted, the town used to have 20,000 inhabitants.

MĀTURIDĪ, ABŪ MAṢṢŪR MUḤAMMAD B. MUḤAMMAD B. MAḤMŪD AL-ḤANĀLĪ AL-MUTAKALLIM AL-MĀTURIDĪ AL-SAMARKANDĪ is the titular head of the Māturidite School of theology which, with the Aṣḥ'arite School, form orthodox Sunnite Islām. The two Schools are equally orthodox, but there has always been a tendency to suppress al-Māturidī's name and to put al-Aṣḥ'arī forward as the champion of Islām against all heretics except in Transoxiana (*Mā warā' al-Nahr*) where his School has been, and is, the dominant, representing the views of *ahl al-sunna wa 'l-djama'a*.

Next to nothing is known of al-Māturidī's life, but he died at Samarḳand in 333 (944), a contemporary of al-Aṣḥ'arī who died a little earlier about 330 (941), while al-Taḥāwī [q.v.], another contemporary, died in Egypt in 331. All three represented the movement, which must have been very widely spread, to defend orthodox Islām by the same weapons of logical argument with which the Mu'tazilites had attacked it. Māturid or Maturit is a locality (*maḥall*, *ḥarya*) in Samarḳand. Its geographical reality and the identity of Abū Maṣṣūr al-Māturidī are assured by the article Māturit in the *Ansāb* of al-Sam'ānī (fol. 498b, l. 4; cf. also Barthold, *Turkestan down to the Mongol Invasion*, G.M.S., p. 90, notes 9 and 10; p. 267, note 5, and the Russian references there). The books of Ḥanafite *Ṭabaḳāt* give the names of his teachers, but to us they are names only (see Ibn Kuṭlūbughā [ed. Flügel, No. 173] and Flügel's *Hunefiten*, p. 274, 293, 295, 298, 313). The Saiyid Murtaḍā in his little treatise on Māturidī, inserted in his commentary on the *Iḥyā'* (ii. 5—14), complains that he has found only two biographies and that both are short (*'ala 'l-ikhtisār*). Even Yāḳūt in his *Mu'djam* has no mention either of him or of Māturid. Ibn Khaldūn in his sketch of the origin and history of *Kalām* (*Muḥadditha*, transl. de Slane, ii. 55 sqq.; ed. Quatremère, iii. 38 sqq.) has no place for him and speaks only of Aṣḥ'arī and the Aṣḥ'arites. For Ibn Ḥazm (d. 456 = 1064; *Fiṣal*, ed. Cairo 1320, ii. 111) the orthodox opponent of al-Aṣḥ'arī is Abū Ḥanifa and he has no mention of al-Māturidī. Similarly Shahrastānī (d. 548 = 1153; *Milāl*, transl. Haarbrücker, i, p. 159; text on margin of Ibn Ḥazm, i. 188) gives the views of Abū Ḥanifa but does not mention Māturidī. Abū Ḥanifa, he says, inclined to the Murdji'ites and his followers were even called the Murdji'ites of the Sunna, meaning, apparently, a form of Murdji'ism consistent with orthodoxy. Similarly the Saiyid Murtaḍā (*loc. cit.*, p. 13 foot) says that the Mu'tazilites claimed Abū Ḥanifa for themselves and rejected his authorship of one book because it was too flatly against their positions. The truth evidently was that Abū Ḥanifa (d. 150 = 767) was the first to adopt the methods of the Mu'tazilites and apply argument to the foundation of the Faith. Also, from the beginning, his standing was so high that it was simply impossible to call him a heretic. This status continued in the Māturidite School.

All this goes back to the time before *kalām* had become a technical term and when *fiḥh* meant both theology and canon law, with the difference that theology was called "the greater *fiḥh*" (*al-fihh al-akbar*; see article *KALĀM* above, vol. ii, p. 672b). That was the title of one of Abū Ḥanifa's books and we have a commentary on it ascribed to Māturidī (Ḥaidarābād 1321), the only writing assertedly by him apparently in print. This does not occur in the two exactly similar lists which we have of his books (Saiyid Murtaḍā, p. 5; Ibn Kuṭlūbughā, p. 43): 1. *Kitāb al-Tawḥīd*; 2. *Kitāb al-Maḳālāt*; 3. *Kitāb Radī Awā'il al-Adilla li 'l-Ka'bi*; 4. *Kitāb Fayān Wahm al-Mu'tazila*; 5. *Kitāb Ta'wīlāt al-Kur'ān*. Of these only the last is given by Brockelmann, i, p. 195, 4; the biographers praise it highly. The others suggest only anti-Mu'tazilite polemic (for al-Ka'bi see Horten, *Philosophische Systeme*, by index). As a matter of fact it is only in one MS. of the com-

mentary on the Fikh Akbar that this work is ascribed to al-Māturidī.

How the theological school of Abū Ḥanīfa came to be known as that of al-Māturidī we do not know. The epithet *al-mutakallim*, applied to al-Māturidī, may mean that he was the theologian of the school of Abū Ḥanīfa as opposed to those who were canon lawyers (*fuḳahā*). But the two tendencies to accept him and to suppress him still continue. The *ʿAḳā'id* of one of his followers, al-Nasafī, fortified with the commentary of al-Taftāzānī, an Ashʿarite, is the theological text-book of the last two years of the Azhar course and is a final authority in Egypt. Yet when Muḥammad ʿAbdū, the late Chief Mufti of Egypt, a regenerator and reformer of Islām, put his views of the development of Muslim theology and of its final position into a course of lectures at Bairūt (*Kisūlat al-tawḥīd: Exposé de la religion musulmane, traduite de l'Arabe*... by B. Michel and Moustapha ʿAbdel Razik, Paris 1925) he showed himself a Māturidite with no mention of al-Māturidī.

The differences between the two Schools are commonly reckoned as thirteen in number; six, a difference in idea (*maʿnavī*) and seven in expression (*loḡī*) (for them in detail see the Saiyid Murtaḍā, p. 8 *sqq.* and Abū ʿUḡba, *al-Rawḍa al-baḥiyya*, Haidarābād 1904). They have been studied by Goldziher in his *Vorlesungen*, p. 110 *sqq.*, and by Horten in his *Philosophische Systeme*, p. 531 *sqq.* It is frequently said that these points of difference are slight, but that is not so. The moral position of Abū Ḥanīfa is as plain in them as in his canon law. Al-Ashʿarī was concerned only to maintain the absoluteness of Allāh's will; that he could do anything; and that a thing was "good" because he willed it. Future rewards and punishments, therefore, had no "moral" basis. But Abū Ḥanīfa, and after him al-Māturidī and his School, recognizes that man possesses free-will (*ikhtiyārī*) actions for which he is rewarded and punished. No explanation is attempted of this fundamental antinomy of predestination and free-will; they are stated side by side as equal, if contradictory, facts. Similarly, while Abū Ḥanīfa admits that evil deeds are by the will (*irāda*) of Allāh — otherwise they could not happen — he cannot bring himself to say that they are by the "good pleasure" (*riḍwān*) of Allāh. Further, the Māturidite School admits the doctrine of "assurance of salvation" and the Ashʿarite does not. A Māturidite may say, "I am a believer, assuredly" (*haḳḳan*), but an Ashʿarite must say, "I am a believer if Allāh wills". Because, then, of this essential difference in human and moral feeling the School of al-Māturidī has steadily penetrated the School of al-Ashʿarī and even the professed Ashʿarite at the present time is, to a greater or less extent, a Māturidite.

Bibliography: has been given in the article. But cf. article KALĀM throughout.

(D. B. MACDONALD)

AL-MĀʾŪN, title of Sūra cvii. taken from Vs. 7 where *māʾūn* denotes the *zakāt*.

MAWĀLIYĀ, MAWWĀL, means a kind of popular song. Tradition says that this genre of poetry was invented by the people of Wasit; but that it was the people of Baghdād who after improving it made it fashionable. It is said that when ʿAlīrūn al-Rashīd had the most prominent Barmecides massacred, he forbade for lamentations them. One of the slaves of Djaʿfar, so well-known

from the *Arabian Nights*, composed in everyday language an elegy on her old master and at the end of each strophe she said *yā mawālīyā* "O my masters!" Whence the name of this kind of poetry.

From the point of view of metre, the mawwāl, a popular form from *mawālīyā* or *mawālīyā*, is a song in the *ḥusn* metre (first *ʿarūd*) of which the last verse of each hemistich is *jāʿilun*, *jīʿilun* or *jīʿlān*.

In its primitive form, the mawwāl consisted of strophes, each of four hemistichs rhyming with one another. Later it was somewhat altered: the strophe contained five hemistichs in which the first, second, third and fifth, but not the fourth rhymed together or it contained seven hemistichs of which the first, second, third and seventh had the same rhyme and the fourth, fifth and sixth rhymed together.

The red mawwāl is used for war-songs while the green mawwāl is used for love-songs. In all cases the mawwāl must be in the popular dialect and make use of alliteration.

Bibliography: Besides the treatises on prosody quoted in the article ʿARŪD and by Fleischer, *Z.D.M.G.*, vii. 365 *sq.* and *Description de l'Égypte*² (Paris 1822, xiv. 306; xviii., part 1, 75 *sqq.*) quoted by Dozy, *Suppl. aux dict.*, ii. 844, we may mention: al-Khafaḍjī, *Shifʿ* al-*Ghalīl*, Cairo 1320, p. 9; Bistānī, *Muḥīt al-Muḥīt*, Bairūt 1870, p. 2011 (sub *m-w-l*) and 2289 (sub *w-l-y*); Ibn Khaldūn, *Proleg.*, iii. 451 *sqq.*; Muḥammad Taʿat, *Ghawāt al-ʿArab fī Shīʿat Shīʿr al-ʿArab*², Cairo 1316, p. 101; Muḥammad al-Damanhūrī, *Hāshiya ʿala ʿl-Kāfi*, Cairo 1316, p. 36; al-Muḥibbī, *Khuḷāṣat al-Aḥḍar*, Cairo 1284, i. 109; Saiyid Amin, *Bulbul al-Afrāḥ wa-Muzil al-Atrāḥ fī ʿl-Mawwāl al-khudr wa ʿl-ḥumr al-Milāḥ*, Cairo 1316, p. 4 *sqq.*; Djabiān Mikḥāʾil Futīya, *al-Rasʿ al-shāfi*, Bairūt 1890, p. 105; al-Abshihī, *al-Mustaṭraf*, Būlāk 1292, ii. 258, 271; L. (MOH. BENCHEB)

MĀ WARĀ' AL-NAHR (Arab.) "that which (lies) beyond the river"; the name for the lands conquered by the Arabs and subjected to Islām north of the Amū-Daryā [q. v.]. The frontiers of Mā warā' al-Nahr on north and east were where the power of Islām ceased and depended on political conditions; cf. the statements of the Arab geographers on Mā warā' al-Nahr in G. Le Strange, *The Lands of the Eastern Caliphate*, Cambridge 1905, p. 433 *sq.*; W. Barthold, *Turkestan* (G. M. S., N. S., v., London 1928), p. 64 *sqq.* The phrase Mā warā' al-Nahr passed from Arabic literature into Persian. As late as the ninth (xvth) century, Ḥāfiz-i Abrū [q. v.] devotes a special chapter (the last) to Mā warā' al-Nahr in his geographical work. Under the influence of literary tradition, the phrase Mā warā' al-Nahr was used down to quite recent times in Central Asia itself (Bābur, *G. M. S.*, i, Index: the Özbek Muḥ. Šālih, *Spraz. Knizka Samark. Oblasti*, v. 240 *et pass.*)

although to the people of Central Asia the lands in question were on their side of and not across the river. (W. BARTHOLD)

AL-MĀWARDĪ, ABU 'L-ḤASAN 'ALĪ B. MUḤAMMAD B. ḤABĪB, a *Shāfi'ī* faḳīh, who on the conclusion of his studies taught in Baṣra and Baghdād and after holding the office of chief ḳāḍī at Ustuwā near Nisābūr, settled permanently in Baghdād. Here he often acted for the caliph al-Ḳādir (381-422 = 991-1031) in his negotiations with the Būyids, who then ruled al-'Irāq; when the Būyid Ḳalāl al-Dawla in 429 (1037-1038) asked the caliph al-Muḳtaḍī to grant him the title of *shahān-shah* (*malik al-mulūk*), he expressed his objections in a *fatwā* and thus earned the enmity of the Būyid. He died on 30th Rabi' I 450 (May 27, 1058) at the age of 86.

His works are said to have been collected and edited only after his death by one of his pupils. The following have survived: 1. *Tafsīr al-Ḳur'ān* or *Kitāb al-Nukat wa 'l-'Uyūn*; MSS. in Rampur (s. *Journ. As. Soc. Bengal*, N.S., ii., xli.), Fez (*Fihrist Masūd al-Ḳarawīyīn*, N^o. 215) and Sтамбул (Ḳilī 'Aḥ, N^o. 90); 2. *K. al-Ḥawā' al-ḳabīr* *fi 'l-Furū'*; MSS. in the Brit. Museum Or. 5828; s. Ellis and Edwards, *Descr. List*, p. 22; Cairo (*Fihrist*, iii. 215) and Sтамбул (Sulaimāniya, N^o. 436); 3. his most celebrated work, dealing with constitutional law in purely theoretical fashion, disregarding the political conditions of the time (s. A. v. Kremer, *Culturgeschichte*, i. 396; M. Hartmann, *Unpolitische Briefe aus der Türkei*, p. 242), entitled *K. al-Aḥkām al-Sulṭāniya*, *Constitutiones politicae*, ed. R. Enger, Bonn 1853; pr. Cairo 1298, 1324, 1327. Translations: *Publiek en administratief regt van den Islam met een inleiding over de tweepasselykheid van dat regt in Nederlandsch-Indië* door S. Keizer, 's-Gravenhage 1862; *Les constitutions politiques, trad. et commentées d'après les sources orientales* par le comte L. Ostorog, Paris 1900-1906; *Les statuts gouvernementaux ou règles de droit public et administratif trad. et comm.* par F. Fagnan, Algiers 1915; cf. H. F. Amedroz, *The Mazahim jurisdiction*, *J.R.A.S.*, 1911, p. 635-674; 4. *K. Naṣīḥat al-Mulūk*, MS. in Paris, de Slane, N^o. 2447, 3; 5. *K. Tashīl al-Nāṣar wa-Taḍīl al-Zafar*, on politics and the art of government; MS. in Gotha, s. Pertsch, *Verz.*, N^o. 1872; 6. *K. Ḳawānīn al-Wazīra*; MS. in Vienna, Consularakademie, Krafft, p. 475, entitled *Ḳānūn al-Wazīr wa-Siyāsat al-Mulūk*; MS. formerly in Landberg's possession, s. Goldziher, *Abh. zur ar. Philologie*, ii., note p. 14 (the *K. al-Wazīra* in Sтамбул. Top Kapu 2403, 3 is however, according to Rescher, *R.O.S.*, iv. 710 perhaps only a part of N^o. 4); 7. *K. al-'Ām al-Nu'ūwa*; MS. in Berlin. Ahlwardt, N^o. 2527; Cairo. *Fihrist*, i. 270; pr. Cairo 1319, 1330 (cf. Diez, *Denkwürdigkeiten von Asien*, ii. 382; Schreiner, in *Kokuts Semitic Studies*, p. 502-513); 8. *K. Adab al-Ḳāḍī*; MS. in Sтамбул. Sulaimāniya, N^o. 381; 9. *K. al-Amḥāl wa 'l-Ḥikām*, a collection of 300 traditions, 300 wise sayings and 300 verses in 10 *faṣl* to 30 proverbs; in Leyden, s. *Catalogus*, i., N^o. 382; 10. *K. (al-Buḡḡya al-'ulū'ā fi) 'Āḍāb (Adab) al-Dunyā wa 'l-Dīn*, a work still much read; pr. Sтамбул 1299, Cairo 1309, 1310, 1315, 1327, 1328, 1339; on the margin of al-Āmulī's *Ḳaṣṣidā*, Cairo 1316, in India 1315. Uwais Wafā' b. Dāwūd al-Arzandjāni *Khānzāde* wrote a commentary entitled *Minhādī al-Yaḳīn*, pr. Sтамбул 1328. A synopsis was prepared by

Ibn Liyūn a teacher of the vizier Lisān al-Dīn b. al-Ḳhaṭīb (d. 776 = 1376), Madrid, N^o. 427. An anonymous synopsis entitled *K. Ma'rifat al-Faḳū'il* is in the Escorial, s. Derenbourg, ii. 748.

Popper, p. 718 (ii. 224); Wustenfeld, *Schajā'ir*, N^o. 395; R. Enger, *De vita et scriptis Mawerdii*, Bonn 1851; Brockelmann, *G.A.L.*, i. 386.

(C. BROCKELMANN)

MAWDŪD, ABU 'L-FATH, SHIHĀB AL-DAWLA WA-ḲUTB AL-MILLA, ruler of Ghazna, was born about 412 (1021-1022). In Muharram 432 (September 1040) he was appointed to the government of Balkh with Khwādja Abū Naṣr Aḥmad b. Muḥammad as wazir. A few months later, his father Sulṭān Maṣ'ūd was deposed and Muḥammad, son of Sulṭān Maḥmūd, was raised to the throne. On learning news of this, Mawdūd left Balkh, took possession of Ghazna, and spent the winter in making preparations for a struggle for the throne with Muḥammad. At the end of the winter, Muḥammad marched from India to take Ghazna and Mawdūd advanced to meet him. A fierce battle took place on 3rd Sha'bān, 432 (April 6, 1041) near Dunpūr or Dinawar (modern Fathābād on the Peshāwar-Kābul route) in which Mawdūd was victorious. Muḥammad, all his sons except 'Abd al-Rahīm, Sulaimān b. Yūsuf, and Nūshūḡīn of Balkh were taken prisoners and executed. Mawdūd returned to Ghazna in triumph, but he was not yet the undisputed master of the kingdom. His brother Maḥdūd, governor of Multān, was advancing on Ghazna by way of Lahore, but three days after his arrival at Lahore, he died mysteriously on the morning of 10th Dhū 'l-Hijja, 432 (August 11, 1041).

In 435 (1043-1044) Sukhpāl, alias Nawāsa Shāh, son of Djaipāl of the Hindūshāhiya dynasty of Waihand, formed a confederacy with some Hindū Rājās and laid siege to Lahore. Sukhpāl was killed in action, and after his death the Rājās quarrelled among themselves, raised the siege and retired to their respective kingdoms. The Muslims followed them in pursuit and laid siege to the fort of Sonipat where one of the confederates named Dipāl Haryāna had taken refuge. The fort was captured and given up to plunder but Dipāl managed to escape. About 5,000 Muslims who had been imprisoned in the fort were released. The victors next attacked another Rājā, called Ṭābat Bālri by Ibn al-Aṭhīr, took his fort and returned to Lahore with immense booty. These victories restored for some time the waning prestige of the Ghaznawids in Upper India.

It was the ambition of Mawdūd to restore the greatness of his empire by conquering the provinces which his father had lost to the Saldjuks. In Muharram 435 (August 1043) he attacked Khurāsān but was defeated by Alp Arslān b. Dāwūd. In the following month the Ghaznawid troops retrieved their reputation by inflicting a defeat on the Saldjuks near Bust, but in spite of this reverse they became so powerful that Mawdūd found it difficult to overcome them single-handed. After protracted negotiations, he secured the assistance of the ruler of Isfahān and the Khān of Turkistān, and marched towards Balkh to join forces with the Khān of Turkistān, but he had not gone far

when he was taken ill with colic and was forced to return to Ghazna where he died on 20th Radjab, 441 (December 18, 1049), at the age of 29 years.

Mawdūd was a good ruler and was famous for his generosity. *Paikān-i Mawdūdī* (the Arrow of Mawdūd) is called after him. It is stated that in his wars he used golden arrows so that if the victim was killed, the gold in the arrow would pay for his funeral, and if he was only wounded, it would defray the expenses of his treatment. He was a skilful general, and his premature death put an end to all hopes of crushing the power of the Saldjuks.

(M. NAZIM)

MAWDÜD B. IMĀD AL-DĪN ZANGĪ, KUṬB AL-DĪN AL-AḌĀD, lord of al-Mawṣil. After the death at the end of Djamādā II 544 (Nov. 1149) of his elder brother Saif al-Din Ghāzi I [q.v.], Mawdūd was recognised as lord of al-Mawṣil through the influence of the powerful vizier al-Djawād [q.v.] and of the commander-in-chief of the army Zain al-Din 'Alī. A number of emirs negotiated with the third brother, Nūr al-Din Maḥmūd, who lived in Ḥalab, and seized the town of Sindjār, and Mawdūd began preparations for war. The vizier however, who feared not only Saladin but also the Franks, succeeded in dissuading him, whereupon Nūr al-Din handed over Sindjār to his brother and was given Ḥims and al-Rahba instead. On other questions also Mawdūd followed his vizier's advice; al-Djawād however fell into disgrace and in 558 (1163) he was thrown into prison and replaced by Zain al-Din Kūṣik. In the next year Mawdūd joined forces with his brother Nūr al-Din in a war against the Franks, and in Ramaḍān (Sept. 1164) the latter defeated the Christian forces and stormed Kal'at Ḥārim. According to the most usual statement, Mawdūd died on 22nd Dhu 'l Ḥiǧdja 565 (Sept. 6, 1170) aged about forty. He is described by the Oriental historians as a just and benevolent ruler. He was succeeded in al-Mawṣil by his son Saif al-Din Ghāzi II.

Dynasties*, p. 163.

(K. V. ZETTERSTÉEN)

MAWKIF (A.), *nomen loci* from *w-k-f* "to stand". Of the technical meanings of the term two may be mentioned here:

a. the place where the *wuḳūf* [q.v.] is held during the pilgrimage, viz. 'Arafāt [q.v.] and Muzdalifa [q.v.] or Djam'. In well known traditions Muḥammad declares that all 'Arafāt and that all Muzdalifa is mawkif (Muslim, *Ḥaḍy*, trad. 149;

Abū Dāwūd, *Manāsik*, bāb 56b, 64 etc.; cf. *Hant-book of Early Muh. Tradition*, s. v. 'Arafāt). Snouck Hurgronje (*Het meekainsche feest*, p. 150 = *Verspreide Geschriften*, i. 99) has conjectured that these traditions were intended to deprive the hills of 'Arafāt and Muzdalifa of their sacred character, which they doubtless possessed in pre-Islamic times.

b. the place where on the day of resurrection several scenes of the last judgment will take place; cf. al-Ghazālī, *al-Durra al-Fākhira*, ed. Gautier, p. 577, 683, 12, 813; cf. *Kitāb Aḥwāl al-Ḳayyama*, ed. M. Wolff, p. 65 sqq.

(A. J. WENSINCK)

MAWLĀ (A.), a term with different meanings (cf. *Lisān al-Arab*, xx. 289 sqq.) of which the following may be mentioned:

a. Tutor, trustee, helper. In this sense the word is used in the *Qur'ān*, Sūra xlviii. 12: "God is the mawlā of the faithful, the unbelievers have no mawlā" (cf. sūra iii. 143; vi. 62; viii. 41; ix. 51; xiii. 78; lxi. 2). In the same sense mawlā is used in the Shī'ite tradition, in which Muḥammad calls 'Alī the mawlā of those whose mawlā he is himself. According to the author of the *Lisān*, mawlā has the sense of *wali* in this tradition, which is connected with Ghadir al-Khumm [q.v.; cf. C. van Arendonk, *De opkomst van het Zaidietische imamaat*, p. 18, 19]. It may be observed that it occurs also in the *Musnad* of Aḥmad b. Ḥanbal (i. 84, 118, 119, 152, 330 sq.; iv. 281 etc.).

b. Lord. In the *Qur'ān* it is in this sense (which is synonymous with that of *sayyid*) applied to Allāh (sūra ii. 286; cf. vi. 62; x. 31), who is often called *Marwānā* "our Lord" in Arabic literature. Precisely for this reason in Tradition the slave is prohibited from calling his lord mawlā (Bukhārī, *Djihad*, bāb 165; Muslim, *Alfāz*, trad. 15, 16).

It is not in contradiction to this prohibition that Tradition frequently uses mawlā in the sense of "lord of a slave", e.g. in the well known *ḥadīth*: "Three categories of people will receive twofold reward... and the slave who fulfils his duty in regard to Allāh as well as to his lords" (Bukhārī, *ʿIlm*, bāb 31; Muslim, *Aimān*, trad. 45).

Compositions of mawlā and suffixes are frequently used as titles in several parts of the Muslim world, e.g. *mawlay(a)* (*moulār*), "my Lord" (especially in North Africa and in connection with saints); *mawlawi* (*mollā*), "Lordship" (especially in India and in connection with scholars or saints).

The term mawlā is also applied to the former lord (*patron*) in his relation to his freeman, e.g. in the tradition: "Who clings to a (new) patron without the permission of his (legal) mawlā, on him rests the curse of Allāh" (Bukhārī, *Djizya*, bāb 17; Muslim, *ʿItq*, trad. 18, 19).

c. Freed slave, e.g. in the tradition "the mawlā counts as the people to whom he belongs" (Bukhārī, *Farāʿiq*, bāb 24, etc.). In this sense mawlā, or rather the plural *muwālī*, is frequently used in Arabic literature. The evolution of the idea as well as the position and the aspirations of the *muwālī* have been expounded by von Kremer (*Culturgeschichte des Orients unter den Chalifen*, ii. 154) and by Goldziher (*Muhammedanische Studien*, i. 104 sqq.), by the latter especially in connection with the *shuʿūbiya* [q.v.]. On the position of the

mawālī in the law of inheritance law cf. the art. *MIRĀTH*.

MAWLAWĪ. [See MAWLĀ.]

MAWLAWIYA (Turkish pronunciation Mewlewīya), Order of Derwishes called by Europeans Dancing or Whirling Derwishes.

1. Origin of the Order. Its name is derived from *mawlānā* ("our master"), a title given *par excellence* to *Ḍjalāl al-Dīn al-Rūmī* (e.g. by the Turkish writers Sa'd al-Dīn and Pečewī, cited below), of which the Persian equivalent was according to the *Manāḳīb al-ʿArifin* (translated by Huart as *Les Saints des Derviches Tourneurs*, Paris 1918—1922) bestowed on *Ḍjalāl al-Dīn* [q. v.] by his father, with whom this hagiography commences. According to the same authority (i. 162), his adherents adopted the name *Mewlewī*, and indeed copyists of the *Mathnawī* of the years 687 and 706 A. H. thus designate themselves (Nicholson's ed., i. 7 and ii. 11); yet Ibn Baṭṭūṭa, who visited Konia after the latter date, asserts that they were styled *Ḍjalālīya*, and the word *Mawlawī* seems to be used occasionally in the *Manāḳīb* in the sense of "scholar", which it ordinarily has in India. This work asserts that one *Badr al-Dīn Guhartāsh* (a historical personage, since he is mentioned in Ibn Bibi's chronicle of the Seldjūks of Asia Minor) built a college at Konia for the children of *Ḍjalāl al-Dīn*'s father, which was inherited by *Ḍjalāl al-Dīn*. The *Manāḳīb* (by *Shams al-Dīn Aḥmad al-Aḥākī*, 718—754 A. H.), however, so teems with anachronisms and extravagances that its statements must be used with great caution.

The European name is taken from the ritual of the *dhikr*, in which the derwishes revolve, using the right foot as a pivot, to the tune of various instruments. *Ḍjalāl al-Dīn* is said to have claimed that he had elevated the practice, but denied that it was an innovation (*Manāḳīb*, ii. 79). Certainly "dancing" (*raqs*) is mentioned as a *Ṣūfī* practice in works earlier by some centuries than *Ḍjalāl al-Dīn*'s time, often with severe condemnation. The historian *Sakhāwī* (*al-Tibr al-Masnuḳ*, p. 220) in recording an edict issued in 852 against the practice in Egypt cites verses by one of "the earliest Sāyids" in which the *Ṣūfīs* who perform it are compared to apes and are bitterly reproached.

Dancing is indeed a natural accompaniment of music (*Aḥḍānī*, x. 121) or poetry (*Irshād al-Arīb*, v. 131, 11), but the whirling of the derwishes would seem to have for its purpose the production of vertigo rather than the presentation of an idea in rhythm. Of the various reasons which have been assigned for it the most interesting is that recorded in the *Manāḳīb* (i. 190) as the excuse of *Ḍjalāl al-Dīn*, viz. that it was a concession to the pleasure-loving inhabitants of Asia Minor, who might thereby be drawn to the true faith. The theory that the whirling was a reproduction of the motions of the celestial bodies is found in his *Mathnawī* (ed. Nicholson, iv. 734), and the same view is offered in the much earlier *Risāla* of Ibn Tufail (Cairo 1922, p. 75), where its hypnotic effect is emphasized. The saints in the *Manāḳīb* are represented as able to maintain the exercise for many days and nights continuously, but the

actual *dhikr* lasts only about an hour, with some intermission.

2. Relations with other Orders. Although the earlier mystics, such as *Ḍjunaid*, *Bisṭāmī* and *Hallādī* are mentioned in the *Manāḳīb* with profound reverence, the treatment of founders of orders who came near *Ḍjalāl al-Dīn*'s time is very different. *ʿAbd al-Kādir of Ḍjilān* is ignored, Ibn ʿArabī mentioned with contempt, and *Rifāʿī* with severe condemnation. *Hādīdī Bektāsh* is represented as having sent a messenger to inquire into the proceedings of *Ḍjalāl al-Dīn*, and to have acknowledged the supremacy of the latter. At a later period the rivalry of the *Mawlawī* with the *Bektāshī* Order became acute.

It has been shown by F. W. Hasluck (*Christianity and Islam under the Sultans*, Oxford 1929, ii. 370 sqq.) that the environment wherein the *Mawlawī* Order originated was favourable to Christians, and that throughout its history it has shown itself tolerant and inclined to regard all religions as reconcilable on a philosophic basis. He suggests that the veneration of the Muslims of Konia for the supposed burial-place of Plato (in a mosque which was once the church of St. Amphilochius) may have been intentionally favoured by the *Mawlawī* derwishes, or possibly their founder, as providing a cult which Muslim and Christian might share on equal terms. In three other sanctuaries of Konia, one of them the mausoleum of *Ḍjalāl al-Dīn* himself, he found evidence of a desire to provide an object of veneration to the adherents of both systems. It is not, however, easy to accept his inference that some sort of religious compromise on a philosophic basis was devised between the Seldjūk Sultan ʿAlāʾ al-Dīn, *Ḍjalāl al-Dīn*, and the local Christian clergy. It appears from the *Manāḳīb* that the Order was frequently exposed to persecution from the *fuḳahāʾ* in consequence of the music and dancing; and they found an analogy in Christian services to the employment of the former. They are credited in recent times with having impeded the massacres of Armenians.

3. Spread of the Order. The *Manāḳīb* attributes its propagation outside Konia to *Ḍjalāl al-Dīn*'s son and second successor, Sultan *Bahāʾ al-Dīn Walad* who "filled Asia Minor with his lieutenants" (ii. 262). It would however appear from Ibn Baṭṭūṭa's narrative (ii. 282) that its following was not in his time extensive outside Konia, and was confined to Asia Minor. The story told after Sa'd al-Dīn by v. Hammer (*G. O. R.*, i. 147) and others, that as early as 759 (1357) Sulaimān son of Orkhan received a cap from a *Mawlawī* derwish at Balair, has been shown by Hasluck (ii. 613) to be a fiction. The historians make no allusion to any importance attaching to the *Mawlawī* chief when Murād I took Konia in 1386; but when the city was taken by Murād II in 1435, peace was negotiated according to Sa'd al-Dīn (i. 358) by *Mawlānā Hamza*, but according to *Neshrī* (quoted *ibid.*) by a descendant of *Mawlānā Ḍjalāl al-Dīn al-Kūmī*, ʿAuf Celebi. "who united all the glories of worth and pedigree, and possessed mystic attainments"; the rebellious vassal supposed that a holy man of the family of the *Mawlā* would inspire more confidence. The same person performed a similar service in 1442 (Sa'd al-Dīn, i. 371). According to V. Cuneo (*La Turquie d'Asie*, i. 829) Selim I when passing through Konia in 922 (1516) in pursuit of the Persians (?) ordered the destruction

of the Mawlawikhāna, at the instance of the Shaikh al-Islām; and though this command was repealed, the moral and religious authority of the head of the Order was gravely compromised. That the saints of Konia were highly revered in the Ottoman Empire later in the sixteenth century appears from the list of graves visited by Saiyid 'Alī Kapūdān in 1554, which commences with those of Djalāl al-Dīn, his father and his son (Pečewi's History, 1283, i. 371). In 1634 Murād IV assigned the khawāḍḡi of Konia to the Çelebi. Yet the first reference to "dancing derwishes" in Constantinople which Haslück produces, is from the time of the Sultān Ibrāhīm (1640—1648). Cuinet mentions three Mawlawikhāna of the first rank and one Tekye of the second in Constantinople and the neighbourhood; he gives the names of the saints whose tombs they contain, without dates. He mentions seven other Mawlawikhāna of the first rank, at Konia, Manissa, Karahisar, Bahariya, Egypt (Cairo?), Gallipoli and Bursa; and as the more celebrated of the second rank that of Shamsi Tabrizi at Konia, and those in Medina, Damascus and Jerusalem. To these Haslück adds Tekye at Canca (Crete), founded about 1880, Karaman, Ramla, Tatar (in Thessaly), and possibly Tempe (for one in Smyrna see *M. W.*, 1922, p. 161; for one in Salouca see the work of Garnett, and for one in Cyprus that of Lukach cited below). It would seem then that the Order was confined to the limits of the Ottoman Empire, and indeed to its European and Asiatic territories.

By a decree of Sept. 4, 1925 all the Tekye in Turkey were closed, and the library of the Mawlawikhāna of Konia was transferred to the Museum of the city (*Oriente Moderno*, 1925, p. 455; 1926, p. 584).

4. Political importance of the Order. Reference may be made to Haslück's work (ii. 604 sq.) for refutation of the stories uncritically reproduced by Cuinet and some less authoritative writers. In these "the Shaikh of the Mawlawi becomes first the legitimate successor by blood of the Seljūq dynasty, and finally the real Caliph!" Haslück supposes these tales to be based on the supposed "traditional right" of the Mawlawi Shaikh to gird the new Sultān with a sword. This right cannot be traced earlier than 1648, and appears to have obtained recognition in the nineteenth century. It would seem that reforming Sultāns used the Mawlawi Order as a make-weight against the Bektāshis, who supported the Janissaries, and then against the 'Ulamā, who supported the treatment of the Muslim community as a privileged community against the dhimmis. In recent times the Sultāns 'Abd al-'Aziz and Mehmed Reshād were members of the Order.

5. The ritual of the Order has been described by numerous travellers, e. g. J. P. Brown, *The Dervishes*, 1868, p. 198—206; 1927, p. 250—258; V. Cuinet, *loc. cit.*, p. 832; Garnett and Lukach in the works cited; M. Hartmann, *Der islamische Orient*, 1910, iii. 12; S. Anderson, *M. W.*, 1923. The attire consisted of a cap called *sikke*, a long sleeveless skirt called *tennūre*, a jacket with sleeves called *dete-gul*, a waistband called *elif-lām-end*, and a cloak with sleeves called *khurke*, thrown over the shoulders (in Lukach's description [Cyprus] "a violet gown worn over a dark green cassock"). The instruments employed according to the last writer (dealing with Konia)

are six: reed-flute, zither, rebeck, drum, tambourine, and one other. Cuinet enumerates four, of which three agree with the above, the last being *halile*, vulgarly *zil*, a sort of small cymbal. Brown enumerates three, flute, violin, and kettle-drum. Those mentioned in the *Manāḡib* are rendered by Huatt, *flûte*, *violon* and *tambour de basque*. The service in Konia according to Lukach was held twice a month after the Friday prayer; in Constantinople, where there were several *tekye*, they were held more frequently, to enable the members of different *tekye* to join in,

6. Administration of the Order. The head of the Order, resident at Konia, had the titles *Mullā Khunkār*, *Hadret-i Pir*, *Çelebi Mullā*, and *'Aziz Efendi*. A list of persons who have held the office is given by Hartmann (*loc. cit.*, p. 193) after the *Hakik-i Adhkar-i Mawlāna*, making 26 in all down to 1910; this list appears to be imperfect, and the *Çelebi* whom Lukach found in Konia was uncertain whether he was the 39th or the 40th. The head of the establishment at Manissa counted as second in authority. Cuinet enumerates seven officials subordinate to the *Çelebi* at Konia, but the names of several seem seriously mutilated. Others mention a secretary (*wakil*). An account of the discipline which those who would enter the Order had to endure is given by Huatt (*Konia, la Ville des Derviches Tourneurs* Paris 1897). They had to perform menial service for 1001 days, divided into periods of 40; when this was over, they were clothed in the uniform of the *tekye*, assigned cells, and instructed in the exercises of the Order; and they had to remain thus occupied till they believed themselves able to enter into relation with the Deity by means of whirling, meditation, and music.

Brown, Cuinet, Hartmann, and Haslück, cited above; Lucy M. Garnett, *Mysticism and Magic in Modern Turkey*, London 1912; H. C. Lukach, *The City of Dancing Dervishes*, London 1914; S. Anderson, in *M. W.*, 1923, p. 188—191.

(D. S. MARGOLIOU RH)

MAWLID (A.) or MAWLĪD (pl. *mawālīd*), time, place and celebration of the birth of any one, particularly of the Prophet Muḥammad (*Mawlid al-Nabi*). From the moment when Islām in its attitude to Muḥammad abandoned the lines laid down in the Qurānic view of him and began to bring his personality within the sphere of the supernatural, the scenes among which his earthly life had been passed naturally began to assume a higher sanctity in the eyes of his followers. Among these, the house in which he was born, the *Mawlid al-Nabi*, in the modern Suḡ al-Lail in Mekka, the history of which is preserved principally in the chronicles of the town (ed. Wustenfeld, i. 422), does not seem at first to have played a part of any note. It was al-Khazurān (d. 173), the mother of Hārūn al-Raḡid, who first transformed it from a humble dwelling-house to a place of prayer. As they did to the tomb of the Prophet in Medina, the pious now made pilgrimages also to his mawlid to show their reverence for it and to receive a share of its blessings (*li 'l-tabarruk*). In time also the reverence in which the house was held found expression in its development in a fitting architectural fashion (Ibn Djabar, ed. Wright, p. 114, 163; on the present state of the house: Snouck Hurgronje, *Mekka*, i. 106; ii. 27).

Records of the observation of the birthday of

the Prophet as a holy day only begin at a late date: according to the generally accepted view, the day was Monday the 12th Rabi' I. The story which Wustenfeld originated, according to which the pious Shāfi'i Karadji (d. 343) observed this day by breaking his fast upon it, which he only did on one other occasion, the 'Id al-Fiṭr (*Abh. G. W. G.*, xxxvii., N^o. 126), does not seem to find any confirmation in the sources and is in contradiction to the general custom of fasting on Monday, as this day plays a special part in the life of Muḥammad as the day of his birth, of his Hīdja and of his death (*Ghazālī, Ihyā'* [Bulāk], i. 363 and *pass.* On the Jewish origin of fasting on Monday, see Wensinck, *Mohammed en de Joden*, p. 126). But that on this day a special celebration was arranged, as distinct from private observation, one first learns for Mecca, where one would expect it earliest from the local traditions, from Ibn Dūbair (d. 614; *Travels*, p. 113), who however is obviously referring to a custom which has already been a considerable time in existence. The essential feature of the celebration is however only a somewhat considerable increase in the number of visitors to the Mawlid house which was exceptionally open the whole day for this purpose. This visit and the ceremonies associated with it (*mash* etc.) are carried through entirely in forms which are characteristic of the older Muslim cult of saints.

But just as the later cult of the Prophet cannot be put on a level with the reverence shown to other holy men, so new and special forms developed for his birthday celebrations, which in spite of minor differences in time and place show the same general features everywhere and are comprised under the name *Layla al-Mawlid* or briefly *Mawlid al-Nabi*. An anticipation of the Mawlid celebration is found in Egypt as early as the middle and later Fātimid period. During the period of office of the vizier al-Afdāl (487—515), we hear that the "four Mawālid" were abolished but a little later revived in all their old glory (Maḳrīzī, *al-Khitaṭ*, i. 466; for the description of the festival: i. 433 *sqq.*). The celebration still took place in broad daylight and participation was practically limited to the official and religious circles of the city. There were not yet any preliminary celebrations; but we already have a solemn procession of all the dignitaries to the palace of the caliph, in whose presence — he sits, covered with a veil on one of the balconies of the palace — the three *Ḥuṭabā'* of Cairo (cf. above, ii., p. 928) in succession deliver a religious address, during which a special ceremonial is observed. As to the matter of the discourses, we only know that they were like those delivered on the nights of the illumination so that they presumably dealt mainly with the occasion of the celebration. It is interesting to note that the mawlid ceremonies here are not confined to that of the Prophet but the mawlid of 'Alī, Fātima and even that of the reigning Caliph, the *Imām al-ḥādith*, are similarly observed. As in the fundamental idea of these celebrations (*Mawlid al-Imām al-ḥādith*!), Shī'a influence can also be traced in separate elements of it. It had not yet come to be a festival of the common people in the time of the Fātimids. This no doubt explains why — except in Maḳrīzī and Kaḳḱashandī, the great historians of Fātimid Cairo — there is hardly any reference to these celebrations in the literature emanating from Sunnī circles, not even when

writers like 'Alī Paṣṣa Mubārak are dealing with features peculiar to Cairo and deal very fully with the history of the Mawlid festival.

The memory of these Fātimid mawālid seems to have almost completely disappeared before the festivals in which Muslim authors unanimously find the origin of the Mawlid, the Mawlid which we find first celebrated in Arbela in 604 by al-Malik Muzaḳfar al-Dīn Kökburi, a brother-in-law of Saladin. The fullest account is given by a somewhat later contemporary, the great historian Ibn Khallikān (d. 681) on whom later writers continually base their statements (e.g. al-Suyūṭī, *Ḥusn al-Maḳṣid* [Brockelmann, *G. A. L.* ii. 157] and others). The personality of this ruler, his period so disturbed by the turmoil of the Crusades, and his milieu to which Ibn Khallikān calls special attention, lead us to suggest marked Christian influence in the development of this celebration; his close relations with the Sūfī movement on the other hand suggest the possibility of influence of quite a different nature. This is clear from the description of the celebrations. Preparations are begun long before and people come in from remote districts. The prince takes special care that the visitors are housed in splendid wooden ḳubbas specially built and they are entertained with music, singing and all kinds of amusements (shadow-plays, jugglers etc.). The streets of the town were for weeks as busy as on the occasion of an annual fair. On the eve of the Mawlid night a torchlight procession took place from the citadel of the town to the *khānḳah*, led by the prince after the maghrib ṣalāt. Next morning the whole populace assembled in front of the *khānḳah*, where a wooden tower had been erected for the ruler and a pulpit for the *wā'iz*. From this tower the prince surveyed not only the crowd assembled to hear the address but also the troops summoned to be reviewed on the adjoining maidān. We are told nothing of the substance of the address. On its conclusion the prince summoned the distinguished guests up to the tower to give them robes of honour. The people were then feasted at the prince's expense in the maidān, while the notables were entertained in the *khānḳah*. The following night was spent by the prince like so many of the Sūfis in *samā'* (Ibn Khallikān, *Bulāk* 1299, ii. 550 *sqq.*).

In contrast to the Fātimid celebrations, what is specially striking here is the large share taken in the festival by the Sūfis and the common people, a circumstance which is all the more notable, as it is probably in this association with Sūfism that we have the reasons for the later great popularity of the mawlid. At the same time the torchlight procession, really foreign to Muslim sentiment, and borrowed from contemporary Christian customs at festivals deserves our attention; it is not found at the celebration in Cairo which was purely a day ceremony, while the lavish entertainment of all present, especially with sweets, and the addresses are found in both cases. In this remarkable ceremonial, we seem really to have the foundation of all Mawlid celebrations. With the great political and religious movement, which we may call Salḳūḳ reaction, the Mawlid reached Egypt in Saladin's time, where it is significant that Sūfism very quickly took deep roots, thus preparing the way for an observance like the Mawlid, which is essentially kept up by popular religious sentiment.

The observance of the festival spread sooner

or later from here to Mecca where its old form was transformed. Its further progress was along the coast of North Africa to Ceuta, Tlemcen and Fās to Spain but it also went eastwards to India, so that ultimately the whole Muslim world is united on this day in a ceremonial, frequently of unprecedented splendour, but alike everywhere in its main features. We have innumerable descriptions of the festival from all parts of the Muslim world, most fully for Mekka (*Chroniken*, ed. Wüstenfeld, iii. 438 sq.; Ibn Ḥaǧǧar al-Haitamī, *Mawlid* [Brockelmann, *G.A.L.*, ii. 389]; for modern times: Snouck Hurgronje, *Mekka*, ii. 57 sqq.), where the celebrations have always been famous, for Egypt (Muḥ. Tawfiḳ al-Bakrī, *Bait al-Šiddīk*, Cairo 1323, p. 404 sqq.; Lane, *Manners and Customs* [1871], ii. 166 sqq.) and the Indies (Snouck Hurgronje, *Achehnese*, i. 207; do., *Verspreide Geschriften*, ii. 8 sqq.; Herklots, *Qanoone Islam* [1832], p. 233 sq.; Goldziher, *Culte des saints* [1880], p. 13; here it is frequently not the birth but the death of the Prophet that is commemorated). The Turkish element in Islām also has not resisted the advance of the celebration of the Mawlid (Turk.: *Medvlid*). Since Sulṭān Murād III introduced it in 996 into the Ottoman empire, it has enjoyed increasing popularity. Since 1910 it has been celebrated as a national festival. Accurate descriptions of the festival as celebrated in the older period of the court of Constantinople (Mouradega d'Ohsson, *Tablau général*, Paris 1787, i. 255 sqq.; *G. O. R.*, viii. 441) clearly reveal its relationship with the festivals of a more popular nature in other lands of Islām.

One element in particular is very prominent, and that is the most characteristic one of the later celebrations, namely the recital of *mawlid*'s i.e. panegyric poems of a very legendary character, which start with the birth of Muḥammad and praise his life and virtues in the most extravagant fashion. The origin of these addresses is already to be found in the religious addresses in Fātimid Cairo and in Arbela and perhaps in part at least goes back to the sermon usual at Christian festivals. The *K. al-Tawwīr fī Mawlid al-Sirādī*, which Ibn Dihya composed during his stay in Arbela at the suggestion of Kokburi was already famous as a *mawlid* at this period (Brockelmann, *G.A.L.*, ii. 310). It was not till later times however that mawlds became a predominant element in the celebration, along with torchlight processions, feasting and the fairs in the street, ever increasing in size. In Mecca, for example, at the present day they form the main feature of the celebration in the mosque; among the pious they are the most popular evening entertainment for days before the celebration and teachers interrupt their lectures in order to deliver mawlds to the students and the people on the streets and in the coffee houses find edification and entertainment in listening to them. The number of such mawlds is quite considerable. Beside the famous but not very popular *Bānat Šu'ād* of Ka'b b. Zuhair of the older period, the *Burda* and the *Hamziya* of al-Buṣīrī and their numerous imitations, there are a whole series of regular mawlds, some of which are intended to instruct like that of Ibn Ḥaǧǧar al-Haitamī, others purely edifying like a shorter version of it, and notably that of Ibn al-Djawzī (*G.A.L.*, i. 503) and al-Barzandjī (*G.A.L.*, ii. 384). In addition to those in Arabic, there are a great many mawlds in Turkish (Irmg. Engelke, *Suleymān Tschelebi's Lob-*

gedicht, 1926). It is significant of the part played by these poems, that they have passed from the mawlid celebrations to other festivals, so that the word has actually become a name for "festival" and particularly "feast" (*ʿaṣīma*; cf. Snouck Hurgronje, *Mekka*, ii. 147, 154 and pass.; Becker, in *Isl.*, ii. 1911, p. 26 sqq.). Quite apart from any festivals, the recitation of mawlds is popular, in Palestine for example in fulfilment of a religious vow (T. Canaan, in *Journ. of the Pal. Or. Soc.*, vi., 1926, p. 55 sqq.; cf. also the introductory anecdote in the mawlid alleged to be by Ibn al-ʿArabi [*G.A.L.*, i. 441]). Like the substance of these mawlds, the form is also very regular. Prose and poetry alternate, interrupted frequently by appeals to utter blessings on the Prophet. *Dhikrs* are usually added at the end.

The Mawlid as the finest expression of reverence for Muḥammad has found almost general recognition in Islām, as fulfilling a religious need of the people and as a result of the strength of the Šūfī movement. This must not however blind us to the fact that at all times there has also been vigorous opposition to it. This is found as early as the festival of Arbela (al-Suyūṭī, *Ḥusn al-Maḳṣid*). The celebration is a *bid'a*, a religious innovation, which is in sharp contradiction to tradition. Even ardent advocates of the festival confess this and the strictly orthodox, who adhere to the sunna, reject it most emphatically. But, as in so many other things, practice has here proved stronger than dogmatic theory. Once the festival had been thoroughly established in the religious life of the people, it was bound in time to find approval as an element of the *idmā'*. Its supporters found it easy to get this *bid'a* legitimated, in theory at least, as a *bid'a ḥasana*. When the festival had been accepted by the consensus of the community, the essential thing had been done and legitimate ground for opposition had been removed. While the opposition thus finds itself reduced to combating the outer forms of the festival and its developments, its supporters are never tired of calling attention to the merit that lies in feeding the poor, in the more frequent reading of the Qur'ān and mawlds, and in expressions of joy over the birth of the Prophet and all that the day brings with it. It is significant of the character of the opposition that the opponents object to those very forms which show the influence of Šūfīsm (dancing, *samā'*, ecstatic phenomena etc.) or Christianity (processions with lights etc.). The most interesting document of this feud is a *fatwā* by al-Suyūṭī (d. 911; Brockelmann, *G.A.L.*, ii. 157: *Ḥusn al-Maḳṣid fī ʿAmal al-Mawlid*) which gives a brief survey of the history of the festival, then discusses the pros and cons very fully and concludes that the festival deserves approval as a *bid'a ḥasana*, provided that all abuses are avoided. Ibn Ḥaǧǧar al-Haitamī in his *Mawlid* and Kuṭb al-Dīn (*Chronik in der Stadt Mekka*, iii. 439 sq.) take the same view, while Ibn al-Ḥāǧǧī (d. 737) as a more strict Mālikī condemns it most vehemently (*K. al-Madkhal* [1320], i. 153 sqq.).

Although the height of this struggle was apparently reached in the eighth—ninth century, it did not completely die down in later years; indeed it received new life with the coming of the Wahhābis. The cult of the Prophet is in such contradiction in their fundamental principle, the restoration of the ideal purified primitive Islām, that we can understand that they should completely

disapprove of this, the most popular and most splendid expression of it. In doing this, they are only putting into action the protests of the extreme Hanbali Ibn Taimiyya (d. 728), the famous precursor of their movement, against innovations which are contrary to the sunna (Ibn Taimiyya against the holding of *khutbas* in the Mawlid night: *Fatāwā* [Cairo 1326], i. 312). Similar ideas are still found to-day even where Wahhabism is rejected, notably in the school which Goldziher calls "Kulturwahhabismus", founded by the celebrated Muḥammad 'Abduh (d. 1905), who in connection with the worship of saints condemns the Mawlid also, in the periodical *al-Manāwī* (Goldziher, *Richtungen der islam. Koranauslegung*, p. 369 sqq.).

In the reverence shown to other Muslim saints, the Mawlids also play a great part. Although the success of an appeal to a saint does not depend on particular days, yet certain days and birthdays in particular are regarded as particularly favourable. These celebrations are often connected with places, to which a certain sanctity had been attached from pre-Islamic times (the Mawlid of Shaikh Ḥasan al-Badawi in Tanja: Goldziher, *Muh. Stud.*, ii. 338 sq.). There are also Mawlids of nameless saints. In the derwish orders, next to that of the Prophet, the Mawlid of the founder is held in particular popularity. 'Alī Pasha Mubārak (*Khiṭaṭ Ḍayida*, i. 90; iii. 129 sqq.) mentions a large number of such festivities in modern Cairo, the characteristic features of which, he says, are the brilliant illumination of the town, the ceremonial procession (*Mahfil*; at the *Mawlid al-Nabi*: *murakkab*; cf. P. Kahle, in *Isl.*, vi., 1916, p. 155 sq.) and the great feasts. One cannot now imagine the popular religion of Egypt without these feasts.

Bibliography: Besides the works already mentioned: Muḥ. Tawfiq al-Bakrī, *Rait al-Ṣiddiq*, Cairo 1323, p. 404 sqq.; al-Sakhawī, *al-Tiḥ al-makbūh*, Bulāq 1896, p. 13 sq.; numerous Mawlid texts are given in the *Verzeichn. der arab. Hs. der Kgl. Bibl. zu Berlin*. Of special value is the Mawlid of Abu 'l-'Abbās b. 'Abd Allāh al-Aḥmī of Ceuta (Brockelmann, *G. A. L.*, i. 306); J.-J. L. Bargès, *Complément de l'histoire des Bent-Zayyān*, 1887, p. 47 sqq.; *Description de l'Égypte*, Paris 1826, xiv. 196 sqq.; A. Mer, *Renaissance d'Islām*, 1922, p. 403; Goldziher, *Vorlesungen u'er den Islam*², 1925, p. 257.

(H. FUCHS)

AL-MAWSIL. [See MOSUL.]

MAWSIM (v. from the root *w-s-m* "to stigmatise"), market, festival. In this sense the term is used in *ḥadīth*, especially in connection with the markets of early Arabia, such as those which were held in 'Ukaz, Madjanna, Dhū 'l-Madjaz, 'Arafa, etc. (Bukhārī, *Ḥaḍy*, b. 150; *Tafsir*, sūra 2, b. 34). At these markets the worst elements of Arabia gathered (*al-mawṣim yaḍma' ra'ā' al-nās*, Bukhārī, *Ḥudūd*, b. 31). Advantage was also taken of these assemblies to make public proclamations and inquiries, e.g. in order to regulate the affairs of deceased persons (Bukhārī, *Khums*, b. 13; *Manāḳib al-Anṣār*, b. 27). As the pilgrimage was at the same time one of the chief markets of early Arabia, the term *maṣāsim* is often combined with it (*maṣāsim al-ḥajj*, Bukhārī, *Ḥaḍy*, b. 150; *Burū'*, b. 1; Abū 'l-Dāwūd, *Manā'ik*, b. 6). Upon this basis the term mawṣim has developed chiefly in two directions; it has acquired the

general meaning of (religious) festival (Dozy, *Supplément*, s. v.) and that of season. In the Lebanon mawṣim denotes the season of the preparation of silk (Bistānī, *Muḥit*, s. v.).

In India and in European terminology referring to these parts of the world, it has acquired the meaning of season in connection with the weather-conditions special to those regions, such as the regularly returning winds and rainperiods. *Monsoon*, *mousson*, *mecsson* and other corruptions of the term are found in this literature.

Bibliography: apart from the works mentioned in the art. cf. *Lisān al-'Arab*, xvi. 123 sqq.; Wellhausen, *Reste arabischen Heidentums*, Berlin 1897, p. 84 sqq., 246; Yule and Burnell, *Hobson-Jobson*, ed. Crooke, London 1903, s. v. *monsoon*. (A. J. WENSINCK)

MAWWĀL. [See MAWĀLIYA.]

MAWZŪNA, a small silver coin struck by the Sharifs of Morocco in the eighteenth and early nineteenth century. It was the smallest silver piece and equivalent to 24 copper fulūs or a quarter dirham. Another name for the mawzūna was *ḍaḡa*. In 1911 (1330) copper coins of the value of 10, 5, 2 mawzūnāt were issued, the mawzūna being now the equivalent of a centime. On recent issues the name mawzūna has disappeared and its place is taken by *sentim*.

Bibliography: J. J. Marcel, *Tableau général des Monnaies ayant cours en Algérie*, Paris 1844, p. 9, 36—40. (J. ALLAN)

AL-MAYURKĪ, nisba of three Arabic authors, belonging to Majorca (Mallorca), the largest of the Balearic Islands.

I. the poet Abū 'l-Ḥasan 'Alī b. Aḥmad b. 'Abd al-'Aziz b. Ṭunaiz, d. in 475 (1082), according to others in 477 at Kāzima near Baghdād; poems by him are preserved in the MS. of the Escorial in Derenbourg, N^o. 467, 2; cf. al-Suyūṭī, *Buḡyat al-Wu'āt*, S. 327; Yāqūt, *Mu'djam*, iv. 722.

II. the traditionalist Abū 'Abd Allāh Muḥammad b. Abi 'l-Naṣr Futūḥ b. 'Abd Allāh b. Ḥumaid al-Azdi al-Ḥumaidi, cf. above, ii. 3, where to the sources should be added Yāqūt, *Iṣṭihād al-Arib*, vii. 58—60 and 'Abd al-'Aziz al-Dihlawī, *Bustān al-Muḥaddithīn*, p. 81. In addition to the works there given, the following still exist: 1. *al-Djam' bain al-Ṣaḥīḥain Ṣaḥīḥ al-Bukhārī wa-Ṣaḥīḥ al-Muslim*; Mss. in Cairo, *Fihrist*, i. 325 and Mōṣul, s. Dāwūd, *Makḥfūtāt al-Mawṣil*, p. 194, 16 (fragment); Yahyā b. Muḥammad b. Hubaira al-Wazīr (d. 560 = 1165) wrote a commentary on it; MSS. in Berlin, Ahlwardt, N^o. 1192; Leipzig, Vollers, N^o. 313 and in the Brit. Museum, N^o. 1603. 2. *Tafsir gharīb mā fi 'l-Ṣaḥīḥain murattab 'ala 'l-Masānid*; MS. in the possession of A. Taimūr Pāshā in Cairo, s. *R. A. A. D.*, iii. 340. 3. *Tashīl al-Sabīl ilā Ta'allum al-Tarsīl bi-Tamthīl al-Mumāthalat wa-Taṣnīf al-Mukḥāṭabāt*; MS. in Stambul. Top Kapu, N^o. 2351; photograph in Cairo, s. *Fihrist*², iii. 62.

III. 'Abd Allāh b. 'Abd Allāh al-Tardjūmān, born in Majorca of Christian parents, studied in Lerida and Bologna, then went to Tunis on the advice of Bishop Nicolas Martell, who was himself a Muslim in secret, there adopted Islām and in 823 (1420) wrote a pamphlet against Christianity entitled *Tuhfat al-Arib* (*Adīb*) fi 'l-Radd 'alā Ahl al-Ṣalīb; Mss. in the Brit. Museum Or. 5942; Ellis and Edwards, *Descriptive List*, p. 13; in Stambul. Khāli, N^o. 5275 (with Turkish translation), Fāṭḥ, N^o. 2909, As'ad, N^o. 1147—1148; pr. Cairo

1895; transl. by J. Spiro, Paris 1886; cf. J. Miret y Sina, *La tomba del escriptor Catala Fra Anselmo*, Barcelona 1910. Abu 'l-Ghaith Muḥammad al-Kašh-shāsh wrote an introduction to the book and dedicated it under the new title *Taḥiyat al-Asfār Talīf al-Akhyār al-Anṣār fī 'l-Radd 'ala 'l-Naṣāra 'l-Kuffār* to the Ottoman Sultān Aḥmad I (1012-1026 = 1603-1617); MSS. s. G.A.L., ii 250 (thereon Paris, N^o. 6051-6052). The author's son 'Abd al-Ḥalīm wrote a synopsis of the work; MS. in Berlin, Ahlwardt, N^o. 2211.

MAZAGAN (old Arabic name: *al-Buraidja*, "the little fortress"; modern Arabic name: *al-Djadīla* "the new"), a town on the Atlantic coast of Morocco, 7 miles S.E. of the mouth of the Wādi Umm Rabi'. Its population in 1926 was 19,159, of whom 14,141 were Muslims and 3,385 Jews.

Some writers think that Mazagan was built on the site of the *Ποσειδών λιμὴν* of Ptolemy, or *Portus Rutubis* of Pliny. The texts however do not say that there was ever a town there, but only a roadstead frequented by ships. The situation seems to have remained unchanged throughout the middle ages. As to the name Mazagan, it seems to appear for the first time in al-Bakī (eleventh century A.D.). This geographer, enumerating the ports of Morocco on the Atlantic coast, mentions a Marifen (de Slane's reading), which should undoubtedly be emended to Mazighan, a form attested by Idrīsī (xiith century). The same place-name is found in a manuscript collection of edifying anecdotes relating to the great saint of Azammūr: Sidi Abū Shu'āih, who also lived in the twelfth century. Mazighan appears here as a fishing village between Azammūr and the ribāṭ of Tīt [q.v.]. The proximity of these two fairly important towns prevented it from developing. The roadstead is marked on a whole series of European planispheres and portulans of the xivth and xvth centuries (publ. by Ch. de La Roncière, *Découverte de l'Afrique au Moyen-Age*, 1925) which give the forms Messegan (1339 and 1373), Masaghan (1367), Mazagem, intermediate between Mazighan and the Mazagão of the Portuguese. The latter, from the end of the xvth century, used to come to the harbour of Mazagan for cargoes of the grain of Dukkāla to supply the capital. In 1502, a squadron commanded by a Portuguese gentleman, Jorge de Mello, caught by a storm in the Straits of Gibraltar was driven to Mazagan and landed there. The Portuguese installed themselves in a deserted tower there to defend themselves against a possible attack by the inhabitants. Jorge de Mello soon returned to Portugal and obtained the king's permission to build a fortress at Mazagan. Although the story of these events is only recorded by writers of the xviiith century, it must be in keeping with the facts, for letters patent of king Dom Manuel dated May 21, 1505, give Jorge de Mello the captaincy of the castle which he is authorised to build at his own expense at Mazagan. He did not however make use of his privilege for, when on Aug. 27, 1513 the Portuguese army sent to take Azammūr under the command of the Duke of Braganza landed at Mazagan, there was neither town nor

fortress there except the old ruined tower (*al-Buraidja*). The difficulty of entreating the port of Azammūr led the Portuguese to establish a more accessible base at Mazagan. During the summer of 1514 under the direction of the architects Diego and Francisco da Arruda, a square castle flanked by towers at each of the four corners was built. One of these bastions was formed by the old tower, al-Buraidja, the name of which survived among the natives as that of the Portuguese town. This early castle still exists almost in its entirety. Particularly striking is a magnificent subterranean hall, the vaulting of which is supported by 25 pillars. It was probably, rather than a *salle d'armes*, a huge granary built to hold the contributions in grain paid by the tribes subjected to the Portuguese protectorate. It was at a later date used as a cistern to hold supplies of drinking-water for the garrison, when the place blockaded by rebellious tribes had no longer any taxes in grain to collect, which happened in 1541. For ten years before, the situation of the Portuguese stations on the coast, in view of the religious and anti-foreign movement stirred up by the coming and successes of the Sa'ḍian Sharif, had been so bad that the king of Portugal thought of abandoning several of his fortresses. The taking of the fort Santa-Cruz on the Cape of Guer (Agadi) by the shaif (March 12, 1541) was a warning. John III decided to evacuate Safi and Azammūr and to concentrate on Mazagan, a more favourable and more easily defended position, all the Portuguese forces he wanted to leave in the south of Morocco. The operation was carried through in the autumn (before Nov. 6). From the month of April onwards the work of putting the town in a state of defence had been going on. The work was actually pushed on during the last months of the year (1541) under the direction of the great architect João da Castilho, who used plans prepared by an Italian engineer, Benito of Ravenna. This was when the walls of Mazagan were built as they still stand to-day.

In retaining Mazagan the Portuguese wanted to keep a base on the coast to secure protection for the route to India. They also hoped that the fortress would serve them as a base for the conquest of Morocco, when a favourable conjuncture should arise, which however never happened. In fact for the more than two hundred years in which the Portuguese retained it, the possession of Mazagan only served them as a pretext to obtain from the Pope bulls of Crusades, which supplied the Papal Treasury with appreciable revenues. The tribes kept the town so closely blockaded that the inhabitants could not go outside its walls without military protection. The collection of wood and the cultivation of a few gardens, continually devastated by the natives, gave rise to continual skirmishes. The Muslims of the country around had built two little towns, a few miles from Mazagan, Faḥṣ al-Zammūriyīn and Faḥṣ Awlād Duwayib, where they entrenched themselves to keep up the blockade and where the devout, desirous of acquiring merit from participation in the holy war, used to come to discharge a few shots at Mazagan.

Badly supplied by sea, often a prey to famine and epidemics, the garrison and population however lived in sufficient security under their powerful walls, against which the tribes could do nothing. On several occasions however, they had to resist vigorous attacks. In April 1562 Muḥammad, son

of the Sa'dian Sultān, 'Abd Allāh al-Ghālīb bi'llāh, at the head of a vast horde of tribal warriors laid siege to Mazagan. Two assaults were repulsed and the besiegers lost heart. On Aug. 4, 1623, the place, attacked by 3,000 Muslims during the absence of the governor, who was led into an ambushade, owed its safety to his wife who ordered the gates to be shut, organised the defence, distributed arms to the whole population, women as well as men, and sent them on to the walls. During the disorder which accompanied the decline of the Sa'dian dynasty, the governors of Mazagan seem to have succeeded in raising the blockade and resuming relations to some extent with the tribes. The *mudhāhid* Sidi Muḥammad al-'Aiyāshī, to put an end to this, attacked the Portuguese in 1639 and inflicted some losses on them. Mawlay Ismā'īl, occupied with the siege of Ceuta, never seriously tried to take Mazagan. The honour of retaking it belonged to his grandson Sidi Muḥammad b. 'Abd Allāh. The Sultān came to besiege it in person at the end of Jan. 1769. The place held out successfully for five weeks but, the order to abandon it having arrived from Lisbon, the governor surrendered on honourable terms. The garrison and civilian population returned to Portugal with their arms and possessions. On abandoning Mazagan on March 10, 1769 the Portuguese exploded mines there which did great damage; the sultān entered a ruined town which he repopulated in part but it remained in so miserable a state that it was called *al-Mahdūma* "the ruined", until, in the reign of Sidi Muḥammad b. Hishām, in 1240 (1824—25) it was restored by Sidi Muḥammad b. al-Tayyib, kha'id of Dukkala and Tāma-na, who gave it the name of *al-Diyā'idā* by which it is generally known to Muslims.

MĀZANDARĀN, a province to the south of the Caspian Sea bounded on the west by Gilān, on the east by the province of Āstarābād (q. v. formerly Guḡān).

The name. If Gurgān to the Īrānians was the "Land of the Wolves" (*vahkāna*), the region to its west was peopled by "Māzānian dēws" (Bartholomae, *Altir. Wörterbuch*, col. 1169 under *māzāniya dāwā*). Darmesteter, *Le Zend-Avesta*, ii. 373, note 32, thought that Māzandarān was a "comparative of direction" (**Mazana-tara*; cf. *shīsh* and *shīshār*) but Noldeke's hypothesis is the more probable (*Grundr. d. iran. Phil.*, ii. 178) who thinks that Māzan-dar = "the gate of Māzan" was a particular place, distinct from the part of

the country known as Tapuristān. [A village of Mesderan (?) is marked on Stahl's map 12 km. south of Fīrūzkūh!] In any case the name Māzandarān seems to have no connection with *τοῦ Μαζωδάρων ἔπος* which according to Ptolemy, vi., ch. v., was situated between Parthia and Areia (Hāri-rūd) and was connected by Olshausen (*Mazdoran und Mazandarān, Monatsberichte Ak. Berlin*, 1877, p. 777—783) with Mazdūrān, a station 12 farsakhs west of Sarakhs; cf. Ibn Khurdādhbih, p. 24; Muḥaddasī, p. 351 [cf. however the late source of 881 (1476) quoted by Dorn, *Mélanges asiat.*, vii. 42].

The Avestan and Pahlavi quotations given by Darmesteter, *loc. cit.*, show to what degree the people of Māzandarān were regarded by the Persians as a foreign group and little assimilated. According to the *Buntahish*, xv. 28, transl. West, p. 58, the "Māzandarān" were descended from a different pair of ancestors to those of the Īrānians and Arabs. The *Shāh-nāma* reflects similar ideas (cf. the episode of Kai-kā'ūs' war in Māzandarān and esp. Vullers ed., i., p. 332, v. 290: the war is waged against Ahriman; p. 364, v. 792—793: Māzandarān is contrasted with Īrān; p. 574, v. 925: the bestial appearance of the king of Māzandarān).

Among historical peoples in Māzandarān are the Tapyres (*Τάπυροι*), who must have occupied the mountains (north of Simnān), and the Amardes (*Ἀμαρδοί*), who according to Andreas and Marquart have given their name to the town of Āmol (although the change of *rd* to *l* is rather strange in the north of Persia). These two peoples were defeated by Alexander the Great. The Parthian king Phra-dates I (in 176 B. C.) transplanted the Maides (Amardes) to the region of *Χάρπας* (Khwar to the east of Warāmin) and their place was taken by the Tapyres, whose name came to be applied to the whole province.

The Arabs only know the region as Ṭabaristān (< Tapuristān, on the Pahlavi coins). The name Māzandarān only reappears in the Saldjūq period. Ibn al-Athīr, x. 34, in speaking of the distribution of fiefs by Alp Arslān in 458 (1065) says that Māzandarān was given to the emir Inandj Baighu. Ibn Isfandiyār, p. 14, and Yāqūt, iii., p. 502, q. think that Māzandarān as a name for Ṭabaristān is only of fairly modern origin (in Arabic?) but according to Zakariyā Kazwīnī, p. 270, "the Persians call Ṭabaristān Māzandarān". Ḥamdallāh Mustawfī distinguishes between Māzandarān and Ṭabaristān. In his time (1340) the 7 *tuman* of the "wilāyat of Māzandarān" were: Djurdjān, Mūrūstāk (?), Āstarābād, Āmol and Rustamdār, Dihistān, Rūghad and Siyāh-rustāk (?); on the other hand the *diyār-i Kūmis wa-Ṭabaristān* included Simnān, Dāmghān, Fīrūzkūh, a town of Damāwand, Firrim etc. We find a similar distinction in Khwāndamir, ed. Dorn, p. 83.

Geography: The actual extent of Māzandarān (Rabino) is 300 miles from east to west and 46 to 70 miles from north to south. Except for the strip along the coast — broader in the east than the west — Māzandarān is a very mountainous country. The main range of the Elburz forms barriers parallel to the south of the Caspian, while the ridges running down to the sea cut the country up into a multitude of valleys open on the north only. The principal of the latter ridges is the Mazār-ūh, which separates Ṭabaristān from Tūnikābun. The latter is bordered on the south by the chain of the Elburz in the strict sense, which

separates it from the valley of the *Shāhrūd* (formed by the waters of the *Alamūt* and *Talakān* and flowing westward into the *Safid-rūd*).

To the east of *Mazār-ēbū*, a number of ranges run out of the central massif of the *Elburz*: 1. to the east the chain of *Nūr* which cuts through the *Harāz-pey* and 2. to the S. E. the southern barrier which forms the watershed between the *Caspian* and the central plateau. Between the two, rises in isolation the great volcanic cone of *Damāwand* (9,900 feet).

To the east of *Damāwand* the southern barrier rejoins the continuation of the *Nūr* and the new line of the watershed of eastern *Māzandarān* is marked by the ranges of *Band-i-pey*, *Sawād-kūh*, *Shāh-mirzād* (to the south of *Simnān*), of *Hazār-djārib* (to the south of *Dāmghān*), of *Shāh-kūh* (to the south of *Shāhrūd*) etc.

The rivers of *Māzandarān* are of two kinds. A hundred short streams run straight down into the sea from the outer mountains of *Māzandarān*. Much more important are the rivers which rise in the interior and after draining many valleys form a single great river when they break through the last barrier. Such are (from west to east): the *Sard-ābrūd*; the *Čālūs*; the *Harāz-pey*, which drains the region of mount *Damāwand* and then runs past *Āmol*; the *Bābol* (the river of *Bārfrūsh*); the *Tālār* (river of 'Āliābād); the *Tidjīn* (river of *Sāi*) and the *Nikā* (or *Aspneyzā*) which flows from east to west, its valley forms a corner between the southern chain (cf. above) and the mountains which surround the Gulf of *Astarābād* on the north.

The historical geography of Māzandarān is still full of difficulties although Vasmer's very full study has considerably reduced their number. The matter is complicated by the fact that certain well-known names are used in different periods for more or less identical districts.

The eastern frontier of Māzandarān (Tabaristān) in the strict sense, with Astarābād (Djurdjān) seems to have always run near Kullād (on the river Kīrrind; cf. Ptolemy *Χηρόαι*) where there used to be a wall (*djari-i Kulbāf*) which barred the narrow

strip of lowland between the Gulf of Astarābād and the mountains; cf. Ibn Rusta (p. 149) who speaks of the brick wall (*adjuir*) and of the Gate of Tāmis through which travellers had to pass (cf. Ibn al-Fakih, p. 303). To the west the town of Shālūs (Čālūs) was situated on the frontier of Dailam (Ibn Rusta, p. 150: *fi nahwi 'l-'aduwa*) but later the valley of the Sard-āb-rūd (Kalārdasht) seems to have been annexed to Tabaristān. Farther west the coast of Tunikābun was governed sometimes with Māzandarān and sometimes with Gilān.

The Arab geographers distinguished between the plain (*al-sahlīya*) and the mountains (*al-djabalīya*) of Tabaristān (Iṣṭakhri, p. 211, 271). The important towns of Tabaristān were in the lowlands: Āmol, Nātil, Shālūs (Čālūs), Kalā (Kalār), Mila, Tardji (Tādjī, Bardji); 'Ain al-Humm, Māmpir (= Bārfurūsh), Sārī, Tāmissha (cf. Iṣṭakhri, p. 207; cf. Mukaddasī, p. 353). The principal town (*madīna*) of Tabaristān in the time of Ya'qūbī, p. 276, still was Sāriya [q. v.], but in the time of Mas'ūdī, *Tanbih*, p. 179, Iṣṭakhri, p. 211, and Ibn Hawkal, p. 271, the principal town (*qasaba*) and the most flourishing one in Tabaristān was Āmol (larger than Qazwin).

The mountain area was quite distinct and its connection with the plain is not very clear in the Arabic texts; cf. the confused summary in Iṣṭakhri, p. 204. Tabarī, iii., 1295 under the year 224 (838) distinguishes three mountains in Tabaristān: 1. the mountain of Wandā-Hurmuz in the centre (*wasaf*); 2. that of his brother Wandāsandjān (*sic*) b. Alandā b. Kāin and 3. that of Sharwīn b. Surkhāb b. Bāb. Now according to Ibn Rusta, p. 151, (the Kārinid) Wandā-Hurmuz lived near Dunbāwand. On the other hand, the same writer, p. 149, says that during the rule of Tabaristān by Djārir b. Yazid, Wandā-Hurmuz had bought 1,000 djarib of domain lands (*sawāfi*) outside the town of Sārī. These *alf djarib* seem to correspond to the region round the sources of the rivers Tīdjīn and Nikā which in Persian is called Hazār-djarib. Later, the lands of Wandā-Hurmuz included the greater part of eastern Māzandarān. "Wandāspdjān seems to have ruled over the greater part of Māzandarān for his capital Muzn was the rallying point from which expeditions set out against Dailam. Finally the mountain of Sharwīn comprised the S.E. part of Māzandarān, for according to Ibn al-Fakih, p. 305, it was close to Kūmis.

In the time of Iṣṭakhri, the three divisions of the mountains specified are: the mountains of Rūbandj, of Fādūbān and of Kārin. "They are high mountains (*djīāl*) and each of them (*djabal*) has a chief".

Rūbandj, according to Ibn Hawkal, lay between Raiy and Tabaristān. Barthold, *Oierk*, p. 155 emends the name to *Rūyandj and identifies it with Rūyān. Ibn Rusta, p. 149 says that Rūyān, near the lands of Raiy, did not form part of Tabaristān but formed a special *kūra* with the capital Kadidja which was the headquarters of the Wālī (cf. Kačarustāk in the *bulūk* of Kudjūr). According to this, "Rūyand = Rūyān is to be located in the S.W. part of Māzandarān (north of Teherān). In the Mongol period, Hamdallāh Kazwīnī, p. 160, is the first to mention Rustamdār (on the Shāh-iūd). As Vasmer, *loc. cit.*, p. 122—125, has shown, Rustamdār later included all western Māzandarān between Sakhtasar (Gilān) and Āmol.

Rustamdār therefore included Rūyān, without the two terms being completely synonymous.

Djibāl Karin had only one town Shahmār, a day's journey from Sāriya. The local chiefs of the dynasty of Kārin lived in the stronghold of Firrim which must have stood on the western branch of the river Tidjin, which later flows past Sāri. The modern *bulūk* of Firrim is in the Hazār-Djarib (more accurately in its western half which is called Dudānga). According to Ibn Isfandiār, p. 95, the possessions of the Kārinids included the mountains of Wandā-ummid (*ibid.*, p. 25; the water supply of the mosque of Āmol came from this mountain), Āmol, Lafūr (on the eastern source of the river Bābul which runs to Bārfurūsh) and Firrim, "which is called Kūh-i Kārin". According to Yāqūt, iii. 283, the lands of the Kārinids included Djibāl Sharwīn (cf. above) which I'timād al-Saltāna, *Āl-tāb al-Tadwīn*, p. 42, identifies with Sawād-kūh i.e. the sources of the Tālār (river of 'Alīābād between Āmol and Bārfurūsh); the pass leading to Sawād-kūh is still called *Shalfin* < *Sharwīn*.

The Djibāl Pādūspān (قادر و سپان) long wrongly read قادیسپان lay a day's journey from Sāri. The district had no cathedral mosque; the chief lived in the village of Uram (Ibn Hawqāl, p. 268, 17: Uram-khāst, Ārum). As Vasmer has shown, p. 127-130, this must be sought on the middle course of the rivers of Bārfurūsh and 'Alīābād (to the north of Lafūr and near Shīrgāh).

Bibliography. B.G.A., s. v. Dailam, Tabaristān, Āmol, Sāriya etc. Ibn al-Faḳīh, p. 301-314, in particular gives very detailed information about Tabaristān. Mas'ūdi, *Murūdj al-Dhahab*, index; Idrīsī, transl. Jauhart, ii. 169, 179-180. 333, 337-338 (of little originality); Zakariyā Kazwīnī, *Āthār al-Buldān* (clime iv.): Āmol, p. 100; Bilād al-Dailam, p. 221; Rūyān, p. 250; Tabaristān; Yāqūt, cf. Dorn, *Auszuge*, 1858, p. 2-45, where are collected all the articles relating to Tabaristān [but the text of Wüstenfeld's edition is preferable]; Ḥamdallāh Kazwīnī, *Nuḥat al-Kulūb*, G. M. S. p. 159 and 161; Dorn, *Auszuge aus 14 morgenl. Schriftstellern betreffend d. Kaspische Meer*, *Mélanges Asiatiques*, vi. p. 658, vii. p. 19-44 and 52-92; cf. also the historical bibliography. European works: Spiegel, *Eran. Altertumskunde*, 1871, i. 64-74; Dorn, *Caspia*, 1875 (a mass of rather undigested information); Geiger, *Ostiranische Kultur*, 1882, index; Brunnhofer, *Vom Pontus bis zum Indus*, Leipzig 1890, p. 73-93; Alburn and Mazanderan (the author seeks to explain Iranian geography from Sanskrit texts): Barthold, *Istor.-geogr. obozr. Irana*, St Petersburg 1903, p. 158-161, Pers. transl., Teherān 1930, p. 289-295; Le Strange, *The Lands of the Eastern Caliphate*, p. 368-376; Vasmer, *Die Eroberung etc.*

History. The local dynasties of Māzandarān fall into three classes: 1. local families of pre-Islamic origin, 2. the 'Alid sayyids and 3. local families of secondary importance.

I. At the coming of the Sāsānian dynasty, the king of Tabaristān and of Padashwārgar (Marquart, *Ērānshahr*, p. 130: "the district opposite the region of Khwār"; Farshuwādgār is a misreading of the name, which is also found in the *Bundahish*, xii. 17) was Gushnasp, whose ancestors had reigned since the time of Alexander. In 529-536 Tabaristān was ruled by the Sāsānian prince Kayūs, son of Kawāt. Anūshirwān put in his place Zarmihr, who

traced his descent from the famous smith Kāwa. His dynasty ruled till 645 when Gil Gaubāra (a descendant of the Sāsānian Djamāsp, son of Pērōz) annexed Tabaristān to Gilān. These families, on whom their coins might throw some light (cf. below), had descendants ruling in the Muslim period.

The Bāwandids (who claimed descent from Kayūs) provided three lines: the first 45-397 (665-1007) was overthrown on the conquest of Tabaristān by the Ziyārid Kābūs b. Washmgir; the second reigned from 466 (1073) to 606 (1210) when Māzandarān was conquered by Muḥammad Khwārizmshāh; the third ruled from 635 (1237) to 750 (1349) as vassals of the Mongols. The last representative of the Bāwandids was slain by Afrāsiyāh Culāwī.

The Kārinids (in the Kūh-i Kārin) claimed descent from Kārin, brother of Zarmihr (cf. above). Their last representative Māzyār [q. v.] was put to death in 224 (839).

The Pādūspānids (Rūyān and Rustamdār) claimed descent from the Dāhūyids of Gilān (their eponym was the son of Gil Gaubāra: cf. above). They came to the front about 40 (660) and during the rule of the 'Alids were their vassals. Later they were vassals of the Būyids and Bāwandids, who deposed them in 586 (1190). The dynasty, restored in 606, survived till the time of Timūr; one of its branches (that of Kāwūs b. Kayūmarth) reigned till 975 (1567) and the other (that of Iskandar b. Kayūmarth) till 984 (1574).

II. Alongside of these native dynasties the 'Alids were able to establish themselves, principally in Tabaristān. In 250 the people of Rūyān, rebelling against the governor, sent to Raiy for the Zaidī Saiyid Ḥasan b. Zaid, a descendant of the Caliph 'Alī in the sixth generation. This (Ḥasanid) branch ruled in Tabaristān till 316 (928). The Ḥusainid branch ruled from 304 to 337 (?). Another dynasty of Marāshī sayyids ruled in Māzandarān between 760 (1358) and 880 (1475). The founder of this dynasty was Kīwām al-Dīn, a descendant of 'Alī in the twelfth generation. A third family of Murtaḍā'i sayyids is known in Hazār-Djarib between 760 and 1005 A.H.

III. The noble families who enjoyed considerable influence, mainly in their fiefs, are very numerous. Rahīno mentions the Kiyā of Čulāw (at Āmol, Talaḳān and Rustamdār) between 795 A.H. and 909 A.H.; the Kiyā Djalālī of Sāri in 750-763; the house of Rūzafzūn of Sawādkūh between 897 and 923; the Dīw in the period of Shāh Tahmāsp in certain parts of Māzandarān; the Banū-Kāfīs between 857 and 957; the Banū-Iskandar between 857 and 1006 and the different princes of Tamīshā, of Miyāndurūd, of Iārīdjan, of Māmūr, of Lafūr etc.

Besides this confusion of feudal dynasties, a series of conquerors from outside has ruled in Māzandarān: the Arabs (their expeditions began in 22=644; the final conquest took place under al-Manṣūr in 141-144 [cf. the article TABARISTĀN]; the dates and facts given are very contradictory as Vasmer has shown), the Tāhirids, the Saffārids, the Sāmānids, the Ziyārids, the Ghaznawids, the Saldjūks, the Khwārizmshāhs, the Mongols, the Sarbadārs, Timūr and his descendants, the Šafawids. Shāh Ismā'īl sent an expedition to Māzandarān in 923 (1517) but it was under Shāh 'Abbās that the land was definitely incorporated in Persia in 1005 (1596). This monarch claimed hereditary

rights there from the connection of his family with the Saiyid Kīwām al-Dīn Mar'āshī (*Ālam-ārā*, Teherān, p. 354). Farāhābād was founded in 1020 (1612) and in the next year Ashraf was built with its famous palaces.

Bibliography. On the campaigns of Alexander the Great and Antiochus III (in 209 B.C.; cf. Polybius, x. 28–31), cf. Dorn, *Caspia, sub Alexander*; Dorn, *Reise*, p. 156–161; Marquart, *Alexander's Marsch von Persepolis nach Herāt, in Untersuch. z. Gesch. von Iran*, ii., 1905, p. 45–63; Stahl, *Notes on the march of Alexander the Great from Hebatana to Hyrcania*, *J. R. G. S.*, Oct. 1924, p. 312–319. (V. MINORSKY)

The coins of Māzandarān. The question whether the Sāsānians struck coins in Māzandarān is still an open one and can only be settled when the groups of letters that mark the mints on Sāsānian coins have been properly explained. According to the so far insufficient attempts to explain them, the letters *A M* found from the time of Firūz onwards are an abbreviation for Āmul, but this explanation is quite without proof.

The Dābwahids and the earlier Arab governors of Ṭabaristān struck in the second (eighth) century coins of the type of the Sāsānian drachms of Khusrāw II; on the obverse, with the bust of the ruler, his name is given in Pahlavi characters and on the reverse is the fire-altar with its two guardians and on the right the mint *Ṭpurstan* and on the left the year in the Ṭabaristān era (began on June 11, 652). These silver coins average in weight 1.90 grammes = 29.3 grains and are hemidrachms. Of the Dābwahid rulers, Ferkhwān, Dābwirdjmatūn and Khūshīt are mentioned upon them. The coins of the first bear the years 60—77 (711—728), of the second 86—87 (737—738) and of the third 89—115 (740—766); these dates enable us to correct the chronology given by the historians. On some coins with the name Khūshīt, earlier students read the dates 60—63 but this is to be explained by the similarity of *ghast* and *dehsat* in the Pahlavi script and these coins are really of the years 110 sq. The assumption of a Khūshīd I, who reigned in the sixties of the Ṭabaristān era (Mordtmann), is thus quite unfounded. As Khūshīd died in 144 A. H = 110 Ṭabaristān era, and there are coins with the names of Arab governors earlier than the year 116 Ṭab, it must be assumed that the Arabs continued to strike coins in the name of the earlier ruler of the land for a period after the conquest of Māzandarān, just as they did after the conquest of Persia under the Caliph 'Omar.

The earlier coins struck by Arab governors of Ṭabaristān bear the name Khālīt (Khālīd b. Barmak, 116—119) and 'Omar ('Omar b. al-'Alā, 120—125) in Pahlavi. From 122 the name of the governor is given in Kūfic also and afterwards in this exclusively ('Omar, Sa'īd, Yaḥyā, Djarir, Sulaimān). In the years 130 and 140, there frequently appear on the coins names which seem to have belonged to some other officials, as the names of governors given for this period by historians are different.

Anonymous coins were also struck. The issue of these coins with Sāsānian types ended in the year 143 Ṭabaristān era (794, anonymous) but we have a coin of 161 (812) on the obverse of which in place of the king's head — as earlier on the coins of the governor Sulaimān (136—137) — there is a rhombus with the puzzling Arabic letters *h h* and on the margin al-Faḍl b. Sahl Dhul-Riyāsatain (in Arabic) is named; on the reverse, instead of the altar with its guardians are three parallel designs like fir branches, between them an inscription in four lines giving the Muḥammadan creed in Kūfic and the date and mint in Pahlavi (Tiesenhäusen, *Zap. vost. old arch. obsh.*, ix. 224).

We know dihamms of Ṭabaristān mint of the Caliphs of the years 102 (Lavoix), 147 (Brit. Mus. with the name of the governor Rawḥ), 190—192, copper coins of the years 145 and 157 (Zambaur, *Numism. Ztschr.*, xxvii., the latter with the name of 'Omar b. al-'Alā). At a later date, coins were struck there by the dā's of the 'Alids ('Āmul, 253 AR, 300 AV and AR), the Būyids and Ziyāids ('Āmul, Sāriya and Firrūn), the Bāwandids (Firrūn, 353—367, 401 AR), sometimes by the Sāmānids, ('Āmul AV 341, AR 302, 353—357), still later by the Hūlāgūids, Serberdār, Timūrids ('Āmul, Sāri) and Shāhs of Persia ('Āmul, Sān, Ṭabaristān, Māzandarān). In Āmul anonymous copper coins were struck from the xvth century onwards. On several pieces of this period the mint Ṭabaristān occurs. As these are all very rare, the issue must have been an occasional one. The dates are not preserved on any specimens. More common are copper pieces of the value of 4 kāzbekī (18—22 grammes = 280—340 grains) with the lion and sun and mint Māzandarān, which belong to the xviiith century. During the Russian occupation of Gilān in 1723—1732, to meet the shortage of currency provoked by the financial crisis in Russia at this time, Persian copper coins were overstruck with a Russian die (double-eagle) and circulated in the occupied provinces in place of Russian money. These coins are often called Māzandarān pieces but this is not correct, as only Gilān and not Māzandarān was occupied.

(R. VASMER)

MAZĀR-I SHARĪF, a town in Afghānistān, south of the Āmū-Daryā [q. v.]. In the middle ages it was the site of the village of Khair, later called Khodja Khairān, 14 miles east of Balkh. On two different occasions, in the vith (xiith) century after 530 (1135—1136) in the time of Sultān Sandjaj [q. v.], and in 885 (1480—1481) in the reign of the Timūrid Sultān Husain, the tomb of the caliph 'Alī was "discovered" here and its genuineness declared to have been proved. A place of pilgrimage (*mazār*) at once arose around the tomb with a considerable market: the second

tomb which is still standing (the first is said to have been destroyed by Čingiz-Khān), was built in 886 (1481—1482). The *mazār* does not seem to have been of any particular importance during the time of the Uzbeks and is hardly mentioned although several Özbek Sultāns were buried there. In the first half of the sixteenth century, the place is usually simply called *mazār* by travellers, the name *Mazār-i Sharīf* seems only to have arisen within the last hundred years. 'Abd al-Karīm Bukhārī (ed. Schefer, p. 4) does not mention Mazār at all among the towns of Afghānistān: in 1832 when A. Burnes passed through it, it was a little town with about eight hundred houses. In 1866, the Afghān governor Nā'ib 'Alīm Khān, a Shī'ī, chose Mazār-i Sharīf as his residence; since then Mazār-i Sharīf has been the capital of Afghān Turkistan. In 1878 it was described by the Russian general Matweyew as one of the best towns in Northern Afghānistān with about 30,000 inhabitants (Kostenko, *Turkestan'skiy Khat*, ii. 157).

Bibliography: On the first discovery of the tomb cf. the text of Abū Hāmid al-Andalusī al-Ġarnāṭī (*G. A. L.*, i. 477, where the name is different), in *J. A.*, cccvii, 1925, p. 145 sqq.; on the second: Khwāndamīr, *Ḥabīb al-Siyar*, lithography of Tihrah, iii. 260 sqq.; C. E. Yate, *Northern Afghanistan*, Edinburgh and London 1888, p. 279 sqq. (W. BARTHOLO).

At-MAZĀTĪ, a name borne by over twenty Abādī writers or men celebrated for their piety, among whom may be mentioned Abū 'l-Rabī' Sulaimān b. Yakhlaḥ al-Mazāṭi, a pupil of Abū 'Abd Allāh Muḥammad b. Bakr. Celebrated for his learning and his virtues, he spent all his life in study and teaching and died in 474 (June 11, 1081—May 31, 1082) in a little town of the Banū Wislū (ويسلو), a clan of the tribe of Mazāṭa, which in those days occupied the lands between Gabes and the south of 'Ispah. He wrote a book on the principles of law (*uṣūl*) entitled *al-Muḥajj*.

MAZDAK, the apostle of a religion, which was founded two centuries before him by Zarādusht, son of Khurrahān, but spread in Persia only after his propaganda; it had great political influence in the country in the time of Kawādh (488—531 A.D. with an interregnum). The latter adopted it and even made arrangements for putting its teaching into practice but after his restoration he put Mazdak and a large number of his followers to death. The best known feature of his teaching was the endeavour to remove every cause of covetousness and discord among men, and thus to purify religion, by making women and possessions common property.

It is not possible to reconstruct from the sources the Mazdaki doctrine in detail nor to settle its relations with the other religions or sects of Persia. The main features will be indicated here.

The sources. Detailed narratives of the reign of Kawādh and some important references to Mazdak and his teaching will be found in the contemporary Syrian and Byzantine writers (Joshua Stylites, Agathas, Procopius, Malala, Theophanes). In Pahlavi literature there are few references to Mazdak. The bulk of our information about Mazdak and his relations with Kawādh come to us

from Arab and Persian writers and go back mainly to the *Khwadānāmāgh* or Royal Sāsānian Chronicle, of which the best known Arabic version was that of Ibn al-Mukaffā'. Baron Rosen has shown that the other Arabic versions were not all dependent on this one, some of them having been prepared directly from the original. Some compilers also inserted historical or legendary episodes taken from other Pahlavi works and others attempted to harmonise different narratives and did a certain amount of retouching in their reconstruction of the original. The Persian and Arab writers who had these different versions or compilations at their disposal only very rarely mention their sources and endeavour in turn to reconcile the statements made. Noldeke has already distinguished two "Hauptquellen" for the various Arabic and Persian narratives (the first followed by Ibn Qutaiba and Eutychius and a part of Ṭabarī, the second by al-Ya'qūbi and another part of Ṭabarī). Christensen in his fundamental study thinks he can distinguish four lines of the tradition of the *Khwadānāmāgh* found by the Arab and Persian authors in the different versions or editions of it. Noldeke's two "Hauptquellen" correspond to the first two; a third is represented by al-Dīnawarī (Noldeke thinks his story is a harmonising of the two "Hauptquellen") and the *Nihāyat al-ʿArab fī Akhbār al-Fus wa 'l-ʿArab* (*J. R. A. S.*, 1900, p. 195 sq.); the fourth presents features of its own, some of which are legendary in character and are found again in the *Siyāsat-Nāma* of Niẓām al-Mulk, which is independent of the *Khwadānāmāgh*. The common source of all these legendary features would be, according to Christensen, the Book of Mazdak, a Pahlavi work of fiction (like the *Kalila wa-Dimna*), which enjoyed great popularity and was translated into Arabic by Ibn al-Mukaffā' and into Arabic verse by Aban b. 'Abd al-Ḥamid al-Lāhikī. The elements of this fourth line of tradition are, according to Christensen, found in the *Kitāb al-Aghānī*, al-Ḥa'ālihi, Firdawsī, al-Bīrūnī, Ibn al-Athīr and Abū 'l-Fidā'. Some references in al-Mas'ūdī and al-Kh̲wānizmi can also be traced to the book of Mazdak.

Independent traditions would also be preserved elsewhere, for example by the Arabs of al-Hira. Al-Shahrastānī's notes (to which some critics deny any historical value) might go back to books of the sect now lost. These are not found elsewhere and their immediate source was Muḥammad b. Harūn Abū 'Isā al-Warrāk, a Zoroastrian converted to Islām. The source of the notices in the *Fihrist* is not known (it calls the Mazdaki Zoroastrians); the Persian work of the xvth century called *Dabistān-i Madhāhib*, is probably a mere compilation of no value, from sources already mentioned and the pretended Mazdaki book *Disnād*, which it quotes, is not genuine.

Doctrine. The fact that the majority of these sources emphasise the social aspect of the Mazdaki reforms and do not mention special doctrines or beliefs of the sect (some like the *Fihrist* and Ibn al-Athīr connect it with Mazdaism) has convinced the majority of Orientalists who have studied this subject (e.g. Noldeke, Nicholson, v. Wesendonk) that the reforms must be considered as a social movement which aimed at purifying the Mazdaean religion: a communist system of which the precepts regarding women and property and those of an ascetic nature (like the prohibition of slaughtering

animals and eating their flesh) had however a religious aim, and were clearly distinguished by this character from modern social communism.

Christensen, in his work already quoted, comes to the contrary conclusion that Mazdakism was above all a religious movement and that its social precepts were originally a very secondary feature; it was, he says, a reform of Manichaeism, already preached by Zarādušt, two centuries before Mazdak. Christensen supports his argument by two well known passages in Malala, of which the first deals with the doctrines propounded at Rome under Diocletian by the Manichaean Bundos in opposition to official Manichaeism.

This Bundos is supposed to have afterwards gone to Persia and spread his doctrine there, which was called *τῶν Δαρισιέων* (from the Pahlavi form *derist-dēnān* = followers of the orthodox faith). The other passage calls king Kawādī *ὁ Δαρσιένος* (an inaccurate form for *ὁ Δαρισιένος*), an epithet which contains an allusion to the Mazdaki faith. A popular form *دین دین* is said to be the origin of the very corrupt forms of this surname, which are found in the Arabic texts and are due to the similarity of certain Arabic letters (al-Thaʿālibī translates it "may his beard fall" which presupposes a form *دین دین*). Christensen thinks these links sufficient to identify Zarādušt with Bundos (Bundos would be an honorific title of the reformer, "the venerable", from the Pahlavi *bundazh*, *bundagih*) and defines Mazdakism as a Manichaean *ὁπαδοῦς*.

This theory is supported by al-Shahrastānī's résumé, which gives us, along with the general character of the religious history of Iran, the best argument for this thesis, and those who hold the other view are forced to deny any force to the evidence of this historian of sects. Christensen also concludes that it is with good reason that the Byzantine historians call the Mazdakis Manichaeans: but it must be added that their classification of a doctrine so little known in the west (where on the other hand Manichaeism was well known and was, so to speak, the typical heresy of Persia) is not of much value.

According to al-Shahrastānī's exposé, Mazdak's system resembled that of Mani; except that he said that the dark spirits did not act of their own will and without restraint (*bi 'l-kāṣṣ wa 'l-ikhtiyār*), but blindly and by chance (*bi 'l-khabṭ wa 'l-itṭifāk*); that mixture is produced also *bi 'l-khabṭ wa 'l-itṭifāk* and liberation will be produced *bi 'l-khabṭ wa 'l-itṭifāk*. In this connection we must remember that the same author in his survey of the Manichaeans tells us that the views of the Manichaeans on the cause of mixture were divided and that some of them said that it was produced *bi 'l-khabṭ wa 'l-itṭifāk* the opposite of what was laid down in the original cosmogony. Other Muslim writers allude to this point in dispute among the dualist sects: al-Mutahhar b. Tāhir al-Makdisī says, for example, that mixture *bi 'l-khabṭ wa 'l-itṭifāk* is taught by the Sabians, a name which is sometimes applied to the Manichaeans. All this gives the impression that the mention of the Mazdaki teaching in this connection is quite in keeping with the conditions of polemic among dualists. Perhaps the practical teachings of Mazdakism should be connected with the doctrine of mixture *bi 'l-khabṭ wa 'l-itṭifāk*.

Al-Shahrastānī also gives from another source other details on Mazdaki cosmogony (the four forces, which surround the object of worship as court dignitaries surround the king of Persia; the seven viziers, the twelve spiritual beings, the three elements, the director of good and of evil), details which have their parallels in other gnostic and dualist cosmogonies, which should be studied with their names from the point of view of the latest studies on Iranian syncretism.

Al-Shahrastānī finally alludes to certain cabalistic speculations on the letters of the supreme name and mentions Mazdaki sects (like the Abū Muslimīya) still in existence in his time in Persia and as far away as Soghdiana.

We may conclude that it is at least premature to deny all connection between Manichaeism and Mazdakism; it seems that rather than put the question in the form of a rigid alternative between Mazdaean or Manichaean influence, it would be better to regard Mazdakism as a form of gnosis upon which two powerful religious forces have exerted an equal influence, the official religion and the Manichaean heresy, and some other elements also (just as Manichaean gnosticism owes much to the national religion).

In any case, the feature which appears most clearly from the sources and which struck contemporaries was the general body of Mazdaki precepts with communist and humanitarian tendency and especially those which relate to community of women and property and were actually put into practice for a short time. The ascetic prescriptions are quite in keeping with a gnostic character of the sect (the prohibition of slaughtering animals and eating their flesh) which with communist teachings would be the elements forming the path to gnosis and liberation.

The presence of an ascetic strain in Mazdakism, as in Manichaeism, is probable. The people naturally seized on these principles and eagerly attempted to put them into practice on a large scale. Thus excesses resulted which, at least in origin, were very far from the intentions of the reformer and the élite of his adherents. This explains also why the religious character of the sect was forgotten and memory of its social teachings retained. Whether the founder and his leaders also abandoned themselves to the excesses of which the sources accuse them, one cannot say; we know that very frequently the initial good faith of reformers is disturbed by contact with reality.

It was natural to give a more practical value to this body of teaching, if we regard Mazdakism as a Puritan reform remaining within the Mazdaean religion and not becoming an independent religion.

Contemporary sources also tell us of a bishop elected by the Mazdakis, named, according to Malala, Indarazar (which Noldeke connects with the Pahlavi word *andarazar* = to advise; cf. the *ispasagh* or *episkopos* of the Manichaeans) who was slain with the other Mazdakis on the day of the massacre; according to Christensen, it is possible to identify him with Mazdak.

During the persecution which followed the massacre, all the Mazdaki books were destroyed. The Persian work of the seventh century, *Dabistān-i Madhāhib* quotes a book called *Disnād* which is usually regarded as a forgery: all the notices of the sect professing to come from this book are

taken from the text of al-Shahrastānī and other sources, like the rest of the book. The Book of Mazdak which enjoyed a great popularity and was translated in Arabic by Ibn al-Muḳaffāʿ and into Arabic verse by ʿAbd al-Ḥamid al-Lāhikī was a work of entertainment and not of religious teaching (cf. above).

History of the Mazdaki movement in the reign of Kawādh — The Massacre. We know very little about the life of Mazdak (also written Mazdak). His father was called Bāmdādh (a Persian name like Mazdak) and according to Ṭabarī, they came from a town مَدْرَه which

Christensen is inclined to identify with Mādharāyā. I-takhr and Tabriz are mentioned as the birth-place of the reformer. According to some sources, he had been a Zoroastrian priest (*mōbadh*); al-Bīrūnī who sometimes follows a romantic tradition (cf. above), calls him *mōʿaddhān mōbadh*. The details of his doctrine are not known but it is certain that he developed and spread the teaching of his precursor Zoroādušt of Pāsā, who lived two centuries before him. It is evident that the disturbed condition of Persia after the victories of the Hephthalites facilitated the spread of revolutionary doctrines: but it is difficult to see why the king (whose reign began in 488) became a convert to the new faith (and this is a question which also puzzled the ancients), and how he became connected with Mazdak.

The necessity of crushing the power of the nobility and higher clergy which he found annoying may have caused the king to use for his own ends a sect which aimed at destroying the privileges of these classes. Noldeke (who thinks Kawādh was a man of strong will) credits him with this plan. Christensen (who had accepted this thesis) now sees in the allusions of some of the sources proof of the sincerity of Kawādh (whom, as he says, the contemporary sources do not credit with a "Machiavellian character"). Kawādh, he thinks, was moved primarily by religious motives and was attracted by the religious element in the new teaching, while ready to take advantage of any political advantages that the sect might be likely to gain for him. In any case it is evident that in his wars he was not restrained by any humanitarian prejudices, although one Arabic source with a hostile bias says that the king as a *candīk* feared to spill blood. Christensen likes to compare his attitude with regard to Mazdaki morality with that of Constantine with regard to Christian teaching. In any case it is difficult to give a verdict on Kawādh, in view of the varying prejudices of the sources and the tradition of the time of Khusrāw which in general tends to elevate the figure of Anūsharwān at the expense of the others. There were numerous conversions among the upper classes; proselytising among the common people was facilitated by the wretched conditions in which they lived and of course also by the nature of the teaching which in every age has seduced the masses. Mazdakism thus became a remarkable force and permeated all the machinery of government. The practical effect of the king's favour was seen in the measures alluded to in contemporary sources: but we do not know to what degree they realised the Mazdaki ideal, either as regards community of women (perhaps this was only an extension of regulations already existing in the Sāsānian code²)

or community of property (only taxes on the rich?). But what is certain is that Khusrāw at the beginning of his reign had to take important steps to remedy the disastrous results to property and the organisation of the family; such abuses were however not the direct result of the legal measure adopted by Kawādh but rather of the violent application of communism which was a later development.

The philo-Mazdak policy of the king and the growing power of the sect provoked a revolution in the palace and Kawādh was dethroned and imprisoned. Dīāmāsp, his brother, was put on the throne in his stead. Kawādh succeeded in escaping and took refuge with the Hephthalites and regained his kingdom with their assistance (498 or 499). In the meanwhile, in spite of the dethronement of the king, the sect had grown more and more and its power became disquieting. The people, urged on by their leaders and more alive to the practical advantages than to the religious elements of the reform, naturally abandoned themselves to all sorts of excesses and disorder broke out everywhere. The estates of the nobles were plundered, the women carried off, which, with a horror of communist principles, explains the violent language used by contemporary and Arabic and Persian sources against the sect. All this must have frightened the king on his return. Having revenged himself on his principal enemies immediately on his restoration, he now found it necessary to come to an agreement with the majority of the nobility and clergy in order to face the war with Byzantium. Prince Khusrāw seeing his rights to the succession threatened by the activities of the sect, which, taking advantage of its power, was endeavouring to secure the election of Kawādh's eldest son Padhashkhwār Shāh (Phthasuaran). It is also said (in the sources of the fourth line; cf. above) that Khusrāw was eager to avenge himself on Mazdak, who had refused to take as his wife the mother of Khusrāw (offered to him by Kawādh in recognition of the principles of the sect) until the prince humbled himself before him. Khusrāw, who had already begun to display his remarkable political abilities, must have had considerable influence with his father, who was persuaded to have Mazdak and his followers massacred, after inviting them en masse to the court on the pretext that a theological disputation was to be held (or according to another story, for the public proclamation of Padhashkhwār Shāh as heir to the throne). The massacre took place in 528 or at the beginning of 529. Arab writers wrongly put it at the beginning of the reign of Khusrāw; this exploit earned him the title of Anūsharwān. The number of slain is unknown. Kawādh died in 531 and after him Khusrāw took special steps to restore order in the ownership of property and in the social organisation which had been upset by the application of communism. The surviving Mazdakis were persecuted in a blood-thirsty fashion and their books burned.

Mazdakism after the massacre. It is not probable that Mazdakism disappeared with the persecution; perhaps the survivors sought refuge in the mountains, in different parts of Persia where we later find sects (e.g. the *Khuramiya*) whom Muslim writers do not hesitate to connect with the Mazdakis. Nizām al-Mulk, who in his manual on the art of government attributes great political importance to a knowledge of the various sects, is very clear on this point. According to some

orientalists Mazdaki elements can be discovered in Bāṭinism and Ismāʿīlism. But the whole question of the relations between these sects (of which very often insufficient is known) and the old Persian religious forms must be examined thoroughly with a knowledge of the progress made in the study of Irānīan gnosés and syncretisms. It cannot be dealt with here; cf. the articles ISMĀʿĪLIYA, KHURRAMIYA, MUBAIYIDA, MUHAMMIRA, MUʿANNAʿ, RĀWANDIYA, SINBĀD etc.

MAZHAR, MĪRZĀ DJĀNDJĀNĀN, an Urdu poet and eminent Ṣūfī, of Turkish descent, was born in 1111 (1699) or 1113 (1701) in Kālābagh, Mālwa. His father Mīrẓā Dījān was an officer of Awrangzēb [q.v.], who, when the news of his birth was conveyed to him, said his father was Mīrẓā Dījān and hence his son should be called Djāndjānān; though his father afterwards named him Shams al-Dīn, yet he is known by the name which the emperor had selected for him. He was received into the Naqshabandi order by Saiyid Mīr Muḥammad Badāʿūnī and into the Kādirī order by Muḥammad ʿĀbid Sumānī. He died in Dihli on the 10th of Muḥarram 1195 (January 6, 1780) from a pistol shot fired at him by some Shīʿa fanatic. His memoirs with some letters, called *Maḥamāt Maḥhari* or *Latāʾif Khamsa* are edited by Muḥammad Beg b. Raḥīm Beg, Dihli A. H. 1309, A. D. 1892. His biography, together with notices of his disciples, has been written by Muḥammad Naʿīm Allāh Bahrāʾīdjī in *Bishārāt Maḥ-hariya*.

MĀZIN, the name of several Arab tribes who are represented in all the great ethnic groupings of the Peninsula; this finds typical expression in the anecdote recorded in *Aghānī*, viii. 141 (= Yāqūt, *Irshād*, ii. 382—383), according to which the Caliph al-Wāṭiḥ asked the grammarian Abū ʿOḥmān al-Māzinī, who had come to his court, to which Māzin he belonged: — if to the Māzin of the Tamīm, to those of the ʿKais, to those of the Rabiʿa or to those of the Yemen.

The first are the Māzin b. Mālik b. ʿAmr b. Tamīm (Wustenfeld, *Geneal. Tabellen*, L. 12); the second, the Māzin b. Maṣṣūr (D. 10) or the Māzin b. Fazāra (H. 13); the third, the Māzin b. Shaibān b. Dhūhl (C. 19); the last, the Māzin b. al-Nadjdjār, a clan of the Khazrajī Anṣār (19, 24). But alongside of these, many other

tribes and clans bore this name. The *Djamharat al-Anṣāb* of Ibn al-Kalbī gives no less than seventy, of whom the best known are the: Māzin b. Saʿd b. Dabba (Ibn Kūtaiba, *K. al-Maʿārif*, ed. Wustenfeld, p. 36; more accurately according to the *Djamhara*, MS. Br. Mus., Add. 23, 297, fol. 114 r: Māzin b. ʿAbd Manāt b. Bakr b. Saʿd b. Dabba; not given in the *Tabellen*); Māzin b. Saʿsaʿa b. Muʿāwiya b. Bakr b. Hāwāzin (Ibn Kūtaiba, p. 42; *Tabellen*, H. 14); Māzin b. Raṭṭh b. Ghāṭafān (H. 10); Māzin b. Rabiʿa b. Zubair or Māzin Madhhidj (7, 18); Māzin b. al-Azd (11, 11). The large number of tribes named Māzin and their distribution over the whole of Arabia makes the hypothesis that we have here a single tribe that had been broken up into small sections impossible and we are led to suppose that the name Māzin, is a descriptive rather than a proper name; since the verb *mazana* means to “go away”, one might suppose that Māzin originally meant “the emigrants” and was used in a general way of any ethnic group which became separated from its own tribe and was incorporated in a strange tribe. This etymology, like almost all those of the names of Arab tribes, is of course only a hypothesis.

The sources give a certain number of geographical and historical references to different tribes called Māzin; but they are generally very scanty, none of these tribes having attained sufficient importance to make it independent of the larger body to which it was attached. We have a few details about the Māzin b. al-Nadjdjār, a fairly important group of Madinese Khazrajī (on the part played by them at the beginning of Islam see Caetani, *Annali dell' Islam*, Index to Vols. i.—ii.), as well as about the Māzin b. Fazāra who took part as members of the tribe of the Dhūbyān, in the war of Dāḥis and al-Ghābiʿ (cf. *Dhūbyān*, and *Aghānī*, xvi. 27). Ibn Maīyāda, himself a Dhūbyānī, directed a violent satire against them at the end of the first century A. H. (*Aghānī*, ii. 90, 102). As to the Māzin b. Shaibān b. Dhūhl, to whom the grammarian Abū ʿOḥmān belonged, we know from the anecdote above quoted that in their dialect, *m* (initial?) was pronounced like *b* (*baʿsmuka* for *maʿsmuka*, what is thy name?), a peculiarity which does not seem to be recorded of the dialect of other Rabiʿa. Lastly the Māzin b. al-Azd, whom tradition makes migrate to the north, changed their name to Ghassān [q.v.] under which they became celebrated.

It is only of the Māzin b. Mālik b. ʿAmr b. Tamīm that we have fairly full information. Legend, which has developed with unusual detail around the sons of Tamīm [q.v.] gives Māzin a part in the story of his uncle ʿAbd Shams b. Saʿd b. Zaid Manāt b. Tamīm's fight against al-ʿAnbar b. ʿAmr b. Tamīm (cf. al-Mufaḍḍāl b. Salama, *al-Fakhīr*, ed. Storey, p. 233 and the references given in the note). This tribe of Māzin never left the great group of the ʿAmr b. Tamīm to which it belonged and dwelled with them in the lands in the extreme N.W. of Nadjd; their headquarters were around the well of Safāri near Dhū Kār (*Vakāʾif*, ed. Bevan, p. 48, note to line 17; Yāqūt, iii. 95; Bakrī, p. 724, l. 1; 787—788); their principal subdivisions were the Banū Ḥurkūs, Khuzāʿi, Kizām, Anmār, Zabīna, Uḥāṭha and Raʿlān. In the Djāhiliya, the Māzin followed their parent tribe and we find them sharing in the

wars of the latter; in rotation with the other Tamīmī tribes they held the office of *ḥakīm* at the fair of 'Ukāz (*ʿAḥḥā'id*, p. 438). At the coming of Islām, their chief was Mukhārīq b. Shihāb, also known as a poet (cf. especially al-Djāhīz, *Bayān*, ii. 171; al-Kalī, *Amālī*, iii. 50; Ibn Ḥadjar, *Iṣāba*, Cairo 1325, vi. 156). Without being particularly zealous partisans of the new religion, they did not take part in the *ridā* with the other Tamīmī tribes (11 A. H.) and they even drove away the messengers sent them by the prophetess Sadjāh [q. v.] and made one of them prisoner, the Taghlibī al-Hudhail b. 'Imrān; the latter waited for his revenge till the troubled period that followed the murder of the Caliph 'Othmān (35 = 656), of which he took advantage to ravage the district of Safāri; but the Māzin met him and slew him and threw him into the well (Ṭabari, i. 1911, 1915; cf. *Aḥḥānī*, xix. 145—146, transl. in Caetani, *Annali dell' Islām*, x. 552—553; in the last passage the expedition against the Safāri appears to be independent of the events of the *ridā*).

At a later date, the Māzin settled in large numbers, like the rest of the Tamīm, in Khurāsān and took part in the conquest of Central Asia; among the Māzinis who distinguished themselves there were Shihāb b. Mukhārīq, son of the chief already mentioned (Ṭabari, i. 2569, 2707); Hilāl b. al-Aḥwaz, who in 102 (720) slew the members of the family of Yazid b. al-Muhallab after the defeat of the latter (Ṭabari, ii. 1912—1913); 'Umayr b. Sunān, who killed the Persian chief Rutbil (Ibn al-Kalbī, *Nasab al-Aḥḥāl*, p. 30, note to lines 3—4). We also find many of the Banū Māzin among the *kuwwād* of the 'Abbāsid army in the time of the rising against the Umayyads. But a no less number went to swell the ranks of the Khārījīs; the celebrated chief of the Azrakīs, Kaṭarī b. al-Fudjā'a [q. v.], belonged to the Māzini clan of Kābiya b. Hurkūs.

Very few of the remarkable number of poets produced by the Tamīm belonged to the Māzin. We may note however Hilāl b. As'ar of the Omayyad period (*Aḥḥānī*, ii. 186); Mālik b. al-Raib, poet and brigand, contemporary of al-Ḥadjdjadī (*Aḥḥānī*, xix., 162—169; Ibn Kutaiba, *al-Shi'r wa 'l-Shu'arā'*, ed. de Goeje, p. 205—207 etc.); Zuhair b. 'Urwa al-Sakb (*Aḥḥānī*, xix. 156; the few verses that we have by him, often quoted, are also attributed to his father, 'Urwa b. Djalham, and even to 'Abd al-Rahmān b. Ḥassān b. Thābit: cf. *Mufaḍḍaliyat*, ed. Lyall, p. 249, note y). Lastly it may be mentioned that the Māzin have given to Arab philology two of its most illustrious masters: Abū 'Amr b. al-'Alā' (q. v., d. 154) and al-Naḍr b. Shumail whose genealogies are given in Wustenfeld, *Tabellen* (1).

MAZYADĪS, a Muḥammadan dynasty in al-Ḥilla. The Banū Mazyad belonged to the tribe of Asad and lived west of the Tigris, from Kūfa to Hit. In the southeast, on the Khūzistān frontier, the Banū Duhais had settled. When Abū 'l-Ghanā'im Muḥammad b. Mazyad, who was related to the Banū Dubais, slew one of their chiefs with

whom he had quarrelled, a war broke out between the two tribes (401 = 1010—1011). Abū 'l-Ghanā'im fled to his brother Abū 'l-Ḥasan 'Alī; the latter set out against the Banū Dubais with an army, but was defeated and Abū 'l-Ghanā'im fell in the battle. In 403 (1012—1013), 'Alī was recognized as emīr by the Būyid Sulṭān al-Dawla. In Muḥarram 405 (July 1014), he undertook a campaign against the Banū Dubais, to revenge himself for the defeat he had suffered and slew Ḥassān and Nabḥān, the sons of Dubais, but in Djumādā of the same year (Oct.—Nov. 1014) he was routed by their brother Muḍar. After 'Alī's death in Dhu 'l-Ka'da 408 (March—April 1018), his son Dubais succeeded him. The latter's brother al-Muḥallad with the help of Turkish mercenaries in Baghdād, endeavoured to seize the power for himself; but order was soon restored and al-Muḥallad went to al-Mawṣil to the 'Ukailids. In a few years Dubais became involved in war with Karwāsh b. al-Muḥallad [q. v.] and he had also troubles within his borders. In the war between the two Būyids Abū Kāldjār and Djalāl al-Dawla, the former was supported by Dubais and the latter by al-Muḥallad. After the defeat of Abū Kāldjār in 421 (1030), al-Muḥallad with the help of the Banū Khafādja and the troops of Djalāl al-Dawla invaded his brother's territory. Dubais had to take to flight and the land was laid waste. Peace however was soon arranged. Dubais was allowed to retain his lands but had to pay Djalāl al-Dawla a considerable sum. The third brother Thābit allied himself with al-Basāsiri, the military governor of Baghdād, and in 424 (1032—1033) they advanced against Dubais. The latter sent an army to meet them; but his troops were routed and he himself had to take to flight. After receiving reinforcements he advanced against Thābit; they met at Djardjarāya and after a fierce battle, Dubais had to cede a part of his possessions while al-Basāsiri, who arrived too late to take part in the battle, returned to Baghdād. In Rajab 446 (Oct.—Nov. 1054) the Banū Khafādja invaded the country but were soon driven out with the help of al-Basāsiri. Two or three years later war broke out between al-Basāsiri who was joined by Dubais, and the Saldjuk Sulṭān Toghril Beg and his follower Kuraish b. Badrān [q. v.]. Dubais died in Shawwāl 474 (March—April 1082) at the age of 80. His son Mansūr succeeded him but died in Rabi' I, 479 (June—July 1086). In the reign of his son and successor Ṣadaqa [q. v.] the power of the Mazyadis spread over almost the whole of the 'Irāk. At first he was a stout supporter of Baikiyārūk [q. v.]; in 494 (1100—1101) however he turned to his brother. The towns of Hit, Wāsiṭ, Baṣra and Takrit fell successively into his hands but, as the commander appointed by Ṣadaqa in Baṣra did not prove fit for his task, Muḥammad seized the suzerainty of the town and installed a new governor. In Ṣadaqa's reign the capital al-Djām'ān was extended and fortified, and given the name of al-Hilla (495 = 1101—1102). His steadily increasing power however aroused Muḥammad's misgivings and in spite of long negotiations, a rupture finally occurred between them. At the end of Rajab 501 (Febr.—March 1108) Muḥammad himself set out from Baghdād against Ṣadaqa. A section of the Arahīs allied with him fled and Ṣadaqa fell in the battle. His son Dubais was taken prisoner but the latter's two brothers escaped and were only able to return home after Muḥammad's death

(511 = 1118). In 529 (1135) he was treacherously murdered [cf. the article DUBAIS] and succeeded by his son Ṣadaḳa. In the war between Sulṭān Mas'ūd and his nephew Dāwūd, Ṣadaḳa declared for the former. After Mas'ūd's victory, the troops scattered to seek booty and several emirs including Ṣadaḳa were surprised and captured by the enemy and at once put to death (532 = 1137—1138). Ṣadaḳa's brother Muḥammad was thereupon recognised as lord of al-Hilla. In 540 (1145—1146) however, the third brother 'Alī went to al-Hilla, because he was afraid of the Sulṭān and drove out Muḥammad. After he had taken the town, he drove back the Sulṭān's troops and it was not till 542 (1147—1148) that Salārkerd, one of Mas'ūd's generals, was able to expel 'Alī but in the same year he was defeated by the latter and had to abandon the town. In 544 (1149—1150) 'Alī endeavoured to induce the caliph al-Muḳtafi to abandon Mas'ūd but, as the caliph refused and summoned the Sulṭān to his help, 'Alī had to

(K. V. ZETTERSTÉEN)

MĀZYĀR, [Balādhurī gives the form Māyazīyār < *Māh-yazd-yār], the last of the Ḳārinid rulers of Ṭabaristān, leader of the rising against the caliph al-Muṭaṣim.

Origins. The Ḳārin-wand dynasty claimed descent from Ḳārin b. Sūkhṛā, whom Khusrāw Anūshirwān had established in Ṭabaristān and who was descended from the legendary smith Kāwa, who saved Farīdūn. The hereditary fief of the dynasty was the "mountain of Ḳārin" [or of Windād Hurmuz], Ṭabari, iii. 1295. The capital of this region was probably Lapūra (cf. Lafūr on the eastern source of the river Bābul which later runs through Bārfurūsh). The Ḳārin-wand were subordinate to the Bāwandid *ispahbads* (capital Firrim). The genealogy of the Ḳārinids given by Ṣāhir al-Dīn, p. 167 and 321 is fantastic. The first Ḳārinid known is Windād-Hurmuz (138—190 =

Genealogical Table of the Mazyadīs:

suhmit and the rehels who had joined him dispersed. 'Alī died in the following year and al-Hilla was given as a fief to Salārkerd by Mas'ūd. On Mas'ūd's death in 547 (1152), the town fell into the hands of Mas'ūd Bilāl, the commander of Baghdād; the latter however was driven out by the caliph's troops who occupied al-Hilla. When in 551 (1157) Sulṭān Muḥammad took the field against al-Muḳtafi [q. v.], they had to withdraw and Muḥammad put a garrison in the town. The Mazyadis submitted to his deputy but in 558 (1162—1163) the caliph al-Mustandjīd sent an army against them which put an end to their power. 4,000 men were slain and the remainder outlawed so that they were scattered in all directions.

755—805?) who raised a coalition of local chiefs against the Arabs (the Bāwandid Sharwīn, [the] Māsmughān Walāsh of Miyāndurūd, the Pādūspān Shahriyār b. Pādūspān) and defeated the generals sent by the caliph al-Mahdī (first Sālim Farghānī, then Firāsha; Ibn Isfandiyyār, p. 128; Ṣāhir al-Dīn, p. 155—159). Windād-Hurmuz had to submit to Hādī, the son of the Caliph, and accompany him to Baghdād. Soon he returned to his native mountains and resumed an independent attitude (*ibid.*, p. 160). According to Ibn al-Faḳīh, p. 304, Windād Hurmuz came to the court of Hārūn al-Rashīd, who appointed him *ispahbad* of Khurāsān. He died in the reign of al-Ma'mūn. His son and successor was Ḳārin (a contemporary of the Bāwandid Shahriyār). According to Ibn Isfandiyyār, p. 145, he accompanied al-Ma'mūn on his campaign against the Byzantines but this does not agree with the dates given for his successor.

According to Ṣāhir al-Dīn, p. 321, Māzyār b. Ḳārin ruled for 30 years (194—224 = 809—839) but on p. 167 the same writer says that his (tyrannical!) government lasted 7 years (217—224). Ṭabari, iii. 1015, under the year 201, speaks of the conquests in Ṭabaristān of 'Abd Allāh b. Khurdadhbah (sic!) as a result of which the Bāwandid Shahriyār b. Sharwīn had to leave the mountains and Māzyār b. Ḳārin was sent to al-Ma'mūn. According to late sources,

Shahriyār b. Sharwīn had deprived Māzyār of his possessions. Māzyār sought refuge with his cousin Windā Ummid b. Windād-aspān, who handed him over to Shahriyār. Māzyār however managed to escape, sought refuge with al-Ma'mūn and became a Muslim, assuming the name Muḥammad. After the death of Shahriyār (210 = 825; Ṭabarī, iii. 1093), Māzyār, returning to Ṭabaristān, slew Shāpūr b. Shahriyār and seized the mountain (Ṭabarī, *ibid.*). [Ibn al-Faḳīh's story, p. 305—306, about the "son of Sharwīn b. Shahriyār", whom Māzyār assassinated treacherously seems to refer to Shāpūr; to allay the suspicions of his victim, Māzyār had built a mosque in Firīm]. Māzyār assisted the Arab governor Mūsā b. Ḥaḡḡ b. 'Omar b. al-'Alā' to subjugate the mountain of Sharwīn and al-Ma'mūn appointed him governor of Ṭabaristān, Rūyān and Dunbawand with the rank of *ispahbadh* (Balādhuri, p. 229; Ibn al-Faḳīh, p. 309). At this time (Ya'qūbī, *Historiae*, ii. 582), Māzyār boasted the title of *Djil Djilān*, *ispahbadh ispahbadhān Bishwār-Khurshān* (read *Patishwār-djārshān*), *Muḥammad b. Kārin*, *muwālī* (sic) *amir al-mu'minīn* (i.e. "ally" instead of *maulā* "client"). When Mūsā b. Ḥaḡḡ died, Māzyār paid no heed to his son Muḥammad b. Mūsā. Complaints against Māzyār were taken to Baghād by the Bāwandids and by devout Muslims. But as al-Ma'mūn was setting out against the Byzantines (expedition of 216—218?) Māzyār felt himself free from any control. In his turn he charged Muḥammad b. Mūsā with intriguing with the 'Aḥds and on this imaginary pretext besieged Amul. The town capitulated at the end of 8 months. Māzyār executed his enemies and imprisoned all the notables, including Muḥammad b. Mūsā, first at Rūd-bast and then in his principal stronghold of Hurmuzd-ābād. To judge from Ṭabarī, iii. 1289—1292, the place must have been in the valley of the lālār, above Uram (Ārum) at a distance of 8 farsakhs from Amul and from Sāri [cf. the article MĀZANDARĀN].

In the sixth year of the reign of al-Mu'taṣim (218—227), Māzyār openly rebelled (Balādhuri, p. 229: *kafara wa-shadara*). The Ṭāhirid 'Abd Allāh, governor of Khurāsān, had denounced to the Caliph the "misdeeds, tyranny and apostasy" of Māzyār. When al-Mu'taṣim's ambassador arrived, Māzyār would not listen to him. Ibn Isfandiyār, p. 152, even accuses him of having conferred honours "on Bābak, Mazdak and other Magians who had ordered the destruction of the mosques and the obliteration of all traces of Islām".

Māzyār's schemes. It is difficult to reconstruct Māzyār's programme from the sources, which are hostile to him, but the narratives of contemporary witnesses which Ṭabarī, iii. 1268—1303, gives under the year 224 contain a number of curious and important details.

The extension of Māzyār's power (after the assassination of the Bāwandid Shāpūr and the occupation of the mountain of Sharwīn) had brought him into conflict with the Ṭāhirids to whom he refused to pay *khurādī*. It may be noted that Māzyār's very title "*ispahbadh of Khurāsān*" (this variant is given in Ya'qūbī, *B. G. A.*, vii. 276) must have been displeasing to the Ṭāhirids. On the other hand the celebrated Afshīn, who after his victory over Bābak was at the height of his glory, coveted Khurāsān. He therefore secretly encouraged Māzyār's resistance to his rivals and according to Ṭabarī, iii. 1269, played upon his

sentiments as a man of noble Iranian blood (*yasta-miluhu bi 'l-dahḡanati*).

From the national point of view, Māzyār could recall the precedent of his grandfather Windād-Hurmuz to whom late sources attribute the organisation of the massacre of the Arab garrisons. Māzyār, who came out of "the mountain" where he had only an almost unknown town (Iṣṭakhri, p. 206: al-Asabmār?) must have looked askance at the urban elements of the great towns of the "plain" among whom Arabs and their clients (*abnā'*) predominated. The landowning class was certainly hostile to him, as in order to weaken and even exterminate them, he had relied on the support of the peasants. Māzyār's actions were certainly very violent, for ten centuries later, Ṣāḥir al-Dīn, p. 167, quotes the proverb: "so and so has done an injustice such as not even Māzyār could have done".

Coming out in open rebellion (probably before the year 224 under which Balādhuri and Ṭabarī relate the dénouement) Māzyār had homage paid to himself, took hostages and levied *khurādī* at once. The doings of his governor Surkhāstān in Sāri are characteristic. He transferred all the inhabitants of Sāri to Āmul, where he shut them up in a fort; as to the people of Āmul, he took 20,000 of them away into the mountains of Hurmuzd-ābād (cf. above). The walls of Sāri, Āmul and Ṭamisa were razed to the ground "to the sound of fifes and drums".

Māzyār had given orders to the peasants to attack and plunder their masters (Ṭabarī, iii. 1269). The next passage (iii. 1270) seems to indicate that a cadastral survey was ordered (*amara an yumsaḡa 'l-balaḡ*) and the lands were let out, the rental being 30% (of the produce). As to Surkhāstān, he collected 260 nobles (*abna 'l-kuwwād*), the bravest he could find, and on a pretext "that the *abnā'* were favourable to the Arabs and to the 'Abbāsids", handed them over as dangerous individuals to the peasants, who slew them at his suggestion. He even tried to provoke a massacre of all the imprisoned landowners, saying to the peasants "I have already handed over to you the houses of the landowners and their wives", but this time the peasants refrained from following his advice.

The later sources retain the usual accusation of apostasy against Māzyār ("he once more assumed the girdle of Zoroastrianism", says Ibn Isfandiyār, p. 150 quoting the *kādi* of Āmul). Balādhuri, p. 229 and Ibn al-Faḳīh, p. 309 also say that Māzyār "renounced the faith and committed treason", but this point is more obscure in Ṭabarī, where it only occurs in the list of charges made against Afshīn, iii. 1311 (transl. in Browne, *Lit. Hist. of Persia*, i. 334). The tone of the letter which Māzyār had addressed to his representatives, *ibid.*, iii. 1381, is respectful to the Caliph, in form at least. But there is no smoke without fire, if we may believe the authors who mention the existence in Ṭabaristān of a *Māzyāriya* sect connected with the *Khurramiyya* [q. v.] or *Muḥammira* [q. v.] (i.e. followers of Bābak). Cf. al-Baghdādī (d. in 429), *Faḡḡ bain al-firak*, p. 251—252; Ṭāḥir al-Isfara'īnī (d. in 451), *Tabṣīr fi 'l-dīn* [quoted in Flügel, *Bābek*, *Z. D. M. G.*, 1869, p. 533] and Sam'ānī, *G. M. S.*, fol. 501a.

Māzyār's end. 'Abd Allāh b. Ṭāḥir sent against Māzyār his uncle Ḥasan b. Ḥusain to operate from the direction of Djurdjān as well as

Haiyān b. Djabala, who went with 4,000 horses via Kūmis towards Djabal al-Sharwīn (= Sawādkūh?; cf. the article MĀZANĪRĀN). At the same time the caliph al-Mu'taṣim sent considerable forces under the command of Muḥammad b. Ibrāhīm who entered Rūyān (western Ṭabaristān) by Shalamba and Rudhbār (Ṭabari, iii. 1264). Maṣṣūr b. Ḥasan, "lord of Dunbāwand", attacked from Raiy while Abu 'l-Sādj advanced via Lāriz and Dunbāwand.

The Arabs very skillfully exploited the rivalries and enmities in the entourage of Māzyār. First of all his nephew Kārīn b. Shahriyār (his representative in the mountain of Sharwīn = Sawādkūh) went over to Haiyān, who marched on Sāri and began to negotiate with Māzyār's brother Kūhyār. In the meanwhile Surkhāstān's army which occupied the Ṭamīsha front dispersed and allowed Ḥasan b. Ḥusain to advance. Kūhyār, who had been promised Māzyār's place, submitted to Ḥasan. Māzyār seems to have lost his courage when he found himself surrounded by the Arabs and betrayed by his follower. He trusted Kūhyār, who had promised him the *amān*, and came with him to Ḥasan (Ṭabari, iii. 1288—1291, dramatic story by an eye-witness) but Ḥasan did not even acknowledge his greeting. Māzyār was handed over to Muḥammad b. Ibrāhīm and sent to Sāmarrā. Here he was confronted with Afshīn and seems to have denounced the latter. The caliph ordered him to be given 400 lashes, under which he died and his body was exposed beside that of Bābak in 224 = 839.

Kūhyār's treachery served him little. He was slain as a traitor by his cousin Shahriyār b. Māsmughān who commanded the Dailamīs in the service of Māzyār.

Surkhāstān was betrayed by the soldiers after the defeat at Ṭamīsha and the other of Māzyār's generals, al-Durri, who was fighting against Muḥammad b. Ibrāhīm on the Rūyān front, died while attempting to reach Dailam (Ṭabari, iii. 1300).

(V. MINORSKY)

MECCA.

I

On the eve of the Hidjra. It is with the birth of Muḥammad — between 570—580 A.D. — that Mecca suddenly emerges from the shadows of the past and thrusts itself upon the attention

of the historian. The geographer Ptolemy seems to know it under the name Macoraba; but it must have been in existence long before his time. Mecca was probably one of the stations on the "incense route", the road by which the produce of the East especially valuable perfumes, came to the Mediterranean world. It owes its importance to its position at the

Intersection of great commercial routes. The town that had grown up around the well of Zamzam and the sanctuary of the Ka'ba was advantageously placed at the extreme ends of the Asia of the whites and the Africa of the blacks, near a breach in the chain of the Sarāt, close to a junction of roads leading from Babylonia and Syria to the plateaus of the Yemen, to the shores of the Indian Ocean and the Red Sea. By the latter it was in communication with the mysterious African continent. What advantages were offered by this situation at the boundary between civilisation and barbarism, at the point of contact of two societies, brought together by necessities more pressing than political ambitions or the quarrels of race and religion! This was the part played by the Palmyrans, situated between the Romans and the Parthians. It demanded an adaptability and diplomatic skill beyond the ordinary. The two societies were frequently at war; it required wits to deal tactfully with them. But if the position had its risks, it had the advantage of being able to fix the price for its services to the belligerents. In the delicate role of intermediary and broker between two world, the strength of will of the Ishmaelite and the tenacity that lay beneath his apparent complaisance assured his success from the first. Civilisation and barbarism might conclude peace for a time or be at war; he was able to trade on their agreement or exploit their dissensions with equal satisfaction to himself. Ambiguous and amphibious, the Meccan was able to have a foot in both camps without it being possible to discern where his sympathies really lay.

At an early date we see the Meccans opening negotiations with the states adjoining Arabia. They obtained from them safe conducts and capitulations, permitting the free passage of their caravans. This is what their chronicles call the "guarantee of Caesar and of Chosroes". They also concluded agreements with the Negus of Abyssinia, with the principal *shaikhs* of Nadjd, the *kaul's* of the Yemen, with the phylarchs of Ḥasān and of Hira. In the negotiations with the Greeks and Persians the principal of the "open door" was not admitted. Commercial transactions were carried through at posts on the frontier or in towns specially designated for the purpose. In Palestine these were the ports of Aila and Ghazza and perhaps also Jerusalem. In Syria, Bosrā was their principal outlet, their great market.

Sūra cvi. 2 mentions as a permanent institution "the double caravan of winter and summer". The *nassāba*, genealogists, record the names of the *Quraysh* chiefs who had succeeded in obtaining by negotiation permits to trade. The countries open to commerce in this way were called *wadīh*, direction, *matdār*, region of trade. There were innumerable restrictions, limiting the extension of the privilege. Eastern governments did not permit free trade. Distrustful of merchants even when her own subjects, Byzantium showed herself still more

suspicious of foreigners, especially Bedouins, a slippery race which filled her with an unconquerable distrust. The latter had therefore to make heavy sacrifices, to pay onerous taxes, to pay continual customs-dues and tolls or to hand over hostages before negotiations could be begun. Mecca was not inspired by principles any more broad-minded; she took care to recompense herself from foreign traders and to levy various charges upon them, tithes, charges for permits to stay in the country, to travel about and to trade. Tithes had to be paid before entering Mecca. There was also, as at Palmyra, a "departure" tax or tax on exportation. In short, foreign merchants were entangled in a very intricate fiscal system, whether they settled in Mecca or only passed through it, especially those who did not obtain the *dhīwār* or guarantee of a local clan or notability.

The population. About the time of the Hīd̄ra, the people of Mecca claimed descent from a common ancestor. They called him *Quraysh* or *Fih̄r*, sometimes also al-Naḍr surnamed *Quraysh*. The origins of the *Quraysh* were humble and little is known of them. They formed one of the less wealthy branches of those who went back to the main stock of the *Kināna* [q. v.]. At first they led a miserable existence in the wild mountains around the sacred territory of Mecca. A condottiere from the northern Hīd̄jāz, *Quraysh*, is said to have installed them by force of arms in Mecca, which he took from the control of the tribe of *Khuzā'a* [q. v.]. Some ten main clans can be distinguished among them: *Hāshim*, *Umayya*, *Nawfal*, *Zuhra*, *Asad*, *Taim*, *Makhzūm*, *ʿAdī*, *Djomaḥ* and *Sahm*. These occupied mainly the centre of the town, the bottom of the valley, al-Baḥā', where the water of the well of *Arzam* accumulated, the hollow where the Ka'ba stood. Their living in this neighbourhood earned them the epithet of *Abṭāhī*, *Biṭāhī* or *Quraysh al-Biṭāh*. This central quarter of the town was regarded as that of the aristocracy and of the oldest *Quraysh* families. Among these ten groups, some owe to Islām a renown hitherto denied them. Such were the *Taim* and the *ʿAdī*, rendered illustrious by the caliphs Abū Bakr and ʿUmar. Other clans more vaguely connected with the eponymous ancestor were thrust towards the outskirts of Mecca, on the lower slopes or in the gorges (*shib*) of the hills which dominate the town. They were called the "*Quraysh* of the outskirts" (*Quraysh al-Zawāhir*). Held in less consideration than their fellow-tribesmen of the Baḥā', these suburbans had the advantage of being distinguished from them by their bravery. They supplied the *Quraysh* community with its best soldiers and never failed to cast this up to the Meccans "of the centre".

Government and Administration. It is not easy to discover definite indications of this. There must however have been a rudimentary system of archives in which to preserve treaties of alliance and commerce, and later the equivalent of an office to take charge of the collection of taxes on foreign traders. Nowhere do we find any explicit allusion to the working of such administrative organisations. A tradition records the existence of purely honorary offices with no jurisdiction. But it does not agree either upon the number (ten or six) nor upon the functions of these offices. I imagine it was invented to satisfy the vanity of the great families. The only allusion to it is in

the verses of a Medinese poet, *Hassān b. Thābit*. The office of "pavilion and reins" has nothing to do — as has been supposed — with the art of war. This dignity, which was an ancient one and no longer understood, was a memory of the ritual processions held in pagan Arabia. The *ḥubba* was simply the pavilion or portable tabernacle, containing the fetish of the tribe and solemnly carried on the back of a camel. The chiefs and notables took turns at holding the reins of the animal bearing this precious burden. It is taking nothing from the glory of *Khālid b. al-Walīd* to say that he had not a monopoly of this privilege. Behind the legend of the Meccan dignities, we perceive the intention of glorifying the cradle of the Prophet. In giving it administrative institutions, an attempt was made to conceal the modest beginnings of the *Hāshimis* and no less those of Abū Bakr and ʿUmar. The onerous office of *ishnāk*, which had to pay compensation for murder and injury, was far beyond the financial resources of the modest citizen called Abū Bakr. The entrusting to ʿUmar of the *safāra* or diplomatic missions cannot be reconciled with his extreme youth and plebeian origin.

I have elsewhere, for lack of a better term, called Mecca "a merchant republic". If Abū Sufyān is called "*Shāikh* and chief of the *Quraysh*", several of his contemporaries are given equally high sounding titles. There is not the slightest reason to think that he was a kind of *Quraysh* doge. The manner in which the events of the first eight years of the Hīd̄ra are recorded produces the fallacious impression that he held the power in Mecca in his hands. In reality he was only the ablest and most intelligent of his peers, the chiefs of the *Quraysh* clans. As al-Fāstī pertinently observes, all were equal: "no one exercised authority unless delegated or kindly permitted to do so by them". Did their chiefs constitute a regular official body? Yes, says tradition. Mecca is even said to have had a kind of Senate or Grand Council, the *dār al-nadwa*. It met only in extraordinary circumstances. Usually however, we find that it is in the *mad̄alis*, family groups or clubs, the *Nādi Kaʿum* opening on the square of the Ka'ba — the forum and bourse of the town — that affairs of general interest were dealt with.

The *Qurʾān* cannot conceive of authority without a council of notables, without the *malaʾ*. This institution is so frequently mentioned in the *Qurʾān* that the Prophet must have seen it working before his eyes. We think then that Mecca was ruled by the oligarchy of the *malaʾ*, the equivalent in the town of the *mad̄alis* of the nomad tribe. This was an assembly of the chiefs of the wealthiest and most influential families. This is why *Umayyads* and *Makhzūmis* are most usually mentioned as composing the *malaʾ*. Neither election nor birth could necessarily open the way to a seat on it, but rather the fame of services rendered, the prestige of ability and wealth. Thus it welcomed to its counsels the very wealthy Ibn *Djūdʿān*, a member of the humble clan of *Taim*. An assembly of elders or if you like of senators, in conformity with the principle of seniority among the Arabs: its authority, purely moral, was limited to advising, studying, looking ahead and giving to the merchant community the benefit of the experience of its conscript fathers. In the absence of any coercive

powers, persuasion was the only force it had to make its wishes obeyed. Hence the importance of eloquence in a milieu like this, where every family and every clan claimed autonomy. The cause of peace was in continual conflict with their claims. Without infringing their prerogatives, the *mala'* was able to exert moral pressure when the general good required it. The system recalls, though remotely, the organisation of Palmyra and of Venice.

Site and climate. In the form of an elongated crescent with its points turned towards the flanks of the *Ḳu'ayfān*, the town was hemmed in by a double range of bare and steep hills. The centre of this ill-ventilated couloir coincided with a depression in the soil. The early town occupied the bottom of this; this was the *wādī*, the valley, the *baṭn Makka*, the hollow of Mecca. The centre, the lowest part of this depression, was called *al-Baṭḥā'* (cf. above). Some buildings in this quarter were so close to the Ka'ba that in the morning and in the evening their shadows were merged in that of the sacred edifice. Between these houses and the Ka'ba [q. v.] a narrow esplanade (*finā'*) lay below the level of the surrounding soil. This open area formed the primitive *masjīd*, a sanctuary open to the heavens. The pre-Islāmic *Baṭḥā'* knew no other. The ends of the little streets opening on this open space were called the "gates of the haram or of the *masjīd*". The so-called gates or openings took their names from the clans settled around the Ka'ba. Thus one regularly spoke of the "gate of the Banū *Djumaḥ*". The walls of their houses served to mark the boundaries of the *masjīd*. It was on the ground floor of the buildings facing the sides of the Ka'ba that the *maḍjlīs* or *nādī* of the chief families met, those that formed the *mala'* (cf. above).

In the suburbs (*ḡawāḥir*), and at a later date in the ravines (*shirb*) which had been dug by erosion out of the flanks of the hills, was a confusion of poor houses, low and ramshackle hovels. The unpleasant features of a town of this kind are obvious. The geographer Maḳḍīsī has summed these up strikingly: "suffocating heat, deadly winds, clouds of flies". The continual difficulty was the dearth of water. The population was dependent on the variable output of the Zamzam. There were other wells, mainly outside the town. Those inside had a doubtful reputation. The scarcity of drinking-water is evident from the amount of precaution taken, when some thousands of pilgrims had to be supplied. In such deplorable conditions one can imagine what suffering the long days brought, *ramḍā' Makka* "the burning of Mecca"; why the great families preferred to send their children to be brought up in the desert; why the *Sira* only incidentally mentions the plague of Mecca (*waba' Makka*). Smallpox is mentioned only in connection with the enemies of the Prophet.

Rains are few and far between. Droughts sometimes last for four years. But when the winter season is wet, the rains may sometimes attain an unheard-of degree of violence. To the east of Mecca a rocky wall raises its steep barrier, a succession of strata and summits merging into the chain of the Sarāt. These jagged hills collect on their flanks the surplus rains of the monsoon which brings fertility to the Yemen. All along these slopes, where no shrub interrupts the fall — at the bottom

of each a *sail* is formed — the cataracts augmented by all these tributaries fall into the hollow of Mecca, *baṭn Makka*, of which the Ka'ba occupies the bottom. The waters rush to this depression they force a passage through the "gates of the *masjīd*" and flow over the area around the sanctuary. They fill it and rise to attack the Ka'ba. Before the *Hidjra*, the *Ḳuraish* syndicate seems to have paid no heed to the flooding or said they were powerless to prevent it. Efforts made by the caliphs yielded "only mediocre results".

This is why the misdeeds of the *sail* fill the annals of Mecca. On several occasions their violence has overthrown the Ka'ba and turned the court of the great mosque into a lake. As a result of the floods, epidemics broke out. The deposit of filth brought by the waters polluted the wells: bodies left unburied formed centres of epidemic infection. The annalists avoid dwelling on this, troubled by the Tradition which says that the plague never reaches Mecca. The absolute sterility of the soil brought another scourge, that of famine. The slightest irregularity in the convoys of grain from Syria or the Sarāt was enough to cause it. It continues to figure along with the ravages of flood and plague in the monotonous annals of the town.

Economic life and finance. On examining closely the picturesque literature of the *Sira* and *Ḥadīth*, one receives the impression of business, of intense activity bursting out of the narrow and sterile valley of Mecca. The *Ḳur'ān* only strengthens this impression. All his life the Prophet retained the impress of his *Ḳuraish* education and training. This fundamentally mercantile character is revealed at every turn.

Writing and arithmetic! One is amazed at their importance in the economic life of the town. Relying on the *Ḳur'ānic* epithet *ummī*, i. e. pagan, gentle, and on biased writers like al-Balādhuri, it has been held that, except for some fifteen individuals mentioned by name, all the pre-*Hidjran* *Ḳuraish* were illiterate. Alongside of the "book" of accounts, the scales always figure in the Meccan shops: not so much to weigh goods as to verify and check payments of all kinds including cash. Now, coins were not plentiful on the Meccan market; they were supplemented by the precious metals, ingots of gold and silver, by *tibr*, gold dust. Only the scales could determine the value. In the more delicate cases, recourse was had to the services of a *wazzān* or professional weigher.

It would be difficult to imagine a society in which capital enjoyed a more active circulation. The *tāḍjir*, business man, was not engaged in hoarding, in gathering wealth into his strong boxes. He had a blind faith in the unlimited productivity of capital, in the virtue of credit. Brokers and agents, the bulk of the population lived on credit. The sleeping partnership was much in favour (*muḍārabā'*), especially the "partnership for the half", which supposes 50% participation in the profits by the sleeping partners. Thanks to the development of these institutions the humblest sums could be invested, down to a gold *ḍinār* or even a *naḡshah* or half *ḍinār*. Such a flexible organisation stimulated even the humblest to take his share in commercial enterprises.

The coins brought to Mecca were of very different kinds: the *denarius aureus* of the Byzantines

and the silver drachm of the Sāsānids and Himyars. These pieces often worn, rudely engraved, very unequal in weight and format, came from the most varied mints. Only the money-changer had the requisite flair, the eye sufficiently trained to deal with the confusion of currencies, to determine accurately the standards, values, and the kinds in circulation. In addition there were the complications caused by the difference of standard and the oscillations of exchange. The Byzantine provinces, Syria and Egypt, were among the *ahl al-dhahab* or countries with a gold standard. Babylonia was *ahl al-wariḳ*, a land with a silver, the Sāsānian standard. On the eve of the departure of the caravans for Syria, there were regular battues in search of dinārs. The Meccan *tāḡīr* was not distinct from the financier. His first article of trade was money. When occasion arose, he invested his capital in business, in the organisation of large caravans. To the leaders of the caravan, to the traders and to the factors, he advanced the funds necessary for their operations.

Primarily a clearing house, a banking town, Mecca had customs and institutions peculiar to this kind of transaction and to finance. Sometimes it is *ribā*, usury, in all its ugliness: dinār for dinār, dirham for dirham, i.e. 100% interest. To the condemnation of *ribā* in the *Qurʾān*, the *Quraysh* objected that they saw in it only "a kind of sale" (*Qurʾān* ii. 276), of letting out capital for a rent. Speculation too was rampant, on the rates of exchange, the load of a caravan which one tried to buy up, the yield of the harvests and of the flocks and lastly the provisioning of the town. Fictitious associations were formed and sales were made on which loans were borrowed "Every Arab", says Strabo, "is either a trader or a broker". In Mecca, says the *ḥadīth* "he who was not a merchant, counted for nothing". In setting out on a military expedition the citizens always took merchandise along with them. This is what they did when going to relieve the Badr caravan. The first thing the Meccan *muhājirūn* did on arriving in Medina was to ask the way to the market-place. The women shared these commercial instincts: Abū Djahl's mother ran a perfumery business. The activities of the *tāḡīra* *Khadija* are celebrated Hind [q. v.], the wife of Abū Sufyān, sold her merchandise among the *Kalbīs* of Syria. Like their husbands the Meccan women had financial interests in the caravans. On the return of the convoys they gathered round Abū Sufyān to know what their money and their contributions had earned and to get their share of the profits.

The caravans. The organisation of a caravan was the subject of interminable palavers in the *nādī* around the Ka'ba. Its departure and return were events of public interest. The whole population was associated with it. En route it remained in continual communication with the metropolis through Beduins met on the journey or special couriers. Abū Sufyān sent one of these messengers to describe the critical position of the Badr caravan. It cost him 20 dinārs, an enormous sum, but one proportionate to the value of the convoy in which Mecca had 50,000 dinārs invested. The Meccan caravans were of considerable size. Neither horses nor mules appeared in them. The number of camels on occasion rose to 2,500. The men (merchants, guides [*ḍalīl*] and guards) varied from 100 to 300. The escort was strengthened on approaching areas

infested by bandits (*ṣa'īlūk*) or when traversing the territory of hostile tribes. The Badr caravan may be taken as typical. We do not know of another in which the capital invested attained such an amount. The greater part was supplied by the important Umayyad firm of Abū Uḡaiḡa, i.e. the family of Sa'īd b. al-ʿĀṣ. This firm had formed a company of the family, adding to their own considerable reserves the contributions of its sleeping partners. To their 30,000 dinārs the other Umayyad houses added 10,000. Four-fifths of the capital of the Badr caravan was therefore of Umayyad origin. We can understand why the direction and supreme control of the convoy was entrusted to Abū Sufyān, who was personally interested in the enterprise.

In the first place a caravan from Mecca carried skins and leather, sometimes also the *zabīb* of Tā'if, a kind of currant; then ingots of gold and silver partly from the mines of the Banū Sulaim and *tibr*, gold dust from Africa. The texts frequently call it *laṭīma*, i.e. a convoy laden with perfume and rare spices. Of the perfumes, the most esteemed came not from the *Ḥijāz*, but from southern Arabia, the "land of frankincense", or even from India and Africa. To these might be added aromatic gums and medicinal drugs, like the senna of Mecca, all objects of small bulk and purchased at higher prices by the luxury of the civilised countries.

From the Yemen the Meccan caravans brought back the products of India, the silks of China, the rich *'adani* cloths, so called from 'Aden. Besides gold dust, the main exports of Africa were slaves and ivory. From Africa Mecca recruited her labourers and her mercenary soldiers, the *Aḥābiṣh* or Abyssinians. In Egypt and in Syria, the *Quraysh* traders bought luxury articles, products of the industry of the Mediterranean, mainly cotton, linen or silk stuffs and cloths dyed in vivid purple. From Bosrā and the *Sharāt* (Syria) came arms, cereals and oil, much appreciated by the Beduins. The pace of the caravan was slow but the articles transported, leather, metals, scented woods, feared neither damage nor the delays of long journeys. The expenses were confined to the hire of the animals, the payment of the escort, the tolls and presents to the chiefs of the tribes. With such an economical organisation, the profits of 100% attested by our authors were quite usual. This was the case with the caravan of Badr "each dinār having brought back a dinār". Two years after this brilliant affair, the Companions of the Prophet who had sought refuge in Medina were able to carry out as profitable a transaction in the same field "since each of their dirhams gained a second dirham", that is to say a profit of 100% again.

Fortunes in Mecca. We can now imagine how money had gradually accumulated in the chests of the Meccan financiers, who were naturally of a saving disposition. This explains Pliny the Elder's ill-humour when he recalls "the millions of sesterces which the Arabs take annually from the Roman Empire giving nothing in return, *nihil invicem redimentibus*" (*Hist. Natur.*, vi. 28). This last statement is an exaggeration, but it should be remembered that the Meccan caravan carried only articles of high value, and that with regard to the Empire the Arabs were mainly importers, so that the trade balance was always very much

in their favour. The 30,000 *dirhams* invested by the one house of Abū Ḥaiḥa in the Badr caravan suggests that H. Winckler is quite right when he tells us to think of the Palmyra of Zenobia if we wish to get an idea of the financial capacity of Mecca. The fortunes of the *Makhzūmis* were no less than those of their Umayyad rivals. The Taimī 'Abd Allāh b. Ḍjūd'an must have been a millionaire if the poet thought of comparing him to Caesar. The principal organisers of the Badr caravan were also millionaires. The thousands of *dirhams* subscribed by them did not even represent all their fortune. Other portions of their capital were out at interest or put in other speculations. Among other millionaires we may mention the *Makhzūmis* Walid b. al-Mughira and 'Abd Allāh, father of the poet 'Umar b. Abi Rabi'a.

Next to these representatives of high finance come the well-to-do Meccans, like 'Abd al-Rahmān b. 'Awf who had a capital of 8,000 *dirhams* and al-Hārith b. 'Āmir and Umayi b. Khalaf. Of the latter two, the first had 1,000 and the second 2,000 *dirhams* in the Badr caravan. Lastly there were the small traders, brokers and shopkeepers who formed the petite bourgeoisie of the town. To their commerce a number added the supervision of some industry like ironwork or carpentry. The most typical representative of this class is given us by the future caliph Abū Bakr, a *baraz*, retailer of cloth. He belonged like Abū Ḍjūd'an to the plebeian clan of Taim, rich in men and women of initiative, like 'Ā'isha, daughter of Abū Bakr. He seems to have had a capital of 40,000 *dirhams*. 'Abbās, the uncle of the Prophet, is also mentioned among the rich bankers of Mecca, but we have no details about him. The other Hāshimis lived in circumstances bordering on poverty. Those Meccans most certainly must have been wealthy who paid without a murmur the enormous ransoms demanded for their relatives after the defeat of Badr. After this sacrifice — it cost them not less than 200,000 *dirhams* — the Meccan chiefs gave up their share of the profits in the Badr enterprise — some 25,000 *dirhams* — to prepare for the revenge. They did this *ḥaiyibu'l-anfus* "with a good heart", with the easy grace of opulent financiers, used to running the risks of speculations on a large scale. One touching detail is recorded. They refused to touch the modest shares of the small contributors. This example shows how at Mecca, "the strong", *ahl al-kuwwa* (Wākidi), i.e. the patricians, were able in critical circumstances to realise a spirit of solidarity and of sound democracy.

Mecca before the Hijra had neither ships nor a port. It was only exceptionally that foreign ships cast anchor in the little bay of Shu'aiba off a desert shore. It was here that the Byzantine ship was wrecked, the wood of which went to build the terrace of the Ka'ba. It was to Shu'aiba that the first Muslim emigrants for Abyssinia went, no doubt on hearing that two merchant ships had touched there. More rarely sailings took place from the desolate shore of Ḍjidda, which was nearer Mecca. From the time of 'Uthmān, Ḍjidda took the place of Shu'aiba and became the port of the Kuraish metropolis. When Muḥammad settled in Medina and cut their communications with Syria, the Meccan leaders never thought of taking to the sea but resigned themselves to the enormous detour through al-Nadjd. The

creation of an Arab navy was the work of the caliph Mu'āwīya.

2. After the Hijra. We need not rehearse the events of the first eight years of the Hijra. They are summed up in the struggle with the Prophet. This struggle and the *rida*, the surrender of Mecca, were fatal to its economic prosperity. One after the other, the great families migrated to Medina, now the capital of Islām. This tendency increased under the first three caliphs, who made their headquarters among the Anṣār. 'Alī definitely left Arabia to settle in Kūfa. Richly endowed by the state, the leading Quraish, becoming generals and governors of provinces, lost interest in commerce. No more is heard about caravans or fairs in the Hijāz. It was only at the period of the pilgrimage that Mecca became alive again and saw the caliphs reappear at the head of the pilgrims. The conquest of the 'Irāk dealt the last blow to the economic decline of western Arabia. The Indian trade resumed its old route by the Persian Gulf and the valley of the Euphrates. Direct communication was established by land with the markets of the middle east.

Umayyad period. The situation improved with the coming of the Umayyad dynasty. Mu'āwīya took an active interest in his native town. He erected buildings there and developed agriculture in the environs, dug wells and built dams to store up the water. Under his successors, especially the Marwānids, Mecca became a city of pleasure and ease, the rendezvous of poets and musicians, attracted by the brilliant society formed by the sons of the Companions of the Prophet. Many people returned to live in Mecca after making their fortunes in the government of conquered provinces. Contact with foreign civilisations had made them refined and fastidious. They had become accustomed to baths, a luxury which presupposes an abundant water-supply. Water had to be procured from the hills of the Sarāt. Khālīd al-Kasrī's [q. v.] name is associated with this undertaking which changed the aspect of the town. To meet the scourge of flood, the caliphs 'Umar and 'Uthmān had called in the aid of Christian engineers, who built barrages in the high-lying quarters. They also secured the area round the Ka'ba by making dykes and embankments. The Umayyad caliphs continued and completed these works. They dug a new bed along the course of the *sail* and endeavoured to break its violence by barriers built at different levels. Their great anxiety was to protect the depression of the Bathā' where the Ka'ba stood. The skill of the engineers of the period did not succeed in overcoming the topographical difficulties nor in averting the ravages of the winter rains, regular cloudbursts. They were frustrated by the steep slope of the ground, still further aggravated by the unusual shape of the Bathā', a basin with no outlet. The houses on the bank of the *sail* were taken down and the alleys adjoining the Ka'ba removed. Each modification of the old plan meant the sacrifice of more buildings. These clearances in time changed the traditional aspect of Mecca, where the *sail* continued to sow destruction.

Along with these precautions against flooding an endeavour was made to enlarge the exiguous court around the Ka'ba. Islām aspired to possess a temple in keeping with its worldwide claims. Successive expropriations begun by 'Umar and finished

by Walid I prepared an esplanade. The plan of the great mosque [cf. AL-MASDĪD AL-ḤARĀM] with its galleries, a vast courtyard with the Ka'ba in the centre, is the work of the Umayyad caliph. He had the assistance of Christian architects from Syria and Egypt to carry it out. The important governorship of the Ḥijāz with its three cities, Medīna, Mecca and Ṭā'if, could in principle be given only to a member of the ruling family. Among the most celebrated of these Umayyads may be mentioned Sa'īd b. al-ʿĀṣ and the two future caliphs, Marwān b. al-Ḥakam and ʿUmar b. ʿAbd al-ʿAzīz. When no Umayyad was available the choice fell upon an official of tried capacity like Ḥajjāj and Khalīd al-Qasrī. At first they were given Ṭā'if and then transferred to Mecca. It was only after this probation that the three towns were entrusted to them. But even then the centre of government remained in Medina, which under the Umayyads eclipsed Mecca by its political importance and by the fact that it was the home of the new Muslim aristocracy.

Under Yazid I, the rising of ʿAbd Allāh b. al-Zubair [q.v.] brought Syrian troops to Mecca. The rebel had made his headquarters in the court of the great mosque. A scaffold of wood, covered with straw, protected the Ka'ba. The carelessness of a Meccan soldier set it on fire. Ibn al-Zubair rebuilt the edifice and included the Ḥidjr within it [see KA'BA]. When Ḥajjāj had overthrown the Zubairid anti-caliph, he restored the Ka'ba to its former dimensions which have since remained unaltered. In 747 a Khārījī rebel from the Yemen seized Mecca without meeting opposition. He was soon defeated and slain by the troops of the caliph Marwān II. In 750, Mecca passed with the rest of the caliphate under the rule of the ʿAbbāsids.

II

1. Mecca under the ʿAbbāsids down to the foundation of the Sharīfate (750—961).

Although the political centre of gravity in Islām now lay in Baghdād, this period at first presents the same picture as under Omayyad rule. The *Ḥaramān* are as a rule governed by ʿAbbāsīd princes or individuals closely connected with them (*Die Chroniken der Stadt Mekka*, ed. Wustenfeld, ii. 181 *sqq.*). Sometimes Mecca and Ṭā'if were under one ruler, who was at the same time leader of the Ḥajjāj, while Medina had a separate governor of its own.

Arabia had however from the first century A.H. contained a number of ʿAlid groups, who, as was their wont, fished in troubled waters, lay in wait as brigands to plunder the Ḥajjāj caravans and from time to time hoisted their flags when they were not restrained either by the superior strength or by the bribes of the caliphs. We find al-Manṣūr (136—156 = 754—774) already having trouble in Western Arabia. Towards the end of the reign of al-Mahdī (156—169 = 774—785) a Ḥasanīd, Ḥusain b. ʿAlī, led a raid on Medina, which he ravaged; at Fakhkh near Mecca, he was cut down with many of his followers by the ʿAbbāsīd leader of the Ḥajjāj. The place where he was buried is now called al-Shuhadāʾ. It is significant that he is regarded as the "martyr of Fakhkh" (Ṭabari, iii. 551 *sqq.*; *Chron. Mekka*, i. 435, 501 *sq.*).

Ḥārūn al-Rashīd on his nine pilgrimages expended vast sums in Mecca. He was not the only ʿAbbāsīd to scatter wealth in the holy land. This had a bad effect on the character of the Meccans. There were hardly any descendants left of the old distinguished families and the population grew accustomed to living at the expense of others and were ready to give vent to any dissatisfaction in rioting. This attitude was all too frequently stimulated by political conditions.

In the reign of al-Ma'mūn (198—218 = 817—833) it was again ʿAlids, Ḥusain al-Aʿṭas and Ibrāhīm b. Mūsā, who extended their rule over Medina, Mecca and the Yemen (Ṭabari, iii. 981 *sqq.*; *Chron. Mekka*, ii. 238), ravaged Western Arabia and plundered the treasures of the Ka'ba. How strong ʿAlid influence already was at this time is evident from the fact that Ma'mūn appointed two ʿAlids as governors of Mecca (Ṭabari, iii. 1039; *Chron. Mekka*, ii. 191 *sqq.*).

With the decline of the ʿAbbāsīd caliphate after the death of Ma'mūn, a period of anarchy began in the holy land of Islām, which was frequently accompanied by scarcity or famine. It became the

regular custom for a number of rulers to be represented at the Ḥajj in the plain of 'Arafāt and to have their flags unfurled; the holy city was rarely spared fighting on these occasions. The safety of the pilgrim caravans was considerably affected; it was very often 'Alids who distinguished themselves in plundering the pilgrims.

The 'Alid cause received an important reinforcement at this time by the foundation of a Ḥasanid dynasty in Ṭabaristān (Ṭabari, iii. 1523—1533, 1583 sq., 1682—1685, 1693 sq., 1840, 1880, 1884 sq., 1940). In Mecca the repercussion of this event was felt in the appearance of two Ḥasanids (*Chron. Mekka*, i. 343; ii. 10, 195, 239 sq.), Ismā'il b. Yūsuf and his brother Muḥammad, who also ravaged Medina and Djidda in the way that had now become usual (251 = 865—866).

The appearance of the Ḳarmāṭians [q.v.] brought still further misery to the country in the last fifty years before the foundation of the shērifate (Ṭabari, iii. 2124—2130). Hard pressed themselves at the heart of the empire, the caliphs were hardly able even to think of giving active support to the holy land, and, besides, their representatives had not the necessary forces at their disposal. From 916 onwards the Ḳarmāṭians barred the way is the pilgrim caravans. In 930, 1,500 Ḳarmāṭian warriors raided Mecca, massacred the inhabitants by the thousand and carried off the Black Stone to Bahrain. It was only when they realised that such deeds were bringing them no nearer their goal — the destruction of official Islām — that their zeal began to relax and in 950 they even brought the Stone back again. Mecca was relieved of serious danger from the Ḳarmāṭians. The following years bear witness to the increasing influence of the 'Alids in western Arabia in connection with the advance of Fāṭimid rule to the east and with Būyid rule in Baghdad. From this time the Meccan 'Alids are called by the title of Sharif which they have retained ever since.

2. From the foundation of the Sharifate to Ḳatāda (c. 350—598 = 960—1200).

a. The Mūsāwīs. The sources do not agree as to the year in which Dja'far took Mecca. 966, 967, 968 and the period between 951 and 961 are mentioned (*Chron. Mekka*, ii. 205 sqq.). 'Alids had already ruled before him in the holy land. It is with him however that the reign of the Ḥasanids in Mecca begins, who are known collectively as sharifs, while in Medina this title is given to the reigning Ḥusainids.

The rise and continuance of the Sharifate indicates the relative independence of Western Arabia in face of the rest of the Islāmic world from a political and religious point of view. Since the foundation of the Sharifate, Mecca takes the precedence possessed by Medina hitherto.

How strongly the Meccan sharifate endeavoured to assert its independence, is evident in this period from two facts. In 976 Mecca refused homage to the Fāṭimid caliph. Soon afterwards the Caliph began to besiege the town and cut off all imports from Egypt. The Meccans were soon forced to give in, for the Ḥidjāz was dependent on Egypt for its food supplies (Ibn al-Aṭhir, *Kāmil*, viii. 491; *Chron. Mekka*, ii. 246).

The second sign of the Sharifs' feeling of independence is Abu 'l-Futūḥ's (384—432 = 994—1039) setting himself up as caliph in 1011

(*Chron. Mekka*, ii. 207; Ibn al-Aṭhir, *Kāmil*, ix. 233, 317). He was probably induced to do this by al-Ḥākim's heretical innovations in Egypt. The latter however was soon able to reduce the new caliph's sphere of influence so much that he had hurriedly to return to Mecca where in the meanwhile one of his relatives had usurped the power. He was forced to make terms with al-Ḥākim in order to be able to expel his relative.

With his son Shukr (432—453 = 1039—1061) the dynasty of the Mūsāwīs, i. e. the descendants of Mūsā b. 'Abd Allāh b. Mūsā b. 'Abd Allāh b. Ḥasan b. Ḥasan b. 'Alī b. Abī Ṭālib came to an end. He died without leaving male heirs, which caused a struggle within the family of the Ḥasanids with the usual evil results for Mecca. When the family of the Banū Shāiba (q. v.; the Shēbis) went so far as to confiscate for their private use all precious metals in the house of Allāh, the ruler of Yemen, al-Ṣulaiḥi (*Chron. Mekka*, ii. 208, 210 sqq.; Ibn al-Aṭhir, *Kāmil*, ix. 422; x. 19, 38), intervened and restored order and security in the town. This intervention by an outsider appeared more intolerable to the Ḥasanids than fighting among themselves. They therefore proposed to al-Ṣulaiḥi that he should instal one of their number as ruler and leave the town.

He therefore appointed Abū Ḥāshim Muḥammad (455—487 = 1063—1094) as Grand Sharif. With him begins the dynasty of the

b. Hawāshim (455—598 = 1063—1200), which takes its name from Abū Ḥāshim Muḥammad, a brother of the first Sharif Dja'far; the two brothers were descendants in the fourth generation from Mūsā II, the ancestor of the Mūsāwīs.

During the early years of his reign, Abū Ḥāshim had to wage a continual struggle with the Sulaimānī branch, who thought themselves humiliated by his appointment. These Sulaimānis were descended from Sulaimān, a brother of the Mūsā II above mentioned.

The reign of Abū Ḥāshim is further noteworthy for the shameless way in which he offered the suzerainty, i. e. the mention in the *khutba* as well as the change of official rite which is indicated by the wording of the *adḥān*, to the highest bidder i. e. the Fāṭimid caliph or the Saldjūk sultān (*Chron. Mekka*, ii. 253; Ibn al-Aṭhir, x. 67). It was very unwelcome to the Meccans that imports from Egypt stopped as soon as the official mention of the Fāṭimid in the *khutba* gave way to that of the caliph. The change was repeated several times with the result that the Saldjūk, tired of this comedy, sent several bodies of Turkomans to Mecca.

The ill-feeling between Sultān and Sharif also inflicted great misery on pilgrims coming from the Irāk. As the leadership of the pilgrim caravans from this country had gradually been transferred from the 'Alids to Turkish officials and soldiers, Abū Ḥāshim did not hesitate occasionally to fall upon the pilgrims and plunder them (*Chron. Mekka*, ii. 254; Ibn al-Aṭhir, x. 153).

The reign of his successor is also marked by covetousness and plundering. The Spanish pilgrim Ibn Djubair, who visited Mecca in 1183 and 1185, gives hair-raising examples of this. Even then however the Hawāshim were no longer absolutely their own masters, as over ten years before, the Aiyūbīd dynasty had not only succeeded to the Fāṭimids in Egypt but was trying to get the whole of nearer Asia into their power.

Saladin's brother, who passed through Mecca on his way to South Arabia, abandoned his intention of abolishing the *sharifs* but the place of honour on the *Ḥajj* belonged to the Aiyūbids and their names were mentioned in the *khutba* after those of the 'Abbāsīd caliph and the *sharīf* (Ibn Djbair, p. 75, 95). The same Aiyūbid in 1186 also did away with the *Shī'ī* (here Zaidī, for the *Sharīfs* had hitherto been Zaidīs) form of the *adhān* (*Chron. Mekka*, ii. 214), had coins struck in Saladin's name and put the fear of the law into the hearts of the *sharīf's* bodyguard, who had not shrunk from crimes of robbery and murder, by severely punishing their misdeeds. — A further result of Aiyūbid suzerainty was that the *Shāfi'ī* rite became the predominant one.

But even the mighty Saladin could only make improvements in Mecca. He could abolish or check the worst abuses but the general state of affairs remained as before.

3. The rule of Ḳatāda and his descendants down to the Wahhābī period (c. 1200—1788).

In the meanwhile a revolution was being prepared which was destined to have more far-reaching consequences than any of its predecessors. Ḳatāda, a descendant of the same Mūsā (see above) from whom the Mūsāwīs and the Hawāshim were descended, had gradually extended his estates as well as his influence from Yanbu' to Mecca and had gathered a considerable following in the town. According to some sources, his son Hanẓala made all preparations for the decisive blow on the holy city, according to others, Ḳatāda seized the town on the 27th Raddjāb when the whole population was away performing a lesser *'umra* in memory of the completion of the building of the Ka'ba by 'Abd Allāh b. al-Zubair, which was celebrated on this day along with the festival of Muḥammad's ascension to heaven. However it came about, Ḳatāda's seizure of the town meant the coming of an able and strongwilled ruler, the ancestor of all later *sharīfs*. He steadfastly followed his one ambition to make his territory an independent principality. Everything was in his favour; that he did not achieve his aim was a result of the fact that the *Ḥidjāz* was once again at the intersection of many rival lines of political interest.

Ḳatāda began by ruining his chances with the great powers; he ill-treated the son of the Aiyūbid al-Malik al-ʿĀdil (540—615 = 1145—1218) in brutal fashion (*Chron. Mekka*, ii. 263). He roused the ire of the caliph by his attitude to pilgrims from the 'Irāk. He was able however to appease the latter and the embassy he sent to Baghdad returned with gifts from the caliph. The caliph also invited him to visit Baghdad. According to some historians, however, the *sharīf* turned home again before he actually reached Baghdad. On this occasion, he is said to have expressed his policy of the "splendid isolation" of the *Ḥidjāz* in verse, as he did in his will in prose (see Snouck Hurgronje, *Ḳatādah's Policy of Splendid Isolation* etc. in *Bibl.*).

On the other hand, Ḳatāda is said to have vigorously supported an Imām of Ḥasanid descent in founding a kingdom in the Yemen. After the reconquest of this region by a grandson of al-ʿĀdil, the Aiyūbids of Egypt, Syria, and South Arabia were mentioned in the *khutba* in Mecca along with the Caliph and *Sharīf*.

Ḳatāda's life ended in a massacre which his son Ḥasan carried out in his family to rid himself of possible rivals (*Chron. Mekka*, ii. 215, 263 sqq.; Ibn al-Athir, *Kāmil*, xii. 262 sqq.). The Aiyūbid prince Mas'ūd however soon put a limit to his ambition and had Mecca governed by his generals. On his death however power again passed into the hands of the *sharīfs*, whose territory was allowed a certain degree of independence by the rulers of the Yemen as a bulwark against Egypt.

About the middle of the xiiith century the world of Islām assumes a new aspect as the result of the advent of persons and happenings of great importance. In 1258 the taking of Baghdad by Hūlāgū put an end to the caliphate. The pilgrim caravan from the 'Irāk was no longer of any political significance. In Egypt power passed from the Aiyūbids to the Mamlūks; Sulṭān Baibars (658—676 = 1260—1277) was soon the most powerful ruler in the lands of Islām. He was able to leave the government of Mecca in the hands of the *sharīf*, because the latter, Abū Numaiy, was an energetic individual who ruled with firmness during the second half of the xiiith century (1254—1301). His long reign firmly established the power of the descendants of Ḳatāda.

Nevertheless the first half century after his death was almost entirely filled with fighting between different claimants to the throne. 'Adjlān's reign also (1346—1375) was filled with political unrest, so much so that the Mamlūk Sulṭān is said on one occasion to have sworn to exterminate all the *sharīfs*. 'Adjlān introduced a political innovation by appointing his son and future successor Aḥmad co-regent in 1361 by which step he hoped to avoid a fratricidal struggle before or after his death.

A second measure of 'Adjlān's also deserves mention, namely the harsh treatment of the Mu'adhḥidīn and Inām of the Zaidīs; this shows that the reigning *sharīfs* had gone over to the predominant rite of al-Shāfi'ī and forsaken the Zaidī creed of their forefathers.

Among the sons and successors of 'Adjlān special mention may be made of Ḥasan (1396—1426) because he endeavoured to extend his sway over the whole of the *Ḥidjāz* and to guard his own financial interests carefully, at the same time being able to avoid giving his Egyptian suzerain cause to interfere.

But from 1425 he and his successors had to submit to a regular system of control as regards the allotment of the customs.

From the time of Ḥasan, in addition to the bodyguard of personal servants and freedmen, we find a regular army of mercenaries mentioned which was passed from one ruler to another. But the mode of life of the *sharīfs*, unlike that of other Oriental rulers, remained simple and in harmony with their Arabian surroundings. As a vassal of the Egyptian Sulṭān the *sharīf* received from him every year his *ṭawḳī'* [q. v.] and a robe of honour. On the ceremonies associated with the accession of the *sharīfs* see Snouck Hurgronje, *Mekka*, i. 97 sq.

Of the three sons of Ḥasan who disputed the position in their father's lifetime, Barakāt (I) was chosen by the sulṭān as co-regent; twenty years later, he succeeded his father and was able with slight interruptions to hold sway till his death in 1455. He had to submit to the sulṭān sending a permanent garrison of 50 Turkish horsemen under an emir

to Mecca. This emir may be regarded as the precursor of the later governors, who sometimes attained positions of considerable influence under Turkish suzerainty.

Mecca enjoyed a period of prosperity under Barakāt's son Muḥammad (*Chron. Mekka*, ii. 341 sqq.; iii. 230 sqq.), whose reign (1455—1497) coincided with that of Kā'itbey [q. v.] in Egypt. The latter has left a fine memorial in the many buildings he erected in Mecca.

Under Muḥammad's son Barakāt II (1497—1525) who displayed great ability and bravery in the usual struggle with his relatives, without getting the support he desired from Egypt (*Chron. Mekka*, ii. 342 sqq.; iii. 244 sqq.), the political situation in Islām was fundamentally altered by the Ottoman Sultān Selim's conquest of Egypt in 1517.

Although henceforth Constantinople had the importance for Mecca that Baghdad once had and there was little real understanding between Turks and Arabs, Mecca at first experienced a period of peace under the sharifs Muḥammad Abū Numaiy (1525—1566) and Ḥasan (1566—1601). Under Ottoman protection the territory of the sharifs was extended as far as Khaibar in the north, to Ḥālī in the south and in the east into Naǧd. Dependence on Egypt still existed at the same time; when the government in Constantinople was a strong one, it was less perceptible, and vice versa. This dependence was not only political but had also a material and religious side. The Ḥidjāz was dependent for its food supply on corn from Egypt. The foundations of a religious and educational nature now found powerful patrons in the Sultāns of Turkey.

A darker side of the Ottoman suzerainty was its intervention in the administration of justice. Since the sharifs had adopted the *Shāfi'ī madhhab*, the *Shāfi'ī Kādi* was the chief judge; this office had also remained for centuries in one family. Now the highest bidder for the office was sent every year from Constantinople to Mecca; the Meccans of course had to pay the price with interest.

With Ḥasan's death a new period of confusion and civil war began for Mecca. In the language of the historians, this circumstance makes itself apparent in the increasing use of the term *Dhawī*... for different groups of the descendants of Abū Numaiy who dispute the supremacy, often having their own territory, sometimes asserting a certain degree of independence from the Grand Sharif, while preserving a system of reciprocal protection which saved the whole family from disaster (Snouck Hurgronje, *Mekka*, i 112 sqq.).

The struggle for supremacy, interspersed with disputes with the officials of the suzerain, centred in the xviiith century mainly around the 'Abādila, the *Dhawī Zaid* and the *Dhawī Barakāt*.

Zaid (1631—1666) was an energetic individual who would not tolerate everything the Turkish officials did. But he was unable to oppose successfully a measure which deserves mention on account of its general importance. The ill-feeling between the Sunni Turks and the *Shi'ī* Persians had been extended to Mecca as a result of an order by Sultān Murād to expel all Persians from the holy city and not to permit them to make the pilgrimage in future. Neither the Sharifs nor the upper classes in Mecca had any reason to be pleased with this measure; it only served the mob as a pretext to plunder well-to-do Persians. As soon

as the Turkish governor had ordered them to go, the Sharifs however gave permission as before to the *Shi'is* to take part in the pilgrimage and to remain in the town. The Sharifs likewise favoured the Zaidis, who had also been frequently forbidden Mecca by the Turks.

The further history of Mecca down to the coming of the Wahhābis is a rather monotonous struggle of the Sharifan families among themselves (*Dhawī Zaid*, *Dhawī Barakāt*, *Dhawī Mas'ūd*) and with the Ottoman officials in the town itself or in Djidda.

4. The Sharifate from the Wahhābi period to its end. The Kingdom.

Although the Wahhābis [q. v.] had already made their influence perceptible under his predecessors, it was Ghālīb (1788—1813) who was the first to see the movement sweeping towards his territory like a flood; but he left no stone unturned to avert the danger. He sent his armies north, east and south; his brothers and brothers-in-law all took the field; the leaders of the Syrian and Egyptian pilgrim caravans were appealed to at every pilgrimage for help, but without success. In 1799 Ghālīb made a treaty with the emir of Darīya, by which the boundaries of their territories were laid down, with the stipulation that the Wahhābis should be allowed access to the holy territory. Misunderstandings proved inevitable however and in 1803 the army of the emir Sa'ūd approached the holy city. After Ghālīb had withdrawn to Djidda, in April Sa'ūd entered Mecca, the inhabitants of which had announced their conversion. All kubbās were destroyed, all tobacco pipes and musical instruments burned, and the *adhān* purged of praises of the Prophet.

In July, Ghālīb returned to Mecca but gradually he became shut in there by enemies as with a wall. In August the actual siege began and with it a period of famine and plague. In February of the following year, Ghālīb had to submit to acknowledging Wahhābi suzerainty while retaining his own position.

The Sublime Porte had during all these happenings displayed no sign of life. It was only after the Wahhābis had in 1807 sent back the pilgrim caravans from Syria and Egypt with their mahmals, that Muḥammad 'Alī was given instructions to deal with the Ḥidjāz as soon as he was finished with Egypt. It was not till 1813 that he took Mecca and there met Ghālīb who made cautious advances to him. Ghālīb however soon fell into the trap set for him by Muḥammad 'Alī and his son Tusun. He was sent to Salonika, where he lived till his death in 1816.

In the meanwhile Muḥammad 'Alī had installed Ghālīb's nephew Yahyā b Sarūr (1813—1827) as sharif. Thus ended the first period of Wahhābi rule over Mecca, and the Ḥidjāz once more became dependent on Egypt. In Mecca, Muḥammad 'Alī was honourably remembered because he restored the pious foundations which had fallen into ruins, revived the consignments of corn, and allotted stipends to those who had distinguished themselves in sacred lore or in other ways.

In 1827 Muḥammad 'Alī had again to interfere in the domestic affairs of the sharifs. When Yahyā had made his position untenable by the vengeance he took on one of his relatives, the viceroy deposed the *Dhawī Zaid* and installed one of the 'Abādila,

Muḥammad, usually called Muḥammad b. ʿAwn (1827—1851). He had first of all to go through the traditional struggle with his relatives. Trouble between him and Muḥammad ʿAlī's deputy resulted in both being removed to Cairo in 1836.

Here the sharif remained till 1840 when by the treaty between Muḥammad ʿAlī and the Porte the Ḥijāz was again placed directly under the Porte. Muḥammad b. ʿAwn returned to his home and rank. Ottoman suzerainty was now incorporated in the person of the wālī of D̲j̲idda. Friction was inevitable between him and Muḥammad b. ʿAwn; the latter's friendship with Muḥammad ʿAlī now proved of use to him. He earned the gratitude of the Turks for his expeditions against the Wahhābī chief Faṣāl in al-Riyāḍ and against the ʿAṣīr tribes. His raids on the territory of Yemen also prepared the way for Ottoman rule over it.

In the meanwhile the head of the Dhawī Zaid, ʿAbd al-Muṭṭalib (1851—1856), had made good use of his friendship with the grand vizier and brought about the deposition of the ʿAbādila in favour of the Dhawī Zaid. ʿAbd al-Muṭṭalib however did not succeed in keeping on good terms with one of the two paṣhas with whom he had successively to deal. In 1855 it was decided in Constantinople to cancel his appointment and to recall Muḥammad b. ʿAwn. ʿAbd al-Muṭṭalib at first refused to recognise the genuineness of the order; and he was supported by the Turkophile feeling just provoked by the prohibition of slavery. Finally however, he had to give way to Muḥammad b. ʿAwn, who in 1856 entered upon the Sharifate for the second time; this reign lasted barely two years. Between his death in March 1858 and the arrival of his successor ʿAbd Allāh in October of the same year took place the murder of the Christians in D̲j̲idda (June 15) and the atonement for it (cf. D̲J̲IDDA, and Snouck Hurgronje, *Een rector der mekkaansche universiteit, in Bydragen t. d. Taal-, Land- en Volkenkunde van Ned.-Indië*, 5^e volgr., deel ii., p. 381 sqq., 399 sqq.).

The rule of ʿAbd Allāh (1858—1877) who was much liked by his subjects, was marked by peace at home and events of far-reaching importance abroad. The opening of the Suez Canal (1869) meant on the one hand the liberation of the Ḥijāz from Egypt, on the other however more direct connection with Constantinople. The installation of telegraphic connections between the Ḥijāz and the rest of the world had a similar importance. The reconquest of Yemen by the Turks was calculated to strengthen the impression that Arabia was now Turkish territory for ever.

The brief reign of his popular elder brother Ḥusain (1877—1880) ended with the assassination of the sharif by an Afghān. The fact that the aged ʿAbd al-Muṭṭalib (see above) was sent by the Dhawī Zaid from Constantinople as his successor (1880—1882) gave rise to an obvious supposition.

Although the plebs saw something of a saint in this old man, his rule was soon felt to be so oppressive that the notables petitioned for his deposition (Snouck Hurgronje, *Mekka*, i. 204 sqq.). As a result in 1881, the energetic ʿOṭhmān Nūrī Paṣha was sent with troops to the Ḥijāz as commander of the garrison with the task of preparing for the restoration of the ʿAbādila. ʿAbd al-Muṭṭalib was outwitted and taken prisoner; he was kept under guard in one of his own houses in Mecca till his death in 1886.

ʿOṭhmān Paṣha, who was appointed wālī in July 1882, hoped to see his friend ʿAbdilāh, one of the ʿAbādila, installed as Grand Sharif alongside of him. ʿAwn al-Rafīk (1882—1905) was however appointed (portrait in Snouck Hurgronje, *Bilder aus Mekka*, p.). As the wālī was an individual of great energy, who had ever done much for the public good and ʿAwn, although very retiring, was by no means insignificant, nay even tyrannical, trouble between them was inevitable, especially as they had the same powers on many points, e.g. the administration of justice and supervision of the safety of the pilgrim routes. After a good deal of friction ʿOṭhmān was dismissed in 1886. His successor was D̲j̲amal Paṣha, who only held office for a short period and was succeeded by Ṣafwat Paṣha. Only Aḥmad Rātīb could keep his place alongside of ʿAwn and that by shutting his eyes to many things and being satisfied with certain material advantages. After ʿAwn's death ʿAbdilāh was chosen as his successor. He died however before he could start on the journey from Constantinople to Mecca. ʿAwn's actual successor was therefore his nephew ʿAlī (1905—1908). In 1908 he and Aḥmad Rātīb both lost their positions with the Turkish Revolution.

With Ḥusain (1908—1916—1924), also a nephew of ʿAwn's, the last sharif came to power. But for the Great War his sharifate would probably have run the usual course. The fact that Turkey was now completely involved in the war induced him to declare himself independent in 1916. He endeavoured to extend his power as far as possible, first as liberator (*munkidh*) of the Arabs, then (June 22, 1916) as king of the Ḥijāz or king of Arabia and finally as caliph. Very soon however, it became apparent that the Sultān of Nadjd, ʿAbd al-ʿAziz Al Saʿūd, like his Wahhābī forefathers, was destined to have a powerful say in the affairs of Arabia. In Sept. 1924 his troops took Ṭāʾif and in October Mecca. King Ḥusain fled first to Akaba and from there in May 1925 to Cyprus. His son ʿAlī retired to D̲j̲idda. Ibn Saʿūd besieged this town and Medina for a year, avoiding bloodshed and complications with European powers. Both towns surrendered in December 1925.

Since January 1926, Ibn Saʿūd has been king of the Ḥijāz; the official title of his kingdom now is Ḥijāz, Nadjd and dependencies. A political unit has thus been formed which covers a larger area than the sharifs ever ruled and possesses greater internal strength than has been seen in Arabia since the end of ʿAbbāsīd power.

By the organisation of the Nadjd warriors (*ikh-wān*) as agriculturists also, by the maintenance of a strict discipline among the Beduins, by the creation of a military police, which is held in awe, a security has been created such as Arabia has perhaps never known and secure foundations laid for traffic, especially of the pilgrims.

With the representatives of foreign governments in D̲j̲idda the king maintains friendly relations. Recently several states have raised their consulates there to the rank of an embassy. Treaties have been concluded with a number of states.

By making use of modern technical skill, the king is endeavouring to counteract the natural poverty of the land. The automobile has become of importance for the pilgrim traffic, agricultural machinery is being imported and cisterns built to hold the rain water. A project for examining the

ground to prospect for minerals has been drawn up as well as a plan for a quay in the harbour of Djidda.

Wahhābism — or as they prefer to call it in Arabia: Islām according to the Ḥanbalī rite — is the state religion. But it has advanced cautiously in comparison with its attitude at the beginning of the sixteenth century. The external symbols of veneration for saints and the dead have been removed; Muḥammad's tomb in Medina has however been spared. The maḥmal [q. v.] no longer comes to the ḥadjj; the new covering for the Ka'ba is made every year in Mecca. The pilgrim traffic again shows high figures and even Shi'is are admitted again to the pilgrimage.

The religious and economic life of the city has from the earliest times centred round the pilgrimage (cf. the article ḤĀḌĪJ) and the Mosque (cf. AL-MASĪD AL-ḤARĀM). The character of Mecca as the metropolis of Islām is reflected in the great variety of its population. Besides the original Meccan nucleus we have numerous Arab elements — among which the Ḥadramīs are particularly prominent on account of their energy — and colonies of foreigners from all parts of the Muslim world who have out of worldly or religious motives taken up their abode permanently in the capital. Among these, special mention must be made of those from the Malay Archipelago who are known collectively as Djāwa; with them it is exclusively religious motives that have caused them to take up permanent residence in Mecca.

Even at the present day, slaves mainly African, form an important element in Meccan society. Abyssinian slave girls have always been highly esteemed as concubines. The slave-market however is no longer of the importance it once was. Freedmen rise from the slave caste and their dwellings, huts put together of every conceivable material, are on the outskirts of the city.

Artisans are, or at least down to the end of the sixteenth century were, organised in guilds. Among these guilds that of the pilgrim guides (*muṭawwif*, q. v.), who have agents in Djidda and outside Arabia, is the most important; it lives entirely on the pilgrim traffic.

This is true in a way of the whole population, which has arranged to let houses to the pilgrims for a considerable portion of the year. By the eighth month, tens of thousands of these visitors are in the town. Their number increases till the twelfth. In Muḥarram, Mecca resumes its usual appearance.

During the last few hundred years — except for the first Wahhābī period — the cult of saints in Mecca has steadily increased. Numerous places have sacred memories of Muḥammad and his family, the most prominent *muhādīrūn* and later saints; numerous kubbās were built over their graves and hawls and mōlids were celebrated in their honour. The Wahhābīs have done away with a great deal of this, how much is not exactly known.

Mecca is the seat of the government, although the king's residence is in Riyāḍ. The official gazette *Umm al-Ḳurū* appears weekly. There are also printing presses, which mainly print Wahhābī or Ḥanbalī literature.

List of the Sharīfs of Mecca (ca. 961—1916).

MEDĒA, a town in Algeria (department of Algiers), 60 miles S. of Algiers, in 36° 15' 50" N. Lat. and 2° 45' E. Long. (Greenwich). Medea lies at an altitude of 3,070 feet on the northern border of the mountainous massif which divides the high plateaus from the Mitidja. Down to the French occupation, it could only be reached by a bridle-path over the Muzaia pass (3,270 feet). The building of a road through the gorges of the Chiffa, alongside of which a railway now runs, has made access to it easier. The town itself is built at the foot of slopes covered with vineyards which yield wines of superior quality and orchards in which, as a result of the temperate climate, fruit trees grow very well. In the neighbourhood a number of European villages have grown up in which the cultivation of cereals is combined with that of the vine. There is also a fairly busy market but it is losing in importance since the railway has been extended to Djelfa at the southern end of the high plateaus. The population (census of 1926) is 13,816 of whom 2,225 are Europeans, almost all French and 11,591 natives.

Medea occupies the site of the Roman settlement of Lambdia, on the ruins of which Boluggin b. Ziri in the tenth century built the modern town. The district in which it was built was, according to Ibn Khaldūn (*Berbères*, transl. de Slane, ii. 6), inhabited by the Ṣanhādja tribe of Lemdia, whence no doubt the name Lemdani taken by natives of Medea. Of the history of the town itself we know hardly anything. Leo Africanus (Bk. iv., ed. Schefer, iii. 66) and following him Marmol (*Africa*, ii. 394) only tell us that after having belonged to the sultāns of Tlemcen who kept a garrison there, it passed into the hands of the sultāns of Tenes, and then of the Turks when the Barbaro-sas established themselves in Algiers. Under Ḥasan Khair al Dīn, Medea became the capital of one of the three provinces (beyliks) of the Regency, the beylik of the south or of Tilteri, to which at a later date was added the lower valley of the Sebou in Kabylia. Down to about 1770 we therefore find the hey of this province living alternately at Medea and Bordj-Sebou. It was not till this date that, the region of Sebou having been incorporated in the Dār al-Sultān governed by the dey, the bey of Tilteri settled permanently at Medea where he was in a better position to control the nomadic tribes of the plateaus. He had however no authority over the inhabitants of the town itself, who were under the authority of a *ḥākim* appointed by the agha of Algiers. The population, which did not exceed 4,000—5,000 among whom were many Kulughlis and Turks retired from the service, became wealthy through its trade with the south. Caravans brought thither the produce of the Sahara and also negro slaves who were sold to the citizens of Algiers.

During the years which followed the capture of Algiers, the French on several occasions (Nov. 1830—May 1831—April 1836) occupied Medea, without taking permanent possession. ʿAbd al-Kādir however placed a bey in it and had his

ownership of it recognised by the treaty of the Tafna [cf. ʿABD AL-KĀDIR]. The outbreak of hostilities again between the Emir and the French led to the final occupation of Medea by the latter on May 17, 1840.

(G. YVER)

MEDINA. The Arabic word *madīna* "town" [cf. AL-MADĪNA] has survived in Spain in a number of place-names. The principal are Medina de las Torres in the province of Badajoz, Medina del Campo and Medina de Rioseco, in the province of Valladolid, Medina de Pomar, in the province of Burgos, Medinaceli, in the province of Soria and Medina-Sidonia, in the province of Cadiz. The Arabic place-names *Madinat Walid* and *Madinat al-Faradj* correspond to Valladolid [q.v.] and to Guadalajara respectively (from the second Arabic name of this town: *Wādī 'l-Ḥidjāra*) [cf. above ii. 177, and it may be added that the town took its name from a known individual, Mālik b. ʿAbd al-Rahmān Ibn al-Faradj, according to Ibn al-Khaṭīb, *Iḥāṭa*, MS. in the Escorial, i. 189].

(E. LÉVI-PROVENÇAL)

MEDINACELI, a little town in the N.E. of Spain on the railway from Madrid to Saragossa, about halfway between these two towns, some 3500 feet above sea-level on the left bank of the Jalón. In the Muslim period it was called *Madinat-Sālim*, which is not to be confused with *Madinat Ibn al-Salim* or Ibn Ṣalim, in the Seville district (Idrisī, *Descr. de l'Espagne*, 174/208 and note 5, 177/215), the modern Grazalema in the province of Cadiz.

The Arab geographers give brief descriptions of Medinaceli. According to Idrisī, it was a large town built in a hollow with many large buildings, gardens and orchards. Abu 'l-Fidā' says that this town was the capital of the Middle March (*al-ṭhaḡhr al-awsaṭ*); Yāqūt adds that Ṭarīk [q.v.] found the town in ruins at the conquest of Spain but it was repopulated under Islām and became a prosperous town.

Through its geographical position, *Madinat Sālim* was of considerable strategic importance for the Umayyads from the fourth century onwards. It was on many occasions, as the last stronghold on Muslim territory, the point from which forces assembled at Cordova finally started for expeditions against the Christians of the N.E. of the Peninsula and to which they retired. Though somewhat decayed down to the reign of ʿAbd al-Rahmān III al-Nāṣir, it was rebuilt, if we may believe the detailed evidence of a chronicler quoted by Ibn 'Idhārī, in 335 (946): this ruler put the work in charge of his client, the general Ḡhālīb, and all the garrisons of the country lent their aid in the work. This Ḡhālīb remained governor of Medinaceli and all the Middle March until the power was seized by al-Manṣūr Ibn Abī ʿAmir [q.v.]. It was in Medinaceli that this famous *ḥaḍḍīb* died on 27th Ramaḍān 392 (Aug. 10, 1002) on returning from his last expedition against Castile. In the following century Medinaceli was frequently taken by the Christians and retaken by the Muslims, before being finally incorporated in the Kingdom of Castile.

(E. LÉVI-PROVENÇAL)

MEDJELLE (A. *maḡjalla*). Under this name the Civil Law Code of Turkey; is generally known it is an abbreviation of *Medjelle-i ahkām-i 'adliye*. The elaboration of this Civil Code took place between 1869 and 1876 and was a part of the legislative programme of the Tanzimāt [q. v.]. It had been preceded by a Penal Code (1858) and a Commercial Code (1861), but, while these two codifications had been based in a large measure on the laws of European countries, the Medjelle was a codification of that part of Hanafite *fiqh*, which treats of obligations (*mu'āmalāt*). The codification was done by a commission of seven members, having as president Ahmad Djewdet Pasha [q. v.]. In a preliminary report (*maḡbāṭa*), dated 18 Dhu 'l-Hijja 1285 (April 1, 1869), this commission explains the reasons why a codification of this matter had become necessary. The newly instituted secular tribunals (*niẓāmiye*) had often to deal with matters of common civil law, but the judges did not know much, as a rule, about *fiqh*; it had, therefore, been thought wise to appoint the president of the so-called religious tribunal at the same time president of the secular tribunal. This, however, did not prove satisfactory and so it was necessary to put the main points of the law of obligations into a code that could be more easily consulted than the voluminous *fiqh*-books. Among the previous endeavours to bring Hanafite law into this form the commission mentions expressly Ibn Nudjaim (q. v.); the biography of this jurist is to be found at the end of the first part of the Cairo edition of 1334 of his *al-Bahr al-rā'ik* [communication of Dr. C. van Arendonk]. The editors have followed as a rule those opinions of Hanafite doctors, which are most in harmony with the exigencies of modern life and business. It is, however, expressly stated that the Introduction (*muḡaddime*) and the first Book have been approved by the *Shaykh al-Islām* and other prominent jurists.

Though the different parts were successively sanctioned by Imperial *khatt* (with the formula *mudjibinde 'amel oluna*), the Medjelle cannot be said to have had an exclusive authority in the matter regulated. The judges were perfectly free to form their own opinion as a result of the study of the Hanafite law books and this liberty was really used.

The *muḡaddime* of the Medjelle contains in 100 articles a number of principles (*ḡawā'id*) as already elaborated by Ibn Nudjaim and his school; then follow sixteen books (*kitāb*), beginning with the *Kitāb al-Buyū'*; the last four books deal with process matters. The whole has 1,801 articles. The first part of each book gives definitions of the technical law terms used, and most of the articles are followed by examples taken from the collections of *fatwās*. The Introduction and the first book obtained the imperial sanction on the 8th Muḡarram 1286 (April 20, 1869) and the last two books on the 26th of *Shabān* 1293 (September 16, 1876).

The text of the Medjelle is to be found in the big code collection *Dustūr* (the introduction and book i.–viii. in vol. i.; book ix.–xiv. in vol. iii.; and books xv. and xvi. in vol. vi.). It has been published several times with a commentary, as the *Medjelle-i Ahkām-i 'adliye sharḥī* by P. M. Diyā' al-Din (Der-i Se'ādet 1311) and a work under the same title by the in his time famous jurist 'Āṭif Bey (Der-i Se'ādet, in different parts from 1328 to 1339; most parts had a second and the first part a third edition); the latter commentary, however, does not go beyond art. 1448. A full French translation is found in G. Young, *Corps de Droit Ottoman*, vol. vi., Oxford 1906, p. 170–446.

Since the Great National Assembly has adopted, on February 17, 1926, a new civil code (*Ḳānūn-i medenī*; cf. *Oriente Moderno*, vi. 134 sqq.), which is substantially the Swiss civil code, the authority of the Medjelle has disappeared.

(J. H. KRAMERS)

MEDJIDIYE. In February 1844 (Muḡarram 1260) in the reign of 'Abd al-Medjd the Turkish coinage was entirely re-organised on European models and this currency is known as the Medjidiye. The name Medjidiye was also given to the largest silver piece in the new coinage: the 20 piastre piece of this new issue; it weighed 372 grains (24.08 grammes).

(J. ALLAN)

MEHEDIA [See AL-MAHDIYA.]

MEHEMET, MEHEMMED, MEHMED. [See MUHAMMAD.]

MEHMED PASHA. [See KARAMĀNĪ MEHMED PASHA.]

MEHRĪ¹), the language of the Mahra country in Southern Arabia, which with *Shahwī* (spoken in the mountains northeast of *Zafār*) and the dialect of the island of *Soqatra* forms a separate branch of South Semitic; the relation of this branch to the now extinct languages found in the inscriptions of the Sabaeans, Minaeans and *Ḥaḍramawtans* has not yet been accurately defined. Mehri itself as a spoken language in South Arabia is seriously threatened by the steady advance of northern Arabic. The Mahra people are already almost all bilingual and their native idiom is very much influenced, especially in vocabulary, by northern Arabic; for example, of its old numerals it has preserved only the first ten; all higher numbers have been replaced by the northern Arabic forms. It is therefore not always easy to distinguish with certainty old words which are also found in northern Arabic from later borrowings.

As regards phonetics, the Mehri consonants are in general agreement with Arabic and Ethiopic. Of the laryngeals the loss of 'ain, which still sur-

¹) In this article the author's system of transliteration is retained for philological reasons.

vives in *Shhawri*, is characteristic of Mehri. The uvular plosive *k* seems always to be voiced; of the palatals the *g*, which still survives in *Shhawri*, is always liquified, as in northern Arabic, to *gh*. The case of the sibilants is particularly characteristic. The original Semitic *s* seems to have been preserved as such, but in many words, as in northern Arabic, the original Semitic *sh* has coalesced with it. This sound, which is preserved in *Shhawri* as well as in Canaanite and Aramaic, has often been replaced by *h* in genuine Mehri words, initially for example in *hima* (he) "heard" (compare *mishma* "ear-muscle") and medially in *nehā* "forgotten"; in the final position it may be dropped, as in *tey* "a little goat", *herē* "head". But when we find alongside of *huda* "to obstruct" *suda* "to carry over, to come to an agreement", which is connected with the Arabic *sadīd* "straight, correct", the latter can only be regarded as borrowed from the Arabic. This *s* however is also found in words like *libes* (he) "put on" and in the pronoun of the third pers. fem. *se, sen*, etc., in which any such borrowing is highly improbable; these must therefore belong to a dialect for which the phonetic law *sh* → *h* did not hold. The primitive Semitic *sh* has also survived where a following *t* was assimilated to it, even when the consequent doubling was dropped, as in the prefix to the causative reflexive *sha*. A primitive Semitic sound seems also to have survived in the *shin*, to which Jahn has given the name "lateral", and which is transliterated in the Vienna texts by *š*; it corresponds etymologically to the Arabic *shin*, and therefore to the *šin* in Canaanite and old Aramaic. Whether the position of articulation was exactly the same cannot of course be decided; but the description of the sound as "lateral" probably means the same as the pronunciation with flattened tongue which is assumed for Canaanite and Aramaic. Among the dentals we find alongside of *d* and *t* also the fricatives *dh* and *th* in native as well as loanwords; but in both groups the fricative pronunciation has frequently been dropped, e.g. in the case of *dh* regularly in the demonstratives; alongside of *thelāthemīye* 300, we have *telatin* 30. In *ser* "behind" *s* appears instead of the *th* in the Arabic *ashar* "track", probably under the influence of *r*, like *sh* in the Eth. *ashar* instead of the *asar* which we should expect. So also in the case of *z*: the fricative has in many cases become a plosive *t* under conditions still to be explained, as in *fohr* "noon", *afaim* "great" = Arabic *zuhir*, *ʿazim*. The voiced *q* has a lateral articulation differing from the Arabic. In the labials, as in Arabic, the voiceless fricative *f* corresponds to the voiced explosive *b*. Of the liquids, *n*, when in proximity to velars and palatals, is frequently more nasal than in Arabic. *L* and *r* before consonants frequently lose their own sound and merge in the preceding vowel, as *matigh* "slain" from *ltgh* = *kt*, *r* *ʿadās* "he carries her" from *ghil* (by dissimilation in *lil* "night", *kilil* "every night"), *karn* > *kōn* "horn", *kās* > *kōs* "belly".

The vowels are frequently prefaced with the laryngeal fricative instead of the laryngeal plosive, i. e. we often have *kā* for *hanza*. As in Ethiopic and probably also in primitive Semitic, only two short vowel sounds, *a* and *i*, are distinguished, while of long vowels we have *ā*, *ū* and *ī*. The old diphthongs are contracted to *ē* and *ō*. These basic vowels are however more strongly affected

than in Arabic by the predominant articulation of consonants. The distinction between *a* and *i* is thus frequently obliterated. Stress brings about the disappearance of short vowels in unaccented syllables and lengthens them in accented ones, whereby *a*, if it is not retained by laryngals or emphatic (i. e. pharyngealized) consonants, becomes *ō* (which often passes into *ū*), open sounds adjoining it however become *ē*, *ī* (*imāla*). Assimilation of vowels in adjacent syllables is frequent. Original long vowels after laryngals and emphatic consonants become *au*, *ou* and *ai*, *ei*.

Of the phenomena of sound-shifting and sound-change in combination, a characteristic feature is the tendency, paralleled in the vowel assimilation just described, to bring voiced and unvoiced sounds into agreement (Jahn, *Grammatik*, p. 8). On this is based the transformation of Arabic *ashawu* "of others", the root of which poetic language retains in *wākhār* "to be delayed", into *ghāher* with metathesis of the initial sound (*hamza* being replaced by *h*) (cf. *mghāre* "thereupon", while the *ghair* of the Arabic, which Bittner, *Studien*, i. 15 compares with this, is to be regarded as distinct). The tendency to the assimilation of *n* is, as in Arabic, usually counteracted by the necessity of maintaining the verbal system. Although the disappearance of vowels produced by stress sometimes produces double consonants initially, this is frequently avoided at the end of words by the insertion of an epenthetic vowel, e.g. *aref* alongside of *ard* "earth". Such additional syllables are found medially also before sonants as in the subj. *yidelēf* (: *yiktōn*), after laryngals as in *yikhām* and velars as in *yikhābēs*, *yaghazēh*, etc. Dissimilation, especially between sonants (*sanb* "idol" from *sanam*, *subōn* < *zanān* "time"; Hein, p. 117, 25), haplogy as in *ʿadit* > *ʿit*, *ʿait* "one" (fem.) and strong metatheses like *katala* > *l. tōgh* "he slew", *shamū(t)* > *hemēt* > *hētem*, *hiteri* "heavens" also contribute to give the Mehri vocabulary its special features.

The pronoun has preserved very archaic forms. The first personal pronoun *ho, hu* can probably not be equated (as Bittner, *Studien*, iii. 7 suggests) to *kū* in Accadian *anāku*, as the change *k* > *h* is not found elsewhere in Mehri, but must be connected with the primitive Semitic *ʾā* (with aspiration of the initial vowel — see above). It is also improbable that the 2nd pers. pronoun sg. *het*, plur. m. *tem* f. *ten*, should preserve in the singular, with assimilation of the *n*, the initial syllable *ʾan* found in the other Semitic languages, but reject it in the plural. It is perhaps more probable that the initial sound of the 2nd pers. has been assimilated to that of the 1. and 3. The 1. plur. *nhā* reveals a corruption of the primitive Semitic *nihnu*. The 3. pers. has alone among Semitic languages preserved the original difference in the initial sounds. m. *he*, f. *se*, plur. m. *hum*, f. *sen*; on the other hand, the double distinction through the vowels has been dropped. Among the suffixes may be noted the distinction of genders, found also in some North Semitic dialects, in the 2. pers. m. *k*, f. *sh*, with palatalisation from *ki*, as in *Shhawri* *shibit* (Muller, iii. 113, 14) and Soq. *shibdeh* (Muller, ii. 227, N^o. 2), "liver". In place of the suffixes, the independent pronouns may also be used with the genitive particle as *mōl di-āw*, "my farm"; *hār awen lehēt*, "thy sheep".

The demonstrative pronouns end in the sg. in *d* (in place of *dh*) and distinguish the

genders as in Arabic, m. *dā*, f. *dī*, in plur. comm. *lū*; they are further combined with (*u*) to m. *ām(e)*, f. *dīm(e)*, pl. *līm(e)*, with *k* to m. *dāk(e)*, f. *dīk(e)*, pl. *lūk(e)*, or with both elements to m. *dākem(e)*, f. *dīkem(e)*, pl. *lūkem(e)*; in the basic form both genders when unstressed sometimes coincide in *de*, in the combined form in *dekme*. The basic form, reduced to *dā*, *dē*, *dī* without distinction of gender, pl. *lā*, *lē*, *lī*, serves also as a relative. In the interrogative besides the personal *mōn* "who?", we have the neuter *hē* < "ai" "what?".

Of the numerals, as already mentioned, only the first ten have survived. "One" in the basic form *hād* is only used as an indefinite "any one"; otherwise it has been driven out by the relative phrase *dhād* > *fād*; the fem. takes, the ending of the nomina unitatis (see below), which by analogy has been transferred to 2 and the other numerals except 4 and 5, perhaps under the influence of *th-menit* 8, which follows the regular phonetic law; from **fadit* we get by haplogy *fit*, *fait*. The numeral 2 agrees in its stem with the Aram. *thū* (like *bu* > *habrē* "son" with *bu*), the ending *ū* from *ā* is the old dual ending of the nominative. In 3 the initial letter, as in Sabaeen and Ethiopic, is dissimilated (from the final) to *s* and the final has become a plosive: *silit*; the feminine form after dropping the *t* (see above) has dissimilated the final *th* of the stem to *f*, becoming *sāfāt*. 4 *arbat* loses in the feminine the unaccented first syllable: *bat*. 5 loses the last radical, weakened to *h*; in the masculine the basic form *khimish* has through vowel assimilation become *khame* through *kh-mish*, the feminine shows the feminine ending *ō*, to which the vowel of the stem is assimilated: *khemō*. 6 and 7 change the initial *sh* to *h*, while the final *dth* of *ō* as in Arabic by mutual synthesis becomes *tt*: *hitt*; 7 following phonetic laws: m. *hōra*, f. *hōrēt*, 9 loses its initial sound, which had already lost its vowel in the unaccented syllable: *sa*, f. *sait*. 8 and 10 show, following regular phonetic laws, m. *themōne*, f. *th-menit*; m. *ōser*, f. *asūt*.

Among the nouns, the most noteworthy for their form are those which were originally monosyllabic; they are found throughout with the prefix *ha* (*hā*) as in *habrē* alongside of *ber* (see above) "son", a new formation (differently Bittner, i. 28, 3), following *habrit* alongside of *bert* "daughter", *hamū* "water". *hayām*, *hāyām*, *hām* "day, sun" alongside of *yamō* "to-day", *hāliu* alongside of *lēt* (*hūt*, *kalēt* see above) "night". *Heb* "father" and *hand* "hand" are therefore not to be equated directly with *ab* and *ād* with *h* for *h* instead of *hamza*, as it is found in *hām* "mother", but we must recognise in them as well the prefixed syllable which is found also before some nouns which are trilateral in the other Semitic languages, like *herē* "head" = **rāsh*, *hanōf* "soul", which Bittner explained by metathesis, *lanō* "vessel" = Ar. *nā*, *hānōb*, pl. *hanōb* "great, elders" = Ar. *nāb*, pl. *anāb* "old she-camel, head of a family", *h-nid* (Shh. *nīd*) "water-skin" = Hebr. *nād*, Accad. *nānu*. In *bu* *hū-rōū* "in a valley" (Muller, iii. 24, 3) this syllable (here assimilated only to the beginning of the next word) serves as an indefinite article, which has lost its significance in the above words and become a component of the stem, so that it also appears in the plur. *habūn* etc., but originally however must have been identical with the numeral *had*, which is still used as an

indefinite pronoun. *Hadid* "uncle" and *haddit* "aunt", *hithet* "fox" *thāt* show the *ha* weakened to *ha*. A. Ember, in *Zeitschr. f. ag. Spr. u. Alt.*, li 118, 138, compares these nouns with the assimilated stems with prefixed *h* in Egyptian discussed by Sethe, *ibid.*, xlvii. 80, note 2.

Of other nominal forms we need only mention the diminutives, sometimes with internal formation similar to Ar. *ḥawāṭil* (see Rhodokanakis, *Zur Formenlehre*, p. 5), as, for example, *ḥawafēt* "little child", sometimes also with the ending *ān*, which here always appears as *en* under the influence of the diphthong of the basic form *ḥatān* (Rhodokanakis, *ibid.*), *waḥāṭin* "short time".

The feminine ending *at* takes the accent in nominatives with short stem vowel and therefore appears as *āt*, *ōt*, or with assimilation to close front vowels as *ēt*, as in *rahmāt* "rain", *ḡahāt* "leaf", *ḥaḥīrēt* "chamber"; after long stem vowels however, it is unaccented, as in *aldinet* "flag", *jkhāidēt* "tube", *dhīrēt* "palm-wood", especially in loanwords from the Arabic, while in true Mehri words the vowel in the unaccented syllable usually disappears and the vowel of the now closed root syllable is abbreviated, as in *ḥajt* (= Yemen *ḥāje*) "town, village", *sust* "woman", *ḡayest* "meal", at the same time showing assimilation of the final consonants: *dhitt* (from *dhīt*) "good" (fem.), *ḡanett* (from *ḡanīn*) "small" (fem.).

Another feminine ending *i*, which still occasionally appears unsupported in Arabic and Aramaic, is here found, as in most Semitic languages, only in combination with the usual ending *t* as a regularly accented *it*, e.g. in the participles, and again in simple noun-stems, corresponding to the masc. ending *one*, e.g. *tōrōne*, f. *tōrite*, in the derivative stems like *mesāṭre*, f. *mesāṭite*, *meṭtekerē*, f. *meṭtekerite* with from the masculine transference of *e* < *i*, and also in the feminines by signification derived from the masc. like *keḥut* "bitch", *habrit* "daughter" (see above), *bālit* "lady" from *bāl*, *dhīrit* "noble lady" from *dhīr*. The endings of the nomina unitatis likewise end in this way in *oidūt* "egg" from *ōd*, *lūnit* "citron" from *līm*, *sejit* "hair" from *sef* (alongside of the usual ending as in *khābēdēt* "bread", *nāḡhēt* "date-palm"); as in Tigre and Tigrina, these are really feminines of adjectives of relation, which in their original meaning preserve the full form *iyet* (see Rhodokanakis, *op. cit.*, p. 6, 7).

Of the dual only a trace remains in *thū* 2; perhaps however also in the ending *i* of nouns before this numeral, like *ḥarḥi*: *thū*, if this is not simply an epenthetic vowel before the double consonant. *ḡhāṣṣen*, borrowed from the Arabic *al-ḡhāṣṣ*, takes the meaning "period after the 'asr'"; from this is formed on the model of *fenḡāwen* "before", *ḡhāṣṣeen* "at the time before the 'asr'".

The sound plural of the masculine with the ending *in* (*am*, *an*), before suffixes *i*, is still in use to a greater extent than in Arabic. The plural of adjectives of relation in *īn* is still found alongside of the contracted form *in*, frequently in names of trades like *ḥammālīn*, *ḡayāṣīn* (Rhodokanakis, *op. cit.*, p. 9). The ending of the fem. pl. is *ēt*, sometimes *een*, which does not, as Bittner thought, maintain the nunation, which survives in Mehri (as in modern Arabic and in Hebrew and Ethiopic) only in adverbs. The suffixed syllable is the plural ending of the masc. in unaccented syllables (*Grundr.*, i. 442), just as the fem. sg. *it* takes the masc.

ending *e* (see above), or it may be, as Rhodokanakis (*op. cit.*, p. 8) suggests, the other plural ending *ān*, as in Accad. *kullātūn* "all". In the formation and use of the broken plural, Mehri adopts a mean between Arabic and Ethiopic. Characteristic are a number of formations from plurals of the plural, such as are found also in Arabic, e.g. *ṣarḳ* "a piece of wood", plur. *-ṣarḳ*, then *-ṣarāyik* and thence *ṣeryak* (Rhodokanakis, p. 11 sqq.). Double plurals also arise through the addition of the masc. pl. ending *in* in *riaheṇ* "wind", *dhembin* "tails", *sehmīn* "bows", to which the original plurals *iāh*, *dhenōb*, *shūm* are then taken as singulars (Rhodokanakis, p. 9), and again with vowel reduction after the accented syllable in *kilēben* "bitches", *habānten* "daughters", in which however Rhodokanakis (p. 15) sees the ending *ān*.

The case-inflections, except for a few remains of the accusative in some adverbs, have completely disappeared. The genitive is expressed by the simple juxtaposition of two nouns, more frequently by the relative, sometimes with a demonstrative suffix, as in *djeldēh de ghōleb hibrē di bagrēt* "the skin of the steer, the young of the cow", Hein, p. 15, 16, alongside of *hebrē tīwīt* "the young of the ewe", *ibid.*, p. 3, 17.

Determination and indetermination are never indicated. Nunation only survives in some adverbs, like *fenōwen* "in front", *shairen* "behind", *mghōren* "later".

The prepositions of Mehri are for the most part new formations, some of uncertain origin. Of the old Semitic prepositions, only *hi* (*bā*, *b-*), *bein*, *bād* "after", *le* < *alā* and *ilā*, and *min* have survived; *ka*, *ke* has come to mean "with". The place of *li* has been taken by *ha*, *he*, which Bittner traces to the first syllable of *iā*, but this is not very probable. The other prepositions have been replaced by words indicating place, like *fenōwen*, *fenē* "before", *ser* (properly "track") "behind", *terwāl*, *turwāl* "at" (properly a T-nomen connected with Arabic *walīya* "to be near", rather than with Syriac *kwāth*, as Bittner considers), *nkhālī* "below" (properly "depression", but Soḳotī, *nhet*; Müller, iii. 54 *infra*, or parts of the body, like *burek* "in" (lit. "in the bottom"; Christian) and *far*, *fair* "upon" (properly "back").

The verb distinguishes from the simple form, which is found in the active as *ketōb* "wrote" and stative as *libes* "was clothed", an intensive which has however dropped the doubling and thus coincides with the purposive, and a causative with the prefix *ha*, which in the imperfect also sometimes has the same form as the intensive (e.g. *hemrōd* "to tend a sick person", impf. ind *yihemrōd*, subj. *yihamrad*, but *haṣalāh* "to remedy", impf. ind *yihāṣalāh*, subj. *yihāṣalāh*). The causative has very often a passive sense, like the simple intransitive verb, with which it often coincides as an inner causative. To each of these stems there is a reflexive with inserted *t*: to the simple verb in double form as *kattēb* or *katetēb*, or with assimilation to the vowels of the simple verb *ktetēb*, to the intensive *ktōtēb*, to the causative from the simple form *shaghfer* "to beg pardon", to the purposive stem *shhākem* "to go to law", *shdjēdel* "to quarrel".

In contrast to the perfect (quoted above as the normal form), which expresses a fact as such, there is an imperative in the active *tebēr* "break", in the stative *lebēs* "put on", in the intensive

sōfer "travel", in the causative *hakteb* "cause to write", in the reflexive *ktēbēb*, *ktetēb*, *ktōtēb*, in the caus. refl. *shaghfer* and *shhākem*. From these imperatives is formed the affective mood (Bittner's subjunctive), like *yitbēr* "that he crush", *yilbōs* "that he put on", *yisōfer* "that he travel", *yihakteb* "that he write", *yiktēbēb*, *yiktetēb*, *yiktōtēb*, *yishaghfer*, *yishhākem*. Next there is expressed the progressive aspect, which presents the action as in progress, often with limitation to the present and future, a form which doubles the second radical in the simple verb but, as in the intensive, has replaced the reduplication by lengthening the vowel as in *yitōbēb* "he crushes", so also in the causative *yihakōtēb*, but in the intensive and sometimes in the reflexive shows an ending corresponding to the Arabic energeticus, as in *yisāferen* "he travels", refl. *yiktetēben* and *yiktōtēben*, caus. refl. *yishhākemen*. In the intransitive simple verb, the affective mood serves also to indicate that an event is happening at the present time (as a so called indicative); on account of the relations of the intrans. to the caus. and refl. already referred to this formation, but now for the indicative only, is transferred to these forms in *yihaktōb* (alongside of *yihakōtēb*), *yishaghfer* and *yiktetēb* (from *kattēb*).

In the so called perfect in active verbs, the stress remains on the second syllable of the stem with the exception of the 3rd fem. sg., the ending of which *ēt*, as in the noun, attracts the emphasis to itself (*teberēt*). The 3rd pl. has lost the endings and replaces them only in the masc. by *em*, which comes from the pronoun. The consonantal terminations have lost their vowels, but the double consonant at the end of a word is separated by the insertion of an epenthetic vowel only before the sonant *n* of the 1st pers. plur. (*tebōren*); before other terminations the vowel of the stem remains short. As in Ethiopic the initial of the 2nd pers. is assimilated to that of the 1st (-*k*); as in the suffix, the 2nd fem. sg. appears in the palatalised form *sh*. The intransitives with the exception of the 3rd fem. sing. retain the stress on the first syllable of the stem, the vowel of which is assimilated to that of the second (*tiber*). In the intensive the lengthening of the *a* to *ō* is found only in the forms which do not add a termination.

In the imperative in the transitive simple verb as well as in the causative there is no distinction of gender in the singular. In the intransitive form however, the vowel of the second accented syllable of the stem was assimilated to the feminine ending *i*, so that even after it was dropped the distinction between m. *tebōr* and f. *tehir* was retained, similarly in the reflexive *ftehōm*, *ftehim*.

Accordingly, in the intensive and its reflexive and in the causative reflexive the distinction of gender is expressed also by changing the accented vowel: m. *sōfer*, f. *sifer*, m. *nōbēh*, f. *nūbēh*, m. *shhākēf*, f. *shhākyēf*. In the plural the genders are distinguished by the endings in *-em*, f. *-en*. In the intransitive simple form however, the vowel change is transferred from the singular to the plural, m. *tebōrem*, f. *tebiren* and in the reflexive of the scheme *ktetēb*, with peculiar change of function m. *ktetēbem* (assimilation to the indic. imp. *yiktetēben*, pl. *yiktetēbem*), f. *ktetōben*. The same change of function is also found in the perf. of the causal: 3 m. pl. *haktēbem*, f. *haktōb*.

Out of the imperative arises the so-called subj.

of the impf. by means of the same personal prefixes as in all Semitic languages and with the endings *i* for the 2nd sg. f. and m. -em, f. -en for the plural of the 2nd and 3rd pers. In the corresponding indicative the distinction of gender is expressed in the second person by internal vowel change, m. *tetöber*, f. *tetiber* and on the addition of the plural endings the short vowel (*yiteberem* etc.) is restored. In the intransitive simple verb the moods are not distinguished, the genders of the 2nd pers. sg. are distinguished by the same vowel change as in the imperative; this vowel change is also transferred to the plural (m. *tetbörem*, f. *tetbiren*) and with exchange of functions also to the 3rd pers. (m. *yitbirem*, f. *tetbören*). In the intensive, distinction of gender in the second person is expressed only in the singular (subj. *tesöfer*, f. *tesifer*, indic. m. *tesáferen*, f. *tesiferen*); before the endings, the vowels are short and the mood endings give way to the plural endings so that the 3rd pers. f. sg. and pl. are the same: *tesáferen*.

The participles are in the simple form active *tebröne*, f. *tebríte* (see above), pass. *metbir*; in the derivative stems as in e.g. intensive *mekâtebe*, f. *mekatebite*, caus. *mehákete*, f. *mehaketebite*; in the passive they follow the model of the simple verb, *makhazáis* "despatched" (in the intensive only when borrowed from the Arabic like *meqaddem* "chief").

The infinitives are in the simple verb of the form *tiber* (more rarely like *ghādel*: "to carry", *mirēd* "to be ill") or *dabyūl* "to take" (frequently with med. lar.), with prefix, like *māmūl* "work", or with ending like *ghafirōn* "to forgive"; in the intensive *tebrid* "to cool down", in the causal and the reflexives with the ending *öl* (*ül*) as in Eth. *hakteböt*, *kteleböt*, *shaghferöt*.

In the verbs with laryngeal as second radical, the perfect is e.g. *djehēm* "he went"; it is therefore, as in Ethiopic, the intransitive scheme with the type of the transitive making itself felt; the imperfect is therefore inflected as in the intransitives without distinction of mood. As a first radical, a laryngeal frequently produces intrusive syllables, as in subj. *yihakēm* "let him judge". *Hamza*, arising out of 'ain as first radical, acts in the same way, e.g. *ya'anāf* "let him become hard" (cf. Arabic 'anafa, not Hebrew 'ānaf as Bittner suggested), while an original *hamza* disappears, as in *yāmer* "let him say". As a second radical 'ain disappears, but keeps a in the perfect of the simple verb unchanged, as *fān* "thrust (past tense) with the lance". In the verbs with third 'ain, unlike Ethiopic, trans. and intrans. formation is distinguished in the simple verb, whereby the perf. of the trans. coincides with the intensive (*dāfa* "he paid" like *dāma* "he collected"): the intransitives distinguish the moods of the imperf. exactly like the transitives.

In the verbs with first wāw, the primitive Semitic formation of the biliteral stem is dying out. It is true we still find the imperative *zēm* "give" with the subj. *yizēm* and *kēb* "come in" with the subj. *yikēb*, but *kēb* is already limited to the feminine and the masc. *wekōb* formed from it; we have besides the reduplicated imperatives: *zēm-zēm*, *kēb-kēb*, as well as *daḡadik* and *shakashik* "to load", and with vowel lengthening *thākh* "to calm" and *djeyō* "to be necessary". In secondary formations the *w* disappears from the root in some forms of the reflexive, like *watkhaḥ* "to go in the

afternoon", imp. ind. *yitkhōf*, subj. *yitakhf*, inf. *takhf* and *watkaḥ* "he awakened", imp. ind. *yetkōt*, subj. *yetekeḥ*, inf. *tekeṭein*. For the rest the first-wāw verbs inflect regularly, and the few first-yā verbs follow them.

The third-hamza verbs very often coincide with the third-wāw and third-yā. In the transitives in the simple form we have *ū* throughout and in the intransitives *i*, which in the perfect in the forms with consonant endings merges with the stem, e.g. *ksū* "he found", but 2 m. and 1 c. *kusk* and *šini* "he saw", but *šink*. In the 3rd plur. m. besides the original *ksūem*, we have also *kšūm* with secondary vowel differentiation, and with a new formation on the model of forms like *kuskem* also *kusem*. In the imper. and subj. the form of the third-yā, like *ksē*, *yiksē* has predominated; in the indic the unaccented final vowels disappear except in the 2. f. sg. (*tekyisi*). The denominative *birū* "to bear" from *ber* "son" follows completely the strong paradigm *tiber*, only the *i* of the 2. sg. f. is also found in the 3rd, e.g. *tibriu*, alongside of *tibrōu* and *tiberū* (Muller, iv. 31, 24). In the derivative stems only the 3rd m. sg. of the perf. in the caus. (*haksū*) and its refl. (*shaksū*) is formed after the trans. simple verb, in all other forms the paradigm of the third-yā is followed (*kōsi*, *klōsi*, *karsi* etc.). But the final vowel is lost in the imperative always and in the subj. of the reflexive sometimes (*katir* "hide thyself", subj. *yikatir*, but *ghatir* "speak", subj. *yighatir*), and both forms lose it regularly in the causative and its reflexive (*hebd*, *yihēbd*, sometimes with lengthening: *heyder* "get up", *yihēyder*, *shudh* [Jahn, p. 113, 25] "give heed", *yishūdah*).

The medial *ū* and *i* verbs are, as in Ethiopic, to a great extent assimilated to the plan of the strong verbs, *yā* and *wāw* being treated as consonants. Only in the simple form of the med. *ū* is the old Semitic inflexion retained in principle. But the old form *yimūt* (frequently *yimōt*) has become indicative, and a new subj. has been formed with vowel change, *yimēl*, followed by the imperative *mēt*. As in the intransitives, the ending of the 2nd sg. f. reacts on the stem in the indicative: *temit*, whence also the fem. plur. *temiten* to the m. *temōtem*, and the 3rd pers with these reversed: *yimitem*, *temōten*. In the perf. *mōt* < *māta* is retained but abbreviated before consonant suffixes, as *metk*; the participle from it is *metōne*. But the pass. part. is quite strong in formation as *makh-zif* "feared". Some verbs, probably formed from nouns, follow the strong paradigm throughout the simple form, like *tawōb* "to be finished", *hāwēl* "to be mad". This is always the case in the reflexive of the base, e.g. *šetwēk* "to long for home" and in the causative, as *hadwōr* "turned" and its reflexive, e.g. *shkowōb* "warmed himself", as well as in the med. *yā* verbs e.g. *seyōr* "travelled". The intensive stem shows a peculiar formation, e.g. *awid* "returned", impf. i. ind. *ye'awiden*, subj. *ye'awid*, imp. *awil*, part. *ma'awide*, inf. *awōdet* (from the simple verb, elsewhere however like *ta'awir*) and *ayit* "called aloud" following the formation of the doubled verbs.

The biliteral roots with short vowel (the so-called med. gem. or doubled verbs) have retained the primitive Semitic inflexion with doubling of the second radical only in the perfect of the simple form; in addition the consonantal endings take an epenthetic vowel: 3rd m. *temm* "was at an end":

f. *temmōt*, 2nd m. *temmek* etc. But the vowel of the stem changes without regard for the meaning: *hās* "thought of", *riśś* "crept" (spider), *hudd* "stopped", *zull* "lost the way", *ghott* "covered", *debb* "crept". The imper. and subj. follow the pattern of the strong verb, e.g. *temmā. yitmēm*. The indicative however is *yitmēm* (*yiflūl*). This is a new formation on the analogy of the med. *ū*, like *yimūt*: *imēt*. The simple form *yitammēm* had avoided the threefold repetition of the same sound just as the intensive has done, by forming in the perf. *temm*, ind. imperf. *yit(e)mēm*, subj. *yitmēm* (with assimilation to the vowels of the inf. *tetmēm*). The causative of the simple form follows in the perf. *katmēm* and ind. impf. the strong paradigm e.g. *yimātēm*, while in the subj. the succession of similar consonants is avoided, as in Aramaic, by doubling the first radical: *whāttēm*, and in the imper. *hatten* and part. *mahattāne*. The causative of the intensive however follows its formation, e.g. perf. *katmēm*, etc. The reflexive of the simple form replaces in the perf. (after the model of *katteb*) the repetition of the second radical by doubling the *t*: *fattak* "was released", but in other respects follows the pattern of the strong verb e.g. ind. *yiftē'āk*, subj. *y'fakk*, imp. *fakk*, part. *miftakke*, inf. *fakkēt*. The causative reflexive follows the same pattern but with doubling of the 2nd radical in the subj. and part.: *sh.mā'ūd*, "he attained", ind. *viš-mūdūd*, subj. *yvsh-mmed*, part. *mēsh mmede*.

The suffixes are added to the 3rd pers. sg. m. of the perf. with the "binding vowel" *i*, which as in the similarly constructed forms of the Syr. imperf. (e.g. *niškēlin*) may have been an originally independent particle, which in Arabic is expanded to *iyā*, cf. e.g. *ghabir* "he met her" with *ghabōr*. Only before the 2nd pers. sg. m. suffix, *ū* appears instead for unknown reasons. This *i* may also appear in association with the element *t* found in North Semitic (Hebrew *ʔēth*, *ʔēth* etc.), probably abbreviated from the verb *atā* "to come", which with the 2nd pers. sg. m. *tāk* also shows *tēl*. These independent suffixes however may also appear after all the other verbal forms, which otherwise take the suffixes direct or with an epenthetic vowel.

The vocabulary shows the closest affinity, apart from later borrowings, to northern Arabic, but possesses, in addition to many characteristic new formations like *ḥāḥ* "mouth" (cf. Arab. *ḥawāḥiḥ* "air-hole"), many old words which otherwise survive only in outlying regions, like *fām* "foot" as in Punic, instead of the phonetically inconvenient *riḥl*, so also *thūwēt*, *thūt*, Sok. *teten*, *ta*, Müller, iv, 170, 22, 1, 2, "sheep" = Eg. *Arām*, and M. *nd*, *tēthā* (see Lidzbarski, *Eph.*, ii, 256; *Jahannussch.*, ii, 215 note); *frāḥre* "together", cf. Accad. *ta'āru* "to assemble". The language of the Beduins and that of poetry has in addition many special features, particularly in its vocabulary.

MEKNES (AR. *MIKNĀS* and *MIK'ĀSĀT AL-ZMITĀS*), a town in Morocco, one of the residences of the Sultān. The old French name *Miquenez* or *Miquenez* has not prevailed against the form inspired by the ethnic.

Situated in 5° 39' W. Long. (Greenw.) and 33° 53' N. Lat. at an average height of 1,700 feet above sea level, Meknes is 80 miles east of Rabat and 40 west of Fās. It occupies the centre of the transitional zone which lies between the Middle Atlas, 30 miles to the south, and the Sebū. It commands the exit towards the Ḡharb of the depression ("south Rifan pass") which separates the massif of the Zahrūn from the plateau of el-Hādḡeb. At Meknes intersect the roads from Rabat to Fās, from Tāfilālt through the land of the Benū Mgild and Azrū, from Mariāḡkush through the Tādā, Meknes at the present day is economically connected with Kniḡra.

The temperature rarely exceeds 30° C. or falls below 5°. The rainfall (491 mm. in 1929) is remarkably equal from one year to the other. The excellent water supply of the plain of Meknes and the quality of its light soil, resting on a subsoil of permeable limestone, make it one of the best agricultural districts of Morocco.

The population at the last census was 30,000, of whom 19,000 were Muslims and 6,000 Jews. Canal in 1902 put it at 20,000 of whom 9,000 were Būāḡhers and 5,000 Jews.

Meknes is built on the flank of a mountain spur. The ruins of the *Ḳāḡba* of Mawlāi Ismā'īl lie to the S. E. of the native town, and give to the old town, surrounded by walls of clay, a considerable extension, of which the *mdīna* itself only covers about a fifth. Beyond the ravine dug out by the Wālī Bū Fekrān the European town has been laid out and is being built. The appearance of the native town, dominating this ravine and placed upon a verdant plateau, is striking. The houses of the *mdīna*, often substantial, are always very simple. There are only fifteen or so houses of an artistic interest. They date for the most part from the reigns of Sultāns Muḡammad b. 'Aḡ al-R.ḡmān and Mawlāi al-Ḥasan. The suburbs of the town look like the streets of a country village. The saḡs, which lie between the Madrasa

Bū 'Inānia and the *Djāmi* al-Naǧǧdījārīn (sūks of the jewellers, carpenters and curiosity shops), have no remarkable features except the covered *kašārīya* [q. v.] the booths of which were ornamented a few years ago with shutters of painted wood. The *mel āh* [q. v.] of Meknes is to the south of the *mdina*; it seems to have been here since the reign of Mawlāi Muḥammad b. 'Abd Allāh. A new *mel āh*, three times the extent of the old one, has been occupied since 1925. The *mdina* of Meknes is one of those which have retained their native character most unaffected. Only one artery, the Kouāmin street, is accessible to European trade and traffic. The centre of the town's activity is the Hedim square. In the evening the story-tellers and buffoons, who usually call themselves *shorfa* of Mawlāi 'Abd al-Ḳādir al-Gilāni, are surrounded by a crowd, the animation of which is exceeded only by that which fills the *Djāma* al-Fina at Marrākush. To the S.E. lie the vast ruins of the *kašba* of Mawlāi Ismā'il. They now reveal nothing but chaos and disorder. The only buildings still kept in repair are the *Djenān* b. Ḥahma, out of which the Direction de l'Agriculture has made a charming garden, and the *Dār al-Baiḡā* which is now a school for native officers. In the *Dār al-Makhzen* live the last surviving women of the family of Mawlāi al-Ḥasan and sometimes it is used as a royal residence. Begun at the end of the xvth century this palace was built in several periods. The *Bāb Dār al-Makhzen* dates from 1889. In the ruins of the *Dār Khira* live the families of the Ḥasani *shorfa*, near the abode of the *naḳib* of the *shorfa*, Mawlāi Kabir b. Zulfān. To the *Djāma* al-Aḳḳāḍ mosque the *ḳādis*, *shorfa* and principal officials go every Friday and on the occasion of solemn prayers. In the old Agdāl of Mawlāi Ismā'il, among waste lands, an ostrich farm, the origin of which goes back to Mawlāi 'Abd Allāh, has been laid out, beside an experimental garden. Farther on there is a horse-breeding establishment. The remainder is nothing but ruins. The visitor goes along miles of massive walls and finds enormous ruins: the Heri al-Manṣūr used as a stable and storhouse for forage, the stables, the granary and the ornamental water left to go to ruins.

There is very little industry in Meknes: carpentry and particularly weaving, already noted by al-Iḍrisi. The most notable artistic industries are the many coloured embroideries of large irregular point lace and painted wood. The public services endeavour to keep going these trades, in which purely Berber influence is more and more marked. European competition is severely affecting, at Meknes as elsewhere, some classes of artisans, like the tailors, smiths and potters. The building trades, on the other hand, are flourishing. Sūks are held outside the town and are attended by the country people, the Sūk of the Bāb Dīdīd, before the gate on which the heads of rebels used to be placed for the edification of the tribes, the Sūk al-Ḳhams and that of the Lanterns. There is no native commercial house of any importance. The market of Meknes does not extend beyond the environs of the town: it exports nothing except in years of abundant harvest. The region was already famed in the tenth century for its fruits, its vines, its gardens and its vegetables. The mills, four or five of which are still working, date from the same period. Since the French occupation, colonisation has developed

considerably. The colonists, most of whom have come from Algeria, cultivate mainly wheat, of which they are obtaining increasing yields. The cultivation of the vine is increasing each year. The region of Mawlāi Idnis is one of the principal centres of olive-growing in Morocco (400,000 trees); 330 farms are laid out in the district, covering 85,000 hectares. Official colonisation which has now disposed of almost all the reserved lands has been out-distanced since 1927 by private colonisation. The native farms (130,000 hectares) tend to disappear from the plain and to confine themselves to mixed farming in the mountains. Prospecting for minerals has only been done piecemeal, traces of petroleum have been found beside Petitjean and of lead in the Central Atlas.

The government of Meknes, which is a *maḳh-zaniya* town, is in the hands of a *bāshā*. He is also *tāshā* of the Būāḳḳhers, who have retained a relic of their past greatness in a special statute and down till 1912 provided the garrison of the town (800 men according to Le Châtelier). The *naḳib* of the Ḥasani *shorfa* exercises a jurisdiction independent of that of the *bāshā*. In the administrative organisation of the protectorate, Meknes has been made the capital of a very considerable area. It was from it that the military operations in the Central Atlas were directed. Although this active part is now over, Meknes is still a military command, and its administrative region, although greatly reduced, still stretches to Midelt. Situated in the centre of Morocco at the junction of important roads, Meknes is marked out as one of the strong places of the country in the future: a military camp is being laid out at el-Hādġeb.

The population of Meknes consists of many distinct elements. *Shorfa*, Būāḳḳhers, Berbers and Jews. The Idnisi *shorfa*, who have played their part in the history of the town and retain privileges (of the numerous descendants of Mawlāi Idnis, only the families residing in Fas and Meknes are allowed to share in the income of the *zāwiya* of Fas) and the Ḥasani *shorfa*, who have many privileges of their own, form a kind of aristocracy, generally penurious. The Būāḳḳhers, descendants of the *ʿabid* of Mawlāi Ismā'il, up till 1912 formed an unreliable element, which was always a nucleus of trouble. Since that date they have been taking up the trades of mat-makers and farriers. They live close to the town of old *kašbas* and gardens which belong to the Makhzen, and in the old *kašba* of Mawlāi Ismā'il in the Bāb Mālī quarter. Their houses, roofed with thatch, look like African encampments. But it is the Berber (*Būāḳḳher*) element which predominates at Meknes and gives it its desire for independence, a feature of which has for centuries been a jealousy of Fas. It is the Berbers of the mountains who give it its tone; when they come down to the town, their women give colour to the streets of the *mdina* with their short skirts, their leather gaiters and their wide brimmed hats. The Berber elements of the plain are much more mixed, having undergone many vicissitudes since the day when Mawlāi Muḥammad b. 'Abd Allāh inaugurated the policy, considerably practised by his successors, of transferring tribes. A considerable part of the population of Meknes consists of floating elements who come, usually between harvests, to work as artisans. These immigrants almost all come from the south, from Tāfilālt in particular (potters, tanners and porters),

from Sūs (grocers), from Tūāt (oil-makers), from Figig and Dar'a (masons). The Rifans and Jbāla supply most of the agricultural labourers. A small number of Fāsīs, who have in recent years merged into the population of the town, are cloth-merchants, old-clothes-dealers and shoemakers.

Jews form a quarter of the native population. Foucauld estimated the *mellāḥ* of Meknes to be half that of Fās. Chénier remarked on its prosperity. It has increased since his day as elsewhere and the position of the Jews is greatly improved since the establishment of the French Protectorate.

Religious life. From the presence of the Idrisid and Hasanid *shorfa*, the proximity of the sanctuary of Mawlāi Idris and the religious event of the celebrations of his *mūsem* (class. *mawsim*, q. v.) every year, Meknes is one of the most important centres of *shari'ism*. At the same time for the Berber population it is a centre of marabout rites of the most elementary kind. All the brotherhoods that have *zāwiyas* in Morocco are represented in Meknes. The most important are those of the Kādīriya, Tīdjāniya, and especially Hmādsha and the largest, the 'Isāwa, to which half the population are attached. Meknes, whose patron saint is Sīdī Muḥammad b. 'Isā and which contains his tomb under the *ḥubba* erected by Mawlāi Muḥammad b. 'Abd Allāh, is the capital of the order. This saint came here at the end of the xvth century. His teaching at first met with a vigorous resistance, which he overcame so completely that, when the governor of the town sought to take steps against him, the people protected him. Before his death he acquired an estate, constituted it *ḥubūs* and set it aside as a cemetery. It is still used and many men of religion are buried there. The celebration of his *mūsem* on the first day of the *mūlūd* (*mawlid*) festival is the great event of the year. The preparations for it begin forty days before and become all-absorbing ten days before the festival. On the day before or the preceding day delegations flock in from all parts of Morocco, following the traditional routes. The most generous hospitality is given to the pilgrims by the descendants of Shaikh al-Kāmil, who have the *niḥaba* (Brunel). The excesses committed on the occasion of this pilgrimage have been frequently described. Many other special cults are observed in Meknes. Bū Zekri is the patron of the graziers, and Mawlāi Idris of the Zarhūn is the patron of the tanners, weavers and butchers (Vasignon). There is even the cult of a living lioly man, Mawlāi Aḥmad Wazzāni. As it was his custom to sit in the public way in a very simple costume, he was in 1917 granted clothes and a *ḥubba* at the request of Mawlāi Yūsuf. The *ḥubba* is at the entrance to a dispensary and the admirers of the saint come there daily to keep him company.

History. We know nothing certain about the history of the region in the Roman period nor in the centuries which followed. The most advanced Roman stations were on the slopes of the Zarhūn guarding the plain, out of which the warriors of the Central Atlas might debouch, and perhaps throwing out a screen as far as the plateau of el-Hādjeb.

We do not know at what date the people here had their first contact with Islām, nor even if it was not till the Hilālī invasion that Islām became securely established here. The Berber tribes of the Sā'is and Sebū made the most of the fertility of their country. A tradition records that a fire

destroyed the gardens there in 917. It was at this period that the country was covered, from Tāzā to Meknes, by the migration of a Znāta tribe, the Miknāsa, a section of whom, who received the name of Miknāsa al-Zaitūn to distinguish them from the Miknāsa Tāzā, who lived farther to the east, established themselves securely in the plain. The Idrisids met with a vigorous resistance from the Miknāsa. They always found in them opponents whom they could not overcome in spite of several campaigns, and who were the medium of Umayyad intervention.

The *Ḳirīās* records that a governor of the district, al-Mahdi b. Yūsuf al-Kezanī, having joined Yūsuf b. Tāshfin, was assassinated by the tribesmen, but the terrified citizens hastened to disown the murder. At this date a few villages stood on the site of Meknes. One cannot say at what date, perhaps in the tenth century, they were grouped together to form the *Tacadart* mentioned by Idrisī (*Taghrat*, according to the *Kitāb al-Istibṣār*). The population seems to have been more numerous in the A'moravid period than later, and prosperous. Enclosed by a wall, Meknes looked like a pleasure resort, with its gardens, cultivated fields, its mosques, its baths and water channels.

The Miknāsa vigorously opposed the Almohad onslaught. When passing through this region in 1120—21, Ibn Tūmart preached here but he was not well received. Twenty years later, 'Abd al-Mu'min laid siege to Meknes but it was not he who took it. He left it to enter Fās, leaving the conduct of siege in the hands of Yahyā b. Yaghmur. The *Ḳirīās* says the siege lasted seven years. The town fell in 1150. It was plundered, the defences dismantled, a part of its wealth confiscated and all its garrison put to death, except the governor Yadder b. Ulgūt, who is said to have gone over to the Almohads before the surrender in order to save his head. On the site, or beside the ruins, Meknes rapidly rose again under the shelter of the fortifications built by the Almohads. At the end of the century, it had regained some importance and the mosque of al-Nadīdjārīn was finished. This is the oldest monument in Meknes: in 1756—1757 Muḥammad b. 'Abd Allāh had it restored and built the present minaret. The Almohads brought water hither from Tadjenna, five miles away. In 1182 the *ḥuḥba* was said in five different places in Meknes and there were six gates in the wall which surrounded the town.

In the course of the following century, the intrigues of the Banū Marīn [q. v.] disturbed the country, where the fighting that accompanied the fall of the Almohads was particularly lively. In 1231—1232, al-Ma'mūn had to intervene against the Banū Fāzāz and Meklāta, who were ravaging Meknes. In 1236—1237, as a result of the Marinid success in the battle in which al-Sa'id's son was slain, Abū Bakr entered the town. This occupation was only temporary but the Almohad restoration was not secure. In 1245—1246, the governor left there by al-Sa'id was slain in a rising in the town in favour of Abū Zakariyā' the Ḥafsid. Al-Sa'id again returned victorious, causing Yahyā b. 'Abd al-Ḥaḥḥ to fly to Tāzā. The Marinid had only two years to wait: after the death of the Almohad governor, he returned to Meknes to occupy it definitely.

The first period of greatness for Meknes dates from the Marinids. They set out to make it beautiful

like Rabat and Fās. Abū Yūsuf moved from Fās Dīdid to Meknes, which owed to him a *kašba* and a mosque (1276). Abū 'l-Ḥasan improved its water-supply, built bridges on the road to Fās and began the *Madrasa Dīdīda* which Abū 'Inān was to finish. It bears the latter's name and is still the most notable building in Meknes, in spite of the indiscreet restorations carried out in 1917-1922. Other madrasas, 'Aṭṭārīn and Filāla, were built by the Marinids.

During this period the political organisation of the country was developing in quite a different direction. The Idrisid *shorfa*, having assisted the Marinids to gain power, prepared to take advantage of the organisation which the latter had given them. Thus the foundations were laid for the movement which was to end in the partition of Morocco in the last years of the xvth century into practically independent divisions. The *shorfa* were numerous in Meknes. When the weakening of the Marinids and the decline of their prestige made it possible, they supplied leaders. History has preserved the name of Mawlāi Zaiyān. The Wattāsids only once intervened, it appears, when at the beginning of the xvth century Maṣ'ūd b. al-Nāṣir, having rebelled against Muḥammad al-Bortuḡālī, found an asylum at Meknes. The Sultān besieged the town and took it, then installed his brother al-Nāṣir al-Kiddid there, who however did not prove faithful to him. The few years of independence enjoyed by Meknes were not particularly glorious. They mark, however, an epoch in the history of the town destined at other periods to be only the prey of anarchy or the plaything of a tyrant.

The rise of the brotherhoods of the xvth century found a favourable soil among the Mīknāsa. The *zāwiya* Djazūliya was established there, as in other places in Morocco. A few years later, Muḥammad b. 'Isā was teaching there.

Meknes was thus well prepared to welcome the Sa'dians. When Muḥammad al-Shaikh approached in 1548 he entered the town without much trouble. The Marinid al-Nāṣir al-Kaṣrī is said to have agreed to hand over the town in return for the liberty of his father Aḥmad Bū Zekrī, and the marabouts to have demanded the conclusion of such an agreement. Muḥammad al-Shaikh however took a sufficiently sure method to establish his authority; when the Khatīb Abū 'l-Ḥasan 'Alī b. Ḥar-zūz began to preach against him, he had him scourged to death. When he returned two years later, he was welcomed with gifts. The estimates of travellers of this time put the population of the town at 6-8,000 hearths. It was the only town in the region. The Sa'dians took little interest in Meknes which never attracted their attention. The country was well in hand and the Berber tribes peaceful to such a degree that the road from Marrākush by the Tādla was regularly used. It was the practice to make Meknes the residence of one of the sons of the Sultān. There was however no important command attached to it. Leo Africanus credits it with a revenue equal to half that of the viceroyalty of Fās, which is astonishing. Under Aḥmad al-Manṣūr, Abū 'l-Ḥasan 'Alī lived there and then after the second partition, Zidān and, lastly Mawlāi al-Shaikh, but as a prisoner in the last years of his father's life.

The civil war which broke out on the death of al-Manṣūr placed Meknes at the mercy of the

Berber risings and marabout intrigues. Mawlāi 'Abd Allāh b. al-Shaikh lived by brigandage and often found a refuge in al-Kaṣr al-Kabir. In 1619, his brother Muḥammad defeated him near Meknes. Al-lfrānī mentions for the next year the rising of an individual who called himself the *Sharif* Amghār. In the midst of this disorder an authority gradually made itself felt, that of the *zāwiya*s, and especially the *Zāwiya* of Dila'. In 1640-1641, Muḥammad al-Ḥājjīdj was even able to seize the sovereign power and get himself recognised by Fās and Meknes after his victory over Mawlāi Muḥammad al-Shaikh b. Zidān. He gained over the Berber tribes, and Mawlāi al-Kashid in 1666 found the Bani Mūr against him, allied with the Dila'i Abū 'Ahd Allāh, and he had to fight them again in 1668.

Mawlāi al-Kaṣhid seems to have been interested in Meknes, the *kašba* of which he restored. In burying him in the mausoleum of al-Maḍjdhūb, Mawlāi Ismā'il said he was fulfilling the last wishes of the deceased. But the most important event was that al-Kashid sent Mawlāi Ismā'il to Meknes. The latter lived before his accession in the Almohad *kašba*, as a landed proprietor managing his estates. In his choice of a capital, we see the attraction of a rich district like this. He wished it to be in his own image and realised his desire. For fifty years Meknes was simply the framework for his splendour, the scene of his extravagances.

He at once decided to build himself a palace and at once a grandiose scheme was projected. He began by clearing a space. The houses adjoining the Almohad wall east of the town were destroyed and their owners forced to carry the debris off to a site which has retained the name of Hledim, then to rebuild on a site which the *sharif* enclosed by a wall to the N. W. of the *mdina*. The site which he chose for himself was also separate from the town. His palace was built, and one even more splendid for his women. This first edifice, Dār Khīra, was finished in 1679. It was a series, without intelligible plan, of *ḥayāṭs* embellished with fountains, paved with marble, surrounded by galleries which were supported by columns of marble; the apartments opened on to three galleries. The sovereign's palace was in two suites, that of his ladies in four and larger than his. His four wives and his favourites were equally splendidly housed. The other concubines, of whom he had 500 of all nations, were housed in rooms along the passage. At the end was a common hall, on a higher level, which gave a view over the gardens through iron grilles. The reception pavilions were planned on the same scale; one of them had forty rooms. The palace contained in all 45 pavilions and twenty *ḡubbas*. The whole was surrounded by a crenelated wall pierced by twenty gates. It was triple in the N. E. with a road round it and it could be defended equally well against the interior of the *kašba*. The bastions supported batteries of guns and mortars. The women being subject to rigorous confinement and Mawlāi Ismā'il being very meticulous in the performance of the duties of religion, a mosque was set aside for them. Another had been begun in 1672, communicating with the town by the Bāb 'Isi. Lastly the palace with its dependencies contained four mosques; two are still in use, the *Djāmi'* al-Akḥḍar and in the quarter of the mews, very broken down, the *Djāmi'* al-Ruwā. To the south was a garden, the area of which is equal to that of the present *mdina*, an

orchard in which olive trees predominated. Farther on were the stables to which the Sultān admitted only picked horses, to the number of 1,200: two parallel rows of arcades about 100 feet apart. In the centre ran running water. Each animal had its stall and a shelter for its equipment. Opposite was a storehouse, the *herz*, which supported a supplementary palace with twenty pavilions. Between the palace and the stables was the granary, forty feet high and big enough it was said, to contain the whole harvest of Morocco. At the side was a pond for irrigation purposes and also subterranean reserves of water in case of a siege.

The buildings did not stop here. To the south west of the town lay a city of pleasure, Madinat al-Riyāḍ, where the officials had palaces, where Mawlāi Ismāʿīl himself had his mosque, his madrasa, his hammām, his fondaks and the offices of the umama of the Treasury, with the shops of the Shurifan tailors. In 1732-1733 Mawlāi ʿAbd Allāh on returning from an unsuccessful expedition into the sūis, had the Madinat al-Riyāḍ destroyed by Christian slaves. There is nothing left of it to-day except the Bāb al-Khamis, dated 1667, one of the finest and best proportioned gates in the city.

Lastly a site was reserved for the troops. To the west of Meknes a large *duar* was settled with *ahbas* and their families. To the east of the Dār al-Makhzen, five *kaṣbas* for the 130,000 men of the *gizā* were gradually incorporated in the great *kaṣba*.

After fifty years of unorganised but superhuman effort, the buildings were not yet completed. It was in 1731-1732 that Mawlāi ʿAbd Allāh finished the surrounding wall and the Bāb Manṣūr, the most finished example of the Ismāʿīlian gate, ponderous, of proportions by no means perfect but imposing, of which the Bāb al-Bardān and the Bāb al-Nuār are the two other finest examples at Meknes at the present day. This name of a renegade, Manṣūr al-Euldj, was no doubt that of a keeper of the gate. Mawlāi Ismāʿīl directed all the operations himself. During the first twenty-four years of his reign he never spent twelve months on end at Meknes. But he returned there after each expedition; in proportion as his ambition and his power increased, his despotism and the needs of his government, his army and his family grew, his scheme became more and more grandiose: the work done was found unsatisfactory, modifications were made, buildings taken down and the work began all over again. The result certainly was sumptuous and imposing but also odd and varied.

All the country helped in the work. Mawlāi Ismāʿīl collected materials wherever he could. Volubilis, Chellah, Marrakush were plundered. If he destroyed al-Badiʿ, it was perhaps out of jealousy of Saʿīdian work, or perhaps simply to get material. Like Ahmad al-Manṣūr, he procured marble from Pisa. One day when a corsair ship had stranded near Tangier he ordered the Ghumāra to bring the cannon from it by unaided manual labour. When he died the columns of marble which were still on their way were left at the roadside.

Labour was recruited by similar means. The Sultān imposed days of labour on the tribes, levied forced labour as he pleased, sent his ministers to the workshops, but relied mainly on renegades and Christian slaves who were his permanent workmen. From 1680 the work was pushed on frantically. All the Christians in Morocco were

collected there. The Trinitarians of Fās joined them. The slaves were at first housed in siloes near the building-yards, then they were moved to the Dār al-Makhzen, then to near the stables, under the arches of a bridge, where their lot was particularly miserable, finally to the interior of a ruined *bordj*, east of the town along the north wall of the Dār al-Makhzen. They were able to organise themselves a little there, to build themselves a church, to have chapels, a convent and infirmaries. A pharmacist monk made up a medicine, the "Christian decoction"; this was the means by which humane relations were established with the natives, even with the dwellers in the palace. Their last historian has reduced the number of Christian prisoners in the service of Mawlāi Ismāʿīl to its real figure; they did not as a rule reach a thousand and the Sultān, in the course of over fifty years, himself killed only one hundred and nine (Koehler).

The emperor revealed in his palaces his extravagance and his cupidity; he accumulated wealth as he did buildings, but only to hide it. The consuls and ambassadors who came to negotiate the ransom of captives he received with a mixture of buffoonery and splendour. Frequent mention is made of the cruelty and the terror which this ruler inspired; he loved to torture his women and cut off heads to show his skill. His amusements were of a similar character; he liked to shoot with his hands at the deer in his menageries then to finish them off with spearthrusts. "Let us avert our eyes from all these horrors which make nature shudder", says Chénier. Following his example his household inspired terror in the town. He had six hundred children, a nursery of slaves, "who might have had a happier lot if he had loved them as much as his horses". On the approach of any of them, "every one hid all that he might take a fancy to"; and the *ʿabid* in their turn, negroes robed in bright colours, went about bullying, in the name of their master at first and then in their own.

All his work was to collapse at his death, but he was able to keep it up in his lifetime. From the troubles that broke out when he disappeared from the scene, one can judge of the energy of this man of eighty who maintained order among his horde of negroes and in this country destined by God to anarchy. The *kaṣba* of Zarhūn, the *kaṣba* of Azrū in the middle of the Central Atlas, defended Meknes on North and South. He was also able to preserve it from other scourges; when an epidemic of plague broke out, the *ʿabid* were simply given orders to kill any people who came from Fās.

Mawlāi Ismāʿīl was buried like his brother in the mausoleum of Sidi ʿAbd al-Raḥmān al-Maḍjdhūb, a moralist saint of the xviith century. His sons, the rebel Mawlāi Muḥammad, killed at Tāruḍānt in 1706, and Mawlāi Zidān in 1707, had already joined Mawlāi Rashid. In 1859 the ashes of Mawlāi ʿAbd al-Raḥmān were also deposited there.

On the death of Mawlāi Ismāʿīl, the Buākhers and the soldiers of the *gizā* stirred up a palace war which lasted twenty years. Mawlāi ʿAbd Allāh lost and regained his throne six times. But however great this danger was, the other threat was still more disturbing; having got rid of the garrisons of the Ismāʿīlian *kaṣbas*, the Berbers, armed, came down from the mountains. The problem for the sultāns was to choose the lesser evil; they

declined to disband the *ʿabid* and in the struggle which naturally arose between these and the Berbers relied more on the former. The civil war extended to the tribes of the plain and the garrisons of Fās, especially the Ūḍāya; pretenders stirred up the flames, readily giving the signal to plunder and, in the rivalries of races and tribes, easily finding a party to support them. Gradually the Būākheri sank in misfortune. It was in vain that Mawlāi ʿAbd Allāh and his sons expended the treasure of Mawlāi Ismāʿil for them. The worst of it for Meknes was that every one ended or began by plundering it.

Muḥammad b. ʿAbd Allāh almost re-established order and restored to the town its past glory. He did a great deal for it: his palace of Dār al-Balḍāʾ, the severe architecture of which, not without charm, can still be seen in a part of the office-grove of al-Hamriya; in the Kaṣba, he built the Djamīʿ al-Anwar and in the *madīna*, the minaret of the Djamīʿ al-Nabḥātīn, the ḡubba of Sidi Muḥammad b. ʿIṣā and several mosques (al-Azhar, al-Bardāʾīm, Bāb Miāh, Berrima and Sidi Bū ʿUṭmān). It was he who made the 12,000 books of the library of Mawlāi Ismāʿil *ḡubbi* for the benefit of all the mosques of Morocco. As regards the tribes his policy was to break them up. He transplanted many of them and tried several repressive measures. The end of his reign was marked by the success of the Berbers whose attacks had been resumed about 1775.

Soon nothing was to be left of the work of Mawlāi Ismāʿil. The Christian community lost its Franciscan mission in the reign of Mawlai Yazid and did not survive the persecution of this *sharif*. The earthquake of 1755 had destroyed their church, convent and hospice. The renegades, who had gathered together at Kaṣba Agūrai, were gradually absorbed.

The Berber crisis was again acute from 1811. Communication with Fās was continually being cut and it was something to boast of for the sultān to go out of Meknes. Mawlāi Sulmān (Sulaiman), who had undertaken to restore the Kaṣba and rebuild the bridges on the road to Fās and who would have liked to get rid of the Būākheri, decided to settle in Fās. His walls were his only defence at Meknes, which was blockaded by the tribes. Mawlāi ʿAbd al-Raḥmān, whom Delacroix saw there and who built a *ḡubba* in Djenān b. Ḥalima, left the Berbers in semi-independence and at last disbanded the *ʿabid* without even granting those who remained in Meknes the character of Makhzen troops. His son carefully avoided all quarrels.

Mawlāi al-Ḥasan revived the tradition of the great sultāns and made his authority felt. He was able to enter Meknes after his accession only by crushing the power of the tribes. In 1879 he conducted a campaign against the Beni Mjir. In 1887 he forced his way through the country of the Beni Mjrid in his campaign against the Nān. On his death the Berbers regained their independence. If they retained their kāids it was because the latter cast off their allegiance to the Makhzen. After the fall of Mawlāi ʿAbd al-Aziz, Meknes recognised all the competitors in succession. It was Meknes that proclaimed ʿAbd al-Ḥafiz, who had come via the Berbers of Tāḡla in 1908, in 1909 it summoned the *sharif* al-Kutāni and in 1911 rallied to Mawlāi Zain. It was in this year

that General Moinier entered Meknes and two years later Colonel Henrys under the direction of General Lyautey pacified the Beni Mjir country.

(C. FUNCK-BRENTANO)

MELLĀH, the name given to the quarter in Moroccan towns which the Jews are compelled to inhabit. Being *ahl al-dhimmā*, the Jews have a right to the special protection of the government which allows them a particular quarter to live in, situated very often quite close to the citadel (*kaṣba*) where the governor of the town resides. Moreover, the sovereigns and governors liked to have at hand "their" Jews who were frequently of use, to them as clever diplomatic

agents and often gave them valuable financial support. All the towns of Morocco, even the large ones, did not necessarily have a *mellāh*. Thus at Tangier there are certain quarters particularly inhabited by Jews but they are not set aside for them and we also find Muslims there. As to Rabat, its present *mellāh* was established only in 1808 by Sultān Mawlay Sulaimān; formerly the Jews lived together in the al-Buḥaira quarter (el-bḥera) where there were also Muslims. When he founded Fās in 805, Idris II compelled the Jewish refugees who flocked into the capital to reside in the northern part of the 'Adwat al-Ḳarawiyīn (Aḡhlān quarter as far as the gate called Bāb Iḥṣān Sa'dūn); this was undoubtedly the first Moroccan ghetto; and the present *Fondaḡ el-Iḥūdī* ("the Jew's warehouse") apparently preserves its memory. But at the end of the xiiith century the Marinid [q.v.] dynasty, wishing to create a new capital, founded alongside of "Old Fās" (*Fās al-Bālī*) "New Fās" (*Fās al-Djadīd*) or "White City" (*al-Ma'īnat al-Baiḡā*). In the first half of the xivth century, the town of Ḥimṣ was built close beside Fās and at first occupied by the Ghuzz archers who formed a part of the regular Marinid army; after the suppression of this force in 1320, Ḥimṣ became the quarters of the Christian mercenaries, whom we find there in 1361. Later, probably at the beginning of the xvth century, and no doubt as the result of massacres, the Jews of Old Fās were ordered to settle in Ḥimṣ; this town was built on a site known as *al-Mallāh*, the "salt spring", or "salt marsh", and the new ghetto became known by this name. From a proper, this became a common noun, and passed from Fās to the other towns of Morocco as the name for the quarter assigned to the Jews. The etymology proposed by Dozy in his *Supplément* (*al-mallāh* < *al-maḥalla* "quarter") is therefore to be rejected, as are the explanations as "salted, accursed land", or "quarter of the Jews who were forced to salt the heads of decapitated rebels". In Morocco instead of *el-mellāh*, in speaking, the expression *el-messūs* (class. *al-masūs*) is often used by anti-phrasis, lit the "not-salted".

The *mellāh* of Fās is therefore the oldest in Morocco in every way. For a long time it was also the most important; in the middle of the xiith century, al-Bakrī says that Fās is the town with most Jews in the Maghrib, which has given rise to the proverbial saying: *Fās balad bi-lā nās*. "Fās, a town where there are no people (worth mentioning)". But the constitution of Marrākush in 1063 resulted in the foundation in southern Morocco of a new Jewish centre which was to attract to it the Jewish and pseudo-Jewish peoples of the Atlas. The term *el-mellāh* however appears for Marrākush only in the second half of the xvth century (cf. E. Fagnan, *Extraits inédits relatifs au Maḡreb*, p. 409). At the present day the *mellāh* of Marrākūsh and the Jewish town of Mogador form the most important Jewish centres of Morocco.

The name *el-mallāh* is peculiar to Morocco; there, however, it is applied not only to the Jewish quarter in a town but also to little mountain villages exclusively inhabited by Jews. At Tlemcen the term *derb el-ḥūd* (class. *darb al-yaḥūd*) is used; at Constantine *esh-shāra* and in Algiers, Tunis and Tripoli: *el-ḥāra*.

On the interior organisation of the present day Moroccan *mellāh* see E. Aubin, *Le Maroc d'aujourd'hui*.

(GEORGES S. COLIN)

MELILLA (in modern Arabic: *Mīliya*, Berber *Tāmlilt*, "the white", in the Arab geographers: *Malila*), a seaport on the east coast of Morocco on a promontory on the peninsula of Gel'īya at the end of which is the Cape Tres Forcas or the Three Forks (*Rās Hurk* of the Arab geographers, now *Rās Werk*).

Melilla probably corresponds to the *Rusadir* of the ancients (cf. *Rhyssadir oppidum et portus* [Pliny, v. 18], *Russadir Colonia* of the Antoninian Itinerary). Leo Africanus says that it had belonged for a time to the Goths and that the Arabs took it from them, but in reality we know nothing of the ancient history of the town.

It is only at the beginning of the tenth century that Melilla appears in the Muslim history of Morocco. In 930, the Umayyad Caliph of Spain, 'Abd al-Rahmān al-Nāṣir li-Dīn Allāh succeeded in detaching from the Fātimids the famous Miknāsa chief Mūsā b. Abi 'l-'Āfiya, who had established his authority over the basin of the Moluya and the district of Tāzā; having seized Melilla, al-Nāṣir built ramparts around it and gave it to his new ally, who thus had at his command a base of defence (*maḡkil*) against the Fātimids of Ifrikiya and a port which made communication with Spain easy. Later on, the descendants of his son, al-Būrī b. Mūsā, rebuilt the town, which remained one of the strongholds of the Miknāsa in Morocco down to the time of the decline of the power of the tribe, who were definitely defeated and scattered by the Almoravid Yūsuf b. Tāshfin in 1070.

But the Miknāsa must have abandoned it before their dynasty was crushed by the Almoravids; for al-Bakrī shows us that by 1067 a descendant of the Hammūdid Idrisids of Spain had been summoned to Melilla and recognised as ruler by the people of the district.

At the period when al-Bakrī wrote (1068), Melilla was a town surrounded by a wall of stone; inside was a very strong citadel, a great mosque, a *ḥammām* and markets. The inhabitants belonged to the tribe of the Banū Wartadī (or B. Wartardā), a branch of the Ṣanhādja group of the Baṭṭūya. Melilla had a harbour which was accessible only in summer. It was the terminus of a trade route which connected Sidjilmāsa with the Mediterranean through the valley of the Moluya and Agarsif (French: *Guercif*). The trade must have been considerable; the principal exports were no doubt those mentioned by Leo Africanus: iron from the mines of the mountains of the Banū Sa'īd and honey from the Kaddāna country; we may also add pearls which were taken from oysters found in the harbour itself. Al-Bakrī notes that the inhabitants made money by granting protection to merchants. The environs of the town were occupied by the Banū Wartadī (who also occupied the stronghold called Kulūf Gāret), the Maṭmāta, the Aḥl Kaddān, the Marnisa of the "White Hill" (*al-Kudyat al-baiḡā*) and the Ghassāsa of the massif which ends in Cape Tres Forcas (*Djabal Hurk*). All this region was then independent and had no political

link with the kingdom of Fās or that of Nakūr.

But in 1080 the Almoravid sovereign Yūsuf b. Tāshfin took Melilla and added its territory to the Almoravid empire. In 1141–1142, in the course of the Almoravid pursuit of the Almohads, a body of the latter set out from Tāmsāmān to lay siege to Melilla, which was taken and plundered. In 1272, the Marinid Sultān Ya'qūb took Melilla from the Almohads and Ibn Khaldūn simply mentions it as a fortified place. It seems in fact that these three captures of the town had destroyed its commercial importance to the advantage of another town on the west coast of the peninsula of the Gel'īya: Ghassāsa also called al-Kudiyat al-baḡdā', the *Alcudia* of the Portolans; in the xiiith century it is this latter town that appears as the Mediterranean port of Fās and Tāzā, and it was through it that political and commercial relations with eastern Spain and Italy (Genoa and Venice) were carried on.

Leo Africanus says that in 1490, hearing that an attack on it was planned by the Spaniards, the inhabitants abandoned the town and fled to the mountains of the Baḡḡya; to punish them for this the Waṭṭāsid Sultān had the town burned down; when in Sept. 1497 the Spaniards arrived they were thus able to disembark without resistance and occupied the town, abandoned and half destroyed. The occupation of Melilla enabled the Spaniards to attack the port of Ghassāsa by land and it was taken in April 1506. The Moroccans recaptured it in 1533 but the dangerous proximity of Melilla henceforth deprived it of importance. The commercial activity of this region was moved farther west to the port of al-Mazimma (Spanish: Alhucemas, Fr.: Albouze), and the centre of Muslim resistance in this part of Morocco was henceforth the stronghold of Tāzūṭa, which after having been the capital of the Marinid fief of the Banū Waṭṭās became that of a practically independent leader of a holy war. After passing into the hands of the Spaniards, Melilla was continuously besieged by the Muslims, mainly by the forces of the leaders of holy war established at Tāzūṭa and at Mǧāu (the *Megeo* of Leo Africanus). Occupied by the Christians, the town naturally became one of the places in Morocco in which Muslim pretenders and rebels found asylum and support against the central power, especially at the beginning of the Sa'dian dynasty. In 1549, it sheltered the dispossessed Waṭṭāsid Abū Hassūn, "king" of Bādis; in 1550 it welcomed with his family the Mawlāy 'Amar, "king" of Debdū. It was from Melilla that in 1595, the pretender al-Nāṣir b. al-Ghālīb b. 'Iṣṣāh set out against his uncle Sultān Aḥmad al-Manṣūr.

Later Melilla only appears in history in connection with sieges which it had to suffer: sieges by Mawlāy Ismā'il in 1687 and 1695; siege in 1774 by Mawlāy Muḥammad b. 'Abd Allāh; Spanish-Moroccan war of 1893 (Sidi Waryāsh affair). From 1903 to 1908 the region of Melilla was the scene of struggles between the pretender al-Djilālī al-Rūḡi, established in the ḡaṣba of Selwān, and the troops of the Sultān 'Abd al-'Azīz; defeated and receiving no support, the latter had to take refuge in Spanish territory and be repatriated. Still more recently in 1921, the same district witnessed the sanguinary battles between the Spaniards and the Rifans under 'Abd al-Karīm (Anwāl disaster). Melilla is for Spain a "place of sovereignty" like Alhucemas, Peñon de Velez and Ceuta. Before the establish-

ment of the French protectorate, Melilla, constituted a free port, was the landingplace for all the European merchandise (cotton, sugar, tea) intended not only for eastern Morocco but also for the Saharan regions of Morocco and Oania. It has now lost much of its commercial importance.

(GEORGES S. COLIN)

MENDEREZ, the name of two rivers in western Anatolia:

1. Büyük Menderes (called by al-'Umari Menderos, by Piri Re'is, Mendiraz or Mendiroz), the ancient Maeander, the Mandra of the Crusaders. It rises in the district of Germiyan in a little lake, the Huweiran Golu (Sāmi) above Diner (according to Abū Bakr b. Bahām in a spring called Buḡar baḡh, a day's journey from Homa), flows past Homa at some distance off, then through the plain of ḡhiklī and the ḡazās of Baḡlan and 'Al. In the ḡazā of 'Arḡamba (capital Bulladan) it is joined by the Banaz 'Cai (called Murād Daḡh Suyu in Abū Bakr b. Bahām whose statement that it flows past ḡhiklī is wrong), which rises in the Murād Daḡh and flows past Banaz. Farther down its course, in the plain of Denizli, it receives the 'Cürük Su, the ancient Lycus Fl. Farther on a ruined bridge called Demirtaş Koprusu marked the frontier between the two old liwās of Germiyan and Aidīn; according to Abū Bakr a warm spring rising in its foundations had contributed to the destruction of this bridge.

In the territory of Aidīn the Büyük Menderes flows past at a distance the villages of Ortaḡöl, Nazilli, Sultānḡiṣār, Koshk and Guzelḡiṣār. Aidīn, breaks up into several arms in the plain of Balat (Palatia, the ancient Miletus) and feeds a lake full of fish (al-'Umari) there, which is now called Bafī Deūizi (Lake of Palatia, the ancient κόλπος Λατμικός). A little below Balat, it enters the sea.

Al-'Umari who, generally speaking, is inaccurately informed about its course (he puts Denizli and Birgi on it, i.e. brings the Cayster into its basin and makes it flow into the Black Sea) compares the Maeander for its size at low level with the Nile, in flood however with a sea. According to him, it is navigable and the people on its banks sail from its mouth on military or commercial enterprises. Western writers also speak of the trade borne on the Maeander in the late middle ages. The main centre of trade on the Maeander and also on the land routes through the valley was Palatia (Balat, the ancient Miletus): in later times, however, the caravan route down the Maeander valley ended in Scalanuova (Kush Adasi).

2. Kucuk Menderes, the ancient Caystrus. The central part of its course runs in a wide plain on the northern edge of which is Birgi, on the southern edge Tire, the old capital of the liwā of Aidīn. A little below Ayasolugh, the ancient Ephesus, it enters the sea.

In the middle ages the centre of trade with the hinterland reached by the Cayster was Altoluogo (from Ἀλτος; ὁ ὁλογος), the ancient Ephesus (Turk. Ayasolugh, now called Seldjuk); later Scalanuova (Kush Adasi). In the Ottoman period Smyrna attracted all the trade of the Aegean Sea with the Anatolian hinterland. The caravan routes which

came down the river valleys opening on the Aegean thus ended in Smyrna, just as at the present day the railways which utilize these valleys start from Smyrna.

MENF. [See MANTF.]

MENGÜCEK (MANGUTJAK), a Turkish emir, who after the capture of Komanus Diogenes in 1071 A. D. seized various places in the north-east of Asia Minor and transmitted his power to his descendants. We find them in Erzindjān, Koghoma (Colonia, Kara-İlkar Şarkı) and Diwrigi (cf. the genealogical table in von Zambaur, *Manuel de Généalogie* etc., p. 146). Little is known of their history. It is incidentally mentioned in Michael Syrus (ed. Chabot, iii. 205) that Ibn Mangūdjak, being threatened by the Ortukid Balag, made an alliance with Theodore Gabrias, the Byzantine commander of Trebizond, but was taken prisoner in battle along with the latter (1118). He was, how-again released by the Danişmandid Emir Ğhāzi, whose daughter he had married, while the Greek had to pay a heavy ransom. His name is not mentioned but, from the genealogical statements in the inscriptions of his descendants, he was called I-shāk. The same story is given elsewhere but not so fully. Better known is his grandson Fakhr al-Dīn Bahrāmshāh, who ruled for many years in Erzindjān and died in 622 (1225). To him the celebrated poet Nizāmī dedicated his poem, *Mahżan al-Isrār*, which was composed in 1198 or 1199. He was on the best of terms with the Saljuqs of Konya, with whom he was connected by marriage, but when these relations were altered under his son ʿAlā al-Dīn Bāwūfshāh, the rule of the Mandjukids was ended. At the end of 625 (1128) he was forced to cede Erzindjān to Kaikobād, and his brother Muzaifār al-Dīn Muḥammad who ruled in Koghonia met a similar fate. A collateral line established in Diwrigi and ruling there in the name of the Saljuqs held out for a few more years, perhaps till the coming of the Mongols into these regions in 675; only a few scraps of information about this line have been gleaned from inscriptions and coins.

MENTESHE-ELI, a little principality in Anatolia. The boundaries of the territory of the Menteshe-oghlu's [q. v.] are given by Muveddjim-bashi (cf. Fr. Babinger, *G.O.W.*, p. 234 sq.) in his *Şahā'if al-Akhlā'ī* (Istanbul 1285) as marked by Mughla, Balāt, Boz-Uyuk, Milās, Bardjın, Marın, Çine, Tawās, Bornāz, Makri, Godjūmiz, Foča and Mermeire. They thus correspond approximately to those of the ancient Caria. The origin of the name is uncertain, but it can confidently be asserted that the opinion, presumably first put forward by F. Meninski (*Lexicon*, iv. 737) and till quite recently upheld, that the district takes its name from the Myndus (Μύνδος in Strabo) of the ancients is not worthy of credence. Several of the places above mentioned play a not unimportant part as centres of scholarship and literature in the earlier period of Ottoman intellectual life. Thus in the time of the Menteshe-oghlu Mehemmed (775—777) a certain Maḥmūd b. Mehemmed of Bardjın composed a *Bāz-nāma* which was published by J. v. Hammer-Purgstall under the title "*Falkner-klee*" (Pest 1840) from the Milan MS. and rightly described as one of the earlier documents of the Ottoman language. In many of these places there were academies where an active intellectual life flourished, so that the share of the district of Menteshe in Ottoman literature is strikingly large. (FR. BABINGER)

MENTESHE-OGHLULARI, a petty dynasty in Anatolia. The princes of Menteshe first appear in history after the break up of the Seljuq empire. The founder of the family is said to have been a certain Menteshe Beg b. Behā' al-Dīn Kurdī. He had his court at Milās (Mylasa) in the ancient Caria, and not far from it his stronghold Paicin (Pet-ona). His descendants also lived in Milās until they moved their court to Miletus. The son of Menteshe was Urkhan Beg, who is known from an inscription on a building in Milās and from Ibn Battūṭa who visited him in 1334 in Milās (cf. Ibn Battūṭa, *Voyages*, ed. Defrémery, Paris 1854, II. 278 sqq.) Urkhan's successor was his son Ibrāhīm, who built a mosque in Mughla in 745 (1344) and left two sons, Ahmed Ğhāzi and Mehemmed. The second succeeded him in 755 (1354), but succumbed in the struggle for the throne to his brother Ahmed, who took Eski İlār in 755 (1354). In 777 (1375) founded an academy at Bardjın and at the end of Djumādā II, 780 (Oct. 1378) completed the Ulu Djāmī in Milās. Ahmed Ğhāzi died in Sha'bān 793 (July 1391) and was succeeded by his nephew İlyās. The Ottomans had in his reign already taken possession of several principalities in the neighbourhood of Menteshe-eli, such as that of the Germiān-eli [q. v.] and of the Hamid-eli [q. v.] and now seriously threatened the existence of the Menteshes. Immediately after the accession of İlyās Beg, Bāyazid I. who had just become Sultān, deprived the lords of Menteshe of the last vestige of independence. They sought refuge with the ruler of Sinope, Bāyazid Koturum, and later with the conqueror of the Ottomans, Timūr-Lenk. İlyās Beg, who built a mosque in Miletus, regained possession of Menteshe-eli in 1402. On 24 July 1403, he concluded a treaty with the Count of Crete, Marco Falerio (publ. by Mas Latrie, at the end of his essay, *Commerce d'Éphèse et de Milet au moyen âge* in the *Bibl. de l'École des Chartes*, Ser. v. Vol. vi. Paris 1864, p. 226 sqq.) and with

the admiral Ser Pietro Civrano on 17th Oct. 1414 (cf. *Diplomatarium Veneto-Levanticum*, ii. 305, 293 and W. Heyd, *Histoire du commerce du Levant*, ii. 353 sq.). The reign of Ilyas Beg, filled with fighting and difficulties of all kinds, ended in 824 (1421) when his lands passed to the Ottomans. Mehmed I had struck coins as early as 818 (1415) on which he calls himself lord of Menteshe. Among the children of Ilyas Beg, mention is made of Laith Beg, but the shadowy part he played is quite uncertain. The year 829 (1426) saw the end of the princes of Menteshe. A certain Balaban was appointed as Ottoman governor of Menteshe-eli and henceforward the district forms a part of the Ottoman empire. The chronology of the dynasts of Menteshe is still uncertain and essential points have still to be cleared up, which will require a systematic study of the many monuments in Menteshe-eli with their important inscriptions, especially in Milas, Miletus, Bardim, Mughla, etc.

The following genealogical table shows the relationship of the various princes and is based on coins and inscriptions.

MERDAWIDJ. [See MARDĀWIDJ.]

MERIDA, Ar. MĀRIDA, from the Latin *Emerita*, a town in the southwest of Spain, in the modern province of Badajoz, where it is the capital of a *partido*, on the right bank of the Guadiana. Now somewhat decayed, it has only 11,150 inhabitants. It is on the Madrid-Badajoz railway and is also connected by rail with Cáceres in the north and Seville in the south.

The ancient capital of Lusitania, *Augusta Emerita*, was founded in 23 B.C. and under the Roman empire attained remarkable importance and prosperity. Numerous remains of Roman buildings still testify to the position it held in the Iberian peninsula in those days: a bridge of 64 arches, a circus, a theatre, and the famous aqueduct of *los Milagros*, of which there are still standing ten arches of brick and granite. Merida under the Visigoths became the metropolis of Lusitania and according to Rodrigo of Toledo was fortified and strongly defended, which explains why the Muslim conquerors led by Mūsā b. Nuṣayr [q. v.] had some difficulty in taking it. The Arab leader on landing in Spain in Ramaḍān 93 (June 712) first took Medina-Sidonia and Carmona, then Seville. He next laid siege to Merida, before which he stayed for several months; but the inhabitants in the end capitulated and the town surrendered on 1st Shawwāl 94 (June 30, 713). From Merida, Mūsā b. Nuṣayr continued his advance to Toledo.

Under the Arab governors, Merida seems to have very soon become a rallying point for a large number of rebels of Berber and Spanish origin. It was there that Yūsuf al-Fihri endeavoured to organise a movement against that organised for his own benefit by 'Abd al-Raḥmān al-Dākhil in 141 (758). At a later date, a Berber named Aḥbagh b. 'Abd Allāh b. Wānsūs rebelled there against al-Iḥakam I in 190 (805) and the emir of Cordova had for the next seven years to undertake summer campaigns against him before bringing him to reason. Another rebellion broke out in Merida in 213 (828) and the town had to be besieged in 217 and again in 254 (868). In the reign of Emīr 'Abd Allāh it was the headquarters of 'Abd al-Raḥmān b. Marwan al-Jullikī (the Galician), an Arabic name which concealed that of a Christian nationalist leader. Merida definitely returned to its allegiance in the reign of 'Abd al-Raḥmān III al-Nāṣir when it submitted in 316 (928) to the *ḥā'id* Aḥmad b. Alyas.

From the xith century, Merida began to decline in favour of Badajoz, especially when the latter town became the capital of the independent little kingdom of the Alfasids [q. v.]. It remained in the hands of the Muslims till the beginning of the xiiith century. In 1228 it was retaken by Alfonso IX of Leon but never recovered its former importance.

The Arab geographers who mention Merida, describe its Roman ruins in detail; they also mention the Muslim citadel, the foundation inscription of which has been preserved. It was built in 220 (835) by the governor 'Abd Allāh b. Kulāib b. Tha'āba by order of the Umayyad Emīr 'Abd al-Raḥmān II.

(E. LÉVI-PROVENÇAL)

MERĪNIDS (BANŪ MARĪN), a Berber dynasty, which ruled over the extreme Maghrib (Morocco) from the middle of the xiiith to the middle of the xvth century.

The first references we have to the Banū Marīn show them living a nomadic life in the Sahara between Figuig [q.v.] and Tāfilālt [q.v.]. Like the other groups who claimed to be Zenāta, they must have been driven to the west by the nomad Arab Banū Hilāl in the second half of the xth century. Like their brethren, the Banū 'Abd al-Wād, whose lands adjoined theirs, they had attempted in 1145 to resist the conquest of the Central Maghrib by the Almohads and had been defeated. While the Banū 'Abd al-Wād entered the service of the conquerors, the Banū Marīn took refuge in the desert. The weakening of the Almohad empire gave them a chance to take their revenge. In the course of their periodic movements in the valley of the Muluya, they learned of the weakness of the defences of the extreme Maghrib, the best forces of which were engaged in Spain, and the Banū Marīn therefore made a formidable razzia northwards in 613 (1216). This was the first stage of the conquest which was to proceed step by step for 53 years. It was continued next year by the crushing of the Banū Riyāḥ Arabs, who lived in the plains of the west, and by a first fiscal exploitation of the country. The Almohads, paralysed by dynastic feuds, made no serious thrust in return until 27 years later, when the Banū Marīn were defeated by the troops of the caliph al-Ṣā'id (642 = 1244). After a forced check, the conquest was resumed with more method by the *amir* Abū Yahyā b 'Abd al-Ḥaḥḥ. He endeavoured to increase his military forces by granting lands to groups of his kinsmen and taking into his service foreign mercenaries, and he made every effort to capture towns. To achieve this end and to gain a moral support which he lacked, the *amir* claimed to be the mandatory of the Hafsids [q.v.], the Almohads of Ifrikiya. He further declared himself the protector of the holy men, who were venerated by the people. It was thus that he took possession of Meknes, Fas, Tāzā, Rabat and Sale. Finally the help he gave the Almohad pretender Abū Dabbūs enabled the *amir* Abū Yūsuf Ya'qūb, Abū Yahyā's successor, to annex Marrakesh, which marked the completion of the Marinid conquest (669 = 1269).

Inheriting this area of the western Muslim world, which had been the very heart of the great Almohad empire, the Merinids also inherited the traditions

of those they had dispossessed and their dreams of hegemony in Spain and Barbary.

As in the time of the Almoravids and Almohads, Spain was for the Maghribis the sacred land of martyrs for the faith. Not only did the dynasty send there its troublesome sons, princes whose presence in the Maghrib might be inconvenient and who formed the corps of volunteers of the faith, but several sultāns fought there in person: Abū Yūsuf, whose resumption of the holy war was his one great scheme, his successor Abū Ya'qūb, and Abū 'l-Ḥasan, who saw the failure of these overseas expeditions.

In crossing the Strait, Abū Yūsuf fulfilled his dearest vow but he was also answering the reiterated appeals of the Banu 'l-Aḥmar of Granada, who were tired of enduring the exactions and insults of the King of Castille. He was received there as a saviour and at once undertook a plundering expedition. Don Nuño de Lara, endeavouring to capture the loot taken by the Christians, sustained a heavy defeat near Ecija and was himself slain (674 = 1275). Very few other pitched battles are mentioned in these wars of the Merinids in Spain, but almost daily razzias into Christian territory. The Muslims destroyed or carried off the crops and stocks and they took prisoners who were sold as slaves in the Maghrib. The relations between the Sultāns of Fās and of Granada, by no means warm at the time of the landing in Spain, became decidedly hostile when Abū Yūsuf claimed the ownership of the town of Tarifa [q.v.] as a base for his future operations in the Peninsula. Ibn al-Aḥmar appealed to the King of Castille for help against the encroachments of his rescuer. An alliance was formed between Christians and Muslims of Spain which Yaghmorāsan, sultān of Tlemsen, soon joined. The latter undertook to prevent or impede any further crossings of the Moroccan ruler into Andalusia.

The entente with the Christians did not however prevent the latter from continuing the task of the Reconquista. In 709 (1309) they took Gibraltar and the Sultān of Granada appealed again to the Maghribī Sultān. Abū 'l-Ḥasan sent his son 'Abd al-Malik who recaptured Gibraltar (733 = 1333). 'Abd al-Malik having been killed, Abū 'l-Ḥasan sent a large army on ships supplied by the ports of Ifrikiya and himself landed near Tarifa. This town was in the hands of the Christians. He tried to take it but was routed by the combined forces of Alfonso XI of Castille and Alfonso IV of Portugal. This disaster of 1340 and the taking of Algeciras by the King of Castille finally discouraged the Merinid sultān. Neither he nor his successors again made attempts in Spain.

If circumstances prevented the Merinids from reviving against Christianity the glories of the wars of the Almohads, they were able to devote themselves to regaining the great African empire of their predecessors and they succeeded in doing so for a comparatively short time. That empire, as is well known, covered in addition to the kingdom of the Merinids, that of the 'Abd al-Wādids of Tlemsen and that of the Hafsids of Tunis [q.v.]. The kingdom of Tlemsen was that most directly threatened by the ambitions of the sultāns of Fās. Causes of quarrel were numerous between these neighbouring and related dynasties. To old rivalries, dating from the days when the two clans were nomads, had been added the competition of two adjoining states each seeking to extend their frontiers.

The 'Abd al-Wāḍids very soon lost hope of annexing territory in the west. If, as we have seen, they were a thorn in the side of the Merinids who desired to cross into Spain, this policy was of brief duration. Very soon they had to confine themselves strictly to the defensive. On many occasions, the kingdom of Tlemsen was invaded and the Tlemsenians shut up within their walls. For example for eight years and three months, from 698 (1299), they were blockaded, during which period the Merinids established a permanent camp which became the town of al-Manṣūra [q. v.] in addition to numerous other works of circumvallation; Tlemsen however did not fall till later. In 737 (1337) Abu 'l-Ḥasan took it; he and his son Abū 'Inān were to hold it for 22 years. For these two princes, whose reigns mark the apogee of the dynasty, Tlemsen was only a first stage towards Ifrikiya. The dream of recreating the empire of the Almohads was to be realised by annexing the Ḥafṣid kingdom.

Constant relations, in which each hoped to gain some advantage, united the two states of east and west, Banū Ḥafṣ and Banū Marīn. To a contemporary observer like the Egyptian al-'Umarī, the Banū Marīn alone counted as a military power, but the Banū Ḥafṣ, descendants of the Almohad caliphs, had a prestige which the Banū Marīn could not elaim in spite of the title of *Amīr al-Mu'minin* which Abū 'Inān arrogantly assumed. This explains why, from the very first, the Banū Marīn in annexing the towns of the Maghrib declared themselves mandatories of the sovereigns of Tunis and why they married Ḥafṣid princesses. On their side, the Banū Ḥafṣ did not think it wise to refuse their daughters; they dealt tactfully with the Moroccan sultāns, who might be useful in protecting them against the sultāns of Tlemsen. In a word, they hoped to see the Merinids attack central Maghrib but not to become complete masters of it, which would directly expose Ifrikiya to the attacks of the conquerors.

This is what actually happened in 1347. Taking advantage of the usurpation of the throne of Tunis and of the troubles which followed it, Abu 'l-Ḥasan invaded Ifrikiya and sought to impose his authority there as in his own kingdom. The situation here however was very different from what he was familiar with in the Maghrib. In Ifrikiya, the Arabs were still very strong. Abu 'l-Ḥasan came to grief against the Arab tribes united against a foreign master and near Kairawān they inflicted a disastrous defeat on him in Muḥarram 749 (April 1348). This disaster even endangered the position of the Merinids in the Maghrib itself. An attempt by Abū 'Inān, son of Abu 'l-Ḥasan, to reconquer Ifrikiya proved fruitless.

In spite of the collapse of Marinid aims, the period of these two last sultāns was nevertheless one of the greatest in the history of Muslim Barbary, one of those which has left us most memorials of its magnificence.

The Merinids were vigorous builders. In 1276, Abū Yūsuf had founded New Fās, west of the old town, to make it his official capital; but it was during the first half of the xivth century that the greatest building activity was displayed. The majority of those that have come down to us date from this period. Works of considerable artistic value, they are at the same time evidence of the military activity and religious ardour of

the Banū Marīn, like the ramparts and the mosque of al-Manṣūra, the walls and necropolis of Chella, the medersas of Fās and Sale, the different buildings erected near Tlemsen around the tomb of the great ascetic Sīdī Bū Madyan. Piety in the form of mysticism was the dominating note in the intellectual life of the Maghrib. We must however not forget that the court of Fās was frequented by men like 'Abd al-Raḥmān b. Khaldūn, Ibn al-Khatīb and Ibn Baṭṭūṭa, who have left a name in the field of literature and profane learning.

The failure of the attempts upon Ifrikiya and the disaster at Kairawān may be taken as the beginning of the decline of the Merinids. As a result of these military failures, the troops stationed in some parts of the Maghrib had to be withdrawn. The passes of the Atlas being no longer guarded, the Arabs of Sūs and Tāfilālt, excited by the rumours from Ifrikiya, began to display their turbulent spirit. The tribes who paid taxes now paid only at longer and longer intervals under the threat of expeditionary forces sent against them. There was still a graver cause of decline: the power of the viziers vastly increased. An aristocracy of high officials related to the royal family handed down offices from father to son, backed by powerful clans, and ended by acquiring the power to nominate the new sovereigns. To keep them in tutelage, they used to choose for the throne a minor or a weakling. When the Sultān displayed some desire to rule in person, they did not hesitate to dethrone or assassinate him. Thus in 762 (1361) Abū Sālim was decapitated by a soldier of the Christian militia; his successor Taḥṣfin, an idiot, was deposed and replaced by Abū Zaiyān, who was found strangled and drowned in a reservoir.

In the midst of these palace revolutions the unity of the kingdom was destroyed. We find the prince who governs Sijilmāsa fighting with the sultān reigning at Fās. The vizier who has control of the legitimate sovereign has pretenders against him, who end by dividing up the country among them. Marrākesh fights against Fās. At one time, the traditional enemies of the dynasty, the 'Abd al-Wāḍids of Tlemsen, endeavour to profit by the occasion to resume the aggressive policy of Yaghmorāsan. But Tlemsen was itself too weakened to attain success. Besides, it was attacked in the rear by the Arabs of the Central Maghrib, instigated from Fās. One of the *shaiḫs* of the Suwa'id Arabs is called the "friend and patron of the Marinid dynasty". The Banū Marīn had another means of neutralizing Tlemsen; this was to support pretenders of the 'Abd al-Wāḍid family. To sum up, in spite of the weakness of the Banū Marīn, the Banū 'Abd al-Wāḍ, whose lands had for the most part passed into the hands of the Arabs, cut a still sadder figure and could not resist when attacks from the west were resumed. From 1389 all the sultāns of Tlemsen ruled under the suzerainty of Fās.

But grave events were to turn the attention of the Merinids from the affairs of the Central Maghrib. In 1401, King Henry III of Castille landed in Barbary to take vengeance for outrages of the Muslim corsairs and destroyed Tetwān. This attack, which produced considerable commotion in the Maghrib, and the taking of Ceuta by the Portuguese in 818 (1415), provoked a vigorous campaign by the religious element. The threat from abroad, combined with its weakness in meeting this critical

situation, brought about a series of troubles under which the dynasty succumbed. In 823 (1420) after the assassination of the Sultān Abū Sa'īd, the Merīnids gave place to the Banū Waṭṭās.

MERKEZ, MUŞLIḤ AL-DĪN MUSA, an Ottoman *Shāikh* of an Order and Saint.

Merkez Muşliḡ al-Dīn Mūsā b. Muşṭafā b. Kīlīdī b. Ḥadīdar belonged to the village of Şarī Maḥmūdli in the Anatolian district of Lādhiḡiya. He was at first a pupil of the Mollā Aḥmad Paşa, son of Kḡiḡ Beg [q. v.], and later of the famous Khalwetī Shāikh Sunbul Sīnān Efendi, founder of the Sunbuliya, a branch of the Khalwetiya, head of the monastery of Koḡḡa Muşṭafā Paşa in Stambul (cf. on him: Brūsālī Meḥemmed Ṭāhur, *'Oḥmānī Mu'ellifleri*, i. 78 sq.). When the latter died in 936 (1529), Merkez Efendi succeeded him in the dignity of Pīr. He held the office of head of a monastery for 23 years and died in the odour of sanctity in 959 (1552), aged nearly 90. He was buried in Stambul in the mosque which bears his name (cf. *Ḥadīkat al-Djāwāmi'*, i. 230 sq.; J. v. Hammer, *G. O. R.* ix. 95, N^o. 495) before the Yenī Kapu. At the tomb of Merkez Efendi there is a much visited holy well, an *ayazma*, to which one descends by steps. Its reddish water is said to have the miraculous power of healing those

sick of a fever (cf. Ewliyā Čelebi, i. 372; J. v. Hammer, *Constantinopolis*, i. 503; do., *G. O. R.*, ix. 95, N^o. 495, following the *Ḥadīkat al-Djāwāmi'*, loc. cit.). Beside it is the cell (*zāwiya*) of Merkez Efendi, of which wonderful stories still circulate among the people. He had many pupils, including his son Aḥmad, famous as the translator of the *Kāmūs*, his son-in-law Muşliḡ al-Dīn (cf. Ewliyā, i. 372), the poet Ramaḡān Efendi, called Bihishti and many others.

(FR. BABINGER)

MERSİNA, an Anatolian sea-port on the south coast of Asia Minor.

Mersina, the port and capital of the former sandjak of the same name (with an area of 1,780 sq. m.) in the wilāyet of Adana [q. v.] on the south coast of Anatolia, is 40 miles from Adana, to which a railway runs. The name Mersina comes from the Greek *myrsini* (μυρσίνη), myrtle, because this tree grows in large numbers in this region. The regularly built town, founded only in 1832, with about 21,171 inhabitants (1927) is only of importance as a port for the export of silk, corn and cotton. The climate is very unhealthy in summer. The old name of Mersina was Zephirium; in the vicinity (8 miles S. W.) lie the ruins of Soloi or Pompeiopolis. The town which is quite modern is of no Muslim historical interest.

Bibliography: V. Cuinet, *La Turquie d'Asie*, ii. 50 sq. (FR. BABINGER)

MERTOLA, Ar. *Martūla* and *Mirtūla*, a little town in the south of Portugal on the Guadiana, 35 miles above and north of the mouth of this river, at its junction with the Oeira. This place, the *Myrtilis* of the Romans, was of some importance in the Muslim period. It was in the district of Beja and according to Yāḡūt was the best defended stronghold in the whole of the west of the Peninsula. At the end of the ninth century it was the headquarters of an independent chief, 'Abd al-Malik b. Abi 'l-Djawād, who was in alliance with the lords of Badajoz and Osonoba and held his own against the Cordovan emir 'Abd Allāh.

MĒRWĀRA, a British district in Rādīputāna, lying between 25° 24' and 26° 11' N. and 73° 45' and 74° 29' E., has an area of 641 sq. miles and a population (1901) of 109,459. The local name of the district is Magra, or "hills". Beyond the fact that between 1138 and 1232 (1725 and 1816), several unsuccessful attempts were made by Rādīpūts and Marāṭhas to subdue the country, the history of MĒrwāra is a blank up to 1234 (1818), when the British appeared on the scene. The District was at one time an impenetrable jungle, inhabited by outlaws and fugitives from surrounding states. The population known under the name of Mēis originally comprised a mixture of castes, Čandēla Guḡjars, Blāṭi, Rādīpūts, Brahmins and Minas. It is said that Nisāldēw, the

Čauhān King of Adjmir, subdued the inhabitants and made them drawers of water in the streets of Adjmir. The country has made much progress under the British rule.

(M. Hidayet Hosain)

MERZIFŪN, also called MĀRSIWĀN, a town in the Anatolian wilāyet of Siwas [q. v.] and in the sandjak of Amasia [q. v.] at the beginning of the fertile plain of Şulu Owa, with 11,334 inhabitants (in 1927), of whom the Armenians have had to migrate, which produces a good deal of wine and makes some cotton. Merzifūn before the World War was the centre of activity of the Protestant missions in this region and contained the Anatolia College. The town most probably occupies the site of the ancient Phazemon (Φαζημών) in the district of Phazemonitis; the name is probably a development of Φαζημών. Ibn Bibi (cf. *Recueil de textes relatifs à l'histoire des Seldjoukides*, ed. M. Th. Houtsma, iv., Leyden 1902, p. 292, 12) also gives the form مَرْزِفُون. Little is known of the early history of the town in the Muslim period. It belonged to the kingdom of the Dānīsh-māndids [q. v.] and when in 1393 Bāyazid I drove the ruler of Siwas, Mir Aḥmad, out of the country, the land of "Marsvani", as the Bavarian traveller Hans Schiltberger (cf. *Hans Schiltbergers Reisebuch*, ed. V. Langmante, Tübingen 1885, p. 12) called it, passed to the Ottoman empire. Merzifūn plays a notable part in the history of Ottoman culture as the birth-place and scene of the activities of learned men and authors (cf. A. D. Mordtmann, *Anatolien*, ed. F. Babinger, Hanover 1925, p. 88). In Merzifūn there used to be a number of dervish monasteries (cf. Ewliyā Ćelebi, *Siyāhet-nāma*, ii. 396 infra, where several are mentioned). Of special interest are the mosques, mainly converted from Byzantine churches, including the so-called Eski İjāmī, on the walls of which Christian paintings could until recently be seen (cf. V. Cuinet, *La Turquie d'Asie*, i. 761) and the mosque of Murād II, both on the market-place. The saint locally revered was Pir Dede Sulṭān, said to be a pupil of Ḥādjdjī Bektaşh (Ewliyā, *op. cit.*, ii. 396). In A. D. Mordtmann's time (1852) the "whole Turkish population" consisted of shāiṭs, i. e. descendants of the Prophet.

Bibliography: Ewliyā Ćelebi, *Siyāhet-nāma*, ii. 396 sqq.; Engl. transl. by J. v. Hammer, ii. 212 sqq.; *Le Voyage de Monsieur d'Armenon* . . . , *escript par* . . . J. Chesneau, ed. Ch. Ritter, *Erkunde von Kleinasien*, i. 179 sqq.; Wm. Ainsworth, *Travels in Asia Minor*, London 1842, i. 33; Wm. Hamilton, *Researches in Asia Minor*, London 1842, i. 329; A. D. Mordtmann, *Anatolien*, ed. by F. Babinger, Hanover 1925, p. 87 sqq.; Henry J. van Lennep, *Travels in little-known parts of Asia Minor*, London 1870, i. 82; F. Cumont, *Studia Pontica*, ii. 140; iii. 162; V. Cuinet, *La Turquie d'Asie*, i. 758 sqq. — [As regards the derivation of the name Merzifūn from Phazemon, it must be pointed out that the ancient name no longer came easily to the mouths of

the later Greeks; Stephen of Byzantium (fifth century A. D.) already writes Φαζηζών (var. lect. Φαμεζών, Φαμαζών)]. (FR. BABINGER)

MESHĤĤED (AL-MASHĤĤAD), capital of the Persian province of Khurāsān (q. v., ii., p. 966), the greatest place of pilgrimage for the Shī'is in Persia. It lies 3,000 feet above sea level in 59° 35' E. Long. (Greenw.) and 16° 17' N. Lat. in the valley from 10 to 25 miles broad of the Keshef-Rūd, which runs from N. W. to S. E. This river, also called Āb-i MeshĤĤed (the "river of MeshĤĤed"), rises about 12 miles N. W. of the ruins of Tus [q. v.] in the little lake of Ćeshme-i Gilās (cf. Fraser, *op. cit.*, p. 350; Khanikoff, *op. cit.*, p. 110; Yate, *op. cit.*, p. 315) and joins the Heri (Hari)-Rūd (q. v., and cf. Le Strange, *op. cit.*, p. 407 sq.) about 100 miles S. E. of MeshĤĤed on the Russo-Persian frontier. MeshĤĤed lies about 4 miles south of the bank of the Keshef-Rūd. The hills which run along the valley rise to 8,000 or 9,000 feet at MeshĤĤed.

In consequence of its high situation and proximity to the mountains, the climate of MeshĤĤed is in the winter rather severe, in the summer, however, often tropically hot; it is regarded as healthy.

MeshĤĤed may in a way be regarded as the successor of the older pre-Muḥammadan Tūs [q. v.], and it has not infrequently been erroneously confounded with it.

The fact that Tūs is the name of both a town and a district, together with the fact that two places are always mentioned as the principal towns of this district, has given rise among the later Arab geographers to the erroneous opinion that the capital Tūs is a double town consisting of Tābarān and Nūḳān; e. g. Yāḳūt, iii. 560, 5 (correct at iv. 824, 23) and in the *Lubāb* of Ibn al-Aṭṭār [q. v.] quoted by Abu 'l-Fidā' (*op. cit.*, p. 453). Ķazwīnī (*Āṭṭār al-Bilād*, ed. Wustenfeld, p. 275, 21) next made the two towns thought to be joined together into two quarters (*maḥalla*). This quite erroneous idea of a double town Tūs found its way into European literature generally. Sykes (*J. R. A. S.*, 1910, p. 1115—1116) and following him Diez (*Chwasanische Baudenkmäler*, Berlin 1918, i. 53 sq.) have rightly challenged this untenable idea. The older Arab geographers quite correctly distinguish between Tābarān and Nūḳān as two quite separate towns. Nūḳān, according to the express testimony of the Arabic sources, was only ¼ parasang (*farsakh*) or one Arabic mile from the tomb of Ilārūn al-Rashīd and 'Alī al-Riḳā (see below) and must therefore have been very close to the modern MeshĤĤed. The ruins of Tābarān-Tūs and MeshĤĤed are about 15 miles apart.

As to Nūḳān (often wrongly vocalised Nawḳān) it is sometimes called more precisely (e. g. Yāḳūt, iii. 153, 21) Nūḳān Tūs, and occasionally (e. g. Iṣṭakhri = *B. G. A.*, i. 257, 3; Ḥamd Allah al-Mustawfī, *op. cit.*, p. 151, 2—3) included with Sanābādh. The distance between these two towns is put at an Arabic mile (Yāḳūt, iii. 153, 21) or what is practically the same, ¼ *farsakh* (e. g. Iṣṭakhri, *op. cit.*; Ibn Hawḳal in Abu 'l-Fidā', *op. cit.*, p. 451). Nūḳān must have lain to the east and northeast of the modern MeshĤĤed and a small part of it is the northeastern quarter of the latter town.

In Nūḳān or in the village of Sanābādh belonging to it two distinguished figures in Muslim history

were buried within one decade: the caliph Hārūn al-Rashīd and the 'Alid 'Alī al-Riḍā b. Mūsā.

When Hārūn al-Rashīd was preparing to take the field in Khurāsān, he was stricken mortally ill in a country house at Sanābād̲h̲ where he had stopped, and died in a few days (193 = 809). The caliph, we are told (Tabarī, *op. cit.*, iii. 737, 13—17), realising he was about to die, had his grave dug in the garden of this country mansion and consecrated by Kūī ān-readers.

The three available accounts differ at first sight as to the house in which Hārūn spent his last hours. Two of them are given by Tabarī: according to the first (iii. 736, 17—18; 737, 4) it was on the estate of Ḍjunaid b. 'Abd al-Rahmān that the caliph stopped; the second story (iii. 735, 15—16; 738, 14—15) says that Hārūn lived in the mansion of Ḥumaid b. Abī Ḡhanm. A third story in Yāḳūt (ii. 560) says that the tombs of Hārūn and of 'Alī al-Riḍā were in one of the gardens of the house of Ḥumaid b. Kaḥṭaba. Now there is not the slightest doubt that the references to the house (*dār*) of Ḥumaid b. Kaḥṭaba and to that of Ḥumaid b. Abī Ḡhanm are to the same place. Ḥumaid b. Kaḥṭaba must be the same person as Ḥumaid b. Abī Ḡhanm; they are both described as of the tribe of Ṭaiy.

As to Tabarī's second story, which substitutes a *dār* b. 'Abd al-Rahmān for a *dār* Ḥumaid, it may be observed that Ḍjunaid b. 'Abd al-Rahmān held the office of governor of Khurāsān under the Omayyads (caliphate of Ḥishām) from 111 to 116 (729—734) (on him cf. above i. 1109 sq.; ii. 357b; Weil, *op. cit.*, i. 629—631; E. v. Zambaur, *op. cit.*, p. 47). Ḍjunaid probably resided as a rule not in Nishāpūr or Ṭūs but in the palace at Sanābād̲h̲ which he had probably built. One of his successors, Ḥumaid, also chose to live here and seems to have enlarged the place. This would explain how our sources call the same house the house of Ḍjunaid and of Ḥumaid. Perhaps the estate became the property of the 'Abbāsids on the death of Ḥumaid.

About 10 years after the death of Hārūn, the caliph al-Ma'mūn on his way from Merw spent a few days in this palace. Along with him was his son-in-law 'Alī al-Riḍā b. Mūsā, the caliph designate, the eighth imām of the Twelvers. The latter died suddenly here in 203 (818); the actual day is uncertain (cf. Strothmann, *Die Zwölfer-Schia*, Leipzig 1926, p. 171). On 'Alī al-Riḍā and his death cf. above i. 296, 298b; iii. 222a; Weil, *op. cit.*, p. ii. 225b; Fraser, *Narrative of a Journey into Khorasan* (London 1825), p. 449—451 (gives the story current in Meshhed of the imām's death); Yate, *op. cit.*, p. 340—342; Sykes, *The Glory of the Shia World*, London 1910, p. 235—238; W. Jackson, *op. cit.*, p. 265—266.

It was not the tomb of the caliph but that of a highly venerated imām which made Sanābād̲h̲ (Nūḳān) celebrated throughout the Shī'a world, and the great town which grew up in course of time out of the little village actually became called *al-Mashhad* (Meshhed) which means "scpulchral chapel" (primarily of a martyr belonging to the family of the Prophet). Cf. on the conception of Mashhad, iii. 323 and v. Berchem in Diez, *Churasanische Faudenkmaler*, i. (Berlin 1918), p. 89—90. Ibn Hawkal (p. 313) calls our sanctuary simply Mashhad, Yāḳūt (iii. 153) more accurately al-Mashhad al-Riḍāwī = the tomb-chapel of al-Riḍā; we also find

the Persian name *Meshhed-i muḳaddas* = "the sanctified chapel" (e. g. in Ḥamd Allāh al-Muṣṭawfi, p. 157). As a place-name Mashhad first appears in al-Muḳaddasī (p. 352), i. e. in the last third of the tenth century. About the middle of the xivth century the traveller Ibn Baṭṭūṭa (iii. 77) uses the expression "town of Mashhad al-Riḍā". Towards the end of the middle ages the name Nūḳān, which is still found on coins in the first half of the xivth century under the Ilkhāns (cf. Coddington, *A Manual of Muslim Numismatics*, London 1904, p. 189), seems to have been gradually ousted by al-Mashhad or Meshhed. At the present day Meshhed is often more precisely known as Meshhed-i Riḍā, Meshhed-i muḳaddas, Meshhed-i Ṭūs (so already in Ibn Baṭṭūṭa, iii. 66). Not infrequently in literature, especially in poetry, we find only Ṭūs mentioned, i. e. New Ṭūs in contrast to Old Ṭūs or the proper town of this name; cf. e. g. Muḥammad Mahdī al-'Alawī, *Ta'rikh Ṭūs aw al-Mashhad al-Riḍāwī*, Baghdad 1927, p. 3.

The history of Meshhed is very fully dealt with in the work of Muḥammad Ḥasan Khān Samī' al-Dawla entitled *Maṭla' al-Shams* (3 vols., Teherān 1301—1303). The second volume is exclusively devoted to the history and topography of Meshhed; for the period from 428 (1036) to 1302 (1885) he gives valuable historical material. On this work cf. Yate, *op. cit.*, p. 313—314 and E. G. Browne, *A History of Pers. Lit.*, Cambridge 1924, iv., p. 455—456. The *Maṭla' al-Shams* forms the chief source for the sketch of the history of the town in Yate, p. 314—326. Cf. also the chronological notes in Muḥammad Mahdī al-'Alawī, *op. cit.*, p. 13—16.

The importance of Sanābād̲h̲-Meshhed continually increased with the growing fame of its sanctuary and the decline of Ṭūs. Ṭūs received its death blow in 791 (1389) from Mirānshāh, a son of Timūr. When the Mongol noble who governed the place rebelled and attempted to make himself independent, Mirānshāh was sent against him by his father. Ṭūs was stormed after a siege of several months, sacked and left a heap of ruins; 10,000 inhabitants were massacred (see Yate, *op. cit.*, p. 316; Sykes, in *J. R. A. S.*, 1910, p. 1118 and Browne, *op. cit.*, iii., p. 190). Those who escaped the holocaust settled in the shelter of the 'Alid sanctuary. Ṭūs was henceforth abandoned and Meshhed took its place as the capital of the district.

As to the political history of Meshhed it coincides in its main lines with that of the province of Khurāsān [q. v.]. Here we shall only briefly mention a few of the more important events in the past of the town. Like all the larger towns of Persia, Meshhed frequently saw risings and the horrors of war within its walls. To protect the mausoleum of 'Alī al-Riḍā in the reign of the Ḡhaznawid Mas'ūd [q. v.], the then governor of Khurāsān erected defences in 1037. In 1121 a wall was built round the whole town which afforded protection from attack for some time. In 1161 however, the Ḡhuzz [q. v.] succeeded in taking the place, but they spared the sacred area in their pillaging. We hear of a further visitation by Mongol hordes in 1296 in the time of Sulṭān Ḡhāzān [q. v.]. Probably the greatest benefactors of the town and especially of its sanctuary were the first Timūrid Shāh Rukh (809—850 = 1406—1446; see vol. iv. 265 sq.) and his pious wife Dīawhar-Shādh.

With the rise of the national Ṣafawid dynasty [q. v.], a new era of prosperity began for Meshhed. The very first Shāh of this family, Ismā'il I (907-930 = 1501-1524; q. v.), established Shi'ism as the state religion and, in keeping with this, care for the sacred cities within the Persian frontier, especially Meshhed and Kumm, became an important feature in his programme as in those of his successors. Pilgrimage to the holy tombs at these places experienced a considerable revival. In Meshhed the royal court displayed a great deal of building activity. In this respect Tahmāsp I, Ismā'il I's successor (930-984 = 1524-1576; q. v.), and the great Shāh 'Abbās I (995-1037 = 1587-1627; q. v.) were especially distinguished.

In the xvth century the town suffered considerably from the repeated raids of the Ozbegs (Uzbek). In 1507 it was taken by the troops of the Shaibāni Khān [cf. SHAI'ANIDS]; it was not till 1528 that Shāh Tahmāsp I succeeded in repelling the enemy from the town again. Stronger walls and bastions were then built and another attack by the same Özbek chief was foiled by them in 1535. But in 1544 the Ozbegs again succeeded in entering the town and plundering and murdering there. The year 1589 was a disastrous one for Meshhed. The Shaibānid 'Abd al-Mu'min after a four months' siege forced the town to surrender. The streets of the town ran with blood and the thoroughness of the pillaging did not stop at the gates of the sacred area. Shāh 'Abbās I who lived in Meshhed from 1585 till his official ascent of the throne in Kazwin in 1587 was not able to retake Meshhed from the Özbegs till 1598.

At the beginning of the reign of Tahmāsp II [q. v.] in 1722 the Afghān tribe of Abdālī [q. v.] invaded Khurāsān. Meshhed fell before them, but in 1726 the Persians succeeded in retaking it after a two months' siege. Nādir Shāh [q. v.] (1736-1747) had a mausoleum built for himself in Meshhed.

After the death of Nādir Shāh civil war broke out among the claimants to the throne, in the course of which the unity of the Persian empire was broken. The whole eastern part of the kingdom of Nādir Shāh, particularly Khurāsān (except the district of Nishāpūr), passed in this period of Persian impotence under the rule of the vigorous Afghān Shāh Aḥmad Durrāni. An attempt by Karīm Khān Zand to reunite Khurāsān to the rest of Persia failed. Aḥmad defeated the Persians and took Meshhed after an eight months' siege in 1167 (1753); cf. above i., p. 169b. 202b, 203b. Aḥmad Shāh and his successor Timūr Shāh left Shāh Rukh in possession of Khurāsān as their vassal, making Khurāsān a kind of buffer state between them and Persia. As the real rulers however, both these Afghān rulers struck coins in Meshhed (cf. above i., p. 202b).

Otherwise the reign of the blind Shāh Rukh, which with repeated short interruptions lasted for nearly half a century, passed without any events of special note. It was only after the death of Timūr-Shāh (1207 = 1792) that Agha Muḥammad Khān, the founder of the Kādjār dynasty, succeeded in taking Shāh Rukh's domains and putting him to death in 1210 (1795) and thus ending the separation of Khurāsān from the rest of Persia (cf. above, i., p. 204a). The death soon afterwards of Agha Muḥammad (1211 = 1796) enabled Nādir, who had escaped to Herāt, to return to Meshhed and take up the reigns of government

again. A siege of his capital by a Kādjār army remained without success; but in 1803 Faṭḥ 'Alī Shāh was able to take it after a siege of several months when Nādir's funds were exhausted.

From 1825 Khurāsān suffered greatly from the raids of Turkoman hordes and the continual feuds of the tribal leaders (cf. Conolly, *op. cit.*, i. 288 and Yate, *op. cit.*, p. 53). To restore order the crown prince 'Abbās Mirzā entered Khurāsān with an army and made Meshhed his headquarters. He died there in 1249 (1833).

The most important political event of the sixth century for Meshhed was the rebellion of Iḥasan Khān Sālār, the prince-governor of Khurāsān, a cousin of the reigning Shāh Muḥammad-i 'Abbās. For two years (1847-1849) he held out against the government troops sent against him. At the time of the accession of Nāṣir al-Dīn (1848) Khurāsān was actually independent. It was only when the people of Meshhed, under pressure of famine, rebelled against Sālār that Ḥusām al-Saltāna's army succeeded in taking the town.

In 1911 a certain Yūsuf Khān of Herāt declared himself independent in Meshhed under the name of Muḥammad 'Alī Shāh and for a period disturbed Khurāsān considerably with the help of a body of reactionaries who gathered round him. This gave the Russians a pretext for armed intervention, and on March 29, 1912, they bombarded Meshhed in gross violation of Persia's suzerain rights and many innocent people, citizens and pilgrims, were slain. This bombardment of the national sanctuary of Persia made a most painful impression in the whole Muslim world. Yūsuf Khān was later captured by the Persians and put to death (cf. E. G. Browne, *The Press and Poets of Modern Persia*, Cambridge, 1914, p. 124, 127, 136; Sykes, *History of Persia*, London 1927, ii. 426-427).

Meshhed is now the centre of eastern Persia, the capital of the province of Khurāsān which, since its eastern part was taken by the Afghāns in the xviiith century, is barely half its former size (cf. Le Strange, *op. cit.*, p. 383 *sq.*; Isf., xi., 108 *sq.* and above, ii. 966). In the middle ages it was not Tūs, Meshhed's predecessor, but Naisābūr (modern Persian Nishāpūr) that was the capital of this extensive and important province. A royal prince has usually been governor since the fall of the Nādirids. Since 1845 the lucrative and influential post of Mutawallī-Bāghī, the controller or treasurer of the sanctuary of the Imām, has usually been combined with the governorship (cf. Yate, *op. cit.*, p. 322).

The only plan — not very accurate — of Meshhed known to me is that of Colonel Dolmage (cf. Curzon, *op. cit.*, i. 151, note 2; 160) and was made about 1870. It is published in MacGregor, *op. cit.*, i. 284. The plan of the town is an irregular oblong with its longer axis running from N. W. to S. E. Its circumference is according to the most reliable calculations about 6 miles, the greatest breadth about a mile, and the length not quite two miles measured along the main street Khiyābān which runs right through the town.

Like most Persian towns Meshhed is enclosed by a great girdle of walls, which gives it a very picturesque appearance. The lines built to stiffen the defences, namely a small moat with escarpment before the main wall and a broad ditch around outside, are now in ruins and in places have completely disappeared.

The citadel (*ark*) in the southwest part of the town is directly connected with the system of defences. It is in the form of a rectangle with four great towers at the corners and smaller bastions. The palace begun by 'Abbās Mirzā but finished only in 1876, with its extensive gardens, is connected with the fortress proper, now fallen into disrepair (cf. Yate, *op. cit.*, p. 327). It is used as the governor's residence. The whole quarter of government buildings, which, according to MacGregor, occupies an area of 1,200 yards, is separated from the town by an open space, the Maidān-i Tōp (Cannon Place) which is used for military parades.

There are six gates in the city walls.

The town is divided into six great and ten smaller quarters (*mihalla*) (see Yate, *op. cit.*, p. 328). The six larger bear the names of their gates; see al-Mahdi al-'Alawī, *op. cit.*

The principal street which divides the whole town into two roughly equal halves, the *Khiyābān*, is a creation of Shāh 'Abbās I who did a great deal for Meshhed (1587—1627; see Yate, *op. cit.*, p. 319; cf. the pictures in Sykes, *The Glory of the Shia World*, p. 231). This street, a fine promenade, is, being the main thoroughfare, filled all day with a throng of all classes and nationalities, including numerous pilgrims, and caravans of camels and asses; the bustle is tremendous, especially in the middle of the day.

The canal, which flows through the *Khiyābān* in a bed about 9 feet broad and 5 feet deep is fed, not from the Keshf Rūd (see above) which runs quite close to Meshhed, as it has too little water, but from the Āshmī-i Gilās already mentioned, which used to provide Tūs with water. When this town had been almost completely abandoned, Shīr 'Alī, the vizier of Sulṭān Husain b. Maṣṣār b. Bākārā (1468—1506; on him see above, ii. 343; i. 594), at the beginning of the xvth century had the water brought from this source to Meshhed by a canal 45 miles long, thus sealing the ruin of Tūs; cf. Yate, *op. cit.*, p. 315; al-Mahdi al-'Alawī, *op. cit.*, p. 13.

The making of this canal (see Yate, *op. cit.*, p. 315; Mahdi al-'Alawī, p. 13) contributed essentially to the use of Meshhed; for the greater part of its inhabitants rely on it for water, although after entering the town, the canal becomes muddy and marshy (which was often a subject of satire; cf. Abd al-Kārim, *op. cit.*, p. 74), and use it for drinking, washing and religious ablutions without hesitation. There are also large and deep reservoirs before the main gates. The water is saline and sulphurous and therefore has an unpleasant taste (cf. Conolly, i. 333—334; Khanikoff, p. 105; Curzon, i. 153).

The sacred area divides the principal street into two parts: the Bālā (= Upper) *Khiyābān* in the N.W. and the Pā'in (= Lower) *Khiyābān* in the S.E., of which the former is about 3 times as long as the latter. The sacred area covered by the sanctuary of the Imām al-Riḍā is usually called Bast (cf. above, i. 709). The name Haram-i Shīrīf or Haram-i Muḥaddas or Haram-i al-Riḍāwī (al-Riḍā's Haram) is often also applied to it; frequently it is called simply, "Imām" as in Persia as in the 'Irāq this title is applied also to a building or piece of ground sacred to an Imām. The Bast, a rectangle 900 feet × 700 feet in area, is in the lower half of the *Khiyābān*. With its courts, mosques, sanctuaries, madrasas, caravanserais,

bazaars, dwellinghouses etc. it forms a town by itself; a wall around it cuts it off completely from the rest of Meshhed. The main entrances from the *Khiyābān* are two great doors on north and south, but they are barred by chains so that no vehicle or riding-beast can enter; for the ground of the Bast is holy and may only be trodden on foot. Animals which get in by accident become the property of the administration of the Imām. The Bast also has the right of a *asylum* (whence the name *Bast*). Debtors who take refuge in it are safe from their creditors; criminals can only be handed over by order of the Mutawallī-Bāshī, which is now usually done after three days. In the whole of the sacred area strict discipline is maintained by its own police; there is a special prison for thieves (see the plan in Yate, p. 332, No. 75; cf. also Conolly, i. 263; Khanikoff, p. 98; Bassett, *op. cit.*, p. 224; Curzon, i. 153—154; Massy, *op. cit.*, p. 1006; Yate, p. 334).

Entrance to the Bast is strictly forbidden to all non-Muslims. In earlier times the rule does not seem to have been so strict, for Clavijo (see *Rihl.*) in 1404 was able to visit the sepulchral chapel of the Imām al-Riḍā. In the sixteenth century Fraser (1822, 1833), Conolly (1830), Burnes (1832), Ferrier (1845), Eastwick (1862), Vámbéry (1863), Colonel Dolmage (in the sixties) and Massy (1893) visited the sacred area. Only Fraser, Conolly, Dolmage and Massy actually entered the sepulchral chapel itself. Vámbéry and Massy were dressed as Muslims while the others retained their European dress. Except Dolmage, all these travellers have given more or less full descriptions of the sacred area. The full and accurate description given by Sykes in the *J. R. A. S.*, 1910, p. 1130—1148 and in the *Glory of the Shia World* is based on information supplied by the attaché to the British Consulate, Khān Bahādur Ahmad bin-Khān (cf. *J. R. A. S.*, 1910, p. 1113 and *The Shia World*, p. iii.; see also Curzon, i. 154 sq. and Mahdi al-'Alawī, p. 17—22).

The most detailed plan of the Bast is in the already mentioned *Maṭla' al-Shams* of Ṣanī' al-Dawla (1885); also given in Yate, *op. cit.*, p. 332. A plan on a somewhat smaller scale was prepared by the Persian architect Mu'awīn-i Ṣanā'ya (cf. Sykes, *Glory of the Shia World*, p. 240) and was published by Sykes in the *J. R. A. S.*, 1910, p. 1128 and in *Glory of the Shia World*, p. 100. The latter differs in details not inconsiderably from Ṣanī' al-Dawla's plan; which is right we have not the means of telling.

The history of the sanctuary of 'Alī al-Riḍā is pretty well known from inscriptions and literary sources (cf. especially the references in Yate, *op. cit.*, p. 317 sq.; Sykes, *J. R. A. S.*, 1910, p. 1130 sq. and Mahdi al-'Alawī, p. 14 sq.). According to local legend, Alexander the Great built a wall around the site as he foresaw in a dream that it was destined to be the tomb of a saint (cf. Fraser, *Narrative*, p. 449; Sykes, *op. cit.*, p. 1130). As early as the second half of the tenth century, as Ibn Hawkal tells us (*B. G. A.*, ii. 313), the 'Alid sanctuary had a strong wall built around it, within which devout men who wished to lead an ascetic life (*i'tikāf*, q. v.) took up their abode. The almost contemporary account of al-Muhallabī in Abu 'l-Fidā', p. 452 is similar. A few decades later, Sulṭān Maḥmūd of Ghazna (998—1030) as a result of a dream enlarged the

buildings of the tomb and provided a new wall around them (see Sykes, p. 1130). The sanctuary at a later date seems to have fallen somewhat into decay: for about a century later it was restored by the Saldjūk Sultān Sandjār [q. v.] out of gratitude, local tradition says, for the miraculous cure effected on his sick son there (see Fraser, *op. cit.*, p. 451; Napier, *J. R. G. S.*, xlvii. [1876], p. 80 *sq.*; Sykes, *op. cit.*, p. 1141—1142 and in *Glory of the Shia World*, p. 238 *sq.*). It is to this event that an inscription of 512 (1118) inside the chamber of the tomb refers (see it in Sykes, p. 1140—1141 and cf. Mahdi al-'Alawī, p. 18). There is also a second inscription (in Sykes, p. 1142—1143) which records a restoration undertaken in 612 (1215). The existence of these two inscriptions, the oldest in Meshhed, shows that the Mongols of 'Ingiz-Khān when they swept over Khurāsān in 1220, if they may have plundered the sanctuary, spared the buildings. We hear of another restoration of the buildings in the reign of Sultān 'Ulghātū Khudābanda (1304—1316; cf. Sykes, *J. R. A. S.*, 1910, p. 1132; Mahdi al-'Alawī, p. 18). From the middle of the sixteenth century we have the somewhat fuller description of the sanctuary of 'Alī al-Riḍā by Ibn Baṭṭūta (ii. 77—79). Timūr's son Shāh Rukh (1406—1446) and his wife Djawhar Shāhī did a great deal for the Haram. The latter built the splendid mosque to the south of the tomb which still bears her name. The Dar al-Siyāda, the fine hall west of the tomb, and the adjoining chamber, the Dar al-Huffāz, are also due to this queen. Under Timūr's grandson Sultān Husain Bāḳarā (1469—1506) [q. v.], the vizier Shīr 'Alī erected the southern part of the Ṣaḥn-i Kuhna, "the old court", with the imposing portico; see the inscription reproduced in Sykes, p. 1133.

With the coming to power of the Ṣafawids a new and brilliant era dawned on Meshhed. The rulers of this dynasty vied with one another in the development and adornment of the sanctuary of 'Alī al-Riḍā, which they raised to be the religious centre of their kingdom. In this respect Tahmāsp I, 'Abbās I, 'Abbās II and Sulaimān I deserve special mention. Tahmāsp I (1524—1576) erected a minaret covered with gold in the northern part of the Ṣaḥn-i Kuhna, adorned the dome of the tomb with sheets of gold and put a golden pillar on the top of it. The Ozbegs carried off this rich adornment on their raid in 1589. 'Abbās I the Great did most of all the Ṣafawids (1587—1627) for Meshhed. 'Abbās I (1641—1666) devoted his attention mainly to the further decoration of the Ṣaḥn-i Kuhna. The inscription published in part by Sykes, p. 1133 (cf. also Khanikoff, p. 103) was written by the master hand of Muḥammad Riḍā 'Abbāsī (on him cf. Sarre and Mittwoch, *Zeichnungen des Riza Abbasi*, Munich 1914, p. 15—16). Sulaimān I (1666—1694) devoted special attention to the restoration of the dome of the Imām's tomb; see Mahdi al-'Alawī, p. 19 (cf. also Yate, p. 343; Sykes, p. 1137).

Foreign potentates also gave great gifts to the 'Alid sanctuary in the Ṣafawid period, such as the Emperor Akbar of India who made the pilgrimage to Meshhed in 1695 (cf. Yate, p. 319) and in 1512 the Kāth Shāh of the Dekkan.

It was Nādir Shāh (1736—1747) who did most for the town of Meshhed in the eighteenth century. Although a very strict Sunni, he devoted a considerable part of the enormous wealth which he had

brought back from his Indian campaign to the embellishment of the great Shī'a place of pilgrimage. He restored thoroughly the southern half of the Ṣaḥn-i Kuhna built in the reign of Sultān Husain Bāḳarā. He decorated the portico richly and covered it with sheets of gold so that it is still called "Nādir's Golden Gate" after him. In 1730, before his accession to the throne, Nādir erected a minaret covered with gold in the upper part of the Ṣaḥn, as a counterpart to that erected by Tahmāsp I on the north side of the "old court". Cf. on Nādir Shāh's activities at the sanctuary of al-Riḍā, Muḥammad 'Alī Ḥāzin *Ta'rikh Akhṣāl Shākh Ḥāzin* (*Memoirs*, ed. Balfour, London 1831, p. 272).

The rulers of the Qājār dynasty of the nineteenth century, Faṭḥ 'Alī (1797—1834), Muḥammad Shāh (1834—1848) and Naṣr al-Dīn (1848—1896), faithfully followed in the footsteps of their predecessors, as regards attention to the Imām's sanctuary.

In spite of the number of times which the 'Alid sanctuary has been plundered in course of time, it still has countless treasures within its buildings and puts in the shade, as regards its wealth and the extent of its buildings and courts, all the other great Muḥammadan sanctuaries, except perhaps Mecca, but including the much admired Najaf and Kerbela.

A detailed and accurate description of the Haram and an account of its architectural history based on its present state cannot be given because the strict prohibition of admission to members of other faiths has prevented non-Muslim scholars from examining thoroughly and reproducing the buildings. Relying on descriptions of the sacred area prepared by Europeans and Orientals and on the valuable data contained in inscriptions (the latter were first noted by Khanikoff, p. 103—104; the more important were published by Sykes assisted by Khān Bulādur Ahmad Dīn, in *J. R. A. S.*, 1910, p. 1131 *sq.*), we can assume with considerable probability that, except the tomb proper, which in its present form (excluding the later dome) according to the inscription (512 = 1118), dates from the beginning of the sixth century, only insignificant remains of the earlier mediaeval period have survived. The Haram in its present form is in the main a creation of the last 500 years, as is briefly outlined in the above short historical sketch of the sanctuary.

The dome of the tomb with its various annexes rises in the centre of the sacred area and is bounded on the north and east by two great rectangular courts, the Ṣaḥn-i Kuhna and the Ṣaḥn-i Naw, while in the south it is adjoined by the extensive buildings of the Djawhar Shāhī mosque.

The most popular entrance to the East and the one preferred by pilgrims is the gateway in the Bāṭi-Khiyābān barred by a chain. The road runs for 250 yards through this street filled with shops and ends at a great gateway through which the Ṣaḥn-i Kuhna, the "old court" is entered. Its northern part dates from the time of Shāh 'Abbās I, while the southern is as old as the second half of the xvth century (reign of Sultān Husain Bāḳarā) but was completely restored by Nādir Shāh. Four great towers with niche-like halls (hence called *arṣṭān*) admit to the court. The simplest are the west and east towers built by 'Abbās I; the former has the clock tower, while the platform of the latter is used as *naḳḳārā-khāne* i. e. "music-

house", where, according to an old Persian custom, found in other royal cities, sunrise and sunset are greeted with music. From the east gate one reaches the eastern exit of the Bast through the Bazar of the Pā'in-Khiyābān. Much more impressive from the architectural point of view are the northern gateway built by 'Abbās II and especially the southern gateway of the court, "Nādir's Golden Gate", Nādir Shāh's most splendid achievement and the most imposing building of the whole Haram. At each of the two great gates stands a minaret 100 feet high, the upper part of which is covered with gold; the builder of the northern gate was Tahmāsp I and of the southern Nādir Shāh. Nādir built in the centre the famous octagon of "Nādir's Well" covered by a gilt baldachin (*Saḡḡā-Khān-i Nādiri* = "Nādir's water carrier-house"); it was hewn out of a huge block of white marble which the Shāh had brought at great expense from Herāt. The walls of the court are pierced by two rows of alcoves, the lower of which is occupied by artisans, schools and dwellings of the servants of the mosque, while the higher officials of the Imām occupy the upper storey. The whole courtyard which has a length of about 100 yards and a breadth of 70, is paved with dark Meḥhed stones (cf. below) which are also to some extent tombstones. For pictures of the Ṣaḡn-i Kuhna with clock tower and Nādir's Well see above, iii. 384, pl. 15; Yate, p. 340, 346; Sykes, *Glory of the Shia World*, p. 241; picture of Nādir's Golden Gate in Yate, p. 328 and Sykes, *op. cit.*, p. 245.

Nādir's golden gateway leads southwards into the area of the holy tomb, the sepulchral chamber with the halls and rooms surrounding it. Strictly speaking, it is only this nucleus of the whole sacred area that should be called *Haram* or *Haram-i Muḡaddas* or *Haram-i Muḡarak*, terms often extended to the whole Bast. The names *al-Rawḡa al-Muḡahhara* and *Āsitāne* = the (holy) threshold, are also used. After passing through the Golden Gate one enters the *Dār al-Siyāda*, built by Dījawhar Shādh, the finest hall in the sacred quarter. Hung on a wall here is a round dish said to be that on which the poisoned grapes were offered to 'Alī al-Riḡā. The pilgrim can see into the sepulchral chamber through a silver grille from the *Dār al-Siyāda*. Turning to the southeast one enters a smaller, more simply decorated chamber, the *Dār al-Iḡuffāz*.

Adjoining the *Dār al-Iḡuffāz* in the north is the dome of the Mausoleum of the Imām. The interior of the sepulchral chamber (see the picture in Sykes, *op. cit.*, p. 251), an almost square area, 30 × 27 feet, is, as there are no proper windows, lit by the dim light from golden lamps and chandeliers and furnished with the greatest splendour. The tomb itself is in the N.E. corner and surrounded by three beautiful grilles, one of which, dated 1747, is said to come from the mausoleum of Nādir Shāh now destroyed. 'Abbās I gave the top of the tomb with its gold covering. In a projection at the foot of the tomb, Faṭḥ 'Alī Shāh placed a false door of gold inlaid with jewels (picture in Sykes, *op. cit.*, p. 255). In niches in the wall behind glass are kept very valuable votive offerings (jewelled arms, etc., mainly gifts of the ruling house). On the wall are the two inscriptions already mentioned of 512 (1118) and 612 (1215) of which the first is the earliest known

example of the so-called round hand (*ḥulth*) in Arabic epigraphy (cf. v. Berchem in Diez, *Churasan. Baudenkmäler*, i. 97, note 8). These enable us to place the building of the present chamber in the beginning of the xith century, while the dome 65 feet high covered with sheets of gilt copper was built only in 1607 by 'Abbās I and renovated in 1675 by Sulaimān I, according to inscriptions on its outside. As the thread of tradition regarding the site of the Imām's grave can hardly have been broken, it may be assumed practically with certainty that the present dome is built on the true site. There is no longer any trace of Hārūn's grave; it probably was in the centre of the mausoleum, whence the tomb of the 'Alid who died later was put in a corner of the same place.

Of the other chambers and isolated buildings belonging to the system of the Haram proper, we shall only mention here the *Gumbad* (domed tomb) of Allāh Wardī Khān, which lies to the N.E. and takes its name from its builder, a famous general of 'Abbās I (cf. Conolly, i. 271; Sykes, *The Glory of the Shia World*, p. 266; see also the picture in Diez, *Persien: Islam. Baukunst in Churasan*, p. 54).

Leaving the sacred chamber by the eastern door one reaches, after traversing two adjoining rooms, the "Golden Gate" of Naṣīr al-Dīn, which leads into the New Court (*Ṣaḡn-i Naw*); its northside is bounded by the Pā'in Khīyābān. Faṭḥ 'Alī Shāh began this court in 1818. His two successors continued the building, which was completed in 1855.

If one turns southwards from the *Dār al-Siyāda* already mentioned, one soon enters the area of the charming mosque endowed by Sulṭāna Dījawhar Shādh and bearing her name. Like the Ṣaḡn-i Kuhna this older court, an oblong running N. to S. about 100 yards long and 90 broad, is broken in the middle of each of its four sides by an arched hall (*aiwān*), while the unbroken parts of the walls have rows of alcoves fitted up as dwellings. The largest and finest of these four *aiwāns* of the mosque, the *Aiwān-i Maḡṣūra* in the south (for *Maḡṣūra* = stall, cf. iii., p. 336), is used for prayers; in it is a wooden pulpit in which the Mahdī will one day show himself to the faithful. The entrance hall is covered by a blue dome which surpasses that on the tomb of the Imām in height and width, and is flanked by two high minarets covered with blue glass tiles. The centre of the court is occupied by the *Masḡid-i Pir-i Zan* = "Mosque of the Old Woman", a square unroofed area surrounded by a wooden balustrade around which runs water in a deep stone channel.

The Dījawhar Shādh mosque is the noblest and finest building in the sacred area; cf. the opinions of Fraser, *Narrative*, p. 447; Vámbéry, *Meine Wanderungen* etc., p. 322 and Sykes, *J.R.A.S.*, 1910, p. 1145. — Pictures of the mosque in Sykes, *The Glory of the Shia World*, p. 263; Yate, p. 344 (*Aiwān-i Maḡṣūra* and *Masḡid-i Pir-i Zan*); Diez, *Persien: Islam. Baukunst*, p. 45-48.

Of the various small sanctuaries which the pilgrim visit in the Haram, only two need be mentioned here, the *Ziyārat Qadam-i Muḡarak* or *Sharif* = "the place of pilgrimage of the blessed or excellent foot" also called *Dīā-i Sang-i Čahār-pā* = "place of the foot-stone" (see the plan in Yate, p. 332, No. 16), a circular space covered by a dome (east of the north *aiwān* of the Dījaw-

har Shādh mosque), in which reverence is paid to a dark grey oval-shaped stone said to contain an impression of 'Alī al-Riḍā's foot (cf. Massy, *op. cit.*, p. 1003—1004). The second noteworthy feature of the Bāst is a tall stone pillar, out of which a water basin has been roughly hewn. It is said to have fallen into the Bāst as a shapeless block from heaven (see Massy, *op. cit.*, p. 1002).

Inside of the sacred area are the richest and busiest bazars of the town, the most richly endowed madrasas, the most profitable caravanserais and the most popular baths. These are all, like the dwelling houses there, the absolute property of the Imām, the 'Alid buried here, i. e. of the ecclesiastical authorities who administer the sanctuary on his behalf. The whole Bāst belongs exclusively to them. This dead hand however has still more possessions in land, buildings, canals (*kanāt*, q.v.), in all the provinces of Persia, especially in the immediate and more distant vicinity of Meshhed. To the vast sums which these properties yield in produce and rents, are to be added the considerable payments for funerals and tombs, the gifts of pilgrims etc. There is also considerable expenditure, the payment of a considerable number of higher officials and of a large number of lower officials and servants, the maintenance of many pilgrims, the cost of repair, lighting, decoration of the sanctuaries etc. The income of the Hāram in course of time has naturally varied. Towards the end of the Ṣafawid period it is said to have been about £15,000 while at the time of Fraser's first visit (1822), as a result of the troubled times, it had sunk to £2,000—2,500 (Fraser, *Narrative*, p. 456). Later travellers, like Basset (1878) and Curzon (1889), estimated the annual revenues of the Imām at £16,000 to £17,000 (without revenues in kind); for the last decade of the sixteenth century Massy (p. 1106) and Yate (p. 344) give £20,000. Ibrāhīm Beg's estimate (*op. cit.*, p. 43) of £40,000 is certainly much too high.

At the head of the administration of the Hāram there has been from early times a Mutawallī-Bāshī, who must be a layman. In view of the very influential position which this official occupies in his capacity as head of the greatest Persian sanctuary and treasurer of a very considerable estate, it is only natural that an appointment to such a position of trust is regarded as a very special honour. As it was not uncommon for disputes about the limits of their respective spheres of authority or other matters to arise between the holder of this office, the representative of ecclesiastical power, and the governor of Khurāsān, the clerical element has since the middle of the sixteenth century been subordinated to the civil power by giving the office of Mutawallī-Bāshī to the governor of the time (see Yate, p. 323, 344). This very lucrative double office — the Mutawallī-Bāshī gets 10% of the revenues of the Hāram — is as a rule only held for a few years by the same individual.

The Mutawallī-Bāshī is assisted by a staff of higher officials (*mutawallīs*). He has further at his command the varied hierarchy of the sacred area, among whom the *mullṭahids* [q.v.], who have a thorough knowledge of religious law and are men of great prestige and influence, occupy the first place. Next comes a regular army of lower clerics (*mullās*) who conduct the services, teach in the schools and guide the rites of the pilgrims;

not a few of them make a living by supplying official documents sealed with the seal of the Imām (see the picture in Sykes, *Glory of the Shia World*, p. 278) which deal among other matters with the answering of petitions made by the pilgrims at the sacred tomb (cf. Khanikoff, p. 99). On the administration of the sanctuary of Meshhed cf. Fraser, *op. cit.*, p. 455—456; Curzon, i. 162—164; Massy, p. 1006 and especially Yate, p. 344—346.

As we know from mediaeval Arabic sources, pilgrimage to the tomb of 'Alī al-Riḍā began at an early date. We occasionally hear also of royal visits from the sixteenth century onwards.

As to the number of pilgrims who visit Meshhed annually we have different estimates for the sixteenth century but as exact figures can hardly be kept and the numbers vary greatly, they can only claim reliability to a very limited extent. While Yate (p. 334) gives the annual number for the last decade of the sixteenth century at 30,000, earlier travellers, except Marsh (1872: 20—30,000) give much higher figures, e.g. Bellow (1872): 40—50,000; Ferrier (1845): 50,000; Khanikoff (1858) and Eastwick (1862): over 50,000; Curzon 1889 even gives 100,000, but this is certainly too high. The numbers go up considerably when special religious ceremonials are going on, e.g. at the anniversary of 'Alī al-Riḍā's death (cf. the pictures in Diez, *Persien* etc., p. 46) and during the first third of the month of Muḥarram at the *Ta'ziya* [q.v.] in memory of the tragedy of Kerbelā. We have a full description of the Muḥarram festival of the year 1830 from Conolly (see his *Journey* etc., i. 267—284, 335—336) and a shorter one of 1894 by Yate (*op. cit.*, p. 144—148); cf. also the illustrations in Yate, p. 146 and the drawing by the painter 'Alī Riḍā 'Abbāsī of a Meshhed pilgrim at the time of the Muḥarram festival in Sarre and Mittwoch, *Zeichnungen des Riza Abbasi* (Munich 1914), Plate 1 (thereon p. 23, 49 and *Ist.*, ii. 216 sq.).

Every pilgrim who arrives has a right to free maintenance for three (according to Vámbéry: six) days. In the sacred quarter, south of the Pālā Khayābān (see the plan in Yate, p. 332), there is a special kitchen used exclusively for pilgrims, which gives out 5—600 free meals every day (cf. Vámbéry, *op. cit.*, p. 323; Goldsmith, *Eastern Persia*, i. 364 and Curzon, i. 162).

On the ceremonies which the pilgrims have to perform at their visit to the tomb of 'Alī al-Riḍā, we have accounts by Massy, *op. cit.*, and the notes supplied by Khān Bahādur Aḥmed al-Dīn Khān in Sykes, *J.R.A.S.*, 1910, p. 144—45 and in the *Glory of the Shia World*, p. 240 sq. Special mention may be made of the three circumambulations (*ṭawāf* [q.v.]) of the tomb and the cursing of all enemies of the Imām three times, especially the Caliphs Hārūn and Ma'mūn.

Every pilgrim who has performed the pilgrimage to 'Alī al-Riḍā's grave in the prescribed fashion is entitled to call himself *Meshhedi*.

Meshhed occupies first place among all the places of pilgrimage in Persia. Among the great sanctuaries of the Muslim world, Meshhed stands seventh in the view of Shī'a theologians, coming after, not only Mecca and Medina, but also the four specifically Shī'a sanctuaries of the 'Irāq, Nedjef, Kerbelā, Sāmarrā and Kāẓimain, in this order (cf. Sykes, *The Glory of the Shia World*, p. xiii). According to a version current in Shī'a

circles which Curzon (i. 150) gives, Meshhed is entitled to the sixth place, coming between Kāzimain as fifth and Sāmarrā which is put seventh.

The longing of every Shi'ī to find a last resting place in the shadow of one of the beloved Imāms caused extensive cemeteries to be laid out at an early date at the great centres of pilgrimage. Thousands of corpses are brought every year to Meshhed, mainly of course from Persia, but also from all the Shi'a lands, particularly India, also Afghānistān and Turkeṣtān. Nowhere in the whole of Persia are there so many tombs as at Meshhed. As the ground of the cemeteries must be used over and over again, the graves change their occupants every few years. Fine solid tombstones are not used, but simply rough blocks of granite or soapstone from the quarries of the neighbourhood (cf. also Conolly, i. 343—4 and Khanikoff, p. 105). Graves within the sacred quarter itself are naturally most desired. Every available space there is used for the purpose; the pavingstones in the courtyards are often tombstones for the dead below. The fees for graves within the Bast, which vary with the distance from the Mausoleum of 'Alī al-Riḍā, bring a not inconsiderable revenue to the authorities.

Of the large cemeteries (*maḡbaras*) outside the Bast the most important is the Maḡbara Katl-i Gāh ("place of the killing") lying north of the sacred area. East of it is that of Saiyid Aḡmad in which three children of the seventh Imām, Mūsā al-Kāẓim, are buried (cf. Mahdī al-'Alawī, p. 8). In the Pā'in Khīyābān quarter is the Maḡbara Pir-i Pālāndūz. S.E. of the citadel is the cemetery of Gumbad-i Sabz ("green dome") which takes its name from a half ruined mausoleum there, now inhabited by dervishes (cf. Yate, p. 328; Mahdī al-'Alawī, p. 9).

In the Nūkān quarter is the Maḡbara Shāh-zāde Muḡammad (see Mahdī al-'Alawī, p. 8). We may also mention that outside the Nūkān gate on the site of the old town of Nūkān (see above), are visible the remains of a gigantic cemetery on which, according to Sykes (*J. R. A. S.*, 1910, p. 1116), there may be found stone sarcophagi with inscriptions carved upon them dating from 760 to 1099 (1359—1688).

Outside of Meshhed a good half hour's journey to the south, on rocky ground is the cemetery of Mirzā Ibrahim al-Riḍawī (see Mahdī, *op. cit.*, p. 8) and still further from the town, 3 miles north of it, that of Khwādja Rabi' (cf. Sykes, *op. cit.*, p. 1124 and Ibn Sa'd, vi. 127 *sq.*). According to the popular view, he was a Sunnī in spite of his relations with 'Alī and is therefore in a way regarded as the patron of the Sunnis in Khurāsān, of whom those who live in Meshhed are usually buried near his tomb. Rabi's mausoleum is one of the most interesting in the whole of Khurāsān: it is a large octagonal building crowned by a dome but now it is in a half ruined condition.

Meshhed is the centre of Muslim theological and legal studies in Persia. A number of colleges (*madrasas*) there are devoted to teaching these subjects. Lists of them with dates are given by Fraser (p. 456—460) who mentions 14 of the present 16 madrasas, also by Khanikoff (p. 107) who gives 13, and by Mahdī al-'Alawī (p. 9—12). The latter observes that there were 20 older colleges, of which he gives 13, and a number of more modern ones. Fraser also gives brief notes on the

possessions of the various madrasas and the clerics (*mullās*) attached to them. Yate (p. 329—330) simply mentions six of the best known. From these lists, which supplement one another in welcome fashion, we get the names of 20 colleges. From the dates of foundation we find that the oldest of the madrasas still standing in Meshhed is the Madrasa Dūdār, which was built in 823 (1420) by the Timūrid Sulṭān Shāh Rukh and restored by Sulaimān I. Under the same ruler was built the Parizād Madrasa which was completely remodelled by Sulaimān I. From the time of 'Abbās II date the two almost contemporary colleges Khairāt Khān (1058 = 1649) and Mirzā Dja'far (1059 = 1650). The majority of the older colleges, no fewer than nine in number, date from the time of Sulaimān I, who also restored some buildings (1666—1694). As to the Kādjiars, one was founded in the reign of Fath 'Alī Shāh and two in that of Nāṣir al-Dīn, who also restored two that had fallen into ruins.

From the artistic point of view, the finest is the Madrasa of Mirzā Dja'far which was built and richly endowed in 1059 (1650) by a Persian of this name who had made a fortune in India. It is generally regarded as the third finest building in Meshhed, next to the Mausoleum of 'Alī al-Riḍā and the Dja'whar Shāh Mosque. In its plan, with vaulted halls and courtyard with niches, and its rich decoration, it follows the style of the courts and mosques of the sacred area above described, typical of the ecclesiastical architecture of Persia (cf. above, iii. 439, 447 *sq.* and also Fraser, p. 466—467). Not only the Madrasa of Mirzā Dja'far but also other richly endowed colleges, like that of Pā'in-Pā (both of the time of Sulaimān I) owe their origin to Persians who had made fortunes in India (cf. on the foundation of the two last named colleges: Fraser, p. 457—459; Sykes, *The Glory* etc., p. 267—269). The most esteemed colleges are in the Bast, namely the three already mentioned as the oldest, Dūdār, Parizād and Khairāt-Khān, also Dālāsār and 'Alī Naḡī Mirzā. Others, like the above mentioned Mirzā Dja'far Madrasa and the Mustashār Madrasa have doors communicating with the Ṣaḡn-i Kūhna of the Haram quarter.

Students also live in the madrasas, their maintenance being provided for by pious endowments. While in Khanikoff's time (1858) there were no outstanding teachers there and the number of students was small, the reputation of the Meshhed colleges went up again in the second half of the sixteenth century so that Sykes (*The Glory* etc., p. 267 *sq.*) in 1910 puts the attendance at 1,200 students, who came from Persia, India and other Shi'a regions. The student who wishes to take a higher theological training after the nine years' course at Meshhed must go to Meshhed 'Alī (Nedjef, q. v.) and attend the lectures of the teachers there, who are the first authorities on Shi'a theology.

We have no details of the libraries of the Meshhed colleges. Of the rich Faḡlī-Khān Madrasa, Fraser only says (p. 457) that it has a valuable library. The administration of the Haram also has a large and valuable collection of books (on its location see the plan in Yate, p. 332, N^o. 65 and cf. N^o. 29), founded in the first half of the xvth century by Sulṭān Shāh Rukh. The treasures accumulated under him and his successors were for the most part lost when Meshhed was sacked by

the Özbegs under 'Abd al-Mu'min Khān (1589; cf. Yate, p. 318; Sykes, *The Glory* etc., p. 239; cf. also Herzfeld, in *Ephemerides Orientales*, 1926, No. 28, p. 7—8). A thorough examination of the manuscripts here might give valuable results.

In this connection we may mention the activity of the Meshhed printing presses (news-papers etc.), which began with the last decade of the sixteenth century; see thereon Browne, *The Press and Poetry of Modern Persia* (Cambridge 1914), p. 348 (Index, s. v. Meshed); Browne, *Literary History of Persia*, iv., Cambridge 1928, p. 223, 489; Mahdī al-'Alawī, p. 12.

Meshhed is remarkably rich in mosques which are built in the sacred area, at cemeteries and at separate tombs, and are connected with madrasas and other buildings of a religious character.

Here we may also mention the Muṣallā which stands outside the town, $\frac{1}{2}$ mile from the Pā'in (Khiyābān) gate on the Heiāt road. It is a hall (*aiwān*) about 30 feet high which opens into a gigantic arch about 60 feet high.

However picturesque Meshhed may look from outside, the impression one gets on entering it is far from pleasing, excepting the Bast which forms a separate enclave. Except for the already described broad main street (Khiyābān), there are only narrow dark alleys the level of which is almost always considerably above that of the inner courts of the houses of brick, so that they can only be entered by long gloomy passages (cf. Khanikoff, p. 304; Yate, p. 328).

As to the population of Meshhed, — the permanent residents, excluding the many pilgrims, — it was at its highest in the reign of Nādir Shāh, who frequently held his court here and in every way contributed to the prosperity of the town. At that date Meshhed had not less than 60,000 inhabitants. But the half century of turmoil which followed the reign of Nādir Shāh brought about a great decline in the town so that only 3,000 houses were reckoned there in 1796 (cf. Yate, p. 330). In the sixteenth century began a slow but steady rise. Truilhier in 1807 estimated the number of houses at 4,000; Fraser in 1822 at 7,700 with 25–30,000 inhabitants. Conolly (1830) and Burnes (1832) estimate 40,000 inhabitants; Ferrier (1845) and Khanikoff (1858) at 60,000. In 1874 Khurāsān suffered a terrible famine and 24,000 in Meshhed alone died of starvation (see Goldsmid, i. 361). Baker is too high in putting the figure at 80,000 in 1873 and Curzon too low at 45,000 for 1889. Meshhed at the present day is said to have 100,000 inhabitants (see Mahdī al-'Alawī, p. 4); it is in any case the third largest town in Persia.

The permanent population of Meshhed is a rather mixed one; in consequence of the great influx of pilgrims and the commerce which was very great at least in an earlier period, many foreigners (Turkomans, Afghāns, Indians etc.) settled in Meshhed. Except for a very small section, all the Muslims of the town are Shī'is. The small number of Sunnis are mainly Afghāns and Turkomans. We have already mentioned that the Masjid-i Shāh and the Makbara Khwādja Rabi' are used by the Sunnis. The number of Christians is infinitesimal and is confined to a few Armenian traders and the personnel of English and Russian consulates established in 1889.

Nādir Shāh settled 100 Jewish families in Meshhed whom he had transplanted from Kāzwīn.

After his death their position became a miserable one, especially after the catastrophe which overwhelmed them in 1839. When in this year, during the celebration of the Muslim Kurbān festival, a Jewess on medical advice placed her hand, which was suffering from an eruption, in the bowels of a freshly slain street dog, the Muḥammadans took this for an insult to their religious observances. The excited mob, seizing the excuse, fell upon the Jewish quarter, plundering and murdering as they pleased and destroyed the synagogue. The surviving Jews had to adopt Islām. These Jewish converts are called Djadid, more fully Djadid al-Islām = "new comers to Islām", because their forced conversion is of recent date. The change of faith was only an external one; it is true that these Djadid to avert suspicion regularly attend the mosque, but not a few of them are said to observe their old rites in secret. The number of Judeo-Muslims in Meshhed at the present day who are small traders, physicians, etc., was put by Bassett (1878) at 300 families, by Yate at 200. On the Jews of Meshhed and their persecution in 1839 cf. Truilhier, p. 273; Conolly, i. p. 304—308; J. Wolff, *Narrative*, p. 177, 394—396; Ferrier, p. 122—123; J. J. Benjamin (see *Bibl.*), p. 189—190; Vámbéry, *Wanderungen*, p. 324—325; Bassett, p. 230—233; Yate, p. 322.

The clerical element is strong in the Muslim population; everywhere one sees mullās, ṭolbas (students) and dervishes. The town swarms with sayyids (alleged descendants of 'Alī) among whom the Ridāwīs, who claim descent from 'Alī al-Riḍā, enjoy special privileges. Meshhed is not only one of the most fanatical cities in the whole Muslim world but also one of the most immoral in Asia. Prostitution, the so-called pilgrim marriage (Pers. *sighe*; cf. MURTA and iv., p. 353^a, 355^a), sanctioned by the Imāmi group of the Shī'a, flourishes here. Most pilgrims take advantage of this institute of temporary marriage (cf. Khanikoff, p. 98; Curzon, i. 164—165; Ibrāhīm Beg, p. 45; Yate, p. 419; Allemagne, iii. 86—87).

The people of Meshhed are described as very superstitious: see especially Bassett, p. 228 *sq.* and the *Meshhed Stories* in Conolly, i. 316—318. Many stories are told of miracles wrought in the 'Alid sanctuaries: see Fraser, p. 451—452; Bassett, p. 426—427; Massy, p. 992—993, 1002; Yate, p. 325, 337.

The population of the town lives partly by catering for pilgrims and partly on local industries and commerce.

The industries, once very flourishing, have now declined. The famous manufacture of sword blades, introduced by a colony of workers transplanted by Timūr from Damascus, has now almost entirely disappeared (cf. Truilhier, p. 275; Fraser, p. 124; Ferrier, p. 468; Curzon, i. 166).

A speciality of Meshhed is the manufacture of decorated vessels (household utensils, like jugs, pots, dishes etc.) out of serpentine and dark grey soapstone (Meshhed stone), from the quarries $1\frac{1}{2}$ hours south of Meshhed. This stone industry is old and the Arabic sources of the middle ages mention it as native to the district of Tūs and especially to the town of Nūḳān (the predecessor of Meshhed): cf. *B. G. I.*, i. 258; ii. 313; iii. 324, 326; al-Muḥallabī in Abu l-Fidā, p. 452; Abū Ḥamid al-Gharnāṣī in *J. I.*, 1925, p. 203; Yāqūt, iv. 824 and cf. G. Le Strange, *op. cit.*

p. 389. For the sixth century cf. Truilhier, p. 274-275; Fraser, p. 469; Ferrier, p. 124; Bellew, p. 366-367; Baker, p. 184; MacGregor, i. 291-292; Bassett, p. 234; Curzon, i. 167.

The celebrated turquoise mines east of Nishāpūr (about 1½ days' journey distant; cf. FÜRŪZEH and Le Strange, *op. cit.*, p. 368; Fraser, p. 409-420; Ferrier, p. 106-107; Khanikoff, p. 90-92; Bassett, p. 216-217; Yate, p. 399-408) at one time were of special significance in Meshhed's trade and industry. Meshhed was the centre of the turquoise trade; for the whole output of these mines came to it and they were controlled by Meshhed merchants. The turquoises were sorted in Meshhed and put into commerce there. Now however, the finest specimens are usually sent directly abroad from the mines and only pieces of inferior quality come to Meshhed, to be worked there by the still very stilled stone cutters into ornaments and souvenirs for pilgrims. On the turquoise industry of Meshhed cf. Truilhier, p. 274; Bellew, p. 367; Goldsmid, i. 365; Baker, p. 184.

Weaving is another important industry in Meshhed. The carpets produced here were at one time of immensely greater value than those of the present day, which are produced in factory fashion. The modern shawls of Kashmir style are especially prized and known as Meshhedī, as are the velvets, which in Fraser's time were regarded as the best in Persia. On weaving in Meshhed cf. Fraser, p. 468; Ferrier, p. 124; Goldsmid, i. 365; Baker, p. 184-185; Curzon, i. 167; Ibrāhīm Beg, p. 47; Schweinitz, p. 27-28; Allemagne, iii. 110.

Until the second half of the sixth century, Meshhed was one of the first emporia of Eastern Irān. At the intersection of important caravan routes, it was the entrepôt for the trade of Central Asia and especially of Afghānistān. Since however Russia has become established in Turkistān and built the Transcaspian railway, Meshhed's through trade has much declined. Nevertheless the town must still be described as an important centre of traffic and trade, not least on account of the numerous pilgrim routes that lead to it. Meshhed is 150 miles from the Russian railway station of Ashkābād [q. v.], the capital of the Transcaspian area; there is a good road between the two towns.

For the housing of the numerous pilgrims and other strangers who come to Meshhed, a considerable number of caravanserais are available. In Fraser's time (1822), there were at least 25-30 such places in use, apart from some that had been abandoned and allowed to fall into ruins (see Fraser, *Narrative*, p. 460). Khanikoff (p. 107-108) gives 16, four of which, intended for pilgrims only, were inside the East; of these latter the oldest is the Sulṭān Caravanserai, built by Tahmāsp I; others date from Sulaimān I.

Hdschr. . . zu Berlin*, Berlin 1888, No. 360, p. 378-379. On the *Maṭla' al-Shams* of Ṣanī' al-Dawla s. above.

As to descriptions of Meshhed by Europeans we owe the first full description to Fraser (1822); Conolly (i. 260) and Burnes (ii. 78) both say it is thoroughly reliable. Valuable notes on the town are given by Conolly, Ferrier, Khanikoff, Eastwick, MacGregor, Bassett, O'Donovan, Curzon, Massy, E. Diez, and especially by C. E. Yate and Sykes, each of whom spent several years (1893-1897 and 1905-1912 resp.) in Meshhed as British Consul-General for Khurāsān. — Ruy Gonzales de Clavijo (1404), *Embassy to the Court of Timur*, ed. C. R. Markham (Hakluyt Society, vol. xxvi., London 1859), p. 109-110; Truilhier (1807), in *Bulletin de la Société de Géogr.*, vol. ix., Paris 1838, p. 272-282; J. B. Fraser (1822), *Narrative of a Journey into Khorasan in the years 1821-1822*, London 1825, p. 436-548; A. Conolly (1830), *Journey to the North of India*, London 1834, i. 255-289, 296-368; A. Burnes (1832), *Travels into Bokhara*, London 1834, ii. 76-87; J. B. Fraser (1833), *A Winter's Journey from Constantinople to Teheran*, London 1838, i. 213-255; J. Wolff, *Narrative of a Mission to Bokhara in the years 1843-1845*³, London 1846, p. 177-196, 386-408; J. P. Ferrier (1845), *Caravan Journeys and Wanderings in Persia*², London 1857, p. 111-133; J. MESHHEH 'ALĪ. [See NEDJAF.]

MESHHEH ḤUSAIN (KERBELĀ'), a place of pilgrimage west of the Euphrates about 60 miles S.S.W. of Baghdad on the edge of the desert (Yāqūt, *Mu'djam*, ed. Wüstenfeld, iv. 249). It lay opposite Kaṣr Ibn Hubaira (al-Isfahānī, *B.G.A.*, i. 85; cf. al-Balādhuri, *Futūḥ*, ed. de Goeje, p. 287; al-Makdisī, *B.G.A.*, iii. 121).

The name Kerbelā' is probably connected with Aram. Karbelā (Daniel, 3, 21) and Assyr. Karbal-latu (a kind of headdress) (G. Jacob, *Türkische Bibliothek*, xi. 35, note 2). It is not mentioned in the pre-Arab period.

After the taking of al-Hīra, Khālīd b. al-Walīd is said to have encamped in Kerbelā' (Yāqūt, iv. 250). On the Āshūrā' day (10th Muḥarram) 61 (Oct. 10, 680) the Imām Ḥusain b. 'Alī (cf. ii., p. 339) on the march from Mecca to the Irāk, where he intended to enforce his claims to the caliphate, fell in the plain of Kerbelā' in the district of Ninawā (al-Ṭabari, iii. 2190; Yāqūt, iv. 870; now according to Massignon: Khaimat Kā'a; according to Musil: Ishān Nainwa) in a battle with the troops of the governor of al-Kūfa and was buried in al-Ḥā'ir (Yāqūt, ii. 188 sq.; al-Ṭabari, iii. 752; E. Herzfeld, cf. above, ii., p. 221).

The place where the decapitated body of the

Prophet's grandson was interred (on the fate of the head which was cut off and sent to Damascus to Yazid I, cf. van Berchem, *Festschrift*, Ed. *Sachau gewidm.*, Berlin 1915, p. 298—310), called Kabr al-Ḥusain, soon became a celebrated place of pilgrimage for the Shī'is (cf. art. *SHĪ'Ā*).

As early as 65 (684—685) we find Sulaimān b. Šurad going with his followers to Ḥusain's grave where he spent a day and a night (al-Ṭabari, ed. de Goeje, ii. 545 sq.). Ibn al-Athīr (*Tārīkh*, ed. Tornberg, v. 184; ix. 358) mentions further pilgrimages in the years 122 (739—740) and 436 (1044—1045). The priests of Meshhed Ḥusain at quite an early date were endowed by the pious benefactions of Umm Mūsā, mother of the Caliph al-Mahdī (al-Ṭabari, iii. 752).

The Caliph al-Mutawakkil in 236 (850—851) destroyed the tomb and its annexes and had the ground levelled and sown; he prohibited under threat of heavy penalties visiting the holy places (al-Ṭabari, iii. 1407; Ḥamid Allāh al-Mustawfi, *Nuḥat al-Kulūb*, ed. Le Strange, p. 32). Ibn Ḥawkal (ed. de Goeje, p. 166), however, mentions about 977 A.D. a large meshhed with a domed chamber, entered by a door on each side, over the tomb of Ḥusain, which in his time was already much visited by pilgrims. Dabba b. Muḥammad al-Asadi of 'Ain al-Tamr, supreme chief of a number of tribes, devastated Meshhed al-Ḥā'ir (Kerbelā') along with other sanctuaries, for which a punitive expedition was sent against 'Ain al-Tamr in 369 (979—980) before which he fled into the desert (Ibn Miskawayh, *Tadhārīb al-Umam*, ed. Amedroz in *The Eclipse of the Abbasid Caliphate*, ii. 338, 414). In the same year, the Shī'ī Būyid 'Aḍud al-Dawla (cf. above, i. 143) took the chief of two sanctuaries of Meshhed 'Alī (= al-Nadīf) and Meshhed al-Ḥusain (M. Ḥairi) under his special protection (Ibn al-Athīr, viii. 518; Ḥamid Allāh al-Mustawfi, *loc. cit.*).

Ḥasan b. al-Faḍl, who died in 414 (1023—1024), built a wall round the holy tomb at Meshhed al-Ḥusain (Ibn Taghribirdī, *Nuḥūm*, ed. Popper, ii. 123, 141), as he also did at Meshhed 'Alī (Ibn al-Athīr, ix. 154).

In Rabi' al-awwal 407 (Aug./Sept. 1016), a great conflagration broke out caused by the upsetting of two wax candles, which reduced the main building (al-Kubba) and the open halls (al-Arwiḳa) to ashes (Ibn al-Athīr, ix. 209).

When the Saldjūk Sultān Malik Shāh came to Baghdad in 479 (1086—1087) he did not neglect to visit the two Meshheds of 'Alī and al-Ḥusain (Ibn al-Athīr, x. 103). The two sanctuaries at this time were known as al-Mashhadān (al-Bundari al-Isfahānī, *Tawārīkh al-Saldjūk*, ed. Houtsma, in *Récueil des textes...*, ii. 77) on the analogy of the duals al-'Irāqān, al-Ba-ratān, al-Ḥiratān, al-Miṣrān etc.

The Ilkhān Ghazān in 1303 visited Kerbelā' and gave lavish gifts to the sanctuary. He or his father Arghūn is credited with bringing water to the district by leading a canal from the Frāt (the modern Nahr al-Ḥusainiyya) (A. Noldeke, *Das Heiligtum al-Ḥusain zu Kerbelā'*, Berlin 1909, p. 40).

Ibn Baṭṭūṭa (ed. Defremery and Sanguinetti, ii. 99) visited Kerbelā' in 727 (1326—1327) from al-Hīra and describes it as a small town which lies among palm groves and gets its water from the Frāt. In the centre is the sacred tomb; beside it is a large madrasa and the famous hostel

(*al-ṣawīya*) in which the pilgrims are entertained. Admission to the tomb could only be obtained by permission of the gate-keeper. The pilgrims kiss the silver sarcophagus, above which hang gold and silver lamps. The doors are hung with silken curtains. The inhabitants are divided into the *Awlād Rakhik* and *Awlād Fāyiz*, whose continual feuds are detrimental to the town, although they are all *Shī'is*.

About the same date, Ḥamd Allāh al-Mustawfi (*op. cit.*) gives the circumference of the town as 2,400 paces; he mentions there also the tomb of Ḥurr Riyā (b. Yazīd), who was the first to fall fighting for Ḥusain at Kerbelā'.

The Ṣafawid Shāh Ismā'il I (d. 930 = 1524) made a pilgrimage to al-Nadījaf and Meshhed Ḥusain.

Sulṭān Sulaimān the Magnificent visited the two sanctuaries in 941 (1534—1535), repaired the canal at Meshhed al-Ḥusain (al-Ḥusainiyya) and transformed the fields which had been buried in sand into gardens again. The Manārat al-'Abd (see below), formerly called Engusht-i Yār, was built in 982 (1574—1575). Murād III in 991 (1583) ordered the Wālī of Baghdād, 'Alī Pasha b. Alwand, to build or more correctly restore a sanctuary over the grave of Ḥusain. Soon after the capture of Baghdād in 1623, 'Abbās the Great won the Meshheds for the Persian empire. Nādir Shāh visited Kerbelā' in 1743; while he is credited with gilding the dome in Meshhed 'Alī, he is also said to have confiscated endowments intended for the priests of Kerbelā'.

The great prosperity of the place of pilgrimage and its large number of inhabitants is emphasised on the occasion of the pilgrimage of 'Abd al-Karīm, a favourite of Nādir Shāh. Radiya Sulṭān Bēgum, a daughter of Shāh Ḥusain (1694—1722), presented 20,000 nādiris for improvements at the mosque of Ḥusain.

The founder of the Kādījār dynasty, Agha Muḥammad Khān, towards the end of the xviii century, presented the gold covering for the dome and the manāra of the sanctuary of Ḥusain (Jacob in A. Noldeke, *op. cit.* p. 65, note 4).

In April 1801, in the absence of the pilgrims who had gone to al-Nadījaf, 12,000 Wahhābis under Shāikh Sa'ūd entered Kerbelā', slew over 3,000 inhabitants there and looted the houses and bazaars. In particular they carried off the gilt copper plates and other treasures of the sanctuary and destroyed the shrine. But after this catastrophe contributions poured in for the sanctuary from the whole *Shī'i* world.

After a temporary occupation of Kerbelā' by the Persians, Nedjib Pasha in 1843 succeeded by force of arms in enforcing the recognition of Turkish suzerainty over the town; the walls of the present old town were now for the most part destroyed. The governor Midhat Pasha in 1871 began the building of government offices, which remained incomplete, and extended the adjoining market place (references for the history of Meshhed Ḥusain are given in A. Noldeke, *op. cit.*, p. 35—50).

At the present day with over 50,000 inhabitants, Kerbelā' is the second largest and perhaps the richest town of the 'Irāk. It owes its prosperity not only to the great number of pilgrims who visit the tomb of Ḥusain, but also to the fact that it is the most important starting point for the Persian pilgrim caravans to al-Nadījaf and Mecca, and through its situation on the edge of

the alluvial plain it is an important "desert port" for trade with the interior of Arabia.

The old town with its tortuous streets is surrounded by modern suburbs. About half to three quarters of the citizens are Persians, the remainder *Shī'i* Arabs. The most important tribes among them are the Banī Sa'ad, Salālme, al-Wuzūm, al-Tahāmze and al-Nāshīriye. The Dede family is the richest: for constructing the Nahr al-Ḥusainiyya it was rewarded with extensive estates by Sulṭān Selim.

The name Kerbelā' strictly speaking only applies to the eastern part of the palm gardens which surround the town in a semi-circle on its east side (Musil, *The Middle Euphrates*, p. 41). The town itself is called al-Meshhed or Meshhed al-Ḥusain.

The sanctuary of the third Imām lies in a court yard (*ṣaḥn*) 354 × 270 feet in area, which is surrounded by *liwāns* and cells. Its walls are decorated with a continuous ornamental band which is said to contain the whole *Kur'ān* written in white on a blue ground. The building itself is 156 × 138 feet in area. The rectangular main building entered by the "golden outer hall" (picture in Grothe, *Geogr. Charakterbilder*, pl. lxxviii., fig. 136) is surrounded by a vaulted corridor (now called *ajāmī*; A. Noldeke, *op. cit.*, p. 20, 3) in which the pilgrims go round the sanctuary (*ṭawāf*) (Wellhausen, *Reste arab. Heidentums*?, p. 109—112). In the middle of the central domed chamber is the shrine (*ṣandūq*) of Ḥusain about 6 feet high and 12 long surrounded by silver *mashrabiya* work, at the foot of which stands a second smaller shrine, that of his son and companion-in-arms 'Alī Akbar (Mas'ūdi, *Kitaḥ al-Tanbih*, ed. de Goeje, *B. G. A.*, viii. 303).

"The general impression made by the interior must be called fairy like, when in the dusk — even in the daytime it is dim inside — the light of innumerable lamps and candles around the silver shrine, reflected a thousand and again a thousand times from the innumerable small crystal facets, produces a charming effect beyond the dreams of imagination. In the roof of the dome the light loses its strength; only here and there a few crystal surfaces gleam like the stars in the sky" (A. Noldeke, *op. cit.*, p. 25 sq.).

The sanctuary is adorned on the *Ḳibla* face with magnificent and costly ornamentation. Two manāras flank the entrance. A third, the Manārat al-'Abd, rises before the buildings on the east side of the *ṣaḥn*; south of it the face of the buildings surrounding the court recedes about 50 feet; on this spot is a *Sunnī* mosque. Adjoining the *ṣaḥn* on the north side is a large medrese the courtyard of which measures about 85 feet square with a mosque of its own and several *mihṛābs* (on the present condition of the sanctuary: cf. A. Noldeke, *op. cit.*, p. 5—26, on its history p. 35—50 and on its architectural history, p. 51—66).

About 600 yards N. E. of the sanctuary of Ḥusain is the mausoleum of his half-brother 'Abbās. On the road which runs westward out of the town is the site of the tent of Ḥusain (*Khaimagāh*). The building erected there (plan in Noldeke, pl. vii.; photograph in Grothe, pl. lxxxvii., fig. 145) has the plan of a tent and on both sides of the entrance there are stone copies of camel saddles.

On the desert plateau (*ḥammūd*) west of the town stretch the graves of the devout *Shī'is*. North of the gardens of Kerbelā' lie the suburbs, gardens

and fields of al-Bkëre, N.W. those of Kūrā, S. those of al-Ghādhiriya (Yāqūt, iii. 768). Among places in the vicinity, Yāqūt mentions al-ʿAkr (iii. 695) and al-Nawaylī (iv. 816).

A branch line diverging north of al-Hilla connects Kerbelā' with the Baghdad-al-Baṣra railway. Caravan roads lead to al-Hilla and Najaf. The sanctuary of Husain still has the reputation of securing entrance to Paradise for those buried there, wherefore many aged pilgrims and those in failing health go there to die on the holy spot.

(E. HONIGMANN)

MESHHEH-I MIŞRIYÂN, a ruined site in Transcaspiāna (Turkmenistān). N. W. of the confluence of the Atrak and its right bank tributary the Sumbar, or more exactly, on the road which runs from Čat at right angles to the road connecting Čikishlar with the railway station of Aydıñ.

The ruins are surrounded by a wall of brick and a ditch and have an area of 320 acres. The old town, situated in the steppes which are now peopled by Turkomans, received its water from a canal led from the Atrak about 40 miles

above Čat. Near the latter place the canal diverged northwards from the river, crossed the Sumbar by a bridge and finally followed an embankment 6 feet high on which the bed of the canal was 12 feet broad.

The ruins of a fine mosque can still be seen, the gateway of which, decorated with faience, has an inscription according to which this *ḡāḡ* was built by 'Alā' al-Dunyā wa 'l-Din Ghīyāth al-Islām wa 'l-Muslimin Zill Allāhi fi 'l-Ālamin Sulṭān Muḥammad b. Sulṭān Takīsh Burhān Amīr al-Mu'minin. The Khwārizmshāh Muḥammad in question reigned 1200—1220. On one of the two towers (minarets) is written: *bismillāh . . . barakatun min Allāhi mimma amara bihi Abū Dja'far Ahmad b. Abi 'l-Agharr ṣāhib al-ribāṭ, ʿazzahu 'llāhu. ʿAmal 'Ali K. . . (?)*. The identity of this Ahmad is unknown but the title "lord of the ribāṭ" which he gives himself, confirms the fact that M.-Mişriyān was a frontier fortress (ribāṭ). Near the east gate stood another white mosque.

Tradition (Conolly) ascribes the destruction of Mişriyān to the "Kalmuk Tatars". The appearance of the Kalmuks in these regions may be dated about 1600.

The name Meshhed-i Mişriyān (variants: Mestorian, Mest-Debian, Mest-Dovran, Mastan) is obscure, unless Mestorian is to be explained as Nestoriyān "Nestorian Christians"; it may be recalled that during his campaign in the Čöl (**صول*), to the east of the Caspian, Yazdagird II

persecuted the Christians (Hoffmann, p. 50; Labourt, *Le christianisme dans l'Empire Perse*, 1904, p. 126).

The site of the ruins (to the north of Djurdjān) is given the name Dihistan in Muslim sources, which recalls the name of the old Scythian people Dahia who led a nomadic life on the Atrak (Greek *Δαία* and *Δαία*; cf. Tomaschek in Pauly-Wissowa, *Real-Encycl.* 2, iv., col 1945). From the Dahian clan of the Parnoi was descended the Arshakid dynasty which imposed its authority on the Parthians (cf. Minorsky, *Transcaucasia*, *J.A.*, 1930, July—Sept., p. 56).

The basin of the Atrak (the ancient *Σάπρος*) is at the extreme limit of the lands described in the classical and Muhammadan geographers. The sources mention several settlements in Dihistān but in a somewhat confusing fashion. As the analysis by Hoffmann and by Barthold has shown, a distinction must be made between: 1. the settlement on the sea-shore, 2. the town of Dihistān and 3. the ribāṭ Dihistān.

1. The first of these was built on a promontory (*dakhla*) behind which ships could shelter. Marquart, *Frānsahr*, p. 130, reads the name concealed in the variants in Iṣṭakhri, p. 219, note b, as "Dihistān Bayāsīn" which he connects with the district of Bayāsīn mentioned (in Djurdjān!) by Ṭabarī, ii. 1330; Balādhuri, p. 337 and Ibn Khurdādhbih, p. 35. The *Hudūd al-Ālam* mentions a peninsula of Dihistān-Sur on the coast of Dihistān. This *سر* may be an echo of the name of the Turkish (?) princes *صل* or *صول* (Hoffmann, p. 281) who attacked Djurdjān from the north (Ibn al-Athīr, iii. 22). Lastly Ṭabarī, ii. 1325, locates an island of Buḥaira 5 farsakhs from Dihistān. Barthold identifies all these names with the cape of Hasan-Kuli which shelters the bay into which the Atrak flows. [Cf. also the article TÜRĀN, on the Diz-i Alanān mentioned in the *Shāh-nāma*].

A difficulty is raised by İştakhrî (p. 219) who puts at 50 farsakhs and p. 226 at 6 *marḥala* (each of $8\frac{2}{3}$ farsakhs) the distance between Abaskūn (at the mouth of the river Djurdjān, now Gümüş-tapa?) and the cape of Dihistān in question. If we follow this double indication literally, we ought (with Hoffmann, p. 279, who reads the name "Dihistān-Tabāshir") to move the cape of Dihistān considerably to the north, in the bay of Krasnowodsk, which is certainly a very important place. In this case the cape would be a different one from Buḥāira = Ḥasan-Kūli (Hoffmann, p. 278).

2. The town of Dihistān, according to the middle Persian list of the towns of Ērān, was founded by a certain Narsahē the Arshakid (Marquart, *Ērānsahr*, p. 73) and according to the *Nuzhat al-Kulūb*, p. 166, by the Sāsānid Qubād b. Firūz. According to Muḥaddasī, the town of Dihistān was called Akhūr. Tabari locates (the town of) Dihistān 23 farsakhs from (the river of) Djurdjān and, as we have seen, 5 farsakhs from Buḥāira. This latter distance is by the way less than the actual distance between Ḥasan-Kūli and Meshed-i Mişriyān.

3. The ruins of Meshed-i Mişriyān (as the inscription on the mosque suggests!) must correspond to the ribāṭ of Dihistān which Muḥaddasī, p. 358 (cf. also p. 312, 367, 372) mentions distinct from Akhūr. This ribāṭ situated on the borders of the steppes had fine mosques and rich markets. Relying on Yāqūt, i. 39, Barthold thinks that in the xiith century the ribāṭ (and not Akhūr to the east of the Djurdjān-ribāṭ road) was the capital of the district of Dihistān.

(V. MINORSKY)

MESİHİ (originally Īsā), an important Ottoman poet of the time of Bāyazid II. Born in Prishtina (northern Albania), he came as a youth to Constantinople where he became a *sofía* (theological student) and distinguished himself as a calligrapher. In the end he won the favour of the grand vizier Khādim 'Alī Pasha [q. v.] and became his diwān-secretary. But his irregular life and carelessness in the performance of his duties frequently irritated his patron ('Alī Pasha called him *Shahr oghlani*). He held his post, however, till the death of 'Alī Pasha in 917 (1511) in battle against the Shī'i rebels under Shāh Kūllī. Mesīhī wrote an elegy on his death, full of the deepest emotion.

His attempts to find a new patron failed. He had to be content with a miserable fief in Bosnia where he soon died in 918 (1512), poor and forgotten and still quite young.

According to Aḥmad Pasha [q. v.] and Nedjātī (d. 914=1509), Mesīhī was regarded as the third great Ottoman poet and the greatest lyric poet before Bākī. He is a most artistic and original figure. His output was not extensive, but of lasting influence. His *Diwān* has not yet been printed, a fate common to nearly all important Turkish poets. In his lyric poems he is above the average of contemporary poets. In addition to the grace and delicacy of his diction, there is a certain novelty in his style. New images and pictures are introduced with great boldness, perhaps a result of his Albanian blood. The best known of his poems, in Europe is his Ode to Spring (*nurebbā'a*) which Sir William Jones published with a Latin translation: *Poesos Asiaticae commentariorum libri sex*, Leipzig 1774 and has been repeatedly reprinted (by Toderini, by Wieland in the *Deutsche Merkur*, by J. von Hammer etc.). His *Diwān* is also of importance linguistically, for it bears the stamp of the Rumelian dialect.

Mesīhī's most original work is his *Mathnawī, Shahr-engiz* (the "Thriller of the Town"), which is also the most original work in Turkish literature down to Mesīhī's time. It is original in subject also, as it did not have a Persian model. It introduced quite a new style of poem, which was frequently imitated. *Shahr-engiz* represents the first attempt at humorous verse in Turkey, and its language is very close to the spoken speech. Here Mesīhī could write Turkish to his heart's content, while in other forms he had to use the learned jargon. He laments in one passage that without Persian and Arabic there would be no room for him as a poet, even if he had come down from heaven.

Shahr-engiz is a burlesque catalogue of the beautiful "boys" of Adrianople — it is interesting to note that they are all Muḥammadan — and became popular on account of its unaffected language.

As a product of his activity as a secretary, we have also a collection of *inshā's*, elegant specimens of epistolary style, not without historical interest, entitled *Gul-i Sad Berg* (the hundred-leaved rose). I have a manuscript of this work, which seems to be rather rare, of 991 (1583) entitled *Inshā-i Mesīhī*.

METĀWILA. [See MUTAWĀLĪ.]

MEWLĀNĀ HUNKĀR, a title of the head of the Mawlawī Order [see MAWLAWĪYA]. The second word is the Turkish form of the Persian *khulāwandgar*, the equivalent of *mawlā*, which according to Afākī (*Saints des Derviches Tourneurs*, i. 59) was bestowed on Djalāl al-Din by his father. Sāmi in his Turkish Lexicon states that the word, besides being used for "Sultān", "King", is applied to certain saintly personages, in such combinations as *pīr hunkār* or *mulā hunkār*. The underlying idea of such a title is probably that the saint has had committed to him the government of the world, if he choose to undertake it, an idea elaborated by Ibn 'Arabi (*Futūḥāt Makkiyya*, i. 262; ii. 407), who regards such a saint as the true *khālifa*. The title *elebi* is more generally recognized as that belonging to the head of the Mawlawī Order (Sāmi, *loc. cit.*, p. 510a). (D. S. MARGOLIOUTH)

MEZZOMORTO, an Ottoman Grand Admiral whose real name was **ḤUSEIN PASHA**.

Hādjdī Ḥusein Pasha, known as Mezzomorto, i. e. "half-dead" because he was severely wounded in a naval battle, came from the Balearic Islands, if A. de la Motraye's statement (*Voyages*, The Hague 1727, i. 206) that he was born in Mallorca is right. He probably spent his youth sailing with corsairs on the seas off the North African coast. He first appears as a desperate pirate in the summer of 1682 in the Barbary States. When France was preparing to deal a decisive blow at the pirates of Algiers, whose arrogance had passed all bounds, he was handed over as a hostage to the French after the bombardment of Algiers, but managed to return there, to strike down with his own hand, in a mutiny of the mercenaries which he had stirred up, the Dey of Algiers Baba Ḥasan, who was ready to make peace and to fight his way to the head of the state (summer of 1683, cf. Zinkeisen, *G.O.R.*, v. 51 sq.). Ḥusein Re'is in the following year concluded with Louis XIV of France a truce for a hundred years, which however was only of brief duration. His own rule over Algiers was not long either (till 1688: cf. A. Bernard, *L'Algérie*, Paris 1929, p. 159). About ten years later, in Muḥarram 1107 (Aug. 1695), Ḥusein Re'is, who had already distinguished himself as commander of a galleon (*kā'ūn kapudānī*), was appointed Grand Admiral of the Ottoman fleet (*kapudān-i deryā*) in succession to 'Amūdjivāde Ḥusein Pasha, who was appointed governor of Adana after the taking of Chios. He owed his promotion to his skilful seamanship at the capture of Chios where he distinguished himself in the battle with the Venetian fleet (spring of 1695). In 1697 Ḥusein Pasha inflicted a disastrous defeat on the Venetian Captain General Alessandro Molino off the island of Lemnos, and in the following year in a naval fight on July 6 with Molino's successor, Giacomo Cornaro, near Mytilene it was very doubtful whether the Crescent on the Lion of St. Mark gained the victory (cf. Zinkeisen, *G.O.R.*, v. 183, from the account by the *ingustore* Garzoni in his *Istoria della Repubblica di Venezia*, Venice 1705, p. 644 sqq., 691 sqq., 748 sqq. and 775 sqq.) Ottoman authorities and the historian Rashīd (fol. 231; cf. J. v. Hammer, *G.O.R.*, vi. 635) credit the victory to the Ottomans. In 1113, Mezzomorto was dismissed from his rank and re-

placed by 'Abd al-Fattāḥ Pasha. He retired to Chios, where his adventurous life came to an end in the same year on the 13th Šafar 1113 (July 20, 1701, according to Šafwet, *op. cit.*), on the 14th Šafar 1114 (i. e. July 9, 1702) according to others. J. v. Hammer, *G.O.R.*, vi. 766 and vii. 624, gives the date as 15th Rabi' 1113 (Aug. 20, 1701). One of these dates is probably that of his dismissal.

MİDHANA. [See MANARA.]

MIDHAT PASHA, Ottoman statesman, twice grand vizier.

Midhat Pasha was born in Stambul in Šafar 1238 (beg. Oct. 18, 1822), the son of Hādjdī 'Alī Efendi-Zāde Ḥādjdī İfāfī Meḥemmed Eshref Efendi, a native of Ruḥbūk. The family seem to have been professed Bektashis and Midhat Pasha also had a leaning towards them. His earliest youth was spent in his parents' home at Widdin, Lofca (Bulgaria) and later in Stambul, where his father held judicial offices. In 1836 he was working in the secretariat of the grand vizier and later he filled confidential posts in various governorships (including two years in Damascus). In 1844 he came to Konya and in 1849 became second, in 1851 first secretary to the Council (*mā'lis-i wālā*). In 1854 the grand vizier Kibrizli Meḥemmed Pasha gave him the difficult task of pacifying the provinces of Adrianople and the Balkans and clearing them of robber bands. Here he displayed for the first time his special talents for administration, which were not unnoticed by the Porte and soon afterwards brought him the appointment of governor of the Danube districts (Widdin, Silistia). In 1858 he spent six months travelling for study in western Europe, including Vienna, Paris, Brussels and London. In 1861 he was appointed governor (*wālī*) of Nish and Prizren with the rank of vizier, where he earned distinction by his pacification of the country, so that, when the new organisation of wilāyets was carried out in 1864, he was given the model province, Danube-Bulgaria (*Tuna Wilāyeti*). During his four years' governorship, he raised the province to a level rare in Turkey, although it was only under his successor that the people learned to thank him for it. He built schools and educational institutes everywhere, created funds to make advances to and support useful undertakings, built hospitals, granaries, roads (2,000 miles) and bridges (1,400) and improved communications in every way. As he required money for all these progressive undertakings, which the government could not give him and he would not raise by abuse of taxation, he raised the necessary funds by "voluntary contributions" from the people. The Bulgars, with whom for nationalist reasons he had no sympathy, suffered not a little from the enterprising spirit and unrestrained love of work of the young governor who, of unbending will and inexorable severity, was of a nature not attractive, but rather arrogant and conceited. At the same time he was quite modern in his views and had no scruples about

introducing absolute equality between Christians and Muslims in his province. He proceeded ruthlessly against agitators and rebels, dismissed incompetent officials and brought extortionists to book. His most rigorous steps were directed against the Russian Pan-Slav intrigues, the leaders of which he ruthlessly hanged. Although in a few years he made the Danube province the richest in Turkey without it costing the state a piastre, in 1869 Midhat Pasha, who had incurred the hostility of the Russians, was deprived of his office and sent to remote Baghdad as governor and commander of the viñ Army Corps. Midhat Pasha was not dismayed, but went to work with renewed energy to develop his new governorship. He laid roads, started horse-tramways, built a technical school, founded a savings bank, instituted regular steamship traffic on the Tigris between Baghdad and several harbours on the Persian Gulf and urged the building of a "Euphrates railway". Under the pretext that he had taken part in a conspiracy against the Sultān, Midhat Pasha, who had already earned the gratitude of the Baghdad province and also won Nedjd for the Ottoman empire, was summoned to Stambul where his enemy, the grand vizier Maḥmūd Nedīm Pasha, had chosen him for the office of wālī of Adrianople. Instead of this, on the fall of his rival, Midhat Pasha was appointed grand vizier on Aug. 1, 1872, only to be dismissed on October 19. It was clearly shown that his real strength lay in provincial administration. All possible elements combined to bring about his fall: Sultān 'Abd al-'Azīz could not endure him because he opposed his mad whims; the Old Turks regarded him as an infidel because he planned his measures regardless of dogmatic objections; he was most unpopular with the Russians because he had taken sharp measures to deal with the Slav Bulgar intrigues. Midhat Pasha retired into private life as *persona ingrata*. In the grand vizierate of Es'ad Pasha, he became minister of justice on March 15, 1873 and held this office still under his successor Shīrwānī-zāde Meḥmed Rushdī Pasha till Sept. 29, 1873. In the following October, the governorship of Salonika was given to him which he only accepted with reluctance and held for barely three months. On Feb. 17, 1874 he was again dismissed and retired once more to private life. He used the leisure thus forced upon him to work out the schemes which he later unfolded and which meant a decisive change in the orientation of the Ottoman empire. In August 1875 his old enemy Maḥmūd Nedīm Pasha, who had again received the imperial seals, appointed him minister of justice but by November he had handed in his resignation, which was accepted. The empire was then in a state of complete confusion risings, famine, an empty treasury and a half mad sultān. Midhat Pasha then composed his famous memorandum of March 9, 1876, which was to have such momentous results. On May 20, 1876 he entered the cabinet of the grand vizier Muterdjim Meḥmed Rushdī Pasha as minister without portfolio. In the night of May 30, Sultān 'Abd al-'Azīz was deposed and Murad V raised to the throne of his fathers. On July 15, a proclamation issued in the name of the new sovereign used for the first time the word "constitution". Midhat Pasha was the soul of the new movement and he worked ardently with a few kindred spirits to give Turkey a constitution. Sultān Murad V became insane and was replaced by his brother 'Abd al-Ḥamid; on December 18,

1876 Midhat Pasha became grand vizier for the second time, and five days later, the constitution was solemnly proclaimed. The reactionary party and a powerful camaila never ceased its endeavours to bring about the fall of Midhat Pasha and to bring his progressive schemes to nought. Under the pretext of high treason he was dismissed on Feb. 5, 1877 and banished to Europe. He was put upon a steamer and went via Rome and Paris to England. He was only permitted to return in 1878 and then only to Crete. In November 1878 under pressure from England, he was appointed governor-general of Syria. In 1880 he was transferred to Smyrna as governor. Here 'Abd al-Ḥamid's wrath overwhelmed him. In May 1881 he was arrested and brought to Stambul. The ludicrous charge of having caused the assassination of Sultān 'Abd al-'Azīz was brought against him. Midhat Pasha was condemned to death but the sentence was not carried out. He was banished for life to Ṭā'if in Arabia. After repeated attempts to poison him, he was strangled on April 10, 1883 (Rajab 29, 1301) in prison. In this tragic fashion ended the life of one of the most notable and best statesmen of Turkey, perhaps the most important administrator that the Ottoman empire has produced in modern times. Midhat Pasha had a son, 'Alī Haidar Midhat Bey, who after his death conducted a campaign to clear his memory and wrote a very full life of his father.

Bibliography: The main source for the life of Midhat Pasha is the work of his son 'Alī Haidar Midhat Bey, which appeared in 2 vols. entitled *Midhat Pasha, Ḥayāt-i siyāsiyesi, khidmātī, menfā ḥayātī* at Stambul in 1325 (1909) (vol. 1: *Tahqīre-i 'İbret*; vol. 2: *Mir'āt-i Ḥayret*, Hılāl press). — He had previously published *The Life of Midhat Pasha*. By his son *Alī Haydar Midhat*, London 1903, xii., and *Midhat-Pasha, sa vie — son œuvre. Par son fils Alī Haydar Midhat Bey*, Paris 1908, xxiii. A kind of translation of these works is: Yūsuf Kamāl Bey Hatāta, *Muḥakkirāt Midhat Bāshā*, Cairo 1331 (cf. F. Babinger, *G. O. W.*, p. 395, note). Of the wealth of literature on Midhat Pasha we may mention: Léouzon-le-Duc, *Midhat Pasha*, Paris 1877; Benoît Brunswick, *La vérité sur Midhat Pasha*, Paris 1877; A. Clécian Vassif Effendi, *Son Altesse Midhat-Pasha, Grand Vizir*, Paris 1909, vii.; *Un horrible assassinat commis sur l'ordre spécial du Sultan Abdul-Ḥamid II. Assassinat de Midhat Pasha d'après les documents officiels de la Jeune Turquie*, publ. par le Comité Ottoman d'Union et de Progrès, Geneva 1898, also *Midhat Pasha ve-Damād Maḥmūd Pasha Ḥadretinīñ Sultān 'Abd al-Ḥamidīñ Emrile Karfiyet Şehādettleri*, Geneva 1314 (1896); Thuraiyā Rif'at, *Midhat Pashanın Kātilleri*, Stambul 1324; of importance for the political ideas of Midhat Pasha are his own publications: *Feryāl ve-Fighānlar*, Stambul 1326, political apologia; *Aḥwāl al-Dawla al-'othmāniya al-siyāsiya bi 'l-Nazar ila 'l-Mādī wa 'l-Ḥāl wa 'l-İstikbāl*. *La Turquie, son passé, son avenir. Ta'rif Miḥat Bāshā wa-kad tardqamahā* Khālil Efendi al-Khūrī, Bairūt 1879; thereon Meḥmed Rushdī, *Midhat Pashanın Waḥiyet-Nāmesi ve-Şehādetti*, Stambul 1325. — Of European works on the life and work of Midhat Pasha may be mentioned: [A. D. Mordtmann sen.], *Stambul und das moderne Turkenthum*, New Series,

Leipzig 1878, p. 82 sqq.; [Gg. Dempwolff], *Serail und Hohe Pforte*, Vienna 1879, p. 237 sqq.; Carl. v. Sax, *Geschichte des Machtverfalls der Türkei*, Vienna 1908, p. 375 sqq. But the western sources have mainly to be used with caution, as the very varying statements about his origin, date and place of birth show.

(FR. BABINGER)

MIDILLÜ, Turkish form for Mytilene, name of the island of Lesbos, which in the middle ages had already taken the name of its capital. The island is about 650 sq. m. in area and has two large gulfs, the Gulf of Kalloni (Kālania) and that of Jeros (Kelemlia).

When the Muslims first became acquainted with the island, it belonged to the Byzantine empire. Its conquest in the reign of the emperor Alexios Comnenos in 484 (1091) by the Emir of Smyrna, Tzachas, father-in-law of the Seldjūk Kılıdī Arslān I b. Sulaimān, was only temporary. After the conquest of Constantinople by the Latins (1204), the island passed for a time to the Venetians. In 1355, the emperor John Palaeologos, on the marriage of his sister with the Genoese Francesco Gattilusio, granted the island to the latter as a fief. It belonged to this family when Mehmed II the Conqueror took Constantinople in 1454. The islands of the Aegean had to pay tribute to the Turks, to which the Gattilusio in the hope of retaining their position readily agreed; and when the grand vizier Hamza Pasha in 1456 anchored off Lesbos on the voyage to Rhodes, the prince Dorino Gattilusio sent rich gifts to the Turkish commander through the historian Ducas. After the death of Dorino, his son and successor Domenico sent an embassy under the same Ducas to try to gain the good graces of the Sultān, but the Turks imposed rather harsh conditions. In 1458 Domenico was slain by his brother Nicolas who had escaped from Lemnos and the latter seized the island. On the pretext that he had given shelter to the pirates who harassed the Asia Minor coast and had committed other acts hostile to the Sultān, Mehmed in 1462 set out against Lesbos. The grand vizier Mīhmūd Pasha conducted the siege of the capital. It was taken after 27 days' bombardment and the Sultān received the surrender of the island in person (ʿAshīk Pasha Zāde, ed. Giese, Leipzig 1929, p. 156 sq.; Hādjdī Khulifa, *Tuḥf t a'-Kibār fi Esfār al-Bihār*, Constantinople 1141 [1728-1729], fol. 6b; Hammer, ii. 15, 67; Zinkeisen, ii. 226, 239 sqq.). A mosque in the citadel of Midillu was built by Fāthī; cf. Newton, i. 117; Koldewey, p. 11.

Attempts of the Venetians under Orsato Giustiniani (1464) to take the island from the Turks failed (v. Hammer, ii. 83 sq.). An expedition against the island in 1500 of the allied French and Venetian fleets was thwarted by the Turkish forces (v. Hammer, ii. 327; Hādjdī Khulifa, *op. cit.* fol. 10a). Since that date the island had been in undisturbed possession of the Turks until during the Balkan War it was handed over to the Greeks on Nov. 24, 1912 and finally conceded to them by the Peace of London of May 30, 1913, although with certain reservations by Turkey.

The island, the largest in the Archipelago, belonged to the "wilāyet of the Archipelago" (*Djezīr-i Bahr-i sefid*) and formed in it the sandjak of Midillu with 5 kazās: Midillu (with the capital, in the east of the island), Pilemar (= Plomary, in the south), Molowa (= Molivo, the an-

cient Methymna, in the north), Sighri in the west of the island; and lastly the Junda Islands (Moskonisi) east of Midillu; cf. Sāmī, *Kāmūs a'-A'lam*, col. 1894, 4243; Cuinet, *La Turquie d'Asie*, i. 449-472; cf. also: Suleimān Faḥī, *Rehba-i Deryā*, i. (Stambul 1299), p. 55-59. — According to Baedeker 1914, the island had 140,500 inhabitants of whom 9/10th were Greeks and 1/10th Muhammadans.

Bibliography: On the island in ancient times and most of the questions connected with it, see the very full article by Burchner on *Lesbos* in Pauly-Wissowa-Kroll, xii. (1925), col. 2107-2133.

A full description for the earlier Turkish period is given by the Turk Piri Ke'is in his *Bahriye* written in 1521: this section has been translated by Maximilian Bittner in Paul Kretschmer, *Der heutige Lesbische Dialekt* (= *Schriften der Balkankommission*, III/1), Vienna 1905, col. 579-584 and in my ed. of the *Bahriye* of Piri Ke'is (Berlin and Leipzig 1926), chap. ix.: *Midillu*, text p. 21-26, transl. p. 32-42. — The most important later descriptions are those by Pococke, *Description of the East*, 1745, London 1745; Newton, *Travels and Discoveries in the Levant*, London 1865, i. 37 sqq.; A. Conze, *Reise auf der Insel Lesbos*, Hanover 1865 and R. Koldewey, *Die antiken Baureste der Insel Lesbos. Im Auftrage des Kaiserlich-Deutschen Archäologischen Instituts untersucht und aufgenommen*, Berlin 1890. This book gives details of early explorations of the island and accurate maps on a larger scale of sections of it.

(P. KAHLE)

MIDJMARĀ, the censor, from *qamra*, "glowing coal", the Arabic name for the constellation of the Altar which lies south of the Scorpion (*ḥurḥūm* in Aratus, *ara* in Cicero, Manilius etc.) or censor (*ḥurḥūm* in Ptolemy, *turibulum* in Geminus).

Bibliography: al-Kāzwinī, ed. Wustenfeld, i. 41; L. Ideler, *Untersuchungen über den Ursprung und die Bedeutung der Sternnamen*, Berlin 1809, p. 280; A. Hauber, *Planetenkenntnisbilder und Sternbilder*, Strassburg 1916, p. 193-199. (J. RUSK)

MIDRĀR BANĒ. [See **SIDJILMĀNA**.]

MIHNA (A.), noun derived from the root *m-h-n*, appearing in the Arabic verb *maḥana*, "to smother", and in some Aethiopic derivations, trial (e.g. the trials to which the prophets and especially the family of Muḥammad, the 'Alids, are exposed in this world. cf. Goldziher, *Vorlesungen*, p. 212 sq., 261), inquisition. In the latter sense it is usually applied to the Mu'tazilite inquisition and persecution extending from 218-234 (833-848). On the ninth form of the verb, *mitahana*, "to torture", cf. especially Quatremere, *Histoire des sultans mamluks*, I/II, p. 81, note 101.

The first Mu'tazilite inquisition was instituted towards the end of his reign by the 'Abbāsid caliph al-Ma'mūn (q.v. 198-218 = 813-833), who was a Mu'tazilite by conviction, especially with regard to the creation of the Qur'ān [cf. the articles **AL-KUR'ĀN** and **MU'TAZILITES**]. He sent a letter to the governor of Baghdad, Ishāq b. Ibrāhīm, ordering him to cite before him the *qāḍī*s under his jurisdiction in order to test them with regard to their opinion on the Qur'ān (Tabarī, iii. 1112 sqq. transl. by Patton, *op. cit.*, p. 57-61; *Kitāb Baḥṭūd*, p. 338 sqq.; cf. Abu 'l-Maḥāsīn, i. 636

sqg.; *Fragmenta Hist. Arab.*, p. 465). Those who declared their opinion in conformity with that of the caliph, should cite the legal witnesses under their jurisdiction and institute a similar inquisition.

This letter was sent to the provinces. In Egypt little was done. At Kūfa the general feeling was against yielding to the order of the caliph. In Damascus, the latter, probably on his way to Asia Minor, personally conducted the testing of the doctors of the town.

In a second letter he ordered Ishāk b. Ibrāhīm to send to him seven of the leading theological authorities of Baghdād, that he might test them himself. The name of the chief champion of the orthodox view, Aḥmad b. Muḥammad b. Ḥanbal [q. v.], which was at first in the list, was cancelled at the instance of the chief kādī Aḥmad b. Abī Du'ād [q. v.], the most vigorous advocate of the miḥna under al-Ma'mūn and his successors. Among the seven who were summoned to the court was Muḥammad b. Sa'id [q. v.], the secretary of al-Wāḥidī [q. v.], and author of the *Kitāb al-Ṭabaqāt*. All of them gave way to the pressure, assented to the view forced upon them and were sent back to Baghdād, where Ishāk b. Ibrāhīm had them repeat their confession before the theologians (Ṭabari, iii. 1116 sq.; *Kitāb Baghdād*, p. 343 sqg.). The success of the caliph moved him to cling to the method inaugurated by him. In a third letter which is interwoven with theological arguments (Ṭabari, iii. 1117 sqg.; Patton, *op. cit.*, p. 65 sqg.) he enjoined Ishāk b. Ibrāhīm to test all the kādīs under his jurisdiction, who in their turn should test all witnesses and assistants in matters of law. Ishāk b. Ibrāhīm cited before him a number of the most notable doctors of Baghdād (Ṭabari, iii. 1121 sqg.; Patton, *op. cit.*, p. 69 sqg.), among them Aḥmad b. Ḥanbal. The result of the test was that some of them yielded and others remained steadfast; Aḥmad b. Ḥanbal belonged to the group of the latter.

In a fourth letter to Ishāk b. Ibrāhīm (Ṭabari, iii. 1125 sqg.; Patton, *op. cit.*, p. 74 sqg.), the caliph discussed the attitude of each of the doctors in connection with his character and way of life, and ordered those who had given unsatisfactory answers to be sent to his camp in Ṭaisūs. After a further examination by Ishāk b. Ibrāhīm two of them only remained steadfast, Aḥmad b. Ḥanbal and Muḥammad b. Nūḥ. They were sent to Ṭaisūs as prisoners. On the way thither the report of the caliph's death reached them. They were sent back to Baghdād, Muḥammad b. Nūḥ died before he had reached the capital.

Aḥmad b. Ḥanbal remained in prison. Although he was urged to make use of *taḳīva* [q. v.] as others had done, he stuck to his attitude. Cited before al-Ma'mūn's brother and successor al-Mu'tasim (218—227 = 833—842), there originated lively debates on the nature of the Qur'an and other theological subjects between him, the caliph, Aḥmad b. Abī Du'ād and others, which lasted three days. No change, however, being brought about in Aḥmad's attitude, he was scourged at the order of the caliph, and afterwards, from fear of an insurrection (for Aḥmad was very popular), set free. Little more is heard of the miḥna under al-Mu'tasim (Abu 'l-Maḥāsīn, i. 649; Patton, p. 113), who had neither the interest nor the training of his predecessor in theological matters.

His son al-Wāḥik bi'l-lāh (227—232 = 842—847) who succeeded him, returned to the methods

of al-Ma'mūn (Abu 'l-Maḥāsīn, i. 683; Patton, p. 115 sqg.), although it is said that he had restrained his father from prosecuting the miḥna any farther. He ordered the governors of the provinces to test the notables under their jurisdiction. Little is known of the consequences of this order. Aḥmad b. Ḥanbal in the meanwhile had become a favourite teacher; when, however, he heard of the renewed activity of Aḥmad b. Abī Du'ād he refrained of his own will from teaching, and was henceforth left alone.

Al-Wāḥik personally intervened in the trial of one person of note, the theologian Aḥmad b. Naṣr b. Mālik al-Khuzā'i who had moreover taken part in a conspiracy (Weil, ii. 341; Patton, p. 116 sq.; cf. Ṭabari, iii. 1343 sqg.; de Goeje, *Fragmenta hist. arab.*, p. 529 sqg.). Questioned about the Qur'an, al-Khuzā'i replied that he believed it to be the word of God. The trial had not proceeded much farther, when the caliph put an end to it and personally made an attempt to behead his victim, in which he did not succeed without the assistance of some one more skilled than himself (Shā'bān 231 = 846).

Other persons of note who remained steadfast under al-Wāḥik were Nu'aim b. Ḥammād and the well known Abū Ya'qūb Yūsuf b. Yahya 'l-Buwaitī, the pupil of al-Shāfi'i and editor of some of his works (Patton, p. 119). Both died in prison. As an instance of the fanaticism of Aḥmad b. Abī Du'ād it is related that, when in 231 (846) it was proposed to ransom 4,600 Muslim prisoners from the Byzantines, he proposed to abandon those who would not admit the creation of the Qur'an; this was actually done (Ṭabari, iii. 1351 sqg.; *Fragm. hist. arab.*, ii. 532; Abu 'l-Maḥāsīn, i. 684; Patton, p. 120). It is said that al-Wāḥik gave up his Mu'tazilite views before his death. The miḥna continued to exist during the first years of the reign of his successor al-Mutawakkil (232—247 = 847—861), but in 234 this caliph stopped its application and forbade the profession of the creation of the Qur'an on pain of death.

MIHR, the seventh month of the Persian solar year which runs from Sept. 17 to Oct. 16 and therefore begins the autumn. Mihr is also the name of the 16th day of each month. To distinguish between the month Mihr and the day, the former is called *Mihr Māh* and the latter *Mihr Rūz*. On the 16th Mihr, the day when Mihr Māh and Mihr Rūz coincide, called *Mihr-gān*, one of the great feasts begins, which is also called *Mihrgān* and lasts till the 21st of the month. The first day of the feast is called *Mihr-i 'amma*, the general Mihr, the last *Mihr-i khāssa*, the special, proper Mihr. The associations of this feast partly relate to the beginning of autumn, partly to the sun, whose name the month indeed bears, and partly to heroic legend: *Mihrgān* is the feast of Feridūn's accession after his victory over *Daḥḥāk*. On the rites observed at the feast see the sources mentioned below.

MIHR-I MĀH SULTĀN, daughter of Suleimān the Magnificent. Mihr-i Māh (sometimes also written Mihr-u-māh; cf. *Karaçelebi-zāde*, *Rawḍat ul-Ebrār*, p. 458) was the only daughter of Suleimān the Magnificent [q. v., as well as F. Babinger, in *Meister der Politik*, ii.², Berlin 1923, p. 39—63]. While still quite young she was married to the grand vizier Rustem Pasha (cf. F. Babinger, *G. O. R.*, p. 81 sq.) in the beginning of December 1539 (cf. J. H. Mordtmann, in *M. S. O. S.*, Year xxxii., Part 2, p. 37), but the marriage does not seem to have been a happy one. She used her enormous wealth — St. Gerlach in 1576 estimated her daily income at not less than 2,000 ducats (cf. *Tagebuch*, Frankfurt 1674, p. 266) — for many pious endowments. Among these the most important were the two mosques built by her, one in Stambul at the Adrianople gate (*Edirne Kapusu Džami'i*; cf. Ewliyā, *Seyāhet-nāme*, i. 165; Hāfiẓ Husein, *Hadiqat al-Djavanmī*, i. 24 and J. v. Hammer, *G. O. R.*, ix. 50, No. 1) and the other (*Mihr-i Māh Sultān Džami'i*; cf. Ewliyā, *op. cit.*, i. 472 sq.; Hāfiẓ Husein, *op. cit.*, ii. 186 and J. v. Hammer, *G. O. R.*, ix. 128, No. 741) near the landing-stage in Scutari. The second was the work of the great architect Sinān [q. v.] who built it in 954 (1547) and also erected a palace for Mihr-i Māh in Scutari near this mosque. After her husband's death (July 8, 1561) Mihr-i Māh Sultān intervened in political matters on several occasions; for example she continually urged upon her father that the conquest of Malta should be one of the main undertakings of the Holy War and offered to equip 400 galleys for this campaign at her own expense. She was still alive at the reconciliation with her brother Selim and his accession. The correct date of her death, Jan. 25, 1578 is given only by Gerlach. *Tagebuch*, p. 449; the date in *Karaçelebi-zāde*, *op. cit.*, p. 458, namely Dhū l-Ḳa'da 984 (Jan. 20—Feb. 18, 1577), is a whole year out. She was buried beside her father in his *turbe* (tomb-mosque) in Stambul. From her marriage with Rustem Pasha two sons and a daughter 'Ā'isha Khanum were born; the latter married the grand vizier Ahmed Pasha.

in the text, cf. Mehemmed Thuraiyā, *Sidjill-i 'othmāni*, i. 83; J. v. Hammer, *G. O. R.*, iii. 393, 425 and pass.; a description of the circumcision festivals of her sons Djihāngir and Bāyazid is given in the Turkish MS., No. 34, fol. 43^a sqq. in the Pruss. State Library (cf. W. Pertsch, *Verzeichnis*, 66). (FR. BABINGER)

MIHRĀB (see also MASJID I, D, c). Derivation of the niche. The mihrāb niche has been given a twofold origin by Orientalists and historians of art: from the Christian apsis and the Buddhist niche. "Tout ce qui reste de la basilique dans le sanctuaire de la mosquée c'est la qibla, sorte d'abside atrophie" says M. v. Berchem in his *Notes d'archéologie arabe* (*J. A.*, vol. xvii., 1891, p. 427). The introduction of the niche mihrāb into the mosque is no doubt rightly ascribed to the Omayyads, who were the first to build mosques of any size, under the influence of the Christian architecture of their lands. The simple Arabian and Persian village mosques have no niches even at the present day. According to tradition, Walid I, when he visited the mosque built for him with the help of Byzantine masons in Medina, was reproached with having built the mosque in the style of Christian churches (Wustenfēld, *Geschichte der Stadt Medina*, Abh. G. W. Gott., ix., 1861). When 'Omar b. 'Abd al-'Azīz in his Syrian buildings had the qibla made in the form of a niche, he provoked the opposition and anger of the zealots on account of the similarity which was thus produced between the mosques and churches. H. Lammens has collected a number of references, in which the mihrāb is roundly asserted to be copied from the Christians and to have become naturalised only with difficulty and not till the second century (*Ziyād*, p. 94, note 1 quoted by C. H. Becker, *Zur Geschichte des islamischen Kultus*, *Islamstudien*, p. 493). Perhaps the custom of placing several niches in the qibla wall of large mosques was also a gesture against the appearance of imitating the Christian custom. On the other hand it should not be forgotten that the semicircular niche was one of the most widely disseminated forms of ornament in Mediterranean architecture and its adoption was much more natural than an imitation of the much larger Christian apsis. The derivation of the mihrāb from the Buddhist or Hindu niche for idols has as much or as little in its favour as the other. For it was only exceptionally that the Indian idol stood in a niche, but regularly it was in a separate quadrangular cell. The separate phenomenon of the eastern polygonal mihrāb developed by the Turkish peoples, which was brought by the Seldjūks and other Turkish peoples to Asia Minor and is found in Mesopotamia from the end of the xiith century can only be explained satisfactorily as a deliberate creation of its makers. As the heart of the house of worship, the mihrāb forms the culminating point in the equipment of the mosque, and as the carrier of the varied forms of decoration and continually changing systems of Muslim decorative art through the centuries is of considerable importance in the history of art. As a barometer of culture and art the mihrāb, if properly read, shows the prevailing tendency of art and its changes as a result of social changes. The writing of its history is a task for the future and it can only be outlined here.

History. The qibla was originally indicated not by a niche but by some mark such as a strip of paint or a flat stone marked in some way. Ac-

coiding to Abū Huraira, it was introduced into the first mosque of the Prophet in Medina: "Instead of a mihrāb or prayer niche a block of stone directed the congregation; at first it was placed against the northern wall of the mosque and it was removed to the southern when Mecca became the Kiblah" (R. F. Burton, *Personal Narrative of a Pilgrimage to Mecca and Medina*, 1874, ii. 72). The oldest mosque of 'Amr in Fustāt of 21 (642) had no niche, but the kībla, accurately calculated, was marked (Corbett. *J.R.A.S.*, 1890, p. 757-800). The Arabian use of slabs to indicate the kībla instead of a niche survived, alongside of the mihrāb and in spite of it, for several centuries within and without Arabia. The mosques in Arabia proper are still unknown and only a few buildings on the borders enable us to draw some conclusions. The ruins of the xith-xiith century on Bahrain (Diez, *Eine schiitische Moscheereste auf der Insel Bahrain, Jahrb. d. asiat. Kunst*, 1925, II. Halbband) and the mosque of Kisimkazi on Zanzibar (*J.R.A.S.*, 1922, pl. iii.) show examples of a type later well known. Such slabs of stone or stucco were frequently built into the front pillars of the ḥarām down to the xiiith century to indicate the kībla. They are to be found in Mōsul (Herzfeld, *Arch. Reise*, ii. 277, 280) and they would certainly have been found in Baghdād for example had the old mosques survived there. They gave the caliph and his representatives the opportunity, so limited in Islām, of perpetuating their names and boasting themselves helpers of Islām by pre-erecting such flat mihrābs. Examples are the richly ornamented stucco slab presented by the vizier al-Afdāl in the name of the Caliph al-Mustansir (485 = 1092) to the mosque of Ibn Tulūn and its counterpart ordered by Sulṭān Lādīn (696-698 = 1296-1298) (illustr. in F. Flury, *Die Ornamente der Hakim- und Ashar-Moschee*, 1912, pl. xvi). When Muslim architecture is deliberately developed on a grand scale however we find the mihrāb in the viiith century as a semi-circular shell-shaped niche flanked by pillars, and this is the form that has survived essentially with local variations to the present day.

Mesopotamia. The oldest example here is the mihrāb of the Djamī al-Khāsaki in Baghdād. It consists of a single marble block 5'4" inches high and 3'1" broad with a semi-circular niche in it 12' deep. The columns have spiral grooves in them and Corinthian-like capitals upon which the horse-shoe shaped shell is directly placed without an abacus. The niche, otherwise smooth, has in the central axis a perpendicular strip of ornament as its sole decoration, which is quite devoid of any structural function and is quite in the textile-like style of later Islamic decoration. Herzfeld supposes that this mihrāb was brought by water about 145 A. D. for the newly founded Baghdād from North Syria or Diyār Bakr and suggests for this and similar mihrābs of Northern Mesopotamia, the similar niches in Christian churches as models (*Isl.*, i. 35 sqq.). The Khāsaki type of mihrāb is found again in the walls of Anūd, which were built in 297 (910) by al-Muktadir (M. v. Berchem, *Inschriften aus Syrien* etc., coll. by Frh. von Oppenheim; De Beyhe, *Premie et Samarra*, fig. 42; v. Berchem-Strzygowski, *Anuda*, fig. 12, 292, pl. 111 sq.). The change to the pointed arch however took place here probably by the tenth century, certainly in the xith A.D. Instead of the

semicircular we find also flat niches cut out in the form of a rectangle e.g. in the tomb of a holy man in Abū Huraira (Sarre-Herzfeld, *Arch. Reise*, i. 133 sq.). The use of stucco, which is so easily worked, hastened the development of the form of the niche in the xiiith century. In the mausoleum of the Forty Faithful (al-Arba'in) in Takrit there is a stucco mihrāb of 660 (1261-62) with a stepped arch in profile. The tomb of Zainab in Sindjār of about 657 (1288) contains a richly decorated stucco mihrāb completely covered with ornaments and scrolls (*Arch. Reise*, p. 308 sq., pl. iv.). This wealth of decoration may in turn have reacted on the niches of stone, as the rich mihrāb of the great mosque of 543 (1148) and other niches in Mōsul show (*Arch. R.*, pl. v. xci. xciii.). In contrast to Persia, stone remained the usual material here. We now find twisted little pillars with vase bases and vase capitals, zigzag arches and richly fluted bands with plumed fucations (mihrāb of Badr al-Dīn in Mōsul). The Hellenistic mussel-shell, so far as it still survives, lost its naturalism by turning the sphincter structure into ornament. The rectangular frame of the arch of the niche completed the adaptation of an originally Hellenistic type to the oriental spirit of architecture. In the vacant field below the conch we here frequently have a mussel shell carved in relief. We find variations like the flat rectangular niches with the base of the conch protruding as in the Djamī al-'Omariya (*Arch. R.*, pl. cxxv.). When however we find in Pandjah 'Alī in Mōsul in 686 (1287) i.e. under the Ilkhān Arghūn, a polygonal mihrāb with stalactite canopy, we have apparently eastern, Seljuq influence, which produced the abstract stereometric crystallisation of the details and general form. Their seeming structural function is taken from the flanking pillars by direct continuation around the arch. Finally we may mention the occurrence of corner mihrābs in Mesopotamia when the kībla demanded it and it was not possible to orient the whole building properly. Such exceptions were confined to sepulchral domes (Mashhad Imām 'Awn al-Dīn in Mōsul: cf. Herzfeld, *Arch. R.*, pl. cxxv.).

Syria. The Mosque of the Omayyads in Damascus has twelve mihrābs in all (cf. the plan by A. Dickie, supplemented by C. Watzinger and K. Wulzinger, *Damaskus, Die islamische Stadt*). If systematically studied, they would probably give a conspectus of the development of the mihrāb in Syria. Only the principal mihrāb appears, at least in its architectonic development, if not in its embellishment to go back to the time of the foundation of the mosque. The other niches were put up mainly in the xivth century and later (*J. A.*, 1890, ser. vii., p. 185). The two favourite styles of decorating the walls in use among Byzantine workmen under Walid were *opus sectile* and glass mosaic. They must have been used almost exclusively for the early mosques along with carved mouldings. The description by Ibn Džubair, who visited the mosque in 580 (1184) i.e. not till after the first great fire of 461 (1069), gives us an idea of the mihrāb as it then was, probably still predominantly Omayyad. The mihrāb wall was covered with marble slabs; the arch of the niche had inscriptions in gilt letters on a blue ground, probably in mosaic, and had a quadrangular frame. The wedges between arch and frame were decorated with the famous "vineyard of Walid", as we may safely assume, in mosaic. The vaulting of the niche was probably adorned in the same way. The frame

of the mihrāb was crowned by a miniature arcading, a motive which with others was taken to Spain (see below) and above this the wall was adorned with views of celebrated towns and trees in mosaic, the Ka'ba in the centre. Remains of these mosaics still survive and the mosaics discovered a few years ago in the mosque by the French give us an idea of the splendour of their colouring. The mihrāb destroyed in the fire of 1893 had a miniature arcading (illustr. in Saladin, *Manuel*, fig. 35); it had also an arch encircling it above, which also suggests an Omayyad origin. (According to Marçais, *La mosquée d'el-Walid à Damas et son influence sur l'architecture musulmane d'Occident*, R. A., L, where the dependence of the mosque of Cordova on that of Damascus is discussed, in Damascus all arches were originally horseshoe-shaped — and as in the rebuilding — arranged in two stories as we see from old descriptions). Of the mihrāb of the Djami' al-Akṣā we know that it was covered with marble in 583 (1187) by order of Saladin. It has a wide niche formed of segments, with a pointed arch. The two sets of pillars with acanthus capitals are earlier than Saladin (Saladin, *op. cit.*, fig. 28). Le Bon mentions two peculiar mihrāb niches in the transept of the mosque (*La civilisation arabe*, p. 148 and fig. 68). Under the Aiyūbids the use of interlacing patterns in stone was popular in Northern Syrian architecture. They are sometimes rectilinear, sometimes rounded interlacings of textile origin which were used on the fronts of doors and prayer niches either in profile or as bands of stone in alternating colours. The decoration of the mihrāb thus received a remarkable stimulus, as the prayer niches of the Madiasa al-Sulṭāniya and the Djami' and Madrasa al-Firdaws of 633 (1235), both in Aleppo, and the mihrāb restored by Baibars of the Qubbat al-Silsile in Jerusalem, shew (picture in Creswell, *The Works of Sultan Baibars*, R. I. F. A. O., pl. xxvi., pl. 28, 29). Another peculiarity of the Syrian mihrāb is the occasionally found adornment of the vaulting of the niche with — it is true very rounded — views of buildings and trees in opus sectile, as an example of which we may take the mihrāb of the great mosque of Tripoli founded in 693 (1294) (pict. in *M.I.F.A.O.*, vol. xxv. 1909, pl. 5). The later Syrian mihrābs continued the traditional encrusting with different coloured marbles to which Turkish influence added the stalactitic conch.

Egypt. The principal mihrāb of the oldest mosque that has survived in Cairo, the mosque of Ahmad b. Tulūn, is thought to be the original one in its general structure. The mosaic frieze with inscription at the level of the capitals and the marble covering below belong either to the restoration by Kalā'ūn or more probably to that of Lādīn. Thus a type was created in Cairo in the middle of the third century which is characterised by the double stepping of the niche with two pillars on each side, in this case taken from old Christian buildings and by the stilted pointed arch and rectangular frame; this form became the Egyptian model. In place of the Mesopotamian conch, the top of the niche was smooth and probably, as in Kanawān, painted. The narrow top continued through the Fatimid period while the double recess of the niche with pillars gives all later Cairene mihrābs their character. A stucco mihrāb of the fourth (tenth) century, only the upper third of which has survived in its original form, of

which there is a copy in the Arab Museum, had the same structure with two pairs of pillars. The conch was imposed later (Flury, *Ein Stuckmihrāb des IV. (X.) Jahrhunderts, Sarre-Festschrift*, 1925, *Jhb. d. as. K.*). The stucco mihrāb of the sepulchral mosque of Djiyūshi on the Mukattam in Cairo, a century later (478 = 1085) and particularly richly decorated, has a similar niche with a high pointed top (pict. in Flury, *Ornamente loc. cit.*, pl. xvii.; Springer, *Handb. d. Kg.*, vi., fig. 400). It is to be assumed that the original mihrābs of the Fātimid mosques of Hākim and al-Azhar also belonged to this group. The al-Akmar mosque, completed in 519 (1125) introduced a new motif in its façade, which was much imitated in Cairo, the placing of a row of ribs like the corrugation of a shell along the top of the niche. The stucco mihrāb already mentioned, a copy of which is in the Arab Museum, must have been embellished about this time by a mussel shell. The mihrāb in the sepulchral chapel of Shadjarat al-Durr [q. v.] the widow of Sulṭān Šālih Nadjm al-Dīn Aiyūb of c. 648 = 1250 (fig. in R. L. Devonshire, *Some Cairo Mosques*, London 1921, p. 32) shows this fashion in a much more decided and more advanced mugharnasised stage. Such variations were however the exception. On the other hand the stucco mihrāb survived down to the Mamlūk period. Creswell, for example, ascribes the stucco mihrāb on the outside of the north wall of the mosque of 'Amr, rebuilt by Sulṭān Baibars, to the time of Baibars on grounds of style (658—676 = 1260—1277) (*The Works of Sultan Baibars*, R. I. F. A. O., xxi. 1926). The splendour of the exceedingly thick stucco ornamentation in relief is here increased by the *mugharnaf* in the miniature arcading of the upper part of the niche. Stucco decoration thus reached its last effective possibilities. With the Mongol invasion of Syria, Syrian influence on Egyptian art was renewed (Cairo also benefited by the taking of Mōsul by the Mongols in 653 = 1255 and the resultant migration of the celebrated coppersmiths of Mōsul to Cairo, where from this time on the art of the metal-worker flourished, cf. Creswell, *op. cit.*, p. 182). Syrian influence also brought the Syrian mihrāb overlaid with marble slabs and stone mosaic to Egypt, where it drove out the other types and became predominant. The oldest prayer niches of this new kind appear in the buildings of Kalā'ūn at the end of the viii (eighth) century. The flanking double pillars give them their Gothic grace and elevation. The arches are usually composed of alternating coloured wedge shaped stones serrated in various ways. The walls of the niches are decorated with mosaic in geometric patterns between miniature arcading and the conch vaulting overlaid with light and dark strips of colour alternating (often zigzag). Exceptionally we also find glass mosaic, as in the masjid of the Muristān of Kalā'ūn. Under the late rulers of the Circassian Mamlūks the decoration of the niche reached its height. The inlaying was done with all kinds of costly materials such as mother-of-pearl, turquoise, agates, ivory (Madrasa of Abū Bakr b. Muzhir and al-Ghūrī: cf. Briggs, *Mus. Arch.*, fig. 119 and 127).

A small group by itself is formed by the three portable mihrābs of the viii (eighth) century from al-Azhar. Saiyida Kuṣariya and Saiyida Nafisa which are now preserved in the Arab Museum.

Maghrib. The history of the mihrāb in the

western lands of Islām begins with the prayer niche in the great mosque of Kairawān. It was not the direct model for the later mihrābs — this was reserved for the portal of the library of this mosque — but with its wide semi-circular niche and the slightly rounded but still pointed arch it forms the transition to the western form of mihrāb. The pillars of mottled red and yellow stone rest on late antique bases and support pseudo-Byzantine porphyry capitals the abacuses of which are decorated with Kūfic inscriptions. The wall of the niche is covered with marble slabs, some perforated, some carved in relief, the frames of which also bear inscriptions. Behind is a recess. The vaulting of the niche still shows traces of having been painted with vine tendrils arranged in circular patterns, which remind one of Mshattā (pictures in G. Margais, *Coupoles et plafonds de la Grande Mosquée de Kairouan*, 1925, pl. viii.). The frieze separating the recess and the vaulting of the niche, and the surrounding walls are covered with the famous lustre tiles made, some in Baghdad and some by a Baghdad artist in Tunis, and presented in 281 (844) by Ibrāhīm b. Aghlab. This remarkable mihrāb of the early period, when Islām was still in search of a style, thus combines all that the empire could produce in decoration, sculpture, painting, both richly brightened by gold and shining tiles. The fully developed western style is found a century later in the mihrāb of the Mezquita in Cordoba. This mihrāb, built by Hākim II about 970, consists of an isolated heptagonal space 12 feet broad and 23 to 26 feet high. One side is formed by the wall containing the door. The floor and walls are covered with rectangular pieces of white marble, above a frieze of inscriptions and the cornice, on which a richly carved niche wall with clover leaf arch on marble pillars with gilt capitals forms the upper part, which again terminates in an incised frieze and is covered by a single piece of marble in the shape of a mussel shell. In the inscription on the outer wall the artist is mentioned "the work of Badr b. al-Khūyān". The historically important part here is the entrance wall to this chamber, which consists of a horseshoe-arch gateway with rectangular frames and miniature arcading at the top. This form of wall, which now becomes typical for mihrābs and portal walls in most lands of the Maghrib and shows its own course of development, has been traced to the portal wall of the library of the great mosque in Kairawān as the earliest model, or both go back to a common Syrian original (cf. Margais, *Manuel*, i. 264 *sp.*). In Cordoba we meet with a special shape of the mihrāb recess, the origin of which is doubtless different from that of the niche and goes back to an original with special functions connected with the cult of relics and of the dead. According to tradition, a relic of the Prophet was actually preserved in this space and the believers used to pay reverence to it in a sevenfold circumambulation. A quite singular, similar, isolated mihrāb is found in the madrasa in Khargird, Khurāsān (cf. MASQUID and below PERSIA). (Whether here we have the influence of the *pradakshina* of the Indian cult of relics cannot be settled. The circumambulation of altars, tombs of saints, and other sacred objects was of course a widespread custom in northern lands also.) Horseshoe-arches, multiple rectangular border and miniature arcade

are the typical elements of the henceforth canonical mihrāb wall. The wedge-shaped stones of the horse-shoe arch are not serrated in complicated fashion, as in Egypt and Syria, but usually alternate in colour and are all smooth, as in Cordoba, or alternately smooth and carved in relief. In Cordoba the spandrels are still filled with palm-branches and acanthus-like tendrils in relief and the two borders decorated with Kūfic inscriptions (cf. R. Amador de los Rios, *Inscriptiones arabes de Cordoba*, Madrid 1892). The niches of the miniature arcading with clover-leaf arches are covered with mosaic (pict. in E. Kühnel, *Maurische Kunst. K. d. O.*, pl. 13, 14). The wall of the pentagonal mihrāb niche in the great mosque of Tlemsen of about 1135 A.D. is similarly formed (pict. in Kühnel, *op. cit.*, pl. 24). But we already find here in the spandrels the isolated rosettes which first appear on the mihrāb of the Aljaferia in Saragossa of the second half of the eleventh century (pict. in Margais, *Manuel*, fig. 215). The mihrāb wall of the Almohad mosque in Tinnāl in the Atlas (1153 A.D. shows, instead of the tendrils, a woven pattern such as is often found on carpets (pict. in Margais, *op. cit.*, fig. 216); and in place of the miniature arcading we have round arched windows alternating with flat niches. A divergence from the canonical type is found in the mihrāb of the mosque in Tozeur built in 590 (1194) in the oasis of Qyerid (pict. in Margais, *op. cit.*, fig. 218). It has a double arch and profuse ornamentation, on the wall of the niche also. Margais explains the divergence by saying that the mosque was built by a conqueror of Almoravid descent in the Almohad period by workmen from Andalus. The niche bears the stamp of hurried improvisation. The mihrāb here reproduced, in the Sidi Okba mosque in the Siban oasis at Biskra which is considered the oldest mosque in Algeria, may be regarded as an example more in the popular tradition, therefore particularly interesting. The date is unknown. The decoration belongs to the field of *Kutubkhana*. Under the dynasties which succeeded the Almohads from the xiii.—xvth century the Cordoba type remains the model in principle. Only the proportions are more slender, the horseshoe arches more elegant and, instead of the miniature arcading, windows with coloured glass in a stucco framework have become naturalised. The isolated mihrāb chambers have given place to semicircular or polygonal niches. Examples are the *maḥārīb* of the mosques in Taza, Sidi bel Hasan and al-'Uḥāl in and near Tlemsen, in Fās and the Ḥamrā of Granada, the latter covered with mosaic (pict. in Margais, *op. cit.*, fig. 336—338 and P. Ricard, pl. x. xi.). In Tunis of the xv.—xvith century also the mihrāb with flat round niche and horseshoe arch of alternately coloured and ornamented stones and rectangular frame continued to predominate. The plinths are regularly covered with marble or tiles, while the niche vaultings are fluted like a mussel shell.

Persia, Turkestan, Afghānistān. The two earliest prayer niches in Persia, so far as is known, are in the mosque at Nāyin, east of Isfahān, of the ix.—xth century A.D. (Viollet and Flury in *Syria*, 1921, pl. xxx. and S. Flury, in *Syria*, 1930) and in the *Iwān* at Khargird, Khurāsān, of the xi.—xvth century (Diez, *Churasanische Baudenkmäler*, pl. 30).

In spite of their different ornamentation, these

two stucco mihrābs are very similar. Both are rectangular niches flanked by inset $\frac{3}{4}$ pillars with leaf capitals, with pointed conches diagonally set and thickly decorated with tendrils in a rectangular frame. The back wall under the conch presents a repetition of the architecture of the niche so that we have a niche in a niche. In Persia therefore, if Flury is right in his early dating, perhaps as early as the third (ninth) century, a rich double framed style of mihrāb had been developed, which lasted down to the xivth century, as is shown by the next surviving monument of this group, the stucco mihrāb in the Masjid-i Djum'a in Iṣfahān of 710 (1310) (Diez, *K. d. Isl. Volker*, p. 109; 2nd ed., p. 85). In the interval however the decoration, at first purely floral, had become mainly epigraphic, a transition that can be followed step by step from the xiith century. The stucco mihrāb of the mosque of Djiyūshī on the Muḳaṭṭam in Cairo of 478 (1085) is also of importance for this sequence of development (pict. in Flury, *Ornements* etc., pl. xvii).

But in Persia a second type developed alongside of the stucco mihrāb, the mihrāb decorated with lustre faience, with which this part of the decoration of the mosque and with it Persian faience reached its zenith. The lustre mihrāb of Kāshān of 624 (1226) in Berlin (pict. in Springer's *Kunstgeschichte*, vi. 438) and a similar niche from Warāmin in the possession of the firm of Kelekian (*Cat. of the Exhib. of Persian Art*, London 1931) may be quoted as examples. These mihrābs show the same double niches as their stucco counterparts but are flatter, more framework than niche. In place of the curved arch, the canopy is a rectilinear gable, a change in shape probably mainly due to the material. The colours are predominantly a light blue ground with letters in dark blue relief and decorations in brown lustre. By the combined effect of the colours and the profuse ornamentation, these mihrābs have a truly fairylike suggestion and reach the highest ideal of Islāmic decorative art. The mihrāb assumed a new form in the Timūrid period. Instead of the semi-circular or flat rectangular niche we now find under Turkish influence the polygonal — pentagon constructed out of an octagon — of larger dimensions than previously, broader and deeper. The ornamentation proceeds parallel with the usual Timūrid wall decoration. In the same way the plinth is covered breast-high with polygonal tiles and the walls above usually with flat miniature arcading, which pass into vaulted mugharnaṭ painted or covered with tiles. Finally the frames and the scrolls of inscription filling them are frequently inlaid with that finely executed tile-mosaic which forms the glory of Timūrid architectural ornament. As examples may be mentioned the mihrābs in the praying chambers of the madrasa in Khargird (Diez, *Chur. Baudenkmäler*, pl. 33, 1), the mihrāb of Ziyāret Abi Walid near Herāt (Niedermayer-Diez, *Afghanistan*, fig. 174), the splendid prayer niche in the mosque of Djawhar-Zāde in Mashhad (Diez, *K. d. isl. Volker*, v. fig. 146 and 108) all of the ixth (xvth) century. The mihrāb in the splendid medrese in Herāt, now destroyed, must have been similar to that in Meshhad, here reproduced, having been founded by the same princess and probably built by the same architect (cf. above iii. p. 387b). In the Ṣafawid period, we find alongside of mihrābs with mosaic and mugharnaṭ also painted niches,

which show intertwining tendrils standing out in white from a brick red ground. Mihrābs like this are to be seen in the ruins of the Muṣallā outside Iṣfahān and in Reshlār, Khurāsān (fig. Diez, *Chur. Baudenkmäler*, pl. 22, 3). They seem to have been very widely disseminated. It may be mentioned in conclusion that in place of a prayer niche in the *Kibla-iwān* of the Timūrid madrasa in Khargird, there is a rectangular windowless chamber, accessible by a doorway through the *iwān*. The similarity with the mihrāb chambers frequently found in the Maghrib is remarkable and is discussed under Spain.

In India. No mosques earlier than the xiiith century have survived in India. In the mosques of the xiiith—xvth centuries the prayer niches are built in Indian fashion, that is to say flanked by decorated Indian pillars and adorned with Indian ornamentation. The gable-shaped panels over the niches are particularly ornamental. The wall of the niches is usually adorned in relief with a lotus rosette and a pendant vase out of which grow tendrils. Numerous niches of this kind are to be found in mosques of Guḍjarat and Aḥmadābād of the xivth—xvth centuries. An Indian peculiarity is the placing of three to five, sometimes even seven mihrābs in the kībla wall in keeping with the architectonic units of the main building, each marked by a dome (Djāmi' Masjid in Bharoch, and Champanir, Guḍjarat etc.). There are also mosques with mihrāb chambers, which we can assume with Havell to be adaptations of the former cells for idols (Dholka, Guḍjarat, Khans Masjid and Aḥmadābād). It is therefore not impossible that isolated mihrāb chambers outside of India, as in Khargird, Persia, or even in the Maghrib, should be traced to Indian influence, although this feature is not found in the earliest mosques in Aḍmir and Dehli. In Guḍjarat however these chambers might have been used as mihrābs in the oldest mosques and provinces with a sea coast and international trade may have had influence abroad (cf. *Arch. Survey of India, Western India*, vol. vi, vii., Guḍjarat, Aḥmadābād). When Persian influence began to be felt under the Moghul emperors, the Indian elements gradually disappeared from the mihrābs and their place was taken by the polygonal niche in the wall incrustated with coloured marble. Under Akbar Indian detail still survived. The arches of the mihrāb of the great mosque in Faḥpur Sikrī, for example, are edged with a lacework of carved palmette friezes; the material is stone but the inlay work imitates the Persian tiled mihrābs (pict. in V. A. Smith, *A History of Fine Art in India* and Diez, *K. d. isl. Volker*, p. 229 and p. 141). In the court mosques of Agra and Dehli we find dazzling white marble mihrābs with coloured intarsia of flowers. The most splendid mihrāb in India and indeed in all the lands of Islām is the niche of the Friday mosque in Bidjāpūr, the former capital of the 'Adil Shāhs in the Dekhan. The only rival that it can ever have had is Walid's mihrāb in Damascus. Framed by a gigantic arch resting on double pillars, the pentagonal niche recess constructed out of an octagon goes deep into the wall on whose surfaces the motif of the niche is three times repeated. The central of the three niche areas is mystically marked by a gilt eight-pointed star as the real kībla. In gigantic letters of gold the two sacred names Allāh and Muḥammad in the spandrels of the arch impress themselves on the hearts of the worshipper, and chime in

afresh in the drumshaped flanking pillars, which in Bidjāpūr decoration are frequently used as conventional ornament but are here of structural importance. Manāras and sepulchral domes crown the structure and their principal motive is again a niche in the centre. This imposing decoration is carried out in shallow relief and is painted with red, blue and black colours heightened with gold. In the rectangular fields on both sides and in the arches are inscriptions on bands and in medallions of which we give Cousens translation of one because it sums up Muslim philosophy in a nutshell:

"Place no trust in life: it is but brief".

"There is no rest in this transitory world".

"The world is very pleasing to the senses".

"Life is the best of all gifts but it is not lasting".

"Malik Ya'qūb, a servant of the mosque and the slave of Sulṭān Muḥammad, completed the mosque".

"This gilding and ornamental work was done by order of the Sulṭān Muḥammad 'Adil Shāh, 1045" (1636 A.D.).

Asia Minor, Armenia and Turkey. The mihrāb took a development quite of its own among the Seldjūks of Rūm. Instead of the descendant of the high, Hellenistic round niche, we find here a prayer niche which rather resembles a hearth and is probably to be explained as an adaptation of the prayer carpet to this form of building. The appearance of these niches, which are thus of no structural significance, is however made up for by their stereometrically crystallised cone-shaped vaulting formed of cells. The Turkish art of the Seldjūks brought as its dowry to the art of the Muslim world the Mugharnā, the suggestion of which, it in turn owed to Buddhist art, for the Seldjūks came from Central Asia where Buddhist art had long prevailed. During the short period of Seldjūk architecture in Asia Minor, the xiiith century, the form of the niches remained unaltered. They are low rectangular shallow niches with pillars built in without bases, which bear rhombohedral crystal bodies as capitals and come to a point with the conical cells of the vaulting. The spandrels and frames are inlaid with the usual Seldjūk white, blue and black tile mosaic (pict. in Löytved, Sarre, Springer-Kühnel and Diez, *op. cit.*).

The most important change undergone by this early Turkish mihrāb in Ottoman architecture was the raising of the supporting niche to its full height. The niche assumed polygonal form, i.e. it has three or five surfaces constructed out of the octagon, such as we find in India and Persia from the xvth century; it was however raised higher and looks more slender and regularly ends in a mugharnā cone. The decoration consists mainly of marble and Turkish tiles. A moulded tinfoil frieze formed the usual framework for the whole. The combination of Byzantine and early Turkish elements, the hard forms and a certain rationalism in execution give these mihrābs that cold appearance which is peculiar to Ottoman art.

Worthy of mention is the splendid mihrāb of the Ulū Djāmi' in Wān in the Persian style with mosaics of glazed brick terracotta reliefs and inscriptions; a niche with a mugharnā (xiith—xiiith centuries, pict. in Bachmann, *Kirchen und Moscheen in Armenien*, pl. 62).

MIHRĀN, the name given by Muslim writers to the Indus (Sanskrit *Sindhu*), called by the Greeks *Σίνδός* and *Ἰνδός*, by the Romans *Sindus* and *Indus*, and by early Muslim writers *Ab-i Sind* (the Water of Sind). The name is more particularly applied to the lower reaches of the river, after it enters Sind. Pliny writes of "Indus, incolis Sindus appellatus".

The Indus rises in 32° N. and 81° E., receives the Kābul river almost opposite to Ātak, and the Panjnad, the accumulated waters of the five rivers of the Panjāb, just above Mithankot. Near Kashmir, in 28° 26' N. and 69° 47' E., the river enters Sind, and below Bakkar is locally known as *Daryā*, "the Sea". It falls into the Arabian Sea in 23° 58' N. and 67° 30' E. Its drainage basin is estimated at 372,700 square miles and its length at a little over 1,800 miles.

The courses of the Indus and its tributaries have undergone, even in historical times, extensive changes of which it is impossible to give details in this article, and which have misled historians who have disregarded them. They have been minutely and elaborately described in *J. A. S. B.*, vol. lxi. (1892) by the late Major H. G. Raverty, who has illustrated his scholarly monograph by a series of admirable maps.

(T. W. HAIG)

MIHRGĀN. [See MIHR.]

MIHRĪ KHATUN (originally Mihr-i Māh), an important Turkish poetess of the end of the xvth and beginning of the xvth centuries. She belonged to Amasia, which produced a number of poets, and spent her whole life there. She was one of the family of Pir Ilyās. Her father was a kādī and wrote poetry under the *makhlas* of Belāi. She inherited from him her poetic gifts and also

received from him the poetic and theological training ascribed to her by Ewliyâ.

Not much is known of her life. This is in part to be explained by the reticence of the East regarding women. That in the East boys rather than girls are sung of in love songs is due not so much to a preponderancy of paederasty as to a disinclination to talk of women at all. She died in 912 (1506). Her tomb in Amasia is a place of pilgrimage. She belonged to the literary circle of prince Aḥmad, the second son of Sultān Bāyazid, who was governor of Amasia in 886–918 (1481–1512). Of a circumcision festival in the *konak* of the prince in 911 (1505), it is recorded that Mihri was the chief of the poets present.

In spite of the love affairs credited to her and sung by her (with Iskender, son of Sinān Pasha, with Mu'ayyad-zāde [born 860 = 1456] and others), the Turkish biographers emphasize besides her beauty her virgin life, in spite of the glowing fervour with which she described her nights of love. Her nature was evidently not quite clearly understood by the *tezkere*dār. Contrary to the Oriental custom, Mihri remained unmarried in spite of many wooers. It is not improbable that the experiences described by her are not quite inventions but evidence of her passionate nature which drove her to unfettered love. Mihri's great merit is that she did not suppress her femininity, so that in her poems she reveals a truly womanly soul. In this respect, she is the most personal among Turkish poetesses.

As a woman she found it doubly difficult, in view of the restrictions on her sex at the time, to win a place as a poet, as the study of the Persian poets was absolutely necessary for this. The energy with which she managed to achieve her aim is remarkable. Her chief model was Nedjāti (d. 914 = 1509), the most important poet of the period, with whom she tried to compete. Most of her pieces are written in Nedjāti's manner. She is not very original, but very few Turkish poets are. In language and in images she is conventional. But her freshness, directness and passionate feeling, in which no other poetess equals her, are remarkable. Her eloquence and brilliant style were proverbial.

She left a *Diwān* (edition in preparation by Martinovitch) and several treatises in rhyme. A number of her poems have been made accessible to us by Smirnov. According to Ewliyâ's statement (in MSS., not in the printed text), she also composed *risāla*'s on *fiḥh* and *farā'id*.

(TH. MENZEL.)

MİKÂL, the archangel Michael [cf. MALĀ'IKĀ], whose name occurs once in the *Qur'ān*, viz. in sūra ii. 92: "Whosoever is an enemy to Allāh, or his angels, or his apostles, or to Gabriel or to Michael, verily Allāh is an enemy to the unbelievers". In explanation of this verse two stories are told. According to the first, the Jews, wishing to test the veracity of the mission of Muḥammad, asked him several questions, on all of which he gave the true answer. Finally they asked him who transmitted the revelations to him. When he answered, Gabriel, the Jews declared that this angel was their enemy and the angel of destruction and penury, in opposition to Michael whom they said to be their protector and the angel of fertility and salvation (Ṭabarī, *Tafsīr*, i. 324 sqq.). — According to the second story, 'Umar once entered the synagogue (*miḥrās*) of Madīna and asked the Jews questions concerning Gabriel. They gave of that angel as well as of Michael an account similar to the one mentioned above, whereupon 'Umar asked: What is the position of those two angels with Allāh? They replied: Gabriel is to His right and Michael to His left hand, and there is enmity between the two. Whereupon 'Umar answered: If they have that position with Allāh, there can be no enmity between them. But you are unbelievers more than asses are, and whosoever is an enemy to one of the two, is an enemy to Allāh. Thereupon 'Umar went to meet Muḥammad, who received him with the words: Gabriel has anticipated you by the revelation of: "Whosoever is an enemy" etc. (sūra ii. 92; Ṭabarī, *Tafsīr*, i. 327; Zamakhsharī, p. 92; Baiḍāwī *ad* sūra ii. 91).

We do not know of any Jewish traditions which ascribe to Gabriella hostile attitude towards the Jews. For the statements regarding Michael as communicated above, there is sufficient literary evidence. In Daniel xii. 1 Michael is called the great prince, the protector of the people of Israel; cf. *Targum Canticum*, viii. 9: "Michael, the lord of Israel"; Daniel x. 13, 21 where Michael is said to have protected the Jews against the kings of Persia and Greece; further 1 Enoch xx. 5 where he is called the protector of the best part of mankind; *Testamentum Levi*, xv. 6; *Test. Dan.*, vi. 2.

In *Vita Adae et Evae*, chap. xii. sqq., it is Michael who orders Satan and the other angels to worship Adam. Although the story is mentioned several times in the *Qur'ān* [cf. IBLIS], there is no trace in Muslim literature of the role ascribed to Michael in *Vita Adae et Evae*: the only mention of Michael in the Muslim legend is that he and Gabriel were the first to worship Adam, in opposition to Iblis who refused to do so (al-Kisā'ī, p. 27).

Neither does Muslim literature seem to have preserved other features ascribed to Michael in Jewish Apocrypha (mediator between God and mankind, 1 Enoch xl. 9; *Test. Dan.* vi. 2; 3 Baruch, xl. 2), or in the New Testament (Ep. Jude, vs. 9: Michael disputing with the devil about the body of Moses; Revelation xii. 7 sqq.: Michael and his angels

fighting against the dragon and the final discomfiture of the latter). Perhaps a faint recollection of Michael as the protector of mankind (the Jews, the Christians) may be found in the tradition according to which Michael has never laughed since the creation of Hell (Aḥmad b. Ḥanbal, iii. 224). Further, however, Michael is rarely mentioned in *ḥadīth* (Bukhārī, *Bad' al-Khalq*, b. 7, where he, together with Mālik, the guardian of Hell, and Gabriel, appears to Muḥammad in a dream; Nasā'ī, *Istīṭāh*, b. 37 where Michael incites Gabriel to urge Muḥammad to recite the Qur'ān according to seven *ahruf*).

al-Ya'qūbi mentions a story of which we have no counterpart in Jewish or Christian literature either, which is not amazing, the story bearing an outspoken Shī'ite tendency. One day Allāh announced to Gabriel and Michael that one of them must die. Neither however was willing to sacrifice himself in behalf of his partner, whereupon Allāh said to them: Take 'Alī as an example, who was willing to give his life on behalf of Muḥammad (the night before the *hiǧra*; Ya'qūbi, ii. 39).

Michael is further mentioned by name as one of the angels who opened the breast of Muḥammad before his night journey (Ṭabarī, ed. de Goeje, I, 1157—59; Ibn al-Aḥfir, ed. Tornberg, ii. 36 sq.), and as one of those who came to the aid of the Muslims in the battle of Badr (Ibn Sa'd, ii/i. 9, 18).

In the text of the Qur'ān as well as in a verse cited by Ṭabarī (ed. de Goeje, I, 329), the form of the name is Mīkāl as if it were a *mif'al* form from *wakala* (Horovitz). A direct reminiscence of the Greek, probably also of the Hebrew and Aramaic, forms of the name is to be found in the tradition preserved by al-Kisā'ī (p. 12), which calls Mikhā'il the attendant of the second heaven, in contradistinction to Mīkā'il, who is the guardian of the sea in the seventh heaven (p. 15). Other forms of the name are Mīkā'il, Mīkā'il, Mīkā'il, Mīkā'in and Mīkā'ill. It is hardly necessary to say that in the magical use of the names of the archangels that of Mīkā'il is on the same level as that of his companions (e.g. Zwemer, *The Influence of Animism on Islam*, p. 193, 197).

(A. J. WENSINCK)

MĪKĀT (A., *mif'al*-form from *w-k-t*, plural *mawāḳit*) appointed or exact time. In this sense the term occurs several times in the Qur'ān (sūra ii. 185; vii. 138, 139, 154; xxvi. 37; xlv. 40; lvi. 50; lxxviii. 17).

In *ḥadīth* and *fiqh* the term is applied to the times of prayer and to the places where those who enter the *ḥaram* are bound to put on the *iḥrām*. For the latter meaning of the term cf. *Iḥrām*, I.

Although some general indications for the times at which some *ṣalāts* are to be performed occur in the Qur'ān (cf. sūra ii. 239; xi. 116; xvii. 80; xxiv. 29), it may be considered above doubt

that during Muḥammad's lifetime neither the number of the daily *ṣalāts* nor their exact times had been fixed and that this happened in the first decades after his death.

A reminiscence of that period of uncertainty may be preserved in those traditions which apply a deviating nomenclature to some of the *ṣalāts*. The *ṣalāt al-zuhr* e.g. is called *al-ḥaǧīr al-ūlā*; the *ṣalāt al-maghrib*, *ishā'*; the *ṣalāt al-'ishā'*, *'atama*; the *ṣalāt al-faǧr*, *ghaḍāt* (Bukhārī, *Mawāḳit al-Ṣalāt*, bāb 13, 19). In other traditions the term *al-'atama* as applied to the *ṣalāt al-'ishā'* is ascribed to the Beduins and prohibited (Muslim, *Masāǧid*, trad. 228, 229; Abū Dāwūd, *Hudūd*, bāb 78; Aḥmad b. Ḥanbal, *Musnad*, ii. 10 etc.); cf. on the other hand Bukhārī, *Mawāḳit*, bāb 20; Muslim, *Ṣalāt*, trad. 129 etc., where the term *'atama* is used without censure.

From some traditions so much may be gathered, that the — or at least some of the — Umayyads showed a predilection for postponing the times of the *ṣalāt* (Bukhārī, *Mawāḳit*, b. 7; Muslim, *Masāǧid*, trad. 166, 167; al-Nasā'ī, *Imāma*, b. 18, 55; Zaid b. 'Alī, *Maǧmū' al-Fiḥh*, N^o. 113).

In opposition to this a *ṣalāt* in due time is declared the best of works (Bukhārī, *Ḍiḥād*, b. 1; *Mawāḳit*, b. 5; Muslim, *Imān*, trad. 138, 139; Tirmidhī, *Ṣalāt*, b. 13; *Birr*, b. 2). In other traditions this is said of a *ṣalāt* at its earliest time (Tirmidhī, *Ṣalāt*, b. 13).

This early state of things is reflected in several respects in a tradition according to which 'Umar b. 'Abd al-'Azīz once postponed one of the *ṣalāts* and was rebuked for this by 'Urwa b. al-Zubair, who related to him that al-Mughīra b. Shu'ba had once been rebuked for the same reason by Abū Mas'ūd al-Anṣārī, on account of the fact that Gabriel himself had descended five times in order to perform the five *ṣalāts* at their exact times in the presence of Muḥammad. Thereupon 'Umar admonished 'Urwa to be careful in his statements (Bukhārī, *Mawāḳit*, b. 1; Muslim, *Masāǧid*, trad. 166, 167; al-Nasā'ī, *Mawāḳit*, b. 10).

Some early groups of traditions affect to reproduce reminiscences of the practice in Madīna in Muḥammad's time.

a. The *ṣalāt al-zuhr* was performed at noon, when the sun was beginning to decline (Bukhārī, *Mawāḳit*, b. 11);

b. the *ṣalāt al-'aṣr* when the sun was shining into 'Ā'isha's room, no shadows being yet cast there (Bukhārī, *Mawāḳit*, b. 13; Muslim, *Masāǧid*, trad. 168). After this *ṣalāt* people had still time to visit the remotest parts of the town, while the sun was still "alive" or "pure" (Bukhārī, *Mawāḳit*, b. 1, 13, 14, 18, 21);

c. the *ṣalāt al-maghrib* was finished at a time when people could still perceive the places where their arrows fell down (Bukhārī, *Mawāḳit*, b. 21);

d. the *ṣalāt al-'ishā'* was sometimes postponed till a late hour, sometimes till the first third of the night had passed (Bukhārī, *Mawāḳit*, b. 11, 20, 21, 24);

e. the *ṣalāt al-faǧr* was performed by Muḥammad at a time when a man could discern his neighbour (Bukhārī, *Mawāḳit*, b. 13); but the women on their way home could not yet be recognised (Bukhārī, *Mawāḳit*, b. 27).

In a second layer of traditions these general indications are specified by the mention of the first and the last limits allowed for the different

prayers (cf. e.g. Muslim, *Masāḍid*, trad. 176, 177). On one day Muḥammad performed:

a. the *ṣalāt al-ḡuhr* when the sun began to decline;

b. the *ṣalāt al-ʿaṣr* when the sun was still high, white and pure;

c. the *ṣalāt al-maghrib* immediately after sunset;

d. the *ṣalāt al-ʿiṣhāʾ* when the twilight had disappeared;

e. the *ṣalāt al-faḍr* at daybreak.

On the following day Muḥammad performed:

a. the *ḡuhr* later than the day before;

b. the *ʿaṣr* later than the day before, the sun being still high up;

c. the *maghrib* before the twilight had disappeared;

d. the *ʿiṣhāʾ* when the first third of the night had passed;

e. the *faḍr* when sunrise was near (*asfara bihū*).

In a tradition communicated by al-Shāfiʿi (*Kitāb al-Umm*, i. 62) the fixing of the mawākīt just mentioned is ascribed to the example of Gabriel (cf. Zaid b. ʿAlī, *Maḍmūʿ al-Fiḡh*, N^o. 109). These mawākīt have for the most part passed into the books of *fiḡh*. We cannot reproduce all details here. The following scheme may suffice:

a. *ḡuhr*: from the time when the sun begins to decline till the time when shadows are of equal length with the objects by which they are cast, apart from their shadows at noon. The Ḥanafites alone deviate in one of their branches in so far as they replace the ultimate term by the time when the shadows are twice as large as their objects. In times of great heat it is recommended to postpone the *ḡuhr* as late as possible;

b. *ʿaṣr*: from the last time allowed for *ḡuhr* till before sunset. According to Mālik the first term begins somewhat later;

c. *maghrib*: from the time after sunset till the time when the red twilight has disappeared. Small deviations only, in connection with a predilection for the first term;

d. *ʿiṣhāʾ*: from the last term mentioned for the *ṣalāt al-maghrib* till when a third, or half of the night has passed, or: till daybreak;

e. *faḍr*: from daybreak till before sunrise.

Side by side with these mawākīt we find in the books of Tradition and of Law the times on which it is not allowed to perform prayer, viz. sunrise, noon, and sunset (Bukhārī, *Mawākīt*, b. 30—32; Muslim, *Ṣalāt al-Muṣāfirin*, trad. 285—294; cf. al-Nawawī's commentary for controversies regarding this point, and further Wensinck, *A Handbook of Early Muh. Trad.*, p. 192a). According to ʿĀṣha it is only forbidden to await sunrise and sunset for prayer (Muslim, *Muṣāfirin*, trad. 296). In Makka prayer is allowed at all times (Bukhārī, *Ḥaḍīṭ*, b. 73; Tirmidhī, *Ḥaḍīṭ*, b. 42).

(A. J. WENSINCK)

MĪKHĀʿĪL ṢABBĀGH, an Arabic author born of Catholic parents in Akko in 1784, was educated in Damascus and then came to Egypt. Here he joined the French army of Napoleon's expedition, had to leave the country with them and came to Paris. The State printing works employed him as a proof-reader and the Bibliothèque Nationale as a copyist of Oriental manuscripts; his irregular habits prevented him leading a comfortable or settled existence, although de Sacy and his pupils appreciated his thorough knowledge of his mother tongue. He himself only used it to compose *ḡasidas* in the old style in praise of great men of the period and to make some money thereby. For example in 1805 he addressed a poem to the Grand Judge when he visited the printing works, in 1805 to Pope Pius VII, in 1810 to Napoleon on his marriage, in 1811 to the King of Rome, in 1814 to Louis XVIII. These poems were printed at the government press, that to Pius VII with a Latin translation by de Sacy, that to Louis XVIII with a French one by Grangeret de Lagrange. He also published a work on carrier pigeons entitled *Kitāb Musāḥakāt al-Barḡ wa ʿl-Ghamām fi Ṣulāt al-Ḥamām*. *La colombe messagère, plus rapide que l'éclair, plus prompt que la nue*, par M. S. traduit de l'Arabe en Français, par Silv. de Sacy, Paris 1805; based on the preceding: *Die blitzgeschwunde Briefpost, oder sinnreiche Kunst des Orients, Tauben zum Bestellen der Briefe abzurichten*, nach dem Arab. des M. S. Herborn 1806; *Beschreibung der Kunst der Taubenpost, welche seit der Zeit der Erlösung gebraucht wird*, aus dem Arab. von Dr. Th. J. K. Arnold, Frankfurt 1817; *La colomba messagiera ratto fu del lampo*, trad. di S. A. Cataneo, Mailand 1822; *Die Brieftaube schneller als der Blitz*, aus dem Arab. von C. Loper, Strassburg 1879. — He left in manuscript a history of the Arab desert tribes of Syria, a history of Syria and Egypt and, important for its lexicographical information: *al-Risāla al-tamma fi Kalām al-ʿAmma wa ʿl-Manāḥiḡ fi Aḥwāl al-Kalām al-dāriḡ*, M. S.'s Grammatik der arab. Umgangssprache in Syrien und Ägypten, nach der Münchener Hs. herausg. von H. Thorbecke, Strassburg 1886.

(C. BROCKELMANN)

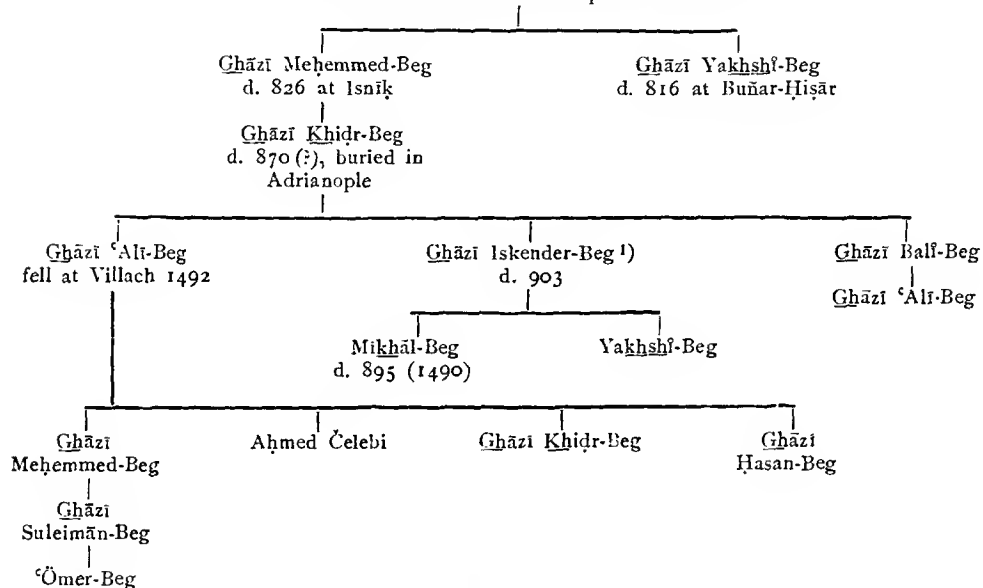

MĪKHĀL-OGHLU, an old Ottoman noble family. This family traces its descent to the feudal lord Kose Mikhāl ʿAbd Allāh, originally a Greek (cf. F.-A. Geuffroy in Ch. Schefer, *Petit traité de l'origine des Turcs par Th. Spandoun Cantacasin*, Paris 1696, p. 267: *L'un desdicts Grecz estoit nommé Michali... D'un Michali sont descenduz les Michalogli*), who appears in the reign of ʿOthmān I as lord of Chirmenkia (Khirmendjik) at the foot of Olympus near Edrenos, and later as an ally of the first Ottoman ruler earned great merit for his share in aiding the latter's expansion (cf. J. v. Hammer, in *G.O.R.*, i. 48, 57, following Idris Bitlisi and Neshi). Converted to Islām, Kose Mikhāl appears again in the reign of ʿOthmān's son Urkhan. The rank of commander of the *aḡindīʾs* [q.v.] became hereditary in the family of Kose Mikhāl,

which is even said to have been related to the royal house of Savoy and of France (cf. Paolo Giovio: *Michalogli di sangue Turchesco e per via di donna si fa parente del Duca di Savoia e del Re di Francia*; in this case Mikhāl [*Μιχαήλ*] alias Kose Mikhāl must have been descended from the Palaeologi; cf. J. v. Hammer, *G.O.R.* i. 582), and along with the Malkoç-oghlu (properly Malković, i. e. Marković), the Ewrenos-oghlu [q. v.], Timūrtash-oghlu [q. v.] and Turakhan-oghlu [q. v.] was among the most celebrated of the noble families of the early Ottoman empire. Kose Mikhāl, called 'Abd Allāh, died in Adrianople and was buried in the mosque founded there by him in the western Yildirim quarter.

As Adrianople was certainly not conquered till 1361 (see F. Babinger, in *M.O.G.*, ii. 311) he must therefore have lived into the reign of Murād I. What J. H. Mordtmann has said in the article *GHĀZĪ EWRENOS* [q. v.] would therefore be true about his remarkably long life. Kose Mikhāl had two sons, namely Mehemmed Beg and Yakhshī (Bakhshī?) of whom only the former acquired some renown. He was vizier under Mūsā Çelebi and a close friend of Sheikh Bedr al-Din of Simav [q. v.]. Under Mūsā he was Beglerbeg of Rūmellī, and died in 825 (1422) at Isniq at the hand of the judge Tādī al-Din-oghlu and is said to have been buried at Plevna in Bulgaria (cf. Ewliyā Çelebi, *Siyāhet*-

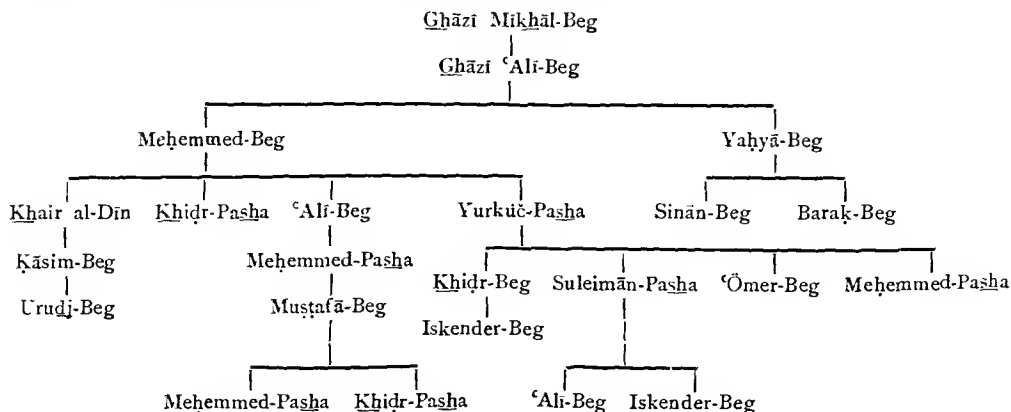

The following genealogical table shows the order of succession of the Mikhāl-oghlus:

'Abd Allāh, called Kōse Mikhāl, son of "Azīz", d. at Adrianople, buried in his own mosque there

According to the genealogy published by Ismā'il Haḳkī, *Kitābeler* (Stambul 1345 = 1927), p. 25 which is based on a *Silsilenāme* in the Ewḳāf-

office, *Wakfiye Defterī*, No. 247, in Siwās, the genealogy of the Mikhāl-oghlus is as follows:

If we compare the article Yurkuç Pasha in Mehemmed Suraiyā, *Sidḳill-i 'osmānī*, iv. 652, where the descendants of this general are given, we get a different picture of the genealogy.

1) According to Mehemmed Thuraiyā, *Sidḳill-i 'othmānī*, iv. 101, Iskender-Beg had four sons, 'Alī, Mehemmed, Khidr and Suleimān. This must be wrong and the genealogy is as above.

nâme, iii. 305), after being previously (816 = 1413) detained as a state prisoner in the prison of Bedewî Çardak near Tokat. His son was Khidr-Beg who distinguished himself in the wars of Murâd II's reign. He died in 870 (1465) and was buried at Adrianople beside his ancestor Kose Mikhâl. Khidr-Beg seems to have had three sons, namely Ghâzi 'Alî Beg, Ghâzi Iskender Beg and Ghâzi Balî Beg, of whom only the first two are of any historical importance. Ghâzi 'Alî Beg in 1461 distinguished himself in the battle against Vlad (see J. v. Hammer, ii. 64), in 1473 ravaged the lands of Uzun Hasan (*ibid.*, ii. 118), invaded Hungary in 1475 (*ibid.*, ii. 144) with his brother Iskender Beg, in 1476 (*ibid.*, ii. 156) was in command of the *aķindî*'s before Scutari in Albania and appears once again in Transylvania (*ibid.*, ii. 172); in the next 13 years nothing is heard of him. In 1492 he seems to have met his death at Villach in Carinthia, defeated by Count Khevenhüller, although other sources mention him at a still later date. According to them, he died in Plevna. His brother Iskender Beg in 1476 commanded the light cavalry at the siege of Scutari, as *sanjakbeg* of Bosnia (880, 885 and 890) (J. v. Hammer, *G. O. R.*, ii. 156); in 895 (1490) in the Karamanian campaign, in which he lost his son, the governor of Kaişariya Mikhâl Beg (see J. v. Hammer, *G. O. R.*, ii. 300), who was taken prisoner and sent to Egypt. He seems to have lived till 903 (1498). The military exploits of Ghâzi 'Alî Beg were celebrated by Süzi Çelebi (d. 930 = 1530 at Prizren; cf. F. Babinger, *G. O. W.*, p. 34 sq.) in a long epic, (said to have been 15,000 couplets) fragments of which have recently been discovered (one in Berlin, MS. Or., N^o 1468 containing 1,700 *bait* and the other in Agram, South Slav Academy of Sciences, Coll. Babinger, N^o 535, i., with 212 *bait*). In some sources a Mehmed Beg, who was distinguishing himself at that time, is described as a fourth son of Ghâzi Khidr-Beg; in others however, he appears as the son of Ghâzi 'Alî Beg, which is not at all probable, if he really was twice governor of Bosnia, namely as early as 897 (1492) and again in 949 (1542) and did not die till 950 (1543). The family of the Mikhâl-oghlû now begins to fall into the background. About the middle of the xvth century an Ahmed Beg is again mentioned, perhaps as the last of the Mikhâl-oghlû holding the hereditary office in the family of leader of a body of *aķindî*'s (see J. v. Hammer, *G. O. R.*, iii. 293), and lastly a Khidr Pâshâ is mentioned in history as a descendant of Kose Mikhâl (see J. v. Hammer, *G. O. R.*, iv. 512). The family at a later date had estates in Bulgaria (around Ihtiman; cf. Ewliyâ Çelebi, iii. 390 and C. Jirček, *Das Fürstenthum Bulgarien*, Vienna 1891, p. 138 and Philippopolis, *ibid.*, p. 379 sq.) and survived down to modern times. As we learn, however, from the *Salnâme* of Adrianople for 1309, p. 82 sqq., the Mikhâl-oghlûs had already at an early date large estates around Adrianople. They had the country round Buñar-Hişâr, Tirnovo, Kırk Kilise and Wize as a hereditary fief. The Anatolian district of Mikhâlidj (Μιχαηλίδης, Μιχαηλίου in Chalkondyles, p. 225; cf. Ewliyâ Çelebi, v. 293 sq.; W. Tomaschek, *Zur historischen Topographie von Kleinasien im Mittelalter*, in *S.W.A.W., Phil.-hist. Kl.*, vol. cxxiv, Vienna 1891, p. 95 and J. H. Mordtmann, in *Z. D. M. G.*, vol. lxxv., 1911, p. 101) seems to be connected with the family of the Mikhâl-oghlû.

Bibliography: The well-known histories of J. v. Hammer, Zinkeisen, Jorga. Under the title *Ahwâl-i Ghâzi Mikhâl* (pr. Stambul 1315; cf. F. Babinger, *G. O. W.*, p. 35, note 1) Nuzhet Mehmed Pasha published a work glorifying a Kose Mikhâl and his descendants. — Al. A. Olesnickij in Agram is preparing an edition of the work of Süzi Çelebi and at the same time a history of the Mikhâl-oghlûs. (FR. BABINGER)

MIKNÂS. [See MEKNES.]

MIKYÂS, any simple instrument for measuring, e.g. the pointer on a sundial; in Egypt the name of the Nilometer, i.e. the gauge on which the regular rise and fall of the river can be read. To get an undisturbed surface, the water was led into a basin; in the centre of this stood the water gauge, a column on which ell and fingers were carefully measured off. The level of the water was ascertained by an official daily and proclaimed by criers.

Originally the rising of the Nile was measured by the gauge (*al-raşşa*). According to Ibn 'Abd al-Hakam, al-Kudâ'i, and others, Joseph, the son of Jacob, built the first Nilometer at Memphis; at a later date, the "aged Dalûka" built Nilometers in Ahnim and Anyinâ (Antinoë). These were the Nilometers in use throughout the Greek period till the conquest of Egypt by 'Amr b. al-'Âs. The latter erected a Nilometer at Assuan and a second at Dendera. Others were built in the reigns of Mu'âwiya and 'Abd al-'Azîz. Finally the Caliph al-Mutawakkil had a large Nilometer built and instead of the Christian officials appointed Abu 'l-Raddâd to look after it, and the office remained hereditary in his family down to the time of al-Makrizî (d. 1442).

The ancient Egyptians are said to have drowned a virgin in the Nile at the beginning of its rise as a sacrifice. 'Amr compelled the Nile to rise and fall at God's command by means of a writing which he threw into the water.

MİLÂD (A.). According to some Arabic lexicographers the meaning of this term is time of birth in contra-distinction to *mawlid* which may denote also "place of birth". The latter is the usual term for birthday, especially in connection with the birthday of Muhammad and Muslim saints [cf. the art. MAWLID]; milâd denotes also Christmas. For other special meanings cf. Dozy, *Supplément aux dictionnaires arabes*, s. v.

Bibliography: the Arabic lexicons.

(A. J. WENSINCK)

MILAS, the ancient Mylasa, capital of Caria and famous in antiquity for its sanctuaries of the Carian Zeus (in mediaeval and modern western sources: Milaso, Milaxo, Melaso, Melaxo), a town in S.W. Anatolia, 15 miles from its seaport, Kulluk (on the Gulf of Mendelia). It is the capital of the kaza of the same name in the wilâyet of Mughla (formerly the sanjak of Men-

teshe) and has 7,346 inhabitants (census of 1928) compared with 7,261 (of whom 3,200 were Greeks who were removed by the exchange of 1922, 739 Jews, who still flourish, and 71 foreigners) in 1908 (*Sālnāme Aidin*, of 1326 A. H.).

Milas lies on a low eastern spur of the Sodra Dagħ (Gr. St. Elhas) in the centre of a very fertile plain surrounded on all sides by hills, and watered by the Şarī Çay which flows round the Sodra Dagħ on north and west. The road to the sea however does not follow this marshy water-course but crosses the hills south of the Sodra Dagħ, here commanded by the once powerful mediaeval fortress of Peçin (three miles S. of Milas). The bay itself was in the middle ages defended by the island citadel of Asfīn Kāfesi (Judcich, Iasos; *Athen. Mitteil.*, xv. 139) and later by a castle at the harbour built by Mehemmed II (Piri Ke'is, *Bahriye*, ed. P. Kahle, chap. 21). At Milas met the old, and although difficult, only roads to the west to the important mediaeval port of Balāt (Miletus), to the north into the fertile plain of Karpuzlu Ovası and Çine and into the Maeander valley, and eastward to Mughla, the other important town of the district. This and its protected situation near the sea within a broad fertile plain destined the town to be once more a capital when the region again attained political independence under the Turkish dynasty of the Menteshe [q. v.].

The region first passed temporarily under Turkish rule when, after the victory of the Seldjūks at Mantzikert in 1071 the western Anatolian coast with Nicaea, Smyrna and Ephesus and even islands like Samos and Rhodes were occupied by the Turks. Although we have no definite information about Milas itself we know that the monks of the neighbouring Latmos had to leave their monasteries on account of the Turks (in 1079; cf. Th. Wiegand, *Milet*, III/i. 185). But Byzantine rule was soon restored. It was only when the centre of the imperial government was withdrawn to Constantinople after the victory over the Latins in 1261 that this region finally passed into Turkish hands. When and how the final conquest took place we do not exactly know. Melanudion, which with Milas formed a theme from the period of the Comnenoi (W. Tomaschek, *Z. hist. Topographie Kleinasiens im M.A.*, Vienna 1891, *Abh. d. Ak. d. W.*, p. 38), and is therefore to be located in the neighbourhood of Milas and was Byzantine till 1273 at least, was again taken for a time from the Turks of Menteshe in 1296, so that it must have been occupied by them a few years before (Wiegand, *op. cit.*). That Menteshe is called Σαλίνας (= Sāhīl Bāgi, Emir al-Sawāhīl) in Pachymeres (i. 472; ii. 211, Bonn ed.), in Sanudo (Hopf, *Chron. græco-romaines*, p. 145) Turquenodomar (read: Turquenodomar = "Turkoman of the sea") suggests a conquest from the sea. There is no longer any record at this period of the bishopric of Milas, which as a church of the eparchy of Caria (see G. Parthey, *Herodis Synecdemus et notitiae graecae episcopatum*, p. 32, 112 etc.) was under the metropolis of Stavropolis which still existed in the xvth century (A. Wächter, *Der Verfall des Griechentums in Kleinasien im XIV. Jahrh.*, p. 34 sqq.) (Stavropolis, the ancient Aphrodisias, at the village of Gere, twenty miles west of Denizli).

Milas appears as the capital of the principality of Menteshe about 1330 in al-ʿUmari (ed. Taesch-

ner, p. 21; ملاش, corrupted from ملاس, while

Fökelh = Phocaea which appears as a capital in the Genoese report, *ibid.*, p. 47 is probably an error of the writer and is not to be corrected to Mughla) and in Ibn Baṭṭūṭa (ed. Defrémery and Sanguinetti, ii. 278 sqq.) also, who here enjoyed the hospitality of the Akhi gild (on a *Futūwetnāme* written in Milas at the end of the xivth century see Taeschner, in *Islamica*, iv. 40) and admires the wealth of the town in gardens and orchards and gives the name of the lord of the country as Shudjā' al-Dīn Urkhan b. Menteshe, whom he visited in his capital Peçin, not far away. The Menteshe built very little in Milas as they were engaged in embellishing their residence. It is noteworthy that the two mosques of this period lie outside the old town, still largely enclosed in its old walls; one to the south, in the Hādjīti Ilyās quarter, the little Şalāh al-Dīn Djāmī' with outer court and stepped minaret, built under Urkhan Bey in 1330; the other just outside the walls to the east, the mosque of Ahmed Ghāzī built in 1378, which with its entrance in the narrow side (without an outer court) and the stepped minaret built above it (İsmā'il Hakkī, *Kitabeler*, İstanbul 1929, fig. 47) looks as if it had once been a church (cf. Wulzinger, *Die Pirus-Moschee zu Milas*, in *Festschr. d. Techn. Hochschule in Karlsruhe*, 1925, p. 10 of the reprint). The minbar of this mosque also dated 780 (1378) is now in the Çinili Kiosk in Constantinople. From the position of these mosques, it may be deduced that the old town remained in the occupation of the Christians, who still held the most of it in quite recent times. The only mosque in the old town, just in its centre, and in the highest part of it, the Bulend Djāmī', seems also to have been a church and was probably used by the garrison, if it is old. The medrese of Khodja Bedr al-Dīn, which dates from the period of the Menteshe, unfortunately cannot be exactly dated (*Rev. Hist.*, v. 58).

Milas received its first important building from the first Ottoman governor Fīrūz, whom Bāyazid I appointed over Menteshe-ili (*Dusturnāme-i Enveri*, ed. Mukrimin Hilal, İstanbul 1928, p. 88) after the conquest (792 = 1390) (the date given by most Turkish sources is supported by Bāyazid's confirmation of the Venetian privileges for Balāt of May 21, 1390, *Diplomatarium Veneto-Levanticum*, Venice 1899, ii., No. 134). The Menteshe who fled to Egypt (*Dusturnāme*, l. c.) was probably the prince of the house ruling in Balāt, while the senior Ahmed Ghāzī may have held out in Milas and Peçin till July 1391 (according to his tombstone he died in Peçin in Sha'bān 793 as *shahid*). In 1394 Fīrūz built to the north of the old town and outside of it a splendid mosque in the style of the Brusa private mosques (cf. Wulzinger's monograph). Ottoman rule was interrupted by Timūr who passed through Milas on his return from Smyrna in the winter after the battle of Angora (1402) (Ducas, p. 76, Bonn ed.), for about twenty years by the restoration of the former dynasty. This last period of the Menteshe-oghlu has left no memorials in Milas or Peçin. The Ottoman commanders then made their headquarters in Peçin, after which this kazā of the Menteshe sandjak was long called (Abū Bakr b. Bahrām in Hādjīti Khālifa, *Djihan-numā*, p. 638, i. e. the second half of the xviih century) and only moved

to Milas at a later date, when a magnificent official residence was erected, with defensive towers, and is still partly inhabited.

From the second half of the xviii century we have Ewliya's description of the town (in the unprinted vol. ix. of his *Siyāhet-nāme*, MS. Beshir Agha, N^o. 452, fol. 51) He says the town had 4 mosques, 3 masjids and two large khāns. At this time the garrison was still in Peçin. He praises the gardens of the town but rightly describes the climate as unhealthy. Among the products he mentions tobacco, with which Milas supplied the whole of Anatolia. Among the holy places mentioned by him, we may note that of *Shaikh Shushteri* because it probably belongs to the Baba al-Shushteri met here by Ibn Battūta. Ewliya's description of the old ruins is much exaggerated, although he saw a good deal more than now exists. Pococke (*Travels*, ii./2, ch. 6) at the end of the eighteenth century was still able to sketch a temple of Augustus and Roma here. All that now survives in addition to the town walls is the Balta Kapu (a Corinthian gateway with the Carian double-axe) and a mausoleum called Gümüşhkesen (filigree-worker) (Choiseul-Gouffier, *Voyage dans l'Empire Ottoman*, i. 234 sqq., pl. 85—92). In the adjacent village of *Shaikh Koy* is the *turbe* of *Shaikh Bedr al-Din b. Shaikh Kāsim*, who died at Brusa in 884 (1479) and is buried here, a *khalifa* of Saiyid Muḥammad al-Bukhārī (see *Rev. Hist.*, v. 311 sqq.), on the site of a church of St. Xene, who died here (*Bull. de Corr. Hell.*, xiv. 616 sq.).

The capital of the Menteshe, already mentioned several times, Peçin (Gr. Petsona) consists of an imposing citadel built over ancient foundations and Byzantine masonry and an extensive town lying south of it. The citadel with its walls and towers crowns a steep rock that rises out of the southern end of the plain of Milas (Ismā'il Hakkī, fig. 40) and is accessible only at the south side by a great door flanked by a tower adorned with lions carved upon it. Inside the fortress, where there now is a miserable little village, the only architectural remains are the foundations of a church. Opposite to the entrance to the citadel, on a plateau surrounded by walls, some of which still stand, lie the palace and its annexes, now mostly in ruins. All that survives is the charming medrese, built of stone, of Ahmed Ghāzī of 777 = 1375 (Ismā'il Hakkī, fig. 51—54). In the *livān*, the arch of which is flanked in the spandrels by reliefs of lions holding flags, the founder is buried (see above); opposite the medrese stands a mosque built by Urkhan Bey in 732 (1332), in ruins except for the gateway of Byzantine doorbeams and fragments of ambos (the inscription is given in Ewliya), probably the one that Ibn Battūta saw being built on his visit to Peçin (Bardjin). There is also a mosque and medrese, a bath and a palatial serai, all in ruins. Exceptionally finely carved tombstones give the names of important people who lived here down to the xvth century. Ewliya, who still found about one hundred houses here, thought there must once have been a great town here. Peçin is mentioned by Kalkashandī, *Subh al-Ashā*, viii. 18, as the possession of a certain Emir Mūsā, lord of Balāt and Bardjin (س) (who is known from a coin in the collection of J. H. Mordtmann). A native of Bardjin was Maḥmūd b. Meḥmed, who about the middle of the xvth

century dedicated his "Book of the Falconer" (*Bāznāme*) written in Turkish to a Menteshe-oghlu (v. Hammer, *Falknerklee*, Vienna 1840; Thüry, *Török nyelvemlékek a XIV. sz.*, p. 29). On October 17, 1414 in Pezona the Menteshe-oghlu Ilyās Bey concluded a treaty with the Venetians (*Diplomatarium Veneto-Levanticum*, ii., N^o. 166).

(P. WITTEK)

MILK (أ), possession, property. The word is not found in the Qur'an, but is in regular use in legal terminology. The double meaning of the word shows that the usual distinction in our legal language between the conceptions of possession and property are not found in the *fiqh*. There is, it is true, a special term for the actual power over a thing, what we call possession in the narrower sense, namely *yad*, lit. "hand", but the distinction between a judicial ownership and the actual control is not found in Muslim jurisprudence and there is not a word for property which takes into account the actual ownership, either from the positive or the negative point of view. As a result we find, for example, that the ownership of a thing passes directly by an agreement if this was intended, even if the thing in question is not at once handed over. On the other hand, not only things but also rights can be owned.

The following are excluded from the possibility of being property and subject to legal regulations: 1. useless things (e.g. wild animals); 2. things the use of which is prohibited by religion (e.g. wine-grapes); 3. things which are ritually impure or have become polluted to such an extent that they cannot be purified (e.g. swine, dung etc.) so long as they are not essential parts of a pure or permitted thing. If such things, however, are acquired, one talks not of *milk* but of *ikhṭisāṣ*, a special claim upon them; legal transactions relating to such things have a special vocabulary of their own.

Kamāl al-milk is a necessary preliminary for the property of an owner being liable to *zakāt* [q.v.].

(M. PLESSNER)

MILLA (أ), religion, rite. However obvious it may be to connect this word with the Hebrew and Jewish- and Christian-Aramaic *milla*, *mella*, "utterance, word", it has not been satisfactorily proved how and where it received the meaning which is taken for granted in the Qur'an: religion or rite. Nor is it known whether it is a purely Arabic word or a loanword adopted by Muḥammad or others before him (Noldeke, *Z. D. M. G.*, lvii. 413 seems to hold that it is Arabic for he refers to the 4th form *amilla* or *amila* "to dictate"). In the Qur'an it always means (even in

the somewhat obscure passage, Sūra xxxviii. 6) "religion" and it is used of the heathen religions (vii. 86 sq.; xiv. 16; xviii. 19) as well as of those of the Jews and Christians (ii. 114), and of the true religion of the fathers (xii. 38). The word acquired a special significance in the Medina sections where the Prophet in his polemic against the Jews speaks of "Abraham's *milla*", by which he means the original revelation in its purity, which it was his duty to restore (ii. 124; iii. 89; xvi. 124; xxii. 77 sq.; cf. iv. 124; vi. 162; xii. 37). Muslim literature follows this Qur'anic usage but the word is not in frequent use. With the article, *al-milla* means the true religion revealed by Muhammad and is occasionally used elliptically for *ahl al-milla*, the followers of the Muhammadan religion (Tabari, iii. 813, 15, 883, 4), just as its opposite *al-dhimmā* is an abbreviation for *ahl al-dhimmā*, the non-Muhammadans who are under the protection of Islām; e. g., Ibn Sa'd, iii./1, 238, 21; cf. also the derivative *millī* opposed to *dhimmi*, client (Baihaqi, ed. Schwally, p. 121 infra).

MIM, 24th letter of the Arabic alphabet, with the numerical value of forty. On different forms of the letter cf. ARABIA, plate I. In some dialects of Southern Arabia and of tribes coming from that region, mim was and is used as the article of determination, side by side with *l*. A well known tradition is put into the mouth of a man from Southern Arabia in the following form: *La'isa min am-birri am-ṣiyānu fi 'm-safar*. Cf. Ibn Ya'ish, ed. Jahn, ii. 1331; Landberg, *Études sur les dialectes de l'Arabie méridionale*, II/ii. 281—290. (A. J. WENSINCK)

MINĀ, later often pronounced *Munā*, a place in the hills east of Mecca on the road from it to 'Arafa [q. v.]. The distance between the two is given by Muḥaddasī as one parasang, while Wavell calls it five miles and says the continuation to 'Arafa is nine miles. Minā lies in a narrow valley running from west to east, 1,500 paces long according to Burckhardt, surrounded by steep barren granite cliffs. On the north side rises a hill called Thabir. Travellers from Mecca come down into the valley by a hill path with steps in it; this is the 'Aḳaba [q. v.] which became famous in connection with Muhammad's negotiations with the Madinians. The town consists of stone houses of fair size which form two long streets. Close beside the 'Aḳaba is a rudely hewn short pillar leaning against a wall: this is the "great ḍjamra" or the "Aḳaba ḍjamra", at which the pilgrims cast stones [cf. DJAMRA]. A little to the east in the middle of the street is the "middle ḍjamra" also marked by a pillar and lastly at a similar distance the third (the so-called "first ḍjamra"). As one approaches the east end of the valley, there is on the right of the road a square mosque surrounded by a wall, the Masjdīd al-Khaif, which was rebuilt by Saladin and in 874 (1467) reconstructed by the Mamlūk Sultān Kā'it Bey. Along the west side of the surrounding wall is a colonnade with three rows of pillars, but there is none on the other sides. It was different earlier, for Ibn Rusta (c. 300 A. H.) tells us that the mosque had 168 pillars of which only seventy-eight supported the west wing. The north side of the wall

is pierced by several doors. In the centre of the court of the mosque is a little domed building with a minaret built over a fountain. There is another dome over the colonnade on the west side (see the illustrations, ii. 256).

The most striking feature of Minā is the very great difference, noted already by Muḥaddasī, between the quiet and empty streets of the greater part of the year and the tremendous throng and bustle of the pilgrimage month when, as Wavell says, half a million people with heavily laden beasts of burden hope to cover nine miles in the period between sunrise and 10 a. m. Every spot in the valley is then covered with tents in which the pilgrims spend the night. Muḥaddasī talks of fine houses built of teak and stone (among them was a frequently mentioned Dār al-Imāra), and large stone buildings are still to be found in Minā; but these are usually empty and are only let at the pilgrimage to the more wealthy pilgrims and even among these many prefer to live in tents. This depopulation of the city has been a subject for discussion among the legists, for some held that this circumstance enables Minā and Mecca to be regarded as one city (*miṣr*), a view which others reject. But another circumstance must have contributed to prevent a permanent settlement of the town, which is also true of other places on the pilgrims' route, namely the incredible filth and dreadful stench which is caused by such masses of humanity at the Ḥajj. Complaints are made even of the uncleanness of the Masjdīd al-Khaif and at Minā there are further the decomposing remains of the countless animals sacrificed.

The Ḥajj ceremonies in Minā date back to the old pagan period [cf. HADJ], for Muḥammad, as usual in taking over old customs, contented himself with cutting out the too obviously pagan elements, the result being that we can no longer reconstruct the old forms with certainty. The old poets make only passing references to them (cf. DJAMRA); that they were similar to the Muslim practices is evident, for example, from an interesting passage in the Medina poet ʿAḳab b. Khatīm (ed. Kowalski, N^o. 4, p. 1 sqq.) where there is a reference to the "three days in Minā" and where we further learn that the festival held there offered an occasion for entering into and carrying on love-affairs. The stone throwing is certainly very ancient; its significance is quite unintelligible in Islām, although it is doubtful if there were already three heaps of stones in the pre-Islamic period [cf. DJAMRA]. It is also clear that the ceremonies in Minā formed the conclusion of the Ḥajj even in ancient times. Muḥammad however made some serious alterations here, for he inserted a visit to Mecca before the stay in Minā, whereby the ceremony first received its legitimate Muhammadan character; but the old elements remained the important factors, for the Ḥajj ends not in Mecca but, as before, in Minā, to which the pilgrims return after the digression to Mecca. A survival of the pagan period probably exists in the slaughtering place preferred by the majority on the southern slopes of Thabir "the place of sacrifice of the ram" (cf. Sūra xxxvii. 101 sqq.), as its association with the story of Abraham probably enabled an old pagan sacred spot to be adopted into Islām. From Burton's description it is a square rocky platform reached by a few steps. Muḥammad himself did not directly forbid the use

of the pagan place of slaughter, but deprived it of its importance by saying that all Minā is a place of sacrifice: a clever procedure which he also followed at 'Arafāt and Muzdalifa.

According to the law of Islām, the pilgrims who arrive in Mecca on the 8th *Dhu 'l-Hijj*dja should leave this town in time to be able to perform the mid-day ṣalāt in Minā and remain there till sunrise on the 9th and only then go on to 'Arafāt. The majority however do not do this but go on the 8th straight on to 'Arafāt where they arrive in the evening. After performing the ceremonies of the pilgrimage in 'Arafāt and Muzdalifa [q. v.], they go before sunrise on the 10th to Minā to celebrate the day of the great sacrifice (*yawm al-aḍḥā* or *yawm al-naḥr*) (in contrast to the pre-Islāmic practice, which was to start only after sunrise). Here the concluding rites are gone through, the slaughtering, the clipping of the hair and nails and the lapidation. There is not complete agreement on the order of these ceremonies, which one tradition (Wākidi, transl. Wellhausen, p. 429) makes Muḥammad declare to be quite irrelevant. The modification of the stone throwing is noteworthy, for on the day of sacrifice it is only done at the 'Aḳaba heap, while on the three following days each pilgrim daily throws seven little stones on all three heaps (cf. the illustrations above, ii. 256 and Burton, ii. 205). The conclusion of the whole pilgrimage is the three Minā or *tashrīk* days, the 11th, 12th and 13th *Dhu 'l-Hijj*dja (cf. above, ii. 199 and the article TASHRĪK). They are days of rejoicing which are celebrated with great jubilation, illumination and the firing of shots. All the pilgrims however do not wait for these three days but set off on their return journey before then.

MINARET. [See MANĀRA.]

MINBAR (A.), pulpit [cf. MASJID]. On the origin of the form of the minbar the reader may be referred to C. H. Becker's exhaustive study *Die Kanzel im Kultus des alten Islam* (Noldeke-Festschrift and *Islamstudien*). Becker refers to the earliest historical statement which says that the Prophet in the year 7 A. H. made his minbar

on which he used to preach to the people; it had two steps and a seat (*maḥḥad*). The minbar was therefore originally a raised seat or throne. On the morning after the death of the Prophet, after stormy disputes, Abū Bakr took his seat on the Prophet's minbar in a solemn assembly and received the general homage here. The later caliphs followed this tradition, as did the governors, who ascended the pulpit on their accession to office and on their resignation. The minbar in the early period was therefore not at all specially associated with worship but was the seat of the ruler in the council. The pulpit only gradually grew out of it with the development of public worship. According to Becker, the date of the change from the ruler's or judge's seat to the simple pulpit coincides with the end of the Omayyad dynasty. In 132 A. H. all the mosques in the provinces of Egypt were provided with minbars, about the same period probably in the other lands of Islām also. At the beginning of the 'Abbāsīd period the minbar was already a pulpit exclusively. The first tendency to its use as a pulpit is seen by Becker in the introduction of the minbar into the divine service at the Muṣallā in Medina, which is ascribed to Mu'āwīya or to his governor. The Prophet did not have a minbar at the Muṣallā and nothing but divine service could have been held there.

The typical form of the minbar as a pulpit, which is placed to the right of the miḥrāb and of the spectator, is an erection on steps with a portal with or without a door at the entrance to the steps and a ciboriumlike canopy to the platform. This form is peculiar to the minbar of wood, which is the most usual. The variants in stone and brick are more simple and frequently are only a bare platform reached by three to five steps. The fine series of minbars of wood begins with that most famous of all in the history of art, the minbar in the great mosque in Kairawān. On the occasion of the extension of the mosque by Ibrāhīm II Ibn Aghlab (261—289 = 874—902) it is said to have been brought with the lustre tiles of the miḥrāb wall from Baghdād and set up. It is made of plane-tree wood and is in the canonical minbar shape with a staircase—here of 17 steps—to the preacher's platform. The pulpit, however, has not yet the stylized structure of the later wooden minbar. It has not the portal nor the canopy at the top. Its composition of about 200 carved panels and narrow strips of unequal size, is simply a primitive agglomeration of profuse ornamentation, still very nomadic in feeling, such as would hardly ever have been found in Baghdād, and even in Kairawan can scarcely be regarded as original. Saladin has pointed out that the pulpit must have been restored after Kairawān had been sacked by the troops of the Fātimid Mustanṣir Abū Tamīm in 441 (1049). In any case it has several times suffered damage and undergone restoration so that its present general appearance cannot be dealt with critically until we have a thorough monograph based on exact investigation on the spot. The ornamentation must, as Kuhnelt observes, be regarded as Omayyad (Springer's *Kunstgeschichte*, vi. 385).

The vine branches of the frame-strips and the panels filled with floral patterns and leaves resemble the decoration at Mshatā' [q. v.] and some of the geometrical patterns, which are of all imaginable combinations, are already found on the shafts of

pre-Islāmic columns in Diyār Bakr (cf. van Berchem-Strzygowski, *Amida*). The archaistic combination of designs on the minbar has no connection with the decoration which since Sāmarrā we call 'Abbasid. We have here a phenomenon comparable to *Mshattā'* since here also ornamentations from different sources are combined to form a general scheme whose common denominator is formed by the formal quality of the chiaroscuro common to them all. We do not even know how long the nucleus of these carved strips and latticed panels may have previously existed in Baghdad and they may have there belonged to an Omayyad minbar before the pieces were brought to Kairawān and supplemented by copies and additions of local workmanship.

The few pulpits that have survived from the Fātimid period follow the Syro-Egyptian style of woodwork of the period with their system of frames filled with foliage. The tendrils were prevented from over-running the whole surface by being placed within small polygonal areas which were grouped together in cassettes (Kühnel, Springer's *Kunstgeschichte*, vi. 406). The wooden mihrāb of the xiith century from Cairo illustrated in the article MIHRĀB illustrates this style, which is also represented by the minbar made in 1091 A.D. for the mosque in 'Aṣkalān and now in Hebron, and by the pulpit of 1155 A.D. in the mosque of 'Amr in Kūs on the upper Nile.

During the Fātimid period the pulpit developed its canonical form as represented in the minbar of the Masjid al-Aḳṣā in Jerusalem, which was gifted in 1168 A.D. by Nūr al-Dīn to Aleppo and later taken by Saladin to Jerusalem (Saladin, *Manuel*, fig. 28). It henceforth appears with the door way and the domed canopy. The main decorative motives are 8-pointed stars and the polygonal and star-shaped subsidiary panels show carving in relief inlaid with ivory and mother-of-pearl. Of the minbar of Sulṭān Lādīn in the mosque of Ibn Tūlūn of the year 1269 A.D. little more is left than the framework, while the panels are preserved in the Arab Museum in Cairo and in the South Kensington Museum (cf. *Descriptive Catalogue of the Arab Museum*, Cairo). That wooden minbars were sometimes copied in stone is shown by the stone pulpit in the mosque-madrasa of Sulṭān Ḥassān (757—764 = 1356—1363). The muḳarnas on the door case and soon after found on the dome also, here as in the mihrāb goes back to Turkish influence transmitted through Syria. Like the mihrāb, the minbar also attained its finest workmanship in Cairo under the second Mamlūk dynasty in the xvth century and later. No essential alteration was later made in its canonical form and its embellishment remained standardised and varied only in details. A fine example of this fully developed Cairo type is in the South Kensington Museum. According to the inscription, it was presented by Kā'it Bey (1468—1495) and has finely carved ivory panels and traces of painting on the wooden parts. The usual star pattern is replaced by a smooth surface. The gilt onionshaped dome with its finial and crescent on the stalactite cornices are, as Briggs observes, characteristic of the period (Briggs, *Muham. Archit. in Egypt and Palestine*, p. 217).

After the Turkish conquest, the general deterioration in craftsmanship in Cairo affected the minbar also, but exceptions, like the finely-worked pulpit of the mosque of al-Burdainī, however show that the good old tradition still survived. Ḥakam II's

minbar in Cordoba has not survived but from the descriptions of the Arab writers it must have been a peculiarly valuable piece of work, for according to al-Maḳḳarī it cost 35,705 dinars. It could be moved on wheels and contained the caliph 'Omar's Kur'ān. In the mosque of 'Alā' al-Dīn in Konya is a minbar of hazelwood, according to an inscription on the posts supporting the upper part, the work of an artist of Akhlāt of the year 550 (1155). Two inscriptions on the door of the pulpit mention Sulṭān Mas'ūd I (510—551 = 1116—1156) and Kiliḍj Arslān II (551—584 = 1156—1188) (cf. J. H. Lojtvēd, *Konia* and F. Sarre, *Seldschukische Kleinkunst*, p. 27 sq., pl. vi.—viii.). Inscriptions from the Kur'ān decorate the frames of the balustrades of the steps. The pulpit is of the traditional Syro-Egyptian form, but is, however, distinguished from them by its vigorous structure. Polygons and star-shaped panels fill the sideframes, together with the same tendril patterns symmetrically interwoven, as we find naturalised in all the eastern lands of Islām from the beginning of the eleventh century (detailed illustration in Sarre, *op. cit.*, fig. 24).

In Persia and Afghānistān all the old minbars seem to have been destroyed during the Mongol invasion. On the other hand, the minbar illustrated here in the mosque of Djawhar Shāh Agha in the sanctuary of the Imām Riqā in Meshhed which was built about 840—850 (1436—1446) is original in ornamentation and an example of the Timūrid minbar. The structural motive is thrust into the background by the profuse covering of small pentagonal and star-shaped wooden panels with tendrils carved in relief after the style of the contemporary tiles; the effect is that of a carpet. Nothing is known of old minbars in Turkestan. In India, pulpits were built almost exclusively of stone. Many, some of them richly carved, still exist in the Muslim provinces and towns of India. The pavilion on four pillars, common and popular in India, which gives a charm to buildings for Muslim worship as a decorative finish to the roof, was also used here for the stone minbar. Indeed one might even wonder whether this originally Indian structure was carried by the Eastern Turks to Central Asian lands and adopted by them for the minbar. Minbars with such canopies are frequently found in the mosques of the province of Guḍjarat and in Aḥmadābād (cf. these volumes in the *Arch. Survey of India, Western India*). The mosque of Hilāl Khān Qāḍī of 1333 A.D. in Dholka, for example, has a stone minbar with seven steps and a canopy on pillars on the roof, but no entrance gate. The triangular side walls are divided into square areas which are carved in relief (*Arch. Survey of India, Western India*, vol. vi., Guḍjarat, pl. xxviii., xxx.). In Ḥaidarābād, the Muslim state of the south, on the other hand, the minbars are more simple and heavier, and have no canopy (cf. illustration from Osmanābād).

MINTAQA or **MINTAQAT AL-BURUDJ** also **MINTAQA FALAK AL-BURUDJ** or (more rarely) **NIṬĀK AL-BURUDJ** means, like the technical term **FALAK AL-BURUDJ** most frequently used in scientific literature, the circle (*mintaka*) of the twelve signs of the zodiac ("towers", Greek *πύργοι*), then the zone of the ecliptic formed of the twelve signs each covering 30°.

The *Qur'ān* contains references to *mintaka* in three different passages, viz:

Sūra xv. 16: "We have placed towers (*burūdj*) in the heavens and adorned them for the spectators".

Sūra xxv. 61: "Blessed be he that placed towers (*burūdj*) in the heavens and who placed a lamp in them and a light-giving moon".

Sūra lxxxv is entitled *al-Burūdj* and verse 1: "By the heavens with its towers (*burūdj*)".

Babylonia may with great probability be assumed to be the original home of the zodiacal circle. The period of its origin cannot be fixed with certainty: the first attempts at a grouping of the constellations on the path of the sun and the planets, however, date from before the period of Hammurabi and in any case into the third millennium B. C. Almost all the names familiar to us are already found in Sumerian inscriptions. The Boghaz-Koi list of about 1300 B. C. gives all the signs of the zodiac with the exception of Leo and Libra.

The only pictorial representation of the starry heavens of the early Muslim period, the fresco on the dome of *Ḳuṣair 'Amra* shows the ecliptic as a broad band, along which are arranged the twelve *burūdj*; it also shows the pole of the ecliptic and the 12 (ecliptical) degrees of longitude, as well as the equator and a series of parallel circles. The peculiarity of the arrangement of the heavens with considerable southern latitudes shown beyond the equator on the hemispherical inner surface of the dome results in the equator and ecliptic not being shown as the largest circles. The method of representing the separate constellations on the fresco, especially the *mintaka*, is, broadly speaking the same as that on the *Atlas Farnese*. (N. B. It should be noted that the fresco of *Ḳuṣair 'Amra* represents the heavens reflected as in a mirror).

The twelve *Burūdj*. Preliminary Note: The names of the *burūdj* are given in Arabic literature with many variations: those quoted below are the most usual. With the fixed stars a distinction is made between those which form the outline of a constellation (*Kawākib min al-ṣūra*), i. e. the essential stars and such as "go beyond the constellation" (*khāridj al-ṣūra*) and are regarded as only being loosely connected with it, i. e. the unessential stars.

The account here given is based in its main features on the statements in the first part of *al-Ḳazwini's Cosmography*.

1. *al-Ḥamal* or *al-Kabsh*, the Ram (*Aries*). It consists of 13 essential stars, 5 unessential lie in its immediate vicinity; its fore-part is turned to the west and its hind-part to the east. It has its face on its back. The two bright stars on the horn (β and γ) are called *al-Sharāṭāni* or *al-Nāṭih* ("the butter"); they form at the same time the first of the 28 stations ("mansions") of the moon (*manāzil*). According to another reading the name *al-Nāṭih* is given to the unessential star α Arietis situated above the figure of the Ram. The three stars ϵ , δ and ρ Arietis form the second station of the moon and are called *al-buṭain* ("little paunch").

2. *al-Thawr*, the Bull (*Taurus*). 32 essential and 11 unessential stars; its forepart faces the east. The bright star at the point of the northern horn (presumably β Tauri) is also included in the Waggoner (*Auriga*) as well as in the Bull. α is called *al-Dabarān*, *Ain al-Thawr*, *Tālī 'l-Naḍīm*, *Ḥādī 'l-Naḍīm* and *al-Fanīk* ("large camel"), while the Hyades which surround it are called *al-Kilās* (the "young camels"). The Pleiades are called *al-Thurayyā*, χ and ν together *al-Kalbāni* ("the two dogs" of *al-Dabarān*). The Pleiades form the third, *al-Dabarān* and the Hyades together the fourth station of the moon.

3. *al-Taw'amāni* or *al-Djawwā*, the Twins (*Gemini*). 18 essential and 7 unessential stars. The Twins are in the form of two men whose heads are turned to the northeast and feet to the southwest. Castor and Pollux (α and β) are called *al-Dhirā* *al-mabsūṭa*; they form the seventh station of the moon. γ and ξ are called *al-Han'a*; together with three other stars of the Twins they form the sixth station of the moon. The name of η and μ Geminorum is *al-Bakhāṭi*.

4. *al-Saraṭān*, the Crab (*Cancer*). 9 essential and 4 unessential stars. ϵ Cancrī with γ and δ form the eighth station of the moon and have the peculiarly Arab name of *al-Nathra* ("the cartilage of the nose") or in keeping with the *Almagest*, *al-Ma'taf* (= *praesepe*). The star β on the south hind-foot is called *al-Taraf* ("the extremity"). ξ Cancrī and λ Leonis form the ninth station of the moon, *al-Tarf* ("the glance").

5. *al-Asad*, the Lion (*Leo*). 27 essential and 8 unessential stars; he is conceived of as looking to the west. α (Regulus), γ , ζ and η are called *al-Djabha* ("forehead of the Lion") and form the tenth station of the moon; δ and ϵ are the eleventh station of the moon, *al-Zubra* ("back-hair" or "mane of the Lion") or *Kāhil al-Asad*. β Leonis is called *Ḳunb al-Asad* or as the twelfth station of the moon *al-Ṣarfa*. According to another reading, the name *Ḳunb al-Asad* is given to small stars in the vicinity of *al-Ṣarfa*.

6. *al-'Aḍhrā* (only in the catalogue of fixed stars taken from the *Almagest*), the Virgin (*Virgo*) or *al-Sunbula*, the ear of corn. 26 essential and 6 unessential stars; the head of the Virgin lies south of β Leonis, her feet west of α and β Librae. The five stars in the shoulders β , η , γ , δ and ϵ Virginis, form the thirteenth station of the moon *al-'Awwā*; α Virginis forms the fourteenth station of the moon, *al-Simāk al-'a'al* or *al-Sunbula* (cf. *Spica*) which name is applied to the whole constellation of the Virgin. (N. B. The name *Sāk al-Asad* for α Virginis is not quoted as a name of the fourteenth station of the moon). The fifteenth station of the moon consists of the stars ϕ_1 , ι , κ and λ on the left foot; it is called *al-Ghafr*.

7. *al-Mizān*, the Scales (*Libra*). 8 essential and 9 unessential stars. α and β Librae on the pans of the balance form the sixteenth station of the moon which is called *al-Zubānā* or *Zabāniyā al-'Akrab* ("claws of the Scorpion") (cf. Sumerian *ZI.BA AN.NA*, Akkadian *Zibanita* as the name of the constellation *Libra*).

8. *al-'Akrab*, the Scorpion. 21 essential and 3 unessential stars; it has its head to the west and its tail to the east. β , δ and π Scorpii mark the seventeenth station of the moon *al-*

Ikliḥ, α the eighteenth station of the moon *Ḳalb al-ʿAkrab*, λ and υ the nineteenth station of the moon *al-Shawla* ("Sting of the Scorpion"). The stars σ and τ to the right and left of *Ḳalb al-ʿAkrab*, are called *al-Niyāf*.

9. *al-Rāmī*, the Archer (*Sagittarius*) or *al-Ḳaww*, the Bow or *al-Sahm*, the Arrow. 31 essential and no unessential stars; the face with bow and arrow is turned to the west, the hind-part of the horse's body to the east. (The fresco on the dome at Ḳuṣair ʿAmra on the other hand shows the upper part of the body of the archer turned towards the hind-part of the horse's body, and aiming with the bow over this to the west. The stars γ (on the point of the arrow), δ (on the how-grip) ε (at the south end of the bow), η (on the right fore-foot) are called *al-Naʿām al-wārid*, σ (on the left shoulder), φ (on the notch of the arrow), τ (on the shoulder blade) and ζ (under the shoulder) *al-Naʿām al-ṣādir*. Both constellations together form the twentieth station of the moon, *al-Naʿām*. μ and λ *Sagittarii* on the northern bend of the how are called *al-Zalīmūnī*, α (on the knee), and β₁ β₂ (on the shin-bone) are together called *al-Ṣuradānī*. The space almost void of stars at π *Sagittarii* marks the twenty-first station of the moon, *al-Balda* or *Baldat al-Thuḥlab*.

10. *al-Djady*, the Goat (*Capricornus*). 28 essential, no unessential stars: the figure is conceived of as looking to the west. α and β on the eastern horn form the twenty-second station of the moon *Saʿd al-Dhābiḥ* γ and δ on the tail are called *al-muḥibbānī*.

11. *Sāḳib al-Māʾ* or *al-Sāḳī*, the water-carrier (*Aquarius*) or *al-Dawu*, the pail. 42 essential and 3 unessential stars; the head of Aquarius points to the N. W., the feet S. E. α and ο on the right shoulder are called *Saʿd al-Malik* or *Saʿd al-Mulk*. The two (or three) stars on the left hand (μ, ν or μ, ν, ε) form the twenty-third station of the moon. *Saʿd al-Bulāʾ*, β and ζ on the left shoulder together with c₁ and c₂ *Capricorni* form the twenty-fourth station of the moon *Saʿd al-Suʿūd*. The four stars γ, ζ, π and η on the right fore-arm and the right hand are called *Saʿd al-Aḫḫbiya* and form the twenty-fifth station of the moon.

12. *al-Samakāfānī*, the two Fishes (*Pisces*) or *al-Hūt*, the Fish. 34 essential and 4 unessential stars; the figure is conceived as two fishes, the western in the south of the back of Pegasus, the eastern in the south of Andromeda. The two fishes are connected by a hand of stars. *al-Ḳazwīnī* does not mention any outstanding stars.

It is evident, then, that by far the greater part of the 28 *manāzil* fall into the area of the 12 *burūdī* and form part of them. Only the following four do not belong to them: N^o. 5 *al-Huḳʿa* (λ, φ₁, φ₂ Orionis), N^o. 26 *al-Farḡ al-awwal* (α, β Pegasi), N^o. 27 *al-Farḡ al-thānī* (γ Pegasi, α Andromedae), N^o. 28 *Baṭn al-Hūt* or *al-Riḡāʾ* (a large number of stars forming a fish in the neighbourhood of β Andromedae).

The zodiacal figures N^o. 1, *al-Hamal*, N^o. 4, *al-Sarāfān*, N^o. 7, *al-Mizān* and N^o. 10, *al-Djady* are known together as *Burūdī munkahiba*, Greek ζώδια τροπικά; N^o. 2, *al-Thawr*, N^o. 5, *al-Asad*, N^o. 8, *al-ʿAkrab* and N^o. 11, *al-Daww* under *Burūdī thābiṭa*, ζώδια στερεά; N^o. 3, *al-Djauwāʾ*, N^o. 6, *al-ʿAdhrāʾ*, N^o. 9, *al-Rāmī* and N^o. 12, *al-Sama-*

katānī under *Burūdī Dhawāt al-Djasadain*, ζώδια δισώμα (i. e. "Signa bicorpora", "Double figures": Twins, Virgin and Ear of corn, Archer with Horse's body and the two Fishes).

al-Ḳazwīnī gives from Ptolemy the extent of the *Mintaqa* as 486.259.721¹/₇ *Mil*, the length of each *Burūdī* as 39.388.310²/₃ *Mil*, and the breadth as 1.322.943¹/₃ *Mil*.

Mintaqa in Astrology.

Muthallathāt.

By *al-muthallathāt* (sg. *al-muthallatha*) are meant in Arab astrology the Greek τριγωνα, Lat. *trigona* or *triquetra*, which in the middle ages were usually translated by *triplicitates*.

The twelve signs of the zodiac are here arranged in threes at the angles of four intersecting equilateral triangles of which one is allotted to each of the four elements. Each triangle is given two of the seven planets as its rulers (*rabb*, pl. *arbab*, Greek οἰκοδεσπότες or τριγωνοκράτορες), one for the day and another for the night; a third is associated with the two others as "companion".

The arrangement is as follows:

1. *Muthallatha* — Element: Fire.

Zodiacal sign: *al-Hamal*, *al-Asad* and *al-Rāmī* (N^o. 1, 5 and 9).

Ruler: by day *al-Shams* (Sun), by night *Muḥṭari* (Jupiter).

Companion: *Zuḥal* (Saturn).

2. *Muthallatha* — Element: Earth.

Zodiacal sign: *al-Thawr*, *al-ʿAdhrāʾ* and *al-Djady* (N^o. 2, 6 and 10).

Ruler: by day *Zuhara* (Venus), by night *al-Ḳamar* (Moon).

Companion: *Mirrikh* (Mars).

3. *Muthallatha* — Element: Air.

Zodiacal sign: *al-Djauwāʾ*, *al-Mizān* and *al-Daww* (N^o. 3, 7 and 11).

Ruler: by day *Zuḥal* (Saturn), by night *ʿUḡāria* (Mercury).

Companion: *Muḥṭari* (Jupiter).

4. *Muthallatha* — Element: Water.

Zodiacal sign: *al-Sarāfān*, *al-ʿAkrab* and *al-Samakāfānī* (N^o. 4, 8 and 12).

Ruler: by day *Zuhara* (Venus), by night *Mirrikh* (Mars).

Companion: *al-Ḳamar* (Moon).

The distribution of the *Muthallathāt* has been settled since the time of Ptolemy (τετράβηλος).

Wudjuh or *Ṣuwar*. By dividing each *burūdī* into three we get 36 decans each of 10°, which in Arabic are called *wudjuh* (sing. *wadḥ*), *ṣuwar* (sing. *ṣūra*) or *darūdījān* (from the Indian *drekkāṇa*, a loanword from the Greek) or *dahadī* (Pers.), in Greek δεκανοί or πρῶματα, in mediaeval Latin *facies*, more rarely *decani*. The astrological significance is the same as with the Greeks, who in their turn go back to Egyptian models. The decans are not mentioned in Ptolemy. *al-Ṣuwar* means properly the *paranatellonta* of the Babylonian Teukros, the constellations which rise at the same time as the separate decans according to his list. Abū Maʿshar and other Arab authors took over the list of the *paranatellonta* from Teukros un-

altered, but not the astrological interpretations associated with them.

Buyūt. The Greek οἶκοι or τόποι, Lat. *domicilia* or (mediaeval) *domus*, are called in Arabic *buyūt* (sg. *bait*). The sun and moon are each ruler (*sāhib*, *rabb*, Greek οἰκοδεσπότης [cf. above *muthallathāt*]) over one sign of the zodiac; each of the other five planets rules over two signs at the same time, according to the following scheme, also already laid down in the *τετράβιβλος*:

| | | |
|-----------------|---------------|---------|
| Lion — Sun | Archer | Jupiter |
| Crab — Moon | Fishes | |
| Scales } Venus | Goat | Saturn |
| Bull } Mars | Water-carrier | |
| Scorpion } Mars | Virgin | Mercury |
| Ram } Mars | Twins | |

The *burūdī* from the Lion to the Goat are day-houses, the rest night-houses. If a planet is in its day-house during the hours of day or in its night-house at night, it is credited with particularly powerful astrological influence.

Sharaf and *Hubūt*. By *sharaf* (pl. *ashraf*) we understand the ὑψωμα of the Greeks, *sublimitas* of Pliny, *altitudo* of Firmicus Maternus, *exaltatio* in mediaeval Latin; *hubūt* is the Greek ταπεινώσις, *ταπεινώμα*, more rarely *κοίλωμα*, class. Lat. *directio*, med. Lat. *casus*.

A planet attains its maximum astrological influence in its *sharaf*; its influence is least in the *hubūt*, i. e. the point in the heavens diametrically opposite the *sharaf* on the circle of the ecliptic.

| Planet | <i>Sharaf</i> | <i>Hubūt</i> |
|---------|------------------|--------------|
| Sun | Ram 19° | Scales 19° |
| Moon | Bull 3° | Scorpion 3° |
| Saturn | Scales 21° (20°) | Ram 21° |
| Jupiter | Crab 15° | Goat 15° |
| Mars | Goat 28° | Crab 28° |
| Venus | Fishes 27° | Virgin 27° |
| Mercury | Virgin 15° | Fishes 15° |

The only inaccuracy in the list of exaltations, already fixed in ancient times, is giving 20° instead of 21° to the Scales for Saturn, which however goes back to a very old error; it is also found in Pliny, Firmicus and in the Hindu astronomer Varāha-Mihira.

al-Bal'amī assumed that at the time of the creation of the world the planets were in their *ashraf*.

Various Arab writers since Abū Ma'shar also ascribe exaltations and dejections to the nodes of the moon (*akdāni* or *uḡlatāni*, scil. *al-ḡamar*):

ascending node (*ra's*) as *sharaf* the Twins 3°, and as *hubūt*, the Archer 3°; *vice versa* to the descending node (*ḡhanab*) as *sharaf* the Archer 3°; as *hubūt* the Twins 3°. This allocation is not known to the Greek astrologers.

Hudūd. Each of the five planets (excluding the sun and moon) possesses in each of the 12 *burūdī* a sphere of influence covering several degrees (Arab. *ḥadd*, pl. *ḥudūd*, Greek ὅριον, Lat. *fines*, med. Latin *terminus*) which has the same astrological significance as the planet itself and can represent it at any time in horoscopes. On the distribution of these spheres of influence within the zodiacal circle opinions differed widely and unanimity could never be attained. Ptolemy added one more to the Egyptian and Chaldaean divisions already in existence. (The various systems are

fully expounded in the *τετράβιβλος*, i. 20, fol. 43: Boll has studied this question very fully in *Neues zur babylonischen Planetenordnung*, Z. A., xxxviii. [1913], p. 340 sqq.). The Arab astrologers used almost exclusively the Egyptian system, which makes the different spheres of very unequal sizes.

Mintaka in Astronomy.

The *Mintaka* is, as in the Greek astronomy, the fundamental basis for all calculations. It is divided into 360° degrees (*djuz*°, pl. *adjizā*° or *daraḡa*, coll. *daraḡi*, pl. *daraḡjāt*), each degree into 60 minutes (*daḡiḡa*, pl. *daḡiḡiḡ*), each minute into 60 seconds (*thāniya*, pl. *thawāni*), each second into 60 thirds (*thālitha*, pl. *thawālith*) and so on.

The points of intersection of the ecliptic with the equator (*dā'ira* or *falak mu'addil al-nahār*) define the two equinoxes (*al-ʿitidālāni*), the points of the greatest northerly and southerly declination the two solstices (*al-inḡilābāni*). The position of a fixed star or planet with respect to the *Mintaka* is defined by giving its longitude (*ḡul*, pl. *aḡwāl* or in al-Battānī *al-djuz*° *allaḡḡi fihi al-kawḡab*) and latitude (*ʿarḡ*, pl. *ʿurūḡ*). The longitudes are numbered from the vernal point (*al-nuḡḡat al-rabi'iya*). The axis erected perpendicular to the plane of the ecliptic meets the sphere of the fixed stars in the two poles of the ecliptic (*ḡuḡbā dā'irat al-burūdī*).

On Arab star-maps and -globes, we frequently find a mixed ecliptical and equatorial system of coordinates used (cf. the remarks above on the fresco on the dome at Kuṣair 'Amra), which consists of ecliptical circles of longitude through the poles of the ecliptic and equatorial parallel circles.

Precession (in al-Battānī *Ḥarakat al-kawḡab al-thābita*, in later authors more precisely *Mubādarat nuḡḡat al-ʿitidāl*). Among the Arab astronomers supporters were found for the theory of Ptolemy, who explained the precession as a continual revolution of the whole heavens around the pole of the ecliptic with a period of 36,000 years, as well as for that handed down by Theon of Alexandria (*Thāwun al-Iskandarāni*) from older sources, according to which the process of the precessions consisted of an oscillation to and from around the "nodes of the path of the sun". The greatest amount of the precession according to this theory is 8° west or east of the nodes; the retrogression amounts to 1° in 80 years so that the whole phenomenon repeats itself after 2,560 years. The latter theory found particular approval in India and was further developed there. Thābit b. Qurra gave an explanation for it which at the same time took into account the (more suspected than observed) diminution in the obliquity of the ecliptic and calculated the length of the period at 4171½ years. al-Battānī attacked and refuted this oscillation hypothesis of Theon and of the *Aṣḡab al-filsamāt* (ἀποτελεσματικοί); on a basis of new and comparative observations he found that the precession amounted to 1° in 66 years, which corresponds to a period of 23,760 years, which is roughly 10% too small. The very accurate estimate of 1° in 70 years is also occasionally, if rarely, given in Arabic literature, according to E. Zinner, *Geschichte der Sternkunde*, p. 289.

Obliquity (*Mail falak al-burūdī*, very frequently *al-mail kulluhu* or *al-kullī* in contrast to *al-mail al-djuz*°, "declination of the separate points in the *Mintaka*", cf. al-Aghzāwī, p. 21). The pro-

blem of estimating the obliquity of the ecliptic was during the classical period a centre of interest for the Muslim astronomers. As a first attempt at an exact estimate in the Muslim period, Ibn Yūnus (ch. ix., p. 222 of the Leyden Codex or of the Paris Codex, N^o. 2475) mentions an observation of the period between 778 and 786 which gave the value $\epsilon = 23^\circ 31'$. We have an unusually large number of observations of later dates. (For details see Nallino's notes on al-Battānī's *Opus Astronomicum*, i. 157 sqq.).

al-Battānī in his observations used a parallactic ruler (triquetrum, *idāda fawila*) as well as a finely divided wall quadrant (*libna*). He ascertained with these instruments in al-Raḡḡa the smallest zenith distance of the sun at $12^\circ 26'$, the greatest at

$59^\circ 36'$; this gave $\epsilon = \frac{47^\circ 10'}{2} = 23^\circ 35'$. This

value is at the basis of all al-Battānī's calculations and tables and has been adopted by many other Arab astronomers.

The question whether the amount of obliquity remains constant at all times or is subject to a secular diminution was answered in different ways by different students. As a matter of fact the degree of accuracy of observation was not sufficient to settle this point and the old Hindu value of $\epsilon = 24^\circ$, on which these investigations were often based, was based not on observations but only on a statement of Euclid's according to which astrologers of his time used to estimate the obliquity as a fifteenth part of the circumference of the circle.

The following table gives a survey of the Arab values for the obliquity of the ecliptic (cf. Nallino, *al-Battānī, Opus Astronomicum, loc. cit.*). The column "average obliquity" gives by Bessel's formula:

$$\epsilon = 23^\circ 28' 18''.0 - 0''.48 368. t - 0''.000 002 722 95. t^2 \quad (t = \text{years after 1750})$$

the true values calculated for the periods in question. The years given in brackets are only approximate, i. e. not given by the authors themselves.

(WILLY HARTNER)

MINICOY, a coral island in the Arabian Sea midway between the Laccadive and the Maldiv Islands; it belongs like the former to the Āli Rājā of Cannanore but ethnographically and geographically has more claim to be attached to the Maldiv group. It is six miles long but very narrow, being only $1\frac{3}{4}$ square miles in area. The population is about 3,000. The people, who are probably of Singhalese origin, have been Muḥammadans since the xivth century. The language is Mahl but the Arabic character is used. They are strictly monogamous. A girl's consent is required for her marriage and she brings no dowry, but receives presents from the bridegroom. The women go unveiled. There are three castes in the island. The inhabitants all live in one village which is divided into ten quarters in each of which the men and women are separately organised with their own headmen and headwomen. All work on land is done by women. The men are sailors and fishermen. Most of the island's food supply has to be imported. The chief exports are cocoanuts, coir, cowries and dried fish. The important position held by women in Minicoy has suggested its identification with Marco Polo's "Female Island" (ed. Yule, ii. 404).

Comparative table of the Arab values for the Obliquity of the Ecliptic

| Observer | Place | Year | Obliquity observed | Average obliquity | Error |
|--|------------|-------------|--------------------|-------------------|-----------|
| Eratosthenes | Alexandria | (230 B. C.) | 23° 51' 20" | 23° 43' 45" | + 7' 35" |
| Hipparchus | Rhodes | (130 B. C.) | | 42' 57" | + 8' 23" |
| Ptolemy | Alexandria | (140 A. D.) | | 41' 10" | + 10' 10" |
| Tabulae Probatae (<i>al-Zīj al-mumtaḥan</i>) | Baghdād | 829 | 33' | 35' 41" | — 2' 41" |
| Other observers under al-Ma'mūn | Damascus | 832 | 33' 52" | 35' 40" | — 1' 48" |
| Banū Mūsā | Baghdād | (860) | 35' | 35' 26" | — 0' 26" |
| al-Battānī | al-Raḡḡa | (880) | 35' | 35' 17" | — 0' 17" |
| Banū Amādjūr | ? | (918) | 35' | 35' 0" | 0' 0" |
| Abd al-Raḥmān al-Sūfi . . | Baghdād? | (965) | 33' 45" | 34' 35" | — 0' 50" |
| Abu 'l-Wafā' | Baghdād | 987 | 35' | 34' 25" | + 0' 35" |
| Widjān b. Rustam al-Kūhī . | Baghdād | 988 | 51' 1" | 34' 25" | + 16' 36" |
| Ibn Yūnus | Cairo | 1001 | 34' 52" | 34' 19" | + 0' 33" |
| al-Birūnī | Ghaznī | (1019) | 35' | 34' 10" | + 0' 50" |
| Alphonsinian Tables . . . | Toledo | (1250) | 32' 29" | 32' 19" | + 0' 10" |
| Ibn al-Shāṭir | Damascus | (1363) | 31' | 31' 25" | — 0' 25" |
| Ulugh Beg | Samarḡand | (1437) | 30' 17" | 30' 49" | — 0' 32" |

Logan (1870) and by H. M. Winterbotham (1876); W. Logan, Malabar, i. 285-287. (J. ALLAN)

MINŪCĪHRĪ, **ABU 'L-NADĪM AḤMAD B. YA'KŪB**, Persian poet, nicknamed *Shast-galla* = "sixty-herds", because of the wealth he accumulated in horses and cattle; but some say the name should be read *Shast-kul* or *Shast-kula* i. e. "crooked-thumb". He was a native of Dāmghān, calling himself "Dāmghāni" in his verse although Dawlatshāh says he came from Balkh. He was a younger contemporary and imitator of 'Unṣuri [q. v.], but he is considered to have excelled his model in poetic power. After completing his studies under Abu 'l-Faraj of Sistān (d. circa 392 = 1002) he enrolled himself in the service of the Amīr Minūcīhr b. Kabūs b. Washmgīr, ruler of Djurdjān and vassal of Maḥmūd of Ghazna, and from the name of this first patron he took his *takhalluṣ*. Presumably through the influence of 'Unṣuri he later became attached to Maḥmūd's entourage of literary men at Ghazna, and wrote *qaṣīdas* in praise of his new patron and of his sons Muḥammad (who reigned for less than a year) and Mas'ūd who succeeded to the Ghaznawid throne. The latter was assassinated in 432 (1041), and Minūcīhrī did not long survive him (Rizā-kulī Khān, *Madjma' al-Fuṣṣṣā*, i. 543, says he died in the same year and quotes 'Awfi as having called him "short-lived"). In his work Minūcīhrī shows himself to be a skilled versifier, displaying a clever felicity of rhyme and very often a refreshing simplicity and straightforwardness of language. Also he did not hesitate to use new forms for his verse, and he is the earliest Persian writer we know of to have used the strophic form of the *musammat*, which, as used by him, consists of a series of *miṣrā's* or *stichoi*, in groups of six. All six may rhyme together, or only five; in the latter case the last line rhymes with the last lines of the other strophes. In spite of his qualities as a versifier, Minūcīhrī cannot be regarded as a great poet, even for his day. His themes, — wine, love, springtime and the virtue of patrons — are of the stock pattern, and his *qaṣīdas* are deliberately moulded on the Arabic form, with all its artificialities. In flattery of his patrons he is as servile as any in the whole range of Persian panegyrist and his conceit of himself as it appears in his work is sometimes ludicrous in its effect (cf. N^o. 48 in Biberstein-Kazimirsky's edition, Paris 1886).

Bibliography: works quoted above and Ethé, in *Grundriss d. iran. Philologie*. A Tihārān ed. of the *Diwān* was published in 1297 A. H. (R. LEVY)

MĪR, a Persian title abbreviated from the Arabic *amīr* and approximating in meaning both to it and to the title *mīrā* [q. v.]. (For the dropping of the initial *alif*, cf. Bū Sahl for Abū Sahl etc.). Like *amīr* the title is applied to princes (Minūcīhrī, ed. Biberstein-Kazimirski, 1886, p. 96, speaks of Mas'ūd, Sulṭān of Ghazna, as "Mīr"), but it is also borne by poets and other men of letters (e.g. Mīr 'Alī Shīr, Mīr Khwānd, Mīr Muḥsin; cf. the following art.). In India, Saiyids sometimes call themselves by the title. As a common noun, it is used as an equivalent of *ṣāhib*, e.g. *mīr pandi*,

mīr ākhwūr. In Turkish there was derived from it the colloquial adjective *mīrī* ("belonging to the government"), which gave rise to *al-mīrī* ("the government") in the colloquial Arabic of 'Irāk.

(R. LEVY)

MĪR, the poetical designation of Mīr Muḥammad Taqī b. Mīr 'Abd Allāh, was a native of Akbarābād. After the death of his father he went to Dihli during the reign of Shāh 'Ālam (1173-1221 = 1759-1806) and became a pupil of Sirādj al-Dīn 'Alī Khān Arzū. In 1190 (1776) he left Dihli for Lucknow, where he spent the remaining portion of his life. He is recognised to be the most eminent poet of the Urdū language. He died at Lucknow in 1225 (1810) when he was nearly 100 years old. He is the author of six *dīwāns* which have been repeatedly printed in India, and a biography of Urdū poets, entitled *Nukāt al-Shu'arā*.

Bibliography: Shīfta, *Gulshan-i Bikhār*, fol. 167-176; Āzād, *Ābi Hayāt*, Lahore 1913, p. 203-241; Karīm al-Dīn, *Ta'rikh-i Shu'arā-i Urdū*, Dihli 1848, p. 115-120.

(M. HĪDAYET HOSAIN)

MĪR AMMĀN. [See AMMĀN.]

MĪR DJUMLA. [See MUḤAMMAD SA'ID.]

MĪRĀDJ (A.), originally ladder, later "ascent", especially Muḥammad's ascension to heaven. In the Qur'ān, Sūra lxxxi. 19-25 and liii. 1-12, a vision is described in which a heavenly messenger appears to Muḥammad and Sūra liii. 12-18 deals with a second message of a similar kind. In both cases the Prophet sees a heavenly figure approach him from the distance but there is no suggestion that he himself was carried off. It is otherwise with the experience alluded to in Sūra xvii. 1: "Praise him, who travelled in one night with his servant from the Masjd al-Ḥarām to the Masjd al-Akṣā, whose surroundings we blessed, in order to show him our signs". That Muḥammad is meant by the "servant" is generally assumed and there is no reason to doubt it (Schrieke, *Islam*, vi. 13, note 6; Bevan, *Z. A. T. W.*, xxvii. 53 sq.); that the Masjd al-Ḥarām is the Meccan sanctuary is certain from Qur'anic usage (Horowitz, *Koran. Unters.*, p. 140); but what is the Masjd al-Akṣā? According to the traditional explanation, but not the only one recognised in Ḥadīth (see Schrieke, *op. cit.*, p. 12, 14 and above, s. v. ISRA²) it would mean Jerusalem, but how could Muḥammad, who in Sūra xxx. 1 speaks of Palestine as *adna 'l-arḍ*, call a sanctuary situated in Jerusalem *al-masjd al-akṣā*? The age of this explanation is not quite certain; perhaps it was already known to 'Umar b. Abī Rabi'a (ed. Schwarz, xci.) and Abū Ṣakhr (*Lieder der Hudh-niliten*, ed. Wellhausen, cclxiv. 24); but even these belong only to the Umayyad period (contrary to Lammen's, *Sanctuaries*, p. 72, this is true also of Abū Ṣakhr, who according to *Aghāni*, xxi. 94 was a partisan of the Banū Marwān and panegyrist of 'Abd al-Malik). Muḥammad probably meant by al-Masjd al-Akṣā a place in heaven, such as the place in the highest of the seven heavens in which the angels sing praises of Allāh and we would then have in Sūra xvii. 1, evidence from the Prophet himself about his nocturnal ascension into the heavenly spheres (Schrieke, *op. cit.*, p. 13 sqq; Horowitz, *Isl.*, ix. 161 sqq.), testimony which is however content with the mention of the experience itself and says nothing about its course. The question

of the possibility of an ascent to heaven is several times touched on in the Qur'ān. In Sūra xl. 38 Fir'awn gives Hāmān orders to build a palace so that he can reach the cords of heaven and climb up to the god of Mūsā (cf. also Sūra xxviii. 3). In Sūra lii. 38, the calumniators are asked whether they had perchance a ladder (*sullam*) so that they could hear the heavenly voice and in Sūra vi. 35 the consequences are considered which the signs brought by the Prophet with the help of a ladder to heaven might have on his hearers. The old poets also talk of ascending to heaven by a ladder, as a means of escaping something one wants to avoid (Zuhair, *Mu'allaka*, p. 54; A'shā, xv. 32).

Hādīth gives further details of the Prophet's ascension. Here the ascension is usually associated with the nocturnal journey to Jerusalem, so that the ascent to heaven takes place from this sanctuary. We also have accounts preserved which make the ascension start from Mecca and make no mention of the journey to Jerusalem. In one of these the ascension takes place immediately after the "purification of the heart" (see Bukhārī, *Ṣalāt*, bāb 1; *Hādīdj*, bāb 76; *Manāḳib*, bāb 42; Aḥmad b. Ḥanbal, *Musnad*, iv. 207, v. 143; Ṭabarī, ed. de Goeje, i. 1157 sq.). In the last mentioned passage we read: "When the Prophet had received his revelation and was sleeping at the Ka'ba, as the Qurāish used to do, the angels Gabriel and Michael came to him and said: With regard to whom have we received the order? Whereupon they themselves answered: With regard to their lord. Thereupon they went away but came back the next night, three of them. When they found him sleeping they laid him on his back, opened his body, brought water from the Zamzam well and washed away all that they found within his body of doubt, idolatry, paganism and error. They then brought a golden vessel which was filled with wisdom and belief and then his body was filled with wisdom and belief. Thereupon he was taken up to the lowest heaven". The other versions of the same story show many additions and variants; according to one, for example, Gabriel came to Muḥammad through the roof of his house which opened to receive him; according to another, it was Gabriel alone who appeared to him and there are many similar variants. All these versions however put Muḥammad's ascension at an early period and make it a kind of dedication of him as a Prophet, for which the purification of the heart had paved the way. Ethnographical parallels (Schrieke, *op. cit.*, p. 2—4) show other instances of a purification being preliminary to an ascension. Similar stories are found in pagan Arabia (Horovitz, *op. cit.*, p. 171 sqq.) and also in Christian legends (*op. cit.*, p. 170 sqq.). Another story (Ibn Sa'd, i. 143) says that the ascension took place from Mecca although it does not associate it with "the purification of the heart" which it puts back to the childhood of the Prophet [cf. ḤALĪMA].

How did it come about however that this, obviously the earlier, tradition of Mecca as the starting point of the ascension was ousted by the other which made it take place from Jerusalem? The localisation of the Qur'ānic Masjd al-Akṣā in Jerusalem is by some connected with the efforts of 'Abd al-Malik to raise Jerusalem to a place of special esteem in the eyes of believers (Schrieke, *op. cit.*, p. 13; Horovitz, *op. cit.*, p. 165 sqq.; do., in

Islamic Culture, ii. 35 sqq.) and in any case it cannot be proved that this identification is older than the time of 'Abd al-Malik. It might all the easier obtain currency as Jerusalem to the Christians was the starting point of Christ's ascension and from the fourth century Jesus's footprint had been shown to pilgrims in the Basilica of the Ascension; as now, perhaps as early as the time of 'Abd al-Malik, that of their Prophet was shown to Muslim pilgrims (Horovitz, *op. cit.*, p. 167 sq.). The idea of the "heavenly Jerusalem" may have had some influence on the development of the *isrā'* legends; when Muḥammad meets Ibrāhīm, Mūsā and 'Isā in Jerusalem, the presence of these prophets in the earthly Jerusalem is not at once intelligible, but it loses any remarkable features if Bait al-Makdis (Ibn Hishām, p. 267) from the first meant the "Heavenly Jerusalem" (Horovitz, *op. cit.*, p. 168, another explanation cf. ii. 604). Perhaps also the phrase *alladhī bāraknā ḥawlahu* was taken to support the reference to Jerusalem; when these words occur elsewhere in the Qur'ān they refer to sites in the holy land (Lammens, *op. cit.*, p. 72, note). While the stories quoted above only say that Gabriel took the Prophet up to the heights of heaven, but are silent as to how, others add that a ladder (*mi'rādj*) was used for the ascent (see Ibn Hishām, p. 268; Ṭabarī, *Tafsīr*, xv. 10; Ibn Sa'd, i. 143); this ladder was of splendid appearance; it is the one to which the dying turn their eyes and with the help of which the souls of men ascend to heaven. The ladder is probably identical with Jacob's ladder in Genesis, xxviii. 12; the Ethiopic Book of Jubilees, xxvii. 21 calls this *ma'areg* and Sūra lxx. 3, 4 calls Allāh *Dhu 'l-Ma'aridj* "to whom the angels and the spirit ascend" (*al-ruḍj*). According to Sūra xxxii. 4, the *amr* rises to Allāh; according to Sūra lvii. 4 and xxxiv. 2, Allāh knows "what descends from heaven and what ascends to it", and in Sūra xliii. 32 there is a reference to steps (*ma'aridj*) in the houses of men. Muḥammad therefore already knew the word, which is presumably taken from Ethiopic (Horovitz, *op. cit.*, p. 174 sqq.). Among the Mandaeans also the ladder (*sumbilla*) is the means of ascending to heaven (*Ginza*, transl. Lidzbarski, p. 49, 208, 490) and there are parallels to the ladder of the dead in the mysteries of Mithras (see Andrae, *Die Person Muhammeds*, p. 45; Wetter, *Phos*, p. 114, note 2); the Manichean *amūd al-sabb* (*Fihrist*, p. 335, 10) by means of which the dead man is taken to the sphere of the moon is a more distant parallel (Bevan, *op. cit.*, p. 59).

Just as the *mi'rādj* is associated with the ascension, so Burāk is originally connected with the night journey to Jerusalem; it found its way however at an early date into the legend of the ascension (see Bukhārī, *Manāḳib*, bāb 42; Aḥmad b. Ḥanbal, *Musnad*, iv. 207; v. 387; Ṭabarī, *Tafsīr*, xv. 12). The prophets earlier than Muḥammad had used Burāk as their steed (Ibn Hishām, p. 263; Diyārbakrī, *Tārīkh al-Khāmīs*, i. 349), in particular Ibrāhīm ('Adjīdjādī, ed. Ahlwardt, xlv. 48—52; Ṭabarī, *Tafsīr*, xv. 5; Tha'lahī, *'Arā'is*, p. 63; Ḥalabī, i. 369). This idea of one animal used by the different prophets is borrowed; according to the Midrashic statement, late it is true (*Yalkūṭ* on Zachariah, ix., N^o. 875; *Pirḳe de R. Elī'zer*, xli.), the ass which Abraham rode (Genesis xxii. 3) is the same as that used by Zipporah and her sons (Exodus, iv. 20) and is that on which

the Messiah will make his entrance (cf. also Ibn Sa'd, i/ii. 176). The recollection that this steed was an ass survives in Muslim tradition so that Burāk is described as "smaller than a mule and larger than an ass" (Bukhārī, *Manāqib*, bāb 43; similarly Ibn Hishām, p. 264; Ibn Sa'd, i/i. 143). Ibn Sa'd already describes Burāk as a female beast and, as early as a story attributed by Ibn Ishāq to al-Ḥasan al-Baṣrī, Burāk is given wings (Ibn Hishām, *loc. cit.*). Tha'labī seems to be the first who speaks of Burāk's human face (in Ḥalabī, i. 370); in the miniatures dealt with fully by Arnold, *Painting in Islam*, p. 118 *sqq.*, al-Burāk usually has a woman's head.

At the gate of each of the seven heavens through which he wanders with the Prophet, Gabriel is asked for his own name and that of his companion (Bukhārī, *Ṣalāt*, bāb 1, Ṭabarī, *Tafsīr*, xv. 4; *Annales*, ed. de Goeje, i. 1157). After he gives these he is next asked if Muḥammad has already been sent as a prophet (*awaḳad bu'itha ilaihi*, correction for the original *awaḳad bu'itha* found in Ṭabarī, *Annales*, i. 1158; see Snouck Hurgronje, *Isl.*, vi. 5, note 4); this also indicates that the ascension originally belonged to the period immediately after his call (Schrieke, *op. cit.*, p. 6). In each heaven they meet one of the earlier messengers of God, usually Adam in the first, Yaḥyā and 'Isā in the second, Yūsuf in the third, Idrīs in the fourth, Hārūn in the fifth, Mūsā in the sixth and Ibrāhīm in the seventh heaven; there are also variations and Adam appears as judge over the spirits of the dead (Andrae, p. 44 *sq.*; Schrieke, p. 17; Aḥmad b. Ḥanbal, *Musnad*, v. 143; cf. *Apoc. Mosi*, p. 37). Of the other messengers of God we are only told — in addition to being given a description of their personal appearance — that they greeted Muḥammad; Mūsā is an exception who expressly says that Muḥammad is higher in the esteem of Allāh than himself and that the number of his followers surpasses his own (Ṭabarī, *Tafsīr*, xv. 11). On another occasion, Muḥammad engages in a conversation with Mūsā after Allāh had imposed upon him 50 ṣalāts a day as obligatory prayers for the faithful. On Mūsā's advice, Muḥammad asks several times for an alleviation and each time Allāh grants it; but when Mūsā says 5 ṣalāts are still too many, the Prophet refuses to ask for less (on *Genesis*, xviii. 23 *sqq.* as the prototype of this episode; cf. Goldziher, *Studien*, i. 36; Schrieke, p. 19; Andrae, p. 82). According to some versions, Mūsā dwells in the seventh heaven and the conversation seems to be more natural there. To the ascension belong the visits to paradise and to hell. Paradise according to many versions is in the seventh heaven, according to others in the first; in some it is not mentioned at all. The statements about its rivers are contradictory (Schrieke, p. 19; cf. above KAWṬHAR), the *Sidrat al-Muntahā* is usually placed in the seventh heaven (Bevan, p. 59; Schrieke, p. 18). In one description hell is put below the first heaven (Ibn Hishām, p. 269; Ṭabarī, *Tafsīr*, iv. 10). According to another, the place of punishment of the damned is on the way between heaven and earth and Muḥammad sees it on his journey to the Bait al-Maḳdis (Ṭabarī, xv. 101, also Aḥmad b. Ḥanbal, *Musnad*, i. 257; ii. 353; iii. 120, 182, 224, 231, 239). On the punishment in hell cf. Schrieke, p. 17; Andrae, p. 44; Horovitz, p. 173; Reitzenstein, *Das mandäische Buch der Grosse*, p. 81 *sqq.*; Lidzbarski, *Johannisbuch*, p. 98 *sqq.*; Ginsa, p. 183.

That Muḥammad appeared before Allāh's throne in the seventh heaven and that the conversation about the obligatory prayers took place there, is already recorded in the oldest stories (see above) but only rarely do they extend the conversation between Allāh and the Prophet to other subjects (Ṭabarī, xxvii. 26; *Musnad*, iv. 66 as a dream; Andrae, p. 70). But objection was raised to the assertion that Muḥammad on this occasion saw Allāh face to face (Andrae, p. 71 *sqq.*), and the question was also raised at an early date whether the ascension was a dream or a reality, whether only the soul of the Prophet was carried up or also his body (Caetani, *Annali*, Intr. § 320; Andrae, p. 72; Bevan, p. 60; Schrieke, p. 13, note 1).

The Hadīth contains, besides these, other details which Asin (*Escatologia*, Madrid 1919, p. 7—52; do., *Dante y el Islam*, Madrid 1927, p. 25—71) has discussed. In developing the story of the Prophet's ascension Muḥammadan writers have used models afforded them by the Jewish and Christian Apocalypses. A few features may also come from the Parsees from the Arda Viraf; cf. the works already mentioned by Andrae, Bevan, Schrieke, Horovitz and W. Bousset, in *A. R. W.*, iv. 136—169.

Later accounts (Chauvin, *Bibliographie*, xi. 207 *sqq.*; Asin, *Escatologia*, p. 53 *sqq.*; do., *Dante* etc., p. 72 *sqq.*; Nallino, in *R. S. O.*, viii. 802) collect and systematise the material scattered in the older sources; they only increase the matter without however increasing the depth of its thought. Among the Mīrādī-books which have become popular in modern times that of al-Ḥaṭīfī may be mentioned (this is the correct form, see Nallino, *op. cit.*, p. 813) on which Dardir (d. 1201) wrote a *ḥaṣṣiya*; also that of Barzandjī (d. 1179). In the non-Arab lands of Islām, Persian, Turkish, Hindustānī and Malay versions of the legend have contributed to its dispersion (see Chauvin, *loc. cit.*).

The ascension of the Prophet later served as a model for the description of the journey of the soul of the deceased to the throne of the divine judge (Asin, *Escatologia*, p. 59 *sq.*); for the Ṣūfīs however, it is a symbol of the rise of the soul from the bonds of sensuality to the heights of mystic knowledge. Ibn al-'Arabī thus expounds it in his work *Kitāb al-Isrā' ilā Maḳām al-Asrā* (Asin, p. 61 *sqq.*; Andrae, p. 81 *sq.*), and in his *Futūḥāt*, ii. 356—375 he makes a believer and a philosopher make the journey together but the philosopher only reaches the seventh heaven, while no secret remains hidden from the pious Muslim (Asin, p. 63 *sqq.*). Abu 'l-'Alā' al-Ma'arri's *Risālat al-Ḥuṣṣrān* is a parody on the traditional accounts of the Mīrādī (Asin, p. 71 *sqq.*). Asin in his two books quoted has dealt with the knowledge of Muslim legends of the ascension possessed by the Christian middle ages and their influence on Dante. In a separate work (*La escatologia musulmana en la divina comedia*, Madrid 1924) he has collected and discussed the literature produced by his *Escatologia* down to 1923.

According to Ibn Sa'd, i/i. 147 the *isrā'* took place on the 17th Rabi' 1, the ascension on the 17th Ramaḍān. For centuries however, the night before the 27th Rādjab — a date also significant in the history of Mecca (see Snouck Hurgronje, *Mekka*, ii. 71) — has been regarded by the pious as the *Lailat al-Mīrādī*, and the eve is like the *Mawlid al-Nabī* devoted to reading the legend of the feast

(see al-'Abdari, *Madkhal*, i. 143 sq.; Herklots, *Qanoon e Islam*², p. 165; Lane, *Manners and Customs*, London 1896, p. 474 sq.; Snouck Hurgronje, *The Achehnese*, i. 219; Asin, *Escatologia*, p. 97).

Bibliography: is given in the article; cf. also R. Hartmann, in *Bibliothek-Warburg, Vorträge 1928-1929* (Leipzig 1930), p. 42-65. (J. HOROVITZ)

MĪRĀNDJĪ, whose full name was Mir Muḥammad b. Kādi Sā'in-dātā b. Kādi Qalandar, commonly called Miyān Mir or Miyāndjī, born 938 (1531) in Siwastān, Sind. He traced his origin to the caliph 'Umar and spent the last 60 years of his life in great sanctity at Lāhūr. He died in 1045 (1635). But according to the *Bādshāh-Nāma* of 'Abd al-Ḥamīd, i. 330, his death took place in 1044 (1634). Shāh Dījhān repeatedly visited the saint and Prince Dārā Shikūh erected a splendid dome over his tomb. The Prince also wrote a work called *Safinat al-Awliyā'* in which he described fully the lives of this Indian saint and his disciples.

Bibliography: *Safinat al-Awliyā'* p. 70; *Kāzimat al-Ashfā'*, p. 154; 'Abd al-Ḥamīd, *Bādshāh-Nāma*, i. 329; Rieu, *Cat. Persian MSS. British Museum*, i. 358.

(M. HĪDAYET HOSAIN)

MĪRĀN MUḤAMMAD SHĀH I, of Khāndesh, was the eleventh prince of the Fārūkī dynasty. He belonged to the younger branch of that line, which had taken refuge in Guḍjarāt, and his ancestors had lived in that kingdom and had married princesses of the Muẓaffarī family until Maḥmūd I of Guḍjarāt had, on the extinction of the elder branch of the Fārūkīs, placed 'Adil Khān III, Muḥammad's father, on the throne of Khāndesh. Muḥammad, who was, through his mother, the great-grandson of Maḥmūd, and the grandson of his son, Muẓaffar II, succeeded his father in Khāndesh in 1520, and in 1527 incautiously intervened in the cause of 'Alā' al-Dīn 'Imād Shāh of Barār by aiding him against his enemy, Burhān Nizām Shāh I of Aḥmadnagar. He was defeated and driven back into Khāndesh, but succeeded in persuading his uncle, Bahādur of Guḍjarāt, to intervene, and with him invaded the kingdom of Aḥmadnagar. The campaign was only partially successful, but Muḥammad was indemnified by Burhān I for his losses. He accompanied his uncle in the campaign which ended, in 1531, in the capture of Māndū and the annexation of Mālwa to Guḍjarāt, and on Bahādur's death in 1537, was summoned, in his mother's right, to the throne of Guḍjarāt, but died on his way to Aḥmadābād.

(T. W. HAIG)

MĪRĀTH (A.), inheritance (pl. *mawārith*), *mūrith* legator, *wārith* heir.

1. The law of inheritance ('ilm al-farā'id', "the science of dispositions", i.e. of the quotas laid down in accordance with Sūra iv. 16, which is called after its most important and most difficult part) is one of the branches of Muḥammadan law in which Muḥammad more deeply modified earlier practice by legislation. Although the Qur'anic regulations are fairly detailed, the task of deducing

all necessary conclusions from them, to which lawyers turned with particular enthusiasm, gave rise to a great mass of traditions and considerable divergences of opinion on questions not expressly decided in the Kur'ān. In the law of inheritance we can also still trace fundamental old Arabian pre-Islāmic features.

2. In the period before the rise of Islām, in keeping with the patriarchal system prevailing among the Arabs, the estate of a deceased tribesman went, if he died intestate, to the nearest male relative(s); the order of succession in which these relatives, the so-called 'aṣaba (corresponding to *agnati*), were called upon to inherit survives systematised in its order in the Muslim law of inheritance (cf. below). Minors were, as incapable of bearing arms, excluded from the succession as were female relatives: widows also were not entitled to inherit, and originally no doubt themselves formed a part of the estate, a view which survived in the levirate marriage usual among the Arabs, to which Sūra iv. 23 (cf. below) refers in forbidding it. There is no evidence of any preferential treatment of the first-born, which we find elsewhere in Semitic law. This, the original legal position, had by Muḥammad's time most certainly altered somewhat in favour of women; in cases where the deceased left no male relatives his daughters seem frequently to have obtained the estate: but woman had by no means equal treatment with man, as is clear from Muḥammad's regulations. In addition to these principal heirs the pre-Islāmic Arabs had also secondary heirs who correspond to the later so-called quota-heirs (*dhawu 'l-farā'id*) and received a part of the estate, the bulk of which went to the 'aṣaba. From Kur'ān ii. 176 and iv. 37 which confirm this arrangement, we can see that these included the parents, the "relatives" — apparently so far as they were not 'aṣaba — and the so-called confederates (*ḥalīf*, plur. *ḥulafā'*): the settlement of the portions falling to them was done in accordance with Sūra ii. 176 — at least in part — according to the last will of the testator.

3. Muḥammad modified this system considerably in details, the main point being the improvement in the treatment of women as in his innovations with regard to the laws of family life generally [cf. ṬALĀḤ]; at the same time there is a clear endeavour to fix in legal form the practice which had varied considerably in heathen times. The main lines of the system and the general conceptions as above briefly outlined were retained by the Prophet. One provision which had been made under special circumstances he was not able later to keep in force; immediately after the *Hijra*, he had ordered that those who migrated with him (the *muhājirūn*) and the believers in Medina (the *anṣār*) should regard themselves as brethren and therefore able to inherit from one another, while all bonds of relationship between the *muhājirūn* and their relatives left in Mecca, even if they were believers, were to be regarded as broken (Sūra viii. 73, with the limitation imposed in viii. 76); but this was expressly revoked by Sūra xxxiii. 6. Tradition regards this fraternization as a special case of confederacy (*ḥalīfdom*; cf. above, section 2). For the rest, Muḥammad in his first Medina period confirmed the system of secondary heirs and the whole general practice in regard to inheritance (cf. *ibid*; Sūra ii. 176 is probably to be dated in Ramaḍān of the year 2, and iv. 37, of which the first view in

al-Baiḍāwī is undoubtedly the right one, cannot be much later); that in ii. 176 he expressly makes the fair treatment of the secondary heirs a duty, already reveals the direction which later ordinances were to take. Connected with this is the probably contemporary ii. 241 *sqq.* which secures the wife, if she survives her husband, a legacy of maintenance for a year. Not much later, about the year 3, is Sūra iv. 23: "Ye, who are believers, are not permitted to inherit women against their will"; this is a prohibition against the 'aṣaba forcing the widow of the deceased into a levirate marriage and generally assuming the position of *wali* over her which belongs only to her male relatives; this is not meant as a regular legal ordinance but is part of Muḥammad's endeavour to improve the position of women [cf. TALĀḲ.] Very soon after the battle of Uhud, when numerous Muslims had fallen, we have — as a result of it — the final Qur'anic ordinance of Sūra iv. 8—18: "To the men belongs a share of what their parents and relatives leave, and to the women belongs a share of what their parents and relatives leave — whether it be much or little — as a definite share. 9. If the relatives (not entitled to inherit), the orphans and the poor are present at the division, give them some of it and speak kindly to them (verses 10 *sq.* go on to deal with the treatment of orphans). 12. Allāh commands you, as regards your children, as follows: to the boy belongs as much as the share of two girls; if however there are (only) girls (and) more than two, two-thirds of the estate belongs to them and if there is one (girl) to her belongs the half. And the parents shall each have a sixth if (the legator) had children, and if he had no children and (only) his parents inherit from him, his mother shall have a third. If however he have brothers, his mother shall have a sixth. (All this) after deducting any bequests he may have made or a debt. Ye know not whether your parents or your children be of greater use to you. (This is) an ordinance of Allāh and Allāh is all-knowing and wise. 13. To you belongs the half of the estate of your wives, if they have no children; but if they have children you shall receive a fourth of their estate — after deducting any bequest that they may have made or any debt. 14. To them belongs a fourth of your estate, if you have no children; but if you have children an eighth of your estate belongs to them — after deducting any bequest that you may have made or any debt. 15. If distant relatives inherit from a legator, male or female, and he has a brother or a sister, each shall have a sixth; but if there are more, they shall have a third among them after deducting any bequest which he may have made or debt. 16. Without prejudice (this is) an ordinance of Allāh. Allāh is all-knowing and gracious" (Verse 17 *sq.* contain promises and threats). As the settlement of the succession in indirect lines left questions undecided, Sūra iv. 175 supplemented the above: "They ask thee for a decision. Say: Allāh gives you the following decision for remoter kindred: if a man die childless and have a sister, half of what he has is hers and if she die childless, he is her heir; if there be two sisters, two-thirds of the estate belongs to them; but if there be both brothers and sisters, the brother shall have as much as two sisters...". The object of these regulations is simply to supplement the law regarding the rights of the 'aṣaba; they are not a reorganisation of the whole law. Each of the persons named is

therefore only allotted a definite portion. The remainder, and this is as a rule the major portion, of the estate falls as before to the 'aṣaba. There is a distinct tendency to give female relatives half the share of male relatives of the same degree; even in the case when there are daughters but no sons (and correspondingly sisters but no brothers), they do not receive all that would belong to the sons or brothers; but as regards a few smaller portions the two sexes rank equally. The quotas here given abolished the testamentary settlement of the portions usual in the heathen period, which was still approved by Sūra ii. 176; this is the historical starting point for the tradition — early interpreted in another sense — that a legacy in favour of the heirs is not valid. Sūra ii. 241 *sq.* (cf. above) is probably rightly regarded as abrogated by the settling of the widow's portion in tradition. There is a slight difficulty in interpretation only in iv. 15; but there can be no doubt that this verse refers to half-sisters on the mother's side, as indeed it has always been interpreted; the text of Ubai' even inserts an addition to this effect (cf. Nöldeke-Bergsträsser, *Geschichte des Qorāns*, ii. 85, 93, note 5). The verse iv. 175 on the other hand refers to full sisters; how the Qur'ān wished half-sisters on the father's side to be dealt with, is difficult to say. In iv. 12 "more than two" (girls) is to be interpreted, as the sense requires, as "two and more"; similarly, in the case in which the mother is allotted a third of the estate, it is presumed that the father gets the other two-thirds.

4. The full details which tradition is able to give regarding the causes of the revelation of the regulation of the law of inheritance are not historical; on internal grounds all we can say is that it took place soon after the battle of Uhud (cf. above, section 3). The numerous *ḥadīths* which simply repeat the Qur'anic regulations may be neglected here. Tradition can only record very few actual divergences from the prescriptions of the Qur'ān: one of these is that a woman received back as her inheritance a slave whom she had presented to her mother and who represented the latter's whole estate (in a parallel case it is a man who has given his mother a garden; by this alteration the divergence is disposed of). According to another story, the Prophet is said to have laid it down that the wives of the *muhājirūn* should inherit the houses of their husbands; according to the wording, it cannot have been a temporary arrangement which was abolished by the final settlement. While nothing can be quoted in favour of the first *ḥadīth*, the second, which does not seem to be intended as a foundation for any legal clause, may have a grain of historical truth in it.

5. The prescriptions of the Qur'ān are supplemented and developed in countless traditions among which a comparatively large number relate not decisions of the Prophet himself, but of his Companions (we may cite Ibn Ḥanbal, iv. 279 *sq.* as a typical mixed form); in reality they must not for a moment be regarded as fact, but only as anonymous evidence of the first developments of the Qur'anic law of inheritance. At this stage of development it is already firmly established that an unbeliever cannot inherit from a Muslim; the right of a Muslim to inherit from an unbeliever is finally also denied, although there is some opposition to this view; on the question

of inheritance of a *murtadd*, unity was not attained. Excluded from the right of inheritance is also one who has killed the legator; according to one view always, according to another only if the slaying was deliberate (with *ʿamid*; cf. article *ḲATL*). That a slave has no right of inheritance is taken for granted. Legal relationship is necessary for the right of inheritance; thus illegitimate children or those whose paternity has been disputed by *lʿān* [q. v.] have no legal claim on the estates of their father and his relations. The patron (*mawlā*, q. v.) is included among the *ʿaṣaba*, who are placed in the order which had been handed down from the pre-Islāmic period and continued to hold good: the patron and the manumitted slave inherit from one another and according to one view, the same right is granted to the *mawlā*, meaning the man before whom the person concerned has adopted Islām. After the *mawlā* come — although some oppose this — the *dhawu l-arḥām*, i. e. persons related to the legator in the female line, whose representative is usually the *khāl* or maternal uncle. In case all these heirs should not exist, the fellow-triethsmen are named. The law in *Sūra* iv. 14 is also extended to the widow whose husband dies before the consummation of the marriage; on the question what should be the share of two daughters, we have the answer two-thirds, doubtless in keeping with the sense of *Sūra* iv. 12, but also that based on the literal interpretation (the half); finally half-brothers on the father's side, about whom the *Ḳurʿān* lays down nothing definitely, are excluded from inheriting by full brothers. With certain modifications which occur again in the later teaching, a son's daughters are treated like daughters and grandparents like parents, but this regulation only won recognition after opposition and varying practice in details. Here arises the problem of the different shares of the grandfather along with the brothers when he appears with them as *ʿaṣaba*, which goes back to his varying position in the series (cf. below sect 6b); along with other views we find quoted also the one that later prevailed but it does not seem to be the earliest. The *Ḳurʿān* lays it down that before dividing the estate the amount of any legacies and debts should be deducted; and in early times — probably in literal interpretation of the *Ḳurʿānic* passages — the legacies often were given preference to debts; after some opposition the opposite teaching prevailed. The *diya* [q. v.] to be paid for a slain man was in itself subject to the usual laws as part of his estate; but in early times the wife was not allowed a share in the *diya* of her slain husband, which goes back to old Arah conceptions of the family; the other view ultimately prevailed. In addition there are numerous, often contradictory, views on separate points which show the eager interest taken in the matter. The interest taken in early Islām in the law of inheritance is reflected in *Ḥadīth*; there are traditions in which the Prophet orders the law of inheritance to be taught and learned, calling it "the half of knowledge" on account of its difficulty and expressing the fear that this subject, so difficult to remember, might in time disappear from the memory of his community.

6. The law of inheritance attained its full development in the system of *fiḳḥ*; the following are its principles according to the *Shāfiʿi* teaching (for the most important divergences in the other schools cf. below sect. 7).

a. The law of intestacy in general. According to Muslim law, there is no fusion between the property of the legator and that of the heir. The creditors of the estate can therefore only assert their claims against the estate; on the other hand, the heirs have no claim on the estate until all debts are paid. The *fiḳḥ* has therefore no special teaching on the rejection of legacies, the different ways of succeeding to an inheritance, etc. In addition to pledges entered into by the deceased, the debts of the estate include the funeral expenses and the religious duties omitted by the deceased so far as they consist of concrete things (e. g. unpaid *zakāt*) or can be atoned for by payment (e. g. neglected fasts [*ṣawm*]) or can be carried through at the expense of the estate by a deputy (e. g. the *ḥadīḍ* omitted without good reason); in the opinion of a minority of *Shāfiʿi* legists, omitted *ṣalāts* may also be included in these. After the debts any legacies have to be paid [cf. *waṣīya*]; the remainder passes to the heirs. A necessary condition for inheriting is that the heir has survived the testator; in doubtful cases, when persons who would inherit from one another have died without its being certain which died first, as a rule no inheritance passes between them (this decision is already found in Tradition; there was a very old difference of opinion on the point). The heir must also have existed when the testator died; only in the case where a man leaves a pregnant widow or *umm al-walad*, is a child's share reserved for the unborn child (Tradition is not agreed on this point). If a man is missing long enough to be considered dead, the *kāḍi* can declare him "presumably dead" at the request of the heirs after investigating the circumstances; the heirs thus receive the right to take possession of the estate for the time. Excluded from succession are the following: one who has caused the death of the deceased, the *murtadd*, an unbeliever from the succession to a Muslim and vice versa, the *ḥarbī* (the unbelieving member of a state with which the Muslim stands in no treaty relation) and the slave. As in old Arah law the succession of the *ʿaṣaba* is the basis of the law of inheritance in the case of an intestate; the *ʿaṣaba* are the usual heirs, inheritance by others is only an exception from the general rule; on the order of succession among the *ʿaṣaba* cf. under b. The *ʿaṣaba* receive the whole estate after the deduction of the portions set aside for the quota-heirs by the *Ḳurʿān* (cf. under c). If there are no *ʿaṣaba*, that portion of the estate which remains after the deduction of the portions of the quota-heirs goes to the state treasury (*bait al-māl*); a notable change from the view found in traditions — cf. section 5 —; even ʿOmar II is said to have decided otherwise, cf. al-Dārimī, *Farāʿid*, bāb 56), it being presumed that this is administered according to law for the benefit of the Muslims; otherwise the *Ḳurʿānic* quota-heirs receive the remainder of the estate in proportion to their quota by the so-called law of reversion, with the exception of the widower or widow if they are not also at the same time blood-relations of the deceased (here also as in the case of the exclusion of the widow from sharing in the *diya* of her slain husband, the basis is the old Arah family law). Only if there are neither *ʿaṣaba* nor quota-heirs and the state treasury is not being administered in accordance with the law are the *dhawu l-arḥām* — i. e. persons related to the deceased in the female line as well as those

female relatives who cannot be quota-heirs — called upon to inherit (there are two theories regarding their order of succession). If there are none of these relatives, any Muslim may take possession of the estate, if he is capable and ready to administer it for the general good of Muslims.

b. Rights of the *‘aṣāba*. The *‘aṣāba* are called upon to inherit in the following order which in essentials already existed in the pre-Muhammadan period: 1. The male descendants of the legator in the male line, a nearer excluding the more distant relatives from the succession. 2. The nearest male relative in the ascending male line with the provision that the father, but not the grandfather (and remoter ascendant), of the deceased inherits before his brothers; the grandfather shares with the brothers (cf. below). 3. The nearest male relative in the male line in the descendants of the father: first the full brother, then the half-brother on the father's side, then the descendants of the full brother, then those of the half-brother on the father's side. 4. The nearest male relative in the male line among the descendants of the grandfather (as under 3) etc.; 5. lastly the *mawla*, i.e. the patron (or patroness), if the deceased was a freed man, and then his *‘aṣāba*. — The brothers of the deceased inherit only with the grandfather as *‘aṣāba* in equal shares with him, but if there are more than two brothers there, the grandfather receives one-third of what is to be divided between him and the brothers. If there are also quota-heirs, the grandfather is allowed in addition at least a sixth of the estate (which he would inherit as a quota-heir; cf. below c). He can then choose the most favourable of the three arrangements. This rule seems to be a compromise between the two earlier contradictory views that the grandfather excluded the brothers or *vice versa* was excluded by them (cf. above section 5). — Female *‘aṣāba*. If the deceased left sons as well as daughters they inherit jointly, the share of a son being twice as large as that of a daughter (according to Sūra iv. 12) while the quota allotted to the daughters (*ibid.*) is dropped, as is intended by the spirit of the Qur'anic law. The daughter who inherits along with a son is therefore also called *‘aṣāba* and in order to distinguish her from the male *‘aṣāba*, the *‘aṣāba bi-nafsihi* (“*‘aṣāba* by themselves”), she is called *‘aṣāba bi-l-ghairi* (“become *‘aṣāba* through another”). The daughter of a son of the legator is similarly treated, inheriting along with the son of a son; and the full sister who inherits along with a full brother (by Sūra iv. 175); finally it applies also to the half-sister on the father's side who inherits with a half-brother on the father's side (the grandfather makes the full sister as well as the half-sister on the mother's side *‘aṣāba bi-l-ghairi*). — If the full sister and the half-sister on the father's side inherit along with a daughter of the deceased or of a son, they do not receive their Qur'anic quota (Sūra iv. 175) which in this case goes to the daughter or son's daughter (according to Sūra iv. 12), but the rest of the estate after deduction of all quotas that have to be paid; they are in this case therefore called *‘aṣāba ma'a l-ghairi* (“inheriting with one another as *‘aṣāba*”).

c. Rights of the quota-heirs (*dhawu l-farā'id*; cf. the article FARĀ'ID). The regulations in this connection are in general based on literal interpretation of the Qur'anic regulations. It is

true that here only the daughters, parents, husband and wife, and brothers and sisters are allotted a quota but (with some limitations) the rules holding for the daughters have been extended to the daughters of the son and those for the parents to the grandparents; in addition, a distinction has been made among the sisters between the full sister, the half-sister on the father's side and the half-sister on the mother's side. The total number of quota-heirs has thus been raised to twelve: 1. The daughter is entitled to half the estate, two or more daughters get two-thirds, but if daughters inherit along with sons, their claim to the quota drops and sons and daughters receive the whole after deduction of the quotas to be paid; in this case the daughter's share is half a son's. 2. The daughter of a son is subject to the same rules as a daughter; inheriting along with the son of a son she receives half as much as he as *‘aṣāba bi-l-ghairi*. As the son's daughter is related to the son through him, she is excluded from participation when a son of the legator inherits. A daughter on the other hand does not exclude a son's daughter from the succession; as however daughters and son's daughters together have only two-thirds of the estate as their quota, a son's daughter has only a sixth if there is one daughter, and nothing if there are two or more, unless she inherits in these cases along with a son's son as *‘aṣāba bi-l-ghairi*. 3. The father's quota is always a sixth of the estate; in addition he appears as *‘aṣāba* and receives as his quota also any residuum of the estate after deducting all quotas, unless male descendants of the legator inherit jointly with him. 4. The paternal grandfather (in default of him, the remoter ascendants) also receives one sixth of the estate as his quota but is excluded by the father; he also appears as *‘aṣāba* (like the father) if there are no male descendants nor father of the deceased. But if in addition to him there are also brothers of the legator, he appears with them as *‘aṣāba* (on the share which falls to the grandfather in this case and in the case where there are also quota-heirs cf. above b). 5. The mother by Sūra iv. 12, receives one-sixth of the estate if there are children, son's children or two or more brothers or sisters of the legator; otherwise a third (on the meaning of the Qur'anic rule cf. above; in practice the father in this case as a rule receives two-thirds, i.e. according to the scheme, one sixth as quota-heir and the rest as *‘aṣāba*; on the exceptions cf. below under d). 6. The quota of the grandmother is always a sixth; from this the mother's mother is excluded by the mother, and the father's mother by the father and mother; all other female ascendants of the legator rank equally with the grandmothers on both sides if there is no father and mother, so far as they are not related to the deceased by a male descendant not entitled to inherit (therefore for example the mother of the maternal grandfather inherits nothing). 7. A full sister receives half, two or more such sisters receive together two-thirds of the estate (Sūra iv. 175). Along with a full brother or grandfather she becomes *‘aṣāba bi-l-ghairi* and receives the half of the brother's share (Sūra iv. 175). Along with the daughter or son's daughter she becomes *‘aṣāba ma'a l-ghairi* (cf. above b); sons, sons' sons and the father exclude her from succession. She has a claim to the quota only when the legator has died without leaving de-

scendants or male ascendants. 8. The treatment of the half-sister on the father's side in general corresponds to that of the full sister; along with a half-brother on the father's side or the grandfather, she becomes *ʿaṣaba bi l-ghairi*, with the daughter or son's daughter *ʿaṣaba māʾa l-ghairi* (cf. above 6); sons, sons' sons, father and full brothers exclude her from the succession. Full sisters exclude her only in so far as two or more full sisters receive together two-thirds of the estate, so that nothing is left for the half-sisters; if however the half-sister inherits along with one full sister they receive together two-thirds, the full sister getting a half and the half-sister a sixth; unless she in these cases inherits along with a half-brother on the father's side as *ʿaṣaba bi l-ghairi* (i.e. the same rule as with daughters and sons' daughters; cf. above). 9 and 10. The rights of the half-brother on the mother's side and of the half-sister on the mother's side are based on Sūra iv. 15: each of them receives a sixth, two or more together share a third among them; they are excluded from the succession by descendants and male ascendants. 11. By Sūra iv. 13 the widow receives half of the estate, but only a quarter if there is a son or son's child; it is indifferent whether these are his wife's or his own descendants. 12. The widow, by Sūra iv. 14, receives the half of what a widower would receive under the same circumstances; if the deceased leaves more than one widow they share equally the quota allotted to the widow. During the *ʿidda* (period of waiting; q. v.) after a revocable *ṭalāq* a man and woman are still regarded as man and wife for purposes of inheritance.

d. Exceptions from the general rules. Although the quota-heirs can never all inherit together and in particular the collateral relatives are excluded from their quotas by those in the direct line, the number of qualified quota-heirs may sometimes be so large that the sum of their shares is larger than the whole estate; in this case their shares are proportionately reduced [cf. 'AWL]. Otherwise, the occurrence of a number of heirs makes no change from the main rules necessary, except in a few particular cases which have special names; these are cases in which, if the main rules were strictly carried through, the inheritances would be in a proportion to one another which would be contrary to the law; e.g. in the case of the so-called *gharibatūn*: if some one dies leaving a husband or wife and both parents, the mother would receive in this case a third, the father's share however, which is usually two-thirds (cf. above c 5), would be here reduced by the quota either of the widow i.e. a quarter or of the widower, i.e. the half and thus reduced to five-twelfths or to a sixth; according to tradition, it was 'Omar who decided in this case that father and mother should share, in the proportion of two to one, what remains after deducting the portion of the widow or widower, an arrangement which is doubtless in the spirit of the Qur'anic rule. Another case, the so-called *musharraka*, is that in which a wife leaves her husband, her mother, two or more half-brothers on the mother's side and also one or more full brothers; as the quotas in this case make up the whole estate, nothing would be left for the full brothers as *ʿaṣaba*, and they are more closely related to the legator than the half-brothers; in this case, which is also said to have been

decided by 'Omar, the law lays down that the full brothers have the same rights as the half-brothers so that all inherit in equal shares the third originally set aside for the half-brothers. On a third case of this kind cf. AKDARIYA.

7. The most important points of difference among the *madhāhib*, including the early legists, are the following. It is unanimously agreed that an unbeliever cannot inherit from a Muslim nor a Muslim from an unbeliever; but Sa'id b. al-Musaiyib and Ibrāhīm al-Nakha'ī recognised the right to inherit in the latter case. Unbelievers who belong to different religions cannot inherit from one another according to Mālik and Ibn Ḥanbal, but they can according to Abū Ḥanifa and al-Shāfi'i. There are three views regarding ability to inherit from the *murtadd* according to Mālik, al-Shāfi'i and Ibn Ḥanbal his whole estate goes to the state treasury; according to Abū Yūsuf and al-Shaibānī it goes to his Muslim heirs; according to Abū Ḥanifa what he has made while a Muslim goes to his Muslim heirs, but what he made after his apostasy goes to the treasury. If a legator has been deliberately (with *ʿamd*) and illegally slain, his slayer, it is unanimously agreed, is excluded from inheriting. Abū Ḥanifa, al-Shāfi'i and Ibn Ḥanbal, but not Mālik, also exclude one who has killed him without design (with *khafaʾ*; q. v.). One who is a slave to some degree can, according to Abū Ḥanifa, Mālik and al-Shāfi'i, neither inherit nor bequeath; according to Ibn Ḥanbal, Abū Yūsuf, al-Shaibānī and al-Muzani he can inherit or bequeath in the proportion he is free. According to Abū Ḥanifa and Ibn Ḥanbal, if there are no *ʿaṣaba* and quota-heirs, the *dhawu l-arḥām* inherit; according to Mālik and al-Shāfi'i (cf. above 6a) as well as Zuhri, al-Awza'i and Dāwūd al-Zāhiri, in this case the treasury steps in. If there are only quota-heirs, according to Mālik and al-Shāfi'i the remainder goes to the treasury, according to Abū Ḥanifa and Ibn Ḥanbal however also to the quota-heirs; according to Sa'id b. al-Musaiyib the maternal uncle inherits along with the daughters. The relationship of *mawlā*, which is produced by some one attaching himself to the tribe (usually on the adoption of Islām by a non-Arab; cf. above, sect. 5) and which results in the patron becoming surety for the *diya* [q. v.] of the client, does not, according to the usual view, give any right to inherit. Ibrāhīm al-Nakha'ī and Abū Ḥanifa take the opposite view but hold but it may be dissolved at any time by either side so long as the patron has not paid a *diya* for his client. The paternal grandmother is not excluded from the succession by the father, according to Ibn Ḥanbal only; in his view, in this case she inherits a sixth either alone or shared equally with the mother. Among female ascendants, according to Mālik, only the mothers of the two grandmothers inherit, likewise their mothers and so on, but according to Abū Ḥanifa also the mothers of all male ascendants and their mothers again, and so on; both views are quoted by al-Shāfi'i, but the latter is best known and has established itself in the *madhhab*. According to Mālik and al-Shāfi'i, the female ascendants on the father's and mother's side share in equal portions the sixth allotted to the grandmother who is nearer of the two to the legator. According to Abū Ḥanifa, however, the nearer female ascendant on the father's side excludes the remoter on the

[illegible][illegible]

mother's side from the succession. Whichever of the two sides is entitled to inherit a quota inherits, according to Mālik and al-Shāfi'i, only on ground of "stronger" relationship, according to Abū Ḥanifa and Ibn Ḥanbal on ground of both respects (this case, particularly frequent in the marriages of the Parsees, has been decided in various ways in Tradition; cf. al-Dārimī, *Farā'id*, bāb 42); in the case of two cousins on the father's side, of which one is also the brother on the mother's side, the latter, it is unanimously agreed, receives a sixth and the remainder falls to the two as *ʿaṣaba* in equal portions, while Abū Thawr and al-Ḥasan of Baṣra make him inherit the whole. The estate of a child, whose paternity has been disputed by *li'ān*, as well as that of an illegitimate child, passes in default of other heirs, according to Abū Ḥanifa, entirely to the mother (a third as Ḳur'ānic quota and the remainder as quasi-*ʿaṣaba*); according to Mālik and al-Shāfi'i the mother receives a third as Ḳur'ānic quota and the remainder goes to the treasury; according to one view transmitted from Ibn Ḥanbal the *ʿaṣaba* of his mother are regarded as his *ʿaṣaba*, and receive the remainder; the other view corresponds to that of Abū Ḥanifa. In the special case of the so-called *muṣḥarraka*, Mālik's view agrees with that of al-Shāfi'i (cf. above 6d); this is also the opinion of al-Zuhri and of Sa'id b. al-Musaiyib and others; according to Abū Ḥanifa and his fellows, Ibn Ḥanbal and Dāwūd al-Zāhiri, the full brothers actually receive nothing.

8a. The law of the Imāmis (Twelver-Shi'is) as regards inheritance is based on the same principles as that of the Sunnis but in its practice shows a number of features of its own, which already can for the most part be traced in the traditions, i.e. in the earliest post-Ḳur'ānic development. Among the divergences — apart from differences in terminology and presentation — are the classing of the *ʿaṣaba* and the *dhawu 'l-arḥām* together into one group of relatives, which is divided into three classes: 1. the ascendants in the first degree and the descendants; 2. the other ascendants and the descendants of the ascendants of the first degree; 3. the maternal and paternal uncles and aunts. Each of these classes excludes the following ones from the succession and within the two categories of the two first classes the relative of the nearest degree excludes all others of a remoter degree of relationship, i.e. for example the daughter excludes the son's son; within the third class a distinction is made between the uncles and aunts of the legator and their descendants, the uncles and aunts of his parents, and their descendants etc., and here also the member of a nearer degree excludes those of a remoter degree. Within the same grade all full relatives (male or female) exclude all relatives on the father's (not the mother's) side, i.e. full sisters exclude half-brothers; the relatives on the mother's side are excluded only from a share in the residuary estate by all other relatives of the same degree. If relatives whose relationships with the legator is traced through several persons inherit jointly, the proportion of their shares is settled by the (hypothetical) shares of the persons through whom they are related to the deceased. If, for example, paternal and maternal uncles inherit together, the former divide two-thirds of the estate (i.e. the father's hypothetical share), the latter a third (i.e. the mother's hypothetical share);

correspondingly, son's children and daughters children, children of brothers and children of sisters, and ascendants on the mother's and father's side. The rules applying to the brothers and sisters of a legator are also applied to his father's brothers and sisters and so on, if the latter are called upon to inherit; if, for example, father's full brothers and sisters (uncles and aunts), and father's brothers and sisters on the mother's side exist together, the latter are not excluded by the former but receive a third (if there is only one, a sixth) which is divided equally among them (Sūra iv. 15), and the former receive the remaining two-thirds (or five-sixths as the case may be) of which each uncle gets twice the share of an aunt; the process is similar when their children take the place of uncles and aunts; the grandfather (and if the case arises the remoter ascendants) also inherits equally with the brothers of the legator. Within similar groups the male inherits double as much as the female, so far as there are no special regulations to the contrary (cf. above); for the rest the male relative on the father's side is not specially privileged before the others, as among the Sunnis. Besides these heirs by blood, there are "heirs for special reasons", i.e. the husband and the patron (*muwālā*), namely 1. a patron who has released the legator from slavery; 2. a patron before whom the legator has become a Muslim, or who has pledged himself to pay the *diya* for him; 3. the *imām*, who here takes the place of the state treasury, and who, as the general protector of all Muslims, is entitled to inherit in the last resort. — In both main groups there are simple heirs and such as have a claim to a Ḳur'ānic quota. If the estate does not suffice to satisfy all the quotas, the shares are correspondingly reduced to the paternal relatives only, never to the maternal. What is left over after satisfying the quotas is given to relatives by blood according to the above rule; but if there are no blood relatives entitled to inherit, the quota-heirs, with the exception of the husband or wife, receive the residuum also by the residuary law (cf. however above); if there are no heirs by blood the patrons come in, in the order given, so that the *imām*, i.e. the treasury, inherits only in the last resort. — These general rules are sufficient to cause the distribution of an estate to look very different among the Shi'is from among the Sunnis. But there are in addition differences in detail, of which the most important are the following: The Muslim can inherit from the unbeliever (and apostate); even the remotest Muslim heir of an unbeliever has a preference over all non-Muslim heirs; unbelievers of all sects inherit from one another; the succession of the heirs to the estate of an apostate who was born a Muslim begins from his apostacy. The accidental killing of a legator does not exclude the slayer from inheriting. If the sole existing heir is a slave, he is purchased at the expense of the estate (his owner cannot refuse to sell him), thus becomes free and inherits what is left; if the parents of the legator are slaves, they must in all cases be purchased at the expense of the estate, according to some the children also (this is disputed) and according to others every heir (this has not been accepted). The part-slave inherits to the degree in which he is free. One who has a claim to an inheritance from two sides inherits on both grounds. Of the estate of a child whose paternity has been disputed by *li'ān*, the mother receives a third as the Ḳur'ānic quota

and the remainder as quasi-*ʿaṣaba*, according to the more usual view; according to the other the remainder goes to the *imām*. There are no legal relationships between an illegitimate child and his ascendants (including his mother and her relatives), only between him and his descendants; if there are none, the estate goes to the *imām*. In the special case of the so-called *gharibātān* (cf. above 6 d), there is no divergence from the general principles. — On the whole then the Shīʿa law of inheritance represents an independent systematisation of the common principles found in the Qurʾān and Tradition but diverging further from the old Arab pre-Islāmic principles; whether and how far it the Sunnī system already presupposes (as has been proved for the Zaidīs; cf. Bergsträsser, *O. L. Z.*, vol. xxv., p. 124) has not yet been investigated.

b. On the law of the Shīʿī Zaidīs cf. Strothmann, *Isl.*, vol. xiii., p. 36 sqq.

c. The most important peculiarities of the law of inheritance among the Khārījī Ibādīs are the following: the paternal grandfather inherits as quota-heir a sixth of the estate if there are descendants of the legator; otherwise he inherits as *ʿaṣaba*, thus excluding the brothers, just as he himself is excluded by the father. The grandmother is only excluded by the mother. Female descendants, like husband or wife, have no right to the residuum. Manumission confers no rights of inheritance; freedmen, negroes, Indians, Abyssinians or Nubians can inherit from another if there are no other heirs (cf. above, sect. 5). If there are no heirs at all, the estate is given away in charity. The special case of the so-called *musharraka* is settled as among the Shāfiʿīs (cf. above 6 d). — The dependence of this system on the Sunnī is apparent.

9. The law of inheritance, as a branch of family law and as possessing a peculiarly religious character from its very full regulation in the Qurʾān, has always been one of the chapters of Muslim law most carefully observed in practice [cf. ʿADA and SHARĪʿA]. As in the long run it must lead inevitably to the splitting up of even the largest estates, various endeavours have been made to avoid this result, which was considered undesirable. A plan, frequently adopted, was to constitute considerable portions of the estate religious endowments [cf. WAKF] the proceeds of which could be disposed of by the grantor as he pleased; but most endowments in course of time became much broken up. Another way adopted in the Dutch Indies is, in keeping with the local *ʿāda*, to admit only a portion of the actual estate to division among the heirs; we also frequently find an estate divided already in a lifetime by gift or friendly arrangement, and not infrequently some member of the family, according to circumstances, simply takes over the estate and obligations of the deceased; lands here are taken out of the control of Muslim law. So far only a very few Indian modernists (notably Khuda Bukhsh) have dared to criticise the Muslim law of inheritance and demand its abolition. It is the general practice of Muslim lands and is used by the *sharīʿa* tribunals, which also undertake the distribution of the estate, a thing too difficult for a layman to attempt. The Muslim law of inheritance is also applied to members of other creeds, when they come with problems to be settled to the Shariʿa tribunals, which often happens in Muslim countries.

Bibliography: (so far as not already quoted), in addition to the Muslim sources: On sect. 2: Robertson Smith, *Kinship and Marriage*², p. 65 sqq. — On sect. 3 (chronology of the Qurʾān passages): Noldeke-Schwally, *Geschichte des Qurʾāns*, vol. i. — On sect. 4 and 5: Wensinck, *Handbook of early Muhammadan Tradition*, s. v. Heirs; Feltier, *Le Livre des Testaments du "Ḥaḥīh" d'el-Bokhārī*; al-Shawkānī, *Nail al-Awṣār*, in *Kitāb al-Farāʿid*. — On sect. 6 and 7 (for the earlier period the two recensions of Mālik's *al-Muwattaʿa* are a valuable source): Juynboll, *Handbuch*², p. 237 sqq.; do., *Handleiding*³, p. 241 sqq.; Sachau, *Muhammadianisches Recht*, p. 181 sqq. (Shāfiʿī); Baillie, *The Moohummedan Law of Inheritance*; do., *A Digest of Moohummedan Law*², vol. i. (Hanafi); Guidi and Santillana, *Il muḥtaṣar di Ḥalīl ibn Ishāq*; Sánchez Pérez, *Partición de herencias entre los Musulmanes* (Mālikī); Hirsch, *Abd ul Kadir Muhammed: Wissenschaft des Erbrechts* (Hanafi and Shāfiʿī). — On sect. 8a: Querry, *Droit Musulman*, vol. ii., p. 326 sqq.; Baillie, *A Digest of Moohummedan Law*, vol. ii. — On sect. 8c: Sachau, *Sitzungsberichte der Preuss. Akademie der Wissenschaften*, 1894, p. 159 sqq. — On sect. 9: Juynboll, *Handleiding*³, p. 250 sq. Further references there given p. 406.

(JOSEPH SCHACHT)

MIRDĀS B. UDAIYA, Khārījī leader in Baṣra, killed in 61 (680—681). He belonged to the Rabʿa b. Hanẓala b. Mālik b. Zaidmanāt (called Rabʿa al-Wustā, *Naḥḥīd*, ed. Bevan, p. 185, 5 = 699, 11; *Mufaḍḍaliyyāt*, ed. Lyall, p. 123, 12, 772, 8), a branch of the tribe of Tamīm which supplied so many leaders to the Khārījī movement. His father was called Ḥudair b. ʿAmr b. ʿAbd b. Kaʿb and Udaya was his mother's or grandmother's, name; she belonged to the tribe of Muḥārib b. Kḥasafa (Ibn Duraid, *Kitāb al-Ishṭīkāḥ*, ed. Wüstenfeld, p. 134; Ibn Kṭaiba, *Kitāb al-Maʿārif*, ed. Wüstenfeld, p. 209; Ṭabari, *Mubarrad*, Balādhuri, cf. *Bibl.*). He is often called by his kunya Abū Bilāl.

His brother ʿUrwa b. Udaya had been one of the instigators of the Khārījī movement of secession at the battle of Šiffin; he himself had taken part in the movement and had fought against the Caliph ʿAlī at al-Nahrawān (38 A. H.); after this defeat he gave up all political activity although, like his brother, he remained faithful to his old opinions; but he declared himself against armed insurrection, political assassination (*istīʿrād*) and the participation of women in the Khārījī movement. These moderate views, which Mirdās retained till the end of the caliphate of Muʿāwiya and which caused the extremists to class him among the *ḥaʿada* (quietists) of the Khārījīs, made it all the more remarkable when he came out openly and actively against the excesses of the governor of Baṣra, ʿUbadallāh b. Ziyād, in his repression of Khārījism. A woman named al-Balḍjāʾ or al-Baḥḍjāʾ (the latter form, given by Ibn al-Aṭhīr from al-Balādhuri, seems to be wrong) had been cruelly martyred by the governor. Mirdās's indignation was so aroused that he left Baṣra with 40 of his followers and went to al-Ahwāz on the Fārs frontier, where he held out for a long time without committing any of those acts of fanaticism usual among the Khārījīs and confined himself to imposing a levy equal in value to the pension

(*aqā*) which was legally due to him and his companions (60 A. H.). 'Ubaidallāh b. Ziyād sent against Mirdās the Kilābī chief Aslam b. Zur'a (this is the best authenticated form; al-Ṭabarī in the first of the two versions which he quotes has Ibn Ḥiṣn; al-Dinawarī: Aslam b. Rabī'a; Yāqūt: Ma'bad b. Aslam) at the head of 2,000 men. They met near a village called Āsak (or Mirdjās, according to a verse quoted by Yāqūt, iv. 712—713) but the Khāridjīs, in spite of their greatly inferior number, defeated him. In the following year, a second expedition of 4,000 men under the Tamīmī 'Abbād b. Akhḍar was organised by Ibn Ziyād; he found the Khāridjīs encamped in front of Darābūdjird. It was a Friday and the two parties agreed to finish their prayers before fighting. But the government troops, breaking the oath they had sworn, fell upon the Khāridjīs while they were still praying and massacred them. Mirdās's head was cut off and taken to Ibn Ziyād.

This episode, insignificant in itself, provoked a tremendous reaction throughout the 'Irāk in view of the fame which the piety and moderation of Mirdās had brought him. His death was promptly avenged by 'Abīda b. Hīlāl, who was later to become one of the leaders of the Azrakīs, and it was in the name of Mirdās that Khāridjīs rebelled again on the death of the Caliph Yazīd I (65 A. H.). The heroism and death of Mirdās were sung by several poets, notably the famous 'Imrān b. Ḥittān [q. v.]; his memory was cherished for long in Khāridjī circles and especially in 'Omān, the centre of the Sufriya (al-Mubarrad, p. 533, l. 14 = *Aghāni*, xvi. 154). The latter, whose intransigence is much less marked than that of the Azrakīs, may rightly regard Mirdās as their predecessor (cf. Haarbrucker, *asch-Scharastānī's Religionsparteien und Philosophen-Schulen*, ii. 406, from the *Kitāb al-Tabḡir fī 'l-Dīn of Shāhūr b. Ṭāhir al-Isfarā'īnī* [Brock., i. 387]); on the other hand, the Mu'tazilis held that Mirdās had only rebelled under compulsion (*munkirān*) and the Shī'īs even denied that he was a true Khāridjī (al-Mubarrad, p. 560—561).

Mirdās's brother, 'Urwa b. Udaya, does not seem to have taken part in the insurrection; but this did not save him from persecution by Ibn Ziyād, who had him arrested and executed shortly after the death of Mirdās; the version which puts his execution before the rising of Mirdās in 58 A. H. (Ṭabarī, ii. 185) is less probable.

Bibliography: The fullest and most complete account is that of al-Mubarrad, *al-Kāmil*, ed. Wright, p. 584—596, without indication of source; al-Balādhuri. *Ansāb al-Ashraf*, Constantinople MS. 'Ashir Efendi, p. 386^a—387^b, is very close to but not identical with al-Mubarrad's and quotes a large number of verses. He also omits the *isnād*. Al-Ṭabarī, *Annales*, ed. de Goeje, ii. 186—187, 390—391 relies on two sources, Wāḥb b. Djarir and an anonymous one, of which the former does not seem very reliable and the latter follows al-Mubarrad and al-Balādhuri, but is much shorter; Yāqūt, *Mu'jam al-Bulḍān*, ed. Wüstenfeld, i. 61—62 (cf. also ii. 434, l. 1) seems to have used an independent source. Ibn al-Athīr, *al-Kāmil*, ed. Tornberg, iii. 428—430, iv. 81—82 harmonises al-Ṭabarī and al-Balādhuri, and follows al-Mubarrad, p. 592 for the death of 'Urwa; al-Dinawarī, *al-Akhbār al-firwāl*, ed. Guirgass, p. 278—279 knows the episode, but

wrongly attributes it to the Azrakīs (sic!) and does not even mention Mirdās. — Cf. also Wellhausen, *Die rel.-pol. Oppositionsparteien* (Abh. G. W. Gott., phil.-hist. Kl., N. J. V., 2, 1901), p. 25—27. (G. LEVI DELLA VIDA)

MIRDĀSIDS, an Arab dynasty in Syria. The Mirdāsids took their name from the leader of the Beduin tribe of the Kilābis, Šāliḥ b. Mirdās. We know nothing of Mirdās himself. On Šāliḥ cf. the art. and on his successor Šibl al-Dawla, the art.; for the other members of the dynasty cf. HALAB.

In the beginning of the fifth (eleventh) century the Kilābis migrated from the 'Irāk to the region of Aleppo. In 414 (1023) their leader Šāliḥ took the town. The dynasty, at first so strong, gradually became so feeble that its last representative Šabīḳ exchanged the town in 472 (1079) in spite of his brothers' protest for a few smaller towns with the then powerful Beduin chief Muslim b. Ḳuraish.

The importance of the Mirdāsids, the second last Arab ruling family of Syria, lies in the fact that they successfully defended the northern province of Aleppo by arms and policy against the Byzantines and Turks. Lane-Poole gives the genealogy in his *Muhammadian Dynasties*, London 1894; Šibl al-Dawla Nā'ir (2) had also a son Mubārak and Rashīd al-Dawla Maḥmūd (4) had also sons Šabīb and Wathhāb.

Bibliography: given in the article.

(M. SOBERNHIEIM)

MIRJAM. [See MARYAM]

MĪR KHĀWAND, historian, author of the *Rawḍat al-Šafā'* ("Garden of Purity"). He was son of Burhān al-Dīn Khāwānd Šāh, native of Transoxiana, and, apparently, of Bukhāra. He lived much in Herāt and died there on June 22, 1498, aged 66. His work is a universal history in seven volumes, beginning with the Creation and ending at the death of Sulṭān Ḥusain of Herāt in 1505. The last volume, however, is really the work of his grandson, Khā'andāmīr [q. v.]. His work is not so interesting as his grandson's *Ḥatīb al-Siyar*, for it is a compilation and wants the personal note. The style too is bombastic, and there is little historical criticism. But it is a work of great industry and has a high reputation in the East. It was lithographed in Bombay 1848, in Tihirān 1852; a Turkish translation appeared at Constantinople in 1842; partial translations were made by Jenisch, Mitscharlik, Wilken. Vullers. Shea (O. T. F. series), Rehatsek (T. F. series), Jourdain and Silvestre de Sacy (*Journal des Savans*, 1837).

Bibliography: Quatremère (*Journal des Savans*, 1843, p. 127, 170); Rieu. *Cat. Pers. MSS. British Museum*, i. 87; Elliot-Dowson, iv. 127 (and the authorities quoted there, p. 132 sq.); Ethé (s. v. Mirkhond), *Enc. Brit.*, 11th ed., vol. xviii. (H. BEVERIDGE)

AL-MIRRIKH, the planet Mars. The etymology of the name is unknown. The sphere of Mars is the fifth sphere of the planets. It is bounded on the inner side by the sphere of the sun and on the outer side by the sphere of Jupiter, and its breadth is according to Ptolemy (xx. 376) 998 miles. Its period of revolution is estimated at 1 year, 10 months and 22 days. In about 17 years, after 9 revolutions, Mars comes back to the same spot in the heavens; it spends about 40 days in each sign of the zodiac and covers about 40

minutes each day. It is said to be one and half times the size of the earth.

Astrologers call Mars *al-Naḥs al-aṣghar*, the minor misfortune. It is the planet, which next to Saturn is credited with the most ominous omens and effects, war, revolutions, death, conflagration etc. The character of those born under Mars is in keeping with this.

Bibliography: al-Kazwīnī, *ʿAdjāʾib al-Makhlūqāt*, ed. Wüstenfeld, i. 26; A. Hauber, *Planetenkinderbilder und Sternbilder*, Strassburg 1916, passim; *Rasāʾil al-Iḥwān al-Ṣafāʾ*, Section iii., iv. (J. RUSKA)

MĪRZĀ or MĪRZĀ, a Persian title, from *Mir-zāda* or *Amīr-zāda*, and originally meaning "born of a prince" (cf. *Malik-zāda* and *Farhang-zāda*, which occur in Sa'di etc.). The title, in addition to bearing its original significance, was also given to noblemen and others of good birth, thus corresponding to the Turkish Aghā. Since the time of Nādir Shāh's conquest of India it has been further applied to educated men outside of the class of *mullās* or *ʿulamāʾ*. In modern times the title is placed after the name of a prince, and before the name of other persons bearing it: e. g. *Husain Mirzā* "Prince Husain", whereas *Mirzā Husain* is practically equivalent to "Mr. Husain". (R. LEVY)

MĪRZĀPŪR, a district (and town) in India in the Benares division of the Central Provinces: area 5,240 square miles. The population is nearly 1,100,000 of whom barely 7% are Muhammadans. The latter show a tendency to increase in proportion to the Hindus, owing to their greater vitality, containing as they do a smaller proportion of the very poor. The district is however a stronghold of Hinduism, and Islām makes little progress by conversion. Nothing is known of the early history of the district. It was occupied by Rājputs in the eleventh century A.D. and in the next century passed into the power of the Muslim rulers of Djawnpūr. Down to the Moghul conquest, the district played an important part in the military history of India, as it contained the great stronghold of Ānār which guarded the gateway of the east.

At Rasulpur near Ahraura is the tomb of a Muslim martyr called Saiyid Ashraf 'Alī which is a place of pilgrimage. Near the gateway of the fort of Bijaigarh is shown the tomb of Saiyid Zain al-'Abidin, the saint who miraculously took the stronghold for Sher Shāh. The town of Ānār contains two mosques at one of which are preserved garments said to have belonged to Hasan and Husain. The tomb of the Afghān saint Shāh Kāsim Sulaimānī (1545—1606) with those of his family forms a group of buildings of architectural interest. His festival is celebrated on the 17th—21st Djumādā 1.

Mirzāpūr city is the capital of the district of the same name. It has a population of 80,000 of whom a sixth are Muslims. It is a Moghul foundation dating from late in the xviith century: in the xviiith and early xixth centuries it attained great prosperity as a trading centre, being at the junction of important roads and at the highest point on the Ganges reached by the larger ships. In 1864 the opening of the East India Railway left the town isolated; since then it has declined, as the railway now carries the trade with which it used to deal.

Among the mosques is one founded in the middle

of the sixteenth century by a Muslim lady named Ganga Bibi who also left funds to build a sarai. The town contains the celebrated Hindu shrine of Vindhesvari, much visited by pilgrims and formerly held in special veneration by Thugs.

Bibliography: D. L. Drake-Brockman, *District Gazetteer of Mirzapur*, Allahabad 1911. (J. ALLAN)

MĪRZĀ TAQĪ KHĀN, *Amīr-i Nizām* or *Amīr-i Kabir*, was born at Farāhān of humble parents, his father having been first the cook and then the steward of the *Khā'im Maḥām*, Mīrzā Abu 'l-Kāsim, who ended his life as the first minister of Muḥammad Shāh Qājār (1834—1848). In 1829, as a young menial, Taqī Khān accompanied the Persian Commander-in-Chief on the Mission which was sent to St. Petersburg after the murder at Tih-rān of the Russian ambassador Grebaïdoff. On his return to Persia after this visit to Europe, he was promoted to be a *mīrzā* or writer, and subsequently was advanced to the rank of *khān*. By the time his master and patron died the young official had achieved distinction enough to be made wazir responsible for the army in Ādharbāïdjān. Still further honours came, when, during the negotiations at Erzerūm for the settling of outstanding disputes between Persia and Turkey, he was sent to represent his own country in place of the Mushīr al-Dawla, who had fallen ill after his appointment as plenipotentiary. On the conclusion of the Treaty of Erzerūm, Mīrzā Taqī returned to Tih-rān and was then commissioned to accompany the young Walī 'Ahd, Nāṣir al-Dīn Mīrzā, to Tabriz, to which the latter was sent as governor of Ādharbāïdjān. In 1848, Taqī Khān's master became Shāh, and on the way back to Tih-rān he appointed his lieutenant to the post of Prime Minister. It is said that either modesty or prudence caused him to refuse the title of *Ṣadr-i Aẓam* which is bestowed on the holders of the office, but, in any event, he contented himself with the less imposing one of *Amīr-i Nizām*, which he had held in Ādharbāïdjān as Commander-in-Chief. As a mark of the royal favour he was given the sister of the Shāh in marriage, and found in her a wife who displayed the utmost devotion to him for the short remainder of his life.

In office he had the rare distinction in Persia of being inamenable to bribery, and he had a regard for his country which led him to resent interference from foreign powers in its affairs. Moreover, recognizing the reactionary influence of the *ʿulamāʾ*, he attempted in such ways as were open to him to counteract their activities. He reorganised the army in spite of attempts by his enemies to rouse certain sections of the troops into revolt against him, he made efforts to improve the fiscal system of the country and he had some success in making the provincial treasuries self-supporting. Trade, both internal and external, was encouraged by him, and it was he that equipped Tih-rān with the fine bazars which it now has. As has been indicated, his period of office was not a peaceful one. In 1850 occurred the execution of the "Bāb" [q. v.] at Tabriz, the revolts of the Bābis at Yazd and Zindjān and the execution of the "Seven (Bābi) Martyrs" at Tih-rān. The risings were put down with great cruelty, and in consequence an attempt was made by the Bābis on the life of the Amīr-i Nizām, whom they regarded as responsible. Almost from the begin-

ning of his period of office he had aroused by his influence over the Shāh the jealousy of the latter's mother and of possible rivals, and their secret attacks were helped by his overbearing character. In November 1851 his enemies succeeded in securing his dismissal, after which the ill-judged attempt of the Russian ambassador to give the fallen minister his protection roused the anger of the Shāh who ordered him to retire in disgrace to Kāshān. There, on January 9, 1852, he met his death at the hands of the sovereign's farrāsh-bāshī.

MISĀḤA (science of measurement, plane and solid geometry) is the name given by the Arabs to the science of comparing magnitudes and its methods. In the wider sense it covers the measurement of all things which can or need be measured, mainly lengths, areas, volumes, weights and numbers; in particular however, the *ilm al-misāḥa* deals with geometry, with definitions of solids and geometrical figures as well as the laying down of rules for the calculation of lengths, areas and volumes of the different figures in elementary plane and solid geometry. The conception *misāḥa* therefore includes only a portion of what we call measurement in the wider sense, or practical or technical geometry (i. e. the measurement of things having length, breadth and volume); in particular it excludes mensuration in the narrow sense, geodesy. The Arabs possessed special treatises dealing with the problems of geodesy. They therefore make the same distinction between theoretical and applied measurement, which had developed among the Greeks from the time of Aristotle and is most clearly expressed by Hero in his *Metrica* and *Dioptra*.

The definitions given by the Arabs themselves of the conception *misāḥa* are very varied. Some authors give a very wide one (e. g. al-ʿUmarī: "Measurement consists in ascertaining an unknown quantity by means of a known one. The result gives the amount of the unknown quantity in units of the quantity used for measuring"); most of them mean by it the measurement of length, area and volume. Al-Shīnshawrī makes a clear distinction between direct measurement, "the test of coincidence" (*taṭbīq*), and indirect measurement by calculating from certain formulae.

We find treatises on geometry throughout the whole period in which the Arabs acted as the transmitters of the ancient culture with which they had become acquainted, from the earliest beginnings of their literary activity at the beginning of the ninth century A. D. to the decline of Arab mathematics about 1600. The purpose of such works was to give the future surveyor, architect or soldier the necessary equipment, the theoretical foundation for his profession. Three groups of these treatises can be distinguished according to their method of treatment:

a. those which are quite like our modern collections of formulae, are made as brief as possible, give only the usual methods of calculation and contain no examples (e. g. that of Ibn al-Bannā);

b. those which contain examples, completely worked out, illustrating the process of calculation (e. g. that of al-Baghdādī);

c. those which only contain a series of fully worked out problems, and are a kind of exercise book (e. g. that of Abū Bakr).

On the method of exposition in these works it should be noted that we cannot of course speak of mathematical formulae in our sense of the word among the Arabs. They, especially the eastern Arabs, had no language of mathematical formulae; it was only late among the western Arabs and probably only in the field of algebra that a technical language was developed. The rules for measuring were always written out fully in words, sometimes even the figures occurring in the text.

The matter of the works on *misāḥa*, especially the larger ones, as a rule comprises introductory remarks, rules for calculating areas and volumes and the most important lengths found on them, and occasionally also practical exercises.

A. Introductory remarks. These are as a rule

1. Definition of the term *misāḥa*.
2. Explanation, description and systematic classification of the geometrical figures to be discussed.
3. Definition and list of the most common units of measurement.

B. Rules for calculation.

I. Plane surfaces (and the lengths occurring on them).

1. Quadrilaterals (square, rectangle, rhomboid trapezium, trapezoid, quadrilateral with salient angle).
2. Triangles (equilateral, isosceles, scalene, right angled, acute-angled and obtuse-angled).
3. Polygons (regular, irregular, "drumshaped figure" (*mufabbal*), "hollow figure" (*mudjawwif*) "stepshaped figure" (*mudarradj*)).

"Drumshaped" and "hollow" figures are formed by the combination of two congruent trapeziums in such a way that in the former the shorter, in the latter, the longer parallel sides coincide; a number of varieties are distinguished. The stepshaped figure is formed by placing together a number of rectangles of the same length but different breadth, in which the proportions of the breadths form an arithmetical progression.

4. Circle, segments of a circle (semi-circle, segment, sector, circumference) and related areas (horseshoe or crescent [*hilālī*], egg-shape, bean- or lentil-shaped, or oval figures).

The crescent is formed by the subtraction of two segments of circles of different radius with a common chord. egg-shape and bean-shape by the addition of two congruous segments which in the egg-shape are less, in the bean-shape greater than the semi-circle. The area of the oval (ellipse) is given by Savasorda as $\frac{1}{4} (a + b)^2 \pi$.

II. Solids (and the areas, especially superficies, and lengths that occur on them).

1. Prism (ordinary straight and oblique prism, square column, rectangular column, dice, triangular prism, obliquely cut prism, *corpus simile domui* in Abū Bakr as translated by Gerard of Cremona).
2. Cylinder.

3. Pyramids (straight and oblique pyramids, sections of pyramids).

4. Cones (straight and oblique cone, section of cone).

5. Sphere and section of a sphere, hemisphere, segment, sector and zone.

6. Regular and semi-regular bodies (the five Platonic and two Archimedean are treated at any length only in al-Kāshī).

7. Other bodies [cylindrical vault (*azūdī* and *ṭiḳān*); the only difference between them is the length] hollow dome (*kubba*), roof-shape (*corpus simile caburi* in Abū Bakr), wreaths and discus (hollow cylinder), terrace-shaped figures].

C. Practical exercises.

These are generally speaking rare in works on *misāḥa*. We frequently find exercises in dividing fields modelled on Hero and Euclid. Savasorda has a number of exercises on fields on slopes, in hollows and on summits and on the calculation of the heights of hills; al-Ḥanbalī has some on the measurement of inaccessible pieces of ground, the depth of wells and breadth of rivers. Of other problems may be mentioned, for example, the calculation of the number of pieces of stone or bricks required to build a house or a roof, the ascertainment of the height of a wall.

It must not however be supposed that the subject matter as above described is fully contained in any work on *misāḥa*. The individual works differ in subject matter according to the inclinations and abilities of their authors, just as our text-books of geometry do at the present day. We find works planned on a very comprehensive scale (by al-Ḥanbalī and al-Kāshī), alongside of very brief ones, often dealing only with portions of the subject (e.g. the anonymous Berlin MS. N^o. 5954 which contains only formulae for calculating plane surfaces), or even only a single problem (like the treatise by al-Shīnshawri). We therefore often find expositions which are only put into works on geometry in order to show the author's special knowledge or results of his research in a particular field.

Among remarkable examples of this kind are the insertion by Ḍjamshīd al-Kāshī in a work on *misāḥa* of a treatment of regular and some semi-regular bodies (the calculation worked out by him in sexagesimal fractions to the fifths is so accurate that it only begins to differ from the correct figure in the tenth decimal place); the formulae for the area of a surface given by al-Umawī $F = \sqrt{abcd}$ for trapezoids with a right angle and his improvement of Hero's formulae for the segments of a circle; the formula for an arc given by al-Karkhī; the formula $d^2 = \frac{1}{9}[n(n-1) + 6]a^2$ where d is the diameter of the circle around a regular polygon of n sides of length a given by the same author and al-Baghdādī (the same formula is found in Nemorarius and Regiomontanus and attributed by the latter to the Hindus; it is however, so far as we know, not found in any Hindu mathematical work yet published); also the application of algebra to geometry by Abū Bakr and Ibn al-Bannā'. The former uses the algebraical solution for problems of areas in order to show the application of equations of the first and second degree to the six cases distinguished by al-Khwārizmī; the latter uses combinatorial analysis to investigate the different possibilities of stating the problem.

The methods of calculating the volume are the same as we find among the Greeks and Egyptians. When it is not a question of matter that has been taken over from them, in which case the formulae are directly adopted, the obtaining of results is purely inductive and empirical. Al-Karkhī for example for the volume of a sphere gives, in addition to the formulae d^3 ($\frac{11}{14}$)², on the method of obtaining which he says nothing, also d^3 ($\frac{28}{45}$) which he gets by comparing the weight of a cube of wax with the weight of a sphere, which is made out of the cube of wax and whose diameter is equal to the edge of the cube. al-Baghdādī deals with a method of ascertaining the volume from the weight and specific gravity. al-Kāshī knows the method of immersion of Archimedes mentioned by Hero. The direct method of measuring the length of areas by laying a thread along them is still recommended as the most reliable by al-Karkhī and Bahā' al-Dīn. It is evident that such methods must lead to approximative results and formulae of approximation, the typical feature of practical geometry, continue to be used by the Arabs in measuring long after they obviously knew of their inaccuracy. Ibn Mammātī criticises the usual formulae for the area of a triangle $\frac{1}{2}(a+b)\frac{3}{4}c$ and $\frac{1}{2}(a+b)\frac{2}{3}c$, al-Baghdādī the formula for a quadrilateral $\frac{1}{2}(a+c)\frac{1}{2}(b+d)$ which comes from the Egyptians.

The reasons for the long survival of such rules are partly that the formulae gave in practice quite useful results and partly that the practical men who were concerned with measurement in the exercise of their trade wanted values easy to calculate rather than great mathematical accuracy and took no note of slight errors, especially if they thereby avoided calculations with roots. For similar reasons and in keeping with the traditional practice, almost all works of *misāḥa* give no scientific geometrical proofs of the accuracy of the formulae they quote. Only the book of the Jew Abraham Savasorda, who may be reckoned among the western Arabs, gives logically worked out proofs in any number; we occasionally find references to early mathematicians (especially Euclid) in Ibn al-Bannā' and Ibn al-Ḥanbalī. Probably inspection was quite sufficient ('Abd al-'Azīz for example draws plane figures in a network of squares each of one unit and counts the squares and their parts within this area) or a simple demonstration in some form or a calculation to prove the correctness of the procedure, which was frequently illustrated also by examples completely worked out.

A further peculiarity of Arabic authors was to give formulae which agree completely in substance in different algebraical forms. The Berlin MS. N^o. 5954 gives for example for the calculation of the section of the hypotenuse q in the right angled triangle the following formulae: $q = \frac{1}{2}[a + (c^2 - b^2):a] = \frac{1}{2}[a + (c+b)(c-b):a] = \frac{1}{2}[a + (c+b):\frac{a}{c-b}] = \frac{1}{2}[a^2 + (c^2 - b^2):a]$. This differentiation was probably only intended to give as many forms as possible of the relations between the known and unknown magnitudes so as to afford the practical man a choice of different correct formulae of which one might suit the special case better than another.

The sources of Arab geometry are to be sought among the Greeks and Hindus. The form and

substance of the rules are almost entirely Greek, especially in the older authors. Hero's "elaborations" in particular, which in turn go back to Egypt, seem to have been the model for Arab works on geometry. To Egypt may be traced the prefacing of a metrological section (found in many books on *misāha*), the problems on dividing fields, the formula for the trapezoid, the special name for the upper side of a quadrilateral (*ra's al-'arīf*). Hindu are the values for π in al-Kh'wārizmī, the formula $\sqrt{a^2 + b^2 + c^2 + d^2}$ for the quadrilateral inscribed in a circle, the terms are, perpendicular from the summit of an arc and chord, the marking of lengths in Hindu figures, the use of algebra to solve geometrical problems (equations, method of double error, combinatorial analysis). The chief teachers were however the Greeks, whose achievements the Arabs generally speaking never surpassed; the requirements of practical mensuration gave them no new problems and practical geometry remained down to quite modern times elementary, the majority of the problems of which had been finally settled long ago by the Greeks.

The services of the Arabs to geometry lie less in the extension of the field by ascertaining new, hitherto unknown facts, although in the *misāha* works we do find a series of new and novel rules, than in their enrichment of this science by new methods of calculation and teaching and especially in their preserving the inheritance of the ancients and handing it down to the western world. Although Hero's geometry first became known in northwestern Europe through Roman surveyors, it was mainly the Arab sources which gave new life to this subject which had become stagnant in its old form. Arabic original works were made accessible to the west in Latin translations. Leonardo of Pisa in his *Practica geometrica*, which remained a standard work for three centuries, depended closely on Savasorda, who most probably owed a great deal to Abū Bakr as there are striking similarities between the *Liber embadorum* and the *Liber mensurationis*; down to late in the xvth century we continually come across writings on practical geometry, which in form and content show to what originals they go back.

Bibliography: a. I. Manuscripts: Arabic authors translated into Latin: 1. *Liber in quo terrarum et corporum continentur mensurationes Ababuchri* (author presumably Abū Bakr, † 1055; cf. H. Suter, *Die Mathematiker und Astronomen der Araber* etc., Abhdlg. z. Gesch. d. math. Wissensch., xlv. 10. Heft, 1900, No. 224), Cambridge. Univ. Library. Mm. ii. 18, fol. 69^v—76^v; 2. *Liber Saydi abuothmi* (author presumably Zaid Abū 'Othmān, † 1052; Suter, No. 222); do., fol. 76^v—77^r; 3. *Liber aderameti* (author presumably 'Omar al-Hadramī, † 1057; Suter, No. 227), do., fol. 77^r—77^v.

II. Arabic works (the titles are given as translated by E. Wiedemann and J. Ruska): 1. Ibn al-Djīyāb (c. 1150) "Records of the measurement of surfaces", Escorial. old No. 924, fol. 1^a—70^b; 2. MIS'AR B. MUHALHIL ABŪ DULAF AL-KHAZ-RADJĪ AL-YANBU'Ī, an Arabic poet who lived at the court of the Sāmānid Naṣr II b. Aḥmad (301—331 = 913—942) and in 331 was sent by him to conduct a Chinese embassy back to their land and on his return visited India. He later gained the favour of the Būyid vizier al-Nāḥib al-Tālkānī (so al-Sam'ānī, *Ansāb*, fol. 363^b) Ismā'īl b. 'Ab-bād (d. 385 = 995). To him he devoted a long qaṣida on the thieves' dialect of the Banū Saṣān, which his patron so much admired that he himself wrote a commentary upon it (extracts in Tha'libī, *Yatima*, iii. 176—194). The dates of his birth and death are nowhere exactly given. To his long journeys he alludes in his verses quoted by Tha'libī, *op. cit.*, iii. 174. The only authentic information has been preserved by the author of the *Fihrist*: on p. 346, 30 sqq. (where *wa-kāna ḍān-wālatay* is of course not to be translated as Flügel does [note 182] "there was a rumour current" but "he was a great traveller") he gives his account of a temple in Mukrān said to be of gold, and on p. 350, 15 sqq. a description of the capital of China. A comparison of these with the corresponding account of his journey attributed to Abū Dulaf in Yāqūt, *Mi'dyam*, iii. 457, 20 sqq., 451, 55 sqq. shows that the latter is a late falsification (cf. Marquart in the *Festschrift* for Sachau, p. 292). This is confirmed by an internal criticism of his statements. The first country to be entered after leaving Muslim territory is, he

says (Yāqūt, iii. 449, 7), al-Khargāh, i. e. as Marquart, *S. B. B. A.*, 1912, p. 492 has recognised, the Persian translation of the Turkish name for Kāshghar, Ordukand. Of this kingdom of the Boghrahkhāns however, this author (p. 447 *sqq.*) talks as if it belonged to the tribe of Boghrah, whose ruler was a descendant of 'Alī, as the East Turkish legend of Satok Boghrā Khān says of his grandson. The story is therefore compiled from various sources. Marquart (Sachau, *Festschrift*, p. 271—272) has also recognised that the alleged ruler of Sadjistān whom the author claims (*op. cit.*, p. 458, 4) to have met, Abū Dja'far Muḥammad b. Aḥmad b. Laith, son of Bānū, a sister of Ya'qūb b. Laith, is identical with Khālaf b. Aḥmad son of Bānū, a granddaughter of 'Amr b. Laith, who was taken prisoner by Maḥmūd of Ghazna in 1002—1003 and died in 1008. The geographical information given by the compiler is therefore quite unreliable in detail. His story is also preserved in the second version of Kaẓwini's *Cosmography* in the Gotha Mss. 1506 (Möller, N^o. 2316) and has been edited from it by Schlozer.

MISBAḤA. [See SUBḤA.]

MISKIN, poor, a loanword which has shown remarkable vitality. It goes back to the Assyrian *miskīnu*, "poor" (in the Laws of Hammurabi it is a name for a class between those enjoying full citizenship and slaves; according to L. W. King: freemen who do not belong to the ruling race). In the meaning "poor" it has passed into Aramaic (*meskin*), Hebrew (*miskēn*), North Arabic (*miskīn* or, against analogy, *naskīn*), into Southern Arabic and Ethiopic (*meskin*). It has passed from Arabic into Italian as *meschino* and into French as *mesquin*. In Arabic, on the analogy of the form *mif'āl*, it is usually of common gender but the feminine form *miskīna* is also found with plural *miskīnāt*. Muḥammad often uses the word in the Qur'ān in the list of persons whom it was a duty for believers to support. As in Sūra ix. 60 it is found alongside of *fuḳarā'*, commentators and jurists have felt that some distinction must be made between the two. They usually explain *miskīn* as needy, but not absolutely without possessions like the *fuḳarā'*, and refer to Sūra xviii. 78, where there is a reference to poor people who possess a ship among them. How uncertain this is, is however evident from the fact that the Mālikis in opposition to the Shāfi'is take the other view and regard the *miskīnūna* as the most needy; cf. also the various definitions collected by Lane. *Dhū Matraba* in Sūra xc. 16 does not help us. From the meaning "poor" gradually developed that of "base, miserable", also in the moral sense, cf. e. g. Ibn Sa'd, iii./i. 6 ult. where Abū Sufyan's wife Hind is called *al-Miskīna*. On the other hand, the word can mean "humble" as in the words attributed to Muḥammad: "Let me live as a *miskīn*

and die as a *miskīn* and include me among the *miskīnūna*".

Bibliography: On the Assyrian cf. the references in Gesenius, *Hebräisches Wörterbuch* 18, and King, *History of Babylon*, p. 164; for Arabic: Lane, i. 1305; Abū Ishāq al-Shirāzī, *Tanbīh*, ed. Juynboll, i. 879, 6 *sq.*; Th. W. Juynboll, *Handbuch des islamischen Gesetzes*, p. 106. (FR. BUHL)

MIŞR, a. a proper name denoting the eponym of Egypt, the ancestor of the Berbers and the Copts. In accordance with the Biblical genealogy (Genesis x. 1 *sqq.*) Mişr is called the son of Ḥām, the son of Nūḥ. The Biblical origin of the pedigree appears clearly in the form Mişrā'im or Mişrām (cf. Hebrew *Misraim*) which is found side by side with Mişr.

In some genealogies between Ḥām and Mişr there is inserted Baiṣar, a name of which the origin is unknown to me.

There exists, however, also quite a different genealogy, according to which Mişrām is a son of Tablil, one of the early heroes (*djābābira*), who ruled Egypt after the Deluge.

Bibliography: al-Ṭabarī, *Tārīkh*, ed. de Goeje, i. 217; al-Ya'qūbī, *Tārīkh*, ed. Houtsma, i. 210; al-Mas'ūdī, *Murūdj al-Dhahab*, Paris ed., ii. 394; Ibn Khurdādhbih, *B.G.A.*, vi. 80; Ibn al-Athīr, *al-Kāmil*, ed. Tornberg, i. 58; al-Suyūṭī, *Ḥusn al-Muḥāḍara*, Bulāq, p. 15; Muḥ. 'Abd al-Mu'īṭ al-Manūfī, *Kiṭāb Akhbār al-Duwal*, Cairo 1311, p. 5;

b. a proper name denoting Egypt as a country. It may be supposed that Mişr was already the name of Egypt among the Arabs in pre-Islāmic times as it is used in the Qur'ān (e. g. sūra x. 87; xii. 21, 100; xliii. 50), where the Biblical form Mişraim does not occur. It has remained the Arabic name of Egypt [q. v.] up to the present day.

c. a proper name denoting the capital of Egypt, i. e. at present and since its foundation Cairo, which with its full name is called Mişr al-Kāhira [cf. CAIRO]. Mişr occurs, however, already as the name of the city or the cities situated southwest of later Cairo; when the name had been transferred to this city, the name Mişr al-qadima (Old Mişr) clung to the old settlement, situated between the mosque of 'Amr and the right bank of the Nile (cf. Butler, *Babylon of Egypt*, p. 16).

In the period between the Arab conquest and the foundation of Cairo the name Mişr is regularly applied to the settlement just mentioned (Ibn Khurdādhbih, *B. G. A.*, vi. 247, 251; Ibn Rosteh, *B. G. A.*, vii. 115 *sqq.*; al-Bukhārī, *Fard al-Khums*, bāb 13; Abū Dāwūd, *Ṭahāra*, bāb 74). We are, however, not able to decide which of its parts (Babylon, Fustāt or the Tulūnid capital) is especially denoted by it. It may be supposed that the combination of Fustāt Mişr "Fustāt in Egypt" (cf. e. g. Mas'ūdī, *Tanbīh*, *B. G. A.*, viii. 358; Makrizī, *Khiṭaṭ*, i. 285 opposes Fustāt Mişr to *ard Mişr*) forms the link between the application of the name Mişr to the country and to the capital. After the conquest of Egypt by the Muslims there were two settlements only on the right bank of the Nile where it divides, viz. Babylon and Fustāt. The papyri never mention Mişr as the name of either of these settlements. Yet in the latter part of the seventh century A. D. the application of the name Mişr to one or to the other or to both

must have begun, as is attested by John of Nikiu who at least once uses Mesr as the name of a city, where he speaks of "the gates of Mesr" (p. 25). In other passages Mesr appears as the name of the country (p. 201, 209).

The statement that the name Mişr as the name of a town arose after the Muslim conquest only, is in opposition to Butler, who maintains that at least since the age of Diocletian there existed on the right bank of the Nile, to the South of the later Babylon, a city called Mişr (cf. Butler, *Babylon of Egypt*, p. 15; do., *The Arab Conquest*, p. 221 note). Caetani (*Annali*, A. H. 19, § 47) has already pointed to the fact, that the traditions concerning the Arab conquest of Egypt do not give the slightest credit to the existence of a city bearing the name of Mişr. Butler's reference to the Synaxary proves nothing, as this work was composed many centuries after the conquest. — The Coptic name of Babylon was Keme.

Bibliography: A. J. Butler, *The Arab Conquest of Egypt and the Last thirty Years of the Roman Dominion*, Oxford 1902; do., *Babylon of Egypt*, Oxford 1924; Maspero and Wiet, *Matériaux pour servir à la géographie de l'Égypte*, in *M.I.F.A.O.*, vol. xxxvi, p. 168 sqq.; *Chronique de Jean évêque de Nikiou, texte éthiopien publié et trad. par H. Zotenberg*, Paris 1883, register.

d. a common noun, denoting a town; it is used especially in connection with the capitals of the provinces in the times of the conquests, e. g. in the tradition: "The amṣār will be conquered at your hands" (Abū Dāwūd, *Ḍiḥād*, bāb 28). Baṣra and Kūfa are often called "the two mişr" (Bukhārī, *Ḥaḍiḍ*, bāb 13; Yāqūt, *Muḍjam*, iv. 454). Further any town may be called mişr (e. g. Bukhārī, *Ḍhabā'iḥ*, bāb 2: *Aḍāḥi*, bāb 15; *Idain*, bāb 25; Tirmidhi, *Nikāḥ*, bāb 32 etc.). This mişr is a genuine Semitic word, cf. *Lisān al-ʿArab*, s. v. and the Jewish-Aramaic *mişr*, *meṣrānā*, which have the same meaning, viz. that of a house or a field as an exactly delineated and demarcated territory (cf. J. Levy, *Chaldäisches Wörterbuch*; do., *Neuhebräisches-talmudisches Wörterbuch*).

It may be supposed that the geographical name Mişr (cf. above, a.—c.) comes from the same root and has originally a meaning akin to that of the common noun. (A. J. WESSINCK)

MIŞRĀʿ, a term in Arabic prosody applied to a hemistich or half line (*baiʿ*); the first hemistich is called *ṣadr* and the second *ʿaḍuʿ*. Each has two, three or four feet, *tafʿila* or *ḍuʿ*. The last foot of the first hemistich is called *ʿarūd* and the last of the second *ḍarb*. As a general rule, and in the first verse of a poem, the *ʿarūd* foot should have the same measure (*taḥṣīʿ*) and rhyme (*taḥṣīya*) as the *ḍarb* foot.

(MOH. BEN CHENEB)

MIŞRĪ. [See NİYĀZĪ.]

MIŞŞİŞ, arab. AL-MAŞŞİŞA, a town in Cilicia on the Djaiḥān.

In antiquity it was called Μόψος ἑρτία a name, which (like that of Μόψος κρήνη in the Cilician passes) is derived from the cult of the legendary seer Mopsos (cf. Meyer, *Gesch. d. Altert.*, i/ii. 2, § 483). In ancient times, the town was chiefly famous for its bishop Theodorus (d. 428), the teacher of Nestorius and friend of the suffragan bishop and inventor of the Armenian alphabet,

Masht'ooc (Peeters, *Revue des Etudes Armén.*, ix., Paris 1929, p. 210; on him cf. e. g. al-Masʿūdī, *Tanbih*, ed. de Goeje, p. 152; Mich. Syr., transl. Chabot, ii. 3; Barhebraeus, *Chron. eccles.*, ed. Abbeloos-Lamy, i. 133; Theophanes, *Chron.*, ed. de Boor, i. 77, 19, 96, 4). In the reign of Justinian a synod was held in Mopsuestia in June 550 to see that his name was removed from the diptychs of the bishops (Mansi, *Acta Concil.*, ix., col. 275-289; Hefele, *Konziliengeschichte*, ii. 2, 832-834). At a later date the name of the town was usually written Μοψουεστία (pronounced: Mopsuestia?; cf. *Append. ad Petri Siculi hist. Manich.*, ed. Gieseler, p. 63, 1; Wilh. Schulze, *Zeitschr. f. vergl. Sprachforsch.*, xxxiii., new series, xii., 1895, p. 372; references in Gelzer to Georg. Kypr. 819; Syr. Mopsuestia: Noldeke, *W. Z. K. M.*, iii., 1889, p. 356; Severus Antioch., *Epist.*, v. 6, cd. Brooks, p. 338; Arab. Māsubastiya in Ibn Khurdādhbih, ed. de Goeje, p. 99). As early as the end of classical times we already find the popular forms *Mompistia* (Tab. Peut.), Byzant. Μαμίστα (Michael Glykas, *Annal.*, Bonn. Corpus, p. 570, 4; Anna Komnena, ed. Reifferscheid, ii. 140, 5; in al-Idrisi, ed. Gildemeister in *Z. D. P. I.*, viii. 24: *Mānistra*; the Byzantine work on "Towns with later altered names": ed. Burekhardt, Hierokles, *Synkdem*, Leipzig 1893, p. 62, Appendix I, No. 29, wrongly says: *Καστάβαλα Κιλικίας ἢ νῦν Μάμιστα*; the former is rather the modern Budrūm Ḳalʿe), *Masista* (Theodosius, *De situ terrae sanctae*, c. 32, ed. Geyer in *Corp. Script. Eccles. Lat.*, xxxix. 150, 6), i. e. Syriac Maš-tā (*Notitia Antiochena*, cd. Rahlmāni, *I fusti della chiesa patriarcale Antiochena*, Rome 1920, p. 6; *Byzant. Ztschr.*, xxv. 74, 81), from which the Arabic al-Maššīsa, Armen. Msiš and Turk. Mişşis or Missis have arisen.

The emperor Heraclius is said to have removed the inhabitants and laid waste the district between Antioch and Mopsuestia on the advance of the Arabs, in order to create a desert zone between them (al-Ṭabarī, i. 2396; al-Balādhuri, ed. de Goeje, p. 163; between al-Iskandarūn and Ṭarsūs), and under the Omayyads all the towns taken by the Arabs from al-Maššīsa to the fourth Armenia (Malatya) are said to have been left unfortified and uninhabited as a result of the inroads of the Mardaites (Theoph., ed. de Boor, i. 363, 17). According to Abu l-Ḳhaṭṭāb al-Azdī (in al-Balādhuri, p. 164), the Arabs conquered al-Maššīsa and Ṭarsūs under Abū ʿUbaida, according to others under Maisara b. Masrūk, who was sent by him and who thereafter advanced as far as Zanda (in 16 = 637: Caetani, *Annali dell' Islām*, ii. 805, § 311). Muʿāwiya on his campaign against ʿAmmūriya in 25 A. H. found all the fortresses abandoned between Antākiya and Ṭarsūs (see above). According to the *Maḥḥiẓi Muʿāwiya* he himself destroyed all the Byzantine fortresses up to Antākiya in 31 (651-652) on his return from Darawīṭya (Δαρωίτιον in Phrygia) (al-Balādhuri, p. 164 sq.). After the Syrian rebellion against ʿAbd al-Malik, the emperor Constantine IV Pogonatos in 65 (684-685 A. D.) advanced against the town and regained it (al-Yaʿkūbi, ed. Houtsma, ii. 321). Yahyā b. al-Kḥakam in 77 marched against Mardj al-Shaḥm between Malatya and al-Maššīsa (al-Yaʿkūbi, ii. 337). It was only in 84 (703) that ʿAbd al-Malik's son ʿAbd Allāh retook the town and had the citadel rebuilt on its old foundations (Balādhuri, p. 165; Yaʿkūbi, ii. 466; Wāḳidi in Ṭabarī, ii.

1127; Ibn al-Athīr, ed. Tornberg, iv. 398; Theophan., *Chron.*, ed. de Boor, p. 372, 4; Mich. Syr., transl. Chabot, ii. 477; Elias Nisibēn., *Opus chronolog.*, ed. Brooks, p. 156; transl., p. 75; *Script. Syrī, chronica minora*, ed. Guidi, p. 232, transl., p. 176, under 1015 Sel. year: Weil, *Gesch. d. Chalifen*, i. 472). In the following year, he installed a garrison in the fortress, including 300 specially picked soldiers, and built a mosque on the citadel hill (Tall al-Hiṣn); a Christian church was turned into a granary (*huryun, huryā = horreum, horrea*; al-Balādhuri, p. 165; Ibn al-Shihna, ed. Baihūt, p. 179). To the same event no doubt refers the wrongly dated reference in the *Chronicle* of the Armenian Samuel of Ani of the year 692 A. D. to the fortification with strong walls of the town of "Mamestia, i. e. Msis" by the Muslims under 'Abd al-Malik (*Ratio temporum usque ad suam aetatem presbyteri Samuels Aniensis*, in Euseb. Pamphil., *Chron.*, ed. A. Mai and I. Zohrab, Mediolani 1818, App. p. 57; Alishan, *Sissouan*, p. 286). Every year from 1,500 to 2,000 men of the corps (*ṭawālī*) of Anṭākiya used to winter in the town. According to Michael Syrus (transl. Chabot, iii. 478), 'Abd al-Malik died in 1017 Sel. (705 A. D.) in al-Maṣṣiṣa.

'Umar II is said to have intended to destroy the town and all the fortifications between it and Antioch and to have been either prevented by his own death (Balādhuri, p. 167) or dissuaded by his advisers; according to this version, he then had a large mosque built in the suburb of Kafarbaiya in which there was a cistern with his inscription. It was called the "Citadel Mosque" and kept up till the time of al-Mu'taṣim (al-Balādhuri, p. 165; but Kafarbaiya was probably not really built till the time of al-Mahdi or Hārūn al-Raṣhid; [see below]. Yazīd b. Djabair ('Αζδαρ δ τοῦ Χουεῖ) in 704 A. D. attacked Sis (τὸ Σίσιον κάστρον; in al-Ṭabarī and Ibn al-Athīr: Sūsana in the Nāhiya of al-Maṣṣiṣa) but was driven off by Heraclius, the emperor's brother (Theophan., ed. de Boor, p. 372, 23; A. M. 6196; according to al-Ṭabarī, iii. 1185, and Ibn al-Athīr, iv. 419, wrongly not till 87 A. H.). Hishām built the suburb (*al-Rabaḍ*), Marwān II the quarter of al-Khuṣūṣ east of the Djaīhān, which he surrounded with a wall with a wooden door and a ditch. The bridge of Djisr al-Walid between al-Maṣṣiṣa and Adhana, 9 mil from the former, was built in 125 (742—743 A. D.) and restored in 225 (840) by al-Mu'taṣim (al-Balādhuri, p. 168; Yāqūt, *Mu'djam*, ed. Wüstenfeld, ii. 82; Ṣafī al-Dīn, *Marāsid*, ed. Juynboll, i. 255). In the first half of the viiith century the caliphs al-Walid II and Yazīd III brought the gipsy tribe of the Zutt, who had been deported to Baṣra by Mu'āwiya in 670 A. D., and settled them with great herds of buffalo in the region of al-Maṣṣiṣa in order to fight the plague of lions in the district of the Djabal al-Lukkām (al-Balādhuri, p. 168; De Goeje, *Bijdrage tot de Geschiedenis der Zigeuners*, 1875, p. 17—22).

The first 'Abbāsīd, Abū 'l-'Abbās al-Saffāh, on his accession strengthened the garrison by 400 men, to whom he gave lands; the same estates were later allotted to them by al-Manṣūr. The latter in 139 (756—757) restored the wall, which had been damaged by an earthquake in the preceding year, and increased with 8,000 settlers the much diminished population of the town, which he called al-Ma'mūra (al-Balādhuri, p. 166; Ibn al-Athīr, v. 382; Yāqūt iv 579, s. v. *al-Ma'muriya*; Ibn Shihna,

p. 179). On the site of a heatben temple he built a large mosque which far surpassed the mosque of 'Umar in size. When 'Abd Allāh b. Ṭāhir was governor of Maghrib (i. e. 211 = 826), it was enlarged by al-Ma'mūn. Al-Manṣūr increased the garrison to 1,000 men and settled in the town the inhabitants of al-Khuṣūṣ, Persians, Slavs and Christian Arabs (Nabataeans), whom Marwān had transplanted thither (see above), and gave them allotments of land. It is probably that to the same event the story refers that Ṣāliḥ b. 'Alī, when in the 'Abbāsīd period the inhabitants of al-Maṣṣiṣa, harassed by the Byzantines, resolved to migrate, sent Djabrī'l b. Yahyā al-Baḍjalī al-Khurasānī in 140 (757—758) to rebuild the town and settle it with Muslim inhabitants (al-Balādhuri, p. 166; according to al-Ṭabarī, ii. 135 in the year 141). Under al-Mahdi the garrison was increased to 2,000; in addition there was the Anṭākiya corps of almost the same size which wintered here regularly until Ṣalīm of Burullus became their wālī and increased the garrison by 500 men instead. There is a brief reference in the Syriac inscription of 'Enesh to a raid by al-Mahdi to the Djaīhān (Syr. Giḥōn) in 780 A. D. (1091 Sel.: Chabot, in *J. A.*, ser. ix., xvi., 1900, p. 287; Pognon, *Inscr. sémit. de la Syrie et de la Mésop.*, p. 148—150, N^o 84). Hārūn al-Raṣhid built Kafarbaiya or according to another story, altered the plans for this suburb prepared by al-Mahdi and fortified it with a ditch; he also built walls which were only completed after his death by al-Mu'taṣim. In 187 (803) an earthquake laid waste the town (al-Ṭabarī, iii. 688). In the following year, the Byzantines invaded and pillaged the region of al-Maṣṣiṣa and 'Ain Zarba and carried off the inhabitants of Tarsūs into captivity, whereupon Hārūn al-Raṣhid attacked and defeated them (Mich. Syr., iii. 16). According to al-Ṭabarī (iii. 709) and Ibn al-Athīr (vi. 135), the Byzantines in 190 (806) invaded 'Ain Zarba and Kantsat al-Sawdā' and took prisoners there; but the people of al-Maṣṣiṣa regained all their loot from them. If, as it seems, the curious story in the Byzantine chroniclers (Theoph., *Chron.*, ed. de Boor, p. 446, 18; Georg. Kedren., Bonn. Corpus, ii. 17) that in 771—772 (A. M. 6264) 'Αλφξδδλ Βαδνάρ, i. e. al-Faḍl b. Dīnār, who had 500 Byzantine prisoners with him, lost 1,000 men and all his booty through a sortie of the Μομφουεστῆς refers to the same events, the latter would appear to be wrongly reported and wrongly dated.

On the 13th Hazīran 1122 Sel. (811 A. D.) the walls and many houses in the town and three adjoining villages fell in a great earthquake; near al-Maṣṣiṣa the course of the Djaīhān was dammed for a week so that the boats lay on the dry bed (Mich. Syr., iii. 17). In 198 (813—814) Thābit b. Naṣr al-Khuzā'i was fighting in the Syrian marches of al-Maṣṣiṣa and Adhana (Ya'qūbi, ii. 541). On his campaign into Bilād al-Rūm, al-Ma'mūn passed through al-Maṣṣiṣa and Tarsūs in Muharram 215 (March 830: al-Ṭabarī, iii. 1103; Ibn al-Athīr, vi. 294; Abū 'l-Fida', *Annals Muslim.*, ed. Reiske, ii. 152; Weil, *Gesch. d. Chal.*, ii. 239). In revenge the emperor Theophilus in 216 (831) raided the lands around these two towns and slew or took prisoner 2,000 men (al-Ṭabarī, iii. 1104; Ibn al-Athīr, vi. 295).

After the emperor's campaign against Zibātra (837 A. D.) in which he also defeated the Μομφουεστῆς (Const. Porphyrog., *De caerim.*, ed.

Bonn, p. 503; Vasilev, *Vizantiya i Arabi*, in *Zapiski ist.-filol. fak. imp. S.-Pbtg. Univ.*, čast lvi., 1900, p. 88 sq., note 4), al-Mu'tašim bi 'l-lāh in the following year attacked 'Ammūriya; his general Bashir commanded a part of the army which included the Maššīsa contingents (Mich. Syr., iii. 96). In 245 (859) the town was again visited by an earthquake which destroyed many places in Syria, Mesopotamia and Cilicia (al-Ya'kūbī, iii. 1440). The Caliph al-Mu'ta'adid after restoring order in the Thughūr al-Shāmiya (287 = 900) returned from al-Maššīsa via Funduk al-Hussain, al-Iskandariya and Baghrās to Antākiya, Ḥalab and al-Rakka (al-Ṭabari, iii. 2198—2200; al-Funduk, a place in the Thughūr near al-Maššīsa: Yāqūt, iii. 918; Šafi al-Dīn, *Marāsid*, ii. 365).

When in 292 (904—905) the Byzantine Andronicus invaded the district of Mar'ash, the people of al-Maššīsa and Tarsūs met him but were defeated and lost their leader Abu 'l-Ridjāl b. Abī Bakkār (al-Ṭabari, iii. 2251; Ibn al-Athīr, vii. 371; Vasilev, *Zap. ist.-fil. fak. imp. S.-Pbtg. Univ.*, čast lvi., 1902, p. 154, note 2).

In 344 (955—956) the Ḥamdānid Saif al-Dawla was visited by horsemen from the frontier towns of Tarsūs, Adana and al-Maššīsa and with them an envoy from the Greek king who concluded a truce with him (al-Nuwayrī and Kamāl al-Dīn in Freytag, *Z.D.M.G.*, xi., p. 192; Ibn Zāfir al-Azdi, *Kitāb al-Duwal al-Munkaṭṭa*, transl. Vasilev, *op. cit.*, Priložen., p. 86). Defeated by Leo Phocas in 349 (960) in the pass of al-Ku'uk, Saif al-Dawla spent the night in al-Ḥawānī and returned to Ḥalab via al-Maššīsa (Kamāl al-Dīn in Freytag, *op. cit.*, p. 196; Yāh'yā b. Sa'īd, *Ta'rikh*, ed. Kračkovskiy-Vasilev, in *Patrol. Orient.*, xiii., 1924, p. 782).

In 352 the emperor Nicephoros took Adana, the inhabitants of which fled to al-Maššīsa, and sent the Domesticus John Tzimiskes (Yānis b. al-Shimishkīk al-Dumistik) against this town. The latter besieged it for several days but had to withdraw as his supplies were running short, and after laying waste the country round burned the adjoining al-Mallūn (Μαλλός) at the mouth of the Djaīhān (Yāh'yā b. Sa'īd, *op. cit.*, p. 793 sq.). The emperor himself came again in Dhu 'l-Kāda 353 (Nov. 964) to the marches (al-Thaghīr) and besieged al-Maššīsa for over 50 days but had again to abandon the siege owing to shortage of supplies and retired to winter in Kaisariya. Finally the town was stormed by John Tzimiskes (Arm. Kuīr Žan) on Thursday the 11th Raddjāb 354 (July 13, 965). The inhabitants set it on fire and fled to Kafarbaiya. After a desperate struggle on the bridge between the two towns the Greeks took this suburb also and carried off all the inhabitants into captivity (Yāh'yā b. Sa'īd, *op. cit.*, p. 795; Ibn al-Athīr, viii. 408—411; Abu 'l-Fidā, *Ann. Musl.*, ed. Reiske, ii. 482 sq.; Mich. Syr., iii. 128; Elias Nisiben., ed. Brooks, p. 218; transl. p. 106; Georg. Cedren., ed. Bonn, ii. 362; Leon Diakon., ed. Bonn, p. 52 sq.; Matt'eōs Ūrhayec'i, ed. Dulaurier in *Rec. hist. crois.*, *Docum. Arm.*, i. 5; Step'an Asotik of Taron, *Armen. Gesch.*, transl. H. Gelzer and A. Burckhardt, Leipzig 1907, p. 134, 24). They were, to the number of 200,000, it is said, led past the gates of Tarsūs, which at that time was being besieged by the emperor's brother Leo, to terrify the people of the town (Ibn Shihna, *Rawdat al-Manāzīr*, in Freytag, *Z.D.M.G.*, Elias Nisiben., *op. cit.*). The gates of

Tarsūs and of al-Maššīsa were gilded and taken as trophies to Constantinople, where one set was put in the citadel and the others on the wall of the Golden Gate (Georg. Cedren., ii. 363).

The town remained for over a century in the hands of the Byzantines; the Emperor Basil II Bolgaroktonos stayed for six months in the region of al-Maššīsa and Tarsūs before going to Armenia after the death (March 31, 1000 A.D.) of the Kuropalates David of Tajk^c to take possession of his lands by inheritance (Yāh'yā b. Sa'īd, *Ta'rikh*, ed. Rosen, p. 39, in *Zap. Imp. Akad. Nauk*, xlii., St. Petersburg 1883). In 1042 the Armenian prince Aplgharib, son of Hasan and grandson of Khač'ik of the house of the Arcrunians, was sent by the emperor Constantine Monomachos as governor to Cilicia (St. Martin, *Mém. sur l'Arm.*, i. 199). In 1085 A.D. Philaretos Brachomios, who was appointed in Constantinople perhaps Sebastos (Mich. Syr., iii. 173) or at least Kuropalates (Mich. Attal., Bonn ed., p. 301) and whose ephemeral kingdom comprised the land from Tarsūs to Malatya, Urfa and Antākiya, held al-Maššīsa (Mich. Syr., *loc. cit.*: Laurent, *Byzance et Antioche sous le curopalate Philarète*, *Rev. des Et. Arm.*, ix., 1929, p. 61—72). Shortly before the arrival of the Crusaders, the Seldjūk Turks took Tarsūs, al-Maššīsa, 'Ain Zarba and the other towns of Cilicia (Mich. Syr., iii. 179). About the end of Sept. 1097 the Franks under Tancred, who had been invited thither from Lambton by Ōshin III, took the town which was stormed after a day's siege: the inhabitants were slain and rich booty fell into the hands of the victor (Albert. Aquens., iii. 15 sq., in Migne, *Patrol. Lat.*, clxvi., col. 446 sq.; Radulf. Cadom., *Gesta Tancredi*, c. 39 sq.). William of Tyre describes al-Maššīsa on this occasion (iii. 21, in Migne, *Patrol. Lat.*, cci., col. 295): "*Erat autem Mamistra una de nobilioribus eiusdem provinciae civitatibus, muro et multorum incolatu insignis, sedet optimo agro et gleba ubere et amoenitate praecepta commendabilis*". Count Baldwin, who had quarrelled with Tancred, followed him along with the admiral Winimer of Boulogne and encamped in a meadow near the Djaīhān bridge; Winimer left him there and went with his fleet to al-Lādhikīya, while the two rivals had a desperate fight, after which Baldwin withdrew to the east (Albert. Aquens., iii., c. 15, 59, in Migne, *op. cit.*, col. 446, 472). Tancred followed him, after he had imposed on the city "*plus paternas quam principis leges*" (Radulf. Cadom., c. 44). The Byzantine general Tatikios, who had joined the Crusaders to take over their conquests in name of the emperor, left them in the lurch in the beginning of Feb. 1098 at the siege of Antākiya and ceded to Bohemund the town of Tursol (Tarsūs), Mamistra and Addena (Adana) (Raymond of Agiles, in Bongars, *Gesta Dei per Francos*, Hanover 1611, p. 146, 5) Bohemund only took possession of the towns of Tarsūs, 'Ain Zarba and al-Maššīsa in August (Will. of Tyre, vii. 2). After the town had again fallen to the Greeks for a period Tancred again took it in 1101 (Rad. Cad., c. 143), but had to hand it over with Tarsūs, Adana and 'Ain Zarba to Bohemund on his return from captivity in 1103 (Will. of Tyre, vii. 2, in Migne, *op. cit.*, col. 379). In the following year however Longinias, Tarsūs, Adana and Μάμιστα were regained for Byzantium by the campaign of the general Monastras (Anna Comnena, *Ἀλεξιάς*, ed. Reifferscheid, ii. 140, 5, who apparently did not recognise the identity of Μάμιστα with Μόβου

ἑστίαι which she mentions several times). In the treaty between Bohemund and the emperor Alexios of Sept. 1108 the town was promised to the former (Anna Comnena, *op. cit.*, ii. 218), Tancred having taken it in the preceding year with 10,000 men from the Byzantine general, the Armenian Aspietes (Anna Comnena, ii. 147). At this time, of the quarters of the town one (probably Kafarbaiya) was in ruins (Anna Comnena, *op. cit.*). Baldwin of Burg and Joscelin of Courtenay, who allied themselves against Tancred with Kogh Vasil of Kaisim, were supported by the latter with a detachment of 800 men and a body of Pečenegs, who were stationed in al-Maššīša as Greek mercenaries (Matt'ēos Urhayeci, transl. Dulaurier, p. 266 sq. = *Rec. Hist. Crois.*, *Doc. Arm.*, i. 86). The great earthquake of 1114 destroyed the town like many others in Cilicia and Syria (Smbat, in *Docum. Arm.*, i. 614).

Under the Frankish patriarchate of Antioch, Mopsuestia-Mamistra was separated from the ecclesiastical province of Anazarbos and made an autocephalous metropolis (Michael Syrus, iii. 191; recensions of the *Notitia Antiochena* of the Crusading period, MS. of Chalki [now in Leningrad, Russ. Publ. Libr., MS. Gr. 716, cf. Beneshevič, *Byz.-Neugriech. Jahrb.*, v., 1927, p. 103, note], ed. Papadopoulos-Kerameus, in *Ελλην. Φιλολ. Σύλλογ.*, *Μαυρογορδ. Βιβλιότ.*, Constantinople 1884, p. 65: 'ο Μομφουστίας ἀπεσπάσθη ἀπὸ τοῦ ἐπὶ τοῦ Ἀναζάρβου καὶ ἐτάχθη αὐτοκέφαλος; cf. cod. Paris. suppl. grec. 1226, ed. Nau, *R. O. C.*, 1909, p. 215; Vatic. gr. 1455, ed. Gelzer, *Byz. Ztschr.*, i., p. 250, N^o. 165 and pass.). The ἐνορία Μομφουστίας stretched (according to a work on the boundaries of the Antiochene dioceses, ed. Papadopoulos-Kerameus, *op. cit.*, p. 67) from Seleuceia in Syria and Adana ἀπὸ τοῦ μεγάλου Συροποταμοῦ (now Özerlü or Rabat-çai) ἕως τοῦ μεγάλου ποταμοῦ Φουᾶν. The latter is undoubtedly identical with αὐτὸς ὁ μέγας ποταμὸς "Adanas, the Saihān; for the name Djaihān (probably first found in the 'Umayyad court poet 'Adi b. al-Rikā' c. 710 A. D.: Noldeke, *Z.D.M.G.*, xlv., 1890, p. 699 sq.) and Saihān for Pyramos and Saros are no doubt derived from the names of the Biblical rivers Gihōn and Pishōn (*Gen.*, ii. 11) (wrongly explained from the Persian Djaihān in Cousin, *Ÿyros le Jeune en Asie Mineure*, Nancy 1904, p. 278, r).

In 1132/33 the Rupēnid Ľevon I (Λεβόννης), son of Constantine, took the town (Arm. Msis, Mises, Mamestia or Mamuestia from the Greeks (Cinnamos, i. 7; iii. 14; Smbat Sparapet, *Chronicle*, in *Docum. Arm.*, i. 615). The brother of the emperor John II Comnenos went to him and Ľevon gave his sons his daughters as wives with the towns of al-Maššīša and Adana as dowries. But when they quarrelled he took back from the Greeks all that he had given them, and Isaac had to flee with his sons to Sulṭān Maš'ūd (Michel. Syr., ii. 230). Ľevon, falling through treachery into the hands of Raymond of Poitiers, had to cede (1136—1137) al-Maššīša, Adana and Sarvantik'ar (now Sawuran Kāl'e'), but regained his liberty in a couple of months; he very soon retook these towns (*Docum. Arm.*, i. 152 sq. = *Chron. de Matthieu d'Édesse*, transl. Dulaurier, p. 457; Smbat, *op. cit.*, p. 616). The emperor John in 1137 (1448 Sel.) had his revenge on Ľevon. He invaded Cilicia, took Ṭarsūs, Adana and al-Maššīša, seized Ľevon himself with his wife and children and took them to Constantinople, where Ľevon subsequently died (Ibn al-Aṭṭir, xi. 35;

Michael Syrus, iii. 245; Gregor. presbyt., *Fortis. d. Chronik des Matt'ēos*, transl. Dulaurier, p. 323; cf. *Docum. arm.*, i., p. xxxii, 1 and 153, 4; Will. of Tyr., xiv. 24; Rohricht, *Gesch. d. Kgr. Jerusalem*, p. 211). John installed Coloman (*Calamanus*), son of Boris and grandson of king Coloman of Hungary, as governor of Cilicia (Will. Tyr., xiv. 24, xix. 9, in Migne, *Patr. Lat.*, cci., col. 603, 756; a "Dux Ciliciae" mentioned in *Regum et principum epistolae*, N^o. 24, in Bongars, *Gesta Dei per Franc.*, p. 1182, l. 46 and *passim*). When the emperor John died at Mardj al-Dibādj on April 8, 1143 (Will. of Tyr., xv. 22 sq.; Röhrich, *Gesch. d. Kgr. Jerusalem*, p. 228, 4), his successor Manuel I Comnenos had his body brought by boat from Mopsuestia down the Pyramos to the sea and taken by sea to the capital (Niketas Choniates, *Man. Komn.*, i., Bonn ed., p. 67).

Thoros II, the son of Ľevon who had escaped home from his confinement in Constantinople, was again able to cast off the Byzantine yoke. When in 1151 he took Msis and T'il (Tall Hamdūn) from the Byzantines (Smbat, in *Doc. Arm.*, i. 619) and made their general Thomas prisoner, the emperor Manuel in the following year sent against him with 12,000 cavalry Andronicos Comnenos, whom he had appointed governor of Ṭarsūs and al-Maššīša (Gregor. presbyt., in *Doc. Arm.*, i. 167 = Matth. Edess., transl. Dulaurier, p. 334; Smbat, *Chron.*, in *Doc. arm.*, i. 619). Andronicos, who did not recognise Thoros as ruler of Asia Minor, advanced against al-Maššīša but was surprised by the Armenians and put to an ignominious flight with his 12,000 men. Thus not only the town, which was very well supplied with provisions and military material of all kinds, fell into his hands, but also a great part of Cilicia (Gregor. presbyt., transl. Dulaurier, p. 334—336 = *Doc. Arm.*, i. 167 sqq.; Smbat, *op. cit.*). The emperor, himself too weak to avenge the insult, twice induced by gifts the Sulṭān Kīlīdž Arslān II (Gregor. wrongly: Maš'ūd) of Kōniya to attack Thoros. The Sulṭān, who on the first occasion (1153 A.D.) was content with the defeat of the Armenian and the return of the lands taken from the Greeks, again attacked al-Maššīša, 'Ain Zarha and Tall Hamdūn (Arm. T'iln Hamtunoy) in 1156 but could do nothing against them and had finally to retire after heavy losses (Gregor., *op. cit.*, p. 338 = *Doc. Arm.*, i. 171).

The emperor Manuel himself passed through Cilicia in 1159 with a large army to the assistance of the Crusaders. Thoros had already retired to Vahka in the desolate mountains (*Armen. RhyMEA Chron.*, in *Doc. Arm.*, i. 505) when the emperor entered al-Maššīša at the beginning of November, but he did no injury to any one there (Gregor., transl. Dulaurier, p. 353 sq. = *Doc. Arm.*, i. 187). The Frankish kings led by Baldwin came to pay homage to him in the town or on the adjoining *pratium palliorum* (as Will. of Tyre, xiii. 27 translates Mardj al-Dibādj) where his court was held in camp for 7 months (Gregor., transl. Dulaurier, p. 358; Rohricht, *Gesch. d. Kgr. Jerusalem*, p. 298). Thoros was also able with great tact to become reconciled with him, and on acknowledging Byzantine suzerainty and ceding several towns in Cilicia, was recognised as "Sebastos" of Msis, Anazarbos and Vahga (*Doc. Arm.*, i. 186; Smbat, *ibid.*, p. 622). His brother Mleh, who attempted his life while out hunting between al-Maššīša and

Adana, was banished by Thoros and given by Nūr al-Dīn the town of Kūrus (Kyrrhos; Smbat, *loc. cit.*). After the death of Thoros of Msis (1168—1169; Smbat, p. 623), Mleh (Arab. Malih b. Līwun al-Armani) succeeded him and at first ruled only over the district of the passes (*Bilād al-Durūb*). In 1171 he surprised Count Stephen of Blois at Mamistra and plundered him (Will. of Tyre, xx. 25—28). In 568 (1172—1173), supported by troops of his ally Nūr al-Dīn, he took from the Greeks Adana, al-Maṣṣiṣa and Tarsūs (Ibn al-Aṭhīr, xi. 255; Kamāl al-Dīn, transl. in Röhricht, in *Beiträge z. Gesch. d. Kreuzzüge*, i., Berlin 1874, p. 336).

When Mleh's successor Rupēn III fell through treachery into the hands of Bohemund of Antioch, his brother Ḳevon (II) obtained his release in 1184 by ceding al-Maṣṣiṣa, Adana and Tall Ḥamdūn (T'ila) and paying 3,000 dinārs; immediately afterwards, Rupēn retook these strongholds from the Franks (Mich. Syr., iii. 397; *Doc. arm.*, i. 394).

Heṭ'um, the nephew of the Catholicos Grigor IV and son of Ḳortvanēl of Tarōn, who came to Cilicia in 1189 with his brother Shāhinshāh, received from Ḳevon II (1185—1219) his niece Alice, daughter of Rupēn III, in marriage and the town of Msis, but died in the same year (Smbat, in *Doc. arm.*, i. 629; Marquart, *Südarmenien und die Tigrisquellen*, Vienna 1930, p. 481 sq.). The Emperor Frederick Barbarossa in 586 (1190) was about to go to Syria via Tarsūs and al-Maṣṣiṣa when he met his tragic end in the Kalykadnos (alleged[?] letter of the Armenian Catholicos in Ibn Shaddād, in *Rec. Hist. Orient. des Crois.*, iii. 162): a portion of his army thereupon went to Antioch via Tarsūs, Mamistria and Thegio (Ḥiṣn al-Muthak-kab; not Portella, the Syrian passes, with which Röhricht, *Gesch. d. Kgr. Jerus.*, p. 530, 4, identifies it).

Wilbrand of Oldenburg who visited the East in the train of Duke Leopold VII of Austria and Steiermark and the Teutonic Grandmaster Hermann von Salza, came in the beginning of 1212 to Mamistria where he describes as follows: (Wilbr., c. 18, ed. Laurent, *Peregrinatores*, Leipzig 1864, p. 175): „*Hanc est civitas bona, super flumen sita, satis amoena, murum habens circa se turritum, sed antiquitate corrosum, paucos in quodam respectu habens inhabitatores, quibus omnibus rex illius terrae imperat et dominatur*”. In the vicinity lay „*quoddam castrum quod erat de patrimonio beati Pauli . . . sed nunc temporis possidetur a Graecis*”. „*In hac civitate [Mamistria] habetur sepulchrum beati Pantaleonis. Ipsa vero distat a Canamella (cf. Tomaschek, S. B. Ak. Wien, 1891, app. viii., p. 71) magnam dictam*”. Ḳevon II granted the republics of Genoa and Venice the privilege of having their own trading centres in al-Maṣṣiṣa, which could be reached by ship from the sea before the mouth of the Djaīḥān became silted up (Alishan, *Sissouan ou l'Arménie-Cilicie*, p. 287). The attempt of Raymund Rupēn of Antioch to seize the throne of Armenia after Ḳevon's death in 1219 failed; he was, it is true, able to take Tarsūs and attack al-Maṣṣiṣa but he was taken prisoner by Constantine of Barzberd and died in prison in 1222 (*Doc. arm.*, i. 514; Röhricht, *Gesch. d. Kgr. Jerus.*, p. 741 sq.).

For a century the Rupēnids ruled almost undisturbed in the town. Their glory reached its height under the splendour-loving Heṭ'um I (1219—1270). Here were held the annual festivals of the

Church at which numerous princes and nobles used to gather down to the last and difficult years of the king. Here was held the brilliant ceremony at which his 20-year old son Ḳevon was dubbed knight. Hither the king brought the seat of government after the destruction of Sis (Alishan, *Sissouan*, p. 287 sq.).

Baibars sent a punitive expedition against Heṭ'um in 664 (1266) under al-Malik al-Manṣūr of Ḥamā, who advanced as far as Kaḻ'at al-ʿAmūdāin and into the district of Sis, while Saif al-Dīn Ḳilāʿūn took al-Maṣṣiṣa, Adana, Ayās and Tarsūs (al-Makrīzī, *Hist. d. Sult. Maml.*, transl. Quatremère, i/ii. 34 sq.; Abu 'l-Fidā, *Annal. Musl.*, ed. Reiske, v. 18; al-Nuwairī, in Weil, *Gesch. d. Chal.*, iv. 56). Three years later (1269), the district of al-Maṣṣiṣa was visited by an earthquake (al-Suyūṭī, in *Doc. arm.*, ii., 1906, p. 772, note f.). Baibars (Arm. *Pntukhtar* = Arab. *Bunduḳdār*) himself in 673 (spring of 1275) took the field against Ḳevon III, son of Heṭ'um, laid waste the whole of Cilicia as far as Korikos and stormed al-Maṣṣiṣa and Sis, the former on 26th March. The inhabitants were massacred, almost all the houses burned and the great bridge destroyed (Armen. Kandarayn Msisay, i.e. Kaṇarat al-Maṣṣiṣa; cf. al-Makrīzī, i/ii. 123 sq. with note 154; Mufaḍḍal b. Abi 'l-Faḍā'il, *Gesch. d. Mamlūkensultane*, ed. Blochet, in *Patrol. Orient.*, xiv. 389; Barhebraeus, *Chron. syr.*, ed. Bedjan, p. 531. 6; Smbat, *Chronik*, in *Doc. arm.*, i. 653; Röhricht, *Gesch. d. Kgr. Jerusalem*, p. 967; van Berchem, *C. I. A.*, i. 688, note 2). When in 697 (1297—1298) an army under the emirs Saif al-Dīn Kipčāk, the Nā'ib of Dimashk, Fāris al-Dīn Ilbekī al-Sākī al-Zahīrī, the Nā'ib of Ṣafad, Saif al-Dīn Bizlār al-Manṣūrī and Saif al-Dīn 'Azāz al-Ṣālihi invaded the land of Sis, al-Maṣṣiṣa is not specially emphasised among the unimportant places taken like Tall Ḥamdūn, Ḥammūs (Ḥumaimīs), Kaḻ'at Naḍjima, al-Maṣṣiṣa, Sīrāndikār, Ḥadjar Shughlān, al-Nuḳair and Zandjara (al-Makrīzī, ii/ii. 60—65; Mufaḍḍal, *op. cit.*, p. 602; al-Nuwairī, in Blochet, *ibid.*). In 1322, the Egyptians crossed the Djaīḥān by a bridge of boats, got behind the Armenians who had retired to Msis and inflicted a severe defeat upon them; among those who fell are mentioned the barons Heṭ'um of Dīlknoc', his brother Constantine, Wahram Lotik, Ōshin, the son of the marshal, along with 21 knights and many men (Smbat's Continuator, in *Doc. arm.*, i. 668). This authority also mentions a raid by an Egyptian force against al-Maṣṣiṣa (Mamuestia), Adana, al-Mallūn (Mlun) and Tarsūs in 1334—1335 (*Doc. arm.*, i. 671; Tomaschek, *S. B. Ak. Wien*, 1891, part viii., p. 68). The last Egyptian invasion took place in 823 (1373—1374). Among the towns destroyed were Sis, Adana, al-Maṣṣiṣa and 'Ain Zarba, and Ḳevon IV had to surrender in 1375 after a siege of nine months in Ḡhaban (*Doc. arm.*, i. 686, note 3). The town thus passed nominally into the *Futūḥāt al-Djāḥāniya* of the Mamlūk empire; it had, it is true, by now sunk into insignificance and it is not mentioned, for example, among the towns taken by Shāhsuwar in 1467 (Alishan, *Sissouan*, p. 290).

Armenian sources mention 8 archbishops of the town from 1175 to 1370 (1175—1206 David, 1215 Johannes, 1266 Sion, 1306 Constantine 1316 John, 1332 Stephen, 1342 Basil, 1362—1370 unnamed; cf. Alishan, *op. cit.*, p. 290). Michael Syrus knows only Job of about 800 A. D. (*Chron.*, transl.

Chabot, iii. 23 sq., 451, N^o. 27) and the Frankish writers from 1100 onwards Bartholomaeus, before 1234 Radulphus and in the years from 1162–1238 three or four more unnamed bishops (Albert. Aquens., ix. 16; Will. of Tyre, xiv. 10; Le Quien, *Oriens Christianus*, iii. 1198–1200; Rohricht, *Gesch. d. Kgr. Jerusalem*, p. 42, 202). On account of the many Egyptian invasions the Latin archbishopric was removed to Ayās by Pope John XXII in 1320 (Alishan, *Sissouan*, p. 290).

After the fall of the kingdom of Little Armenia, the power of the Ramaḍān-Oghlu and Dhu 'l-Kadr-Oghlu gradually spread in Cilicia. Selīm I on his campaign against Egypt in 922 (1516) and on his return also preferred to keep to the east of their land (Taeschner, *Anatol. Wegetz*, ii. 32). Mişşis has been Ottoman since that year, in which the decisive battle was fought on Mardj al-Dābiḳ.

In Kafarbaiya a *khān* was built for caravans passing through in 1542 and restored in 1830 by Ḥasan Pasha. The Djaiḥān bridge became useless in 1736 when the central arch collapsed; in 1766 this was repaired but it was blown up in 1832 on the retreat of the Turkish troops from the fighting at Bailān in order to hold up the advance of Ibrāhīm Pasha's pursuing army. As late as the middle of the xixth century it could only be crossed by an improvised wooden footbridge.

In modern times Mişşis is mentioned only by eastern pilgrims and travellers who as a rule only spent a short time there. Thus it was visited in 1432 by the Burgundian Bertrandon de la Brocquière (*"Mise-sur-Jehan"*), in the xvth century by P. Belon, 1682 the Mecca pilgrim Mehmed Edib, 1695 the Armenian Patriarch of Antiochia Makarios, 1704 Paul Lucas, 1736 Chevalier Otter, 1766 the Dane Carsten Niebuhr, 1813 Macd. Kinneir, 1834 Aucher Eloy, 1836 Colonel Chesney, 1840 Ainsworth, 1853 Victor Langlois, whose reports were exhaustively used by Carl Ritter (*Erdkunde*, xix. 66–115). The *"Merges Galles"* visited by Ludwig von Rauter on July 8, 1568, is not (as in Rohricht-Meisner, *Deutsche Pilgerreisen nach dem hl. Lande*, 1880, p. 434, note 43) al-Maṣṣiṣa, but Merkez Ḳal'esi on the Bāh Iskandarīn (Cilic.-Syr. passes). Somewhat fuller descriptions of the modern Mişşis and its ancient and mediaeval ruins were given in the xixth century by Langlois, Alishan and at the beginning of the xxth by Cousin (see *Bibliography*).

The stretch of the Baghdād railway from Dorak south of the Taurus via Adana and Mişşis to Ma'mūra at the foot of the Amanos was opened on April 27, 1912. As a station on the railway (the station is actually 1½ miles N. W. of the place) the town gained a certain strategic importance in the Cilician campaign of the French in 1919–1920 (1919: settlement of about 1,2–1,500 Armenians; May 27–28, 1920: futile Turkish blockade of the garrison there, about a company strong; end of July: withdrawal of the troops to Adana; cf. E. Brémond, *La Cilicie en 1919–1920*, in *Rev. Étud. Arm.*, Paris 1920, i., p. 311, 360, 363, 365). After the Turkish occupation the newly settled Armenians were probably exterminated in the usual way. The importance of the town has now passed to the neighbouring Djaiḥān.

According to the Arab geographers, al-Maṣṣiṣa lay on the Djaiḥān (Πάρακος, sometimes confused by the Byzantine authors with the Σάρος, Arab.

Saiḥān, with which it seems to have had at one time a common mouth: George Cedren., ii. 362; Anna Comn., ii. 147), 1–2 days' journey from Baiyās and one from 'Ain Zarba and Adhāna, 12 *mil* from the Mediterranean coast. The sea could be seen from the Friday mosque in the town; in front of the town lay a beautiful fertile plain (the ancient Ὠλίων πεδῖον). Al-Maṣṣiṣa lying on the right bank was connected with Kafarbaiya by an ancient stone bridge built by Constantius and restored by Justinian. The country round was rich in gardens and cornfields, watered by the Djaiḥān. According to Yāḳūt, the town originally had a wall with 5 gates and Kafarbaiya, one with 4 gates. A speciality of the town were the valuable fur-cloaks exported all over the world. Ten miles from al-Maṣṣiṣa, which is somewhat inaccurately placed by Ibn Khurdādhbih, Yāḳūt and others on the Djabal al-Lukkām (Amanos), was the plain of Mardj al-Dibādī, which is often mentioned in the records of the fighting between the Mamlūks and Little Armenia (probably the *"ager Mopsuestiae"* on which Cicero encamped: *ad fam.*, iii. 8). In it, N. E. of the town on the road to Sis, was the fort of al-'Amūdāin (al-Maḳrīzī, ed. Quatremère, ii. 61; cf. Ḳal'at al-'Amūdāin in Abu 'l-Fidā', *Ann. Musl.*, ed. Reiske, v. 18; located by Alishan, *Sissouan*, p. 225 sq. too far east in *"Hémétié-Kaléssi"*). A field of Mardj al-Atrākhūn is also mentioned near al-Maṣṣiṣa (Yāḳūt, iv. 487; Ṣaḥī al-Dīn, *Marāṣid*, iii. 74). Tall Ḥāmid, a strong fortress of the Thughūr al-Maṣṣiṣa, corresponds to the modern Ḥāmidīye, now called Djaiḥān (*Z.D.M.G.*, xi. 191, 200; Yāḳūt, i. 866; Ṣaḥī al-Dīn, *Marāṣid*, i. 211; Ibn al-Shihna, Bairūt ed., p. 339). There also was Tall Ḥūm (Yāḳūt, i. 867; *Marāṣid*, i. 211; Ibn al-Shihna, *ibid.*; exact site unknown). Al-'Ain at the foot of the Djabal al-Lukkām, over which went the Darb al-'Ain pass, was also one of the forts of al-Maṣṣiṣa (Yāḳūt, iii. 756; *Marāṣid*, ii. 293); on the frontier against Halab lay Būḳa (q. v.; cf. van Berchem, *Voyage en Syrie*, i., p. 257, 8). Ḥiṣn Sinān (al-Balādhuri, p. 165; Yāḳūt, iii. 155) is probably also to be sought near al-Maṣṣiṣa. A pass called Thanīyat al-'Uḳāb, to be distinguished from that of the same name near Damascus, was in the region of al-Maṣṣiṣa (Yāḳūt, i. 936; *Marāṣid*, i. 230). Even the remote fortress of Samālū (on its site cf. Tomaschek, *Festschrift f. H. Kiepert*, p. 144) was sometimes reckoned in the Syrian Thughūr and located near al-Maṣṣiṣa and al-Tarsūs (Balādhuri, p. 170: Dhamālū; Yāḳūt, iii. 416; *Marāṣid*, ii. 167; Byzantine το κάστρον Συμαλοῦς). al-Saḥṣāf on the present Sūgudlī-ṣū (*Z.D.M.G.*, xi. 180; Reiske on Abu 'l-Fidā', *Annal.*, ii. 649, note 76 according to Ḥādīdjī Ḳhalīfa: *"Ḥiṣn Saḥṣāf, that is Sogud"*) is also reckoned by Yāḳūt (iii. 401) to the marches of al-Maṣṣiṣa. Not far from the town was a Syrian monastery, Gawikāth (mentioned about 1200 A. D.: Barhebr., *Chron. eccles.*, ed. Abbeloos-Lamy, i. 624; in Alishan, *Sissouan*, p. 295: Djokhath, probably identical with *Joacheth*). The neighbouring fortress of Adamodana (now Tumlu-Ḳal'e) and Cumbetefort (*"in territorio Meloni"*, i. e. of Mlun, Arabic: al-Mallūn) were according to Wilbrand of Oldenburg (*op. cit.*) about 1212 in the possession of the Teutonic Order (*Allemani*). The Venetians had a church in al-Maṣṣiṣa (*Gestes des Chiprois*, in *Doc. arm.*, ii. 831). Armenian authors mention there the churches of St. Sarkis, Thoros and Stephan (Alishan, p. 288 sq.).

The present Mişşis, (frequently also written Missis,

cf. Taeschner, *Türk. Bibl.*, xxii., pl. 16 and 17), is an insignificant village lying on almost exactly 37° N. Lat. (pict. in Alishan, p. 283), which is stretches along the heights of the right bank of the Dīhān-çai. A stone bridge with nine arches (in Baedeker, *Konstantinopel*, 1914, p. 303 wrongly: "five arched") the foundations of which are in part ancient (pict. in Alishan, *Sissouan*, p. 289; Lohmann, *Im Kloster zu Sis*, p. 15), leads to the left bank where pieces of walls and inscriptions still mark the site of the ancient Mopsuestia. Here lay the medieval Kafarbaiya; while this form is the one in general use in Arabic texts and in modern authors, al-Idrisi (transl. Jaubert, ii. 133) and Hādīdjī Khalifa (*Dīhān-numā*, Constantinople 1145 [1732], p. 602) have Kafarbinā (Taeschner, *Türk. Bibl.*, xxii., p. 145, 1), as Langlois (*Voyage*, p. 462) and others apparently heard on the spot. The name is unknown there now (Heberdey-Wilhelm, *Denkschr. Ak. Wien*, xlv. part vi., p. 11 sq.; the Turkish General Staff map in the German version of July 1918, Sheet Adana, calls the two halves of the town "Misī Nahijesi" and "Huranije"). According to Ibn al-Shihna (Bairūt ed., p. 179), Kafarbaiya was also called "Little Baghdād".

Mişiş lies where the river emerges from a gorge with walls of yellow loess at which the last foothills of the highlands between the Saihān (now Saihūn) and Dīhān (now Dīhān-çai) in the N.W. and the Djabal Nūr (Nūr Dağ, 2,200 feet; pict. in Alishan, p. 284), a part of the Djabal Mişiş (*Stadiasm. mar. magn.*: Πάσιον ὄρος), in the southeast meet. This ridge, which takes its name from the town, lying in the centre of the Cilician plain on the left bank of the lower Dīhān and linked up with the Amanos in the east, is celebrated, particularly in the Djabal Nūr, for its rich flora, which was studied by the Austrian Theodor Kotschy on 24th-26th April 1859. On account of its medicinal herbs, Ibn al-Rūmiya in his commentary on the book of Dioscurides says that many writers took al-Masīşa to be the city of the wise Hippocrates (Ibuḳrāt) who, however, according to others, belonged to Hīmş (Mufaḍḍal b. Abi 'l-Faḍā'il, in *Patrol. Orient.*, xiv. 393; Ibn al-Shihna, Bairūt, p. 180).

Near the mouth of the Dīhān, which at one time was navigable for small ships up to al-Masīşa, lay al-Mallūn, the site of which is not known (Μαλλός; now rather Bebel than Karataş; cf. R. Kiepert, *Form. orb. antiqu.*, viii., text p. 19^a). The Frankish writers also speak of a "portus de Mamistra" (Raimundus de Aiguilers, *Historia Francor. qui ceperunt Iherusalem*, c. xi.; cf. *Doc. arm.*, i., p. xlv, note 1), probably on the "fauces fluminis Malmistræ", where al-Idrisi mentions the place al-Buṣā (*Z. D. P. V.*, viii. 141; Tomaschek, *S. B. Ak. Wien*, cxxiv., 1891, fig. viii., p. 69 writes al-Būṣā).

(E. HONIGMANN)

MISWAK (A.), a term denoting the tooth-brush as well as the tooth-pick. The more usual term is *siwāk* (plural *siwāk*) which means also the act of cleansing the teeth. Neither of the two terms occurs in the *Kur'ān*. In *Ḥādīth* *miswāk* is not used, *siwāk*, on the other hand, frequently. In order to understand its use, it is necessary to know that the instrument consists of a piece of smooth wood, the end of which is incised so as to make it similar to a brush to some extent. The piece of wood used as a tooth-pick must have been smaller and thinner,

as appears e.g. from the tradition in which it is related that Muḥammad one day received a visitor and kept the tooth-pick "at the end of his tongue" (Mir, *Tahāra*, trad. 45).

Concerning Zaid b. Khālīd it is related that he used to sit in the mosque keeping the tooth-pick behind his ear, "just as a writer will keep his pen" (Abū Dāwūd, *Tahāra*, bāb 25; al-Tirmidhī, *Tahāra*, bāb 18). When Muḥammad was in his last hours, there entered a man with a piece of wood fit for a *siwāk*; 'Ā'isha took and chewed it, so as to make it smooth (Bukhārī, *Maḡāzī*, bāb 83).

In general Hadīth emphasises the value attached by Muḥammad to the *siwāk*. When he entered his house, his first movement was towards it (Muslim, *Tahāra*, trad. 43; Abū Dāwūd, *Tahāra*, bāb 27). His servant 'Abd Allāh b. Mas'ūd has received the epithet of *ṣāhib al-siwāk* "he who used to take care of Muḥammad's *siwāk*" (Bukhārī, *Faḍl al-Ṣaḥāba*, bāb 20). When Muḥammad awoke at night, he cleansed his mouth by means of the *siwāk* before he washed himself and performed night-prayer (Bukhārī, *Adhān*, bāb 8; *Wuḍū'*, bāb 73; *Tahādī-ḡud*, bāb 9; Abū Dāwūd, *Tahāra*, bāb 30; Muslim, *Tahāra*, trad. 46, 47). When fasting, Muḥammad also made use of the *siwāk* (Aḥmad b. Ḥanbal, iii. 445, 446).

The miswāk is chiefly used before *wuḍū'* as a preparation before the *ṣalāt*. It is said that this was the practice of Muḥammad (Muslim, *Tahāra*, trad. 48) who attached so great a value to it, that he would have declared it obligatory before every *ṣalāt*, were it not that he feared thereby to overburden his community (Bukhārī, *Adhān*, hāb 8; Muslim, *Tahāra*, trad. 42; Abū Dāwūd, *Tahāra*, bāb 25; Tirmidhī, *Tahāra*, bāb 18). In one tradition it is said, as a matter of fact, that the obligatory use of the *siwāk* before every *ṣalāt* was introduced by Muḥammad as a compensation for the abolition of the obligatory *wuḍū'* before every *ṣalāt* (Abū Dāwūd, *Tahāra*, hāb 25). In another tradition (Nasā'ī, *Ḍjūm'a*, bāb 66) the use of the *siwāk* is called obligatory before the Friday-service.

The appreciation of the miswāk which appears from all these traditions culminates in the fact that it belongs to the customs of the "natural religion" (*fiṭra*: Abū Dāwūd, *Tahāra*, bāb 29) or to the ordinances of the Apostles (Tirmidhī, *Nikāḥ*, bāb 1).

Nevertheless Fikḥ does not declare the use of the miswāk obligatory in any case. There is general agreement on this point. According to some traditions, however, the Zāhirites did declare the use of the miswāk obligatory before the *ṣalāt*, but these traditions are not generally accepted. According to Fikḥ the use of the miswāk is recommended at all times, especially in 5 cases: in connection with the *ṣalāt*, under all circumstances; in connection with the *wuḍū'*; with the recitation of the Qur'ān; after sleep; and as often as the mouth has lost its freshness, e.g. after long silence.

According to the school of Shāfi'ī the use of the miswāk is blamable (*makrūh*) between noon and sunset at the time of fasting; for the nasty smell (*khalūf*) of the faster's breath is beloved by Allāh (cf. Nasā'ī, *Tahāra*, hāb 6).

It is recommended to use a miswāk of *arāk*-wood of medium hardness, neither too dry nor too moist; to cleanse the palate as well as all sides of the teeth, beginning from the right side of the mouth, moving the miswāk upwards and downwards in order not to hurt the alveoles.

MITHKĀL (A.), the weight of a thing; this is the meaning of the word in the Qur'ān; a particular weight for weighing precious metals, jewels, drugs, etc., probably the oldest unit in the Arab Troy system. The *mithkāl* corresponds to the Roman solidus of the Constantinian system which the Arabs adopted in Syria. 'Abd al-Malik took it over for his unit of gold when he reformed the currency in 77 (696). His *ḍinār* weighed a *mithkāl* of 65.5 grains (4.25 grammes), hence *mithkāl* is used as a synonym for *ḍinār*. The silver *dirham* weighed $\frac{7}{10}$ of a *mithkāl* and the *mithkāl* contains 24 *kīrāts*. Slight variations in weight are found in the different parts of the Muḥammadan world.

MI'WADH. [See *HAMĀ'IL*.]

MI'ZAF, *MI'ZAFĀ* (A., plur. *Ma'āzif*). Among the various classes of musical instruments dealt with by Arabic, Persian and Turkish writers on music is one which embraces those with "open strings" (*awṭār muṭlaqa*) such as the lyre or cithara, harp, psalter and dulcimer. Among them are instruments grouped as *ma'āzif*. Nowadays, this term refers to all stringed and wind instruments (*M. F. O. B.*, vi. 28) but in the Middle Ages it had a more restricted meaning and stood for "instruments of open strings". Al-Djāwharī (d. ca. 1003) and al-Ṣaghānī (d. 1261) define them as "musical instruments which you beat upon as in the 'ūd (lute), *ṭunbūr* (pandore) and the like", meaning by this that *ma'āzif* were played with the fingers or plectrum in the same way as the 'ūd and *ṭunbūr* were. The *Tādj al-'Arūs* includes the tambourine among the *ma'āzif*, but it is an erroneous deduction from the saying of 'Umar, *marra bi-'azfi duffin* ("he passed by the sounding of the *duffin*"), which has misled many writers (cf. Sachs, *Reallexikon der Musikinstrumente*, s. v.). The author of *Mafāṭih al-'Ulūm* (xth cent.) states that the *mi'zafa* was "a stringed instrument belonging to the people of al-'Irāk" (p. 237), whilst al-Muṭarrizī (xiith cent.) says that the *mi'zaf* was "made by the people of al-Yaman", a provenance which Ibn Khurdādhbih (d. 912) also gives the instrument (al-Mas'ūdī, viii. 93). A more precise classification is allowed by al-Shalāhī who includes the *mi'zaf* among barbitons (*barābit*) and lyres (*lairān*), which agrees with our oldest authority, al-Lāith b. al-Muzaffar (viiiith cent.), who says that both *mi'zaf* and *mi'zafa* were terms given to "an instrument of many strings", whilst al-Fārābī (d. 950) specifically denominates *ma'āzif* as instruments of "open strings" (Kosegarten, *Lib. cant.*, p. 77, 110). In the *Kitāb al-Aghānī* the *mi'zafa* is rarely placed in the hands of the minstrels, probably because it was of inartistic merit. One performer on the instrument, Muḥammad b. al-Ḥārith b. Baskhīr (ixth cent.), was asked sarcastically if it were a rat-trap (*Aghānī*², x. 153).

Tradition avers that *ma'āzif* were "invented" by Dilāl the daughter of Lamak, who was of the

seventh generation from Adam (al-Mas'ūdī, viii. 89). Since there was a *ḥadīth* condemning *ma'āzif* as signs of the end of the world (al-Tirmidhī, ii. 33) it is quite likely that the *fukahā'* thought it consistent with policy to make *Dilāl* or *Ḍalāl* ("error, destruction") the originator of these *ma-lāhī* or "forbidden pleasures". On the other hand, we read that "David the Prophet had a *mi'ṣafa* on which he used to play when he recited the psalms" (*ʿIkd al-Farid*, iii. 189), which was an echo of the Jewish tradition that he was an adept on the *kinnār* (I Samuel, xvi. 16, 23). The name may be a survival from the days of belief in sympathetic magic. The voice of the *djinn* was termed the *ʿazf*, and the spiritual world could be conjured by the sounds of the *mi'ṣaf*. In Islāmic times musicians claimed that their music was inspired by the *djinn*. The Greek *μάγιστος* was an instrument of the same class as the *mi'ṣaf*. It was of Lydian origin and the name is suspiciously like the Semitic one.

Lyre and cithara. Although we see these instruments in the hands of the ancient Semites on the monuments they do not appear to have had acceptance among the musicians of Islāmic times except with the *fallāḥīn*, unless the seven-stringed *wanaḍj* (= *zanadj*) of *Khurāsān* was such an instrument (al-Mas'ūdī, viii. 90). Both words are of Greek origin and they appear in Arabic as *lūr* and *ḫiṭāra* generally. In Palestine and Egypt to-day, a primitive type of lyre is known under the name of *ṭunbūra barbariyya* or *ḫiṭāra (kissara) barbariyya*. Villoteau (*Descr. de l'Égypte, état mod.*, i. 918) and Saint-Saëns (Lavignac, *Ency. de la musique*, i. 528) have shown that much of the ancient Greek method of lyre-playing still obtains in the modern Egyptian *ḫiṭāra*-playing. It is worthy of notice that the Arabic word for striking the *ḫiṭāra* strings is *ḥarraka*, and this is practically identical with the Greek *κρένω*.

Harp. Whilst we possess an actual example of a Sumerian harp with the sound-chest below the strings, this type does not seem to have had any vogue with the Arabs or Persians in artistic music, and is only found among the peasantry. In Palestine and Upper Egypt to-day it is called the *ṭunbūra sūdānī* and *nanga*. The harp with the sound-chest above the strings has been a far more important instrument with the Semites and is to be found in the Assyrian sculptures (cf. the Assyr. word *sanaḫū* and the Ethiopic *sanḫo*). That extremely chatty Turkish writer Ewliya' Celebi says that this instrument, which the Persians called the *čang*, was "invented" by Pythagoras to solace Solomon (*Travels*, i/ii. 227), and even al-Shalāhī says that it was of Byzantine (*Rūmī*) origin (fol. 15). Yet Ibn Khurdādhbih and al-Djawnharī show that it was peculiar to the Persians and, indeed, the type may be found on the Sāsānian sculptures (Ker Porter, *Travels*, ii. 175). The Arabs called it the *djank* and/or *šandj* (cf. al-Djawnharī, ed. Sachau, p. 97). It may be that the *djank* and *šandj* were different types of harp, the Persian and Arabian. There were certainly two types, the straight sound-chest and the crooked. In the *Mafātīḥ al-ʿUlūm* the Byzantine *salbāk* (σαμβάκη) and *lūr* (λύρα) are likened to the *djank* and *šandj* respectively. Among the Arabs the *djank* is mentioned as early as al-A'shā Maimūn (d. ca. 629). Al-Fārābī devotes a section in his *Kitāb al-Mūsīqī* to *ma'āzif*, *djunūk* and/or *šunūdj*, and

other instruments "in which there is made to every note, according to its state, a solitary string", and he shows them strung with both fifteen (diatonic) and twenty-five (chromatic) strings (Kosegarten, *l. c.*). Both Ibn Sinā (d. 1037) and Ibn Zaila (d. 1048) deal with the *šandj*, whilst in the *Kanz al-Tuḥaf* (xivth century) and the works of Ibn Ghaibī (d. 1435) the *čang* is fully described. The oblique sound-chest was 109 cm. long, and the handle (*dasta*) 81 cm. long. From the sound-chest to the horizontal bar below twenty-four or twenty-five strings of goat's hair were stretched, being fastened to metal pegs (*malāwi*). Some players even used thirty-five strings so as to embrace the scale of the Systematists. The face of the sound-chest was of skin, but the remainder of the framework was of vine or plum tree wood. The handle was placed under the left arm (cf. the pictures in MSS.) and the fingers of both hands were used in performance, plectra (*ṣakḥmūt*) being fastened to the finger tips. Nowadays the harp has fallen into complete desuetude among the Arabs and Turks. Even among the Persians it has become rare, and in its modern form it was little different from the occidental instrument (Advielle, *La musique chez les Persans*, p. 13), whilst the instrument shown by Kaempfer (xviii century) under this name was a zither. In 1638 Ewliya' Celebi found only twelve players of the *čang* in Constantinople because, he said, it was a difficult instrument to play (*Travels*, i/ii. 234). At this time the Turkish *čang* had forty strings, and a very large instrument of the xvth (not xviih) century is given by Engel (*Mus. instr. in the South Kensington Museum*, p. 59).

Although the "humped back" of the *čang* or *djank* became a favourite theme for poets, and it was certainly the best known type, yet an instrument with a "straight back" was also to be found. A more pronounced "hump" existed in a type mentioned by Ibn Ghaibī and called, probably on account of this feature, the *agri*. It was strung similarly to the *čang* but had a wooden instead of a skin face on the sound-chest, and its tuning-pegs were also of wood.

A Byzantine harp called the *salbāk* (erroneously written *salyāk*, *shalyāk* [cf. the art. *SHALYĀK*, which clashes with the opinion of the present writer, Red.], or *salbān* in most dictionaries and MSS.) was also known to the Arabs. It was actually a survival of the old Greek *σαμβάκη*, and is described in the *Mafātīḥ al-ʿUlūm* as "an instrument of the Greeks (*Yūnāniyyūn*) and Byzantium (*Rūm*) resembling the *djank*" (p. 236). According to Ibn Khurdādhbih it had twenty-four strings (al-Mas'ūdī, viii. 91: cf. Farmer, *Byzantine musical instruments in the ninth century*, p. 4 sq.). Ibn Sinā classes it with the *šandj* among the instruments with "open strings" stretched across a space.

Psalttery. In describing those instruments with "open strings" stretched across a surface, both Ibn Sinā and Ibn Zaila mention a particular type named the *ʿankā*. Whilst the name suggests a "long necked" instrument, the details given of strings of different lengths but identically situated bridges (*ḥamlāt*), compel one to recognize in it a trapezoidal psalttery, one species of which was known later as the *ḫānūn*. The word *ʿankā* also stood for "phoenix", and we know that the Greeks of old had an instrument called the *φοινῖξ*. This

may account for both the instrument and the name among the Arabs. It is not mentioned however, after the xth century.

The *kānūn* [q.v.], the present-day psaltery of the Arabs and Turks, is said by Ibn Ghāibī to have been invented by Plato, although the instrument as known in the xth century is attributed to al-Fārābī (Ibn Khallikān, *Biog. Dict.*, iii. 309). The word itself is derived from the Greek *κάνον*. Although the instrument is delineated in the various MSS. of the Syriac lexicon of Bar Bahlūl (xth century) sub "kithara", yet the name *kānūn* is not given. It is mentioned in the *Thousana and One Nights* (ed. Macnaghten, 49th and 149th nights), and in one place is designated the *kānūn miṣrī* ("Egyptian psaltery"). In Spain it was particularly favoured and al-Shāḥundī (d. 1231) includes it among the Andalusian instruments manufactured at Seville (al-Makkārī, *Analektes*, ii. 143—144). In the Persian *Kanz al-Tuḥaf* and in Ibn Ghāibī it is described in detail. The shallow, flat, trapezoidal sound-chest, 9 cm. deep, was made of vine or plum tree wood. The lengths of the bass and treble sides were 81 and 40.5 cm. respectively, whilst the oblique side was 74.25 cm. It was mounted with sixty-four strings (seventy-two? in Ibn Ghāibī), arranged trichordally. Although the *kānūn* has fallen into disuse in Persia, it is still a great favourite in the Maghrib, Egypt, Syria and Turkey, where it is to be found strung trichordally with from fifty-one to seventy-five strings.

A rectangular type of psaltery of greater compass was the *nuzha*. It was invented by Ṣafī al-Dīn 'Abd al-Mu'mīn (d. 1294) and a design is sometimes to be found in his *Kitāb al-Adwār* (see Farmer, *Arabic musical mss. in the Bodleian Library*, frontispiece). Its features are also fully discussed in the *Kanz al-Tuḥaf* and by Ibn Ghāibī. Its dimensions were 74.25 X 54 cm., whilst the depth of the sound-chest was 27 cm. 108 strings were mounted on the instrument.

Dulcimer. Ibn Sīnā and Ibn Zaila describe an instrument with "open strings" played on with beating rods (*maḥārīk*) which is called the *ṣandī ṣīnī* ("Chinese *ṣandī*"). This is clearly the dulcimer, later to be generally known as the *sinfir* or *sanfir* (also written *ṣantūr*, *sinfir* and *sanfir*), a word derived immediately from the Aramaic, but probably finally traceable to the Greek *ψαλτήριον*. Indeed, it is invariably found in the hands of Jews and Greeks. It is of similar structure to the *kānūn*, but with two of its sides oblique instead of one. The strings, which are mounted dichordally in Egypt, are of metal and are beaten with sticks (*maḥārīk*) instead of plectra as in the *kānūn*. We find it mentioned by Ibn Khaldūn (d. 1406) and al-Haiṭhamī (d. 1563), but its popularity was but fitful among the Arabs. In the xviiith century it is doubtfully acknowledged by Russell (i. 152) and Niebuhr (*tympanon*). In Egypt, both Villoteau and Lane show that it was only to be found in the hands of Jews, Greeks and other foreign residents, whilst native writers like Muṣḥarḳa and Darwīsh Muḥammad make no mention of it. To-day it is practically unknown in Syria and Egypt. In the Maghrib it is unnoticed by Host, Christianowitsch and Salvador-Daniel, and although it is dealt with by Delphin and Guin, it is scarcely known to-day. In Persia however, it obtained greater recognition. In the xviiith century it is mentioned by Chardin,

but not by Kaempfer, whilst Advielle in the sixth century gives both a design and a description. In Turkey, whilst the word is registered in the xviiith century by Meninski, it is not mentioned by Ḥājjdī Khalifa nor described by Ewliyā 'Celebī, in their lists of Turkish musical instruments. In the next century however, it is recognised by Toderini, and to-day the *sanfir* is one of the most esteemed instruments in the country, where it may be seen in two forms: the *sanfir turkī* and the *sanfir fransiz*. The former, exclusively used by the Jews, has 160 strings, grouped in fives, giving thirty-two notes, a two octave chromatic scale. The latter, which is confined to the Turks, was introduced from the West about the middle of the last century by a certain Ḥilmī Bey. It is mounted with 105 strings, also grouped in fives, which are placed on the sound-chest in the Occidental way.

AL-MIZÂN, the balance, is the nomen instrumenti from *wazana* "to weigh", which means to weigh in the ordinary sense and also to test the level of, like the Latin *librare*. Here we shall discuss:

1. The various instruments used for weighing in the ordinary sense; brief notes are added on the ascertainment of specific gravities. 2. Levelling instruments.

I. BALANCES.

The steelyard (*al-ḳaraṣṭūn*, q.v.) has already been dealt with; the general principles of the balance are also discussed in that article. — The usual balance with two arms of equal length had the same shape among the Muslims as in ancient times and at all periods in the west; this we know from extant specimens and illustrations in various works, notably in al-Khāzinī, in a manuscript of al-Ḳazwīnī with reference to the constellation Ibra (fig. 1), in a manuscript of Ḥarīrī, in the *Āṣin-i Akbarī* of Abu 'l-Faḍl (fig. 2). In the beautiful manuscript from which Ch. Schefer published the *Sefer Nameh* of Naṣir-i Khusrāw,

on p. 88 in the illustration of the Masjid al-Aksâ there is a balance labelled *terazu* (*Sefer Nameh*, *Relation du voyage de Nassiri Khosrau*, ed. Ch.

Fig. 1.

Schefer, *Publications de l'école des langues orientales vivantes*, ii. ser., i., Paris 1881). The common balance is called *mizân* but in the Qur'ân we also

Fig. 2.

find *kusfās*, which, according to al-Tha'labi, is a loanword. Other names are *shāhin*, which does not only mean the beam and tongue of the balance

and is contrasted by the *lkhwān al-Ṣafā*³ to the *kabbān* (steelyard), also *taris* from the Persian *tarāzū*, then *mihmal* for scales for gold and *kubba* for beam and tongue. *Minḍjam* means the tongs and also the beam. According to J. Ruska, *ḥab-bāba* seems to be used for scales (for gold). On the expressions connected with *karastūn*, see that article. Al-Maḥḍisi mentions Ḥarrān as a place where balances were made, in his work *Aḥsan al-Taḳāsim fī Ma'rifa al-Aḳālim*, p. 141; in this town many very skilful mechanics were engaged in making astronomical instruments. The accuracy of the balances made in Ḥarrān was proverbial.

The Arabs devoted special attention to the construction of balances used to identify metals and jewels from their specific gravity, to distinguish false from genuine and pure and to ascertain the composition of alloys of two metals by the use of the principle of Archimedes. They called these balances *mizān al-mā'*, "water" (hydrostatic) balances. Of makers of these, al-Khāzini (c. 1100, q. v.) mentions: Sanad (Sind) b. 'Alī (c. 250 = 864), Muḥammad b. Zakariyā al-Rāzī († 320 = 932—933), Ibn al-ʿAmīd († 359 = 969—970), Yuhannā b. Yūsuf (perhaps al-Ḳasṣ, d. c. 370 = 980—981), Ibn Sīnā († 428 = 1037), Aḥmad al-Faḍl al-Massāḥ (the "measurer", also mentioned by al-Bīrūnī without the "Massāḥ"), Abū Ḥafṣ 'Omar al-Khāyāmī (as the celebrated mathematician is never called Abū Ḥafṣ, it is doubtful whether he is the individual mentioned by al-Khāzini). The balances made by these men are still fairly simple as only two, or at most three, scales were used in them. A contemporary of al-Khāzini, namely Abū Ḥākim al-Muẓaffar Ibn Ismā'īl al-Ashʿarī (d. before 515 = 1121) added two more scales; these and other improvements made the scales much more convenient to use. Of him al-Baiḥaqī says (E. Wiedemann, *Beitr.*, xx., *Einige Biographien nach al-Baiḥaqī*, in *S. B. P. M. S. Erlg.*, xlii, 1910, p. 17): "He constructed the balance of Archimedes with which one ascertains forgeries. The treasurer of the great sultān feared that his frauds would thus be discovered. He therefore broke the balance and destroyed its parts. Al-Muẓaffar died of grief as a result". Al-Khāzini then took up al-Muẓaffar's work and made the balance a

Fig. 3.

most accurate means of measuring; he called it the universal balance, *al-mizân al-ʿdāmī*. But, no doubt in memory of his predecessor, he called his book *Kitāb Mizân al-Ḥikma*.

in the physical (*ṭabīʿī*) balance of Muḥammad b. Zakariyā al-Rāzi (fig. 3); it goes back to Greek models, e. g. of Archimedes (fig. 4; cf. al-Khāzini, *op. cit.*).

Fig. 4.

For special purposes such as the examination of gold and silver and their alloys, many contrivances were made with balances and the movable scales and running weights on the beams, for example

Here we shall describe somewhat more fully the "balance of wisdom" ¹⁾ of al-Khāzini.

Al-Khāzini gives the beam *A* of the balance (fig. 5) a thickness of six cm. and a length of

Fig. 5.

1) H. Bauerreiss (*Zur Geschichte des spez. Gewichtes im Altertum und Mittelalter*, Dissertation, Erlangen 1913) has reconstructed the "balance of wisdom", as nearly as possible following the data of the original. Reproductions are in Erlangen and the German Museum in Munich. The illustration is taken from a photograph. In the original right and left are reversed.

two m. In the centre it is strengthened by an additional piece *C*, obviously intended to avoid any bending at this point. A cross-piece *B* (*ʿarīḍa*) is let in here. Corresponding to it is a similar cross-piece *F* on the lower part of the tongs, in which moves the tongue *D*, itself about 50 cm. long. The upper cross-piece *E* is hung by rings to a rod which is fastened somewhere. Pegs or small holes are placed at exactly opposite places of the cross-pieces *B* and *F* to which threads are tied or drawn through. The friction at an axis is thus avoided, which, in view of the great weight of the beam, is quite considerable. The knob visible below the beam under its centre is used to secure the tongue to the beam or to take it out in order to adjust it evenly. The tongue has for this purpose a peg at the foot which goes through a hole in the beam. Al-Khāzinī also observes that one could also take shorter beams but then all the other dimensions must be proportionately smaller. The beam is divided not on one side only, as in the illustration, but on both. The scales are hung on very delicate rings of steel (*ghurāb* "ravens") the points of which fit into little niches on the upper surface of the beam. Five scales are used in ascertaining specific gravities, i.e. in investigating alloys and examining precious stones. Of these the scale *H* (fig. 5^a) is called the cone-shaped or *al-ḥākim*, the judge, as it is used to distinguish false from true. It goes into the water and in order to meet with less resistance in sinking is cone-shaped and pointed below. The scale *I* is called the winged (*mudjannah*, fig. 5^b and 5^c, side and top view). It has indented sides so that it can be

Fig. 5^a.Fig. 5^b.Fig. 5^c.

brought very close to the adjoining scales. It is also called the movable (*munakkāl*). There is also a movable running weight *K* (*al-rummāna al-sayāra*) which serves, if necessary, to adjust the weight of the lighter beam; it is therefore also called the *rummāna* of the adjustment (*al-taʿdīl*). The other scales are used to hold weights. Al-Khāzinī attained an extraordinary degree of accuracy with his balance. This was the result of the length of the beam, the peculiar method of suspension, the fact that the centre of gravity and axis of oscillation were very close to each other, and of the obviously very accurate construction of the whole. Al-Khāzinī himself says that when the instrument was weighing 1,000 *mithkāl*s, it could show a difference of 1 *ḥabba* = $\frac{1}{68}$ *mithkāl*, i.e. about 75 centigrammes in 4.5 kilogrammes. We thus have accuracy to $\frac{1}{60,000}$.

Al-Khāzinī used his scales for the most varied purposes. Firstly for ordinary weighing, then for

all purposes connected with the taking of specific gravities, distinguishing of genuine (*ṣamīm*) and false metals, examining the composition of alloys, changing of dirhams to dinārs and countless other business transactions. In all these processes the scales are moved about until equilibrium is obtained and the desired magnitudes in many cases can at once be read on the divisions on the beam.

False balances. That as early as the time of Muḥammad balances showing false weights were used for fraudulent purposes is shown by various passages in the Qurʾān (Sūra xxvi. 182; vii. 13; xvii. 37). We read for example: "Weigh with the just (or upright, *mustakīm*) balance". Al-Djawbārī (middle of the xiiith century; cf. E. Wiedemann, *Beiträge*, iv., *Über Wagen bei den Arabern*, in S.B.P.M.S. *Erlg.*, vol. xxxvii., 1905, p. 388) describes two such arrangements. In the one the beam of the balance consisted of a hollow reed closed at the ends in which there was some quicksilver; by a slight inclination of the beam this could be made to flow as desired to the side of the weights or of the articles and thus make the one or other appear heavier. A balance like this was used in Cairo in the time of E. W. Lane by a dishonest police inspector (*muḥtasib*). In the second pair of scales the tongue was of iron and the merchant had a ring with a magnetic stone. By bringing the ring close to it the balance went down to right or left.

The balance or the principles applying to it were used for many purposes besides weighing. Contrivances turning on an axis in which sometimes one and sometimes the other side becomes lighter or heavier, especially by the admission or release of water, were used to produce automatic movements; they are often called *mizān* (cf. e.g. the writings of the Banū Mūsā and of al-Djazarī; e.g. in F. Hauser, *Über das Kitāb al-Ḥiyāl. Das Werk über die sinnreichen Anordnungen der Banū Mūsā*, Abh. 2, *Gesch. der Naturwissenschaften und Med.*, Heft 11, 1922; E. Wiedemann and F. Hauser, *Über die Uhren im Bereich der islamischen Kultur*, in *Nova Acta der Kais. Leop.-Carol. Akademie*, vol. c., 1915, No. 5 and other passages). In the hour balance used to measure time, a container filled with sand or water is hung at one end of a lever poised with arms equal and has a hole in the bottom. The equilibrium disturbed by the gradual loss of sand or water is compensated for by weights which move along the other arm. From their weight and position one can calculate the time that has passed (E. Wiedemann, *Beiträge*, xxxvii.: *Über die Stundenwaage*, in S.B.P.M.S. *Erlg.*, xli., 1914, p. 27; a full description is given by Prof. F. Hauser in E. von Bassermann-Jordan, *Die Geschichte der Zeitmessung und der Uhren*).

Most artisans also describe as "scales" *al-miṣṭarā*, i.e. ruler, *al-barkaz*, the compasses, *al-kūniyā*, set square and level, as they serve to show lapses from the straight etc. — *Mikyāl*, ell, *shāhin*, *kubbān* are "scales" with which one measures whether things are correct or over measure in business transactions (*Rasāʾil Ikhwān al-Ṣafāʾ*, Bombay 1305, I/ii. 128).

For a few further meanings of *al-mizān* see Dozy, *Supplément*, s. v. *wazana*. — In mathematics the balance is used to elucidate certain mathematical processes. The steelyard is used to illustrate the inversed relation: the weights are in inverse proportion to the length of the arms (cf. e.g. Th. Ibel, *Die Wage im Altertum und Mittelalter*, in *Programm Forchheim*, 1905—1906, p. 93; *Rasāʾil*

Ikhwān al-Ṣafā', Bombay 1305, f. 10 and other places). Al-Bīrūnī uses the balance to explain the procedure in solving equations (*al-djābr wa 'l-muḳābala*) (*Kitāb Taḥṣīm* etc., Berlin, N^o. 5665, fol. 9b). The method of the double error is also called the "process with the use of the beam".

One knows whether a number is divisible by nine by casting out the nines: to do this one adds up the figures in a number and takes away 9's from the total until 9 or another number is left; the number left is called *mizān*. The word *mizān* also means testing the correctness of any calculation (cf. Bahā' al-Dīn, *Khulāṣat al-Ḥisāb*, ed. G. H. F. Nesselmann, Berlin 1843).

In magic squares the sum of the largest and smallest figure is called *al-mizān*; it is half the total of the vertical row, horizontal row or of the diagonals (G. Bergsträsser, *Zu den magischen Quadraten*, in *Isl.*, xiii., 1922, p. 223).

Alchemy is often called *ʿilm al-mizān*, the science of the scales, or of accurate measurement, as in the preparation of the elixir etc. the choice of the right proportion of the ingredients is an important matter.

Among other uses of the word *mizān* may be mentioned that a tree on a boundary near Bāniyās at the source of the Jordan was called "tree of the balance" (*mizān*). We may also note that on the day of judgment a balance with a very long beam will be erected (on it cf. e. g. M. Wolff, *Muhammadianische Eschatologie*, Leipzig 1872, text, p. 81, transl., p. 148 and al-Ghazālī, *al-Durra al-fakḥra fī Kāshf ʿUlūm al-Ākhira*, ed. L. Gautier, Leipzig 1878, text, p. 67, transl., p. 79).

Specific Gravity. We have already mentioned that the "balance of wisdom" and other scales were used to test the purity of metals etc. and to ascertain the composition of alloys: we shall now briefly discuss the work of the Arabs on this subject. Two magnitudes have to be considered. The weights of equal volumes are compared, which corresponds to an investigation of the specific gravities¹); al-Bīrūnī, for example, takes hemispheres of the different metals or rods of equal size and compares their weights, or the volumes of equal weights are compared by finding those of any weights and then comparing the specific volumes (i. e. the volumes of the unit of weight). For these measurements one used either methods based on the principle of Archimedes, according to which a body loses in a liquid as much weight as the volume of the fluid displaced by it, or one measures the fluid displaced by the body itself. For this purpose al-Bīrūnī constructed a cone-shaped vessel (*al-ʿālat al-makhrūʿiyya*) [fig. 6]. This vessel is filled with water until it begins to run out by a pipe at the side; then a definite mass, as large as possible, of the substance (weight P_1) is weighed, as is the scale P_2 placed under the outlet pipe. The substance is then put in the vessel and the pan

with the water displaced weighed (P_3), so that from $P_3 - P_2$ we get the volume of water corresponding to the mass P_1 , which is then calculated by al-Bīrūnī for a weight of 100 mithkāl. As almost always,

Fig. 6.

in ascertaining the specific gravity the Arabs rely on the ancients, particularly on the work of Menelaus "on the artifice by which one ascertains the quantity of each of a number of mixed bodies", *Fī Ḥila allatī yuʿrafu bi-hā Miqdār kull wāḥid min ʿIda Adṣām mukḥtaliḡa* (from the Escorial MSS.) and *Maʿrifat Kammiyyat Tamayyuz al-Adjram al-mukḥtaliḡa* (according to Ibn al-Kīfī, p. 321; Professor Dr. Würschmidt is giving an edition of this work in *Philologus*). In al-Bīrūnī's work, Archimedes himself is mentioned and a certain Manāṭiyūs (according to Noldeke, probably Μανταξ). The Muslims however did not slavishly take over the statements of the ancients. Al-Bīrūnī, for example, emphasises that one can ascertain the composition of an alloy of two components but not of one of three, as Menelaus says. Among the Muslims it was certainly al-Bīrūnī who did most in this field, in his work "on the relations which exist between metals and jewels in volume" (*Maḳāla fī 'l-Nisab allatī bain al-Filzāt wa 'l-Djawāhir fī 'l-Ḥadīm*, cf. also al-Bīrūnī, *Chronology*, text, p. xxxiv), which still exists, and also in another work, which only survives in fragments quoted by al-Khāzinī. Al-Bīrūnī was induced to compose the first named by the difficulties encountered by goldsmiths in ascertaining the quantities of metals necessary to copy a given article. As predecessors he mentions Sanad b. ʿAlī, Yuhannā b. Yūsuf, Aḥmad al-Faḍl al-Bukhārī. So far as we know he was followed and his results were used by: Abū Ḥafṣ ʿOmar al-Khaiyāmī (see above), al-Asfizārī (see above), al-Khāzinī (see above), Fakhr al-Dīn Muḥammad Ibn ʿOmar al-Rāzī († 1210, Suter, N^o. 328), and Abū 'l-Faḍl Allamī, Eliyā Misrākhi, a work ascribed to Plato which was composed in the time of Bāyazid by a slave of a son of Sinān, a Turkish work by al-Ghaffārī, and a Persian by Muḥammad b. Manṣūr (on these works, as on mineralogical literature in general, see E. Wiedemann, *Beitr.*, xxx.: *Zur Mineralogie des Islam*, in *S.P.M.S. Erl.*, xlii., 1912, p. 205). We must also mention the study by Abū Manṣūr al-Nairizī who is not to be confused with the commentator on Euclid, and the work on the measurement of bodies which are compounded of

1) It is to be noted that expressions like specific gravity and specific volume, which refer to the unit of weight and the unit of volume are not found among the Arabs. Al-Bīrūnī, for example, gives the amount of water displaced by 100 mithkāl of various substances corresponding to their volume and the weights of the metals which have the same volume as 100 mithkāl of gold and in the case of other substances the same volume as 100 mithkāl of blue *yāqūt*.

other substances, in order to ascertain the unknown amounts of the separate constituents: *Minbar fi Misāhat al-Adjsām al-mukhtalifa li 'stikhrādī Mikdār madjūhūlikā* by Samū'il b. Yahyā b. 'Abbās al-Maghribī al-Andalusī (d. 1174–1175 at Maghāra; s. Ibn al-Kiftī, p. 209; Suter, N^o. 302).

The statements on specific gravities refer to: A. Metals: gold, mercury, bronze (*šifr*), copper, brass (*šibh*), iron, tin (*raṣāṣ*), lead (*usruf* and *usrub*). B. Precious stones: blue *yākūt*, red *yākūt*, ruby, emerald, lapis lazuli, pearl, coral, cornelian, onyx and rock crystal. C. Other substances: Pharaonic glass, clay from Siminyān, pure salt, salt earth (*sabakh*), sandarach, enamel (*mīnā*), amber, pitch, wax, ivory, bakkam wood, willow wood.

The weights of equal volumes of liquids and the volumes of equal weights of liquid are sometimes found directly, sometimes ascertained with the araeometer of Pappus. The former magnitude plays an important part in the liquids used in every day life like oil and wine. The second was of more scientific interest. It is especially interesting that the Arabs found that hot water and hot uriae had a larger volume than equal weights cold. They also knew that ice had a larger volume than the same weight of water.

The facts ascertained with the araeometer of Pappus for fluids refer to cold fresh water, hot water,

ice (does not properly belong to this connection), sea water, vinegar, wine, sesame oil, olive oil, cow's milk, hen's egg, blood of a healthy man, warm and cold urine.

Fig. 7. shows the araeometer reconstructed by H. Bauerreiss from al-Khāzinī. X is a massive cone used to make the instrument heavy. There are inscriptions corresponding to the Roman numerals. For details the reader may be referred to H. Bauerreiss's article. — The principle that floating bodies of the same weight sink in water to the same depth finds application in a juristic trick cited in the *Kitāb al-Hiyāl fi 'l-Fiḥh* of Abū Hātim al-Kāzinī. The weight of a camel is ascertained by putting it in a boat and noting how deep the boat sinks. The camel is then replaced by iron weights until the boat sinks to the same level (cf. J. Schacht in G. Bergsträsser, *Beitr. zur semitischen Philologie und Linguistik*).

In medical works and treatises on weights and measures, figures are given for the weights of equal volumes of wine, oil and honey (cf. Bauerreiss, *op. cit.*).

So far as it is a question of particular bodies, the values as ascertained by the Arabs agree very well with those obtained by modern science and even surpass in accuracy those obtained by it up till the beginning of the last century.

Bibliography. This is given in the article AL-ḲARASTUN.

2. LEVELLING (*wazana*, to weigh, corresponding to the Latin *librare*).

The Arabs certainly adopted a large number of methods of levelling and testing levels from other

peoples, either the Byzantines or the Persians. The statements in Ibn Waḥshiya (see below) about the making of canals etc. agree with those of Vitruvius, who in turn drew on Greek sources. The Arabs learned partly from Greek works; for example we are told that according to Philemon (according to M. Steinschneider: Philon), the incline in canals must be at least 5 : 1,000; but they also utilized data gained from the practical experience of land owners, canal builders etc. Whether the Arabs were acquainted with the standard works of Hero on this subject, the *Metrica* and the "On the Dioptra" (Hero, *Opera omnia*, ed. H. Schöne, iii., Leipzig 1903), is not known, for no corresponding title is found in the biographical or bibliographical works. But the writing mentioned in the *Fihrist* "On the use of the astrolabe" may have dealt with geodetic problems. Many problems in the Arabic sources are very similar to those dealt with in the work "On the Dioptra"; only the Arabs use the astrolabe or quadrant instead of the dioptra. Whether one or other of the methods described below was discovered independently by the Arabs and by whom, cannot be established from the authors on the subject, who were mainly practical men. They are described in the most different places.

In levelling, one is faced with two problems: firstly to make a surface exactly level and horizontal or to place a rod or a surface exactly perpendicular, and secondly to ascertain the point on the same level as a given one, or to ascertain the difference in height between two points.

I. A surface is made level and horizontal in the following way:

A ruler with a straight edge is moved over the surface and one sees whether it touches it everywhere so perfectly that light penetrates nowhere between ruler and surface; in this case the surface is perfectly smooth (al-Shirāzī, see below).

That the ruler itself is straight is ascertained by seeing if a thread stretched along it and fastened to it at one end can be lifted the same height from the ruler along its whole length. Whether three rulers are straight is tested by putting them side by side and exchanging their sides (Ibn Yūnus, in K. Schoy, see below).

To examine if a surface was perfectly horizontal, the following tests were adopted:

1. Water is poured over the surface and it is observed whether this flows equally in all directions; this is one of the most usual methods. The same plan is given by Proclus in his *Hypotyposis* (ed. K. Manitius, Leipzig 1909, p. 50, 51). According to him, one pushes supports in under a level surface on all sides till it shows no slope anywhere; this is the case when water poured on it remains standing without running to one side.

2. An object which can roll is placed on one side; if it does not roll off but only oscillates, the surface is horizontal (al-Shirāzī, see below).

3. Water is poured into a plate or dish (*dīfma*, fig. 8) with an edge which is parallel to the surface and of the same height all the way round,

Fig. 8.

and it is observed whether the water comes exactly up to the edges on all sides (Ibn Luyūn, see

below). An exactly straight ruler is laid on the plate and one looks over this.

Ibn Sinā (Cod. Leidensis, N^o. 1061) in order to test whether the upper surface of the base of a theodolite is horizontal, makes a cavity in it with exactly perpendicular walls, pours water in and proceeds as in the case of the plate. To test whether a large ring is absolutely smooth, al-'Urdī used a process which he called *al-afādain*. This is not a ready made instrument but an apparatus to be put together from case to case. The ring to be tested is first of all placed exactly horizontal with the ground by means of the level (fig. 9). Inside the ring on its concave side a circular

Fig. 9.

In the original the rod is at *e*, the rope at *a*, *b c mardīkāl*, it is a triangle of wood, at *d* thread, at *f* *thakḥāla*, weight.

gutter of potter's clay is built. Its outer edge comes up to the level of the surface of the ring while its inner edge is a little higher. The gutter is filled with water and some light ashes are scattered on it. If the water flows over the ring the depressions in the ring are filled with it, while the ashes remain on the raised parts of it. The inequalities in the surface of the ring are thus brought out (fig. 10). Al-'Urdī em-

Fig. 10.

phasises that the test must be made in absolute calm.

Al-'Urdī also used the same method in order to see that the outlets for water in a distribution system at Damascus were all of the same level. In the centre of the reservoir he put a gutter like this and deepened or raised the bottoms of the channels running out of it until the water from the gutter spread equally over the channels which revealed any inequalities (fig. 11). Cf. H. J. Seemann, in *S. B. P. M. S. Erg.*, lx., 1928, p. 49, 81 and J. Frank, in *Zeitschr. f. Instrumentenkunde*, xlviii., 1929.

Fig. 11.

4. A plumb-line (*shāḥūl*, *buld*, *balad* [from βέλος], *thakḥāla*) is dropped from the apex (fig. 12) of a isosceles triangle, made for example of wood, with

Fig. 12.

its perpendicular marked; a piece is sometimes left open in the centre of the under side for the weight of the plumb-line. If the plumb-line coincides with the perpendicular, the surface is horizontal (the figures go back to al-Shirāzī and al-Khalkhālī). Such drawings have led to the erroneous idea that Muslim students were already acquainted with the pendulum (cf. E. Wiedemann, in *Verhdl. d. d. phys. Ges.*, 1919, p. 663; the apparatus is called *al-fādin* [e.g. in al-Shirāzī, al-'Urdī, see below], Dozy, *op. cit.*, also *al-kūsin*).

In the architect's balance (fig. 13), according to Ibn Luyūn or al-Ṭighnārī (see below), a quadrangular piece of wood is placed on the beam aa to be

Fig. 13.

examined; in the middle of it, a perpendicular line ba is drawn before which a plumb-line is hung; according to the original figure, it seems to be two parallel lines between which the plumb-line hangs.

Al-Marrākushī (see below) has described a more perfect form (fig. 14). In the figure ab , ac and de are rods, and $ab = ac$ and ade is an equilateral triangle; de is pierced in the centre. A plumb-line

Fig. 14.

is hung from a through the hole. If the surface on which b and c are put is horizontal, the thread of the plumb-line goes through the centre of the hole.

Whether the levels and other similar instruments are themselves correct, whether for example the plumb-line from the apex to the base is perpendicular, is tested in this way: After the plumb-line comes to rest in one position of the level, the latter is put in various positions on some horizontal surface, particularly in one perpendicular to the first, and in one in which left and right have places exchanged. If the plumb-line always comes to rest the level is correct but if it only does so in the former case the error can be corrected by adjusting the position of the surface and that of the level.

The level here described is usually called *kūniya* (γωνία); the word, however, is also used for the wooden set square, as used by carpenters (s. *Mafātīḥ al-ʿUlūm*, ed. v. Vloten, p. 255) and land surveyors like Abu 'l-Wafā' (s. *Abhandlungen zur Geschichte der Naturwissenschaften und Medizin*, Heft iv., 1922, p. 98). A synonym is according to al-Shirāzī (*Nihāyat al-Idrāk fī Dirāyat al-Afāk*, Maḳ. 2, chap. 13): *afadan*. From the same root we have in Ibn Waḥshiya (Cod. Leidensis, N^o. 1279, p. 527) *fawḍān*, in Dozy (*Supplément*, ii., p. 246) *fāḍin* and *fāḍim*. Connected with this is *fawḍān*, dual of *fawḍ*.

Sometimes one finds it stated that levelling is

done with the *shākūl*; e.g. in al-Battānī (ed. Nallino, text, 1903, p. 137): *maʿwūn bi 'l-shākūl*, and an exactly similar statement is made by Ibn Sīnā (Cod. Leidensis, N^o. 1061). A set square is either brought up to the plumb-line and a perpendicular dropped on the surface from it, or the *shākūl* is used for the level, the essential part of which is the plummet.

On larger surfaces, such as roofs, etc., a long rod (*kubṭāl* = cubitale) is first of all laid down and on it the apparatus for testing the level is placed; this is called *miṣān al-izur* (or *al-bannā'in* of the architects; cf. Ibn Luyūn, see below).

5. At the apex of a threesided pyramid built on a surface by 3 rods of equal length, a plumb-line with a sharp point in the plummet is hung. This ought to hang over the centre of the surface (al-Khāzini, see below).

6. On the apexes A and B (fig. 15) of two sharp pointed tetrahedra of equal height $AIHK$, and $BLMN$, a rod of some length AB is laid

Fig. 15.

on which is fixed a triangle with a plumb-line hanging from it or an arrangement such as is already described for the scale-beam. If the plumb-line or the tongue comes to rest, the rod and therefore the surface is horizontal (al-Marrākushī, see below).

The necessity of making surfaces exactly level continually crops up in building, and also in putting up astronomical instruments, and in constructing the Indian circle with which the meridian and then the direction of the *kibla* is a certain. In this case the level surface is usually not prepared on the ground but on a firm foundation, perhaps of stone. The construction for the Indian circle is already described in the *Hypotyposis* of Proclus (*loc. cit.*) in the same way as by the Arabs.

We now deal with the tests used to see if a thing is perpendicular:

1. The simplest method is to hang a plumb-line beside it. In the case of level perpendicular surfaces, this must touch it all the way down if its point of suspension is on it. This method is always recommended in working with the quadrant (s. also below).

2. If the point of suspension is a little in front of the surface the thread must be equidistant from it all the way down.

3. In the side of the gnomon, a perpendicular rod, often with a cone-shaped top, Ibn Yūnus (see below) cut out a groove which ended in a hemispherical cavity. In the groove a thread is hung from the top of the gnomon with a ball shaped weight. If this comes to rest in the hollow, the gnomon is perpendicular.

4. The gnomon is moved backwards and forwards (turned about on its foot: *muḥbil wa-mudbir*); its shadow must only move so far on the level surface, on which it stands, as is in keeping with the movement of the sun during the turning (Ibn Yūnus, see below).

5. A circle is described at the foot of the rod and a pair of compasses used to test whether the distance of the top of the gnomon is the same from all points of the circle.

8. Ibn Sīnā drills a small hole through the gnomon parallel to its base, puts it in a vessel with a horizontal bottom which is filled with muddy water and examines whether the surface exactly coincides with the level of the hole.

7. In order to examine whether a level surface is standing exactly perpendicular, two exactly equal parallelepipedal blocks of wood (fig. 16) are placed

Fig. 16.

on it, L_1 and L_2 , one above the other. From the upper edge of L_1 a plumb-line is hung; one watches whether its thread exactly touches L_2 ; the best plan is to place a very thin ruler between L_1 and the plummet and test the position of the thread with respect to L_2 (al-Mar-rākushī, see below).

II. In order to ascertain the difference in height between two points s_1 and s_2 which are at a distance a from one another, as is necessary in making

a canal for example, one looks horizontally from s_1 with an apparatus which is at a height h from the ground to a vertical rod at s_2 and ascertains the height h_1 at which the point observed is above the ground. A mark can be made on it (in modern mensuration, the rod at s_2 has divisions marked on it). The difference in height is $h_1 - h$. According to fig. 19, the Arabs, like Hero, seem to have used something similar. Ibn al-ʿAwwām (see below) uses a square board on which are marked a number of circles touching one another, which are distinguished by different colours or have different centres. In order to place the rods absolutely perpendicular, plumb-lines are hung beside them (fig. 17).

The horizontal line of vision is obtained in various ways:

1. A rod (e.g. an ell long) with square sides is put up in such a way that the upper surface appears horizontal to the eye and one looks along this surface.

2. The rod (*ḥubṭāl*) is put on the above mentioned dish or plate (fig. 8) and one looks along it.
3. At the end of the rod nails are fastened at the same height and their heads are pierced and one looks through the holes.

4. For a rough examination, one can put, at the two places, two tube-shaped bricks which for convenience may be made each out of two half-pipes (Ibn al-ʿAwwām, see below).
5. An astrolabe is put in a horizontal place such as the edge of a well or on its cover and one looks through the eyepiece.

Other methods of ascertaining differences of level are as follows:

1. An assistant is sent from the higher position to the lower holding a rod of a known length l vertically until one sees just the end of it; if h then is the level of the eye, $l - h$ is the difference in height. If the distance is too great for the top of the rod to be distinguished, a light is put on it, for example a lighted candle and the observation is made by night.

2. If it is a question of ascertaining whether a place outside a well is lower than the level of water in the well, the distance of the latter from the surface of the ground or from the edge is ascertained by letting a rod and thread down with a shining heavy object at the end and used in calculation.

Two apparatuses, closely connected with each other, are the following:

3. To a rod (fig. 17) the triangle with the plumb-line is attached. To its two ends two threads with weights at the ends are attached, a and b .

Fig. 17.

Two posts 1 and 2 are erected at the points, the difference in level of which is to be ascertained. The one thread is fastened to the end of the lower post 1, and the other hung along and over the post 2 until its weight comes to rest. The amount of shifting of the thread measures the difference in height (al-Ḳhāzini, see below).

4. The *murḍijāl* (the bat, fig. 18) consists of an equilateral triangle with a plumb-line which hangs from the middle of one side. The triangle is suspended by this side.

Two rods, an ell in length, are erected 10 ells apart; a rope is passed from the top of one to the top of the other and by two threads a a the *murḍijāl* is suspended in its centre. If the plumb-line goes through the apex of the triangle, both places are on the same level, if not, one is raised by putting stones below it for example; but the end of the rope can, as in 3, be moved along (Ibn Luyūn, see below).

Fig. 18.

5. In the Paris manuscript N^o. 2468, an unknown author describes 3 apparatuses for levelling (fig. 19^{a-c}). In the first (*al-maṣḥūr*, the known) a rod of wood an ell in length is bored through its entire length and tongs with a tongue suspended from its centre (fig. 19^a). Through the hole a rope some 15 ells long is drawn which is fastened to the two vertical rods already mentioned. The second apparatus (fig. 19^b: *al-shābiḥa*, the similar) corresponds to the *murḍijāl*: only the two threads a a

are replaced by rings which are put over the long rope *a a*. The third arrangement (fig. 19c: *al-anbūb*, the pipe) is also mentioned by al-Karkhī

Fig. 19a.

Fig. 19b.

Fig. 19c.

(From the Paris MS. Nr. 1417.
a is the known, b the similar
c the pipe, d the weight)

and Bahā' al-Dīn but not described; it probably corresponds to our canal-level, a communicating pipe filled with water, such as is very fully described by Hero (*Dioptra*, p. 197 and *loc. cit.*); but he gives it no particular name, probably because it is associated with a dioptra. On the plumb-line of the figure is written *ḥaḥkālā* (cf. E. Wiedemann, *Beitr.*, xxxv., see below).

Tighnārī mentions another instrument called *mizān al-kaḥf*, Ibn Waḥshīya (see below) one of brass called *kafar* or *kakar*. Neither are described however. Arab authors who give full descriptions of Arab instruments are the following:

1. Ibn Waḥshīya (or Abū Ṭālib al-Zaiyāt, † 870) in *Kitāb al-Falāḥa al-Nabaṭiyya*, in "the Book of Nabataean Agriculture" (cf. H. Schmeller, in *Abhandlungen zur Gesch. der Naturwissenschaft und Medizin*, Erlangen 1922, Heft VI, p. 36). His data are supplemented by those of numerous commentators.

2. al-Khāzini (c. 1100) in the *Kitāb Mizān al-Ḥikma*; cf. Th. Ibel, *Die Wage im Altertum u. Mittelalter*, Diss. Erlangen 1908, p. 159 sqq.

3. Ibn al-Awwām (c. 1130) in *Kitāb al-Falāḥa* (cf. E. Wiedemann, *Beiträge*, x., see below).

4. Abū 'Othmān b. Luyūn (c. 1348) in *Radjaz fi 'l-Falāḥa*, deals with levelling ground etc., and gives notes on al-Tighnārī and others (cf. E. Wiedemann, *Beiträge*, x. 317 and Dozy, *Supplément*, ii. 302 and 579).

5. Bahā' al-Dīn al-Āmilī, *Essenz der Rechenkunst*, ed. F. Nesselmann (1547—1622, s. E. Wiedemann, *Beiträge*, x. 319).

Full details of levelling are given in the astronomical books in discussing the ascertainment of the meridian, e.g. in Kuṭb al-Dīn al-Shīrāzī (d. 1311; cf. E. Wiedemann, in *Zeitschr. für Physik*, vol. x., 1922, p. 267), al-Khalkhālī etc. Many books on the astrolabe give information on the subject in discussing surveying problems, e.g. al-Birūnī (cf. E. Wiedemann, *Beiträge*, xviii. 59 sqq.).

I give once again the names of the levelling instruments:

mizān, *mizān al-bannā'in*, *mizān al-kaḥf*, *mizān al-izur*, *kuḥfāl*, *kūniya*, *fādin*, *ḥādin*, *afādāin*, *djafna*, *murḍijāl*, *kakar*.

I know of no comprehensive treatise on levelling in connection with canal building etc. in the early Muslim period. For the literature see my *Beiträge*, iii. 229; xviii. 26 and H. Schmeller, *loc. cit.*, p. 41. — For knowledge of these matters in ancient times see C. Merkel, *Die Ingenieurtechnik im Altertum* and H. Diels, *Antike Technik* 2, Leipzig 1920.

H. J. Seemann, *loc. cit.*).

(E. WIEDEMANN)

MIZMĀR means literally "an instrument of piping". In the generic sense it refers to any instrument of the "wood-wind" family, i.e. a reed-pipe or a flute. In the specific sense it refers to a reed-pipe (i.e. a pipe played with a reed) as distinct from a flute, as we know from Ibn Sinā (d. A.D. 1037) who describes the *miz-mār* — a reed-pipe — as an instrument "which you blow into from its end which you swallow", as distinct from an instrument like the *yarā'* — a flute — "which you blow into from a hole". Ibn Zaila (d. 1048) writes similarly but substitutes the Persian word *nāy* for the Arabic word *mizmar*. In Ibn Sinā's Arabic treatise *al-Naḍiāt* we read of the *mizmar*, but in the identical passage in his Persian *Dānish-nāma* the word is *nāy*. Further, the *Mafātīh al-'Ulūm* says, "the *mizmar* is the *nāy*" (p. 236). For the present purpose, "wood-wind" instruments (*maẓmār*) may be divided into: 1. reed-blown types; and 2. pipe-blown types. Among the former we have single reed-pipes of the clarinet, oboe, and saxophone types, as well as double reed-pipes, the bagpipe, and the *chēng*. Among the latter we have the flute and recorder, as well as the panpipes.

a. Reed-blown types. — Single reed-pipes occur in ancient Semitic art and literary remains (Lavignac, i. 35 sq.). Hoary gossip attributes the "invention" to the Persians (al-Mas'ūdī, *Murūdj*, viii. 90), whilst Djamshīd himself is claimed to have been the actual "inventor" (Ewliyyā Ālebi, i. 641). With Islāmic peoples, reed-pipes are found with a conical or cylindrical tube (*unbūb*) pierced with finger-holes (*ḥuḥūb*), and played with a single or double beating reed (*kaḥaba*, *kaḥshā*). Among the Arabs of the 10th century, the *mizmar* finds a place at convivial

parties (*Mufaḍḍaliyāt*, xvii.), and in the viith century it is one of the martial instruments of the Jewish tribes of al-Ḥijāz (*Aghānī*, ii. 172). When Islām came, an anathema was placed on reed-pipes mainly, it would seem, on account of the female reed-pipe player (*zammāra*) who, as was common in the East, was looked upon as a courtesan, and, indeed, the terms *zammāra* and *zāniya* became almost synonymous. It is improbable that the Prophet Muḥammad could have referred to a reed-pipe (*mizmār*) in the well-known *ḥadīth* in praise of the chanting (*ḳirā'a*) of Abū Mūsā al-Ash'ari. The reference was rather to "a *mazmūr* (Hebr. *mizmōr* "psalm") from the *mazmūr* of the House of David" (cf. my *Hist. of Arabian music*, p. 33). In early days, what the Arabs called the *mizmār*, the Persians called the *nāy*, and the latter distinguished the flute by the name *nāy narm* (soft *nāy*). Later they called the reed-pipe the *nāy siyāh* (black *nāy*) and the flute the *nāy safid* (white *nāy*) because of the colour of the instruments. About the beginning of the ixth century, a musician at the 'Abbāsīd court named Zunām invented a reed-pipe which was named after him the *nāy zunāmī* or *zunāmī* (*Taḍj al-'Arūs*). What the invention was we can only conjecture. It may have been the cylinder used for altering the pitch of the instrument, or perhaps it was the introduction of a conical tube (see my *Studies*, p. 79, 82). At this period we have no information whether the various reed-pipes had cylindrical or conical tubes or whether they were played with single or double beating reeds. The word *zunāmī* was accorded little recognition in the East, whatever favour the invention itself found. In the West, where the name eventually became vulgarized into *zullāmī*, it became the most important reed-pipe not only in Spain as we know from al-Shaḳundī (d. 1231; al-Maḳkarī, *Moh. Dyn.*, i. 59), but also in the Maghrib (Ibn Khaldūn, ii. 353). It became the *xelamī* of the Spaniards (see also Schiaparelli, s. v.).

The *mizmār* (= *mizmār wāḥid*) is described and delineated by al-Fārābī (d. 950). It had eight holes for fingering, giving a complete octave. He also describes a smaller reed-pipe called the *sur-yānai* (Kosegarten, p. 95; Land, p. 122; D'Erlanger, p. 262). One special feature of this instrument was called the *sha'ira*. In the *Maḳāṭīḥ al-'U'lūm* (p. 237) we read: "The *sha'ira* of the *mizmār* is its head, and it is that by which it is made narrow and wide [in compass]". It was actually the cylinder inserted into the head of the instrument which lowered the pitch when required (see my *Studies*, p. 82), a device called later the *ṭawḳ* (*Kanz al-Tuḥaf*) or *faṣl* (Villoteau). It was called the *sha'ira* perhaps on account of the button at the top of the cylinder which was turned round. The word *sur-yānai* came to be modified into *sur-nāy* and then *sur-nā*. Popular etymology opined that the word was derived from *sūr* "fête" and *nāy* "reed", but this form only appears in the lexicons (*Burhān-i ḳāṭi*). Some moderns even write *ṣurnāy*. The *sur-nāy* found its way into martial music as early as the beginning of the ixth century (*Aghānī*, xvi. 139; the text has *sur-nāb*).

In the xth century, Ibn Zaiḷa shows how, by devices in the fingering and embouchure, other notes were obtained on the reed-pipe (Pers. *nāy*). In the Persian *Kanz al-Tuḥaf* (xivth cent.) the *mizmār*, also called the *nāy siyāh*, is both de-

scribed and delineated. More valuable is the explanation of the actual making of the beating reed with which the instrument was played, from which we learn that it was a double reed. In the next century a Turkish author Aḥmad Ughlū Shukrullāh copied extensively from this work (Lavignac, i. 3012). Ibn Ḡhaibī (d. 1435) says that all the notes could be obtained on the *zamr siyāh nāy* by accommodating the fingering and the embouchure. The smaller instrument, the *sur-nā*, was defective in the upper octave he says. A similar type of reed-pipe to the latter called the *balabān* is also mentioned by him. Ewliyā Čelebi says that it came from Shirāz. In the Muḥammad b. Murād Treatise (xvth cent.) we learn that the *nāy aswad* (= *nāy siyāh* = *mizmār*) was 27 cm. long.

With the Turks, the Persian word *sur-nā* had been altered to *zūr-nā* and the term had become common to both the *zamr* (= *mizmār*) and *sur-nā* in the East. Ewliyā Čelebi (xviiith century) mentions among the Turkish reed-pipes of his day the *ḳabā zūr-nā* or 'adjami *zūr-nā*, the 'arabi *zūr-nā*, the *aṣafī zūr-nā*, and the *shihābī zūr-nā* (a Moroccan reed-pipe). He also speaks of the *ḳurnāṭa* which, he says, was an English invention (i. 642). If this is the same as the *ḳurnāṭa*, it was the clarinet, an instrument which Denner is said to have "invented" about 1690, which is after its mention by Ewliyā Čelebi. The Persians still continued to call their reed-pipe the *sur-nā*, and a xviiith century design of the instrument is given by Kaempfer. Both Russell in Syria (i. 155) and Villoteau in Egypt (i. 356 sq.) refer to several kinds of reed-pipes in use in the xviiith century.

The latter delineates these and describes them fully. They are three, the *ḳabā zūr-nā* or *zamr al-ḳabir*, the *zamr* or *zūr-nā*, and the *zūr-nā djuṛā* or *zamr al-sughaiyir*, the first being 58.3 cm. and the last 31.2 cm. in length. The modern instrument is also delineated by Lavignac, p. 2793; Sachs, p. 428. For specimens see Brussels, Nrs. 122, 355, 357; New York, N^o. 1331.

In the West also we find a new name, or instrument, the *ghaiṭa* or *ghāyṭa* [q. v.]. It is said to have been introduced by the Turks (Delphin and Guin, p. 48) but the name is mentioned by Ibn Battūṭa (d. 1377) who likens the Mesopotamian *sur-nāy* to the Maghriban *ghaiṭa* (ii. 126). There are, however, two kinds of *ghaiṭa*, one — a cylindrical tube blown with a single reed, and another — a conical tube blown with a double reed. This may explain why *ghaiṭa* does not always equate with *sur-nāy* and *mizmār* in the West (*Tadhkirat al-Nisyan*, p. 93; Muḥammad al-Saghīr, p. 34). The cylindrical tube instrument is known in Egypt as the *ghīṭa*. For details see Bū 'Alī, p. 103; Delphin and Guin, p. 47. For specimens and designs see Host, p. 261, tab. xxxi.; Brussels, N^o. 351; New York, Nrs. 402, 2824; Lavignac, p. 2921.

A reed-pipe that became quite famous in Western Europe was the *būk* played with a reed. The original *būk* [q. v.] was a horn or clarinet, and was made of horn or metal. Pierced with holes for fingering, and played with a reed, a new type of instrument, somewhat similar to the modern saxophone, was evolved. In the xth century, this *būk* was "improved" by the Andalusian Caliph al-Ḥakam II (*Bibl. de autores Españ.*, li. 410). Ibn Khaldūn, who describes it, says that it was the best instrument of the *zamr* family (ii. 353). Ibn Ḡhaibī,

in his holograph MS. in the Bodleian Library, writes *bāk*, but adds, "also called *būk*", but the latter remark has been deleted. It appears to be delineated in the *Cantigas de Santa Maria* (Riaño, fig. 41, b.).

Another interesting instrument is the *ʿIrāḳīya* or *ʿIrāḳya*, which may have been the forerunner of the European *rackett*. It has a cylindrical pipe and is played with a double reed. It is probably the descendant of the *Nāy al-ʿIrāḳī* that al-Ḡhazālī (d. 1111 A. D.) speaks of. It is delineated and fully described by Villoteau (i. 943 sq.). Examples are given at Brussels, N^o. 124; New York, N^o. 2861.

With Islāmic peoples, reed-pipes belong to outdoor music. Just as we see them in the *Alf Laila wa-Laila* as being essential to folk, ceremonial, processional, and martial music, so they are today, and probably have always been.

Double reed-pipes. Ibn Khurdādhbih says that the Persians "invented" the double reed-pipe called the *diyānai* (al-Masʿūdī, *Murūdj*, viii. 90), the earliest instrument of this type that we know by name in Arabic literature, although it appears in the viiith century frescoes at Kuṣair ʿAmrā (Musil, pl. xxiv.). It has been suggested that the word should be *dūnāy*, but *diyānai* is also given by al-Fārābī (see my *Studies*, p. 57), who describes and delineates the instrument which, he says, was also called the *mizmār al-muḥannā* or *muḥawwadj*. The two pipes were of equal length and each was pierced by five finger-holes, which gave an octave between them. Probably the instrument known in the Middle Ages as the *zummāra* (vulg. *zummāra*) was actually the old *diyānai*, although it merely equates with *fistula* in the *Glossarium Latino-Arabicum* (xith century) and the *Vocabulista* (xiith century). As early as the xiith century we read of the *maṣṣūl* in Egypt (al-Maḳrīzī, i. 136). The name itself means "joined" (see my *Studies*, p. 78), and it was doubtless a double reed-pipe. Since the xviiith century at least, *zummāra* has been the name for this instrument in the East (cf. Niebuhr, i. 145), and Lane (p. 367) describes and delineates it. It has cylindrical tubes and is played with single beating reeds. It is to be found with a varying number of finger-holes and is named accordingly (Sachs, p. 433). In the Maghrib it is called the *maḳrūn* and *maḳrūna* (Lavignac, p. 2793; *R. A.*, 1866), whilst in Syria it is given a vulgarized or metathetical form of the old *muḥawwadj* (cf. Sachs, p. 257; Dalman, *Pal. Dīwan*). For specimens and descriptions see Brussels, Nrs. 115-118; New York, Nrs. 2167, 2633; and *Z.D.P.V.*, 1927, p. 19. Specimens in my collection range from 18 to 43 cm. in length.

Another type of double reed-pipe has only one pipe pierced with finger-holes, whilst the other serves as a drone. This also carries the name of *zummāra* when the two pipes are of the same length (cf. Niebuhr, i. 145). When the drone pipe is longer than the chanter pipe it is known as the *arghūl* (*arghūn*, Mushārka, p. 29; *ʿarḳūn*, Lavignac, p. 2812) in modern times (cf. Freytag, *Christ. Arab.*, 1834, p. 34) in Egypt and Syria. Villoteau (i. 962) gives a detailed description with scales and designs of three sizes, 107, 82.6 and 38.6 cm. in length. (In South Kensington Museum there is one 144 cm. long). Like the preceding instrument it is played with single beating reeds. The drone pipe is furnished with additional tubes (*ziyādāt*) which are affixed to lower the pitch.

In Syria the smaller type of *arghūl* is named the *maṣhūra*, a most significant name, in spite of it being ignored in the lexicons. Lane (p. 367) figures a six finger-holed instrument which, he says, was used at *dhikrs*, and by Nile boatmen. For specimens see Brussels, Nrs. 342-346; *Z.D.P.V.*, 1927, pl. 2.

Bagpipe. An ancient instrument in the Orient. Just prior to Islām we have it figured on Sāsānian sculptures (Ker Porter, *Travels*, ii., pl. 64). We do not know its ancient Semitic name, but Ibn Sinā and Ibn Zaila mention it as the *mizmār al-djirāb*, describing it as being played by "an artificial contrivance". Although Niebuhr (i. 146) calls it the *zummārat al-kirba*, and Lane, p. 386 names it the *zummāra bi-sūn*, the more general term used in Arabic speaking countries is *zakra*, although we find *mizarūd* used in Tunisia (Von Hornbostel, p. 4). The word *zakra* is given variations by some European writers as in the *zūkara* of Villoteau (i. 970) and the *sūkka* of Rouanet (Lavignac, p. 2812). In Persia, the bagpipe has long been known as the *nāy anbūn* and *nāy maṣḥk* or *maṣḥak* (*Burḥān-i kātib*) from whence the Hindūstāni name *maṣḥk* or *mushuk* (Tagore, p. 24; Day, p. 151). In Turkey, the older word was *tulum*, *ṭulūm* or *tuṭūm* (Meninski, Sachs; cf. Ewliyā Čelebī, i. 642: *ṭulūm dūdūk*), but *ghaidā* would appear to be equally popular, and this name is to be found throughout the Balkan countries (cf. Arab. *ghuīṭa*; Span. *gaita*; Engl. *wayghte*).

The bagpipe used by Islāmic peoples is generally equipped with a chanter pipe (with five or six finger-holes) and mouthpiece, but rarely with a drone pipe. The chanter, terminating in a horn bell (Schallstück), is often double, a feature which was probably the original reason for the term *zummāra* being used with the bagpipe. The woodwork is sometimes inlaid with metal, whilst another feature is the adornment of the instrument with tassels, beads, shells, and other frippery. Designs may be found in Niebuhr (tab. xxvi.) and Sachs (p. 434), and actual specimens in Brussels, N^o. 372.

Instrument of free reeds. The Chinese *chêng* is such an instrument. Probably it was not used by Islāmic peoples although known to them. The *chêng* is described in the *Mafātīḥ al-ʿUlūm* as follows: "The *mustak* is a musical instrument of the Chinese. It is made of compounded tubes (*anābib*), and its name in Persian is *bisha mushṭa*" (p. 237). We get a little more information from Ibn Ghaiḍi who informs us that the *ṭubīk* or *mūsikār-i khatāy*, was made of tubes of reed joined together. It was blown through a tube and the notes were obtained by finger-holes. For description and designs see Van Aalst, *Chinese Music*, p. 80.

δ. Pipe-blown types. — The flutes of the Arabs, Persians and Turks, unlike those of Western Europe, are played vertically, a current of air being blown across the orifice (*manfakh*) at its head. Ewliyā Čelebī (i. 623, 636, 642 read *فول*

فول) is not sure whether it was Pythagoras or Moses who "invented" the first instrument of this type, the shepherd's flute, called the *ḥawāl* (cf. *ḥawāl*). Ibn Khurdādhbih says that it originated with the Kurds (al-Masʿūdī, viii. 90), and Ibn Ghaiḍi (*Sharḥ al-Adwār*) says that this instrument was the *nāy abyad* (white *nāy*). We know from Ibn al-Aʿrabi (d. 846) that the Arabs called

this flute or reed-pipe the *shiyā'*. A characteristic of the Arab flute was its length, hence the ancient Greek proverb which likened a talkative person to an Arabian flute (*Menandri Fragm.*).

In the early days of Islām, the Arabs called their flute the *kuṣṣāba* (later modified into *kaṣāba*), and this is the name used by the poets al-A'shā (d. 629) and Ru'ba b. al-'Adīdjādī (viiith century). These terms fell into desuetude in the East when Persian musical influences were at their height. The Persians called their flute the *nāy narm* (soft *nāy*) so as to distinguish it from the *nāy* proper and the *sur-nāy*, which were reed-pipes, and so the Arabs of the East called their flute the *nāy*, although in the West the old word *kuṣṣāba* or *kaṣāba* was retained. Another term for the flute in early days, perhaps a different kind, was *yarā'* (*Mafātiḥ al-'Ulūm*, p. 236), and in the xth century *Glossarium Latino-Arabicum* it equates with *calamaula*. In the xiiith century it was still a common name with Ṣafī al-Dīn 'Abd al-Mu'min (p. 9) in the East, and with al-Shakundī in the West (al-Maḳḳārī, i. 59, read *yarā'* not *barā'*). In the contemporary *Vocabulista in Arabico* it (*yarā'*) agrees with *fistula*. The words *hairā'a* and *hair'a* (al-Djāwharī, al-Firūzābādī) would appear to be vulgar forms of *yarā'*.

Whilst the diminutive *kaṣība* (*kuṣā'ibā*) sometimes occurs in reference to a small flute, *shabbāba* and *shabbāb* (*V shabbā* "to grow up") were the more general terms used in 'Irāq (*Iḥkūwān al-Safā'*, i. 97), Egypt (al-Maḳḳārī, i. 136), Spain (al-Shalāḥī, *Voc. in Arab.*), and the Maghrib (Ibn Khaldūn, ii. 352). It became the *esabeba* of Western Europe. Another name for a small flute was *djuwāk*, and this word also found a place with the Latins as the *joch* (Du Cange). In Persia, the small flute was called the *pīsha* (*Kanz al-Tuḥaf*), hence the Balkan *pis-ciu* and *pisak*.

We read of the *nāy* in the *Aghānī* (ix. 71) but we cannot be sure whether it was a flute or a reed-pipe. Al-Fārābī (Kosegarten, p. 45) ignores the flute (*nāy*) and says that it was inferior (*uḥḥur*) to the *mizmār* (reed-pipe), but it soon gained wide recognition in chamber music probably by reason of *ṣūfī* appraisal and the *dhikr* of the *darwish*. Ṣafī al-Dīn 'Abd al-Mu'min (d. 1294) describes the *nāy* with eight holes for fingering, the thumb-hole at the back being called the *shudjā'* ("vehement"), its name revealing its function. In the Persian *Kanz al-Tuḥaf* (xivth cent.) we find two very small flutes mentioned, but in the *Sharḥ al-Adwār* (xvth cent.) we find that the *nāy abyad* was normally 63 cm. long. Five larger sizes are given, the longest being 99 cm., with two smaller sizes, the limit being 31.5 cm. Ibn Ghaybī also registers several varieties including the *nāy bamm* of 67.5 cm. approximating in pitch to the *bamm* string of the lute, and the *nāy sir* of 33.75 cm. approximating to the *sir* string. Ewliyā Celebī (xviiith cent.) gives the names of a number of Turkish flutes (i. 623) including the *shāh manšūr*, the *dāvūdī*, and the *bol-āheng*. Villoteau (i. 954) describes and delineates the Egyptian instruments of the late xviiith century. The largest, 77 cm. long, was the *nāy shāh* (= *shāh nāy*), and the smallest, 48.8 cm. long, was the *nāy djiraf*, the *kiraf* of modern Syria (Mushārka, p. 29). Other flutes named by him are the *nāy kushuk*, the *nāy sufurdja* (? *supurda*), the *nāy mutlak*, and the *nāy ḥusainī*. In Turkey the *supurda* is the smallest

flute used in chamber music (Lavignac, p. 3019). Turkish and Egyptian flutes are usually well made, with a head to support the lips. In Palestine and the Maghrib they still retain, more or less, a primitive appearance, and although the seven holed flute is common (Christianowitsch, pl. 2), the five and six holed instrument has acceptance (Delphin et Guin, p. 45: *Z. D. P. V.*, 1927, pl. 1). In the Maghrib the flutes in the orchestras still retain the name of *kaṣāba* (vulg. *kaṣba*), and they are generally about 40 cm. long, whilst the *djuwāk* or *shabbāba* (*shabbāb*) is smaller. In the interior, longer flutes like the *gibli* and *sudāssi* may be found. Delphin and Guin give an account of these.

The recorder, or flûte à bec, also found favour in the East. This is the Arabic *nāy labāk* (mouth *nāy*), the Persian *sūt*, the Turkish *dūdük*, and the Hindūstānī *alghūza*. As early as the *Iḥkūwān al-Safā'* and the *Mafātiḥ al-'Ulūm* (xth cent.) we read of the *ṣaffāra*, which was doubtless a flûte à bec (see my *Studies*, p. 83). Villoteau (i. 951) says that it was an instrument of this type in his day in Egypt. The *dūdük* or *dūdāk* is mentioned by Ewliyā Celebī in nine different species (i. 642), and is also mentioned by Ḥādījī Khalifa (i. 400). The *shāhin* would appear to have been a small three-holed recorder such as was common with pipe and tabor players in Mediaeval Western Europe. It was played with the fingers of one hand, the other hand being used for beating the *ṭabl* or drum, hence the phrase in al-Ghazzālī: "the *shāhin* of the drummer (*ṭabbāl*)".

Pan pipes are also common to the folk. Both Pythagoras and Moses are credited by Ewliyā Celebī (i. 624, 636) with the "invention" of the *mūsikār* or panpipes. Although the word stands for "a composer of melodies" in the *Mafātiḥ al-'Ulūm* (see also Meninski), it referred to a musical instrument in the xvth century (*N. E.*, xiv. 312). A contemporary writer, Ibn Ghaybī, says that "the *mūsikār* is one of the [wind instruments with] free pipes. Its notes are determined by size [of pipes]. The longest have the low notes, and the shortest the high notes". We find the instrument called *mūsikāl* (*Farhang-i Shu'ūrī*) whilst Ḥādījī Khalifa (i. 400) has *mishkāl*, and Toderini (i. 237) *mescal*, which probably gave birth to the Roumanian *muscal*. The term *mūsikāl* survived up to modern times (Villoteau, i. 963), but the more general word used today (Mushārka, p. 29) is *djānāḥ*. (Pedro de Alcala [1503] mentions a harp by this name, but perhaps he confused the name with *djānk*). Russell (*The Natural History of Aleppo*, i. 156) writing in Syria in the xviiith century says that panpipes were to be found with from three to twenty-three pipes. Kaempfer, p. 743, delineates a xviiith century Persian instrument.

The names of instruments in the *mazāmīr* group in Arabic are legion. Many of those not mentioned in this article are regional and are of folk origin, their source being often discernable, such as in the *zamdjara* and *zamkhar*, to name only two. More interesting however, are the older words like *hunbūka*, *naḳīb* and *zanbāk*. The first two occur in al-Firūzābādī (d. 1414), and *naḳīb*, which equates with *mizmār*, reminds us of the much debated passage in *Ezekiel*, xxviii. 13. *Zanbaḳ* occurs in al-Azhārī (d. 981) and even earlier (cf. Lane). The Greek *σαμβύκη* and the Latin *sambuca* were stringed instruments, and Isidore of Seville's *sambuca* as a "wood-wind" instrument has long been

suspect, but since *zanbaḡ* is to be found in Arabic equating with *zammāra* and *mizmār* there would appear to be good reason for accepting Isidore of Seville.

MIZWĀR, arabicised form of the Berber *amzūwār*, he who precedes, he who is placed at the head, equivalent to the Arabic *muḡaddam* and like this frequently has in North Africa the meaning of chief of a religious brotherhood (*ṭarīqa*, q. v.), the superintendent of a *sāwiya* [q. v.] or the chief of a body of *shorfa* (q. v., dialect form from the class. plur. *shurafa*). In those districts of the Maghrib, where the old Berber organisation has survived, mainly in the Great Atlas and Central Atlas, *amzūwār* is sometimes the equivalent of *anfūs*, the political adviser to a body; cf. R. Montagne, *Les Berbères et le Makhzen dans le Sud du Maroc* (Paris 1930, p. 222).

The term *mizwār* (or *mazwār*) is early found in the histories of the Maghrib in connection with Almohad institutions. There it means the head of a faction and the corresponding office seems

at this time to be often confused with those of *ḡāfiḡ* and *muḡtasib* [q. v.]. In the time of the Muʾminid Caliph Abū Yūsuf Yaʿqūb [q. v.] al-Manṣūr, each of the twenty-one Almohad tribes had two *mizwārs* "one for the first rank of the hierarchy, i. e. the earliest recruits of the Almohads, and another for those who had joined them later (*ghuzāt*)". (*Kitāb al-Anṣāb*, in E. Lévi-Provençal, *Documents inédits d'histoire almohade*, Paris 1928, p. 70; cf. also p. 63–64 and M. Gaudfroy-Demombynes, introduction to the translation of the *Masālik al-Aḡṣār* of Ibn Faḡl Allāh al-ʿUmarī, Paris 1927, p. xxxvi).

At the present day, *mizwār* is in constant use in Fās for the *naḡīb* [q. v.] of the principal Sharīfan groups who live in this capital.

(E. LÉVI-PROVENÇAL)

MÖBEDH, a Persian word which passed into

Arabic in the form مَوْبِدْ or مَوْبِدْ; we also find in Arabic the Persian plural, *möbedhān*, but usually combined with *möbedh* in the expression *möbedhān möbedh*, which means "chief of the *möbedhs*", "grand *möbedh*". It is also found alone (*möbedhān*) standing for *möbedhān möbedh*. The Arabic plural is *marwābidh*. The word is derived from the Pehlevi *magupat*, which means "chief of the *magi*" and therefore indicates a priestly office; according to al-Masʿūdī, *Kitāb al-Tanbīh wa 'l-Ishrāf*, B. G. A., vii. 103, the word would mean *ḡāfiḡ al-dīn* and be derived from *mu* = "religion" and *badh* = "protector", and according to al-Yaʿqūbī (*Tārīkh*, i. 207) *ʿālim al-ʿulamā*. In Armenian texts the word is rendered by *mogpet*, in the Greek acts of martyrs by μαυπητάς μαυπητάς μαυπητάς μαυπητάς; in Syriac and especially in the acts of the Persian martyrs not only by ܡܘܒܕܬܐ, but also by ܡܘܒܕܬܐ; in one passage (Hoffmann, *Auszüge*, p. 88, cf. below), the word ܡܘܒܕܬܐ is used immediately before ܡܘܒܕܬܐ.

The Syriac has also *rēsh mgūshī* or *rēshū damegūshī* corresponding to the Greek ἀρχιμαγός ἀρχιερεὺς τῶν μάγων. We have no satisfactory information regarding the functions of the *möbedhs*; we know more about those of the chief of the *möbedhs* or *möbedhān möbedh*. The information given below relates to the Sāsānian period, a period in which the clergy were reorganised and which is reflected in the Arabic and Persian Muslim sources.

In the later *Avesta* we find references to the sacerdotal organisation but the names do not agree with those of the Sāsānian period; for example the principal office, that given in the Sāsānian period to the *möbedhān möbedh*, is called *Zarathustrotēma*, and had judicial functions like the chief of the *möbedhs*. The term *magupat* is only found in the Pehlevi commentaries on the *Avesta*.

The sources from which we can extract information about the *möbedh*, and the *möbedhān möbedh* or chief of the *möbedhs*, are of course Pehlevi or go back to Pehlevi texts. Among the former which have come down to us is the *Bundahishn* which among other things contains a list of *möbedhān möbedh*; the *Ardā Wirāf Nāmāk*; the *Kārnāmāk-i Artakhschir-i Pāpakān* (transl. by Noldeke in the *Benfey-Festschrift* = *Beiträge zur Kunde der indogermanischen Sprachen*, iv., 1878, and by Pagliaro in *L'Epica e il Romanzo nel Medio Evo persiano*, Florence 1927; a part of the text 1–3 is reprinted in the *Hilfsbuch für das Pehlevi* by Nyberg); the *Mātikān-i hazār Dāte-*

stān, a legal work studied by Bartholomae in *Zum sasanudischen Recht, Sitzungsber. d. Heidelb. Akad. d. Wissensch.*, 1922, is valuable for our knowledge of the judicial functions of the *mōbedhs* and *mōbedhān mōbedh*; a few short moral treatises preserving traces of law (cf. Pagliaro in *R. S. O.*, x., 1925, p. 468—577) etc. The numerous references to the *mōbedhs* and the *mōbedhān mōbedh* which we find in Persian and Arabic sources come from lost Pehlevi sources or Arabic and Persian versions of them. Thus the *Book of Kings* especially in the latter part contains some information about the *mōbedhs* but nothing very full or precise about their functions; the matter of the *Shāhnāma* is taken, as we know, from a Persian prose version of the *Khwadānāmagh*. The version which we have of the letter of Tansar (publ. and transl. by Darmesteter in *J. A.*, 1904, i.) gives very interesting information about the Sāsānian hierarchy and also about the *mōbedhs*; it comes from a Pehlevi document which, according to Christensen, goes back not to the time of Ardashir but rather to that of Khusrāw the Great (cf. *Empire des Sasanides*, 111—112, and more recently *Abersam et Tansar*, in *Acta Orientalia*, x. 43 sqq.).

The numerous writers in Arabic and Persian whose works give us notes on the *mōbedhs* derive their matter, as regards Persia, from information supplied directly by contemporary *mōbedhs* or grand *mōbedhs*, from Pehlevi works translated into Arabic (especially the translations of Ibn al Muḳaffā') which no longer exist, such as the *Khwadānāmagh* and the *A'in-nāma* or "book of offices" (*Kitāb al-Rusūm*; cf. below). Of great importance is the *Kitāb al-Tāḍ* or *Akhṭāk al-Mulūk* by al-Djāḥiẓ (cf. F. Gabrieli, in *R. S. O.*, x. [1928], p. 232—308) and others written by al-Djāḥiẓ himself and the *Kitāb al-Maḥāsīn wa 'l-Aqdād* which is attributed to him; very important also are the works of the historians, chroniclers, geographers and polygraphers or men of letters like al-Ya'qūbī, Ibn Ḳutaiba, al-Dīnawarī, al-Ṭabari, al-Mas'ūdī, Ḥamza al-Isfahānī, al-Ṭālibī, al-Nuwairī, al-Shahrastānī, etc.

Of course all these sources bear different relations to the Pehlevi originals or to one another and they differ greatly in value, apart from the fact that they frequently combine legendary matter with accurate statements, e.g. some concerning certain of the functions of the *mōbedhs*.

Information of value can also be extracted from Syriac, Greek (especially Acts of Martyrs) and Armenian (historians etc.) sources.

Even by combining all these sources it is not possible to give a precise account of the office of *mōbedh* in the Sāsānian ecclesiastical hierarchy as laid down in the organisation of the kingdom attributed to Ardashir (cf. *Kitāb al-Tāḍ*, p. 23—30) nor to follow its developments (cf. the letter from Tansar, al-Mas'ūdī, *Tanbih*, p. 103—104 and *Murūḍ*, ii. 156; al-Ya'qūbī, *Historiae*, i. 202; al-Shahrastānī, ed. Cureton, p. 193; transl. Haarbrucker, i. 292) Information definite can be deduced from the Parsi hierarchy of the present day as the ecclesiastical organisation has profoundly changed. But we may assume that high priests regularly called *mōbedhs* were given the task of supervising in the different divisions of the empire (one might say dioceses) the very varied work of the hereditary clergy, the *magi*, who had so great an influence over the lives of the Persians; that is to say not only the very elaborate ceremonies of worship, the sacrifices, the care of the pyres, but also the cure of souls

and the education of the people. These *mōbedhs* and their chief (cf. below) were like all priests the repositories of learning, profane as well as sacred (cf. *Tanbih*, p. 97, where there is an allusion to the unbounded knowledge of the *mōbedhs* and *hērbedhs*) and the Arab writers must also have obtained information from *mōbedhs* (cf. Inostranzen, *Études sassanides*, p. 10). The *mōbedhs* had also judicial functions (cf. below); in the Acts of the martyrs they appear vested with executive power; but since courts of inquiry were composed of lay officers and priests, it is probable that this power was exercised by the whole college or by delegation. It is also certain that the title of *mōbedh* is not applied exclusively to these heads of administrative divisions or dioceses (of whom it is nevertheless characteristic) because at the court of the king, according to the sources, especially the *Shāhnāma*, there were many high priests called *mōbedhs* or *hērbedhs* who formed a kind of council around the grand *mōbedh* (cf. below) or who had other special offices. Gradually the name *mōbedh* must have come to mean, as at the present day, a priest fully qualified to do everything in connection with worship. The other terms for Persian priests seem to refer rather, either to their dignity (e.g. *dastpr*) or to functions occasionally performed by them [cf. ZOROASTRIANISM]. *Rat* and *magupat* are sometimes put on the same level. The relation of the *mōbedh* to the other degrees of the hierarchy like the *hērbedh*, another office (perhaps teacher) having supervision over a body of priests, is not clear. Al-Mas'ūdī says in the *Tanbih*, p. 103, that *hērbedhs* were lower in rank than *mōbedhs*.

At the head of the hierarchy of priests were no doubt the *hērbedhān hērbedh* or chief of the *hērbedhs* and the *mōbedhān mōbedh* or chief of the *mōbedhs*. Tansar, the writer of the famous letter, is called by the *Dēnkart*: *hērbedhān hērbedh*, according to Darmesteter "chief of the religion", while al-Mas'ūdī (*Tanbih*, p. 99) calls him better the *mōbedh* of Ardashir. Indeed it is quite certain from our sources that the supreme head of the ecclesiastical hierarchy was the chief of the *mōbedhs* (*mōbedhān mōbedh*) who was also the first dignitary of the court; all the power of the Zoroastrian clergy which constituted a state within the state was concentrated in this pontiff. Al-Mas'ūdī in the *Tanbih*, p. 103, says of his rank that it was almost equal to that of a prophet.

In accounts of the ceremonial of the Sāsānids, he is always given first place and he frequently appears surrounded by a council of high priests, *hērbedhs* or *mōbedhs*. Besides all the functions which he exercised as head of the clergy, i.e. the supervision of the whole religious life of the country, the settlement of theological questions, of problems of ecclesiastical policy, the appointment and dismissal of ecclesiastical officials, he had others which we must outline. Christensen thinks he can deduce from several sources (letter of Tansar, al-Mas'ūdī, *Tanbih*, p. 103—104; Ya'qūbī, *Historiae*, p. 1—202), that four or five high officials formed with the king a kind of ministry, the composition and number of members of which perhaps changed from time to time but which always included the *mōbedhān mōbedh* (cf. e.g. the *Shāhnāma*, ed. Mohl, vi. 223 where the *mōbedh* is called the king's vizier). But he was also supreme judge as head of the *mōbedhs* of the administrative divisions, as the latter were the

judges of higher degree in their respective areas. It is evident from the studies of Bartholomae on Pehlevi legal texts (and especially on the *Mātikan-i kazar Dāstān*; cf. *Zum Sasanidischen Recht*, p. 34, etc.) that in the different districts there were judges of first instance and of two degrees (as lower, *mas* higher), above whom was the *mōbedh* of the district. The supreme judge was ultimately the *mōbedhān mōbedh* whose final sentence could not be disputed. For the judicial functions of the *mōbedhs* it is interesting to consult the acts of the Persian martyrs in Syriac and Greek (cf. Hoffmann, *Auszüge aus syrischen Akten persischer Martyrer*, Leipzig 1880; the texts of Bedjan, etc., in *Patrologia Orient.*, etc.). The Arab writers also give us a pretty clear idea, especially as regards the *mōbedhān mōbedh*; for example in Tabari, i. 952; Noldeke, *Gesch. d. Perser und Araber*, p. 230, the *mōbedhān mōbedh* in advising the king in the matter of the son of Dīhū Yazan, lays particular stress on the young man's right to have his prayer granted; al-Mas'ūdi, *Murūū* (ii. 156) and *Tanbih*, p. 103, calls him *kādi l-kudāt*; in the *Murūū* also (ii. 211) we are told in connection with the abuses of Hormuz son of Khusraw that, having abolished the jurisdiction of the *mōbedhs*, the good old tradition and the ancient laws fell into desuetude. In al-Tha'ālibi, *Hist. Pers.*, p. 506-7, we find two answers which are interesting in this connection; they were given by the *mōbedhān mōbedh* to the king, who had consulted him with regard to the sentence of death to be pronounced against his chief wife and his cook; in the *Kitāb al-Tādj*, p. 78 it is related that king Kawādī full of admiration for a subtle answer given by the *mōbedh* exclaimed: "It is with justice that kings have given you the first place and that they have entrusted you with the control of jurisdiction!"

Some Arabic sources also allude to the court of justice which was held on the occasion of the great festivals of the *Nawrūz* and the *Mīhr-gān* (e.g. *Kitāb al-Tādj*, p. 159-63; al-Maḥāsīn wa l-Aḥādīd, p. 359-65; al-Bīrūnī, *al-Āthār al-bākiya*, ed. Sachau, p. 215-219, 222-223; *Siyāset-nāma*, ed. Schefer, p. 38-40, etc.). According to these stories, the people on those days had the right to bring any complaint against the king before a commission of which the grand *mōbedh* was the most important member; the first complaint was judged by the grand *mōbedh* who thus had the right to condemn the king, the latter having pronounced a formula of submission, kneeling before him. The complaints that followed were judged by the king. According to al-Nuwairi, the *mōbedh* also offered to the king on these ceremonial occasions a basket of fruits over which he had uttered a prayer. Tansar's letter (*J. A.*, 1904, p. 544-545) informs us that in the procedure laid down by Ardashir for designating the heir to the throne the grand *mōbedh* played the most important part, that is to say he proclaimed the new heir chosen by divine inspiration should it happen that the other dignitaries summoned to deliberate with him were not in agreement. The position of the grand *mōbedh* as intimate councillor and mentor of the king who placed complete confidence in him (he is often called "councillor of the king") is very clear in the *Shāhnāma* as well as in the Arabic and Persian sources (cf. al-Tha'ālibi p. 504-505; al-Mas'ūdi, *Murūū*, ii. 171 where Bahrām son of Bahrām, son of Hormuz, addresses

the grand *mōbedh*: "Thou, support of religion, councillor of the king and the man who directs his attention to affairs of state neglected by him"). According to al-Mas'ūdi, *Tanbih*, p. 104, only the *mōbedhs* and a few other high officials of state possessed a copy of the *Gāhnāme* or register of offices, a very large book, forming part of the *Ā'in-nāma* (an *Ā'in-nāma* was translated by Ibn al-Mukaffā' with the title *Kitāb al-Rusūm*).

Among the details which are preserved in the sources about the grand *mōbedh*, we are told that he was one of the three who shared the king's table in time of war when the royal meals were very frugal; and that when a victory was won, he along with other dignitaries pronounced a discourse (*Kitāb al-Tādj*, p. 173-174). A very marked feature in the sources is the wisdom of the grand *mōbedh* and indeed of all the *mōbedhs* (cf. below). In the *Shāhnāma* (we pick out only a few of the more interesting episodes) the Byzantine ambassador who was, the grand *mōbedh* tells Khusraw, of the school of Plato, puts seven questions to the *mōbedh* which he answers (Mohl, vi. 3 sqq.) and thus excites the admiration of the king. In this story, as usual, the grand *mōbedh* appears surrounded by other priests called *mōbedhs* or *herbedhs* as the case may be, and he is also given the title *dastūr*. Cf. also the questions put by the grand *mōbedh* to Khusraw Anūsharwān (Mohl, vi. 394 sqq.) and the assembly of the *mōbedhs* under the presidency of the grand *mōbedh* to put questions to Hormuz son of Anūsharwān (*ibid.*, p. 424-430). Another passage (Mohl, vi. 442 sqq.) describes the heroic piety of the grand *mōbedh* who consoles a high official, a victim of king Hormuzd, and is poisoned by the latter. The grand *mōbedh* is also represented as interpreting the language of birds (cf. also al-Mas'ūdi, *Murūū*, ii. 169-170: the dialogue of the owls denouncing the cruelty of king Bahrām son of Bahrām son of Hormuz [276-293 A. D.]), and in al-Tabari (i. 905; Noldeke, p. 250) he explains the invasion of jackals in the reign of Khusraw as a punishment for the impiety of the land.

The story is very well known among the Arabs of the dream of the grand *mōbedh* in the night of the birth of the Prophet and his interpretation of other marvellous happenings of the same night (al-Tabari, i. 982 sqq.; Noldeke, p. 253; *Annali dell' Islam*, i. 150); Hamza al-Isfahāni (ed. Gottwaldt, p. 27) quotes a list of Sāsānian kings drawn up by the *mōbedh* Bahrām son of Mardānshāh (Noldeke, p. 401).

In religious discussions the steps to be taken against heretics, in the persecutions and inquisitions against the Christians, the *mōbedhs* and the grand *mōbedh* are always most prominent (Hoffmann, *Auszüge*; texts of Bedjan; *Patrologia Orient.* etc.). Cf. also the articles MAZDAK, ZINDĪK.

A list of grand *mōbedhs* of the Sāsānian period and of *mōbedhs* contemporary with the last editors of the book is found in the *Bundahishn*, ch. 33 (Christensen, *Empire des Sasanides*, p. 35). The first grand *mōbedh* appointed by Ardashir was, according to Tabari (Noldeke, p. 9), a man named *Pahr* (?). The *mōbedhān mōbedh* Āturpāt-i Zartushtān lived, according to the Pehlevi sources, 150 years and was grand *mōbedh* for 90. Elisee (Langlois, ii. 230) mentions a grand *mōbedh*, who had the honorific title of Hamakdēn ("he who knows all religion") on account of his vast theological learning; this title seems to have been often given to the

mōbedhs. A number of names of grand *mōbedhs* are given in various sources, among them the Acts of the Martyrs in Syriac, Greek and Armenian; some are also preserved on the seals published by Herzfeld in his work on the monument of Paikuli. Mazdak was according to some texts *mōbedh* or even grand *mōbedh*. In Ibn al-Fākih, p. 216, we have a description in verse of pictures representing with other dignitaries "their *mōbedh* and their *hērbedh*" who judges ignorantly and iniquitously. On the *zanzamah* cf. the article ZOROASTRIANISM and Goldziher, *Muhammedanische Studien*, i. 170 and al-Djāhiz, *Bayān*, ed. Sandūbi, Cairo 1927, iii. 7, on the *Shu'ūbiya*. It is known that the Zoroastrian clergy played an important part in the *Shu'ūbiya* movement (Inostranetz, *Études sassanides*, St. Petersburg 1909, p. 10—15).

After the Muhammadan conquest the importance of the grand *mōbedh* and of the *mōbedhs* diminished in proportion as Islām spread; our sources of course continue to mention them and Arab writers give information obtained directly from *mōbedhs* (al-Ṭabari, i. 2874, year 31 A.H., mentions the *mōbedh* who advised the governor Māhawāhī not to kill king Yazdagird; al-Mas'ūdī, *Kitāb al-Tanbīh*, p. 104 gives the name of the *mōbedh* of all Persia in 345 A.H. etc.).

The organisation of the Parsis at the present day is different; *mōbedh* means a priest qualified to perform all the offices of worship. This, however, is beyond the scope of this article.

MODON, a town in the Morea on the south-west point of Messenia, about 20 miles N. W. of Cape Akritas, opposite the island of Sapienza at the foot of Mount Tomeus. Modon is frequently mentioned in ancient times under the names *Μεθών* and *Μαθών*; from the latter comes the Italian name of the town, Modon, under which it has been known since the middle ages in Europe. In the middle ages it was of much greater importance than in antiquity. The good harbour of the town, sheltered by cliffs of varying heights, has long been a haven of refuge and of supply for ships going from the west to the Levant. Hence pilgrims frequently mention the town and their accounts of their travels even contain maps.

The Arab Idrisi, in his geographical work finished in 548 (1153) for Roger II of Sicily, enumerates many seaports and towns on the mainland of Greece. Among these is Modon of which he records that it is a fortified town and has a citadel which commands the sea (*Geographie d'Edrisi*, ed. A. Jaubert, Paris 1846, p. 305). By the treaty of 1199 with the Byzantine emperor Alexius III, Venice was allowed to trade freely in Modon. The town had suffered severely at the hands of the Venetians in 1125 and again of the Normans in 1146 but

was recovering again slowly. After the taking of Constantinople by the Crusaders (1204) and the division of the lands which had previously formed the Byzantine empire, Modon fell to the Venetians, under whose rule it remained for nearly three centuries. It is this period that marks the golden age of the town, which, carefully administered by her merchant princes, developed a new prosperity and became an important and secure centre for trading with Egypt and Syria, while previously it had often been a nest of pirates. In the xvth century the population of Modon was a mixed one of Greeks, Jews, Albanians, Turks, Gipsies and Western Europeans. The Turks of the neighbourhood reared swine which they sold to the townspeople. According to some sources, at the end of the xvth century five thousand swine were exported annually from Modon to Venice. About the same time a settlement of gipsies in Modon is mentioned, who came from Gyppe, a district about forty miles from Modon, from which they said they had fled — for the sake of the Christian faith — and were seeking refuge in all lands with a letter of recommendation from the Pope (cf. *Die Pilgerfahrt des Ritters Arnold von Harff*, ed. E. v. Groote, Cologne 1860, p. xxviii., 67 sq.; *Z.D.P.V.*, xvii., 1894, p. 144). The fact is, however, that the gipsies of Modon after 1500 went over *en masse* to Islām, about the end of the xvth century were again mainly Christians, outwardly at least, after 1715 again became Muslims and finally after 1821 became Christians again.

During the second half of the xivth century the population of Modon increased considerably for many Christians and Jews of the Peloponnesus, seeking to escape the Turkish yoke, took refuge here. While the town itself was immune, the country round, which was flat, suffered a great deal from the Turks. Thus for example about 1480, the Turks raided this plain and destroyed by fire the olive-trees there. In the last decades of the xvth century, the Venetian republic had much anxiety about Modon and her other possessions in the East, which the Turks had long coveted. In 1499 the Admiral Antonio Grimani was ordered by his government to see to the defence of Modon against the Turks. In July of this year, the Turkish fleet came to the vicinity of Modon and soon afterwards several naval encounters with the Venetian fleet took place. In a naval battle fought on Aug. 8, 1499, outside Modon, the heroic Venetian Andreas Loredano, governor of Corfu, was taken by the Turks and put to death. Another Venetian admiral, Melchior Trevisano, was now entrusted by the Venetian republic with the defence of Modon and her other possessions in the East. At the same time the republic endeavoured to make peace with Turkey, but the negotiations broke down in face of the impossible conditions laid down by Bāyazid II. Among other things he insisted on the surrender of Modon. In the meanwhile on March 23, 1500, the Turks had occupied Merona, a little town near Modon. Marcus Gabriel, the commander of Modon, had previously, on February 18, 1500, reported to the Venetian government the great straits of the town. According to his report, the garrison was not sufficient to defend the town against the Turks, and for a successful defence it would require four thousand trained men, in addition to artillery, arms, munitions and gunpowder, which the town lacked. In spite of her difficult financial

situation, Venice managed to provide the town with money, troops and artillery. But the Turkish fleet again appeared before Modon while Bāyazīd II advanced on the town by land at the head of a well equipped army. An attempt by the Venetian fleet under Admiral Hieronymus Contarini to raise the blockade on July 24, 1500 failed with heavy losses. The Turkish fleet, according to the Venetian admiral, had very good artillery. In the meanwhile famine had broken out in the garrison so that they could hold out no longer. Four Venetian galleys were able to steal through the Turkish fleet into the harbour and bring the garrison food, munitions and men, but this could not avert the fate of the town. After a siege of twenty-eight days during which the town was bombarded by heavy artillery, the Turks stormed it. On Sunday, August 9, 1500, the Venetian garrison had to yield to this onslaught.

The lot of the surviving garrison and other inhabitants of the town was a hard one. They were either massacred in most inhuman fashion or sent into slavery. Very few of them succeeded in escaping. But the number of people captured did not come up to the expectation of the Turks, because the Venetian authorities had earlier sent thousands of old men, women and children from Modon to Cete and Zante. Among those who fell at the capture of the town was the Roman Catholic bishop of Modon, Andreas Falcus, a number of prominent Venetians and high officials of other origin. When the news of the capture of Modon by the Turks reached Venice, it was plunged into deep mourning. This is reflected in a letter which the Doge Augustino Barbarigo sent on September 7 to the Pope and several European rulers with reference to the catastrophe. The sole consolation of the Venetians was the deceitful hope that their fleet might succeed in retaking Modon. The Venetian Senate at once saw to the settlement of a number of the refugees from Modon in Cephalonia. Sultān Bāyazīd II regarded the conquest of Modon, at the fortifications of which he was rightly amazed, as a gift from God. When he entered the town as a victorious conqueror, it had already been partly consumed by fire which had been begun by the defenders themselves. The fugitives from Modon, who had taken refuge in Zante, watched the flames that were destroying their homes burn for several days. Sultān Bāyazīd II promoted the first janissary to leap over the walls of Modon to the rank of Sarak-bey. He had two towers built of the skulls of the fallen and massacred Christians and turned the cathedral of the town, the venerable church of St. John, into a mosque. On August 14, 1500, he went to the new mosque to return his thanks in prayer. He then saw to the resettlement of Modon, the walls of which were rebuilt. By imperial decrees, each Peloponnesian village had to send five families to become permanent settlers in Modon, the revenues of which were allotted to Mecca. After a brief stay, Sultān Bāyazīd left his new conquest. He took with him as a prisoner the last Venetian defender of the town, Marcus Gabriel, whose life he had spared with the intention of using him for his own purposes later. The historian Safa'i, a native of Sinope, wrote some time before 1521 an account of the taking of Lepanto (Naupactos) and Modon (*Fethnāme-i Aınabakkli ve-Modon*). The brief description of the capture of Modon written by Munshi Seyid Mehmed also gives details of the sultān's treatment

of the town (cf. F. Babinger, *G. O. W.*, Leipzig 1909, p. 49).

In 1531 the Knights of St. John endeavoured to take Modon from the Turks and to establish themselves there. To do this they equipped a small fleet under the command of the Abbot Fra Bernardo Salbiati, a nephew of Pope Clement VII. Two Greeks employed in the harbour of Modon and Johannes Skandalis, a Greek from Zante, whose father was a customs officer in Modon, were to assist the enterprise. The fleet, led by Salbiati with two merchant ships, which also concealed soldiers, sailed for Sapienza. The war-ships were hidden in the vicinity of this island, while the two merchant ships under the guidance of Johannes Skandalis, made for the harbour of Modon. Permission to land was given without trouble to the crews of the two ships, who gave themselves out to be some merchants and some janissaries, and they were allowed to spend the night in the tower at the harbour. Johannes Skandalis and his little body of followers then succeeded in overpowering the Turkish guard at the tower and taking nearly the whole town. The rest of the Turkish garrison shut themselves in the palace which had once housed the Venetian governors of the town, and offered a stubborn resistance. In order to overcome the Turkish garrison the war-ships hidden at Sapienza were necessary. These now came up, although very late, and bombarded the town with their guns. Scarcely had they begun when a strong Turkish fleet appeared. The Knights and John Skandalis therefore abandoned Modon but not without carrying off some sixteen hundred prisoners.

The years 1532—1534, during which a Spanish force in the service of Charles V occupied the adjoining Coroni, were a critical period for the Turks in Modon. But after this, it was left in peace for a considerable period. The *Travels* of Ewhyā Celebi who visited the Morea in 1667 to 1668 contain valuable notes on Modon and its vicinity, while Hādjdj Khalifa (d. 1658) contains nothing essential.

During the war which broke out in 1684 between Turks and Venetians in which Germans, Poles and Russians also shared as allies, Modon with the whole of the Morea was restored to the Venetians. General Francesco Morosini in 1686 broke the resistance of the Turkish garrison with the help of Greek and German troops and secured it for the Adriatic republic. The chief mosque of the city, i.e. the old cathedral, was once more dedicated to Christian worship. Only in 1699 after the peace of Carlowitz, did the Turks recognise the Venetian claim to Modon. Venice now did her utmost to restore the city which, with its commerce, had much declined during the Turkish occupation. Of the seven administrative divisions (*camera*) into which the Venetians had divided the Morea, the third was that of Modon. This district was again divided into four areas (Fanari, Arcadia, Navarino and Modon). From a Venetian record of September 29, 1690, giving the results of a census by the Venetian officials, we see that the district of Modon had been depopulated to an incredible degree. The 218 villages detailed in this list were inhabited by only 11,202 souls. Modon itself, including the citadel, had only 236 inhabitants of whom some must have been Muhammadans. A large number of villages which at the turn of the xvth—xviii centuries belonged to the district of Modon, have

Turkish names, some of which survive to this day. These villages were originally fiefs granted to Turks whose names in time passed to the village (cf. S. P. Lambros, in *Delion*, publication of the Historical and Ethnological Society of Greece, vol. ii., 1885, p. 686—710. pl. vii.; thereon *Ἱστορικὰ Μελετήματα*, Athens 1884, p. 114 sqq.; Pier' Antonio Pacifico, *Breve descrizione corografica del Peloponneso o' Morea*, Venice 1704, p. 125 sqq.).

After the conquest by Morosini whose services to Modon are commemorated in inscriptions still in existence, the town remained for some nineteen years under Venetian rule. In 1715 the grand vizier 'Ali Kumurtzi with the help of a number of Greeks took not only Modon but almost the whole of the Morea from the Venetians in a very short time. The Venetian garrisons of Navarino and Koroni as well as the inhabitants abandoned them when the Turkish army approached in the summer of 1715, in order to take refuge in Modon, which was much more strongly fortified. Soon afterwards the Turkish fleet and army began the siege of the town. After a brief resistance Modon surrendered voluntarily. After the capture of the town the grand vizier ordered a general slaughter of the Christians. Many in the district thereupon adopted Islām in order to save life and property in this way. The Turks who had formerly owned property in Modon or the neighbourhood were allowed by imperial edict to resume possession of it. The peace of Pessarowitz (1718) finally ceded Modon to Turkey. The town recovered from the catastrophe of 1715. From 1725 onwards a busy trade developed between Modon and the lands of North Africa, especially Algeria and Tunis; this trade had existed previously but not to the same extent. Modon played a certain part during the war between Turkey and Russia in 1768—1774. The Russian vice-general Georg Vladimir Dolgoraki in 1769 with 500 Russians, 150 Montenegrins and 100 Greeks (mainly Mainotes) besieged Modon. The Turkish garrison of Modon consisted of 800 janissaries and a large number of Turks of the town and vicinity able to bear arms. The walls of the citadel were in good condition, and the supply of food and munitions ample. The siege lasted a long time; the fighting was conducted mainly by the artillery on both sides. The Russians had also two warships co-operating on the sea. At the end of May 1769, Turks and Albanians from the interior of the Morea came to the help of the besieged who undertook a valiant sortie when they learned of the approach of help. In the battle that now developed the Russians suffered heavily. They were forced to abandon most of their artillery and to escape to Navarino, from which they sailed with the rest of the Russian army and a few Greek notables. A few years later, the Turks in Modon were still displaying the guns which they had taken from the Russians in 1769. According to reliable sources, the Turkish population of Modon about 1820 was four to five hundred fighting men. About the same time 'Ali Agha was prominent among the Turks of the town for his wealth and in other respects also. The vicinity of Modon was almost exclusively inhabited by Greeks who cultivated the land, which mainly belonged to the Turks, and were despised by them as contemptible menials. During the Greek War of Independence of 1821—1827, all

the attempts of the Greeks to take the town failed. At the end of March 1821, a Peloponnesian force led by the orthodox patriarch of Methone, named Gregory, and other notables, besieged Modon and the adjoining towns of Koroni and Neokastron. The besiegers were joined in the spring by Greeks from the Ionian islands and later by Philhellenes from Europe. On May 18, 1821, Greek ships, under the captains of the Speziots, Nikolaou Mpotasis and Anastasiou Koladrutsos blockaded Modon. But neither the Turkish garrison nor the armed Turkish civilians in the town were the least dismayed. On the contrary, they undertook raids in all directions and did their best to impede the progress of Greek emancipation. Many fierce encounters took place between the Turks of Modon and their besiegers. In July 1821, Turkish ships re-provisioned Modon but they were not successful in their attempt to reprovision Neokastron, the garrison of which was in dire straits from want of food and even water. On August 8, 1821, the Turks of Modon decided to attempt the relief of their compatriots in Neokastron, who had in the meanwhile been forced to capitulate to their Greek besiegers. On the road between Modon and Neokastron a battle was fought on August 8, 1821, in which the valiant chief Constantine Pierrakos Mawromichalis, a member of a notable Mainote family, fell. On the same day, the Greeks took Neokastron; but they gradually abandoned the siege of Modon. The town was able to continue to hold out, only, however, with the frequent help of the Turkish fleet.

When Ibrāhim Pasha, the adopted son of Mehmed 'Ali, undertook to suppress the Greek rising and to pacify the Morea, Modon and its neighbourhood formed his main base. There he landed troops on February 24, 1825, and dug entrenchments. Modon became an important base for Ibrāhim Pasha's operations. On October 8, 1828 the town was taken from him by the French General Maison. Not before 1833 the French left and Modon has since then belonged to the Greeks.

MOGADOR, a town in Morocco on the Atlantic coast. The Bay of Mogador, protected against the north winds by the rocky promontory on which the town is built, against those from the west by an island about 1,000 yards in length, forms a natural harbour which, although not large and inaccessible for ships of large tonnage, has however the merit of being accessible at all seasons, an advantage which secures it a favourable place among the anchorages of the Atlantic coast of Morocco which is, generally speaking, inhospitable. This favoured situation was taken advantage of at a very early period. In spite of the lack of precision in the sources, it is probable that we should seek at Mogador the site of one of the five Phœnician colonies founded by Hanno (vth century). The island seems to have been known as the island of Hera or of Juno. Pliny records that at the end of the first century B.C. the king Juba II founded purple dye-works on the *Purpurariae Insulae*, islands in the Ocean, "opposite the Autololes", a Getulic people who lived in the north of the High Atlas. Getulic purple, which was celebrated at Rome, was supplied by the molluscs abundant on this coast. It is only at Mogador that we find an island and islet which can be identified as the *Purpurariae Insulae*, but no archaeological discovery has yet been made to confirm the deductions made from the ancient geographers.

In the xth century of the Christian era, according to al-Bakî (who finished his book in 1068), Amogdûl, a very safe anchorage, was the port for all of the province of Sûs. We see in the name that of a local saint, Sidi Mogdûl, still venerated in this region, whose tomb is on the bank near the mouth of the Wâdi l-Kṣob. It is however possible that the saint, of whom we know nothing, gets his name from an old Berber place-name. Moga-lor is only a Spanish or Portuguese transcription of Mogdûl, through the forms Mogodul, Mogodor, which we sometimes find in the texts. The harbour and the island bear the name Mogodor or Mongodor on a series of portolans of the xivth and xvth century

(publ. by Ch. de la Roncière, *La Découverte de l'Afrique au Moyen-âge*, 1925) but there was not a town here, when in Sept. 1506, the king of Portugal Dom Manuel I commanded a gentleman of his court, Diogo d'Azambuja, to build a fortress here which was called *Castello Real* of Mogador. Built with great difficulty in face of the hostility of the natives, the Portuguese stronghold did not long resist them. While at Safi and Santa Cruz of Cape Guer (Agadir), the state of anarchy in which the tribes lived favoured the rapid progress of the Portuguese, it seems that at Mogador they came up against strong resistance probably organised by the old Beiber marabout body of the Ragrâga. The garrison had to remain blockaded in *Castello Real*, revictualled with difficulty from Portugal and Madeira, until in October or November 1510, the tribes were strong enough to seize the fortress in circumstances which we do not know.

A sketch of the xvith century and plans of the xviiith leave no doubt as to the site of *Castello Real*. It was situated, not at the mouth of the Wâdi l-Kṣob, where is now shown an alleged Portuguese fort which however only dates from the end of the xviiith century, but on the shore of the northern passage opposite the island, on the rocky point which supports the mole west of the present harbour. Sometimes abandoned, sometimes more or less restored by the rulers of Morocco, who from time to time kept a small garrison there, the old Portuguese castle survived till 1764 or 1765 and was only destroyed when the town was built.

In spite of the lack of success of the Portuguese attempt, this privileged situation continued to attract the envy of European nations. At the beginning of the xviiith century, Spain, fearing that Moroccan, Algerian or even European corsairs would establish themselves at Mogador, thought of seizing it herself to protect the route to the Indies. At the same time, English agents were thinking of making Mogador a base against Spain. The Sulṭân, Mawlay Zaidân in 1611—1612 and his son 'Abd al-Malik in 1628 drew up a scheme to fortify the place to prevent foreigners from establishing themselves there. This was the time when in France Richelieu and Père Joseph were drawing up schemes for a colonial policy. The Chevalier de Razilly in 1626 suggested to them the occupation of Mogador and the organisation of a factory and fisheries there. He had it reconnoitred in 1629 but found it impossible to take it by surprise.

In spite of so many projects and attempts against it, the island and the shores remained practically deserted. Ships however frequented the roadstead. It was through Mogador that in the first quarter of the xviiith century, the greater part of the trade between Marrākush and Holland took place. Later, in the time of Mawlay Ismâ'il, the harbour was mainly used as a refuge for corsairs who came there to rest and repair their vessels.

In 1751, Sidi Muḥammad b. 'Abd Allâh, then *Khalfâ* of his father for the district of Marrākush, desiring to develop commercial relations between his subjects and Europe, ceded the island of Mogador to a Danish company, which however preferred to establish a centre at Agadir and was not successful there. A few years later on becoming sulṭân and having made Marrākush his capital, Sidi Muḥammad decided himself to found a town at Mogador and to conduct all the commerce of

the south of his kingdom through it, to the greater benefit of the royal treasury, which would obtain not only the customs from this increased trade but also profit by the rents of the buildings, most of which had been built by the sovereign and were his private property. The harbour also served as a base for the corsairs who, though the menace they offered to the fleets of Europe, forced the Christian nations to conclude treaties with the sultān by which he received valuable presents and even sums of money. In order to populate the town and start business in it, he demanded that European consuls and merchants should settle there and have houses built at their own expense.

By 1760 he had begun work but it is from the autumn of 1764 that the foundation of the town really dates; it was given the name al-Suwaïra (Souïra), the little fortress, by which it is known to the natives; the name Mogador is only used by Europeans. We also find a Berberised form (*Tasuiri*). The sultān went in person to choose and distribute the sites for the buildings. He had asked the English to send him an architect. They sent him a French "engineer", a native of Avignon, called Nicolas Cournot, who had made the plans for the fortifications of some places in Roussillon. He was an adventurer who, after working in France as a contractor, had entered the English service during the Seven Years' War. He was living at Gibraltar where he entered Sidi Muḥammad's service. The sultān did not gain much by his services and sent him back to France at the beginning of 1767. None of the present buildings in Mogador can be attributed with certainty to Cournot, for after him a number of European architects and masons worked for the sultān, notably a Genoese architect who built the battery called the *ṣḡāla* situated on the western rampart facing the sea. Mogador owed to its builders the narrow streets, massive gateways and bastions of European type, the like of which cannot be found in other Moroccan towns and which give it quite a specific character. Sidi Muḥammad also built outside the town a country palace which still stands half buried in sand opposite the little village of Diyābāt.

The dreams of the sultān were only imperfectly realised. The merchants, attracted to Mogador by the promise of a reduction in the export duties on goods, were soon undeceived when they saw that the sovereign did not keep his promises but constantly imposed new burdens on trade. The prosperity of Mogador remained insignificant under Sidi Muḥammad and declined under his successors. The situation of the town, a long way from great cities and main roads, made it frequently used in the sixteenth century as a political prison and compulsory place of residence for high officials in disgrace. Mogador remained however the starting-place for the caravans to Sūs, Mauritania and the Sūdān and has retained from this position a certain commercial importance, to which the opening of the port of Agadir to commerce will now do considerable harm.

On August 15, 1844, after the battle of Isly, a French squadron commanded by the Prince de Joinville, who had just bombarded Tangier, came and bombarded Mogador. It was intended to make an impression on Sultān Mawlay 'Alī al-Raḥmān by striking at a town which belonged to him personally and from which he drew considerable revenues. A three hours' bombardment silenced the batteries: the French army then disembarked on

the island, the garrison of which, entrenched in the mosque, made a vigorous defence until the next morning. On August 16, a detachment of 600 men went to spike the guns, throw the gunpowder into the sea and destroy the last defences of Mogador. The town, which had suffered very little from the French shot, but had been evacuated by the inhabitants, was burned and plundered by the tribes of the country round (Shiyādma and Hāḡa).

Mogador is now the headquarters of a *contrôle civile*. It had 18,401 inhabitants at the census of 1926. The Jewish element is particularly large, numbering 7,730.

The extremely temperate climate is remarkably equable; but it is spoiled by the wind which blows almost incessantly, laden with the sand from the neighbouring dunes.

MOGHUL. [See MUGHAL.]

MOHUR, an Indian gold coin. The name is the Persian *muhr*, which is a loanword from the Sanskrit *muṭra*, seal or die. The earliest occurrence of the word on coins is on the forced currency of Muḥammad b. Tughlaq where it has the literal meaning of "sealed" or "stamped". By the xvth century it had come to be used as a popular rather than precise name for gold coins in general.

Very little gold had been issued in India for two centuries before the reign of Akbar. One of his reforms was the issue of an extensive coinage in gold. In addition to many pieces which had only a brief circulation, he revived the old gold tanka [q. v.] of the Sultāns of Dehli on a standard of 170 grains (11.02 grammes) to which he gave the name *muhi*. That the name at first could be applied to any gold coin is shown by Djahāngir's reference in his *Memoirs* (transl. A. Rogers, *O.T.F.*, vol. xix., p. 10) to muhrs of 100, 50, 20, 10, 5 and 1 tola. After the numismatic experiments of Akbar and Djahāngir, only one gold piece was struck, occasionally with subdivisions so that the general name acquired a particular meaning, especially among the English merchants in India. Mohurs continued to be struck to the end of the Mughal Empire and by the states into which it broke up in the xviiith and xixth centuries. Akbar and Djahāngir issued

square as well as round pieces and the former also struck a few *mihṛābī* pieces, so called from their shape. Of the numerous large denominations recorded by Abu 'l-Faḡl and Ḍjahāngīr, only 5 muhr pieces of Akkar and of Ḍjahāngīr are known to exist.

As the silver rupee was the standard coin of India the value of the mohur fluctuated with the price of gold. In the latter half of the xviiith and early sixteenth centuries, the East India Company endeavoured to make gold the standard of India and issued mohurs (called gold rupees in Bombay) with the legends of the Mughal Emperor. None of their attempts to keep gold and silver in currency at a fixed rate were successful. When in 1835 a uniform currency was introduced for British India a gold mohur or 15 rupee piece with English types was struck in name of William IV but never attained general circulation; this was the last attempt to restore the mohur to circulation. The mohurs occasionally seen of Victoria of 1861, 1862 and other dates are patterns.

MOKHĀ, a small seaport on the Arabian coast of the Red Sea in 13° 19' 50" N. Lat. and 43° 12' 10" East Long. (Greenwich).

The once imposing town lies on a small bay between two promontories with forts on each about one and a half miles apart. The wall which surrounds the town in a semicircle is pierced by four gates. In the north the Bāb al-Hamūdīya leads to the citadel of the town and to a tongue of land which runs out into the sea; in the east roughly in the centre of the wall is the Bāb al-Shādhīlī through which the fort of al-Bārūdīh is reached and to the east the road to al-Ta'izz from it, while the road to al-Hodeida runs north via Bāt al-Faḡīh. In the south the Bāb al-Sundūl admits to the fort of al-Baḥr and the road to 'Aden; in the west through the Bāb al-Baḥr the harbour is reached; its stone breakwater is now much decayed. This also holds of the wall which connects the city-gates. Seen from the sea the town, which covers an area of about half a square mile, still looks very fine; the white mass of houses stands brightly out from the dark blue waters of the Red Sea. But as one approaches, the damage which wars, dilapidation and turbulent times have done to the often sore tried town, is apparent; the houses are for the most part deserted, while the inhabitants, consisting of Arabs, Sōmālīs, Danakīl, Jews and a few Parsees, have settled in huts outside the town. East of the Bāb al-Shādhīlī, for example, there is a large group of huts, inhabited by Arabs, south of this another group belonging to Sōmālīs, while farther south and on the other side of the Wādī 'l-Kabr is the Jewish quarter (Kā' al-Yahūd). In the north lies the great cemetery and a white-washed mosque which contains the tomb of the patron saint of the town, Shaikh 'Alī b 'Umar al-Shādhīlī; in the east of the town is a second important mosque with a minaret 118 feet high, which forms a landmark visible from a considerable distance, along with several smaller ones. The country round is barren. Drinking water is brought

by a conduit from the Mawzā' twenty-four miles to the north. The population has varied considerably in the last hundred years. In 1824 it was 20,000, in 1878—1879: 5—8,000, in 1882 it was put at 1,500 inside the town and in 1901 it had sunk to about 400.

al-Mokhā is briefly mentioned by al-Hamdānī in connection with al-Mandab as lying in the land of the Banū Maḡdīd; al-Mas'ūdī also refers to it briefly in his geographical work. The Portuguese gave the town the name by which it has become known in Europe: Moca. P. Manoel d'Almeida calls it *Moguā* in his *Historia geral de Ethiopia a dita por B. l'hesar Telles* (C Coimbra 1660).

About 850 years ago Mokhā was an insignificant village, but rapidly grew in importance when Shaikh Shādhīlī discovered the peculiar qualities of the coffee bean and introduced the habit of drinking coffee. In 1513 Alfonso Albuquerque found Mokhā still a modest place but by 1610 it had become the most important port for trade with Abyssinia, and England was endeavouring to trade with it while the Dutch had a factory here. Coffee was the chief article of export along with other specialties of the Yemen, and received its name from the town. As late as 1763 Niebuhr found the town very prosperous; but the capture of 'Aden by the English put an end to its prosperity. 'Aden and al-Hodeida attracted all the trade of Southern Yemen. Under Turkish rule Mokhā was a *kaḍā* in the sandjak of Ta'izz but its trade was insignificant. In 1916 for example, only about £ 10,000 worth of coffee was sent to 'Aden. There is a minimum of industrial activity and that only to supply local needs. Indigo dyeing and the manufacture of spirits may be mentioned; the latter is in the hand of Jews. Mokhā is connected by telegraph with San'a' (via Ta'izz), al-Hodeida (via Zabīd), Shaikh Sa'īd and Perim. Mokhā has acquired a new importance by the creation of the imāmate of al-Yemen and is now beginning to share the trade with al-Hodeida.

MOLLĀ. [See MAWĀ.]

MOLLĀ KHUSRAW. [See MUḤAMMAD B. FARĀMARZ.]

MOMBASA (مَمْبَسَا, anciently Mvita), an island and town on the east coast of Africa, in Lat 4° S., Long. 39° E. The island, about 3 miles in length from north to south and nearly the same distance from east to west, is remarkably compact in shape and is so placed in the deep inlet formed by the converging of several creeks as to be almost entirely surrounded by the mainland, only presenting its south-eastern angle

to the Indian Ocean. This peculiarity of its situation suggested to the late W. E. Taylor the derivation of the name Mvita¹ (the "Curtailed Headland") from (*vi*)ta "point". The more usual derivation from *vita* "war" seems inadmissible on phonetic grounds: another explanation connects it with *ita* "hidden", either from its hidden position, or from the inhabitants, as it is said, having hidden themselves in the bush during a raid from Pate.

The town of Mombasa is situated at the eastern end of the island and, being the terminus of the Uganda railway and the only port of the colony, is of considerable commercial importance. The population, according to the latest information available, is something over 44,000, of whom 26,906 are classed as "Africans" (i.e. the permanent residents, mostly Swahili, and a floating contingent of labourers belonging to other tribes). The remainder includes 7,523 Arabs, 7,556 Indians, 1000 Europeans, and a proportion of "other races". The Arabs, Swahili and many of the Indians are Moslems; the two former chiefly Sunnī of the Shāfi'ī sect, though a few of the older men belong to the Ibādīya. There are several mosques, very plain buildings, as a rule, and devoid of minarets; the *mu'adhdhin* stands on the flat roof to give the call to prayer. The largest and most imposing of these structures is that belonging to the Khōdjas.

The origin of Mombasa is involved in some obscurity. It is certain that Arab trading stations existed on the East African coast at the beginning of the Christian era, and we learn from the *Periplus of the Erythraean Sea* that the traders frequently married native women. This indicates a fairly early origin for the Swahili race. The first permanent settlements, however, seem to have been post-Islāmic: 69 (689) is given as the date for the settlement of Pate; and, as Lamu is said by native tradition to have been founded by colonists sent out by 'Abd al-Malik b. Marwān (A.D. 684-705), these two towns were no doubt contemporary. There is no mention of Mombasa in the traditions of Lamu or Pate, at this period, except for a statement made to the late Captain Stigand (*Land of Zinj*, p. 29), that 'Abd al-Malik sent out Syrians, who "built the cities of Pate, Malindi, Zanzibar, Mombasa, Lamu and Kilwa". Other authorities place the founding of Kilwa much later, viz. 365 (976). The *Chronicle of Kilwa* states that 'Alī b. Ḥasan of Shirāz, the founder and first "Sultān", installed one of his sons as ruler of Mombasa, no doubt the first of the "Shirāzi Shaikhs", the last of whom was deposed by the Portuguese. It would appear that Mombasa was for some time under the suzerainty of Kilwa: but how far the "King of the Zandī" described by Idrīsī and, later, by Ibn Sa'īd as residing at Mombasa, was independent, is not clear. The names of the twelve tribes (called indifferently *ḥabila* or *ṭā'ifa*) said by native authorities to make up the Swahili population indicate a composite origin and possibly a late one, as the bulk of the people came from settlements already founded. It is possible that the Wamvita (who either take their name from the city or gave theirs to it) go back to the alleged foundation under 'Abd al-Malik; but against this is the assertion, repeatedly made, that the Wachangamwe, Wakilindini and Watangana are the *taifa tatu*, "the three" — i.e. the three aboriginal — "tribes". Some native authorities give these three as "Kilindini", separate from Mombasa. Changamwe

is a village on the mainland, a mile or two from the crossing at Makupa; Kilindini (now important as the principal harbour for steamers from Europe) is at the western end of the island. Tradition says that Kilindini was a city before Mombasa existed, and, in fact, the jungle near the present port contains numerous ruins of uncertain date, which, so far as I know, have not yet been competently examined. Tangana is on the island of Mombasa, now included in the town. The remaining tribes are those of Kilifi¹ (a town to the north of Mombasa; its inhabitants are said to have come from "Shirāzi", either Shirāz in Persia or a town of the same name in Tanganyika Territory, a colony from the original Shirāz), Pate, Paza (or Faza, in the island of Pate), Shaka (a Persian settlement near the mouth of the Tana), Mtwapa (between Mombasa and Takaungu), Jomvu (on the creek known as Port Tudor), the Wagunya (the people on the mainland north of the Lamu archipelago) and the Wakatwa (the Somali). Another account omits this last name and substitutes that of the Wamalindi. Krapf (*Dictionary*, p. 240) mentions a tradition that the town was built (not on the present site, but at the place known as Kwa Mashekh, a little to the north) by one Shehe Mvita, whose tomb was pointed out to him; but it seems probable that this eponymus was invented to account for the name. When that of Mombasa was introduced we have no information, but it was used by the Arab geographers as far back as the xiith century. It is mentioned, as already stated, by Idrīsī. Ibn Sa'īd speaks of "a great estuary" to the west of Mombasa, by which must be meant the creek now known as "Port Tudor", and says it is distant about one degree from Malindi. Ibn Baṭṭūṭa, who spent one night there, on his way to Kilwa, describes it as "a large island, two days' journey by sea from the Sawahil country. It possesses no territory on the mainland. They have fruit-trees on the island, but no cereals, which have to be brought to them from the Sawahil. Their food consists chiefly of bananas and fish. The inhabitants are pious, honourable and upright, and they have well-built wooden mosques". This would imply that the coast opposite Mombasa was not reckoned as part of the Sawahil. Present-day Swahilis restrict the term "Swahilini" to the strip of coast between Malindi and Lamu, which they look upon as the cradle of their race and this might be taken as intended by Ibn Baṭṭūṭa, but for his reference to cereals being brought from "Sawahil", which would place it in the south, since the dhows laden with millet come up from that quarter with the S. W. monsoon (cf. Taylor, *Aphorisms*, § 128).

The first European to reach Mombasa was Vasco da Gama, who touched there, April 7, 1498, but did not land, owing to the real or suspected treachery of the Arab pilot sent by the Shaikh. He went on to the rival state of Malindi and established friendly relations with its ruler, who hoped to find in him an ally against Mombasa. Mombasa — after the city had been repeatedly destroyed, in whole or in part, by Almeida in 1505, by Nuno da Cunha in 1528 and by Continho in 1589 — was rendered tributary to the Portuguese in or about 1590, after the adventurer Mir 'Alī Bey had induced the Shaikh to tender his allegiance to the Turkish Sultān and had been

¹) In these names of places, I omit the *wa-*, which is the prefix indicating plurality of persons.

driven off by Continho's fleet. At the same time occurred the invasion of the Zimbas, an unidentified tribe who had spread desolation on their march north-eastward, "probably from some locality on or near the West coast" (cf. Theal, i. 352). From Mombasa they passed on to Malindi, where the Portuguese garrison, with the help of native allies, effectually resisted them, and, if not exterminated, they ceased to exist as a tribe. The fort, still in existence, was erected between 1593 and 1595, and Mombasa was held by the Portuguese for some sixty years. The last Shirāzī Shaikh, Shaho Mshaham b. Hisham, was deposed and the Shaikh of Malindi, Ahmad, installed in his stead with the title of Sulṭān. Immigration from Portugal was encouraged, but in 1615 the settlers, apart from the garrison, only numbered 50 (cf. Strandes, p. 173). In 1605, a convent of Augustinian monks was founded, which, with other ecclesiastical establishments, was under the jurisdiction of the Archbishop of Goa till 1612. In that year a separate diocese of Mozambique was created. Shaikh Ahmad died in 1609 and was succeeded by his son Hasan, whose treatment by the Portuguese authorities ranks among the scandals of Colonial history. He was finally murdered, at the instigation of the governor, De Mello Pereira (1615). His son, Yūsuf, aged seven, was sent to Goa to be educated and there baptized by the name of Geronimo Chingulia. After an inquiry held at Lisbon in 1618, the highest ecclesiastical tribunal in Portugal pronounced Hasan innocent and decreed that Yūsuf should be restored to his inheritance. In 1630 he was sent home and installed as Sulṭān, continued for a time to profess Christianity, but, being accused of apostasy because he had been seen praying at his father's tomb and apprehensive of being sent to Goa (the seat of the Inquisition), revolted, openly declared himself a Moslem and massacred all the Portuguese in Mombasa (cf. Faria y Sousa, vol. iii., iv., i., p. 391). His example was followed by Tanga, Mtangata and some other towns (1631). Mombasa was besieged for three months by F. de Mowra, with a fleet from Goa, but without success. Yūsuf, however, probably seeing that he would be unable to hold out permanently, retreated to Arabia after dismantling the fort and destroying the town. The new governor, Seixas de Cabreira, subdued the revolted towns and repaired the fort, as recorded in the inscription still legible above the gateway. The Portuguese rule becoming more and more oppressive, the Coast Arabs appealed in or about 1660 to Sulṭān b. Seif al-Ya'arūbī, Imām of 'Omān, who had already expelled the Portuguese from Maskat. He took Mombasa after a long siege and various operations; and though it was retaken shortly afterwards, the power of Portugal was already on the wane, and Seif b. Sulṭān again captured Mombasa in 1698 and installed Naṣr b. 'Abd Allāh al-Mazrui as governor. Internal quarrels and a revolt against this governor laid the town open to a last Portuguese attack, in 1728, when Luis de Mello Sampayo seized it, with the help of Bwana Tamn Mknu (Abū Bakr b. Muḥammad), Sulṭān of Pate. This occupation lasted but a short time and was terminated by another massacre, probably that commemorated in the tradition recorded by Taylor (*Aphorisms*, § 401). A period of anarchy ensued, which became so intolerable that not only the "Twelve Tribes" of Mombasa but the chiefs of the pagan Wanyika on

the mainland, appealed to Seif b. Sulṭān for help. He sent three ships and appointed a governor. In 1739 this office was held by Muḥammad b. 'Othmān al-Mazrui, the first of a line who became practically independent rulers of Mombasa. When the Ya'arabi Imāms were ousted by the Al Bū Saidi, the Mazrui refused to recognise the new dynasty. They were left undisturbed for a considerable time, but the more energetic policy pursued by Sa'īd b. Sulṭān (1804—1856) induced them to seek British protection in 1823. This was provisionally granted by Captain Owen, but withdrawn three years later, as the Home government refused to sanction it. Sa'īd finally gained possession of Mombasa in 1837, when the leading Mazrui were captured by treachery and deported to Bander 'Abbās. From that time till the establishment of the British protectorate in 1890, Mombasa remained subject to the Saiyid (now called Sulṭān) of Zanzibar, who indeed retains a certain jurisdiction over the ten-mile strip of coast leased from him by the British East Africa Company in 1887. The principal event in its history since that date is the rising of the Mazrui in 1895, coincident with, but not caused by the proclamation of the British protectorate over the mainland territory, which was taken over from the Company by the Imperial Government. Since then the completion of the Uganda Railway and the harbour works at Kilindini have noticeably changed the character of Mombasa, which is now a flourishing seaport, much frequented by European shipping.

The dialect of Swahili spoken at Mombasa was considered by the late W. E. Taylor "the truly central" language. "the best fitted for accurate statement and grave discussion"; though that of Zanzibar has now attained a wider currency. The art of poetry was, till recently, much cultivated there: the best known of the native poets are Muyaka b. Mwinyi Haji, Mwalimu Sikuuja (died 1891), and Hemedi b. Muḥammad b. Ahmad al-Mambassi, who was still living during the last decade of the sixteenth century (since deceased), Muḥammad b. Ahmad, 'Abd Allāh Borashidi, Mwinyi Mugwama.

(A. WERNER)

MONASTIR (pronounced *Mnestir*, *Mestir*; ethnic *Mestiri*), a town in the Sāhel, the eastern coast of Tunisia, on the site of the ancient Ruspina at the end of a cape which runs out to the south-east of Sūsa. The Arabic name raises a problem which is not yet solved. The name clearly conceals the Greek word *μοναστήριον* which suggests that there was an important Christian monastery here at one time. This is however a pure hypothesis, supported by no text, although Tissot (*Géographie comparée de la province d'Afrique*, ii. 165—166) seems to take it for granted. If on the other hand we remember that the Arab Monastir from the end of the eighth century was a great Muslim monastery and probably the first to be founded in the west, it is tempting to accept the explanation (suggested by Si Ḥasan 'Abd al-Wahhāb) that the name was given to the Muslim foundation by the Greeks of the country or Berbers speaking Greek, still Christians or recently converted, to Islām.

It was in 180 (796) that Ḥarṭama b. 'Aiyān, who ruled the province of Ifrīqiya in the name of the 'Abbāsīd caliph Ḥarūn al-Rashīd, founded the *ribāṭ* of Monastir. This fortified monastery attained considerable importance in Western Islām. A century after its foundation, *ḥalīth*s were quoted which proclaimed its great importance and promised the highest rewards to those who came there to fight the infidel or to prepare themselves for the holy war. The Prophet foreseeing the foundation of al-Monastir is said to have said: "On the coast of Ifrīqiya, there is one of the gates of Paradise which is called al-Monastir; one enters it by the grace of God's mercy and leaves it by the effect of his pardon"; or again: "He who keeps watch in the frontier town of al-Monastir for three days has the right to Paradise" (cf. Abu 'l-'Arab, *Classes des savants de l'Ifrīqiya*, transl. Ben Cheneb, 5. 7. 9. 14, 15; Ibn 'Idhārī, *Bayān*, transl. Fagnan, i. 1). In the xth century al-Bakrī gives a description of Monastir, the substance of which is taken from al-Warrāk (d. 973) and which is not quite clear to us. It is a large fortress (*ḥaṣr*), he says, which contains a quarter (*rabadh*) of considerable size. In the middle of this quarter stands a citadel (*ḥiṣn*) which contains suites of rooms, oratories and castles (*ḥiṣāb*) of several stories. To the south of this citadel is a great court (*ṣaḥn*) with *kubbas*, called *ḥibāb ḍāmī*, around which women who wish to devote themselves to religion come to live. It seems that the "fortress" was the town itself with its ramparts, still known by the name, common in Tunisia, of *bled*. Outside the *bled* is the quarter also encircled by ramparts and turrets in which we have the *ribāṭ*. This occupies the north-east angle of this "faubourg": its walls and high tower called *nadhū* dominate with their proud silhouette

the shore and the country round. To the south is a courtyard with tombs; here no doubt we have to locate the abodes of the pious women mentioned by al-Warrāk. The interior of the *ribāṭ* shows traces of frequent attention and repairs which makes its plan singularly complicated. We can however perhaps recognise the general arrangements of which the *ribāṭ* of Sūsa, founded twenty-five years later, gives us a clearer scheme on a smaller scale: a central rectangular court surrounded by two storeys of cells. On the first floor on the south side, the cells are replaced by a hall for prayer of no great height, very simple with cradle vaulting. It is probably the same as is mentioned by al-Bakrī: "On the first storey is a mosque where there is always a *shikh* of great virtue and merit, who has the direction of the community". The signal tower, circular in plan, occupies almost the same position as that which dominates the *ribāṭ* of Sūsa. In addition to the dwellings of the marabouts there are reservoirs, baths and "Persian mills" in the monastery. Every year a great fair was held at Monastir on the 'Āshūrā day when the pious began their temporary withdrawals from the world. Some, however, shut themselves up for life and devoted themselves entirely to prayer and the defence of the lands of Islām. The people of Ḳairawān supplied them with provisions, in itself a pious work.

The ninth century was undoubtedly the golden age of the *ribāṭ* of Monastir. Its importance however must have diminished somewhat as a result of the foundation in 821 of the *ribāṭ* of Sūsa, which was the starting point for the expedition to Sicily. Al-Bakrī would regard the *ribāṭ* of Monastir as a dependency on that of Sūsa. It was nevertheless, as well as the land around it, an auspicious place. We can date to about 1000 A. D. the building of the Great Mosque, close to the *ribāṭ*, and that of the little mosque of the Saiyida, both of which have preserved *mihrābs* of a very curious transitional style. It is probable that the "Lady" whose tomb has given its name to the oratory of the Saiyida was a princess of the family of the Zirids of Ḳairawān. Monastir was, especially after the Hilālī invasion (middle of the xth century), the St. Denis of the Sanhādja rulers. According to al-Idrīsī (xiith century), the dead were brought there by boat (the roads were by no means safe at this time) from the town of Maḥdiyya. The tombs of this period are numerous in the cemetery in which the patron saint of Monastir, Sīdī al-Māzarī, is buried.

Although Monastir did not play a great part in history after this period, the town and the *ribāṭ* continued to be an object of care to various Tunisian dynasties. From the Ḥafṣīd al-Mustanṣir (1260) date the two gates of the *bled*: Bāb al-Darb and Bāb al-Sūr. As to the *ribāṭ*, one of the gates was rebuilt by the Ḥafṣīd Abū Fāris in 828 (1424); another dates from 1058 (1648) and is the work of the Turks.

Monastir is at the present day a town of some 7,000 inhabitants. Three little islands, one of which contains a number of puzzling artificial caves, shelter the roadstead outside, which is frequented by a considerable number of ships at the tunny and sardine fishing season.

MONTENEGRO (Turk. KARA DAGH, Serbo-Croat: CRNA GORA) is in its heart a steep rocky citadel, the interior of which is difficult of passage and much cut up orographically and hydrographically; it has only a gateway in the south from Lake Skutari and in the north from the Herzegovina; these two gateways are connected by a corridor, the valley of the Zeta. This route which, as the main line of communication, has been the scene of fierce fighting between the natives and invaders and is also the dividing line between western and eastern Montenegro or Crna Gora in the narrow sense, the oldest part of the modern state on the one hand and the eastern districts called Brda on the other, is formed by the undulating plain of Zeta on the lower course of the Morača, which flows into Lake Skutari, by its right tributary the Zeta, the large but little fertile basin of the Nikšić and the depression of the Duža passes. Crna Gora and an adjoining strip of the Brda running north and south belong to the most desolate and poorest parts of the Dinaric or Illyrian limestone region which runs along the Adriatic, the forests of which, still existing down to modern times, have been sacrificed to get pasture land, lime, charcoal and tar (C. Patsch, *Historische Wanderungen im Karst und an der Adria*, i., Vienna 1922, p. 28) and which, with a poor water supply, have only a little arable land in little hollows and cups on their cold rocky highlands, on which we also have the few little villages and towns of which Cetinje at the eastern foot of the Lovćen (5,750 feet) with 5,473 inhabitants is the largest. It is not till we come east of the Brda to the valleys of the Piva and Tara with their deep ravines, which join to form the Drina on the northern frontier, and on the Lim, around the massif of the Durmitor (7,200 feet) and Kom (8,000 feet), where the soil is of gravel, that we have favourable conditions with a regular water supply, extensive forests of pine and other woods, rich meadows which enable cattle to be reared in large numbers; in many places in this region bread is dearer than meat. A very small fruit-growing region is the alluvial plain of Crmnica, the "garden of Montenegro" which lies around Virpazar on the north-western shores of Lake Skutari, which is full of fish, with a Mediterranean climate and vegetation, which is also found in the narrow strip of land along the Karst river Crnojevića Rijeka, to the north.

1. The oldest known inhabitants of the country were the Illyrian tribes of the Docleates and Labiates, of whom the former lived in the wilds

of Montenegro and the latter in the Mediterranean area around Lake Skutari down to the coast. After the destruction in 168 B.C. of the Illyrian kingdom of the Ardiaei whose last capital was Skutari, to which they, along with the Herzegovina, Southern Dalmatia and Northern Albania, had belonged, they came under the rule of the Romans and later formed part of the province of Dalmatia. In the first century A.D. we find the two tribal areas replaced each by a town organised on Roman lines with the old tribal territories attached to them, but ill defined: Doclea, at the corner formed by the junction of the Morača and Zeta, and Scodra, now Skutari, which latter, in the division of Dalmatia under Diocletian, became the capital of the provincia Praevalitana or Praevalis and has maintained a dominating position almost down to the present time [cf SKUTARI]. Doclea, on the other hand, is representative for Montenegro of the economic and cultural decline of south-west Europe since ancient times. In spite of the step-motherly nature of the country, we know from the ruins of public and private buildings bleaching in the miserable desert of the Karst and from epigraphic evidence that it was once a prosperous city with considerable trade with the interior across Lake Skutari and on the Boyana which flows out of it (Patsch, in Pauly-Wissowa, *Realenzyklopädie der klass. Altertumswissenschaft*, v. 1251 sqq.). It suffered severely in 395 when the Balkans suffered so much at the hand of the Teutons at the time of the migration of the Visigoths, but in spite of the plundering of the Adriatic territory which followed at other hands also, it was still the see of a bishop in 602, in the period when the towns of the peninsula were finally destroyed as a result of the raids of the Avars and Slavs and the permanent settlement of the latter, who having no understanding of town life, retained in their new home their traditional poor and primitive mode of life, for the most part in family groups settled on the land and mainly engaged in cattle-rearing.

II. Its situation and tradition, from traces in place-names, remnants of the old population and the city walls, now much decayed, preserved for the ruined town of Doclea which hitherto had held the position later occupied by Montenegro, its old ecclesiastical position — there is a record of a bishopric of Doclea subordinate to the Greek metropolitan of Durazzo — and seem also to have given it a military and political preponderance, since the little Slav state which later grew up here bore after it the name of Dioclia, Slav Diokliya down to the 18th century. This originally comprised only southern Montenegro and the stretch of territory called Kravina along the west bank of the Lake Skutari. The littoral itself (with Cattaro, Budua, Antivari and Dulcigno) and Northern Albania, with many Roman towns like Skutari and Drivasto, remained Byzantine on the contrary, as part of the theme (province) of Dyrrachion down to the 13th century, while eastern and northern Montenegro belonged to Serbia and the north-west to the principality of Travunia (capital Trebinje).

Of the early obscure pre-history of Dioclia all that we have is a Byzantine seal of a ruler of probably the tenth century: Πέτρος ἄρχοντας Διοκλιᾶς; the country was then not only ecclesiastically and culturally but also politically under Greek influence like the Luger Slav Adriatic states. From 1000 A.D. our information is fuller, if not absolutely reliable

Prince John Vladimir, a figure much obscured by legend, is inextricably associated with the last efforts of the Western Bulgar state. First a prisoner, then the son-in-law of the Czar Samuel (d. 1014), he was murdered (drowned in Lake Prespa) by the last Czar John Vladislav (1015—1018) in the Bulgar capital. Remembered in Montenegro as a saint by Christians and Muslims alike, he now rests in the monastery of Shen Jon near Elbassan in Central Albania.

In the years that followed, Byzantium, after the Bulgars, its opponents for centuries, had been finally disposed of by the Emperor Basil II Bulgaroktonos in 1018, being again in possession of the greater part of the Balkan Peninsula, enforced its suzerainty to the northwest also. Dioclia under three able rulers not only survived this danger but attained an importance never reached by Montenegro itself in its best days. Prince Stephan Voyislav — it is not known in what relationship he stood to John Vladimir — in spite of great opposition from the Byzantines (1036—1042) obtained Travunia (see above), Zachlunia adjoining it (on the central and lower Narenta), almost the whole Adriatic coast between the Narenta and Boyana along with Cattaro and Antivari as well as Northern Albania with Skutari and established the still existing Latin bishopric in Antivari, out of political hostility to Byzantinism. His son Michael was the first to take the title of king; the choice of his son Constantine Bodin as Bulgar Czar by rebels in Macedonia (1073) ended however in a — temporary — humiliation of Dioclia. Michael and Bodin, who succeeded his father presumably in 1082, made an alliance with the Normans in Italy and supported Robert Guiscard in his fighting in the west of the Balkan peninsula (1081—1085) with Alexius I Comnenus. Bodin succeeded at the same time in extending his rule over Bosnia also (then practically only the territory on the lower course of the Bosna, the Vrbas and the Narenta) and Serbia or Raszia (in the modern north and eastern Montenegro, the sandjak of Novi Pazar, S. W. Serbia and S. E. Bosnia). The kingdom of Dioclia attained its greatest extent with the conquests of Stephan Voyislav — but only for a brief period. Bodin's good fortune faded away. After the restoration of Byzantine rule on the Adriatic, reprisals were begun (1085—1094) under the personal direction of the emperor Alexius. The king was defeated: the links that bound the various parts of his kingdom together were loosened and quarrels broke out within the royal family itself. In 1096 Bodin could still receive Crusaders in his capital Skutari: Provençals under Raymond of Toulouse, who had marched through Dalmatia and probably through the Zeta valley (cf. above) and were making for Durazzo in order to reach Constantinople from there by the old Via Egnatia. After this we have no certain information about him and his successors. All that is certain is that Dioclia was driven from the coast and out of Northern Albania by the Byzantines and became tributary to them, while Serbia, which had hitherto been politically insignificant in comparison, began to expand at the expense of Dioclia under the Grand Župan Vlkán, Bodin's governor, and his successors, especially after the Byzantine empire fell steadily into decline from 1180 onwards. The Grand Župan Stephan Nemanya, a native of Dioclia, deprived it of the former possessions of Dioclia in

Northern Albania and on the coast from the eastern shore of Lake Skutari to Cattaro, disposed of the last Dioclian prince Michael in 1189, and united his territory with Serbia. From the xiii century the old name of the country was replaced by that of the river Zeta (Latin: Zenta, Genta).

III. Under Nemanya's dynasty Zeta (with Northern Albania and the coast) remained for 170 years under Serbia and was frequently governed by princes, repeatedly by heirs to the throne. Widows of kings also had estates on this sunny strip of coast. A benefactress of the land as a builder was Helena (d. 1314), the French wife of Stephan Uroš I (1243—1276). She had the towns on Lake Skutari restored, which had suffered severely from the Mongol storm which in 1242 had swept southwards along the Adriatic, and built and repaired numerous churches and monasteries in the predominantly Roman Catholic territory around the Lake and on the coast which was under the bishops of Antivari and numerous suffragan bishops, including also the great Benedictine Abbey of Ss. Sergius and Bacchus on the Boyana (now the ruins of Kisha e Shiritit), at which there was an important trading centre with much visited animal markets. St. Sava (d. 1236) created an Eastern Greek bishopric for the Zeta on the island of Prevlaka on the Gulf of Cattaro; the land also had many well-endowed monasteries of this creed on the islands in the Lake Skutari (like Vranjina), and what fertile soil existed elsewhere belonged for the most part to monasteries in Serbia, on Athos and in Jerusalem, granted by the, in this respect, extravagant Serbian ruler. The population received a considerable admixture, now completely absorbed, by the immigration of Wallachians and Albanians.

A grave danger to Serbia was the power of the nobles, which had increased out of all proportion as a result of the constant feuds in the royal family. When after the death of the Czar Stephan Dušan (d. 1355) a general collapse of the great but only loosely knit state began, the centrifugal forces led in Zeta also (1360) to the formation once more of an independent principality by the brothers Stracimir, George and Balša, sons of Balša, a nobleman of Wallachian origin, to whom the government of the country was entrusted.

IV. The break-up of Serbia took place just at the time when the Ottomans were vigorously extending their power in the Balkan peninsula. Their victories at Čirmen on the Marica (1371) and at Kosovo ("field of the blackbird", 1389) destroyed the independence of the petty Serbian states in Macedonia and reduced Serbia itself to the district of the Morava, where it however not only maintained itself till 1459 but, as a result of the Turkish defeat at the hands of the Mongols at Angora (1402), was able for a time to rise to considerable power again. In spite of the danger which threatened Zeta also, George and Balša exhausted their strength in continual feuds with their neighbours over pieces of land, and in the reign of George II the turbulent nobles, among whom the most prominent were the Crnojević or Gyurašević between Budna, Cattaro and the lower Morača, broke the kingdom up into little baronies. The result was that when the Ottomans under Khair al-Din entered Albania from Macedonia, Balša in 1385 lost a battle and his life north of Valona, and George II after fighting with varying

fortune, realising his own weakness, handed over his Albanian possessions in the south and east of Lake Skutari as far as Tuzi (S. E. of Podgorica) for an annual pension of 1,000 ducats (1396) to Venice, who thus became till 1479 the southern defender of Zeta against the Ottomans. George retained Dulcigno, Antivari and Budna for himself as well as the lands west and north of Lake Skutari.

But even this reduced territory found no peace. Under Balša II, the last of his warlike but unimportant house, two long and trying wars with Venice were fought: during the second, the prince died (1421) and left his lands to the despot (Duke) of Serbia, Stephan Lazarević, who lost Dulcigno to the republic.

V. The second period of Serbian rule very soon alienated the sympathy with which it was at first received and had to fight increasing difficulties caused by the influential Crnoyević (see above). In addition there was an inroad by the Turks in 1430 and the demands of Venice. The latter took Antivari and Budua and appointed the woiwod Stephan Crnoyević its salaried governor in the little mountain country now quite cut off from the coast; he (1455) induced the people to take the oath of fealty to the republic in the island monastery of Vranjina (cf. above). The end of Serbia (1459) seemed to secure Venice complete possession of the lands round Lake Skutari, but soon afterwards the Ottomans surrounded this land on all sides, for the conquest of Bosnia (1463) was followed (1466) by the annexation of the Herzegovina and of the present Northern Montenegro as far as Nikšić, which then belonged to it.

Like Stephan Crnoyević (d. 1465) his son Ivan (1465—1490) who called himself Gospodar Zetski (lord of Zeta), was also a vassal of Venice, who gave him so little support in the wars with Muhammad II over Upper Albania that, after the evacuation of Skutari (1479), he had to fly to Italy, and Zeta was occupied by the Turks, which was the beginning of their long rule here. The contest for the throne after the Sultān's death (1481) induced Ivan to return and renew the struggle, which however ended in 1482 with the recognition of Turkish suzerainty. His youngest son Stanisa, a hostage in Constantinople, adopted Islām in 1485, and took the name Skender Beg. Ivan, also called Ivan Beg — his country was also known as Ivanbegovina — resided in Cetinje where he built a small monastery in 1484—1485, to which the Eastern Greek bishop of Zeta (see above) moved. The state suffered from the great independence of the tribes, who had strong separatist tendencies, like the Nyeguši, Biyelice, Ozrinici, and Čeklići; each formed a political entity with a well-defined territory, its own chief chosen for life, courts, tribal and family feuds, blood-vengeance, etc., institutions which survived in Montenegro down to the sixteenth century and existed in the north Albanian highlands until quite recently.

Not even the greatest submissiveness earned for

Ivan's elder sons, at constant enmity with one another, the goodwill of the Turks. George (1490—1496) who introduced the printing-press into Cetinje and in 1493—95 printed beautiful Cyrillic ecclesiastical works, died in Asia Minor in exile. Stephan (1496—1499) was interned in Skutari, where he is said to have ended his days as a monk. On the other hand in 1514, a separate sandjak with capital Žabljak (to the north of Lake Skutari) was created for the Muslim Stanisa Skender Beg Crnoyević out of Zeta, which had been incorporated in the sandjak of Skutari. The latter did not deny his descent; he was also tolerant in matters of religion, used his Slav mother-tongue in his correspondence and was in regular communication with Venice, although their relations were occasionally overclouded; in Venice Božidar Vuković of Podgorica (d. 1540) and others from 1519 printed Cyrillic ecclesiastical works. Skender Beg's title Sandzak Crnogorski naturalised the name Crna Gora for the country, which we find as early as 1435 and as Montenegro in 1496 for the highlands above Cattaro. In 1528 all notices of this remarkable Montenegrin-Turkish ruler cease. Crna Gora again becomes a *kađiluk* of the sandjak of Skutari.

Montenegro under Turkey, under the unassuming ecclesiastical suzerainty of the bishop or Vladika of Cetinje chosen by the tribal chiefs, formed five *nāliyas* or districts in the shape of a small triangle between Cattaro, Podgorica and the N.W. end of Lake Skutari, which in 1614 contained 90 villages with 3,524 houses and 8,027 men capable of bearing arms, of whom however only 1,000 had guns. The poll-tax was readily paid and they shared in the wars of the Porte against Venice and in suppressing rebellions in the adjoining lands, such as the closely related Brda, which had much more desire for independence. This long stereotyped monotony did not change till 1688 when the Montenegrins with the Vladika Visarion placed themselves under the protection of Venice, whose lands marched with those of the Turks, and who since the failure of the siege of Venice had been fighting with the Turks from 1684 to the peace of Carlowitz (1699). After the failure of his first attacks Sulaimān Pasha, Sandjak of Skutari, as a punishment destroyed Cetinje in 1692 with the support of a number of Montenegrin tribes.

VI. The process of liberation thus begun found vigorous support in the warlike Vladika Danilo I Petrović Nyeguš (1697—1735)¹ after whom the dignity of bishop became hereditary in the family, and its holder gradually increased his importance at the expense of the tribal chiefs. In 1711 an embassy from Peter the Great introduced relations with Russia, which however were only occasionally of benefit to the land. Even in the joint war on the Porte which immediately followed, Montenegro was left in the lurch at the peace of the Pruth (1711). The protection which fugitive Montenegrins found in Dalmatia was used in 1714 as a pretext by Turkey for declaring war on Venice. In the same year Nu'mān Pasha Koprulu laid waste Montenegro entirely, Cetinje which had been rebuilt in 1704 being once more destroyed. As a result of the peace of Passarowitz (1718) more peaceful conditions

¹ The story that all Muhammadans in Montenegro who would not be baptised or leave the country were put to death as partisans of Turkey on Christmas Eve 1707 is however a patriotic fable.

began to prevail except for the almost daily guerilla fighting on the frontiers. Danilo took advantage of the peace to build up the country again after the overthrow of the Turkish administration, with the help of Venetian subsidies, so far as the poverty and the intractable nature of the people permitted. In 1724 Cetinje was rebuilt.

Under his incapable successor Sava Petrović Nyeguš (1735—1782), there was a complete relapse into the previous barbarism: no authority, clan and blood feuds, murders. No one dared to leave his house unarmed. The whole people lived by murder and robbery. In addition there were secret conspiracies with the Turks against their own countrymen, abject appeals to Venice and journeys of appeal to St. Petersburg, notably that of the able but powerless episcopal coadjutor Vasilhye (d. 1766).

In the general distress the Vladika only thought of enriching himself. Some relief was afforded Montenegro in 1767 by the south Slav Šćepan Mali (Little Stephen), the Lažni (false) Czar, who was accepted as the Czar Peter III murdered in 1762, and received such general recognition, out of respect for Russia, that in spite of his unmasking by the mission of prince Yuri Volodimirović Dolgorukiy (1769), he was tolerated by Russia also until he was murdered by a servant in 1773. Able, unselfish, strict and just, he restored for a time unwonted order and security.

There was no considerable war with Turkey for a long period. All the more serious then were the relations with the suzerain in the reign of Peter I the Saint (1782—1830). The hereditary wazir of Skutari, Kara Mahmūd Pāshā Bushatli, taking advantage of tribal feuds, laid waste the whole country in 1785, forced it to pay the poll-tax again and burned down Cetinje. During the Austro-Russo-Turkish war of 1787—1792, there were only trifling encounters, for which in 1795 Kara Mahmūd Pāshā again threatened serious reprisals. He was however defeated in 1796 at Slatina and later killed in the great battle of Kruse; his head was long preserved as a trophy in Cetinje, in keeping with the Montenegrin head-hunting custom which had become a regular practice in war. The consequence was that the tribes of Biyelopavlići and Pipei, in the Brda east of the Zeta valley, joined Montenegro.

A welcome and more profitable change were the wars of 1806—1808 and 1813—1814 in alliance first with the inhabitants of the Bocche di Cattaro and the Russians, later with the English against the French, who had occupied Dalmatia under General Marmont after the peace of Pressburg (1805). Numerous ruins stretching as far as Ragusa still testify to the thirst of the Montenegrins for destruction and plunder even on Christian soil.

Peter I, a cultured ecclesiastic educated in Russia, full of good intentions, endeavoured throughout his life by legislative (1798 and 1803) and personal effort to unite his people, raise their moral tone and avert distress by introducing the potato, but in spite of great patience he met with bitter hostility, contributed to also by Russia which, only after being appealed to for a long time, in 1799 granted 1,000 ducats a year for public purposes but did not pay it regularly.

The first ruler over the Montenegrins, Gospodar Crnogorski i Brdski, was Peter II (1830—51), a highly gifted man of the world, bishop only in

name, one of the greatest of Serbian poets and also of unbending vigour which did not hesitate at severe punishments and death sentences. The Radonyić family which claimed secular (*guvernadur*) power for itself had to leave the country. Supported by Russia from 1837 by a grant of 9,000 ducats yearly and occasional gifts of grain, and on this account more highly esteemed by his covetous countrymen, he concentrated the government in his own hands. The powers of the tribal chiefs were restricted. A senate of 12 regularly paid members under the presidency of the Vladika henceforth formed the supreme governing body and court of justice: its authority was enforced by well-paid troops stationed throughout the country, the *Guardiya*, in addition to whom the head of the state had a bodyguard, *Peryanici*. The building of the first public school and a small state printing-press in the capital, the purchase of two cannons and the building of a powder mill, show the small scale of the state but mark the desire for progress. The innovations, and still more poverty and a great increase of population, as in earlier times led to the emigration of numerous families to Serbia and Russia.

Foreign politics were mainly characterised by troubles on the Austrian frontier, continual fighting, celebrated in song, with the neighbouring Muhammadans, especially in the Herzegovina, which was then ruled by 'Alī Pāshā Rizvanbegović (d. 1851) as a practically independent sovereign, under whom Smail Aga Čengić (d. 1840) distinguished himself in the fighting.

VII. Centralisation and reforms generally formed the programme of the next two reigns, which was firmly and successfully carried through in spite of much opposition. Under Danilo II (1852—60) the clan system was dealt a shattering blow, when the chiefs were replaced by captains of princely birth and legislation regulated by the code of 1855. His accession however marks the close of a period in as much as a hereditary secular power now replaced a theocracy. Danilo renounced his spiritual rank and with the approval of Russia and Austria had himself proclaimed Knyaz i Gospodar Crne Gore i Brda. The attempt of the Porte to obtain by force under Serdar Ekiem 'Omar Pāshā in 1852—1853 recognition of her suzerainty thus threatened was vigorously opposed by Austria after giving ample assistance in 1853 through Feldmarschalleutnant Count Leiningen's mission to Constantinople. During the Crimean War (1853—1856) Danilo remained neutral to the discontent of his people. On the other hand, he became involved in a war in 1858 because he supported the rebels in the Herzegovina; this ended in the defeat of the Turks in the valley of Grahovo (north of Risano) and in an enlargement of Montenegrin territory in 1859. In 1860 the ruler, who had previously had to put down conspiracies, some led by relatives, was murdered in Cattaro by a Montenegrin emigrant.

His able nephew Nikola I (1860—1918, d. March 1, 1921) who had been educated in Trieste and in France, son of the doughty Woiwod Mirko (d. 1867), completed the building of the state. By long steady work, first as an absolute and from 1905 as a constitutional ruler, and by very skilfully managing foreign relations, he created out of the ill-famed, unfertile, rocky little country a kingdom which was enlarged by the addition

of fertile valleys with its own sea coast, good communications and post routes, a busy economic life, modest prosperity increased by emigration to America, more law abiding and secure since the institution of the civil code of 1888, with a good system of education and a well organised soldiery with modern equipment to be reckoned with in Balkan questions. Relationship by marriage, notably with the courts of Russia and Italy, gave reflected glory to the pretty little capital of Cetinje which had also become a centre of culture; 1910 crowned the work by raising Montenegro to be a kingdom.

While interested great powers, notably Russia, gave grants of money, arms, munitions, etc., which were readily accepted and also requested, this development was conducted mainly at the expense of Turkey, with whom three wars were waged at longer intervals in addition to minor friction in 1869—1870, 1872, 1874—1875, 1895, 1898, 1911, 1912. The first (1862), a combined attack by Derwish Pāshā from the north and Serdar Ekrem Omar Pāshā from the south in the Zeta valley as a reprisal for the support given to the rising led by Luka Vukalović in the eastern Herzegovina, forced Nikola by the threat to Cetinje to conclude an unsuccessful peace in Skutari. The second war was declared in 1876 by Montenegro in alliance with Serbia in order to profit by the new insurrection in the Herzegovina which had begun in the summer of 1875 in Nevesinje. His victory over Mukhtar Pāshā at Vrbica and at Bileća and the defeat of Serbs were followed by a truce and the intervention of Russia in 1877. Sulaimān Pāshā succeeded at heavy cost in fighting his way out of the Herzegovina through the Zeta valley into Albania, but in 1877 Nikola took Nikšić and Antivari and in 1878 Dulcigno. The Treaty of Berlin (July 13, 1878, Articles 26—33) recognised the independence of Montenegro and granted it, after cutting down very much the terms of the preliminary peace of San Stefano, a broad ring of land around the original land of Montenegro with Antivari, Nikšić, Banyani, Piva, Kolašin, Spuz, Podgorica, Zabyak and the district of Gusinje. The latter, as a result of the opposition of the Albanians, was exchanged for Dulcigno in 1880. The area was increased from 4,366 to 9,080 square kilometres with over 200,000 inhabitants, including 12,500 Catholic Albanians; there was on the other hand a considerable emigration of Muslims from the new territories.

The third war with Turkey was the first Balkan War, which Montenegro began on Oct. 8, 1912, before its allies, Serbia, Bulgaria and Greece; but while the sandjak of Novi Pazar and Upper Albania were easily occupied, Skutari, the main objective, was only taken after a long siege and with the help of treachery on April 23, 1913. After the allies had quarrelled among themselves, Montenegro also took part in the second Balkan War against Bulgaria. By the peace of Bukarest (Aug. 10, 1913) it received the south-western half of the sandjak of Novi Pazar (with Pivovje, Biyelo Polje and Berane), the greater part of the Metohia plain (with Peć and Ryakova), the valley of Gusinje and lands round Lake Skutari, increasing its area by 5,937 square kilometres to 15,017 square kilometres, with 437,000 inhabitants.

In the Great War, king Nikola reluctantly declared war on Austria-Hungary on Aug. 5, 1914. After the capture of the Lovćen (see above) the Monte-

negrins laid down their arms unconditionally on Jan. 16, 1916 and the country, which had gone back a great deal since 1912, was administered by an Austrian military general-gouvernement. The king went first to Italy, then to France, never to return again, for after the War he was deposed along with his sons on Nov. 29, 1918 by an assembly in Podgorica on the charge of treachery.

(C. PATSCH)

MOORS, a rather vague name still applied in the sixteenth century to certain elements in the Muslim town population of various countries and especially to the inhabitants of the Mediterranean ports of North Africa. The word, presumably of Phoenician origin, corresponds to the ancient local name of the natives of Barbary reproduced by the Romans as *Māzūroi*, *Mauri* and by the Greeks as *Μαυροῖσι* (Strabo, vii. 825). The term *Mauri* used by the Romans in a general way for the Berbers passed into Spain in the form *Moro*, and it was by the name of Moros that the people of the Iberian peninsula throughout the whole period of Muslim rule knew the Arab conquerors and arabicised Berbers who had come to settle in Spain from the other side of the Strait of Gibraltar. The name Moros passed into various European languages: French *Maures*, English *Moors*, German *Mauren*. At the time of the "Reconquista" the name *Moriscos* was applied in Spain to these Muslims (usually crypto-Muslims) who had remained in the country until their final expulsion in 1610. The Moriscos went mainly to North Africa, where they were known to the natives as *Andalus* while Christian travellers gave them the general name of Moors.

In modern times the Moors to the European were therefore the urban population of the North African ports, irrespective of the proportion of immigrants from Spain. Since then the word has been generally used with the meaning Muslim of the towns of the western end of the Mediterranean (cf. such expressions in "Moorish bath", "Moorish coffee" etc.).

The name Moors has also been given to the Arab or Berber peoples, pure or mixed with negro blood, who live to the north in the Senegal in the province to which the French now give the ancient name of Mauritania (see below), and to the offspring of the marriages of Arabs from South Arabia and Cingalese who form an important Muslim colony in Ceylon (c. 200,000).

(E. LÉVI-PROVENÇAL)

The land of the Moors is MAURITANIA or Mauretania. This name which has been derived either from a Phoenician word *Mauharim* "the Westerns" or with more probability from the name of a tribe living before the Christian era in North Africa, was applied in ancient times to northern Morocco (Mauretania Tingitana) and to the north-west of Algeria (Caesarean Mauretania). At a later date, by extending the application, Europeans have given the general name of Moors to the Arabo-Berber peoples of Mediterranean and Saharan Africa. Then gradually they came to distinguish out of this mass the groups with which they came more frequently into contact (Tripolitans, Tunisians, Algerians, Moroccans), so that the name Moors came to be limited to the people of Spanish (Muslim), Jewish or Turkish origin of North Africa and particularly to the nomads of the western Sahara, who traverse what Ahmad al-Shinkīṭī (in *al-Wasīṭ*, Cairo 1329 A.H.) calls the "land of Shinkīṭī", from the name of its chief village; this country is bounded, says the author, by the Atlantic Ocean, the valley of the Saḫīat al-Hamra', the plain of Ibn Ḥaiba (plain

of the Brākna) on the right bank of the Senegal and by the two towns of Walāta and Na'ma (Nema); if, like him, we take into account all inhabited areas, we ought to extend it to the east as far as the meridian of Timbuktu.

Mauritania, which now forms one of the eight colonies of French West Africa, is only a part of this vast area. It lies to the north of the Senegal between this river, the Atlantic Ocean and the marigot of Karakoro; to the north and east, a frontier settled by agreements separates it from the Spanish Sahara (June 27, 1900; Oct. 3, 1904; Nov. 27, 1912) and from the territories of the south of Algeria (agreement of June 7, 1905) and from the French Sūdān (decree of 23rd April, 1913). It has an area of 835,000 square kilometres, 289,000 inhabitants, the density of population being 0.34.

Except for the banks of the Senegal, the country is steppe or desert, and only suitable for stock rearing. To be brief, it is a military frontier district defending on the north the more favoured lands of the Senegal rather than a country suitable for development by colonisation.

I. GEOGRAPHY.

A semi-circular range of hills of no great height, worn by erosion but often difficult of access, starts as it were out of the ocean to the south of the Rio de Oro and reaches the middle course of the Senegal after running round the contours of an ancient gulf of the quaternary period. The Adrār Ṭmar and the Tāgant separated by the depression of the Khat form as it were the cornerstones of this system and are continued to the north-west in the "petrified sea" (a plain scattered over with rocky islets) of the Tiris and by the arêtes of the Adrār Suṭuf, to the south by the Rgaiba and Asaba.

The interior of this gulf consists almost entirely of sands, brought from the desert by the predominating north-east winds. The dunes in the south are all fixed and are called "dead"; in the north they are "alive" and constantly changing. Like the other dunes of the western Sahara they run in the direction of the wind, N.E.-S.W., and are separated from one another by contours of firmer soil along which traffic can go.

The Shamamah is a plain, formed of lands of alluvial origin, along the lower Senegal and as such particularly suitable for cultivation; as we go up the river it is known as Latama and then as Gidimaka. Other plains, those of the Brākna and the Gorgol, are more remote from the river; they contain permanent pools of water to which their girdles of high trees gave a characteristic appearance (*tāmurt*). To the north of the Shamamah and the land of the Brākna stretches a series of dunes among which may be mentioned those of Amatlish. The couloir of the Inshiri continued by that of the Amsaiga separates the latter from the similar ranges, the Akshar and the Azefal, which stretch to the Tiris; they are difficult to cross, but between them the Tijrit supplies an easy route. Beyond to the north-west, the Tasiast and the Swiḥel al-Abyaḍ are great plains of denudation.

On their convex face, the Adrār and Tāgant are prolonged to the north in the massif of the Kudiat Ijfel and by that of the Zemmur, separated by the Tizel-kaḥ, towards the north-east by the cliffs of the Dhar Adrār and the Ḥank and by the plateau of the Eglab, which stretches to the

great sand-dunes of the Igidi, to the east by the Dhar Tisht which runs to Walata. Between these lines of rock, great ridges of moving dunes make passage difficult but provide good pasturage for the flocks; these are from north to south, the Erg al-Hamam, the Makteir, the Waran, the Adafer and the Aukar. Lastly, to the north of all these masses of sand, the Ghallaman, Karet and Yetti are "tanezruits" without water, of hard and flat soil, which run as far as the Hammada of the Dra.

The coast consists of dunes and plateaux with numerous *sebkhas* or salt lakes. There is usually a large sand-bar; nevertheless the sea, which is very rich in fish, gives a livelihood to a population of fishermen.

The Sahara in the proper sense of the word hardly extends beyond a line marked by Cape Timiris, Mejriya (Moudjeria), the northern bank of the Tāgant (depression of Khat), the southern margin of the Adafer and Walata. It is especially dry on both sides of the Adrār: to the west in the region of Port Etienne and in the dunes bordering on the Iiris, and especially to the east where to the north of Walata, the Mraya, Djut and the western part of the Erg Shesh, still almost unknown, form a waterless no man's-land; this district is visited only by antelopes, gazelles and ostriches, and by the Amadi, hunters who can manage to go for days without water and live like their game on green stuffs.

To the south of the line above given, the steppe gradually changes to forest as we near the river. The climate is very hot: the influence of the sea is not felt beyond a score of miles inland. Subtropical rains fall as far as the north of the Adrār.

II. POPULATION.

At the earliest period to which the chronicles and native traditions go back, Mauritania seems to have been peopled by negroes. Later, in the course of centuries, it received various immigrations of Berbers, especially *Ṣanhādja* and *Zanāta*, Arabs and probably also of Jews. The *Ṣanhādja* came first, certainly before the *Hudra*; later the development of Trans-Saharan commerce brought to the few towns that had been built, merchants of varied origin (Arabs, Berbers, *Zanāta*, *Nafūsa*, *Lwata*, *Nazāwa*, etc.); at different periods also, Jews came there to seek refuge from persecutions, the last of which drove them out of Fuat at the end of the xvth century; lastly the Arabs belonging to the Ma'kil group in their turn invaded the country from the xvth century onwards, bringing with them more *Zanāta* or driving them in front of them.

The Jews have been completely absorbed into the Berbers (they form, it is believed, the foundation of the caste of smiths, *ma'allemin*) or into the Fula, so that it is not possible to estimate their numbers at the present day. The negroes, who have been gradually driven towards the river, are now represented by approximately 30,000 Foulouls (Iakrūr), 21,600 Sarakole and 13,000 Wolof, Fula and Bambara. The Arabo-Berber Moors number about 216,000.

III. HISTORY.

a. Prehistory. Such researches as have been made in Mauritania, notably in the Adrār and in the Aukar, have revealed there, as throughout the

Sahara, the existence of important prehistoric sites; if it is not possible to date them, they are at least evidence of a very early population whose utensils seem to connect them with the negroes. These conclusions are further confirmed by the native chronicles and traditions, and perhaps we ought to connect with these remote inhabitants of the country the *Bafur*, to whom the Moors attribute the creation of the palm-groves of the Adrār and who are said to have built a town, the "city of the dogs", on the site of the present Azuggi, ten miles N. W. of Atar. What seems probable in any case is that these black Mauritania were more or less subjects of the first kingdoms known to the southwest of the desert: that of Iakrūr, which ruled Senegalese Futa, that of Ghana, the capital of which was on the site of the modern Kumbi, 100 miles S. W. of Walata and that of Diara which succeeded them and ruled the whole of the western Sūdān. To the north, the lands of the negroes no doubt marched with the lands in which the *Ṣanhādja* and *Znāga* Berbers led a nomadic life in the south of Morocco.

b. The *Ṣanhādja* invasion. We do not know at what date the *Ṣanhādja* invaded Mauritania; but it was certainly a very early one. It is possible that expeditions by the Arab emirs to al-Maghrib al-Akṣa, beginning in the latter years of the seventh century, which marked the first contact of the *Ṣanhādja* with Islām, may have driven them to the south but their first incursions into the Iiris, into the Adrār and to the Tāgant were probably much earlier. Their conquest of the country, it is true, seems to have been fairly slow and it was not, it appears, till the xth century that they succeeded in reaching the banks of the Senegal for the first time.

c. The first *Ṣanhādja* kingdom. At the beginning of the ninth century, a certain number of *Ṣanhādja* tribes (among them the Lemtūna, the Guddāla and the Beni Warey) occupied the Adrār, with their advanced posts in the Tāgant, and made raids into the Hawl (Hodh) against the negro Soninke empire of Ghana. The Lemtūna supplied them with chiefs at this time, and one of them, Tilutan (d. in 830 or 837), succeeded in imposing his authority on all the Berbers and making twenty negro kings pay tribute to him. The chief town of his dominion was Azuggi and especially Audaghust, forty miles N. E. of the site of the modern Kifāh (Kifā). Audaghust seems to have been founded in the seventh century by the Soninke and its fame as a centre of trans-Saharan trade brought it a large foreign population, already in part converted to Islām: Berbers of different branches and Arabs. In spite of this brilliant start, this Lemtūna dynasty lasted only a short time and disappeared in 919. Each tribe then led an independent existence and the emperors of Ghana were able to extend their power towards the Tāgant and to take Audaghust at the end of the tenth century.

d. The second *Ṣanhādja* kingdom. Towards 1020, the chiefs of the various *Ṣanhādja* tribes agreed to combine again as in the time of Tilutan and thus to resist the encroachments of the Soninke. The power was placed in the hands of a Lemtūni called Taisina, who seems to have been the first really Muslim *Znāgi* ruler. He went to Mecca and his enthusiasm as a new convert led him to a holy war on the negroes, in which he lost his life (1023). His son-in-law Yahyā b.

Ibrāhīm of the tribe of the Guddāla succeeded him, according to the custom which made the supreme command go to the two tribes alternately. Like Taisina, he was a zealot and on returning from the pilgrimage, he brought from Morocco a holy man, 'Abd Allāh b. Yāsīn, to whom he entrusted the task of educating his brothers, who were still very ignorant of the principles of Islām. The saint was at first well received by the Ṣanhādja and he made them build the town of Aret-neenna near the site of the modern Tishit. But soon his commands appeared too difficult for the nomads, who rebelled against him. He sought refuge with his disciples in a *ribāt* or fortified monastery on an island in the ocean (sometimes identified with Tidra) and they were henceforth known as the *al-Murābiṭūn* (the men of the *ribāt*), a word which has been corrupted in Europe to Almoravids under which name they have become famous.

e. The Almoravids. Their reputation for sanctity spread very rapidly and attracted many disciples to them. When 'Abd Allāh had gathered around him a sufficiently large body of men, he led them against their rebellious brethren and against the negroes. In a few years they subdued the whole of the western Sahara, from Tafilalt and the Dra to the Senegal. In 1050, Yahyā b. Ibrāhīm died, and Yahyā b. 'Umar, chief of the Lemtūna, became the political head of the confederation, 'Abd Allāh b. Yāsīn remaining the religious chief. While the first recaptured and plundered Audaghust, the second attempted the conquest of the Maghrib. But soon they were both slain, Yahyā in a rising in the Adrār in which the negroes of the Takrūr tried in vain to help him, and 'Abd Allāh in fighting the Barghawāta heretics of the plains of Morocco. Abū Bakī, brother of Yahyā, was then for some time supreme chief of the Almoravids, then to gratify his ambitious nephew Yūsuf b. Tāshfin he handed over to him his conquests in North Africa, keeping only to himself the sovereignty of the south. He devoted himself to a holy war against the negroes and to their conversion to Islām. He succeeded in driving them back towards the river and in taking Ghana in 1076 and the capital of the Takrūr in 1080, extending his teaching, the tradition says, as far as the lands of a Mandingo prince of the Upper Niger. He was slain in the Tāgant in 1087 and his death marked the break up of the Ṣanhādja confederation in Mauritania: each tribe regained its independence.

f. The Tashumsha and the negro reaction. Between this date and the end of the xvth century we know very little of the history of Mauritania. We only suspect that the influence of the negro kingdom of Mali must have extended up to the Adrār and Tāgant and that a new Marabout Berber element formed by the Tashumsha of Sūs, came and settled in the country.

The Tashumsha seem to have at first taken up the mantle of the Almoravids and to have made themselves the champions of the *jihād* against the negroes. But after a few successes, they were driven back from the region of the river and fell back upon the Tiris and Adrār, where they gave up fighting and devoted themselves to study and religious devotions. The successes of the negroes then became serious: Wolofs, Soninkes and Tuculors recaptured a whole part of Mauritania and might

perhaps have succeeded in subjecting the Berbers, who were exhausted by their campaigns of conquest in the Mediterranean region, if the coming of the Ma'kil Arabs had not checked them.

g. The Ma'kil invasion. It is not possible to date this new invasion exactly; it is, however, certain that it was not a single effort. It went on almost down to the nineteenth century with little groups filtering into the Ṣanhādja encampments and at length submerging them.

Setting out from Egypt, the Ma'kil passed along the northern border of the desert and reached the Ocean to the south of Morocco in the first half of the xiiith century. They then entered the service of the Marinid rulers of Fās, who used them to keep in subjection the provinces beyond the Atlas and to collect taxes. These undisciplined nomads very soon took advantage of their privileged position. Measures had to be taken against their brigandage and their threats to overrun Morocco, and military expeditions were sent against them. Either as a result of these reprisals, or because they were called in by the Ṣanhādja to help them against the negroes, or because a year of drought drove them in search of new pasturage, some of them, belonging to the confederation of the Dwi Ḥasan or Beni Hasan, went down towards Mauritania. But the chronicles do not say why. In any case, having helped to drive the negroes back towards the river, supported by the Zanāta Kunta who came from Tuāt at the same time as the first of them, they reduced to vassalage the Ṣanhādja of Upper Mauritania (Ijfel and Zemmur) in the xvth century, Western Mauritania, Wadan and Tāgant in the xvth and the Adrār and Lower Mauritania in the xvth century. Throughout the long period from the xvth century to the present day, we find the authority in the hands of a certain number of Udāya tribes: the Ulād Rizg, the Mghānia Ulād Mbark, the Brākna, the Trārza and the Ulād Yahyā b. 'Uhmān. Other Beni Ḥasan also went south, but barely reached Mauritania. The Ulād Dlim have always remained in the desert zone and the Brābīsh seem to have passed some years a little to the north of the Senegal before migrating to the region of Timbuktu.

h. The Ma'kil and the Sultāns of Morocco. From their first sojourn in the south of Morocco, these Ma'kil long retained the character of Makhzen tribes; under the Sa'dians and 'Alawis, many of them supplied contingents to the *gish* tribes. This status gave their migration southwards the appearance of a conquest in name of the Sultāns. This was no doubt the legal justification of the tribute which they exacted from the conquered Beduins; it also explains why the rulers of Fās or Marrākesh sometimes claimed as theirs the territory of Mauritania, why they sent several expeditions there in the xviiith and xviiiith centuries, why they granted investiture to certain chiefs and lastly why the author of *al-Wasit*, after consulting several learned men, thought that the "land of Shingit" should be included with the Maghrib and not with the Sūdān.

i. The Ṣanhādja reaction. Whatever was the actual success of the Arab conquests in Mauritania, it were not effected without violent reaction on the part of the Ṣanhādja. The poverty of the Tashumsha, the negro danger and the looseness of links between the various bodies of invaders facilitated the settlement of the early Arab invaders. But the tyranny of the Ma'kil towards the Berbers

brought them in the xviiith century to such desperation that a general rising broke out in the form of an attempted restoration of the Almoravids led by Nāṣir al-Dīn, a marabout descendant of the Laintūna. This individual, who camped in western Mauntania, first preached a holy war there against the negroes, being sure of re-uniting the various contingents against the traditional enemy. Then having given the troops sufficient training in a campaign which brought them across the river to plunder the left bank, he turned openly against the Arabs. This was the celebrated "War of Babbah", in the course of which the Arabs were held in check for thirty years; but in the end quarrels within the Ṣanhādja ranks destroyed their strength and in 1674 the defeat at Tin Yeflad doomed them to vassalage.

In much the same way in 1745 the Idarshilli Berbers of the Adrār had to bow before the Maḥḥil and at the end of the xixth century we find them again rising against the Arab amir and assassinating him. Finally, the Ṣanhādja Idu'ish well led by their chief Muḥammad Shein regained their independence at the end of the xviiith century. They almost succeeded in seizing the Adrār in 1892, drove the Zanāta Kunta out of the Tāgant and extended their power to the Senegal under the able rule of amirs who are still reigning and claim to be true descendants of the Almoravids.

6. The rule of the amirs. All over, from the xviiith century, the political situation of the tribes became stabilised, and regular little nomad states seem to have been formed, usually under Arab chiefs. Thus we now find the dynasty of the Ulād Aḥmad b. Daman ruling among the Trāza with distinguished sovereigns like 'Alī Shandura (1703-1727) who, supported by Sulṭān Mawḥār Ima'il, delivered his tribe from Brākna domination, and especially Muḥammad al-Ḥabīb (1827-1860) whose long reign is marked by the first Moorish resistance to European penetration. Among the Brākna also, the Ulād 'Abd Allāh amirs played a preponderating role after the war of Baubah and their possessions extended from the Tāgant to the Ocean. Later, and particularly from the xixth century, their power declined, in spite of the brilliant reign of Aḥmaddu I (1818-1841), and their desperate resistance to the advance of the French caused them to disappear from the political scene. In Adrār the Ulād Yaḥyā b. 'Uthman also furnished great leaders: Aḥmad uld Muḥammad (1871-1891) who was able to keep his turbulent subjects at peace with their neighbours and who tried to develop trans-Saharan commerce, and Aḥmad uld Sidi Aḥmad (1891-1899) who by his military successes earned the title of "amir of war". Lastly in the person of Bakar uld Sweid Aḥmad, a descendant of Muḥammad Shein, the Tāgant produced the greatest Moorish ruler of the xixth century.

The rule of these amirs was continually beset with great difficulties, produced by their rivalries, the lack of discipline, rebellion and intrigues among their subjects, by the warlike raids of the negroes, and particularly by the efforts of Europeans to establish their rule on the Atlantic coast and on the banks of the river.

7. European rivalries on the coast of Mauritania. It was in the first half of the xvth century that the Portuguese visited the coast of Mauritania and the north of the Senegal for the

first time. At the instigation of the Infante Henry the Navigator, expeditions followed which brought back slaves, gold and gums. After João Fernandez had gone to Wadan in the eastern Adrār, where he spent some months among the Ṣanhādja in 1446, a permanent settlement was founded in 1448 on the island of Arguin, which afforded excellent conditions of security. From there the Portuguese endeavoured to extend their power into the interior and to command the great caravan routes which led from the Sūdān to Morocco; to them are attributed the fortresses, now in ruins, near Wadan and at Azuggi. But if it is certain that for a short time they extended their relations as far as the capital of the negro empire of Mali on the Upper Niger, it seems that they did not own factories for any length of time except on the coast.

The trade of Arguin flourished for two centuries in the hands of the Portuguese, then of the Spaniards and it extended as far as Lower Mauritania through Portendik (corruption of "Port d'Addi" from the name of an emir of Trāza), a not very good roadstead where barter was carried on. The French at a later date established themselves at the mouth of the Senegal (1626), the Dutch at war with Spain took Arguin in 1638, which the English took from them in 1665 and a struggle for influence began among these three nations which lasted for a century. Arguin and Portendik continually changed hands, while France developed her trade along the Senegal by building factories. Finally the Treaty of Versailles (Sept. 3, 1763) recognised her exclusive sovereignty over the Atlantic coast from Cape Blanc to the mouth of the Salum. The wars at the beginning of the xixth century brought the English back there for a time, and it was only in 1817, three years after the treaty of Paris, that France definitely took possession of the country. Arguin and Portendik had in the meantime been almost completely ruined as a result of these vicissitudes.

8. The French conquest. Down to 1857 England retained the right to trade at Portendik, which allowed the Trāza chiefs and in particular Muḥammad al-Ḥabīb to play off against one another the two nations who seemed to threaten her independence, and thus to gain a footing on the left bank of the Senegal. The position of the Europeans with regard to the natives was however difficult and trade with them was permitted only on payment of heavy customs dues. It was only in 1854 with the appointment of Faidherbe as governor of Senegal that a more vigorous policy was introduced into Lower Mauritania. In four years he reduced Walo on the left bank to submission and drove the Moors out of it and forced the emirs of Trāza and Brākna to sign a treaty, which if it did not abolish the customs, at least recognised that France had a right of suzerainty over the peoples living near the river and guaranteed freedom of trade there.

For nearly fifty years, these treaties were respected and the Moorish chiefs, too much occupied in maintaining peace among their subjects and in defending themselves from the intrigues of pretenders, no longer thought of coming into conflict with French troops; commercial agreements were made which extended as far as with the Idu'ish of the Tāgant and one treaty was even made with the emir of the Adrār. This period also saw a great deal of exploration of the interior, after

Mungo Park (1795—1796), Caillié (1825), Caille (1843) and Panet (1850), Vincent, Bu al-Mugdad, Bonnel, Aliou Sal, Mage, Fulcrand, Aube, Soleillet, Quirga and Cervera, Douls, Soller, Fabert, Donnet, Blanchet, Gruvel and Chudeau contributed to our knowledge of this country and prepared the way for its occupation.

In the last years of the sixteenth century the troubles of which Lower Mauritania was the centre finally had repercussions on the trading centres on the river which became daily more serious. The insecurity hampered commerce and in proportion as the memory of the vigorous policy of Faïdherbe became obliterated, marauders ravaged the country down to the left bank of the river, right into the administered country. The conquest of Mauritania had to be planned in order to protect effectively the colony of Senegal and with this object an endeavour was made to use the influence of the marabouts, tired of a perpetual warfare, of which too often they bore the expense. The diplomatic action of M. Coppolani, Commissaire Général of the government since 1902, judiciously supported by police operations, brought about the occupation of the Trāza country in 1903, of the Brākna country in 1904 and of the Tāgant in 1905.

This rapid advance, however, was checked before the anti-foreign propaganda of a marabout of the Ḥawḍ, Mā' al-'Ainin, son of Muḥammad Fāḍil, who after spending a long period in Upper Mauritania, had been settled for some years at Smara near Sāgiat al-Ḥamrā'. His prestige as a magician, supported by the veneration shown him by the Moroccan sulṭāns, was not long in winning him the support of the greater number of the Moorish tribes and especially of those of the Adrār, the emir of which had been brought up in his entourage. At his instigation, Coppolani was assassinated and a cousin of the Sulṭan Mawlāi Idris came to lead the *qjihad* in Mauritania. A success gained by him at Nyamulan led to nothing, but on the return of a delegation of Moorish chiefs who had gone to seek help from the sovereign of Morocco, a general offensive was begun against the French troops (1908). To put an end to an agitation which threatened to become dangerous, Colonel Gouraud conquered the Adrār in 1909 and his victory was completed in 1910 by the death of Mā' al-'Ainin and in 1912 by the capture of Tishit and joining up with the troops of the Ḥawḍ. The conquest of Mauritania by the French was thus practically completed. The march of el-Ḥeiba, son of Mā' al-'Ainin, on Marrākesh in 1912 revived some inclination to rebel among the Moors, but the destruction of Smara in 1913 checked this, and France now only had to secure the protection of her colony from raiders from the Sahara.

IV. SOCIAL AND ECONOMIC LIFE.

The negroes are settled agriculturists who have their villages mainly in the Shamamah and the Gorgol and in the main they belong rather to Senegal than to Mauritania.

The Moors have a few villages (the principal are Aṭar, Shingiti, Wadan, Tūgja, Tishit) with palm groves and a few farms in the Adrār, the Tāgant and the Ḍhar. They are great nomads who live under cone-shaped tents of camel-skin and follow the rainfall with their flocks. Those who wander in the zone of the steppes oscillate

between the river and the desert, except the Trāza of western Mauritania, who, on account of the dryness of their country, move over a much greater area and sometimes even reach Tiris and Adrār Suṭuf. The people of the Adrār go down as far as Tāgant, and on the north at one time were in contact with the Tekna of the south of Morocco around the Sāgiat al-Ḥamrā'. Their supply of meat is very scanty and it is not an exaggeration when Psichari calls them "the most wretched of mankind".

Their groups have been much gradated by the constant influx of Moroccans. Before French rule, the Ḥasan, pure Arabs, formed the noble and warrior class who protected the encampments and lived by cattle-rearing and marauding. The Zwaya or marabouts, generally Ṣanhādja or Zanāta Berbers, paid an annual sum called *ghafer* to the Ḥasan for their security; they were likewise breeders of cattle, but also included among them merchants and men of letters who were regular travelling universities; the more or less open practice of sorcery served them as a means of defence against the exactions of the Ḥasan. The Znāga or tributaries (*lahma*), Ṣanhādja Berbers, were the exploited. The feudal dues which they paid to the Arabs (*ḥorma*) did not always exempt them from periodical payments to the marabouts nor from arbitrary sums levied upon them by one or the other. They were in part agriculturists. The *Ḥarāfin*, freed slaves, formed tribes of serfs, usually better treated than the preceding. Finally the Ḥasan and the marabouts owned numerous slaves in which they did a busy trade. On the fringe of all these groups, the *Ma'lemūn*, the griots (*igawn*) and the *Nmadi* were respectively the workmen, poets and singers and hunters who supplied the encampments of eastern Mauritania with meat.

The barriers between these castes were in theory rigid. A certain number of marabouts, however, and even of Znāgas succeeded in escaping from Aṭab tutelage, like the Idu'aish of the Tāgant, and devoted themselves to the adventurous life of the Nmadi hunter (*gimer*) just as "penitent" Ḥasan sometimes adopted the pious life of the Zwaya (*Tiyab*).

French administration has left this traditional organisation intact, only suppressing slavery; it has, however, checked the abuses of the Ḥasan by putting a stop almost everywhere to the payment of the *ḥormas* and *ghafers*.

Economic Life. Mauritania has only one port, Port-Étienne, on the peninsula of Cape Blanc; it is, however, only a fishing centre. The course of the Senegal is used as far as Podor in the dry season, as far as Bakel in the winter months. No road has yet been made, but the important points are linked up by automobile or caravan services. The telephone is in use only in the south, but its place is taken by the wireless, which connects Mauritania with Dakar, Casablanca, Agadir, Bamako and Timbuktu.

The principal source of wealth of the country is stock-breeding: 51,000 camels, 3,800 horses, 239,000 cattle, 2,000,000 goats and sheep, 66,000 asses. The abundant game (antelope, gazelle, ostriches, guinea fowl and bustards) supplies further food for the inhabitants. Among agricultural products, special mention may be made of the date-palms in the north (3,000 tons of date a year), along the river and in a few favoured valleys of

the plateaus, millet, rice, maize, wheat and barley. In the south gum is a traditional article of export (1250—2,500 tons a year).

The natural resources of the country have hardly been investigated as yet. We may mention, however, the salt of the Sebkhēt Ijēl, which has for long supplied the caravans to the south; along the coast a few salt-pans are worked by the Moors. The annual export is 4,700 tons.

Industry is in a very rudimentary stage and confined almost entirely to the manufacture of leather goods which form the equipment of the camel and the furniture of his tent. Fishing supplies the encampments near the coast.

A certain number of caravans transport merchandise from the north to the south along the coast and through the Adrār and Tāgant to the trading centres on the river and the Sūdān. They take with them animals, gums, salt, dates, ostrich feathers, skins and leather, and bring back cloth, arms, powder, candles, sugar, tea, spices and cereals, and supply the markets of Aṭar, Shingiti, Wadan and Tijigja. As a result of the insecurity in the desert there is no longer any regular trans-Saharan trade.

V. POLITICAL LIFE.

The negroes are ruled by their village headmen and chiefs of districts. The Moors are grouped in tribes under the authority of a *shaikh* assisted by a council of notables or *qemā'a*. Sometimes several tribes are combined in a hereditary amirate, the ruler of which surrounds himself with a regular court generally recruited from among the Znāga or Harāṭin. The *shaikh* or *amir* is practically all-powerful; only the right to judge in civil matters is not completely his; the *kālis* exercise it. The *amir* further reserves to himself a kind of right to supervise their judgments through the intermediary of his private *kāḍī* who forms a court of appeal.

The French administration has been superimposed on this traditional organisation. A Lieutenant-Governor, residing at St. Louis, on the right bank of the river, is the head of the colony and is assisted by a military commandant, an inspector of administrative affairs, a secretary for military and political affairs, a secretary for finance and a department of public works. The local administration carried out by administrators or officers is divided into eight districts (Trāṭza, Biakna, Gorgol, Gidimaka, Assaba, Tāgant, Adrār and Baie du Lévrier) and seventeen sub-divisions or administrative posts. It controls the native administrative and judicial organization.

The Moors pay the Qur'ānic taxes (*zakāt* and *ashar*) from which their riding-camels and gums alone are exempt. The negroes pay a poll-tax and a tax on cattle. Indirect contributions are paid by the markets, the salt-pans, the carrying of arms, the exploitation of the woods and ferries. The Budget for Mauritania for 1930 was 14,623,000 francs.

VI. LANGUAGE.

The language spoken in Mauritania is Arabic, the *ḥasania* or language of the *ḥaṭṭān*, the "whites". Some 7,000 Znāga in the south have retained a Berber dialect related to that of the dialects of southern Morocco. At Wadan and Tishit, the language *aznir* (Azer) which is a form of Soninke

is now spoken only by a few individuals. Lastly the negroes of the river have retained their own language.

VII. RELIGIOUS AND INTELLECTUAL LIFE.

History does not tell us what was the religion of the Ṣanhādja before their conversion to Islām; we can only think that they had to some extent been influenced by a monotheistic faith like Judaism or even Christianity. Their first contact with Islām probably dates from 'Uqbā b. Nāfi's expedition to the south of Morocco (681), but it is certain that their real conversion was much later and can hardly have been earlier than the energetic proselytising campaign of 'Abd Allāh b. Yāsīn.

At the present day all the inhabitants of Mauritania are Muslims of the Mālikī rite, but many of them and more particularly the warriors and the *Nmadi* have only a very superficial acquaintance with their religion and take little interest in it; superstitions and sorcery further corrupt their Islām almost everywhere, revealing the primitive state of the people and negro influence. Islām is not really known and practised, except among the tribes of marabouts; among the latter, a mystical tradition and a fairly advanced culture have always made themselves felt and for this reason they play in Moorish society the part of a kind of sacerdotal body such as is found nowhere else in the Muslim world of the west. This is no doubt a remote consequence of the Almoravid movement, revived for a time in the war of Babḥah, and of the peculiar situation of these Muslim nomads, who have here long been the advance-guard of the white race, face to face with the negro fetish-worshippers of the Senegal and Sūdān. Perhaps, like Renan and Psichari, we ought also to give credit to the influence of *religiosité* of the desert. In any case in thus assuming a kind of sacred character and surrounding it with a magic prestige, certain Berbers have had a regular revenge of their amour-propre on the pride of race of the Arab invaders and have opposed to their tyranny and brigandage a defensive weapon which has not been without effect.

The principal brotherhoods of Mauritania are those of the Tijāniya and of the Qādiriya: their influence extends into the lands of the negroes. The first are represented by the Iḍa u 'Alī of the Trāṭza, of the Tāgant and of the Adrār, who claim to be *shorfa'* and say they came from Tabelbala at the beginning of the sixteenth century. Since the early years of the sixteenth century they have been connected with the branch of the Tijāniya in Fās. The second are much more numerous and influential; they have several branches: that of the Bekkāya dates from the xvth—xvith centuries and is represented from the bend of the Niger to the Tāgant and Adrār by the tribe of the Kunta. About a century ago it received fresh impulse in a new "path" and its autonomy in Lower Mauritania was secured by the great prestige of the *Shaikh* Sidhya, of the Ulud Bui (d. 1924). We may also mention the branch of the Fāḍiliya, founded in the early years of the sixteenth century, which enjoyed particular fame some 20 years ago under the direction of Mā' al-'Ainin and his brother the *Shukh* Sa'd Bui. These two branches have lost their importance since the deaths of these famous individuals. Lastly the Qādiriya are still represented by the some 600 members of the

Ḥuḍfiya brotherhood, whose practices are regarded as heretical by the other Muslims.

Shingīṭī, benefiting by its situation on the routes of the caravans which came from western Morocco or Sebket Ijjet down to the Ḥawḍ or the Senegal was at one period an intellectual centre, the reputation of which extended to all the western Sahara and to the Sūdān. We see this in the fact that it was able to give its name to all the Moorish tribes (*Shināḡiṭa*) and to the territory in which they led their nomadic life and that the tradition of the country makes it one of the "seven holy cities" of Islām. It has now lost its old prestige. In the xvth century the fame of the medersas of Timbuktu must have offered serious competition to it. At the present day Shingīṭī is seriously threatened by the sands of the Waran and its trade is much reduced. Aṭar is assuming an increasing importance; the insecurity and eccentric development of North Africa and the Sūdān have led to the almost complete disappearance of the trans-Saharan trade by which it lived and in particular, as is natural in a land of nomads, it has been rather under tents and particularly in the marabout encampments of western Mauritania that intellectual culture has developed. Universities have been created there where the teaching of the Qur'ān, theology, law, grammar and logic still flourishes. Some of them have known outbursts of glory under famous teachers, who have sometimes created schools of mystic initiation, like those directed by the *Shāikh* Sidiya, Mā' al-'Aīnīn or Sa'd Bū or like that of the Aḥl Muḥammad Sālem, which is a kind of university in the Tiris which produces almost all the jurists of Mauritania.

A whole original literature has been able to develop. Qur'ānic matter, Ḥadīth, law according to Sidi Khalīl and his commentators, are its essential elements, with the doctrines of the Sūfis and their mysticism. But historical studies have also had and still have their eager followers, especially among the tribe of the Ulād Daman (Trārza). Lastly poetry is held in honour among all the tribes, warrior and marabout alike, and supports a whole caste of troubadours, the griots, who enjoy the favour of the courts of the emirs.

Bibliography: A complete bibliography of Mauritania is given in *Actes du VII^{ème} Congrès de l'Institut des Hautes Etudes Marocaines* (*Hespéris*, vol. xi., Paris 1930). Cf also the collections in the *Bulletin du Comité d'Etudes historiques et scientifiques de l'A.O.F.*, in the *Revue du Monde Musulman*, in the *Bulletin du Comité de l'Afrique Française* and in *La Géographie*. — Only the more important studies need be mentioned here: Aḥmad al-Shingīṭī, *al-Wasīṭ* (monography of Mauritania), Cairo 1329 (1911); *Annuaire du Gouvernement Général de l'A. (F. DE LA CHAPELLE).

MORĀDĀBĀD (Murādābād), a district in the Rohilkhand division of the United Provinces of India and also the chief town in it. The district has an area of about 2,300 square miles and a population of 1,200,000 of whom over 420,000 are Muḥammadans. Nothing is known of the early history of the district. In the Muḥammadan period it was successively ruled by the Sultāns of Delhi, from whom it was occasionally taken by the Sultāns of Džawnpūr, the Moghuls, the Rohillas, and the Nawābs of Oudh until it was ceded to the British in 1801.

Morādābād is the principal town in the district; it is situated on the Delhi-Bareilly road and on the main line of the Oudh-Rohilkhand railway. It has a population of 75,000 of whom over half are Muslims. The town is a Moghul foundation of the second quarter of the xviiith century. Its founder was Rustam Khān who also built the Džāmi' Masjdīd, as an inscription testifies, in 1632. The town takes its name from Murād Bakhsh, the ill-fated son of Shāh Džahān. It rapidly ousted Sambhal from its place as the chief town of the district. Its industries are flourishing (chiefly textiles and brass-work). It was a mint of the Moghul Emperors and also of Aḥmad Shāh Durrānī during his invasion of India in 1760. Sambhal is a very ancient site but has lost much of the importance it possessed in mediaeval times. It has an old mosque, an interesting example of Pathan architecture which has even been claimed as a converted Hindu temple. It is said to have been built by Bābur but it is undoubtedly earlier. Amroha is the great Muḥammadan centre of the district, the majority of its population being *Shāikhs* and Saiyids. The chief saint of the Saiyids is Sharaf al-Dīn Shāh Wilāyat, a descendant of the tenth Imām, who came here about 1300. His tomb is still shown here. The Džāmi' Masjdīd is a Hindu temple converted into a mosque in the reign of Kaiḡubād. It is much visited by pilgrims, mainly Hindus who seek relief from mental diseases through the power of Ṣadr al-Dīn, a former *mu'adhdhin* of the mosque, whose virtues are still believed to be efficacious. There are over a hundred other mosques in the town.

(J. ALLAN)

MOREA is the usual name in mediaeval and modern times for the peninsula of the Peloponnesus which was regarded in ancient times as the citadel of Greece. The name Morea is first found in 1111 A.D. in the subscription to fol. 143^r of the Greek manuscript Brit. Mus. Add.

28816 (cf. M. Vogel—Y. Gardthausen, *Die griechischen Schreiber des Mittelalters und der Renaissance*, Leipzig 1909, p. 28, 466, and also *Byzantinisch-Neugriechische Jahrbücher*, ix, 72). Originally the name Morea did not apply to the whole Peloponnesus but only to the outer mountains of Ichthya and the lands around them as well as the whole district of Elis. Reliable references show us that even in the xivth century the place-name Morea was equivalent to Elis; later the name became gradually extended to the whole Peloponnesus and with this meaning it is still used not only by the Greeks but also by other peoples of east and west.

Alongside of the original form Morea (ἡ Μορέα, with synesis Μορεῖας, Μορεῖς) we find other divergent forms in Greek literature: ἡ Ἀμουρέα, ἡ Ἀμουρέα, ἡ Ἀμύρεα, ἡ Μορέα, ἡ Μορέα, ἡ Μορέα. In eastern sources of the mediaeval and modern period along with the predominant form *Amorea* (mainly in Latin-Italian documents of the xiiith—xivth century), *Amorie* (particularly in documents of the xvth—xviith century), *la Morea* (properly Italian), *la Morie* (French) we also find: *Amorie*, *la Mowee* (in French documents as early as the xiiith century). The origin of all these forms is to be traced to an inaccurate separation of the article from the noun: *la Morea*—*Amorea*.

In Muhammadan texts we find seven main forms of the name Morea = Peloponnesus: *Lamureia*, *Lamoria*, *Almora*, *al-Mora*, *Moria*, *Mora* and *Morch*. The first five are properly Arabic, the last Arabic-Turkish. There are however Arabic texts, which have the old classical name of the peninsula although with certain variants (cf. below).

As to the derivation of the name Morea, it has puzzled students greatly for centuries. Some scholars of the xvth century wanted to connect the name with Moors (Ital. *Mori*). These were said to have settled in the Peloponnesus at one time. This derivation of the place-name, which has even been adopted by modern scholars, agrees neither with historical tradition nor with philological laws. At one time the suggestion put forward by Emerson (*History of Modern Greece*, i, 60) and adopted by Fallmerayer found many supporters: it connected Morea with the Slav word *more* = sea. This view has been challenged by Kopitar (*Wiener Jahrbücher der Litteratur*, i, [1830], 111—120) and again by Zinkeisen and Hopf as decidedly "misleading and fanciful" and rejected by several later Greek and Slavonic scholars. At the present day it is generally thought that Morea is derived from the Greek word *μορέα* = "mulberry-tree", as Prof. G. N. Hatridakis (in the periodical *Ἀρχαία*, vol. v, 1894, p. 230, 401, 549, *Γλωσσολογικά Μελέται*, Athens 1900, p. 29 *sqq.*) has brilliantly shown on the basis of philological arguments. In Elis where — as already mentioned — the name Morea, now applied to the whole of the Peloponnesus for some centuries, first appeared, the planting of the fields with mulberry-trees is said to have been very common in the middle ages. These trees were indispensable for the silk industry which was at one time very flourishing in the Peloponnesus and no less in Patras. Authors of the Empire (Pliny, *Hist. nat.*, vii, 4; Pausanias, vii, 5, 2; vi, 26, 4; vii, 21, 7) also tell us that Elis in those days produced *βύσσον*, i.e. a material related to silk. In any case, as early as the xvth century, the Greeks thought that the place-name Morea was connected

with the mulberry-tree. This is evident for example from Joh. Leunclavius (*Annales Sultanorum Ottomanidarum a Turcis sua lingua scripti*, 1596, p. 63): "Nomen ipsum (= Moreas) derivant Graeci nunc ab arbore *moro* quod tota regione scilicet arbor haec frequens est".

In the mediaeval Muslim writers there is a confusion between *Amureia* = Amorion in Phrygia and *Lamureia* = Moreas, Peloponnesus. But *Amureia* [or *Amureia*, *Amurila*, *Amoriia* etc.] in Abu 'l-Kāsim Firdawst can only be Amorion, which used to be described as the capital and "eye of the kingdom" of the Rūm. In the geographical tables of Nasir al-Din al-Tūsī (middle of the xiiith century) and of Ulugh Beg, *Amureia* should rather be identified with Amorion than with Morea = Peloponnesus (cf. P. Karolidis, in *Wissenschaftliches Jahrbuch [Επιστολή] der Universität Athen*, iii, 1909, p. 288—297; A. Hantzis, in *Byzantinisch-Neugriechische Jahrbücher*, ix, 1931, p. 65 *sqq.*) In the little map by the Arab Idrisi, of the year 1192 A.D., *Belebūnes* = Peloponnesus is given (i.e. the old classical name of the peninsula). On the other hand, we find *Moria* = Morea = Peloponnesus (i.e. its mediaeval and modern name) in the Arabic geographical table of the Paris MS. 2214, which is supposed to contain the cosmography of Ibn Sa'īd of the year 1276 A.D. based for the most part on Idrīsī (1154 A.D.; cf. K. Miller, *Mapae Arabicae*, i, Stuttgart 1926).

The Muhammadan peoples really only became acquainted with the Morea in the xiiith century A.D. Hellenistic culture was long extinct there and Christianity had become predominant. At the end of the fourth century (395 A.D.), Alaic had laid almost the whole of the Morea waste and destroyed many towns and sanctuaries famed in ancient times. About two centuries later, c. 580 A.D., the Avars (a Turkish nomadic people) allied with Slav tribes are said to have invaded the Morea and settled permanently. It should be expressly noted that it is only late and tendentious sources which tell us this. What scholars of the xixth century put forward as a historical fact, namely that an independent Avar or Avar-Slav Kingdom, intractable to Byzantine or Greek Christian influence, existed in the western half of the Morea for 218 years (580—807), must be relegated to the realms of fable (cf. E. Curtius, *Peloponnes*, i, Gotha 1851, p. 86). It is certain, however, that considerable ethnological changes took place in the middle ages in the Morea. In the viiith century in the reign of the Byzantine emperor Constantine V (741—775), if not earlier, numerous Slav tribes had pushed their way into the Morea, which had been much depopulated from 746 by a terrible pestilence. This epidemic had also made great gaps in the population of Constantinople, which Constantine V is said to have endeavoured to fill with people from the Morea: this imperial edict must have further contributed to reduce the Greek element in the peninsula. It may be assumed that the Slavs who at this time were settling mainly in Arcadia and Messenia, Elis and Laconia, sought and found new homes in the Morea, which had been favoured by nature with a milder climate, not only as hostile robber hordes but also as peaceful colonists from the north.

According to Schafarik (*Slavische Altertümer*, German transl. by Wuttke, vol. ii, p. 192), the spread of the Slavs over the Morea can be fixed

between 746 and 799. Nevertheless there can be no question of a complete slavisation of the country nor of a complete annihilation of the Greek element in it — as Fallmerayer and his followers hold. The immigrant Slavs in Greece proper cannot have been very numerous. They were really nomad herdsmen and peasants, who settled here and there in the open country. Their level of culture much have been very low. On the other hand, the Hellenic element in Greece proper and no less in the Morea had always had control of the coasts and of the towns and fortresses in the interior, and it was moreover strong enough as regards culture to assert itself through the centuries and even to leave its mark on the foreign Slavs. The Slav settlers often caused trouble to the Byzantine government, so that the latter found themselves forced to send expeditions against them. For example in 783 A.D. the Athenian empress Irene ordered the Patriarch Staurakios to punish the Slav tribes of the Morea and the rest of the mainland of Greece. He appears to have had numerous troops at his command and was able to carry out his task satisfactorily in a few months. He subdued the Slavs and forced them to pay an annual tribute to the imperial treasury. He returned to Constantinople with many prisoners and considerable booty and celebrated a triumph in the Hippodrome there.

After some time, the Slavs again rose in the Morea against Byzantine authority. They became a great danger and even threatened the towns on the coast. Supported by Saracens from Africa, the Slavs in 807 (805 by another reckoning) blockaded Patras from the land. The citizens of this important town defended themselves bravely in spite of a shortage of provisions, water and other supplies. When the help sought from the imperial strategos in Corinth did not come, the citizens of Patras made a vigorous sortie. They put the enemy to flight and drove them far from their town. Greek superstition seems to have ascribed the victory won at Patras over the Slav hordes to St. Andrew, the patron saint of the town. Nothing is recorded of the fate of the Saracen allies of the Slav besiegers of Patras. It is supposed that it was they who ravaged not only Patras but also Rhodes and other islands by the caliph's order in 807 A.D. With the defeat at Patras the strength of the Slavs of the Morea was broken. It is true that they again and again attempted to win their independence of the Byzantines by force of arms but without success. In 850 A.D., the doughty Byzantine general Theoktistos Bryennios subdued all the Slav districts of the Morea as far as the mountains on the Taggetos and Parnon, where two rebel Slav tribes, the Ezerites and Melinges, had settled. These two tribes survived longest, sometimes as vassals of the Byzantines and sometimes as their open enemies. As early as the ninth century A.D. began the conversions of the Slavs to Christianity to which is due also their gradual hellenisation. The intermixture of the Greek Moreotes (Turk. *Moralis*) with the Slavs undoubtedly contributed considerably to the former process.

The Normans in Sicily in the following period disturbed not only the coasts of the mainland of Greece but also the interior of various Balkan provinces of the Byzantine empire. The Norman king Roger II in his campaign in 1146 against Greece sailed round the Morea and occupied with-

out a blow — after successfully storming the strongly fortified Malvasia — Corinth, celebrated for and prosperous from its trade and industries. It was for this same king, that the Arab Idrisi composed his *Nuzhat al-Mushtāk*, finished about 1153 A.D. According to this work, Morea (*Belbōne*), a flourishing and prosperous island of the Mediterranean, had 13 large and important towns, many citadels or fortified places and villages. Of the towns of the Morea Idrisi mentions the following among others: Corinth, "a large and populous city"; Batia (= Patras), "situated on a promontory", has a "famous" church (of the apostle St. Andrew); Arcadia (= the ancient Kyparissia), "a large and thickly populated town", whose harbour is visited by many ships; Irouda (= Navarino) with "a very commodious harbour"; Motonia (= Modon; q. v.), "a fortified town"; it was protected by a fort which commanded the sea; Coronā (= Koron), "a little town" with a citadel commanding the sea; el-Kedemona (= Lacedaemonia, the mediaeval Sparta), "a flourishing and important town, six miles from the sea"; Maliasa (= Monembasia, Malvasia), "a town defended by a very high citadel commanding the sea, from which the island of Crete can be seen"; Argho (= Argos), "a famous place and beautiful country"; Anaboli (= Nauplia, Napoli de Romania). According to Idrisi, Morea (the extent of which he puts at 1,000 miles) is connected with the mainland "only by an isthmus, the length of which is six miles" (= Hexamilion, cf. below). Only small ships could be taken through the isthmus from the Gulf of Corinth into that of Saron; ships of larger size had to sail all round the peninsula of Morea. The confusion in Idrisi between the promontory of Malea and Tainaron is not peculiar in mediaeval works. Idrisi's statements are not based to any extent on his own observations (cf. *Géographie d'Edrisi*, transl. by A. Jaubert, ii, 1840, p. 122 and also Th. Luc. Fc. Tafel, *De provinciis regni byzantini liber secundus: Europa*, Tübingen 1845, p. 27 sqq.).

We get much and varied information supplementing the Arab geographer's account of the Morea from various 12th century sources, e.g. the *Travels* of Benjamin of Tudela (d. 1173) who starting from Saragossa visited the Greek east and other lands in order to become acquainted with the Jewish diaspora.

The conquest of Constantinople by the Latins in 1204 and the resulting division of the Byzantine empire, which had now collapsed, had a great influence on the future of the Morea. Boniface of Montferrat in 1204 founded the kingdom of Thessalonica in Macedonia which he took in exchange for Asia Minor allotted to him by treaty. By a comparatively slight effort he and his followers were able from Thessalonica to conquer within a year a great part of the mainland of Greece as well as the Morea. Two knights, William of Champlitte, Count of Champagne, and Godfrey of Villehardouin the younger, may be regarded as the men who brought the Morea under Frankish rule. When William of Champlitte had to leave the Morea in 1209, Godfrey of Villehardouin continued the work of conquest alone and organised the Frankish administration of the country which was henceforth known as the principality of Achaia to Europeans. Soon after the Frankish occupation of the country, it was reorganised on western lines. But the feudal system did not find

its way into the Morea only 'after 1204. It had already existed in the country in the time of the Comneni.

The Frankish rulers built new citadels and forts in the plains and on the mountains, most of which survived into the period of Turkish rule. A number of fiefs which were formed by the Franks in 1205 became after the middle of the xth century hereditary possessions of the Ottomans.

It must also be pointed out that the Venetians after the Fourth Crusade had secured important trading centres and depots on the Morea. The Republic in this way acquired the province of Lacedaemonia, Kalabryta, Modon and Patras, and in the case of the last two seaports, some of the surrounding country including the possessions of a number of distinguished families of the Byzantine aristocracy. During this period, Venice succeeded in extending her territory and commercial influence and privileges further in the Morea and even in taking possession of the whole of it (cf below). The fourth prince of Achaia (Morea), William of Villehardouin (1245—1278), the second son of the above-mentioned Godfrey, had vigorously completed the conquest of the country. In 1245 he forced Monembasia, which had so far remained independent in alliance with the Greek kings of Nicaea, to capitulate under certain conditions. The same ruler also conquered a number of Morean tribes who had shown themselves hostile to Frankish rule and who played a prominent part in later times when the Turks occupied the country. To keep in check the wild tribes of Zaconia and Laconia, William II of Villehardouin in 1249 built near the ancient Sparta, on a hill jutting out in front of the Taygetos, Mysithra (Mystra), the fortress of the same name. A Frankish-Byzantine town soon grew up around this fortress which became a centre of art and classical studies. The town of Mystra was destined to be the capital of the later despots of the Morea, and even in the period of Turkish rule it did not completely lose its old importance. Frankish rule in the Morea, which reached its zenith under William II, was destined to suffer a severe reverse within his reign. In October 1259 a fierce battle was fought between Castoria and Monastiri (Pelagonia) at Longos Vorilla. In this battle fought the armies of the Despot of Epirus Michael Angelos and of the king of Nicaea and later Byzantine emperor Michael VIII Palaeologos. As a result of treachery on the part of an illegitimate son of the despot Michael Angelos, the Sebastokrator Johannes, the troops and allies of the former suffered a reverse. Even William II of Villehardouin sought safety in flight only to be shortly afterwards enticed from his hiding-place and captured. He was not released till 1262, after taking the oath of vassalage to the Byzantine emperor and ceding him four important fortresses of the Morea: Mystra, Maina, Geraki and Monembasia, as well as a considerable part of Laconia. The Byzantines thus gained important bases in S. E. Morea from which they were able to reconquer the whole peninsula, which was all the more necessary as William II of Villehardouin only kept his pledge of fealty for a short time.

Relations between the Muslim peoples and the Morea now became closer. At the end of 1262 the Sebastokrator Constantine, a step-brother of the Emperor Michael VIII Palaeologos, landed in the Morea at

the head of a large army which consisted mainly of Macedonians and Turks. This step-brother of the Emperor came to the Morea as administrator of the Byzantine lands there and occupied all the citadels which William of Villehardouin had been forced to cede in order to secure his release. The Byzantine governor took up his residence in Mystra. Soon afterwards open war broke out between the Franks and Byzantines. To strengthen the latter there landed at Monembasia in the spring of 1263 a new Turkish army corps of 5,000 (according to others 3,000) mercenaries in the service of Michael VIII Palaeologos, led by two men named Malik and Shalik. We have no accurate record of the origin and descent of these Turkish chiefs who, so far as we know, were the first to appear in the Morea. They must have been either Seldjûks or Turks of other descent who had no shame about selling their services to Christian rulers. The Turkish mercenaries under Malik and Shalik contributed greatly to the successes which the Sebastokrator Constantine gained over the Franks at the beginning of 1263. Along with Greeks, mainly from Zaconia and other provinces of the east, Slavs from the Morea, Dasmuls (of Greek-Frankish descent), the Turkish mercenaries attacked from Laconia Elis, which was the capital of the Frankish principality. The bands of Malik and Shalik then pressed into the highlands of Skorta. Here they ravaged at their will. With the approval of the Sebastokrator Constantine, they plundered the country, carried off and slaughtered the cattle. In these circumstances the Skortians were forced to pay homage to the Byzantine emperor and to operate with his army against the Franks. Constantine's army, composed of so many different racial stocks, occupied the market-town of Velligosti (near Megalopolis) and burned it, without however being able to take its citadel: they then conquered Kalabryta and burned the famous Latin monastery of Isova. But soon afterwards they suffered a terrible defeat not far from Olympia.

In the spring of the year following (1264), the Sebastokrator Constantine continued the war on the Franks. He had no success and also quarrelled with his Turkish allies, whose pay was six months in arrears. Malik and Shalik at once left him with their men for this reason and retreated undisturbed to the district of Kaiytaina. Constantine tried to win them over again but they went to William of Villehardouin who accepted their assistance. Thereupon Malik and Shalik with their followers went over to the camp of the, as they thought, generous Frankish leader in the conviction that the latter would keep his word. By the accession to the Franks of this Turkish force, the tide was turned in their favour. The Turkish chiefs who were inspired by an ardent desire to avenge themselves in battle on their false employers, now advised William II of Villehardouin's knights to meet the imperial Byzantine army on the frontiers of Messenia and Arcadia. While the Frankish-Turkish army was going through the pass of Makryplagi (between Megalopolis and Kalamata, i.e. the line of the modern railway), they were attacked by an ambush of the Byzantine army, whose leader was no longer the Sebastokrator Constantine but the strategoi Alexius Phylis, Makrenos and Alexius Kabellarius. Twice the vanguard of the Frankish-Turkish force led by Anselm de Toucy had to give way before the numerous Byzantines who occupied the heights on the pass of Makryplagi, but finally they won the

hotly contested summit of the pass, from which they ousted the enemy. The Turks under Malik and Shalik followed up and completed the victory. The leaders of the army so disastrously defeated sought refuge in the neighbouring caves of Gardiki where they were besieged by the Turks. The latter took the caves and led their occupants prisoners to William II of Villehardouin. The latter thereupon ordered the Turks to raid and plunder the districts of Morea previously occupied by the Byzantines, notably the districts of Zaonia, Helos, Vatika and Monembasia.

After the battle in the Makryplagi pass came the news that Skortinians had again taken up arms against the Franks and stormed the fortress of Buchelet (Araklovon) and Karytaina. As the valiant Godfrey Brunères, Baron of Karytaina, who had always been able to keep the turbulent Skortinians in check, was no longer in the Morea, William II of Villehardouin ordered the Turkish leader Malik and his men to go to Skorta to put down the rising. Terrified by the savages and cruelties of the Turkish mercenaries, the surviving Skortinians submitted to the Prince of the Morea and begged for mercy which was granted them.

The *Chronicle of the Morea*, which has survived in four languages (Greek, French, Catalan and Italian), is the only source which tells us of the activities of the Turkish mercenaries in the Morea (1262—1265). The same *Chronicle* adds that the Turks in 1265 sought permission to leave the Morea and to be allowed to return to their Asiatic home. Malik took his leave in the friendliest fashion from the Prince of the Morea and began his journey home. The *Chronicle* however specially mentions that individual Turks preferred to settle in the Morea. They were baptised and married morean women. About the first half of the xivth century, there were still descendants of Malik's followers there, baptised Turks settled in Elis. It is natural to think that the modern villages in N.W. Morea of Maliki (Demos Vuprasion) and Turkochori (= "village of the Turks", Demos Tritaia) owe their names to the Turkish settlers in the time of William II of Villehardouin. This prince gave two of Malik's followers who remained in the Morea the rank of knighthood and even granted them fiefs. According to the Catalan version of the *Chronicle of the Morea*, Malik himself married a noble Frankish lady, a widow, through the intermediary of William II of Villehardouin. It is a historical fact that Turkish-Moreote relations date from the second half of the xivth century. After the death of William II in 1278 we find a reference to estates which this prince had given to his Turkish allies and which were occupied about 1280 by the soldiers of Galerano d'Ivry, who acted for a time as governor of the Morea for Charles of Naples and Sicily. Charles I and his immediate successors in rule over the Morea had not infrequently Turkish warriors in their service. From the beginning of the xivth century it not infrequently happened that Muhammadan pirates from Asia Minor raided and plundered the coastlands of the Morea. Sometimes they had allies of the Christian faith, notably Catalans

About the middle of the xivth century, an important change took place in the administration of the Byzantine possessions in the Morea. The Emperor Johannes Kantakuzenos in 1349 created

an appanage for his second son out of these lands which he called the despotate of Mystra and which lasted till the Ottoman conquest (1349—1380). In this period fell the rule of the first despot of Mystra, Manuel Kantakuzenos, the second son of the Emperor. He assisted the Franks of the Morea to ward off the Turkish attacks, which had reduced the once flourishing Corinth and the country round to such misery that the Corinthians in 1358 were forced to send an urgent appeal for assistance to their sovereign, the titular Emperor of Constantinople and prince of Achaia, Robert II. The latter gave a ready ear to their appeal. On April 23, 1358, he gave the Florentine Grand Seneschal Niccolo Acciajoli and his descendants the extensive district of Corinth as a hereditary barony. The princely family of the Acciajoli survived in the Morea and on the mainland of Greece for two centuries, during which they had much to do with Muslim peoples. A series of circumstances, including the irruptions of the Turks as early as the middle of the xivth century and the advance of the Ottomans, whose strength was steadily increasing, brought numerous Albanians to Greece. The first despot of Mystra, Manuel Kantakuzenos, had them settled in various deserted regions where they became distinguished as warriors, agriculturists and as huntsmen. Thus we find them in Arcadia and Laconia where they seem to have come in large numbers. Later another 10,000 Albanian families were peacefully settled by another despot of Mystra, namely Theodoros I Palaeologos (1384—1407), son of the Byzantine Emperor John V. According to reliable sources, these 10,000 families left Thessaly and Acarnania with their cattle and goods and chattels on account of the Turkish raids and for other reasons and reached the isthmus. There they pitched their camp and sent messengers to Theodore I with the request that they might be allowed to settle in his Morean territory. Theodore I acceded to their request and allowed them to spread over a considerable portion of the Morea. The story of G. Bosisio (*Dell' istoria della Sacra Religione et illustrissima Militia di S. Gio. Hierosolimitano*, vol. iii, Rome 1594, p. 126—129) to the effect that the Turks had occupied Patras by 1378 and conquered the Morea shortly before must be relegated to the realm of fable. About this time, there were again great changes in the Morea. The Company of Navarre, which in 1380 had entered the service of the titular Emperor Jacob de Baux of Constantinople and prince of Achaia and were seeking their fortune on Greek soil, became after the death of the Emperor in Tarso in 1383 absolute masters of a great part of the Morea. In 1386 the Company made Captain Pierre de St. Exupery (Bordo of S. Superan) their leader. The latter was able to extend his power and influence in the Morea by inciting the Turks and also the Greek archons against Theodore I. During the period 1396—1402 he even bore the title of hereditary prince of Achaia (which was given him instead of money by king Ladislaus of Naples). Sometime before, a vigorous and enterprising Florentine, Nerio I Acciajoli (Sept. 29, 1394), had been playing an important part on the mainland of Greece. This man, a nephew of the Niccolo I Acciajoli, already mentioned, had acquired considerable territory in the Morea, partly by inheritance and partly by purchase.

Shortly before his death he attained the height of his glory when he was appointed by king

Ladislaus of Naples as hereditary Duke of Athens and the lands belonging to it. In 1389 the Venetians occupied the important fortress of Nauplion and set about the conquest of Argos. The despot of Mystra, Theodoros I Palaeologos, the son-in-law of Nerio I Acciajoli, at his father-in-law's instigation anticipated the Venetians and occupied Argos. As a result, hostilities broke out among the Christian states, which could end only to the advantage of the Turks. The despot of Mystra replied to the demands of Venice to give up Argos by saying he could only do so with the Sultān's approval. Later the Venetians joined up with the Navarrese. Through treachery Bordo of S. Superan succeeded in taking Nerio I Acciajoli prisoner on Sept. 10, 1389. The latter remained for nearly a year in the hands of the leader of the Navarrese but in the end obtained his freedom.

An epoch-making event was the great battle on the field of the blackbird (June 15, 1389) at Pristina, which decided Turkish rule for centuries in the Balkans. A Turkish army appeared in the Morea at the end of 1392 under Ewrenos Beg in order to aid, at their request, the Navarrese against the despot of Mystra. The Turks thereupon occupied a number of strongholds in the peninsula. Nerio I Acciajoli, who had been appointed governor of the Morea, now pledged himself to pay tribute to Sultān Bāyazid and to be his vassal. After the death of Nerio I Acciajoli, a fatal quarrel broke out between his sons-in-law Theodore I of Mystra and Charles Tocco, during which the Turks won important successes on the mainland of Greece. The fear of the danger from the Turks probably induced Charles Tocco and Theodore I to make up their quarrel. After long negotiations with the Greek national party in Athens, who hated the Latins, Turkish forces under the Pasha Timurtash entered Attica from Thessaly. At the end of 1394 or in the first seven weeks of 1395, the Venetians occupied Athens including the Acropolis, after driving back the Turkish besiegers. Theodoros prepared to advance against the Turks on the isthmus. The latter, however, defeated on Sept. 28, 1396 at Nicopolis the flower of the chivalry of Hungary, Germany, and France and thus laid the foundations for their dominion over the lands below the Danube. Bāyazid thereupon decided to attack the remnants of the Byzantine empire as well as the little principalities of the mainland of Greece. He therefore sent his generals Ya'kūb, Pasha of Rumelia, and the already mentioned Ewrenos Beg with an army of 50,000 men to cross the isthmus again. Ya'kūb occupied Argos; Ewrenos Beg at the same time fell upon the Venetian possessions in Messenia. The prince of Achaia, Bordo of S. Superan, and Theodoros I of Mystra found themselves forced as a result of the Turkish successes to pay tribute to the Porte. Laden with incalculable booty the armies of Ya'kūb Pasha and Ewrenos Beg returned across the isthmus and in 1397 even occupied Athens for a brief period. In addition to Greek sources, Turkish writers record that the "city of the wise", as Athens is frequently called in Muslim works, was taken by Sultān Bāyazid's men (cf. J. H. Mordtmann, in *Byzant.-Neugriech. Jahrb.*, iv, [1923], 346 *sqq.*). As a result of his troubles, especially the Turkish raids, Theodoros I of Mystra became utterly tired of his position. He therefore resolved to sell his towns and citadels to the knights of St. John of Rhodes, who after negotiations readily

purchased Corinth, Kalabryta and Mystra in the years 1400—1402. But they could not establish themselves permanently in the Morea, for the Greek national party in the country, especially in Mystra, rebelled against the sale, which the Sultān, the suzerain of Theodoros of Mystra, also declined to recognise. Theodoros therefore cancelled the sale and compensated the knights partly in money and partly by ceding the county of Salona and the barony of Zituni. Theodoros I had been able to take these lands from the Ottomans after their defeat at Angora in 1402.

Sultān Sulaimān I (1403—1411) abandoned any claim to suzerainty over the Morea. At this time the influence and power of the Venetian colonies in the Morea were increasing. In 1407 the Venetians occupied Lepanto. In the following year, they seized Patras and the country round it and from these two strongholds which lay opposite one another, the so-called little Dardanelles, they were able to keep in check the Turkish pirates who made the Gulf of Corinth unsafe. At an earlier date, the Albanian family of Spata had settled in Lepanto and had occasionally made common cause with the Turks. Patras at this time was ruled by the archbishop Stephan Zaccaria in name of the Pope. As he suffered a great deal from the Turks, he pledged the town and the country round it with the Venetians. The latter also occupied the seaport of Astros in Zaconia. They restored the fortifications of Nauplia and other strongholds in their possession. The Republic of St. Mark in 1406 and 1411 concluded treaties with Sultān Sulaimān I, by virtue of which they secured their colonies in the Morea and the East generally. But in the reign of Murād II (1421—1451) danger again threatened from the Turks. The Venetians were however able to take the necessary measures for the defence of their possessions in the Morea. In the districts of Nauplia and Argos as well as in their flourishing Messenian colonies they settled numerous Albanians who loved fighting. In Corinth and Attica also the Albanians were welcomed by the Acciajoli. The Albanian element was therefore very strongly represented in the Morea in the first half of the xvth century; later they spread to the islands around the Morea. In the wars of the Greeks and Venetians against the Ottomans, the Albanians frequently distinguished themselves; on the other hand, their morals left much to be desired. To this day we still can find descendants of these Albanian colonists in the Morea and in the adjoining territories.

After the battle of Angora, at the time when Frankish power in the Morea was declining, the Byzantines vigorously resumed their efforts to reconquer the whole peninsula. Theodoros I of Mystra had previously wanted, with Venetian support, to erect on the isthmus a great hulwark against the Turks which would make access to the Morea impossible for them. Manuel II Palaeologos again took up Theodoros's plan and began to put it into execution with vigour. Not far from Corinth on the isthmus, which was usually called "Hexamilion" in the middle ages, he built a wall 24 stadia long from sea to sea with castles at each end and in the middle and no less than 153 strong towers besides deep ditches. The building material was taken from older walls and defences. In the course of 25 days (April 8—May 3, 1415), i. e. at a most rapid rate, the great wall was completed which, like the

isthmus itself, was called "Hexamilion"; the greatest hopes were built upon it, but they soon proved deceitful. The Turks usually called the wall *Gezmekissar*. In 1416, Manuel II left the Morea after reimposing his suzerainty upon the prince of Achaia Centurione II Zaccaria and humbling several Greek and Albanian archons, some of whom he carried off with him to Constantinople.

The peaceful relations which had existed between the Byzantines and the Ottomans under Sulaimān I and Bāyazīd suddenly ceased when Murād II ascended the throne. In 1423 he ordered the celebrated Pasha Turakhān to clear up the small states. With an army of 25,000 men, which was joined by the Duke of Attica Antonio I as the Sultān's vassal, Turakhān set out from Thessaly to obey his master's orders. The celebrated Hexamilion wall proved an insufficient bulwark against the onslaught of the Janissaries. Turakhān had the most of it destroyed and advanced into the Morea. The despot Theodoros II of Mystra could scarcely have checked the Ottoman flood which swept into his land, plundering and murdering. Mystra, Lontari, Gardiki (on the Makryplagi pass) and other Byzantine and Latin towns fell into Turakhān's hands. But he suffered one serious reverse. The Moreotes caught a portion of his army in the pass of Lonsari, where they were victorious and took much booty or, to be more accurate, recaptured their own property. In the Arcadian town of Tavia (the modern Dawia, on the road from Tribolizza to Wytina), the Albanians assembled and chose one of themselves as their leader and decided to attack Turakhān on his way back from the south. In the battle that followed, the Albanians did not stand their ground but fled. Turakhān pursued them and slew many besides taking some 800 prisoners. These he put to death and, according to the Turkish practice, built towers of their skulls. Heavily laden with plunder, Turakhān returned soon afterwards across the isthmus to Thessaly. He had however in 1423 not yet completed Murād's order to subdue the Christian states of the Morea.

Soon after the withdrawal of the Ottomans, Manuel II Palaeologos besought Murād II for peace and concluded a treaty with him, by which the despot of Mystra was to pay an annual tribute of 100,000 hyperpyra to the Sultān and further to declare his readiness to give up the Hexamilion wall. Venice, whose colonies in the Morea had suffered much from Turakhān's raid in 1423 and were continually troubled by Muslim pirates, recommended all the Christian powers interested to form a united front. This appeal for unity, however, fell on deaf ears. The various Christian rulers of the Morea quarrelled among themselves in spite of the critical times and even took up arms against one another. The Albanian inhabitants followed their own inclinations entirely and even began separatist movements of a political nature.

It is remarkable that the Greek political consciousness was strengthened in the Morea in this period of political confusion. Mystra became the centre of a kind of renaissance and a centre of learning and study of classical antiquity. In this period there appeared in the Morea a great scholar who was a philosopher of the Platonic school and also a fervent patriot of radical tendencies in social and political reforms. He was Georgios Gemistos or as he called himself "Plethon". His teaching was of a mystical nature. It was directed against Christi-

anity, indeed against every positive religion. His followers who are said to have been numerous, formed a secret society. Plethon (d. between Feb. 1449 and July 1450) had also lived in Brussa where he had as a teacher a Jew named Elissaios, who rejected Christianity, Judaism and Islām as the positive religions. In the reign of Sultān Bāyazīd, he was burned at the stake as a heretic about 1390. It is supposed that the teaching of Plethon and the secret society thus formed was suggested by a similar school of thought in old Turkey, that of the "akhis" (cf. Fr. Taeschner, in *Isl.*, xviii. [1929], 236—243; *Islamica*, iv. [1929], 1 sqq.; *Byzantinisch-Neugriechische Fairbücher*, viii. [1929—1930], 100—113 and Nikos A. Bees, *ibid.*, vii. [1928—1929], 237). Plethon's works were disseminated not only in the Christian west and Greek east but also among the Turks. The MS. Enderum 1896 in the library of the Top Kapu Serai contains an Arabic translation of a fragment of Plethon's chief work *Nomo*. This translation is said to have been made by order of Sultān Mehmed II and is anonymous (cf. Ahmad Zeki Pasha, *Sur une Traduction de Yemistos [Plethon], in Bull. de l'Inst. d'Égypte*).

The son and successor of the Byzantine Emperor Manuel II, Johannes Palaeologos (1425—1448), concluded a treaty with Murād II. The Turkish danger now threatened the Morea more seriously than ever. Since Nov. 1427 the despot Constantine Palaeologos had been ruling there. Alongside of this vigorous, enterprising and self-sacrificing ruler (afterwards Byzantine emperor), we find at this time also his brothers Thomas and Demetrius as princes in the Morea. They had less ability and strength of character and facilitated the conquest of the peninsula by the Turks. The three brothers, especially Constantine, succeeded in bringing the whole Morea except the Venetian colonies under Greek rule; but there was no unity among them. In 1429—1430 Constantine took Patras, which at this time was held by the archbishop and clerical prince Pandolf Malatesta as a vassal of Murād II. The Sultān protested but Constantine was able to dispose of the claims of the Sultān and his advisers by a skilful ambassador. This envoy was Georgios Phrantzes, whose chronicle is an exceedingly important source for Greek and Turkish history in the xvth century. In 1431 Turakhān again reached the northern frontier of the Morea to destroy the Hexamilion wall a second time, for it had been restored by the Palaeologos. The first care of Constantine who now ruled over the greater part of the Morea and cherished ambitious plans, had been to restore the defences of the isthmus. His aim was to unite the Morea with the mainland of Greece and if possible to found a Greek national state. In the west a new league had been formed against the Turks by Pope Eugenius IV, Venice and Hungary. At the same time the rising of the Albanians under Skandarbeg roused a strong feeling against the Turks and encouraged the Christians. Constantine Palaeologos who at the request of the Pope, Venice and Hungary had joined their league against the Ottomans in 1444, crossed the isthmus with a well equipped army to invade the mainland of Greece. He had considerable success. He forced the Duke of Athens Neno II Acciajoli, who was a vassal of the Sultān, to recognise his suzerainty and to pay an annual tribute. He occupied many towns (including Thebes, Livadia, Zituni and Lidoriki) and encouraged the Christians of the Pindus to take up arms against

the Turks of the Thessalian plain. An Albanian clan settled in Phthiotis, whose autonomy had been recognised by the Sultān, joined the victorious Palaeologos. The latter also occupied the little town of Witritza (on the Gulf of Corinth) which the Turks had ceded to the Venetians. He installed a chief of the Pindus Wallachians who lived in Fanar (at the foot of the Ithome mountains).

The battle of Barna (Nov. 10, 1444) brought a change in the Balkans which was fateful also for the Morea. The Turks reinforced once again turned their attention to the south. Nerio II Acciajoli of Athens found favour with Murād II after most humbly promising to be his vassal and to pay the usual tribute. In order to save their colonies in the Morea, the Venetians also made a treaty of peace with the Turks soon after the battle of Barna. It thus came about that the Palaeologoi were left to face the Turkish onslaught quite isolated, a danger which they apparently did not clearly realise. After Nerio II Acciajoli had again recognised Turkish suzerainty, Constantine Palaeologos with a large force invaded Attica and besieged Athens. The consequence was that Nerio II Acciajoli turned for assistance to Muḥād II. The latter demanded that Constantine should evacuate not only Attica but also all the Turkish territory which Constantine had seized in the course of 1444 on the mainland of Greece and in southern Thessaly. Constantine replied to Muḥād II through his ambassadors that he would keep the lands he had won. Muḥād II was furious at this manly attitude of Constantine II. Incited by Nerio II and Turakhān, the Sultān resolved on a campaign into the Morea. By his command powerful Turkish forces were assembled in 1446 at Serres in Macedonia from Europe and Asia. Constantine Palaeologos and his brother Thomas also raised a very large army for that time which was assembled on the isthmus. In the winter of 1446, Sultān Muḥād II led his army from Macedonia to the isthmus, without meeting opposition. He encamped at Mingrae (the modern Μινγρές) and began to get his artillery and other arms ready. On his able picked staff was the experienced old Turakhān who, as already mentioned, had been twice in the Morea and therefore knew the country and the people. According to the historian Chalcocondyles (ed. Darké, ii. 114), Sultān Muḥād's camp on the isthmus was the best organised that had ever been known. A bloody battle developed for the gateway to the Morea. The Turks with their artillery bombarded the Hexamilion wall for days. A Serbian Janissary succeeded in leaping over the wall under the eyes of the Sultān and others followed him. The defenders so far as they were not killed by the Janissaries took to flight in a panic. The wall was thus in the hands of the Turks, who entered the Morea either through the gates or through the breaches their guns had made. In the *Chronicle* of Georgios Phrantzes the date of the capture of the Hexamilion wall, the "last bulwark of liberty in Greece", is given as Dec. 10, 1446. The *Chronicum breve* of Joanninus Cartanus gives Dec. 14, 1446, a date which has been accepted as correct by most modern historians.

The brothers Constantine and Thomas endeavoured to collect the scattered and flying troops, but in vain. The brothers therefore fled into the interior of the Morea. Sultān Muḥād II ordered Turakhān

to pursue the Palaeologoi with 1,000 men and he himself with his army marched along the south coast of the Gulf of Corinth towards Patras. He burned the lower town, laid waste the country as far as Clarentza and then turned eastwards to Corinth. In the meanwhile Turakhān had returned from his pursuit of the Palaeologoi with much booty and many prisoners. The Palaeologoi now began to negotiate for peace with the Sultān. They declared themselves ready to cede the lands in Greece proper and in Thessaly which they had acquired in 1444 and to pay an annual tribute. On these conditions the Sultān left them in possession of their lands in the Morea. The Emperor John VIII Palaeologos died on Oct. 3, 1448, and on Jan. 6, 1449 his brother Constantine, the despot of the Morea, was solemnly hailed as Byzantine Emperor in the Metropolitan church in Mystra. Of course he ascended the throne with the permission of Muḥād II, whose tributary he was. An event of importance in the history of the world soon afterwards took place on the Bosphorus. On May 29, 1453, Constantinople was taken by the Turks; the valiant Constantine died defending the city and thus the line of Byzantine emperors came to an end. When his brothers Thomas and Demetrius heard of the fall of Constantinople they sent envoys to Muḥammad II asking to be allowed to retain their lands in the Morea, on payment of the usual tribute. After many humiliations, their request was granted them. The remainder of the period of Palaeologoi rule was a brief one and their authority only nominal. In 1453 30,000 Albanians in the Morea rebelled against the Palaeologoi. In July 1454 Venice sent Vettore Capello to the Morea, to settle certain business of the republic and at the same time to make peace between the Palaeologoi and the Albanians. But their effort failed. In the meantime Muḥammad II had ordered Turakhān's second son Omar to intervene in the Morea on behalf of the Palaeologoi (end of 1453). He succeeded in putting down the Albanians. The Palaeologoi were now able to enjoy their lands as vassals of the Sultān. For a few years they paid their tribute regularly, then they refused it with various excuses. At the same time they endeavoured to form alliances with western rulers against the Turks, a thing to which the Sultān could not remain indifferent.

The rule of the Palaeologoi was gradually approaching its end. The west scarcely troubled itself about the brothers of the last Byzantine emperor, who were not united and yet had to gather their last forces against the Turks. When a fleet belonging to the Pope Callixtus III appeared in the Aegean, Thomas Palaeologos took courage and announced his refusal of tribute to Muḥammad II. Already the latter had received no tribute from the Palaeologoi for the past three years in spite of repeated warnings. He therefore thought it was time to settle matters himself in the Morea and to teach his rebellious vassals a lesson. In the middle of May 1458, Muḥammad II came to the Morea with a large army, laid siege to Tarsus, a village in two parts N.W. of Nemea and N.E. of the Lake of Pheneos, and forced it to capitulate. The citadel of Rupeli in Arcadia, to which many Greeks had fled with their women and children, surrendered after two days' stubborn defence. Muḥammad II turned from Arcadia to N.W. Morea. Patras, the headquarters of Thomas Palaeologos, was abandoned

by its citizens. The garrison left in its citadel did not dare to offer resistance. The Sultān treated the town of Patras very generously. By July 1458 Muḥammad II had reached Corinth after taking Bostitza (Aegion) on the way. On Aug. 6, 1458, its commanders left the citadel to negotiate its surrender with the Sultān. The loss of Corinth to the Turks seriously alarmed the Palaeologoi. The negotiations for peace, which were now begun, were conducted by Mathaios Asanis. The Sultān then made peace with the despots of Morea but the price was a high one. In the beginning of the autumn of 1458, Muḥammad II left the Morea to return to the north via Athens, which shortly before had passed into his hands. The sources do not agree regarding his activity in the Morea in this year. As a rule, Muḥammad's campaign in the Morea in 1458 is regarded, by modern historians also, as one of destruction. It is true, he was generous to the people of Patras and left the Coriuthians unharmed after taking their city. He carried off however a large number of Christians to Constantinople and its neighbourhood. These settled there as artisans and peasants and formed the productive element in the capital of the Ottoman empire.

In the year 1458 Muḥammad II for administrative purposes combined his possessions in the Morea with Thessaly and placed the newly constituted province under the governorship of Turakhān's son 'Omar. The Sultān had hardly left the country when the Palaeologoi again began to stir up trouble. Muḥammad therefore deprived 'Omar of his office in Thessaly and the Morea and decided to go in person to the Morea again in order to be done with the Palaeologoi once and for all and make the whole peninsula a Turkish province. Demetrius Palaeologos was not the man who could defend and save Mystra. He did shut himself up in the citadel with the intention of defending it, but very soon surrendered it to the Turks. Demetrius after many adventures died as the monk Dorotheos in Adrianople in 1470 (cf. Th. Spandugino, *I Commentari di . . . de l'Origine de' principi Turchi*, Florence 1551, p. 43 sq.). After disposing of Demetrius, the Sultān turned his attention to his brother Thomas. After the Turks had occupied Mystra he had not dared to do anything to defend his lands. He was rather seeking to leave a way open to escape from the Morea, if necessary. One town after the other fell almost without resistance into the hands of the Ottomans. Thomas Palaeologos embarked with his family at Porto Longo (at Navarino) for Corfu, which he reached on July 28, 1460 but went on 3 months later to Rome where he died on May 12, 1465. After the disappearance of his chief opponents, Muḥammad II continued his victorious march from Messenia to Northern Morea. He left the Morea towards the end of summer 1460. The plan which he had decided on when he entered the Morea, was practically carried through. Except for a few places, the peninsula was now Turkish territory. Zaganos Pasha was installed as governor of the Morea by the Sultān and entrusted with the reorganisation of the peninsula, which had become much depopulated and was a great deal poorer economically. In 1458 and again in 1460 Muḥammad II combined the Morea with Thessaly for administrative purposes. This union was later dissolved. As early as the xvth century we already find the Morea a sandjak by

itself with 109 ziamets and 342 timar. Down to about 1570, the residence of the governor was by turns in Corinth, Londari or Mystra, then in Nauplion and in 1786—1821 in Triopolitza (cf. below). The division of the country under Turkish rule, usual from the middle of the xvth century, into 22 or 25 provinces or beyliks is partly suggested by nature and partly a survival of the older Byzantine organisation.

There is no doubt that the Turks introduced their own feudal system after their occupation of the Morea. The Turkish-Muslim element in the country was thus able to expand. Even during the first period of Turkish rule (1458—1687), other factors contributed to this, like the immigration into the Morea of Muslims from other parts of the Ottoman empire, the conversion of Christian Moreotes to Islām, the carrying off of Christian women into Turkish harems, etc. While in the north of the Balkan Peninsula and in Asia Minor, countless Christians had adopted Islām either voluntarily or under compulsion, the Christian element in the Morea at the time of the Turkish conquest was morally strong enough to remain in the mass faithful to the Christian religion. Comparatively few Moreotes became Muslims, and these were principally Albanians, who always adopted Islām more readily (cf. thereon: C. Jirelek, *Studien zur Geschichte und Geographie Albanien im Mittelalter*, Budapest 1916). As in Asia Minor, Bosnia, Crete etc., so in the Morea also members of the nobility and middle classes, especially those of Frankish origin, had adopted Islām in order to retain possession of their estates. There were also in the Morea crypto-Christians, as well as people whose Islām was very superficial. These were usually called *murdar* (impure) in the Morea. These superficial Muslims, who continued to retain much that related to Christian worship, lived mainly in what is now the province of Olympia and were almost all exterminated during the Greek War of Liberation (cf. the articles by Photios Chrysanthopoulos-Photakos in the Athens periodical *Εβδομας*, vol. ii., 1886, p. 1). The Barduniots were also for the most part superficially Muslims. As to the survival of the Greek Moreote element, there are theories current in modern literature which can hardly be right. It is said for example that Sultān Muḥammad II's ordinance regulating the relations of the Christian subjects to the Ottoman empire benefited also the Christian Moreotes. But it is wrong to credit Muḥammad II with any such ordinance (cf. Fr. Giese, in *Isl.*, xix., 1931, p. 264 sqq.). It is however a historical fact that the Greek Orthodox Church contributed a great deal to maintain the Christian element in the Morea as in the East generally. The Christian clergy of the Morea were frequently able to maintain a privileged attitude towards the Turkish officials and thus to further the interests of their co-religionists. The Christian Moreotes were also often cleverly able to avoid having their children taken by the Turks for the Janissaries. The Christians of the Morea held this, the "blood tax", to be the greatest degradation they suffered under the Turkish yoke and a dreadful disgrace to their race. After the death of Sultān Sulaimān the Magnificent (1566), the lot of the Christian Moreotes gradually became worse. Ownerless lands were confiscated by the Sultān and given to his soldiers or allotted to the mosques as *wakfs* or given to private individuals as gifts. During the

long period of Turkish rule in the Morea, the largest and best part of the land was in Turkish hands. As a rule, Christians were not allowed to own large estates. The peasants had to pay over annually the fifth of the produce of the land and pay all kinds of annual taxes, were never sure of their property, noneven of their wives and children, and suffered unspeakably in every way from arbitrary Turkish rule.

In view of the abuses of the Turkish authorities, the Christian Moreote preferred to abandon the fertile regions and retire to barren lands and into the mountains, where he could breathe more freely and more easily escape the despotism of his rulers and shape his course of life a little more pleasantly. We thus find that within the period 1460—1821 the mountains of the Morea were predominantly inhabited by Christians. Of the factors which contributed to the survival of Greek culture in the Morea during Turkish rule special stress must be laid on the political concessions which were made to them by the Ottomans. These lay mainly in the freedom to govern their own communities. Greek local government, as we find it during Turkish rule, is said to have been a continuation of old Greek institutions. In the period from 1715 to 1821, if not earlier, the freedom of the Greek community was not infrequently limited by the Turkish authorities. They interfered indirectly in the appointment of local officials and made propaganda for their favourites. It even happened that the *Kodjabashis*, through the influence of the Turks, were not only appointed for a number of years, but were also able to hand down their offices to children and grandchildren. Undoubtedly, those Moreotes were better off who lived in towns or villages which were allotted to the sacred places of Islām or to members of the Ottoman imperial family. The town of Dimitzana in Gortynia for example was originally a *wakf* of Mecca under the protection of the Sultān's mother.

The peace between their Turkish rulers and Christians could only be external. In the Morea also there were the so-called "Klefs" who would not submit to the existing government and took up arms against it. Against them the Turks used the *Armatoli* force, a gendarmerie of Christians organised on military lines. In the period from 1715—1821 the Turks for the security of the country built watchhouses (*derbent*) in which a garrison was stationed to watch those who passed, especially at the passes. The *Derbenekia* (*kuçuk derbent*) between Corinth and Argos and the *Derbenia* of Lontari, the passes between Arcadia and Messenia (*Maknoplagi*; cf. above) were all very important. The *Mainotes* in their wild mountains felt little of the Turkish yoke which weighed heavily on the rest of the Morea. The *Mainote* tribes who were distinguished for their valour, were from 1460 to 1821 in constant rebellion against every foreign power. The Porte found itself forced to recognise officially the independence of *Maina*, in return for which the *Mainotes* were to pay tribute, but did not always do so. Although the Christians in the Morea were exempt from military service, the warlike spirit which they had so often displayed in the Frankish period continued to survive. An eloquent testimony to their love of freedom was the fact that they continually took up arms against their Turkish oppressors, sometimes alone, sometimes with allies.

For a long period after the year 1460, when

Sultān Muḥammad II had made the greater part of the Morea a province of his empire, this land became the scene of desperate fighting between Turks and Venetians, in which the latter had the majority of the Christian population on their side. The great champion of the Christians, Skanderbeg [q. v.], the leader of the Venetian mercenaries, died in 1468. Two years later, Turkish rule over Euboea was firmly established and they could record further successes in the Morea.

In the spring of 1499 a new war between Venice and Turkey broke out. On Aug. 29—30, 1499, Lepanto had to surrender to the Turks. In 1500 Sultān Bāyazīd II ordered Ya'qūb Pashā to blockade Modon with his fleet, while he himself set out by land from Constantinople with a well-equipped army for the Morea. On Aug. 9, 1500 (according to *İlāddi Khālifa*: on 14th Muḥarrar 916), Modon [q. v.] fell after a long siege in the presence of the Sultān. Bāyazīd II turned the cathedrals at Modon and Koron into mosques and offered up thanks in them and gave these towns to Mecca as *wakfs*. He then paid attention to the defences of the newly acquired towns and to the repopulation of Modon. In 1502—1503 Venice concluded a treaty of peace with Turkey in which she surrendered her Messenian colonies and also *Maina*, which had in the meanwhile been taken by a son of Krokondilos Kladas in name of the Republic. In 1532 the Morea became the scene of notable battles. The emperor Charles V had decided to intervene in the Morea. A considerable fleet assembled in Messina in June 1532. The Pope and the Knights of St. John, the Genoese and the Sicilians also showed a readiness to join in the expedition, the leader of which was the Genoese Andreas Doria (Turkish: *Andrevičius*). After repeated and costly attacks, the allies succeeded in taking a considerable part of the lower town of Koron. The Turks who had retired into the citadel of Koron were forced to capitulate. From Koron Andreas Doria turned his attention to Patras, which also capitulated. He then returned with rich booty. Sulaimān I, who was now on the throne, gave the *sandjak* of the Morea to Muḥammad Beg, a son of Yahyā Pasha and commissioned him to reconquer the fortresses taken by Andreas Doria. Sulaimān I declared war on Venice in 1537. Kāsim Pasha, the *sandjak-beg* of the Morea, was commissioned to conquer the Venetian colonies in the Morea. Nūr al-Din Barbarossa had inflicted several defeats on Venice in her colonies, and she had besides every reason to complain of her allies, the Pope Paul III and the Emperor Charles V. In the summer of 1540 Venice made peace with Sulaimān I in order to save what was left of her possessions. The majority of the Venetian colonies in the East, including Nauplion and Monembasia, was the price paid. The Turks endeavoured to populate once more their new possessions in the Morea. About 1550, there were about 42,000 Christian families in the whole Morea. We know nothing definite of the Muslim population at this time. It may be assumed however that, then as later, Muslims were in a minority. Even when Ottoman power was at its height, the oppressed Moreotes, always desirous of liberty, rose against their oppressors. In the xviiith century the lot of the Christians in the Morea is said to have been unbearable. Two Turkish sources of the xviiith century are of considerable importance for the history of the Morea. These are the "Survey of

the World" (*Djihan-numā*) of Hādjdjī Khalifa (d. Oct. 1657) and the Travels (*Siyāhet-nāme*) of Ewliyā Celebi, who visited the Morea in 1668 and 1670. There is no fuller work on the Morea than the latter among Muslim sources. Ewliyā Celebi's narrative was based on personal observation and enquiry and is distinguished by a vividness of description and to some extent by a tendency to exaggerate. In the treatment of the Morea, given in his vol. viii., it is hardly possible to trace his literary sources. What he tells us about Muslim buildings and religious orders is of importance, and his account of the Christians is also of value. He naturally takes the Ottoman point of view (cf. Ewliyā Celebi, *Siyāhet-nāmesi*, vol. viii., Stambul 1928; Fr. Babinger, *G. O. W.*, p. 219 *sqq.*; Fr. Taeschner, in *Isl.*, vol. xviii., 1928, p. 299 *sqq.*). When Ewliyā Celebi visited the Morea, various Muslim orders and corporations had settled there. They included *futuwwa* brotherhoods, dervish orders, some of which were anti-Islamic, and Shī'ī Bektāshīye. The existence of such brotherhoods, which were widely disseminated in the Greek east from the xvth century, can be proved for the Morea as late as 1828 (cf. F. W. Hasluck, *Christianity and Islam under the Sultans*, vols. i.—ii., Oxford 1929).

At the end of 1683 another coalition against the Porte was formed by Venice, Poland, Germany, Russia and the Pope. Francesco Morosini was appointed by his government to begin operations against the Turks as speedily as possible. He was given command of the allied naval forces. After 42 days of fighting by land and sea, Koron was stormed by Morosini. In the period from the late summer of 1685 to July 1686 Morosini, Count Otto Wilhelm von Königsmark and Hannibal von Degenfeld took from the Turks Old and New Navarino, Kalamata, Modon, Zarnata, Passava, Celefa and Vitilo as well as other fortified places in southern Morea. The Ser'asker Ismā'il Pāshā was defeated in several battles and had to retire to the interior of the Morea. Hasan Pāshā, who was in Maina, negotiated with Morosini and surrendered voluntarily. The Turkish garrisons of many towns, on the other hand, offered a desperate resistance. It cost the Venetians and their allies much time and heavy sacrifices to take Nauplion. The capture of the latter contributed a great deal to increase their confidence. By the end of 1687 Morea up to Monembasia was Venetian. Continual Turkish raids, however, continued to disturb the security of the peninsula. By the peace of Carlowitz (Jan. 26, 1699), the Porte had to cede the Morea to Venice. The seas of the Morea and of the mainland of Greece were now open to Turkey as well as to Venice. For the last period of Venetian rule in the Morea (1669—1715 or 1718), the reader may be referred to L. Ranke, *Zur venetianischen Geschichte*, Leipzig 1878, p. 277—361. The services of Venice to the peninsula in the period 1688—1714 must not be underestimated, especially as she had found it at a very low level.

The occupation of the Morea by the Venetians now attracted the attention of western scholars to the celebrated peninsula. The Turkish empire, which had been able to profit a good deal by the troubles in Europe at the beginning of the xviiith century, resolved at the end of 1714 to reconquer the Morea. Many Greeks felt that the Venetians had not respected their rights in religious and family

matters, were hostile to their own government and even wanted the Turks back again (cf. De la Montray, *Voyage*, vol. i., p. 462). Except for a few larger towns which offered a resistance, the land was easily taken by the Turks and so the Morea once again became Turkish. The history of this conquest was written by several contemporary writers.

The peace of Passarowitz (June 10, 1718) ceded Morea finally to the Turks. We are most fully informed about their rule from 1718 to 1821. The extant sources, especially in Greek, enable us to study the period to the smallest detail. After 1715 many Christians again adopted Islām. A census taken in 1720 gave 60,000 male Christians of 11 years of age and over. The Muḥammadan inhabitants are said to have been in the minority at this time. On the other hand, the Turkish element increased in the period 1769—1780 while the number of Christians diminished considerably, as did the total number of the population. From 1715 to ca. 1780 the Morea was governed by a Pāshā, the Morowalesi, who had three *ḡuḡs* and the title of *wazīr*; his period of office was indefinite. He was usually assisted by two other Pāshas, who were under him and were granted two *ḡuḡs*. A change was made in 1780. From this date to 1821 the government of the Morea was no longer given to a particular Pāshā but to a simple *muhāssıl* of the Porte, who was however given the title of Pāshā. The higher offices were held by a *mukabelelidjī*, a *defterkehaya* and a Christian dragoman. Under the official system of administrative divisions, the Morea was divided into 22 districts. In this period Christian local autonomy gained more strength. After the many disappointments they had suffered from the western powers, the Moreotes now looked to Russia to liberate them from the Turkish yoke. From the time of Peter the Great the bonds between Greeks and Russians had been growing stronger. In the middle of the xviiith century, Russian propaganda increased very much among the Orthodox of the Balkans. Under Catherine II, the Russians easily succeeded, with the help of Greek agents, in stirring up Greek notables and clergy in the Morea to rebel against the Turks. Among these the most distinguished was the influential and wealthy Panayotis Mpenakis of Kalamata. This secret propaganda did not escape the Turks. By 1767—1768 the Christians were preparing for rebellion. On Oct. 15, 1768, Turkey declared war on Russia. Russian fleets, whose equipment left much to be desired, appeared in the Mediterranean. On Feb. 17, 1770, Theodoros Orloff landed at Vitylo and received a warm welcome from the Mainotes; but as the ships had neither sufficient men, guns or munitions, the first enthusiasm of the Greeks soon died down. On July 21, 1774, a treaty of peace was concluded at Kuçuk Kainardjī between Russia and Turkey. Full religious liberty and other concessions were granted to the Christian subjects of the Turks. About three months later, the Porte granted a general amnesty to the Christians of the Morea and resolved to clear the land of Albanian bandits. After 1770 the Porte had confiscated a number of Christian estates in the Morea and granted them to mosques and imārets. By the treaties of Kuçuk Kainardjī and Kainali Kanak (10th March 1779), the Turks now promised to return these or to compensate their owners, but the promises were not kept. Nevertheless, the Moreote

Christians benefited considerably by the treaties between Russia and Turkey; this was not however the case with the treaties later concluded (June 10, 1783 and Dec. 29, 1791). The right given the Christians of the Morea to trade under the Russian flag contributed to their economic expansion in the period 1775—1821. Intellectual relations between western Europe and the Greeks of the Morea became closer and closer after 1790. A new generation grew up among the Greeks of the Morea and other provinces. Since the peace of Paris of 1815, the Moreotes and other Greeks had become convinced that only their own efforts could relieve them of the Turkish yoke. Careful preparations were made in anticipation of the right moment. In the spring of 1821 open rebellion broke out among the Greeks of the Morea, when the Turkish governor *Khurshid Pāshā* was besieging the rebel 'Alī Pāshā at Yanina. Soon after the beginning of the rising, in which a prominent part was played by Theodoros Kolokotronis of a famous Kleft family, the Moreotes were masters of the lowlands and even occupied several strongholds. At the end of 1824 however, the Porte commissioned Ibrāhīm Pāshā, the adopted son of Mehmed 'Alī of Egypt, to put down the Greek rising. Ibrāhīm Pāshā landed his forces in Messenia. He was able to restore Turkish rule over most of the Morea, but he failed to put down the Greek rebellion. In the meanwhile, philhellenism had made progress in Europe and America, and it thus came about that the cabinets of Europe began to take an interest in the question of Greek freedom. On July 6, 1827, England, France and Russia concluded a treaty in London, by which the Morea and other parts of the Greek mainland were to form an independent principality but to pay tribute to the Porte. The Turks insisted on their point of view and declined the intercession of the great powers as regards the rebel Greeks. On Oct. 20, 1827, the combined fleets of the above mentioned powers destroyed the Turko-Egyptian fleet at Navarin. On Jan. 18, 1828, Johannes Kapodistrias came to Nauplion, having been elected President of the Greek Free State by the National Assembly at Troezen. On Aug. 6, 1828, England concluded a treaty with Mehmed 'Alī of Egypt for the evacuation of the Morea by the Egyptian troops. French troops, led by General N. J. Maison, soon afterwards landed in Messenia by order of Charles X to drive the Turko-Egyptian troops out of the Morea. In the autumn of 1828 Ibrāhīm Pāshā withdrew to Egypt after turning the Morea into a heap of ruins during his 3½ years in the Peninsula. After long diplomatic negotiations, much quarrelling among the great powers and disagreement between the Moreotes and the other Greeks, Prince Otto, the second son of the philhellene Ludwig of Bavaria, landed at Nauplion on Feb. 6, 1833 as the first king of Greece. Henceforth the Morea formed a part of the kingdom of Greece. During the rising of 1821—1827 and later, many Moreote Muslims adopted Christianity. To this day, many buildings and inscriptions and especially place-names recall the days when the Morea was under the Crescent.

(NIKOS A. BEES) [Βέης]

MORISCOS, (MORESCOS), the name given in Spain to the Muslims who remained in the country after the capture of Granada by the Catholic Kings, Ferdinand and Isabella, on Jan. 2, 1492 and the dethronement of the last ruler of the Nasid dynasty.

It is mainly from Spanish sources that we learn the history of the Morescos down to their final expulsion from Spain. Arabic texts relating to them are very rare: the only record at all detailed is that of the Maghribi al-Makḥari, a contemporary of the exodus of the Morescos, in his *Nafh al-Tib*.

In proportion as the Spanish "reconquest" proceeded, groups of Muslims gradually increasing in

number found themselves under Christian rule. These Muslims for the most part remained attached to their religion and the largest bodies of them were in Aragon and the district of Valencia; they kept up relations with their co-religionists of the kingdom of Granada. But the latter were suddenly placed in the same position with the fall of the capital of the Naṣrīd kingdom. The treaty for the capitulation of Granada contained, it is true, a large number of clauses safeguarding the liberty and property of Muslims, granting freedom for their beliefs and for the practice of the Muslim religion. But these clauses were not long respected and very soon attempts were made to convert the people of Granada under the stimulus of the Cardinal de Cisneros and the Archbishop Hernando of Talavera. Cisneros in particular began his work in 1499: he tried persuasion at first, then he tried to withdraw from circulation by burning them as many Arabic books as possible dealing with different branches of Muslim learning. His efforts did produce a few voluntary converts, but also caused a rising which began in Granada itself in the Albaicín quarter (*al-Baiyūzīn*) and soon spread throughout the hilly country of Alpujarras (*al-Buṣḥārūt*, q.v.) between the southern slopes of the Sierra Nevada and the Mediterranean, and spread to the towns of Almería, Baza and Guadix and the Serranía of Ronda. The result was in 1501 the promulgation of a law which gave Muslims a choice between leaving Spain and adopting Christianity. It does not seem however to have been strictly applied and the Morescoes of the kingdom of Granada, retiring to the mountains, enjoyed practical independence for over half a century.

But this first edict brought about the conversion of the majority of the Muslims of Castille. As to the Morescoes of Aragon, in spite of a few restrictions on their status they were not much disturbed and orders were given to this effect to the Inquisition. Nevertheless in the early years of the xvth century we find the Muslims of Albarracín, Teruel and Manises being converted en masse. The reaction became stronger, encouraged by Joan the Foolish, then by Charles I. In 1526 the Morescoes of Valencia received their order of expulsion. The situation remained somewhat confused down to 1556, a date at which a series of vexatious measures were decided upon in Madrid and began to be applied against the Morescoes who still remained in Spain: the use of the Arabic language was forbidden them; it was in any case losing ground daily, even among the communities which remained Muslim; they were also ordered to abandon their worship, their costume and to modify their manner of life. This time the Morescoes of Granada and Alpujarras did not hesitate to rebel openly. The rising once again started in the Albaicín of Granada in 1568 and spread to the mountains; it was at first led by an individual named Ibn Ūmayya, the Abenhumaiya of the Spanish chroniclers and afterwards by 'Abd Allāh b. 'Abbū (Abenaboo). It took costly expeditions to put down this movement, and the war lasted for several years, conducted successively by the Marquis of Mondéjar and Don John of Austria.

The final decree of expulsion was not issued by Philip II although he had the intention of doing so in 1582. It was Philip III who signed it in 1609 and in this and the following years, a large number of Morescoes — estimated at half a million — had to cross the sea without hope of returning.

Islām was definitely uprooted from Iberian soil.

According to the Arab authors, the great exodus at the beginning of the xvth century was a most cruel hardship for the Morescoes. A large number died on their enforced journey. Many went to France, from which they tried to reach Muslim lands. A few colonies of Muslims from Spain settled in Egypt and Constantinople. But the majority went direct from Spanish ports to North Africa, their nearest refuge, where they were known as *Andalus* and where they were not always welcomed, at least in Morocco, with open arms. The principal settlements were those at Salé and Rabāt on the one hand and Tetwān on the other, where their descendants still form the most prosperous and most industrious section of the population. The *Andalus* of the seaports of the Atlantic coast of Morocco soon began to devote themselves to piracy: the celebrated Moroccan corsairs were almost all Morescoes, who had retained the use of the Spanish language. On the other hand, the Moroccan Sultāns organised corps of picked troops from the *Andalus* and they played a prominent part under the Sa'dians, especially in the conquest of the Sūdān. There was also very soon a large colony of Morescoes in Fās. In Algeria, a number settled in the towns of Tlemcen, Oran and Algiers. At Tunis they were well received by the Dey 'Uṭmān: they settled together in two quarters which took their name (cf. TUNIS, iv., p. 886). Those who had not been town-dwellers settled in little villages which soon became prosperous and still have a characteristic Spanish look. Such are the villages of Solhmān, Grombālia, Djedeida, Zagh-wān, Teburba, Testur and Gal'et el-Andles (*Kal'at al-Andalus*).

Bibliography: The two oldest Spanish sources are: L. del Marnol Carvajal, *Historia de la rebelión y castigo de los moriscos del Reyno de Granada*, Malaga 1600; F. M. de Guadalajara y Xavier, *Memorable expulsión y justissimo destierro de los moriscos de España*, Pampeluna 1613. Among more recent studies we may mention: A. L. Rochau, *Die Moriscos in Spanien*, Leipzig 1853; F. Janer, *Condición social de los moriscos en España*, Madrid 1857 (Fr. transl. by J. G. Magnabal, Paris 1859); R. González Palencia, *Historia de la España musulmana*, Barcelona 1925, p. 95—98.

Arabic sources, in addition to al-Makḥārī, *Nafḥ al-ṭib* (*Analectes*, ed. Dozy, Dugat, Krehl and Wright, ii. 812—815); Muḥammad al-Ṭāhir Ibn 'Ashūr, *Maṣir al-Andalusīyīn*, in *Nashrat al-Djāmi'iyat al-Khaldūniya*, Tunis 1930, p. 16—26. (E. LÉVI-PROVENÇAL)

MOROCCO, a country and Muslim state of northern Africa. The name (Spanish *Marruecos*, French *Maroc*) is a corruption of *Marrākush*, the largest town in southern Morocco [see the article *MARRĀKUSH*].

1. GEOGRAPHY.

Morocco occupies the western part of Barbary; it corresponds to the *Maghrib al-Akṣā* of the Arab geographers [see the article *MAGHRIB*]. Lying between 5° and 15° W. longitude (Greenwich) on the one hand and between 36° and 28° N. latitude on the other, it covers approximately an area of between 500,000 and 550,000 square kilometres. On the North it is bounded by the Mediterranean, on the West by the Atlantic and on the South by the Sahara. On the eastern side it stretches to the Tell and to the plateau of Oran. The boundary which separates it from Algeria is quite conventional and fixed definitely only on the northern side, for a length of 80 miles, from the mouth of the Wādī Kis to *Thenyet al-Sāsi*.

Although Morocco forms one with the northern part of Africa it is chiefly oriented to the West. It is, one might say, the Atlantic slope of Barbary; it is nevertheless a continental country. The coast does not lend itself to a maritime population; the Mediterranean coast is steep and inhospitable, the Atlantic coastline straight and lacking in natural shelters. The estuaries of the rivers are of very little value because of the sandbars which obstruct their entrances. The geological structure is somewhat complicated. Below the folds of the primary age, of which there still exists much eroded evidence covered by secondary deposits, have risen strata contemporary with the Alps. The actual relief which has resulted from these movements of the earth's surface and from these successive modifications consists of folded mountain chains, plateaux and plains. The chains are two in number, the Rif and the Atlas. The Rif is the continuation from the other side of the Strait of Gibraltar of the Baetic Cordillera [cf. *RIF*]. The Atlas chain forms the backbone of Morocco. It breaks into the High Atlas oriented West-North-East, linked by the volcanic massif of *Sirwā* to the Anti-Atlas which lies more to the South, and also to the Middle Atlas running in a diagonal line from the South-West to the North-East, as far as the country of the outer foothills of the Rif, from which it is separated by the corridor of *Tāzā* [see the article *ATLAS*]. From these different chains stretch plateaux. Those of the east connect the High Atlas to the Saharan Atlas of Algeria; those of the West gradually descend towards the Atlantic. Amongst the latter some are only the vestiges of the primary layer raised and eroded; others are composed of sedimentary deposits of varying origins.

In consequence of the oblique orientation of the middle Atlas, which gradually draws away from the coast, the plains, which occupy in Morocco a more important place than in the rest of Barbary, lie mainly on the Atlantic side. They are composed of two series, the one stretching diagonally from the mouth of the Wādī Tensift to that of the Muluya (the sub-Atlantic plains, the plain of *Sebū*, the corridor of *Tāzā*, the plain of the lower Muluya). The other stretches to the foot of the High Atlas (*Hawz of Marrākush*) and disappears in the heart of the middle Atlas.

Climate. The climate of Morocco has been defined as "an Atlantic variety of the Mediterranean climate" (Gentil). This however must not be taken to apply to the whole of the country; the different regions differ as much in regard to temperature as in the distribution of rain. On the Atlantic coast the climate is relatively mild in winter and cool in summer; only small differences are recorded between the coldest month and the warmest (5°7 at Mogador and 10° at Rabat). In the interior on the other hand, the seasonal variations and even the daily ones increase the farther one goes inland. They become excessive in character in eastern Morocco where the climate is distinctly continental. The rainfall is equally lacking in uniformity. Brought by the West and S.-W. winds, the rains are abundant in the autumn, the winter and the beginning of spring but they are very rare during the summer. The Atlantic coast has everywhere a copious rainfall although the quantity which falls decreases as one goes from North to South (Tangier: 32 inches, Casablanca: 16 inches). It also enjoys the benefit of an atmosphere which is saturated with moisture even in summer. The interior is not so well served. The rains diminish in quantity from West to East. The mountain massifs always form an exception. They condense the moisture in the form of rain and even snow which, although it is by no means perpetual, nevertheless covers the high summits of the Atlas mountains until the beginning of the summer. Eastern Morocco on the other hand, isolated by the barrier of the Middle Atlas, is not subject to oceanic influences and only receives, except in the immediate neighbourhood of the Mediterranean, rare and irregular downfalls of rain.

The flora reveals in striking fashion these variations of climate. Forests of evergreen oak, of oak and of cedar clothe the peaks of the High and the Middle Atlas and of the Rif. The cork tree is found in extensive forests in the massifs of the *Za'ir* and *Zayān* and as far as the region of the Atlantic (forest of the *Ma'mūra*). The thuya and the arganier (a tree peculiar to the S.-W. of Morocco) are already more disseminated. Poplars, willows, elms and tamarisks form a fringe of verdure along the wādīs. The olive tree is met almost everywhere in its wild state. But, as the rain-fall decreases, the forest gives place to scrub where the jujube tree and the mastic abound, then to prairie and steppes. The prairie, which hardly goes beyond the limits of the maritime plain, is the home of plants which are used for fodder and of bulbous plants. The steppe is the home of shrubs and bushes (*artemisia*, *drum*, *alfa*) which are adapted to a dry soil and to extreme variations in temperature. The steppes cover a part of the interior plains of Western Morocco and practically the whole of Eastern Morocco, where they extend to the neighbourhood of the Mediterranean. As regards the desert, it is devoid of vegetation in the *hammāda* [see *ḤAḤARĀ*], although the oases form spots of verdure in the midst of the general desolation.

Hydrography. The structure of the country and the relative abundance of rainfall affect the hydrography. Morocco is much richer in running streams and in subterranean waters than any other country in Northern Africa. Wādīs (weds) are here more numerous; their courses are longer and their volume larger. A number of them even deserve the name of rivers. The waters flow in three different

directions: towards the Atlantic, towards the Mediterranean and towards the basin of the Sahara. The Atlantic rivers are in all respects the most important. They can be divided into three groups: those of the North (Lūkkos and Sebū), those of the centre (Bū Ragrag and Umm al-Rabīʿ), and those of the South (Tensift and Sus). The Lūkkos drains the districts of the Ḡharb; the Sebū, those of the Middle Atlas, of the Zahrūn, and the southern slope of the Rif. On emerging from the mountains it takes numerous turns and windings across the alluvial plain and reaches the ocean after a course of 300 miles. Although subject to considerable variation in volume, according to the season, it never dries up completely. It is even navigable in its lower course. The Bū Ragrag and the Umm al-Rabīʿ run for a part of their course through the Central Plateau, the Moroccan "Meseta". The irregularity of their courses makes them useless for navigation. The Tensift, to the North of the High Atlas, the Wādi Sūs to the South, which are much less in volume approach more nearly to the classic type of wādi of Northern Africa. The watercourses of the Sahara (Wād Gir, Wād Ziz, Wād Darʿa) diminish in volume as they go farther away from the mountains and end by disappearing in the sand. The Darʿa alone reaches the Atlantic, but it only flows intermittently in its lower course [see the article DARʿA]. As for the Mediterranean rivers, they are only torrents with violent and rapid floods. The Muluya alone forms an exception. It collects water from the slopes of the Middle Atlas but only reaches the sea in much diminished volume on account of the loss it suffers in crossing the steppes.

Although the common characteristics of all the countries of Barbary are found in Morocco, the greater or less differences in relief, the differences in climate, the peculiarities of vegetation bring in their train a diversity more marked than in Algeria or Tunisia. The combination of these different elements determines the existence of regions which differ the one from the other in their configuration, their resources, the density and manner of existence of their population. We may distinguish six such regions: Northern Morocco, the basin of the Sebū, Central Morocco, the country of the Atlas, Eastern Morocco, and Moroccan Sahara.

Northern Morocco. Northern Morocco comprises a mountainous zone (the mountains of the Rif properly so-called which are to the North-West continued in the "domes" of the Djebāla as far as the Strait of Gibraltar) and regions less rugged in character which to the South-East and the West form the transition into the adjoining countries. The mountains, split into deep ravines by the courses of the wādis, for the most part only leave between their last escarpment and the sea-shore a narrow strip, or a few bays enclosed between the rocky promontories. A few cuttings which run across the ranges afford communication between the two watersheds. The Rif, therefore, must seem to be a world very little accessible to influences from without. Arab influence has scarcely grazed it. The population has always vigorously opposed the political measures of the sultāns as well as the attempts of Europeans to settle themselves there. Crowded into a limited territory, since the highest parts of the mountains are useless, the Rifans find their chief means of subsistence in the cultivation of vegetables and fruits. A number of them gain from temporary emigration an addition to their

resources. They are not nomadic but inhabit villages perched on the slopes. Towns are represented only by Shāfāsawān and Wazzān, religious and commercial centres, situated the one on the northern side and the other on the southern side of the Djebāla. Towards the South-East, plains interspersed with mountain masses extend as far as the Muluya. The lack of rain gives to these plains (Salwān, Gāret) the aspect of steppes more fitted to a pastoral life than to agriculture and a settled life. Towards the West the lowlying coastland, still a very narrow border at the strait of Gibraltar, increases gradually from the North to the South between the Atlantic coast and the last slopes of the Djebāla. This district commonly called the Ḡharb is a corridor. It still keeps in this respect its historical significance, but its economic value is diminished by the stagnation of its waters in the hollows in the flat bottoms of the valleys, and by the insecurity resulting from the proximity of the warlike tribes of the high mountains. A few townships have however succeeded in establishing themselves, either at the crossing of roads such as al-Ḳaṣr al-Kabir [q. v.] or in proximity to the coast like Ceuta, Tangier and Larache [see the articles TĪTĀWĪN, CEUTA, TANGIER, al-ʿARĀʾIṢH].

The valley of the Sebū. The valley of the Sebū lies between the Rif, the Middle Atlas, Moroccan Meseta and the Atlantic. The situation of the region, the abundance and variety of its natural resources makes it of exceptional value. The Sebū links up the whole of it. Through its tributary the Innāwān, the valley of which leads to the pass of Tāzā, it makes communication with the rest of Barbary easy. The mountain masses there (Zahrūn, Zālāgh, mountains of Gerwān) offer no inseparable obstacles to communication. The high plains of Sāʿis and Meknes are contrasted with the lower plains of the Shṛārda and the alluvial plains of the lower course of the Sebū. The influence of the Atlantic is felt far into the interior and combines with the numerous streams that flow into the Sebū and its tributaries and the subterranean waters to promote the development of all forms of vegetation. Forests cover the higher slopes of the mountains; fruit-trees flourish on the sunny slopes and cereals on the high plains; the *merǧa*, temporary marshes produced by the Sebū, in its lower course are used for grazing until they are sufficiently dry to be of use to agriculture. This combination of circumstances, so auspicious for human habitation, has made the valley of the Sebū a centre of intensive settlement. The most diverse ethnic elements have settled together and mixed there. All types of habitation are found as well as all degrees of attachment to the soil from a nomadic to settled town life. Human activities are displayed in the most varied forms (grazing, agriculture, arboriculture, commerce, industry). The country villages, douars of "nuwālas" in the plains, villages of houses of clay in the mountains, are numerous, the towns are flourishing. Mawlāi Idris is the sacred city of Morocco, Sefiū on the borders of the plain of Sāʿis and the high limestone plateau lives by trading with the people of the mountains and the industry of its weavers and makers of slippers. Fās and Meknes are among the great cities of Morocco.

The first of these towns has remained to this day the political, religious, intellectual and economic centre of Morocco. It has resisted all the usual

causes of decline. From all time the ownership of the high plains of the Sebū has been bitterly contested. Their possession has been the condition for the establishment and survival of the dynasties which have succeeded one another in Morocco. Their political significance and role in history corresponds very exactly to their geographical position and economic value.

Central Morocco. Between the valley of the Sebū, the ranges of the Atlas and the Atlantic, covering about a quarter of habitable Morocco, lies the region called by the geologists the Moroccan Meseta. It includes districts of very different character, the only feature uniting them being the possession of a common substratum, the Hercynian paenoplain covered almost everywhere by sedimentary horizontal formations. Differences of structure and of climate distinguish clearly the various parts: the Atlantic plain, the plateaux of the centre, and the interior plain of the Hawz. The maritime plain lies along the Ocean from Rabat to Mogador. Very narrow at its northern and southern ends, it broadens near the centre (Dukkāla, *Shāwiya*) to a width of 50 miles. To the rains and the constant moisture from the vicinity of the Atlantic, the abundance of running streams and subterranean waters, the natural fertility of the soil further adds to the conditions for prosperity. The *irs* or black lands which run in an unbroken line behind the coast from the Bū Ragrag to Tensift are admirably suited for the growth of cereals. The rural population, almost everywhere settled, is therefore considerable. The land of the Dukkāla has 40 people to the square kilometre, a density very much greater than that of the other districts of Morocco. The towns of the coast, Salé, Rahat, Casablanca, Mazagan, Azemmūr, Safi, Mogador [q. v.], benefit by the richness of the hinterland. The exportation of agricultural produce has at all times been a branch of commerce, and has been much developed since the settlement of Europeans there. While facility for communications and the continental relations with the valley of the Sebū opened the plain to Arab influences, the ports of the coast maintained contact with abroad and permitted the infiltration of European influences.

The interior is much more broken. The ground rises gradually up to a height of 2,000–2,500 feet. The predominant formation is plateaux terminating on the north in the very old massifs of the Za'ir and Zayān, which are really mountains in character, in the south in the equally old but less elevated massif of the Raḥāma. These plateaux deeply cut into by the course of the Umm Rabi' overlook on the west side the lowlying coastlands from the top of cliffs, and slope gently on the S. E. to the plain of Tādla. This is a depression, over 120 miles in length, running to the north into the heart of the Middle Atlas where it terminates in a cul de sac, while it broadens greatly in its southern part. A low pass enables communication to be made between the Tādla and the Hawz of Marrākush, a basin shut in by the High Atlas in the south, the Middle Atlas in the east, the Djbilāt in the north and the hills of the Shiyāḍma in the west. The economic value of this inner region is very unequal. On the mountains of the north the rains and streams support forests and the natives devote themselves to cattle-rearing. The plateaux of the centre covered with a surface of limestone have great stretches of bare rock and cultivation

is barely possible. The Tādla is no better favoured except in the zone adjoining the Atlas, watered by torrents descending from the mountains. The plain of the Hawz would also suffer disastrously from drought, if human industry had not averted this danger. An ingenious system of irrigation has transformed the country round Marrākush into a vast palmgrove and resulted in a particularly dense population (100 to the square kilometre). Comparatively large towns (Amismiz, Demnāt, Tānaṣ-luḥet) and especially Marrākush [q. v.] have been enabled to rise and prosper. Between this region, already half Saharan, and the high lying plains of the Sebū, the plateaux of the centre and the mountains of the north which come down to within a short distance of the shore, interpose a barrier which the attitude of its inhabitants makes still more difficult to cross. The Za'ān, the Za'ir, the Zemmur, over whom the authority of the Makhzen has never been very securely exercised, have more than once cut direct communication between Fās and Marrākush. These two cities have been at different periods the capitals of distinct and even hostile kingdoms.

The region of the Atlas. In spite of the marked differences between the different elements of the Atlas, the whole region nevertheless has general characteristics of its own. Between Atlantic Morocco on the one hand and Saharan Morocco on the other, the Atlas lies as an almost continuous barrier. Only the few transverse fractures in the Middle Atlas permit passage between the basin of the Sebū and the Saharan oases, while in the High Atlas valleys running right into the heart of the massif give access to passes opening on the valleys of Sūs and the Wādī Dar'a. Moister and colder, the Middle Atlas is covered with forests which are denser and more extensive than those of the High Atlas. Both however are great water-sheds. From the Middle Atlas come the great rivers of the Atlantic slope (Sebū, Gigu, Umm Rabi', Wādī T'Abid), from the High Atlas the Tasāut and the Tensift. The lands of the Atlas are nevertheless poor. The high mountains offer little to support mankind. Human activities are found mainly in the zones of contact between the mountains and the plains (*irs*) of the Middle Atlas and in some specially favoured valleys of the High Atlas. Except in the Middle Atlas, where the nomadic mode of life results in the exodus in the bad season of the inhabitants who lead a pastoral life, and on the plateaux of the High Atlas on the Atlantic side (Hāḥa, *Shiyāḍma*) the inhabitants of which are mainly engaged in cattle-rearing, the natives are settled. They live in villages perched on the slopes and terraces between wādīs or scattered along the valleys. There is nothing approaching a town in size. These regions, defended by the nature of the country, have almost completely escaped outside influence. they are still almost exclusively the domain of Berber tribes (Berāber in the Middle Atlas and Shlul in the High Atlas). The customs and institutions peculiar to this people [cf. BERBERS] have survived to a greater extent here than in any other region of North Africa. In particular their political organization is still most rudimentary: municipal republics administered by a *ḡama'a* in the Middle Atlas, feudal lordships ruled in patriarchal and despotic fashion by a few powerful families in the High Atlas. The people of these regions have also always opposed vigorously the

central power; the authority of the Makhzen over the Berbers of the High Atlas has never been exerted except through the local chiefs. As to the tribes of the Middle Atlas they have retained to the present day almost complete independence. Even the most vigorous sultāns have never succeeded in forcing them into obedience for any length of time.

Eastern Morocco. Eastern Morocco may be described as the continuation of the Central Maghrib of which it has the distinctive characteristics. In it, as in Orania, we have a *tell* zone and a zone rising by successive stages up to 6,000 feet. The upper valley of the Muluya separates them from the Middle Atlas. The monotony of these vast spaces is only broken by the outcrops of *gūr*, flat beds of rocks cut up by erosion and by the depressions of the *shotṭ* [q. v.]. Beaten by the winds, exposed to the rigours of an extreme climate, these lands are only fit for the pastoral life led by the nomads who raise sheep. The valley of the Muluya is no better favoured, except in the vicinity of the Atlas, where villages surrounded by vineyards with a settled population are found along the tributaries of the river. As to the Tell, hills of no very great height (the most important being that of the Benī Snāssen which does not exceed 5,000 feet) divide it up into compartments occupied by plains (plains of the Awlād Maṣūr, on the coast, of the Trifa, of the Angād which in the south reaches the cliffs in which the high plateaux end). The dryness of the climate frequently gives these plains a steppe-like character; only the western part of the plain of the Angād with a fertile and well watered soil lends itself to cultivation. The nomads come here to procure grain. But this region owes its importance less to its natural resources than to its situation on the natural route between Atlantic Morocco and the rest of Barbary. Uḍḍa [q. v.] which commands the passage, has thus been enabled to escape various causes of decay that have threatened it. A border district, eastern Morocco has always been a disputed region, a march for which the lords of Tlemcen and Fās have contended. The authority of the latter was never solidly enough established here to impose itself on the settled inhabitants of the mountains and on the nomads of the plateaux and plains. Down to the French occupation the country was left to anarchy and disorder.

The Moroccan Sahara. The Moroccan Sahara is the N.W. corner of the Sahara. There we find the general characteristics of this desert region [cf. ṢAḤARĀ²]. Only the parts adjoining the Atlantic and the threshold of the mountains offer favourable conditions for man. In the plain of Sūs [q. v.] shut in between the Atlas and the Anti-Atlas, the rivers and the irrigation canals enable shrubs to grow. The Dar'a, Ziz and Gir are in their upper courses fringed by a thin border of cultivated land, pasturage, vineyards, and in their middle course assure the growth of palmgroves of which the best known, if not the most prosperous, is that of Tāfilālt [q. v.]. The richness — only relative it is true — of these oases is in contrast with the desolation of the rocky plateaux (*hammāda*) which form the greater part of the Moroccan Sahara. These natural conditions determine the mode of life of the inhabitants. Some lead a nomadic life and drive their flocks up and down the plateaux; others are permanently settled on the Sūs, in the high valleys and in the oases. Sūs contains numerous villages and

even towns (Āgādīr, Tiznit, Tārūdānt); the oases have a settled population in the *ḡṣūr*. Those of Tāfilālt, Tamgrūt, Bū Dnīb and Figig carry on a certain amount of commerce between Atlantic Morocco and the Sahara. But this very circumstance has prevented them escaping as completely as the lands of the Atlas from the political and intellectual influence of Western Morocco, especially Tāfilālt where considerable groups of Arab *shurfā* have been long established in the midst of Berber populations. But, although the present dynasty actually came from Tāfilālt, the people of this region have frequently escaped Sharifan authority.

Begun in the last years of the sixteenth century, methodically pursued since the French occupation, the scientific exploration of Morocco is not yet completed. From the results so far attained one thing is clear: the lack of uniformity in the country. Thus its geography may explain to some extent the historical development of the country.

II. HISTORY.

Morocco before Islām. Morocco, like the other parts of North Africa, has probably been inhabited from a very remote period. We know, however, nothing definite about its earliest inhabitants. The traces which they have left, weapons and tools of chipped flint, pottery, rock-paintings, some of which represent animals of the quaternary period, now extinct, megalithic monuments identical with those found all round the Mediterranean basin, give us no information in this respect. At most, we may suppose that the primitive population consisted of emigrants from southern Europe, the Sahara and perhaps from Egypt. The fusion of these diverse elements gave birth to a race, the members of which, frequently different in type and physical features, were united by a community of language. The ancient writers called them Libyans and Moors. They were the ancestors of the present Berbers [q. v.].

The first historical fact known, and that only imperfectly, is the appearance in the xiith century B. C. of the Phoenicians on the Moroccan coast. The sailors of Tyre and Sidon built factories there, where they exchanged goods of eastern origin for local products (cattle, wool, hides) and slaves. But Phoenician influence was exercised mainly through the intermediary of Carthage when it in turn had become the metropolis of a great maritime empire. The Carthaginians rebuilt the ruined factories and added new ones. In the middle of the fifth century, Hanno in the course of his celebrated "periplus" established on the Atlantic coast seven colonies of which one was at the mouth of the Sebū. Rusaddir (Melilla), Septem (Ceuta), Tingis (Tangier), Lixus (Larache), Sala (Salé) were the principal Carthaginian establishments. It does not seem, however, that Carthage sought to extend her power into the interior. She was content no doubt to conclude treaties with the native chiefs and to recruit mercenaries from the country. Morocco remained independent, but the tribes who inhabited it were not organised into states, except perhaps in the east, where ancient writers mention in the period of the Punic Wars the existence of a kingdom of Mauretania or Marusia, extending along both banks of the Muluya.

The destruction of the Carthaginian empire hardly altered this state of affairs. For two centuries Rome administered only the "Province of Africa" directly and left the other regions of Barbary in the hands of native chiefs under a more or less severe protectorate. Northern Morocco shared the fate of Mauretania down to the annexation of this kingdom in 42 A. D. The region to the east of the Muluya formed part of Caesarean Mauretania. The lands stretching from the Muluya to the ocean formed Mauretania Tingitana, an imperial province governed by a procurator. When the empire was reorganised by Diocletian, it was attached to Spain.

Roman Morocco never covered more than a small portion of the modern Morocco. On the

Atlantic coast, it barely extended beyond the mouth of the Bū Ragra, and in the interior to the massif of the Zarhūn. The plateaux and sub-Atlantic plains and the mountains of the Rif, Middle and High Atlas escaped the authority of Rome. It was the same with the Sahara. The expedition of Suetonius Paulinus, who in 41 A. D. advanced as far as the wādī Gir, remained an isolated incident.

To defend herself against the rebellions of her own subjects and to protect the country from Berber inroads, Rome had to keep in Tingitana an army of ten thousand men, to build strategic roads and to establish fortified posts on the sides of the triangle: Sala, Zarhūn, Tingis. With the exception of Volubilis, the importance of which has been revealed by its ruins, methodically excavated in recent years, and which was undoubtedly a centre of influence of Roman culture on the people of the interior as well as a military base, the towns were all on the coast. They were Lixus and Tingis raised to the rank of "*coloniae*", and Ceuta. They owed their prosperity mainly to trade with Spain to which were exported oil and wheat, the two main products of the country. On the whole, however, Rome's influence on Morocco was superficial and has left little trace.

Without any really firm hold on the country, weakened by native risings and by the quarrels between the donatists and the orthodox, Roman rule was to collapse suddenly at the beginning of the fifth century. Germanic invaders, the Vandals, came from Spain and in 429 A. D. conquered without opposition Tingitana which they gave back a few years later to the Romans. Soon afterwards the western empire disappeared and the natives seized the opportunity to become independent. The Byzantines, who in the sixth century destroyed the Vandal kingdom, were content to re-occupy the two strongholds of Ceuta and Tangier. The rest of Morocco was in the hands of the Berbers. The latter were divided into a large number of tribes, of whom the principal were the Ghomāra on the Mediterranean coast, the Barghawāṭa [q. v.] on the Atlantic coast between the strait of Gibraltar and the mouth of the Sebū, the Mīknāsa, in the central district, the Maṣmūda, on the western slope of the High Atlas and on the coast from the Sebū to the Sūs; the Haskūra between the Sūs and the Darfa; the Lamta and Lamtūna on the left bank of the Darfa. These Berbers were all of Ṣanhādja stock; some professed Christianity or Judaism but the majority still followed the old nature worship. The Arab conquest brought them a new religion: Islām.

The Introduction of Islām. The Arabs appeared in the extreme Maghrib at the end of the viith century A. D. Tradition relates that Sidi ʿOkba, the founder of Kaṭarwān, in 684–685 undertook an expedition which carried him as far as the shores of the Atlantic Ocean. This raid, however, if it ever took place, was too transitory to have any permanent results. But at the beginning of the following century, Mūsā b. Nuṣair [q. v.] who had just completed the conquest of Ifrikiya, took Tangier, installed a governor there and set himself to conquer and convert the natives. He succeeded without much trouble. Attracted by the hopes of gain, the Berbers adopted Islām and enrolled themselves in the armies which were invading Spain. They were not long, however, in

rising against the Arabs. Dissatisfied with the share allotted them of lands taken from the Christians in the Peninsula, and exasperated by the exactions of the governors of Tangier, they took up arms in 740 on the call of the porter Maisāra [q. v.]. The rebellion was both religious and political in character. With the same readiness with which they had adopted Islām, the Berbers adopted Khāridjī doctrines from the east, teachings which also appealed to their equalitarian tendencies and to their spirit of independence. The army sent from Syria to establish order was destroyed on the banks of the Sebū (742) and the extreme Maghrib was lost at one stroke to the caliph and to orthodoxy. Berber principalities were organised in the Rif [see *SIDJILMĀSA*]; in the west, the Barghawāta [q. v.] recognised the authority of a certain Šālih, founder of a rival religion to Islām, who had composed a *Ḳurʾān*, that is a sacred book, in Berber. None of these little states was strong enough to impose its authority on the others and to collect all the Berber tribes under one rule.

It looked for a time as if the Idrisid dynasty [q. v.] were to play this part. Idris I and his successor Idris II, actually enforced their authority over the greater part of the tribes of northern Morocco and successful expeditions extended their kingdom from the shores of the Mediterranean to the High Atlas and from the Atlantic to beyond Tlemcen. Ardent champions of Islām, they imposed their religion on those peoples who did not yet practise it or who had abandoned it after once adopting it. The conversion of the extreme Maghrib to Islām is their work much more than that of the Arab conquerors. Zealous defenders of orthodoxy, in spite of their 'Alid origin, they fought the Khāridjīs with the same vigour but did not, however, succeed in completely extirpating the heresy. It is not without good reason that legend has transformed these rude warriors into saints, the one Idris I, patron saint of Morocco, the other Idris II, the patron saint of the city of Fās [q. v.] which he had founded. The building of this city had enduring results. It gave northern Morocco a religious, political and economic centre which it had lacked since the disappearance of Roman rule. Favoured by its position, Fās prospered rapidly. It survived all causes of decline, even the collapse of the Idrisid power.

The Idrisids indeed rapidly declined. The various groups which had recognised the authority of the founders of the dynasty were not long in casting it off and fighting with one another. These rivalries were taken advantage of by the Fātimids of Ifrikiya and the Umayyads of Spain, who during the tenth century A. D. disputed the possession of the extreme Maghrib. With the assistance of the Miknāsa, the Umayyads in the end remained masters of the country. They were in their turn ousted by the Maghrāwa [q. v.], whose chief Ziri b. 'Atiya, abandoning the cause of the Umayyads, seized Fās where his descendants ruled for three quarters of a century.

The Almoravids and the Almohads. The extreme Maghrib seemed to be condemned to anarchy and to be broken up among small factions when the Almoravid invasion came [cf. *ALMORAVIDS*]. After having first of all subjected all the lands south of the High Atlas, then established themselves solidly on the northern slopes, at the foot of which Yūsuf b. Tashfin founded Marrā-

kush [q. v.] in 1062, these Saharan hordes turned to the centre, east and north of Morocco, sweeping everything before them: Fās, Tangier, the Rif, Oran and Ténés fell before them. The Berber principalities of the Maghrāwa, the Barghawāta and Banū Ifren disappeared. In less than twenty years, Yūsuf b. Tashfin became sole master of the extreme Maghrib as far as Algiers. To these territories, already vast, was soon to be added half of Spain. Summoned by the Muslim emirs who were threatened by the king of Castille, Yūsuf b. Tashfin checked the Christian advance at Zallāka (1086), then dispossessed the petty Muslim rulers to his own advantage. Morocco was thus extended across the Straits of Gibraltar as far as the Ebro and to the Balearic Islands. The fortunes of the Almoravids were, it is true, as ephemeral as they were brilliant. In contact with Andalusian civilization, the Saharans rapidly became decadent. The rigid orthodoxy, which had been their strength, relaxed; they in their turn were regarded as infidels, "anthropomorphists" (*nudjassimān*), whom it was lawful and even meritorious to fight. It was in the name of orthodoxy that the Maṣmūda and the Hintāta of the High Atlas under the leadership of Ibn Tūmart and 'Abd al-Mu'min entered into the struggle against the Almoravids.

This struggle ended in the displacement of the Almoravids by the Almohads [see *ALMOHADS* and 'ABD AL-MU'MIN]. In seven years (1139—1146 A. D.) 'Abd al-Mu'min conquered all Morocco; Sidjilmāsa, Oran, Tlemcen, and Ceuta fell one after the other into his hands. Next came the turn of Salé, Fās, and finally of Marrākush, the gates of which were opened to him by the treachery of the Christian mercenaries. Muslim Spain was also conquered with the exception of the Balearic Islands. Even in Africa, the Hammādid kingdom of Bougie was conquered in 545—546 (1151—1152). A few years later (554—555 = 1159—1160) a new expedition led 'Abd al-Mu'min into Ifrikiya and secured him possession of the interior and of the coast, which he took from the Normans of Sicily who had occupied it some time before. Morocco in the strict sense of the word was now merely a province in the vast Berber empire. The unification of these territories under one ruler had important consequences for the Maghrib. It facilitated the diffusion in North Africa of the Hispano-Moorish civilization, which was to be perpetuated in Morocco after it had disappeared from the Peninsula itself. Further it brought into the extreme Maghrib a new ethnic element: the Arab. 'Abd al-Mu'min, as well as his successors, on several occasions deported Ilibali tribes from the Central Maghrib and Ifrikiya, where they continually created unrest, to the sub-Atlantic plains where other groups of Arabs joined them of their own free will.

The Almohad empire was too vast, it comprised regions of too different a nature, peoples too foreign to one another to last long united. The Almohad caliphs were powerless to restrain the separatist tendencies which revealed themselves on all sides. In the first half of the xiiith century A. D., the Almohad empire broke up. Ifrikiya and the Central Maghrib recovered their independence; local dynasties set up in Tunis (Iḥāsids) and Tlemcen ('Abd al-Wādids). The extreme Maghrib ended by slipping away from the descendants of 'Abd al-Mu'min who were replaced by the Merinids [q. v.].

The Merinids. Berbers of Zanāta stock, driven by the Hilālī Arabs on to the plateaux of Oran and into the central valley of the Muluya, the Banū Merin had at first entered the service of the Almohads, then turned against them, when the power of the dynasty began to decline. By repeated razzias they made themselves masters of almost all northern Morocco. After the death of the caliph al-Saʿīd, who had been able to arrest their progress for a time, their leader Abū Yahyā (1243—1258) seized Fās, Meknes, Rabat and Sijilmāsa. The capture of Marrākush (1269) by Abū Yūsuf, successor of Yahyā, marked the final triumph of the Merinids. Heirs of the Almohads, the first Merinids endeavoured to reconstitute the empire of their predecessors. In Spain, they enforced their authority on the Muslims of Andalusia. In Africa, they endeavoured to take the central Maghrib from the ʿAbd al-Wādids. They were successful when Tlemsen, besieged seven times in sixty years, finally fell into the hands of Sulṭān Abū ʿl-Ḥasan (1337 A. D.). Ten years later, the same ruler took Bougie, Constantine and Tunis, but his hold on these was very insecure. At the end of barely a year, Abū ʿl-Ḥasan, defeated by the Arabs, found himself forced to abandon Ifrikiya, the Ḥafṣids returned to Tunis and the ʿAbd al-Wādids to Tlemsen, while the sulṭān's own son Abū ʿInān rose against him in Morocco. Attaining to power, Abū ʿInān renewed his father's efforts. He re-occupied Tlemsen and Tunis, it is true, but could not retain them (1360 A. D.). The Ḥafṣids and ʿAbd al-Wādids recovered their kingdoms almost at once.

Separatist tendencies thus triumphed and on this occasion in a most definite fashion. The extreme Maghrib, the history of which had hitherto been so often that of Barbary, began to live its own life. The Merinid kingdom, while its boundaries in the east were still vague and changing, already corresponded roughly to modern Morocco and the Merinids may be regarded as the first strictly Moroccan rulers. Lacking the religious prestige of their predecessors, they endeavoured to secure the moral authority which they lacked by taking as their patron saints the apostles of Islām in the Maghrib. The cult of Mawlāʾī Idris in the xivth and particularly the xvth century assumed an importance which it has retained to the present day. No less characteristic is the development of intellectual life and the arts. The Hispano-Moorish civilisation never flourished more brilliantly in Morocco than in the Merinid period. The rulers attracted to their court the poets, men of letters and lawyers of the Iberian Peninsula and of the Maghrib. The university of al-Karawayīn attracted students from all the lands of the western Muslim world. Fās, which the Merinids, abandoning Marrākush and Rabat, the capitals of their predecessors, chose as their royal residence, was given splendid buildings by them, palaces, mosques and madrasas. It was at the same time a commercial city in which African and Spanish merchants mixed with Christian traders.

This brilliant exterior, however, was quite deceptive. Merinid Morocco was never able to organise itself on a solid basis. The central power was very weak and did not succeed in imposing its authority everywhere. The accession of each sulṭān was an occasion for outbreaks. The pretenders who arose always found supporters readily, either

among the Arabs or the Berbers. Powerless in the interior, the sulṭāns were no more fortunate in their enterprises against their neighbours of the Central Maghrib or against the kings of Granada. Their prestige and their authority could not survive these checks. The Merinids in the strict sense disappeared from the scene in 1365, after the assassination of the sulṭān by an Idrisid sharif. The Banū Wattās, descended from a collateral branch, the chief of whom seized the power in 1470, had themselves a wretched existence. Their kingdom broke up into a large number of independent little groups, principalities at Fās and Marrākush, Berber republics in the Atlas, Marabout fiefs in the Rif, the Gharb and in Darʿa and Sūs. The sulṭāns were quite powerless to prevent this decomposition.

The Christian offensive and the revival of Islām. Of all the causes which combined to enfeeble and discredit these rulers, the principal was undoubtedly their impotence against the offensive of the Christians against the Maghrib. In 1415 the Portuguese took Ceuta, in 1465 al-Kaṣr al-Ṣaḡīr, in 1471 Tangiers. They thus secured themselves a base of operations in the north while by the occupation of Aṣṭā and Anfā (Casablanca; q. v.) they secured a footing on the Atlantic coast. In the early years of the xvth century, they built fortified posts at Santa Cruz (Agādīr) and Mazagan [q. v.] and took by force of arms Safi and Azemmūr [q. v.]. Holding all places of importance except Larache [see AL-ARṢIYYAH] they brought under their protectorate all the lands near the coast (Shawiya, Hāḥa, Dukkāla), forced the natives to pay them tribute and to hand over to them strategic points up to the environs of Marrākush. Their expeditions had no other aim than plunder, no other result than to exasperate the inhabitants who saw their towns destroyed, their donors burned, their women and children massacred or sold as slaves.

Menaced in the west by the Portuguese, Morocco was threatened in the east by the Spaniards also. The latter completed the *reconquista* by the taking of Granada (1492). Thus free to go further afield, and still fired with the religious enthusiasm of Ximenes, they too went over to fight the Muslims on African soil. The occupation of al-Marsā al-Kabīr (1507) and of Oran (1509) and the establishment of a Spanish protectorate over the kingdom of Tlemsen constituted a serious danger to the Muslims of Morocco.

The threat from the Christians produced an awakening of religious sentiment. This renaissance of Islām in the xvth and xvth centuries, the results of which are still to be felt at the present day, is beyond question the great event in the history of Morocco since the Idrisid period. The way for it had, moreover, been prepared by the Ṣūfī teachings imported from the east and by the development of the brotherhoods in which the adepts of these doctrines were organized. It also found a favourable soil owing to the persistence of maraboutism among the Berbers. The *bahṭul* or the charlatan, who had always been an object of public consideration, became readily identified with the *shaikh*, the possessor of the *baraka*. Co-operating with one another, these pious individuals became the religious leaders of the people of Morocco. They strengthened orthodoxy, excited the zeal of the faithful, preached the holy war, and led the defenders of the faith into battle. The ascendancy

which they exercised, the wealth they accumulated in their *zāwiya*s, made them independent of the *sulṭān*. They thus became temporal leaders also, all the more readily as the sovereigns could not fulfil their office of defenders of Islām owing to lack of energy and also of means. The activity of these religious leaders was always of a local nature; it was only effectively exercised within a limited area and did not extend over the country generally. The religious solidarity thus established, the kind of common conscience thus created, did not put a check to the political decline until the time when the Sa'dian *shorfa* took direction of the movement and exploited it for their own benefit.

The *Sharifian* dynasties. A. The Sa'dians [q. v.]. The Sa'dian *shorfa* benefited by the prestige which the religious awakening had restored to the descendants, real or presumed, of Fāṭima, the daughter of the Prophet. Coming from Arabia at the end of the xivth century and settling in the valley of the wādī Dar'ā, while another branch of the family settled at Tāfilālt (Ḥasanī or 'Alid *shorfa*), they were not long in acquiring a considerable influence over the tribes of the south. Thus they were naturally led to support the people of the south, who were exposed to the attacks of the Portuguese of Santa Cruz. In 1511, the *sharif* of Tāgmādāret, requested by the Muslims to put himself at their head against the Christians, agreed to do so. Supported by the marabouts who gave him valuable assistance, he began hostilities against the Portuguese. The holy war regularly waged secured to his sons, Aḥmad al-A'rādī and Muḥammad al-Mahdī, the possession of the whole of southern Morocco up to the Umm al-Rabi'. The intervention of the Merinid *sulṭān* in the quarrels which broke out between the two brothers only resulted in his own downfall being hastened. Muḥammad al-Mahdī took Fās in 1550; the foiling of an attempt to restore the Merinids in 1554, with the help of the Turks of Algiers, secured the definite triumph of the Sa'dians.

The coming of the Sa'dians meant a regular reconstitution of Morocco. Muḥammad al-Mahdī and his successors imposed their authority on the whole country, protected it against foreign foes and increased the extent of their territory by distant conquests. They finally triumphed over the difficulties created by the Turks of Algiers, and at the battle of al-Ḳaṣr al-Kabir in 1578 arrested a counter-offensive of the Portuguese. Aḥmad al-Manṣūr (1578—1610) occupied Timbuktu [q. v.] and destroyed the Askia empire of Gao. For half a century the Moroccans were masters of the Western Sūdān, from the banks of the Senegal as far as Bornū. The plunder taken on this campaign of conquest enabled the *sulṭān* to keep a splendid court, the hierarchy of which was modelled on the Ottoman court, and to adorn his capital Marrākush with magnificent monuments.

To the same period also belongs the organisation of the *makhzen* [q. v.]. The early Sa'dians had relied for support on the Arab tribes of the south. To these al-Manṣūr added the Arab tribes of the region of Tlemsen and Uḍja driven into Morocco by the Turkish conquest. These *shraḡa*, as they were called, received lands around Fās in return for the military service they were forced to give. Reinforced by a regular army formed of renegades, Spanish Moors and negroes, trained by Turkish deserters, the *makhzen* provided the

sulṭān with the means of preserving order and levying taxes; it was thus the essential instrument of *sharifian* government and tended to become the government itself.

This instrument proved sufficient in the hands of an energetic ruler but was inefficacious in weaker hands and in moments of crisis. The Sa'dians very soon found this out. The tendencies to disruption which had been held in check by the energy of al-Manṣūr broke out again on his death. The dispute for the throne set his sons against one another. One of them, Zaidān, ended by triumphing over his rivals but could not prevent the break-up of the empire. Larache was occupied by the Spaniards; Fās cast off *sharifian* authority. The Andalus of Rabat and Salé [q. v.], enriched by their piracy, formed an independent republic. Finally the Sa'dians, although they had owed their elevation to the religious movement, now found the marabouts rising against them. Delivered from the restraints which the distrust of al-Mahdī and his successors had placed upon them, the latter began to gain more and more hold over the people and contributed to the ruin of the *sharifian* authority. Sūs was in the control of one of them, Sidi 'Alī; Tāfilālt was under the Ḥasanī *shorfa*, the Gharb under al-'Aiyāshi, leader of the "volunteers of the faith". In the centre, the power of the marabout of Dila' (a *zāwiya* on the upper course of the Wādī l-'Abīd) increased. Muḥammad al-Hādīdj, their leader, victorious over the Sa'dians and over al-'Aiyāshi, lord of Salé and Fās, seemed on the point of founding a new Berber empire from the Atlantic to the Muluya. Incapable, in spite of the support given them by the English and Dutch, of disposing of their adversaries, the Sa'dians now held only Marrākush and its immediate environs. The last representative of the dynasty died in 1660, assassinated by the *shaikh* of the tribe of Shabbānāt.

B. The Ḥasanī *Shorfa*. The disintegration of Morocco was arrested by the coming of the Ḥasanī *Shorfa*. The latter had taken advantage of the disorder to assert their authority in Tāfilālt, then by expeditions, which partook of the nature of brigandage as much as of warfare, they had conquered eastern Morocco. One of them, Mawlāi Muḥammad, had even tried, without success, it is true, to take Fās from the Dila'is. His successor Mawlāi al-Rashīd (1660—1672) was more successful. He took Fās, disposed of Ghailān, an adventurer who had established himself securely in the Gharb, destroyed the *zāwiya* of Dila', reconquered Marrākush, thus rebuilding as it were piece by piece the *sharifian* empire. Installed by force of arms, the new dynasty recognised the necessity of securing the moral prestige which their origin could not give them. They therefore sought to attract to their side the *sharifian* families. They heaped favours on the *shorfa* of Wazzān, whose patronage was a guarantee even for the rulers.

The work begun by Mawlāi al-Rashīd was continued and brought to a successful conclusion by his successor Ismā'il (1672—1729). During the first fifteen years of his reign, he did not cease to wage war on the rivals who disputed the districts of Marrākush and Sūs with him. While fighting his enemies, he was engaged in building up an army which would work his will. To the *makhzen* formed by the *Shraḡa* and Uḍāya he added a body of black slaves, the 'Abid al-Bukhārī (Būākher), the property

of the sultān; their children were specially trained for military service. The number of effectives in this corps by the end of the reign numbered one hundred and fifty thousand men. The sultān was thus able to reduce to obedience the Berbers of the Atlas and the upper Muluya. Defeated and disarmed, the latter were kept in control by garrisons placed in *kašbas* built at the exits to the valleys or commanding the lines of communication. The notables whom the sultān had taken into his service or united to himself by matrimonial alliances forced their tribesmen to live in peace. The *bilād al-makhzen*, i.e. the country where tribute was regularly paid, extended over almost the whole of the extreme Maghrib. The pacification of the interior did not cause Mawlāi Ismā'il to forget the obligations imposed on every Muslim ruler to fight the infidels. He therefore continued the holy war against the Christians of the coast. He recaptured al-Mahdiyya, Larache, Aṣīlā, and Tangier, evacuated by the English in 1684, but could not take Ceuta from the Spaniards in spite of a siege or rather uninterrupted blockade for seventeen years. He was no more successful in his enterprise against the Turks of Algiers, who disputed with the Moroccans the possession of the plains of eastern Morocco and the *ḡūr* of southern Oṭān. The expeditions which he directed against the Algerians ended in failure, and the lower course of the Muluya continued to be the boundary of the sharifian empire. In spite of his lack of success here, Mawlāi Ismā'il is nevertheless the great figure of the Ḥasanī dynasty, the model the Moroccan sultāns have set themselves to the present day. Morocco, however, remained what it was before, i.e. an aggregation of different groups, the cohesion of which depended on the personal energy of the sovereign. The processes of administration were in no way altered: the sharif enforced obedience by drastic executions; he squeezed his subjects to the utmost to get the money necessary for the building of his capital Meknes [q. v.], the palaces of which were built by the forced labour of the natives and of Christian slaves.

On the death of Mawlāi Ismā'il, a reaction set in. For thirty years his sons fought with one another. The real masters of the situation were the 'Abid who made and unmade sultāns as they pleased. One of them, Mawlāi 'Abd Allāh, was proclaimed and deposed six times. He succeeded, however, in triumphing over his competitors by playing the Berbers off against the 'Abid, the importance of whom gradually diminished with the wars. The remedy, however, was not much better than the disease. This period was for Morocco one of misery and ruin. The authority of the sharifs emerged much weakened from it.

Mawlāi Muḥammad (1757—1792) succeeded, however, in restoring it. Inheriting the energy and vigour of his grandfather Ismā'il, he brought the rebel Berbers back to their allegiance, and by the taking of Mazagan in 1769 destroyed the last trace of Portuguese power on the Atlantic coast. Convinced, on the other hand, that the weakness of the central power was mainly due to a lack of financial resources, he endeavoured to procure money by encouraging the development of foreign trade. He inaugurated a mercantile policy, concluded treaties of commerce with Denmark, Sweden, England, and France and endeavoured to attract foreign merchants to his kingdom by founding for them the town of

Mogador [q. v.] in 1764. Heavy taxes, however, severely impeded the progress of this policy. Morocco remained a poor country and did not open itself, as had been hoped, to European penetration. It also remained in a perpetual turmoil. Under Mawlāi Yazid (1792—1794) the country was once more handed over to anarchy. Mawlāi Slimān (Sulaimān) (1794—1822), after at first being able to restore order, had to spend the last ten years of his reign in putting down the continual risings of the Berbers of the middle Atlas; in the course of one of these expeditions he actually fell into the hands of the rebels. This rebelliousness caused the sultān much misgiving; he also wanted to prevent the infiltration of foreign and anti-Muslim influences which he believed would aggravate it. He forbade his subjects to leave the country and restricted to a minimum their intercourse with Christians. The diplomatic and consular agents were relegated to Tangier, and access to the interior was made almost impossible for Europeans. His successors followed his example. Down to the end of the nineteenth century, Morocco was more rigorously closed than it had been in the time of the Merinids and Sa'dians and even in the early days of the Ḥasanī sharifs. In spite of this systematic isolation, the sultāns had nevertheless to face the same difficulties as Mawlāi Slimān and had no more success than he in overcoming them.

For half a century the domestic history of Morocco was a series of rebellions which the sovereigns had great difficulty in suppressing. The regions remote from the centre, Rif, Tāfilālt, Figig, eastern Morocco, escaped the authority of the makhzen. In the very heart of the country, the Berbers cut communications between Fās and Marrākush, forcing the sultāns when they wanted to move from one capital to the other to make a great detour by Rabat. The empire broke up more and more. Mawlāi al-Ḥasan (1873—1894) postponed for a few years the inevitable collapse. His reign resembled that of Mawlāi Ismā'il. At the head of his army, the artillery of which had been reorganised by a French military mission, he was continually in the field raiding the rebels and tearing down *kašbas*. He re-established order in the region of Ūjda, forced the people of Sūs to recognise his *kā'id*s, reduced to obedience the Za'ir and Zayān, endeavoured to extend the makhzen country by expeditions against the independent Berbers, endeavoured to develop his influence in the Saharan regions and to restore his authority in Tuāt. But he died before completing his task and all had to be begun again.

Morocco and the Christian powers. The situation was the more critical that the fate of Morocco could no longer be a matter of indifference to the European powers. It increased the cupidity of some and aroused the cupidity of others. In spite of their desire for isolation, the sultāns had not been able to break every link with Europe. They had also to take account of the proximity of Spain, established for three centuries in the "presidios" of the Mediterranean coast, and of the French who had replaced the Turks in Algeria [q. v.]. The conquest of the old Regency, destroying all the sharifs' hopes of extension eastwards, had caused great irritation in Morocco. 'Abd al-Kādir [q. v.] found followers among the peoples of this country and support hardly disguised on the part of the makhzen. This hostile

attitude resulted in the Franco-Moroccan war of 1844. The *sharīfian* army was crushed at the battle of Isly, the ports of Tangier and Mogador bombarded. The moderation of France alone enabled the *makhzen* to come fairly well out of this unfortunate escapade. Henceforth the relations between France and Morocco remained peaceful, although the impotence of the *sharīfian* government to guarantee security on its borders forced France to military demonstrations like the B. Snāssen campaign (1859) and the wādī Gū expedition (1870). Spain in turn being unable to obtain satisfaction from the attacks directed against her garrisons decided also to resort to arms. The campaign of 1859—1860, ended by the victory of O'Donnell, revealed the military weakness of Morocco. The treaty of Tetwān (1860) granted to Spain, along with some trifling territorial aggrandisement, an indemnity of 100,000,000 reals. To pay this debt, the *sharīfian* government had to raise a loan in London on the security of the Moroccan customs and to accept the control of European commissioners. For the first time foreigners intervened in the domestic administration of the empire. The breach thus made was continually enlarged. The exercise of the right of protection, the erection of a lighthouse on Cape Spartel, served as a pretext for diplomatic negotiations and for the extension of international control. European ambitions were not dissimulated. In order to protect itself against them, the *makhzen* tried to play one off against the other and confined itself to granting, as it did at the conference of Madrid (1880), concessions devoid of all practical significance. Mawlāi al-Ḥasan excelled in this difficult game and the vizier Bā Ahmad, who directed affairs during the early years of the reign of 'Abd al-'Aziz, Mawlāi al-Ḥasan's successor, displayed no less skill. Morocco was thus the object of a very keen struggle for influence. England wanted to maintain her economic preponderance along with the control of the Strait; France wanted to ensure the security of her Algerian possessions and of the roads leading to the Saharan oases occupied in 1901—1902; Spain appealed to her 'historic rights'; Germany lastly was preparing to seize the opportunity to acquire openings for her commerce and emigrants.

The Moroccan crisis and the establishment of the French protectorate. Such a position could not last. The imprudences of Sultān 'Abd al-'Aziz precipitated the crisis. The whims of the sovereign and his immoderate desire for European innovations displeased the stricter Muslims. The modifications in the fiscal policy made by the *ṭartīb* disturbed the people already taxed to the utmost. Rebellion broke out everywhere. A pretender, the *ṣūḡī* Bū Ḥamāra, rose in the region of Tāzā and routed an army sent against him. It was in vain that France by the agreements of 1901 and 1902 endeavoured to organise the activities of the *makhzen* against the rebels and to postpone the inevitable catastrophe. On the failure of this effort, France decided to arrange with England and Spain to settle the Moroccan question and prevent the dismemberment of the empire. In return for recognition of the protectorate *de facto* exercised by England in Egypt and the granting to Spain of a sphere of influence in northern Morocco, these two powers recognised the right of France to act as her interests best demanded. France hastened to propose to the

sultān a plan for reforming the *sharīfian* administration. The intervention of Germany prevented its realisation. On March 31, 1905, William II landed at Tangier and in a sensational speech posed as the defender of the independence of the sultān. On the advice of the German representative, 'Abd al-'Aziz appealed for the constitution of an international conference to study the reforms to be introduced into the Maghrib. The conference met at Algeciras (Jan. 15—April 7, 1906) and affirmed the three principles of the sovereignty of the sultān, the territorial integrity and economic freedom of Morocco. It did not, however, settle the Moroccan question. The two international bodies which it decided to set up, the police for the ports and the state bank, both capable of being of great service, could not take the place of the general reforms necessary for the salvation of the empire. Disorders continued, acts of hostility against Europeans in Morocco itself and acts of brigandage on the frontiers increased in number. Not being able to obtain satisfaction for outrages on its subjects, the French government ordered the occupation of Ujda and Casablanca in 1907. The country was then pacified around these two centres and order restored in eastern Morocco and in the *Shawiya* to the great benefit of the natives themselves. The Spaniards in their turn for similar reasons intervened in 1908 in the adjoining region of Melilla and after a severe campaign in 1909 occupied Salwān and a number of strategic points.

During this period war broke out between 'Abd al-'Aziz and his brother Mawlāi 'Abd al-Ḥafīz, proclaimed sultān at Marrākush and then at Fās. Supported by the anti-foreign party, the pretender was victorious. All the powers, including France and Spain, recognised him, after he had promised to respect the agreement of Algeciras, the international treaties and all the engagements entered into by his predecessors. France and Spain announced their intention of not prolonging their occupation of *sharīfian* territory. The Franco-Moroccan agreements of March 4, 1910, and the Hispano-Moroccan of Nov. 19 of the same year, stipulated that the occupation should cease as soon as the *makhzen* should have a force sufficient to guarantee the security of life and property and peace within its frontiers. This settlement seemed all the more desirable as there had been occasional friction between France and Germany which had only been smoothed over with great difficulty, the most serious being the affair of the deserters from Casablanca in Sept. 1908. A disquieting state of tension remained between these two powers, although France had endeavoured to give satisfaction to Germany in signifying, by the agreement of Feb. 8, 1909, her willingness not to impede the economic freedom nor hinder the development of German interests.

The aggravation of the situation in the interior hastened the dénouement. The sultān's rule was no more effective than that of his predecessors; the exactions of the *sharīfian* agents in the spring of 1911 provoked a rising of the Arab and Berber tribes in the region of Fās. Besieged in his capital and on the point of succumbing, the sultān appealed to the French. They decided to send an expeditionary force to the help of the sultān but ordered its commander to avoid any injury to the independence of the sultān and any occupation of new territory. Vigorously commanded by General

Moinier, the military operations had the desired effect. Fās was relieved on May 21, and after certain police operations necessary to secure the peace of the district, the expeditionary force returned to the coast. But, while the danger was thus banished from the interior, unexpected complications resulted. Spain, taking advantage of the occasion to take possession of the sphere of influence reserved for her by the agreement of 1904, established herself in Larache and al-Ḥaṣī. Germany, feeling the moment was decisive, claimed compensation in her turn and sent a warship to Agādīr. This demonstration provoked the greatest alarm in France and in Europe generally. In the end, however, a peaceful settlement was reached. After four months of difficult negotiations, the agreement of Nov. 4, 1911 put an end to the dispute. Germany abandoned all political claims to Morocco and admitted with certain reservations, chiefly of an economic nature, the principle of the French protectorate. There was no longer any obstacle to the establishment of this régime, which the sultān accepted by the treaty of March 30, 1912. This diplomatic document stipulated the maintenance of the sovereignty of the sultān, the representation of and protection by French diplomatic and consular agents of Moroccan subjects and interests abroad, the carrying out, with the collaboration of and under the direction of France, of a number of administrative reforms, judicial, financial and military, intended to "give the shāfiʿian empire a new régime, while safeguarding the traditional prestige and honour of the sultān, the practice of the Muslim faith and the institutions of religion".

The French protectorate now extends over the whole of Morocco, but the Spanish sphere of influence enjoys by the agreement of Nov. 27, 1912 complete autonomy from the administrative and military point of view, while Tangier and its environs form an international zone, the status of which is not yet definitely regulated.

The establishment of the protectorate was to have had as its first result the restoration of the authority of the shārif, whose support was essential for the carrying out of the reforms. This could only be attained by a considerable effort. The central power was weaker than it had ever been at the time when the conclusion of the protectorate treaty put an end to the crisis. The *bilād al-makhzen* was almost non-existent. France had to conquer Morocco for the sultān. The name of Maréchal Lyautey, appointed High Commissioner and Resident General, will remain inseparable from the history of the pacification of Morocco, like that of Bugeaud in the history of the conquest of Algeria. Very difficult in itself, for it brought the French into contact with warlike tribes, some of whom had never recognised the authority of the makhzen, the task was further complicated by events abroad. Order had hardly been restored around the chief towns, Fās, Meknes, Marrākush and communication restored between eastern and western Morocco, when the War of 1914 broke out. For a moment it was feared that the French were going to abandon the interior and fall back on the coast, but the progress of the pacification of the country was only slowed down, not interrupted. All the conquered positions were retained and the rebels held on all fronts. The counter-offensives of the rebels in the Tāzā corridor, along the Middle Atlas and in Sūs were crushed. The War finished,

the offensive was resumed to reduce the districts still unsubdued (Middle Atlas, south of the High Atlas, upper valley of the Mulya). Three years of difficult fighting (1921—1924) ended in the occupation of "all Morocco of value", i. e. those regions of economic, political or military importance. The Rifan offensive in 1925, however, threatened to compromise all the success achieved. A Rifan chief, 'Abd al-Karīm, had gathered around him the greater part of the tribes of northern Morocco and inflicted serious reverses on the Spaniards and forced them to abandon a portion of the territory which they had occupied. Crossing the Spanish zone, he invaded the valley of the Wargha and threatened Fās. The resistance of the posts echeloned along the frontier gave reinforcements time to reach the scene of hostilities. Checked in the autumn, the Rifan advance was definitely crushed in the spring of 1926 thanks to the combined action of France and Spain. At the moment of writing, the conquest may be regarded as completed: only a few tribes of the Central Atlas and of the oases of the Sahara have not yet been reached by the French, but their reduction is only a matter of time.

The administrative reorganisation has kept pace with the pacification. The old machinery has been retained but submitted to a control which guarantees the natives against abuse of their power and excesses by the agents of the makhzen. Technical services have been created to give the country the works necessary for its economic life. The remarkable results obtained in all fields have been facilitated by the influx of European immigrants and capital. Morocco seemed condemned to vegetate. Now it is being completely transformed. A new epoch is beginning, very different from any that have preceded it.

III. POPULATION.

a. Total population and density. It is difficult to fix with any precision the total population of Morocco. The attempts made at a census in recent years in the parts subject to the *sharīfian* makhzen enable, it is true, comparatively accurate estimates to be made for the greater part of the country and corroborate for most districts the estimates made by European travellers before the establishment of the French protectorate. But the parts of the *sharīfian* empire still outside the authority of the makhzen and those whose southern boundaries are not exactly known have not been seriously investigated from this point of view, and until they have been scientifically studied it will not

be possible to estimate the total population of Morocco to within a few hundred thousands.

The total usually given is 5,000,000, of whom a tenth, 500,000, are in the zone of the Spanish protectorate. This population is very unequally distributed and its density varies with geographical conditions. The most thickly populated part is that of the plains of western Morocco between the massif of the *Djāla* in the north and the Great Atlas in the south: *Gharb*, *Shāwiya*, *Tādla*, *Dukkāla* and *Abda*. The density of the population also varies with the fertility of the soil. The population of this region is estimated at two fifths of the total. The mountainous regions, *Djāla*, *Rif*, *Middle Atlas* are not thickly populated, as we might have expected from the comparatively dense population of Kabylia, in another mountainous region of North Africa. As to the Sahara zone, outside the belts of oases in the *Wādī Gir*, the *Wādī Ziz* (*Tāfilālt*) and the *Wādī Dar'a* (*Dra*), it is very sparsely inhabited.

b. Elements of the population. The population of Morocco consists for the most part of Berbers and Arabs, the former being the older element and the latter invaders. As to the Berbers, who do not seem to be a homogeneous race and whose origin is obscure, see the separate article on them. As to the Arabs, they are in a minority, but it is often difficult to attribute an exact ethnic origin to certain tribes or confederations, so much have the Arabs and Berbers become mixed since the Muslim conquest, and intermingled either by peaceful or warlike methods. It will be more prudent and will give a more accurate result if we distinguish in Morocco between those who speak Arabic and those who speak Berber (see below VII. LANGUAGES). The former live entirely in the plains, while with the exception of the massif of the *Djāla*, the inhabitants of the mountains speak Berber.

1. Berbers. Three main groups may be distinguished among the Berbers of Morocco: in the north the *Rifans* and the *Benī Znāsen*; in the centre the *Znāga* (*Ṣanhādja*) and the *Brāber* (*Barābir*), who form the population of the Middle Atlas; the third group is that of the *Shlūḥ* [cf. the article *SHILUH*] who occupy the western part of the High Atlas and of the Anti-Atlas, as well the plain of *Sūs*. In addition to these main groups, we may mention the *Djāla*, arabicised Berbers, to the N.W. of *Fās*, and the *Ḥarāṭin* (plur. of the Arabic *ḥarfūm*), who seem to be regarded as an intermixture of Berbers and *Sūdānese* and form the basis of the settled population of the zone of the Saharan oases.

2. Arabs. The early invasions at the time of the Muslim conquest do not seem to have appreciably modified the ethnology of the country. Down to the xiiith century A.D., the country districts of Morocco were almost completely Berber; it was the great Almohad ruler *Abd al-Mu'min* [q.v.] who was the first to introduce into Morocco *Hilālī* Arab tribes hitherto settled in the Central Maghrib or in *Ifrikiya*; these importations, continued by the successors of this prince and by the Merinid dynasty, soon drove the Berber element into the mountains or absorbed and arabicised it. Evidence of such assimilation is still found in the fact that tribes with clearly Arab names contain sections whose names show their Berber origin.

These Arab tribes, who are all settled in the

plain, may be divided into two main ethnic groups: the Banū Hilāl [q. v.] and the Ma'kīl. The latter occupies almost exclusively the valley of the Upper Muluya as well as the lands south of the Atlas. The Banū Hilāl occupy the sub-Atlantic plains and the steppes of Eastern Morocco.

3. Jews. There are about 150,000 Jews in Morocco, mainly living in the towns. There are also a considerable number among the tribes of the Great Atlas. They also form the principal element in the population of the two little towns of Debdū and Demnāt [q. v.]. The origin of the earliest elements in this Jewish population is obscure: it is difficult to ascertain whether they were Jews who had migrated from Palestine or were judaïcised Berbers. The modern element is made up of Jews who fled from Spain to Morocco in the xvth century. The former call themselves *phīlīshīm* (Palestinians) and are called *forasteros* (foreigners) by the Spanish immigrants, who are practically all settled in the towns of the coast and are rapidly becoming europeanised.

4. Miscellaneous elements. The negroes, of whom there are considerable numbers in Morocco, do not however form a distinct group there. In the north we find many, who are almost all of slave origin. The predilection of the townsmen of Morocco for black concubines, noted for their domestic virtues, has brought into the population, especially in bourgeois circles, a very considerable amount of negro blood. To the south of the Atlas in the oases, the intermarriage of negroes and Berbers has produced the *Ḥarāṭīn*. Finally the negroes of the Sūdān, since the Middle Ages, have always been esteemed as mercenaries to form the imperial guards, especially since the taking of Timbuktu by the armies of the Sa'dian Sulṭān Aḥmad al-Manṣūr [q. v.].

Large numbers of Muslims from Spain, whether of Arab origin or descendants of Christian inhabitants of the Peninsula, have contributed to form the population of the towns at various times: Cordovans banished by al-Ḥakam I at the beginning of the third century A. H. after the "revolt of the suburb" and Muslims expelled from Spain at the "Reconquista".

We must not omit the influence that may have been exercised on the population of Morocco by Europeans (renegades, who had adopted Islām, mercenaries recruited outside Morocco and settled in the country), and finally we may note that frequently the sultāns have purchased women for their harems in Constantinople.

IV. SOCIAL AND ECONOMIC LIFE.

a. Country. The population of Morocco, although for the most part rural, nevertheless has a larger proportion of town-dwellers than Central Barbary and, like the rest of North Africa, might be divided into nomadic and settled; this division does not at all coincide with that into Arabs and Berbers; there are still nomadic Berbers, while certain Arab tribes are becoming settled on the lands which they cultivate.

It has been shown that the nomadic or settled life of the country-people in North Africa does not depend, as was long thought, on ethnic factors, but is entirely conditioned by geographical considerations. It is the rule for dwellers in the mountains to be settled while the people of the desert steppes, forced to move about in search

of pasture for their flocks, are nomads. There are however means between these two extremes and especially in Morocco, where we find many semi-nomads, who move only short distances, principally on the borders of the various mountains of the centre and south. But generally nomadism is the outcome of pastoral migration and its geographical area is in direct relation to the rainfall and therefore to the nature of the vegetation.

It is in eastern Morocco, in the steppes which lie to the east of the Muluya, and to the south of the Great Atlas, towards the Sahara, that we find the principal groups of nomads in Morocco. In eastern Morocco, we may mention among the large tribes which lead a nomadic life the confederation of the Beni Gīl, between Bergent and Figig; on the other side of the Atlas, the Ait Seddiāt, the Ait Djalāl, the Idā-ū-Bīāl, the Ait-ū-Mribet; lastly to the south of the Dar'a (Dra) country, the Rgība, the Shkārna and the Awlād Dlim. As to the semi-nomads, we find them, outside the Middle Atlas, in the great plains of the Gharb, in the north, the Rḥāma and the Shyādma, in the south, where a pastoral life has not yet completely disappeared before a more settled state of society.

Nevertheless Morocco is, of the three countries of Barbary, that which has in its rural population the largest proportion of settled people, of fixed habitat and living not only in tents but also in houses. The latter are rarely found isolated in the country, but on the contrary are grouped into villages of more or less importance and more or less near one another, according to the density of the population.

The type of dwelling varies with the district. In the mountains we find houses built of unbaked bricks or stone with a gabled thatch or a flat flat roof. In the plains, the tent predominates, more or less fixed to the spot, and with it we find more and more the hut of branches with a conical roof called *nucwāla*. In the Saharan oases, the population collects within a walled area or *ḡṣūr* (sg. *ḡṣar*, from the class. *ḡṣar*); these conglomerations sometimes possess the elements of town-life. The villages are called *duar* (*duwār*) in the plains, and *dṣhar* in the mountains. In some hill regions we find survivals of cave-dwelling.

b. Town. Among the towns of his country, the Moroccan distinguishes a certain number that he definitely regards as cities (*ḥaḍariya*). These are Fās, Rabat-Salé and Tetwan, which have been more than others subjected to the influence of Spanish culture. It must however be noted that in the majority of the other towns we can still find traces of the existence of colonies formed by Muslims from Spain, especially from the xvth century onwards. The population of the non-*ḥaḍariya* towns is found to be composed of rustic elements but little urbanised. This is the case with Ujdā and Mazagan (country Beduins) and also with Tangier (countrymen from the hills). Marrākush and Meknes owe their special urban character to the fact that as capitals they have contained the courts of two Sharifian dynasties, both of Beduin origin; they are *makhḥaniya* towns in which the standard of civilisation does not reach the refinement of the *ḥaḍariya* Spanish towns. The ports Tangier, Larache, Mazagan, Safi and Mogador were for long the only points of contact between Morocco and European influences, politically as well as commercially. Lastly in the mountains,

little towns like *Shefshāwen*, *Wazzān*, *Şefrū*, *Debdū*, *Demnāt* owe their existence to political reasons. The two first were founded as bulwarks against the Portuguese advance in northern Morocco in the xvth century. *Demnāt* and *Debdū* are mainly Jewish towns. As to *Şefrū*, it seems probable that it is a survival of an old Berber town. We may also mention as towns of secondary importance, on the Mediterranean coast, *Ceuta*, completely europeanised for several centuries, on the Atlantic coast *Arzila* (*Aṣailā*), *Casablanca*, which owes its origin to the little port of *Anfā*. *Azemmūr*, *Agādīr*. In the interior, *al-Kaṣr al-Kabīr* (*el-Kṣar*, Spanish spelling: *Alcazarquivir*), *Tāzā*, *Tārūdānt*. Several ancient towns have now disappeared, e.g. *Nakūr* and *Bādis* on the Mediterranean, *Tīt* to the south of *Mazagan*, the two *Aghmāt* and *Tinmallal* to the south of *Marrākush* and several others, descriptions of which have been given by the geographers like *al-Bakrī*, *al-Idrīsī* and *Leo Africanus*.

As a rule, the Moroccan town is grouped round a citadel or *kaṣaba* (pop. *kaṣba*) which is the seat of authority. Under the protection of the citadel lies the *mellāḥ* or Jewish quarter. All around spreads the town proper or *mdīna* with its great mosque, markets and *kaīṣariya* [q.v.]. It is surrounded by a rampart (*sūr*) beyond which there are usually the suburbs more or less rural in character. The town itself is divided into quarters (*ḥamma*) with streets (*zanḡa*), alleys (*darb*) and squares (*raḥba*).

c. Economic Life. The country people, whether settled or nomadic, who form at least four fifths of the population of Morocco, live on the land, either by agriculture or stock-raising, most often combining the two. Those in the highlands grow cereals (wheat, barley), certain leguminosae (broad beans, chick-peas, vetches) and fruit-trees. They also exploit their forests in a very primitive fashion (thuyas, cedars). The people of the plains devote themselves mainly to cereals and the rearing of cattle, sheep, camels, horses and asses. In the oases of the south, the population cultivates the date-palm and understands the art of irrigating the land.

The rural industries are very primitive. They are limited to supplying the necessary implements of agriculture, and weaving wool into the material for garments, tents and carpets. The Berbers of *Sūs* show a certain aptitude at metal-working (arms and jewels). *Sūs* no longer exports the cane-sugar and copper, which formed considerable articles of trade under the *Sa'dians*.

Each tribe has a certain number of markets (*sūḳ*) which are held in the open country and bear the name of the day on which they are held. It is in the *sūḳ* that the peasant sells his produce and buys the manufactured articles that are brought by the merchants from the towns. Cereals are preserved in siloes (*maṭmūra*); in the Great Atlas and to the south of it we find fortified storehouses, which belong to the community and are called *agādīr*.

It is in the towns that we find industrial activity concentrated. Each trade, which originally formed a gild (*ḥanṭa*), is grouped in one street which bears its name. In it the articles are made and sold. The stocks are kept in the *fonduks* (Ar. *fondaḳ*) which correspond to the *khān* and *wakālah* of the east. Some products, like grain, oil, coal, wool, are sold in special places called *raḥba*.

The monopolies of exporting (*sāḡa*) corn and hides established by the *suḷṭān*s at the end of the sixteenth century have now been abolished. Several European products have become of the first necessity in Morocco and form the subjects of an important traffic: cotton goods, tea and sugar and candles. For the history of the weights, measures and coins in use in Morocco before the establishment of the protectorate see the works by *Massignon* and *Michaux-Bellaire* quoted in the *Bibliography*. The very vivid picture drawn by *Leo Africanus* of the commercial and industrial activity of *Fās* in the Middle Ages is still very valuable.

The Jews, who devote themselves specially to certain trades that flourish in larger centres (goldsmiths, embroiderers), also play an important part as brokers. The citizens of *Fās*, who have a large number of converted Jews among their number, had almost a monopoly of the import trade of Morocco, especially from England, and for this reason had little colonies in the sea-ports.

The Berbers of *Sūs* like to settle in the towns as grocers (*baḡḡāl*) and having made their fortunes return to the country. Since the war of 1914—1918 a large number of them have migrated to France as labourers and they settle in groups, according to their original tribes, in the suburbs of certain large industrial towns.

V. POLITICAL ORGANISATION.

It is only at rare intervals and for short periods that Morocco has been entirely under the authority of the *suḷṭān*: whence the distinction between the territory subjected to the government (*bilād al-maḡhzen*) and the territory unsubjected (*bilād al-saiba*). As a rule, the *maḡhzen* territory included the towns, valleys and plains. The mountains, on the other hand, remained more or less independent, according to the degree of power possessed by the sovereign. For further details cf. the article *MAḤZEN*.

Outside the towns the population is grouped into tribes (*qabila*). Several are sometimes grouped together under a common name, without however being a confederation in the strict sense of the word; this is the case with the *Ghumāra* in the north, the *Hāḡa*, the *Dukkāla*, the *Shāwīya* in the south. The tribe is subdivided into sections (*rubʿ*, *khums*, *fakhḍha*), which are subdivided into sub-sections comprising a certain number of villages of tents or houses.

The tribes who own the *suḷṭān*'s sway are governed by a *kaʿīd* appointed by the *maḡhzen*. His duty is to allot and levy the taxes, to raise contingents of soldiers and keep good order. He has under his command a *shaikh* for each section under whom are the *muḡaddam* of the sub-sections.

For the distinction between *maḡhzen*, *djāish* (vulg. *gīsh*) and *naʿība* tribes see the article *MAḤZEN*.

In the tribes not subject to the *maḡhzen*, political activity is confined to the *djāmā'a*, i. e. an assembly of men able to bear arms. The *djāmā'a* deals with all the business of the tribe, civil, criminal, financial and political. It administers justice following local custom (Arabic *ʿurf*, Berber *isref*). It elects a *shaikh* (Berber *amghār*) who is only an agent to carry out its decisions. Alongside of the *djāmā'a* of the tribe, there are *djāmā'as* of the sections and sub-sections but their powers are limited.

All the tribes of the *bilād al-saiba* are divided into opposing factions or *laḡf*. When a tribe of

a certain *laff* is attacked, those neighbouring tribes who belong to the same faction take up arms and come to its assistance.

In the towns, the *makhzen* is represented by a governor whose official title is *kā'id* but in certain large towns he is often called *bāshā*. The title of *āmil* has been sometimes given to the governor of Ujda. The *kā'id* of the town, generally speaking, has the same powers as the *kā'id* of the tribe and acts as judge in case of any violation of the law. He has an assistant or *khalifa*. Alongside of him, the *muhtasib* supervises the corporations, fixes their average prices and looks after public morals.

The *kā'id* has under his orders the *muḥaddam* of the quarter and his police (*mukhāzaniya*) carrying out his instructions. Among the officials sent by the *makhzen* to each town may also be mentioned the *nāqir* or inspector of endowments (*hubūs*), the trustee of vacant inheritances (*wakil al-ghurabā*), popularly *bū-mawāriṭh* = *abu 'l-mawāriṭh*), the collector of local taxes and market-dues (*amīn al-mustafā'il*). Lastly in the harbour and frontier towns, the customs are collected by officials called *umanā* (sg. *amīn*).

Justice is administered by the *kā'id* or by the *kādī*, as the case may be. The latter deals with questions of personal law; official reports on the cases are drawn up by the *uṭul*. In technical cases he appeals to experts: master-masons, agriculturalists, veterinary surgeons (*muwālīn en-naḡār, arbāb et-turka, fallāḡ, baiṭār*). The legal opinions (*fatwā*) given by eminent jurists on the same question being often contradictory, the Sharīfian government has recently created a court of appeal (*madjlīs al-istī'nāf*) at Rabat.

Landed property takes a number of different forms. In the first place, there are the state-domains; they are either managed directly by the *makhzen* (crown-lands) or they are allotted to *gish*-tribes in return for the military service for which they are liable; others of these lands may be granted in temporary or definite ownership to private individuals by imperial edict (*ṣahīr* or *tanfīḡha*).

The *hubūs* lands may be urban or rural. In the towns, they not infrequently cover half the area. They are let out under special conditions which give the tenants special privileges, *mefṭāḡ* and *gṣā* (class. Ar. *ḡiṣṣā*). In the country, the *hubūs* lands consist mainly of fields and orchards. In all cases, the revenue from these lands is set aside for the maintenance of buildings of a religious character or of public utility (mosques, colleges, schools, fountains) and for the payment of the officials attached to these establishments.

In Morocco, there are vast tracts of land which are not the property of any one individual, either as a result of the insecurity prevailing or of the sparsity of the population. These lands belong undivided to the whole tribe; they are called common lands (*blād al-djmā'a*).

Lastly, lands which have come to belong to private individuals (*mulk*) by inheritance or purchase have their character confirmed by a certificate of ownership (*mulkiya*).

The old Muslim imposts (*zakāt* and *ushr*) have recently been merged into a single tax, the *tertib*. In addition to this tax, from which the state draws the essential part of its revenues, we may mention the duties levied at the gates of towns and in the markets (*maks*), unpopular with the

people and not countenanced by religion, and the urban tax on buildings (*darība*). In addition to these, the main taxes, there is the *hadīya* or present offered to the sultān on the occasion of the three great Muslim festivals. The *ḡiṣya* or poll-tax paid by non-Muslims and the *nā'iba* or payment for exemption from military service by certain Arab tribes have been abolished.

VI. RELIGIOUS LIFE.

a. The Berbers before Islām. For lack of documents it is difficult to get any accurate idea of the religious beliefs and practices of the Berbers of Morocco, before their conversion to Islām and it is only from the survival of animistic cults which can still be observed in the country, that we can guess what the primitive religion was. The figures on two carved stones found in Morocco seem to be evidence of the existence of a solar worship. On animistic practices surviving in modern Islām in Morocco see below d. Islām in Modern Morocco.

b. Conversion to Islām. At the time of their invasion, the Arabs found that in the districts around the towns the people were more or less under the influence of Jewish and Christian teachings; but there is little doubt that they did not practise these religions in their true form. It will be more correct to think of them as professing Judaism or Christianity rather than as real Jews or Christians. It seems evident that these influences had prepared the Berber population around the mountains to adopt the new monotheistic religion, which the invaders imposed upon them. The two earliest invasions, that of 'Ukba b. Nāfi in 640 and that of Mūsā b. Nuṣair in 711, could result only in a very partial and superficial islāmisation, for very few Arab elements remained in the country. Islām, a town religion, was for long confined to larger centres. The Berbers generally became converted in the hope of escaping the exactions of the conquerors: but when the latter wanted to treat them simply as tributaries, they did not hesitate to apostatise, on seven different occasions, if we may believe the Arab historians. One thing is certain, that while remaining Muslims, they were not long in trying to cast off the authority of the caliphs of Baghdād by adopting the heterodox doctrines of the Khāridjī [q. v. and the article AL-YUFRIYA]. The Berbers of Morocco went even further when new local religions arose among them more or less based on Islām, with their own prophets and Kuṭāns. After the attempt at rebellion by the Berber of Tangier, Maṣara [q. v.], which was quickly suppressed, the Barghawāṭa recognised as their prophet one of their number, Ṣāliḡ b. Ṭarīf, who gave them a religion and a Kuṭān in the Berber language. This religion, the progress of which was opposed by the early Moroccan dynasties, seems only to have been finally exterminated by the Almohad rulers of the xiith century. This Barghawāṭa movement was the most lasting; we also note that which was created by Hā-Mim (d. 313 A. H.) among the ḡhumāra, near Tetwan.

In spite of these reactions, Islām, having become the official religion of increasingly powerful dynasties, gradually gained ground and penetrated slowly into the Berber mountains, but it is only from the death of 'Abd al-Mu'min, who destroyed the religion of the Barghawāṭa and put an end to the rule of the "anthropomorphist" (*muḡassimūn*) Almo-

ravids, that we can date the complete unification of Islām in Morocco. Till then, Islām had had in Morocco champions who were soldiers rather than theologians, and who after forcing the people to adopt Islām at the point of the sword, were little fitted to instruct them in it. It required a Berber of the Great Atlas, Ibn Tūmart [q. v.], a theologian who had been educated in the east, to come back to his country and to secure the devoted support of a mass of followers in order to found the movement, which was political as well as religious, of the Almoravids [q. v.] or "preachers of *tawhīd*" [q. v.].

If the Almoravid reformation was only temporary in Morocco, it was nevertheless strong enough while it lasted to obliterate in the country all trace of schism or heresy and to establish thoroughly in it the school of Mālik b. Anas [q. v.] which it still follows.

c. Evolution of Moroccan Islām. From the time of the fall of the Almoravid dynasty, Moroccan Islām rapidly acquired features of its own. Islām, defeated in Spain, was gradually driven out of it, then attacked in Morocco itself by the Christians of the Peninsula. The western frontier of the *Dār al-Islām* was brought back to its own territory and then thrust farther back. Islām in Morocco, attacked by Christianity and forced to *ḡihād*, became an active principle. It required all the moral forces of the country, even those of which the orthodoxy seemed doubtful; in order to utilise them, it did not hesitate to absorb them by covering them with a more or less superficial veneer of orthodoxy. It was at this period that the cult of dead and living saints, and to a certain point *Sharīfism*, which had hitherto only existed alongside of Islām in Morocco, were adopted into it and received a kind of official recognition from the *makhzen*.

Before the Marinids, Islām had required the constant assistance of the temporal power to maintain itself and advance. From the time of this dynasty, sprung from a Berber nomad tribe, the roles are inverted; it is now the sovereigns who utilise Islām to increase their own power, and try to monopolise it by creating official colleges for religious instruction (*madrassa*); the first of these (*Madrassa al-Ṣaffiyyin*) was founded in 679 (1280) by the Sulṭān Abū Yūsuf at Fās, the capital of the dynasty, which made it the great centre of Muslim culture in Western Barbary [cf. Fās]. The immediate successors of the Marinids, the Banū Wattās, established in the same town the cult of their founder Idrīs II. The mausoleum in which he is said to be buried was henceforth an object of great veneration. He is the earliest in date and the most important of the innumerable canonised Muslims who are the objects of a regular cult in Morocco, even on the part of the religious leaders and the aristocracy. When the cult of Idrīs was established, his descendants — more or less authentic — claimed the title of *sharīf* and soon played a preponderating part in Moroccan society, as a political and moral influence. The power of the Idrisid *shorfa* was soon reinforced by that of other *shorfa* descended from 'Alī through al-Ḥasan and this is the origin of the two great groups of *sharīfs* in Morocco, the Idrisid and the 'Alid. To the latter belong the two *Sharīfan* dynasties, the Sa'dian and Filāli, the latter still in power. From the moment of their accession to the throne, the

influence of the *shorfa* on the destinies of the country became more and more preponderant.

The phenomenon of *sharīfism* is closely connected on the other hand with the development of religious brotherhoods [cf. the article *ṬARIQA*]. Although we find evidence of their existence at the end of the Almoravid dynasty (Ḥudjdjādī, Māghiriyyūn, Amghāriyyūn), it is only as a result of al-Ḥazālī's (q. v., d. 1645 A.D.) campaign in favour of a *ḡihād* against the Portuguese, that we find the principles of the brotherhoods, as we know them to-day, first coming into existence.

d. Islām in Modern Morocco. Here we will only give a survey of the principal points of detail in which the people of Morocco differ from the rest of the Muslim community as regards the practice of their religion. With the exception of a few isolated groups, still little studied, who are credited with heterodox or heretical practices (Zkāra, in the neighbourhood of the Bni Znāsen, in eastern Morocco, Bādwa, in the Ḡharb, not far from al-Kṣar al-Kabīr), all the Muslims of Morocco are Sunnis and since the Almoravid period have followed the Mālikī rite, which prevailed in the west over that of al-Awzāfi. It is in the towns that the population observes most strictly the duties of religion. The Beduins of the plains and the Berbers of the mountains are rather lukewarm Muslims. The *Djāla*, however, between Fās and Tangier, are very devoted to Islām, show great piety, and *Qur'ānic* studies are very much in favour with them; it is from them that are recruited a great number of schoolmasters who practise their calling in the plains [cf. *SHAḤḤ*]. It is also practically only among the hillmen of the north and south that we find a mosque in every village.

In spite of the great distance they have to traverse, the Moroccans like to accomplish the canonical pilgrimage. A considerable number settle in the east (there are Moroccan colonies in Alexandria and Cairo); the importance of these colonies had even induced the Sulṭān 'Abd al-Azīz to appoint a Moroccan consul, *amīn al-Maḡhāriba*, for Egypt.

In addition to the two canonical festivals of Islām (*īd kabīr* and *īd ṣaḡhīr*), the Moroccans celebrate the festival of the birth of the Prophet (*mūlūd*, class. *mawlid*) and that of 'Ashūrā' (10th Muḥarram). The *mūlūd*, established in Morocco by the Marinids, has become a kind of national festival, since the accession to power of sovereigns claiming descent from the Prophet; this festival in Morocco almost surpasses in importance the two canonical feasts.

The peculiarities just mentioned would not be sufficient to give Moroccan Islām a special character, nor would its religious brotherhoods, if the latter were confined to the practices of religion or exaltation of the faith and to satisfying the need for an elevated mysticism among their adepts. These religious brotherhoods are fairly numerous: Tidjāniya, Darḡāwa, Ṭaiyibiya-Tuhāma, Kattāniya [q. v.] etc. But alongside of these brotherhoods, whose members are almost exclusively recruited from the literate or well-to-do classes of the towns and country, there are popular brotherhoods in considerable numbers, in which preoccupation with religion gives place to charlatanism practices and sanguinary displays. Such are the *Djūlāla*, the *Isāwa*, the *Imādsha*, the *Dghūghiya*. Some of these brotherhoods recruit their members ex-

clusively from a particular class of society; thus the *imā* (class. *rumāt*) is a brotherhood of marksmen, and the *Gnāwa*, a negro brotherhood. All these brotherhoods have this feature in common that their founder has become a famous saint (*walī*).

The cult of saints is highly developed in Morocco and undoubtedly was so before the introduction of Islām, which found itself obliged to tolerate it. There are however very different categories of saints, from the venerated patron saint of a capital or of a district to the local holy man whose name is forgotten, between whom comes the *sayyid* whose tomb is marked by a *kubba* (chapel surmounted by a dome), more or less elaborate. The more humble saints are recognised by the circular wall (*ḥawsh*) which surrounds their tombs.

These venerated individuals, male and female, have attained sanctity by very different ways, some in their lifetime, by their learning, devotion, asceticism, miraculous powers (*baraka*), sometimes even by more or less mystic mania (*maḍydhūb*); the others, after their deaths, have been distinguished by miracles, apparitions etc. The warrior in the holy war (*ḍjihād, ribāṭ*), slain fighting against the infidel is frequently beatified — hence his name of *murābiṭ* (pop. *mrābet* — French and English "marabout"). But the early significance of this term was frequently lost sight of and the term *murābiṭ* came to be generally applied to saints, who never took part in a *ḍjihād* in their lifetime. *Murābiṭ* thus came into general use as a synonym of the other words used for saint in Morocco: *walī, sayyid, ṣāliḥ*. But it is the only one applied to the descendants of a saint, who possess the *baraka* of their ancestor. Among the Berbers, the saint is called *aguram*. The names of great saints have *mawlāi* prefixed, the others the title *sīdī*, while women saints of Berber origin are called *lāla*.

The saint to whom sanctuaries are most frequently dedicated — modest though they are (*maḥām, khalwa*) — was not a native of the country but the famous patron saint of Baghdād, 'Abd al-Kādir al-Gilānī, popularly called al-Djilālī, who undoubtedly never visited Morocco. But the saint whose cult is surrounded with the greatest splendour is the famous Mawlāi Idrīs, founder and patron saint of Fās. Among the other great Moroccan saints may be mentioned: Mawlāi 'Abd al-Salām Ibn Mashīsh, patron of the Djbāla, buried on the Djabal al-'Alam; Mawlāi Abū Salhām, in the Qharb; Mawlāi Abū 'l-Shitā' al-Khammār (Mawlāi Būshshā), in the north of Fās; Sidi Muḥammad b. 'Isā, patron of Meknès and founder of the brotherhood of the 'Isāwa; Mawlāi Abū Shu'ayb (Būsh'ib), at Azemmūr; Mawlāi Abū Ya'azzā (Bū'azzā), in the Tādla; Sidi Abū 'l-'Abbās, al-Sabī (Sidi Bel-'Abbās), born at Ceuta and patron of Marrākuḥ. All these and others less famous are the subjects of a hagiographical literature which will be dealt with later.

Devotion to individuals canonised in their lifetime or after their death is in Morocco not confined to Muslims. The Jews have also their saints, relatively as numerous as the Muslim saints. Some of the Jewish saints have acquired a reputation so great that even Muslims revere their tombs: e.g. those of the Rabbi 'Amiān in Azjen, near Wazzān and of Rabbi Ben Zmīro at Safī. On the other hand, the Jews of Morocco show a special

reverence for certain of the great Muslim saints of the country.

The area, surrounding the tomb of each of the principal saints is sacred (*ḥurm*) and hence regarded as an inviolable asylum; among the best known are the *ḥurm* of Mawlāi Idrīs in Fās and that of Mawlāi 'Abd al-Salām b. Mashīsh in the mountains of the northwest. These pieces of ground are the exclusive property of the families who are descended or claim to be descended from the saint. They are exempt from state taxes; more than that, the descendants of the saints have the right to levy for their own benefit certain special dues, by a privilege officially recognised by the sultān. The levying of these dues is not the only way by which the saint's chapel benefits his descendants. The principal source of revenue is the offerings of pilgrims when visiting the tomb; this is the *ziyāra*. In general once a year, there is a kind of patronal festival at the tomb of the saint which is called *mūsem* (class. Ar. *maṣim*); a vast crowd, some of them from a considerable distance, gather there to pay their devotions to the *sayyid* and to see the display of fireworks given in his honour. On this occasion the offerings flow in and are shared among themselves by the saint's descendants.

In these circumstances, it is usual for every sanctuary of any importance to be regularly organised. The chapel which contains the tomb and the buildings attached to it, an oratory and guest-house, is called the *zāwiya*. It is superintended by a *muḥāldam* who collects and distributes the revenues. These do not come entirely from the *ziyāra*. The *zāwiya* often owns lands, sometimes extensive, which are let out and the profits shared with the tenants. They are called *'azib* and the tenants are called *'azzāb*. These farms, sometimes acquired by purchase, often come from bequests or donations (*ḥubūs*) from pious private individuals.

We can thus see how certain famous and wealthy *zāwiyas* may exert a moral and political influence in the country round them, independent of their religious influence. The latter is however also very important. The great Moroccan *zāwiyas* are centres of orthodoxy and give life and vigour to Islām in the country. Some are centres of mysticism and they are always centres of religious instruction. This explains the enviable position occupied in Moroccan society by any group of descendants of a famous saint, or of marabouts. If their ancestor had, in addition to the virtues for which he was canonised, the honour to be a descendant of the Prophet, they are at the same time *shayfā*, which further increases their material privileges. The descendants of a saint who was not a *sharif* try to claim this origin for him by inventing more or less fictitious genealogies. The marabouts who have in this way "infiltrated" into the social category of the *shayfā* are very numerous in Morocco. A Moroccan *zāwiya* is not only a centre of hagiolatry; it is also in the majority of cases a body of *shayfā* and the centre of a religious brotherhood or of a branch of one, or of a secondary order affiliated to a brotherhood. The *zāwiya* itself may have offshoots. Many of the establishments of this name are daughters of a mother *zāwiya* and are sometimes at a considerable distance from it.

Hagiolatry, religious brotherhoods and *sharifism* thus form three special aspects of Islām in Morocco, which are profoundly intermingled, and it is diffi-

cult to study them separately. For a detailed account of the principal families of *shorfā* in Morocco of genuine *sharīf* origin or simply marabouts see the article *SHORFĀ*. Here we shall only mention the principal ones whose origin is considered authentic by the Moroccan genealogists. They are descended from al-Ḥasan and 'Abd Allāh al-Kāmil through the latter's three sons, Idrīs, Muḥammad al-Nafs al-Zakiya and Mūsā al-Djawn. The descendants of Idrīs or Idrīsids. are subdivided into Djūṭiyūn (Shabihīyūn, 'Imrāniyūn, Tālibīyūn, Ghālībiyūn), Dabbāghīyūn, Kattāniyūn, 'Alamiyūn (descendants of Mawlāi 'Abd al-Salām Ibn Mashīsh, buried on the Djabal al-'Alam, whence their name, and are themselves divided into Shafshāwaniyūn, Raisūniyūn, Rahmāniyūn and Lihyāniyūn). The descendants of Muḥammad al-Nafs al-Zakiya are the *shorfā* of Sidjilmāsa or Filāla (Filāliyūn; *nisba* from Tafilālt). i.e. those of the reigning Sharīfian dynasty; lastly, the descendants of Mūsā al-Djawn are the *shorfā* Kādīriyūn, who take their name from the great saint of Islām 'Abd al-Kādir al-Gilāni. We also find in Morocco, but in small numbers, Ḥusainid *shorfā*, also descended from 'Alī through al-Ḥusain, the brother of al-Ḥasan; these are the *shorfā* called Ṣikīliyūn and 'Irākiyūn, who came from Andalus. The great marabout families are that of the Nāṣiriya from Tāmgrūt in Dar'a, the Sharḳāwa [q. v.] in Tādā, the Darḳāwa and Wāzzāniyūn to the northwest of Fās. The *shorfā* Wāzzāniyūn (sharīfs of Wezzān), whose chief is also head of the great brotherhood of the Ṭaiyibiya-Tuhāma (cf. above), have for long played a considerable part in politics and have been the object of particular attention from the *makhzen*. Even more than the other representatives of the great marabout families, they have in fact rendered great services to the central power by using for its benefit the great moral and political influence which they possess among that part of the population, which is lukewarm or hostile to the *makhzen*. They have mediated in the most successful fashion between the sultān and the unsubjected body of the people.

The *shorfā* are thus at the head of Moroccan society. Some have assumed the power, others are the auxiliaries of the ruler, who in return shows them great deference. We shall see that they have occupied a very high place in the intellectual life of Morocco since the end of the middle ages. Lastly *sharīfism*, an important social factor, has been able still further to strengthen itself by the support which maraboutism has brought it, by incorporating itself in it, and the religious brotherhoods which very frequently spring directly from it.

c. *Survivals of Berber cults.* The cult of saints, accepted and even recognised, as we have seen above, by Islām, is in Morocco much earlier than the introduction of this religion. Indeed, alongside of saints of note, there are others who are essentially popular, in the country as well as in the towns. In the large cities like Fās, the great *saiyids* venerated by all classes of society rub shoulders with humble marabouts whose names show clearly their popular origin; these are Sidi 'l-Mukhfī (Rev. the Hidden One), Sidi Amsa 'l-Khair (Rev. Good Evening) or Sidi Kādī Hādja (the reverend gentleman who procures what is wanted) and notices are given of them by hagiographers like the author of the *Salwat al-Anfās* (cf. E. Lévi-Provençal, *Les Historiens des Chorfā*,

p. 383 *infra*). The humble, often anonymous *khalwas*, which abound in Morocco, undoubtedly are to be connected with earlier mythical individuals, already worshipped in the same place before the coming of Islām. Besides this devotion to popular saints, there are the animistic cults, which we see everywhere in Morocco observed by the lower classes of the population: worship of high places, of caves, springs, trees and rocks. These cults are now being seriously studied and the results will perhaps enable us to reconstruct without too great risk of error, the type of religion practised by the Berbers before the introduction into their land of the three great monotheistic religions.

It is hardly possible to separate from these animistic cults that of Mawlāi Ya'qūb in Morocco, who always has a *ḫubba* beside thermal springs, whose curative virtues are recognised.

Survivals of paganism in every case completely foreign to orthodox Islām may be found everywhere in Morocco: they are hardly distinguishable from what one finds in other parts of Barbary. The rites which accompany birth and the ceremonies connected with it (giving of the name and circumcision), marriage and death are now beginning to be well known. They constitute practices quite foreign to the prescriptions of the Sunna but they are not regarded by those who follow them as in any way heterodox.

It is especially in the life of the country people that we see most clearly traces of pre-Islamic practices. Many of them are strangely like agricultural customs of the Romans. The Moroccan peasant has retained the use of the Julian calendar, no doubt introduced into the country by the Romans; it is of course much more suitable for the needs of agriculture than the Muslim lunar calendar. The names of the months are retained in their Latin form with little change: January is *yennāir* from the Latin *ianuar(ius)*. The beginning of the solar year in Morocco is the occasion of a festival celebrated, especially in the country, under the name of *ḥāgūzza*; the festival of the summer solstice (*anṣra*) is also celebrated and on that day it is usual to have fireworks. Similarly the agrarian rites, which are still scrupulously observed by the peasants of Morocco, are completely foreign to the canonical prescriptions of Islām. They are mainly ceremonies of inauguration (of death and rebirth of the land, first day of labour, first day of harvest); rites to protect the crops from the evil eye, or to preserve the *baraka* which they contain while standing; finally special rites to secure rain and good weather. These various ceremonies, to which ethnographers like Biarnay and Westermarck have already devoted detailed studies to which the reader may be referred, are sometimes closely linked up with ceremonies prescribed by Islām: thus the different pagan rites for producing rain (carnival processions, a large spoon dressed in women's clothes and solemnly carried round) do not exclude the worship of saints specially noted as rain-makers like Mawlāi Būshshat', nor the celebration of the orthodox ceremony of *istisḳā'*.

It is also in the worship of spirits (*djinn*, pop. *djinn*, plur. *djūnūn*) that we find ceremonies of a strongly Islāmic stamp associated with quite profane rites. This cult is especially practised by the lower classes of society, and in the towns

particularly by women. The djinns are regarded as supernatural powers, who have to be conciliated to avert their evil influence or fought when one is attacked by them. The rites which deal with them are either propitiatory or intended to overcome harm done. In spite of the many sacred formulae of Islām, which are found in the celebration of these two kinds of rites, one gets a strong impression of paganism from them; they undoubtedly remain practically what they were before the introduction of Islām into Morocco.

Bibliography: For the general bibliography of Morocco down to 1891 cf. R. L. Playfair and R. Brown, *A Bibliography of Morocco from the earliest times to the end of 1891*, London 1893. A very complete annual bibliography of Morocco has been given since 1921 in *Hespéris*, publ. by the *Institut des Hautes-Etudes Marocaines de Rabat* (bibliography begun by MM. P. de Cenival and C. Funck-Brentano). VII LINGUISTIC SURVEY.

Two languages are spoken in Morocco: Berber and dialects of Arabic. Berber is the oldest language attested in Morocco and we have no evidence of an earlier language being used; as to Arabic, it was introduced by the Muslim conquest of the vith and viith centuries. But until the arrival in Morocco of the Banū Hilāl and of the Sulaim (xiith century), it seems that Arabic, the language of an essentially urban culture, was spoken mainly in the towns while the country people continued to talk Berber; it was only after the occupation of the plains by the Arab tribes that their language spread there. With the exception of the region of the Jbâla to be mentioned later, the highlands of Morocco alone have remained faithful to the Berber language, while the towns and lowlands are at the present day almost completely Arabic speaking.

In his *Annuaire du Monde Musulman*³ (p. 162) L. Massignon gives a proportion of 60% of Berber speakers (3,200,000 to 2,200,000). A. Bernard

thinks this exaggerated and reduces it to 40% (cf. *Arabophones et Berbéophones au Maroc*, 1924, p. 278).

A. Berber.

1. Berber dialects. According to the works of E. Destaing, the Berber dialects of Morocco can be divided into two main groups.

The first is the northern group which includes the dialects of the Rif, those of the Bni Znāsen and of the Berber speaking tribes of the neighbourhood and those of the Ait Seghrūshshen, Marmūsha, Ait Warain etc. to the north of the Middle Atlas. These dialects are characterised phonetically by their strong tendency to spirantisation of the dentals and palatals. In comparing these dialects with those which in Algeria the natives call *Znātiya*, E. Destaing has been led to describe the group as the group of *Zanāta* dialects.

The second or southern group includes, according to the same author, the remainder of the Berber dialects of Morocco; he distinguishes two sub-groups:

a. that of the *Tamazight*, the dialect spoken by the Brāber of the Central Atlas, from the vicinity of Meknes to the edge of the Great Atlas; the dialects of the north are also distinguished from those of the south. It is with this sub-group that we should connect the dialect of the Ṣanhādja d-es-Srār, an important highland confederation to the northeast of Fās, and perhaps also the language of the sections of the *Ghumāra* who still speak Berber.

b. Sub-group of the *Tashelhit*, the dialect once spoken by the Maṣmūda of the Great Atlas and by the *Shlūh* (usual French orthography: *Chleuhs*) of Sūs and the Anti-Atlas.

The three groups of Moroccan Berber dialects seem to correspond very exactly to the three main ethnic divisions of the Berbers of the country: *Zanāta* in the N. E., Ṣanhādja-Zanaga in the centre and Maṣmūda in the south. Going back to the old division of the Berbers given by Ibn Khaldūn, E. Destaing proposes to make the first group correspond to the Butr tribes and the two others to the Barānis tribes.

For the bibliography of Berber studies see the list of works given by E. Laoust at the beginning of his *Mots et Choses Berbères*, Paris 1920, p. xvii.; since that date see the Moroccan bibliography annually published by *Hespéris*. A map showing the division of Morocco between Arabic and Berber is given in the articles by A. Bernard and P. Moussard, *Arabophones and Berbéophones au Maroc* (in *Annales Soc. Géogr.*, vol. 33, Paris 1924). For the north, there is a more accurate map by R. Montagne and Pennès published at the end of the *Manuel de berbère marocain (dialecte rifain)* by Justinard (Paris 1926).

There is no evidence of the existence of another language before Berber in Morocco. Very few of those "Libyan" inscriptions have been found which, although they are not yet read, are admitted to be in old Berber; one was found in the Roman ruins of Tamuda, a few miles S. W. of Tetwān, and is preserved in the museum of the latter town. Other Libyan inscriptions have been found in the region of Petitjean.

The earliest evidence of the use of Berber in Morocco is given by the *Geography* of al-Bakrī (xith century) who says that the prophet Hā-Mīm, killed

in 927 A. D., had given the Berbers a *Kur'ān* written "in their own language". This can only refer to their Berber speech; the same author tells us that the Baraghwāta had also a Berber *Kur'ān* from their prophet Ṣālīh (d. in 750). For the beginning of the Almohad period, a passage in *Documents inédits d'histoire almohade*, p. 67, says that at this time Berber was spoken on the Umm Rabi'. It is in the same work that we find the earliest recorded phrases in Moroccan Berber (*Tashelhit* dialect) transcribed in Arabic characters (cf. p. 26, 30, 36, 38, 39, 67, 117).

Ibn Khaldūn seems to have been the first to interest himself in the creation of a scientific system of transliteration of Berber into Arabic characters. Using certain graphic methods used by specialists in *taḍwīd*, he invented compound characters to render sounds peculiar to Berber (*g*, *z* [z emphatic] and *ʒ*). Unfortunately Ibn Khaldūn, who in his *Muḳaddima* gives interesting chapters on the urban and Beduin Arabic dialects, does not seem to have devoted any attention to the Berber language; one of the few passages to be noted in his book, as far as Morocco is concerned, is his reference to the existence of Berber speaking peoples among the Ṣanhādja tribes settled in the valley of the Waigha and around the fortress of Amargū (cf. *Histoire des Berbères*, ed. de Slane, text, i., p. 273, l. 11). For the beginning of the xvth century, Leo Africanus (p. 28) gives us more detailed information. The five Berber ethnic groups (Ṣanhādja, Maṣmūda, *Zanāta*, Hawwāra and *Ghumāra*) have a special language which they call *aqel amarig* (= *awel amazigh*), i.e. "noble language" (cf. the present name of the *Tamazight* dialect) (ed. Schefer, i.). Berber was still the language of a part of the *Ghumāra*, for, he says, Arabic is used by almost all the people (*op. cit.*, i. 29). It even looks as if the *Shāwiya* ("Soava") of the Tāmasnā still spoke Berber ("African language") like all the other *Shāwiya* of North Africa with the exception of some who lived to the south of Tunis (*op. cit.*, i., p. 83).

We have to come down to the Danish Consul G. Host, in the xviiith century, to find the first Moroccan Berber vocabulary collected from a *qālib* of "Tamenart", a place probably in the region of Agadir (cf. *Efterretninger om Marokos og Fes*, Copenhagen 1779, p. 128—133).

2. Berber literature of Morocco. Although Berber was the language of the Moroccan dynasties who followed between the Idrisids and the Sa'adians, it does not seem that, contrary to what was done in Egypt for the Turkish of the Mamlūks, Berber was made the subject of grammatical studies in Morocco, nor that it was used for the purpose of literary expression. A passage in the *Kirfās* recalls the fact that *khutbas* were pronounced in Berber in the great mosque of Fās but the text of them has not been preserved. The celebrated Almohad reformer Ibn Tūmart is said to have composed in Berber theological and legal treatises which have now disappeared. The Berber *Kur'ān* of the *Ghumāra* and Baraghwāta have also disappeared although al-Bakrī has fortunately preserved some extracts in an Arabic translation. The only texts which we now have are translations or commentaries on religious works of the type of the *Risāla* of al-Kairawānī or of the *Muḳhtasat* of Khaliil; all these Berber texts come without exception from Sūs, whether because this region

had a more advanced culture or its dialect with a more occlusive consonant system and clearer vowel system was better suited than others for transcription in the Arabic alphabet. The Moroccan Berbers have a large stock of fables, legends, songs of love, war and work etc., many of which have already been collected by French and German students of Berber (on Berber literature, written and oral cf. Henri Basset, *Essai sur la littérature des Berbères*, Algiers 1920).

Among Arab authors the Berber language is *ʿadḡamīya*, the non-Arab language; *barbarīya*, Berber; *raṭāna*, "jargon"; in the *Documents inédits d'histoire almohade* we several times come across the expression *al-lisān al-gharībī*, "the Moroccan language". In Moroccan Arabic, Berber is usually called *ash-shellḡa*.

B. Arabic.

The Arabic dialects. The Arabic language was introduced into Morocco in at least two stages: first in the eighth century at the time of the first Muslim conquest, then in the xiith at the coming of the Banū Hilāl and the Sulam. Down to the coming of the latter, who were brought to Morocco by the Almohad ruler Yaḡqūb al-Manṣūr, Arabic seems to have been spoken almost exclusively in the large towns of the north, where it was used by a considerable Arab population who enjoyed a double prestige, religious and political. It was the language of religion and law. From the towns Arabic spread among the people of the surrounding country, and al-Idrīsī (*Description de l'Afrique et de l'Espagne*, text p. 79, transl. p. 90) already notes that in the xiith century the Berber tribes of the southern hinterland of Fās (Banū Yūsuf, Fandalāwa, Bahlūl, Zawāwa, Maggā'a, Ḥaiyāta and Salālgūn) spoke Arabic.

It is this linguistic influence exerted by the towns on the country around them that explains the arabicisation of the mountainous country of the Jbāla (plur. of *jebli*, "highlander") while the rest of the Moroccan highlands remained Berber speaking. The land of the Jbāla, in the wide sense, stretches in the form of a crescent from Tangier to Taza. It was surrounded by a cordon of towns: Nakūr, Bādis, Tigiās, Tetwān, Ceuta, al-Ḳaṣr al-Ṣaḡḡi, Tangier, Arzila, al-Ḳaṣr al-Kabīr, Baṣra, Azdjen, Banū Tāwudā, Walīlī, Fās, and Taza, which were the only ports or markets available for the tribes of the region; besides, the massif itself was traversed by the most important commercial routes of Northern Morocco: the roads from Fās to Tangier, to Ceuta, to Bādis, to Nakūr and to Ḥassāsa; it was therefore natural that being subject to the direct and indirect influences of the towns, the highlands of Jbāla should be the first region of Morocco to be arabicised. The process was further favoured by several other factors: 1. the existence in the mountains of numerous large villages, almost towns, which became secondary centres of Ḳur'ānic culture; 2. the settlement almost everywhere in the xth century among the Jbāla of Idrīsīd sharifs who, driven from Fās by Mūsā b. Abi l-'Āfiya al-Miknāsī, founded independent principalities in the mountains, which became centres of Muslim urban culture; 3. the tribes of the Jbāla furnished a considerable part of the contingents which went to wage the holy war in Spain and returned home after being more or less arabicised by contact with the great Muslim towns of Andalusia; 4. lastly the rebellions and civil wars

which so frequently disturbed Muslim Spain, the emigrations or expulsions caused by the progress of the Christian reconquest, brought to Africa, from the rising at Coidova (in 814) down to the xvth century, an important element which settled in the region of the Jbāla either in the towns around the mountains or in the villages of the highlands (resettlement of Tetwān, foundation of *Shafshāwan*) bringing there along with the Arabic language, the prestige of their cultural, intellectual and material superiority.

This rapid sketch of the spread of the Arabic language in Morocco explains why, after studying the question, three categories of Arabic dialects have been distinguished.

a. Urban dialects; b. highland dialects; c. Beduin dialects; and we may add: d. the Jewish dialects

a. Urban dialects. In Morocco not all the town dialects are "urban dialects". There are towns like Casablanca, Maragan, Safi and Mogador (and to a certain degree Miknās and Marrākush) the population of which is entirely or for the most part of rural origin and where the absence of an old nucleus of town-dwellers has not enabled them to become urbanised. The Moroccans however distinguish quite clearly such places from towns with a really urban culture, more or less influenced by Andalusian culture. The principal towns with urban dialects are Fās, Rabat-Salé, Tetwān, Taza, al-Ḳaṣr al-Kabīr; Tangier, Wazzān and *Shafshāwan* also have urban dialects but these are much contaminated by the surrounding highland dialects. Miknās and Marrākush have been influenced by the Beduin elements introduced by the *maḡzen* groups into the dialects of these two old capitals. It is interesting to note the case of Azemmūr where the old town (Azemmūr al-Ḥaḍar) has an urban dialect, while the new town, which has in recent years grown up beside it around the sanctuary of Mawlāy Abū Shu'ayb (*vulgo* Bū Sh'ayb), uses a Berber dialect. The urban dialects of Morocco form one group with those of the western part of the Central Maghrib, notably with those of Tlemcen, Nedroma and Algiers. Their phonetic characteristics are the loss of the interdentals of the classical language, the affricative pronunciation (*ts*) of *ṭā'*, the frequent attenuation of *ḵāf* to *hamza*. In Fās, *b*, *m*, *k*, *g* and *ḡim* assimilate the *lām* of the article and are treated as "solars"; the simple *ḡim* is pronounced like the French *j* (= Persian *ج*), but when it is geminated, it gives *ʃ* in Fās and *ḡ* in Tangier. The *rā'* is often pronounced very close to the French uvular *r*.

As peculiarities of the dialect of Fās, we may note the construction *ketbetto* "she has written it" for *ketbet* + *o*, and the use of an invariable relative *dī* representing the old dialectal *dhū*. Tangier and Tetwān have a preposition *n-*, "to" which is used before nouns (*n-ed-ūār* "to the house") but not before suffixed pronouns. To translate "of", Marrākush uses *t-*; the dialect of this town uses certain Berber adverbs: *ashku* "because", *hellī* "only".

All the urban dialects use the characteristic prefix of the present indicative: *ka-* in the north, *ta-* in the south. Fās uses one almost as much as the other.

b. Highland dialects. These are at least as well known as those of the towns. In 1920 I published notes on that of the Tsūl and the

Brānes in the north of Taza; in 1922, E. Lévi-Provençal published texts, prefaced by a grammatical sketch, of the dialects of the middle valley of the Wargha; since then I have had an opportunity of studying those of the Bni Hōzmar (near Tetwān), of the Mesāsa (near Bādes) and of the Ghzāwa (near Shafshāwan).

The highland dialects are of course more differentiated than the urban dialects. The tribes which use them belong to two political clans probably originally of different racial origin: the Ghumāra, the old inhabitants, and the Ṣanhādja, the invaders. In the present state of our knowledge it does not seem possible to make the dialects coincide with political or racial boundaries; but we can nevertheless recognise two main groups of highland dialects:

1. The northern dialects, extending from the Straits of Gibraltar to the south of Shafshāwan and embracing in the east the confederation of the Ghumāra; 2. the southern dialects, from Wazzān to Taza, used by two great classes of tribes: first, the Ṣanhādja tribes of the valley of the Wargha: Ṣanhādja of the Central Wargha, Ṣanhādja of the Sun and of the Shade, of Mo-bāh and of Gheddo; secondly, the Butr tribes, more or less closely related to the Zanāta and occupying the lands north of the region of Taza: Mernisa, Brānes, Tsūl, Maghrāwa and Meknāsa. It seems to be a historical fact that these Zanāta and Ṣanhādja peoples only settled in their present habitats long after the first Arab conquest; the Ṣanhādja of the Central Wargha certainly now occupy lands which before the Almoravid period were peopled by the Ghumāra. We should therefore regard these southern highland dialects as younger than those of the northern group. The slight differences noted between the two groups may then be due to two main causes: 1. an evolution of the neighbouring urban dialects which would have taken place during the period between the arabicisation of the Ghumāra and that of the Ṣanhādja-Zanāta; 2. the non-identity of the Berber substrata.

To the two main groups: Ghumāra and Ṣanhādja-Zanāta, we may perhaps add two little islands in the south: the highlanders of the region of Šeffrū to the south of Fās (Bhāllil, Bni Yāzgha etc.), and the Ghiyyāta to the south of Taza; they probably constitute the last vestiges of a continuous Arabic-speaking bloc which stretched to the south of the Fās-Taza corridor, the existence of which in the 11th century we know from al-Iḍrīsī.

Phonetically, the Moroccan highland dialects are characterised by the profound changes undergone by the Arabic consonantal system as a result of the spirantisation of the dental and post-palatal occlusives. We find the interdentalals *ṭh* and *ḏh*, which do not represent the classical interdentalals; *tāʾ-ṭhāʾ* and *dāl-ḏhāl* have given in these dialects *t* and *d* respectively, which remain occlusive only at the beginning of the word or after a consonant or geminated; but after a vowel we have *ṭh* and *ḏh*: *bent* "daughter", plur. *bnāṭh*; after a vowel also *kāf* is pronounced as a spirant like the *χ* of modern Greek. The representative of the group ض-ص of the classical language is usually *ḏ*, sometimes hardened to *t*; but among the Ghumāra we have *ḏh* (=emphatic *ḏhāl*). The sound *ṭh* is fairly common. The short vowels are commoner than in the towns; many of the short vowels *i*

and *u* of the classical language are preserved; this is how we find a considerable number of imperfects *iR¹ R² uR³* and a few *iR¹ R² iR³*.

As to morphology, the fem. personal suffixes -a (<-*hū*) and pl. -em (<-*hum*) are characteristic: they are the complement of the series begun by the masc. -u, -o (<-*hu*). Among the northern Jbāla we find the use of a suffix -*esh* marking the plural: it seems really to be a borrowing from Latin. The dual, reserved for names of parts of the body which occur in pairs and for names of various measurements (of weight, length, volume and time) is in -*āyen*: *shahrāyen* "two months", *yiddāh* "his hands". The relative, pronoun and adjective, is *ī*. The classical construct state (*idāfa*) is very rare and is only found in a few stereotyped phrases: it is in general replaced by analytical constructions in which the preposition *ī* "of" is used, expressing possession as well as the material of a thing.

Almost everywhere the prefixes of the 2nd pers. com. and of the 3rd pers. fem. of the aorist are *de-* (and not *te-*): *dkteb* "thou writest, she writes". The passive participle of hollow verbs is often of the type *mefʿāl*: *mebyāʿ* "sold", *meḥwāʿ* "filled up". Finally we may note a few traces of a passive of the form *fʿāl-yeʿfʿāl*: *kbbāl* "to be taken". As evidence of conservatism, we may mention that in these dialects we have the word *fā* "mouth" which seems to have disappeared since old Arabic.

Just as the urban dialects of Morocco may be linked with a number of urban dialects of Algeria, so have the highland dialects of Morocco correspondents in the latter country. W. Marçais, who is the first to have isolated and described this group of Maghribī dialects and prefers to use the name of "parlers villageois" for them, classes along with the dialects of the Moroccan Jbāla two other similar groups, also characterised by the defacement of the Arabic consonant system (liquidation, affrication, spirantisation), by the use of turns of syntax and structural forms taken from Berber and by the juxtaposition in the vocabulary of Arabic elements sometimes strangely archaic and very abundant Berber elements. These are firstly the Oran group of the Tīāra in the country which extends from Lalla Maghniya to the sea, a mountainous country traversed by the roads connecting Tlemcen, the capital of the Banū ʿAbd al-Wād, with the ports of Ilunain and Arshgūn. It is with the dialects of the Trāia that the dialects of these Moroccan Jbāla show most agreement.

The second group, which differs more, is that of the highland dialects of Eastern Kabylia, a mountainous region of the department of Constantine, traversed by the roads connecting Constantine with the ports of Djidjelli and Collo; this was also the old habitat of the Kutama, whom their support of the Fātimid movement must have caused to be rapidly arabicised. Alongside of these three groups of highland dialects (Jbāla, Trāia, Eastern Kabylia), W. Marçais classes a fourth in the villages of the Tunisian Sāhel, which lie in the coast zone traversed by the roads which connect Kairawān with the ports of Sūs, Mahdiyya and Monastir. These Tunisian dialects, of which that of Takrūna, studied by W. Marçais, is a specimen, are however much arabicised and hardly seem to have been subjected in their phonetics, morphology, syntax and vocabulary to the profound

Berber influences which characterise the first three groups.

In spite of their divergencies, which are due mainly to pronunciation and to the local use of words and phrases corresponding to two very distinct forms of culture, the urban dialects and the highland dialects cannot be either historically or linguistically separated. The fundamental disparity is that which exists between the urban and highland group and the Beduin group. It is the townsmen who have taught the highlanders to speak Arabic, but the urban dialects, used by individuals whose intellectual activity is greater, have evolved more rapidly. They are also more sensitive to external influence, literary and political. These facts added to the predominance of Berber blood in the highlands suffice to explain why the dialects of the Jbāla still seem coarse and quaint to the townsmen. On the other hand, the towns have been frequently repopulated, wholly or in part by people from the neighbouring hills. All this explains the family resemblance which the linguist finds between the dialects of the towns and those of the hills; perhaps the latter, being more conservative, are also the more interesting for the history of the language. W. Marçais regards them as valuable representatives of the Arabic spoken in the country district of the Maghrib before the coming of the Banū Hilāl and the Sulaim (cf. W. Marçais, *Textes arabes de Takrouna*, vol. i., preface, p. xxviii.).

The principal features which are common to the urban-highland group and which distinguish it from the Beduin group are the following:

- loss of the classical interdentals;
- pronunciation of *kāf* as *k* or *hamza* (and not *g* as among the Beduins);
- tendency to the syllabic grouping $R^1 R^2 e R^3$, when R^2 is not a laryngeal nor a sonant;
- rarity of the construct state;
- suffix of the 3rd pers. masc. sing. in *-u*, *-o* (and not *-ah*, as among the Beduins);
- relative rarity of the addition of personal suffixes, but regular use of the analytical phrase with *dyāl*: *ed-dār dyāl-i*, "my house";
- diminutive of $R^1 R^2 e R^3$ becomes $R^1 R^2 iyye R^3$: *kliyyeh*, "little dog";
- diminutive of adjectives of the types $R^1 R^2 e R^3$ (< class.: *af'al*) and $R^1 R^2 i R^3$ becomes $R^1 R^2 i R^2 e R^3$: *hmīmer*, "a little red"; *kōbiter*, "a little large";
- plural of the adjectives $R^1 R^2 e R^3$ (< class. *af'al*) becomes $R^1 ū R^2 e R^3$: *kōhal*, "black" (plur.);
- reductions of the plurals $C^1 C^2 ā C^3 i C^4$ to $C^1 C^2 ā C^3 e C^4$: *mfātah*, "keys";
- use of a verbal prefix to mark the indicative present: *ka-* or *sa-* in the towns and *la-*, *ka-*, *a-* in the hills;
- in the singular of the perfect, the feminine person is in general used for the masculine: e.g. *ktebtī*, "thou hast written" (m.) whence we find in Rabat for the plural, an analogous form *ktebtū*, "you have written";
- in the vocabulary, *shhāl*, "how much?"; *dāba*, "now"; *lāā* (*rha*, *kha*), "to do", are characteristic;
- in the imperfect of the defective verbs, the plural is formed on analogy of the singular: *yebkū*, "they remain"; *yebkū*, "they weep".
